RESEARCH INTERESTS

Interdisciplinary nanophotonics research with applications in physiologically relevant biological systems and solar energy including single-molecule and superresolution imaging, plasmonics and plasmon-enhanced imaging, and the electromagnetics of semiconductor quantum dots.

ACADEMIC TRAINING

Stanford University , <i>Stanford, CA</i> Postdoctoral Scholar, <i>Specialty in superresolution imaging in live bacterial cells</i> Research Advisor: W. E. Moerner (Chemistry)	Dec. 2006 – Present
California Institute of Technology , <i>Pasadena, CA</i> Ph.D. Chemistry; <i>Specialty in silicon nanocrystal optoelectronics and metal plasmonics</i> Research Advisors: Harry Atwater (Applied Physics) and Nathan Lewis (Chemistry)	2006
California Institute of Technology , <i>Pasadena, CA</i> M.S. Applied Physics GPA 3.85	2003
Princeton University , <i>Princeton, NJ</i> A.B. Chemistry with Highest Honors GPA 3.92	2001

HONORS, AWARDS AND FELLOWSHIPS

Finalist, Burroughs Wellcome Fund Career at the Scientific Interface Award	2008
Materials Research Society Graduate Student Silver Medalist	2005
Society of Chemical Industry Perkin Medal Scholarship	2004
Laser Focus World Commendation for Excellence in Technical Communications	2004
PEO Scholar Award	2004
Dow Chemical Company Travel Stipend	2003
Princeton University, Phi Beta Kappa	2001
Princeton University Department of Chemistry, Highest Honors	2001
Sigma Xi Society	2001
Hypercube, Inc. Award in Computational Chemistry	2001
Manfred Pyka Memorial Physics Prize	1999

RESEARCH

Postdoctoral Scholar, Stanford University December 2006 – Present
(Advisor: W. E. Moerner)

Single-molecule imaging of biophysical processes in cells

- Applying superresolution techniques to epifluorescence microscopy to investigate protein structure and dynamics in bacteria cells *in vivo*.
- Implementing sophisticated image-processing algorithms.
- Studying the bulk and single-molecule optical properties of novel fluorescent proteins using microscopy, fluorimetry, and spectroscopy.
- Performing bacteria cell growth, maintenance and handling.
- Supervising a small team of researchers (myself, one graduate student, and one undergraduate student).

Postdoctoral Scholar, California Institute of Technology June 2006 – November 2006
(Advisor: H. A. Atwater)

Silicon nanorod photovoltaics and plasmon-coupled superconductor detectors

- Probed band edge luminescence of silicon nanorods.
- Investigated the properties of NbN superconductors by ellipsometry.
- Predicted the plasmonic properties of long-wavelength metal particles for coupling to superconductive detectors with finite-difference time-domain simulations.
- Coordinated my numerical experiments with laboratory experiments at the NASA Jet Propulsion Laboratory in La Cañada, CA.

Graduate Researcher, California Institute of Technology 2002 – 2006
(Advisors: H. A. Atwater and N. S. Lewis)

Silicon nanocrystal optoelectronics and metal nanoparticle plasmonics

- Tuned the emission energy, intensity and quantum efficiency of Si quantum dots coupled to metal nanoparticles.
- Demonstrated plasmon-enhanced photoluminescence and electroluminescence.
- Complemented laboratory experiments with finite-difference time-domain simulations in order to develop a computational model for our results.
- Examined the effects of surface modifications and metal-semiconductor interactions on the optoelectronics of silicon nanocrystals.
- Demonstrated the existence of surface states in oxide-terminated Si quantum dots.
- Employed optical and electronic characterization tools including photoluminescence spectroscopy in the UV-visible and IR ranges, time-resolved photoluminescence decay, ellipsometry, and electroluminescence.
- Utilized surface science techniques including atomic force, scanning electron and transmission electron microscopy, X-ray photoelectron spectroscopy (including synchrotron experience), X-ray and reflection high-energy electron diffraction.
- Employed lithographic and benchtop synthetic fabrication methods, such as optical and electron-beam lithography and wet chemical synthesis, including sample preparation and handling in inert atmosphere using a glove box.

Graduate Researcher, California Institute of Technology 2001 – 2002
(Advisor: K. P. Giapis)

Physics and chemistry of low-energy ion beam interactions with surfaces

Research Assistant, Princeton University 2000 – 2001
(Advisor: H. A. Rabitz)

Nonlinear maps for quantum control

Research Assistant, McGill University/Montreal General Hospital 1999
(Advisor: L. Rosenberg)

Intracellular signaling pathways in islet cell apoptosis

CONTRIBUTED CONFERENCE PRESENTATIONS

- Gordon Research Conference on Single-Molecule Approaches to Biology, New London, NH, August 2008.
- CLEO Conference on Lasers and Electro-Optics, San Jose, CA, May 2008.
- Stanford University Molecular Biophysics Seminar Series, Stanford, CA, April 2008.
- Stanford Bio-X Interdisciplinary Initiatives Symposium, Stanford, CA, February 2008.
- Stanford Bio-X Life in Motion Symposium, Stanford, CA, October 2007.
- Materials Research Society Fall Meeting, Boston, MA, November 2006 (**Session Chair**).
- Gordon Research Conference on Plasmonics, Keene, NH, July 2006.
- Materials Research Society Fall Meeting, Boston, MA, December 2005.
- International Society for Optical Engineering (SPIE) Optics & Photonics Meeting, San Diego, CA, August 2005.
- Photon Physics in the Netherlands, Amsterdam, The Netherlands, June 2005.
- HP Labs Quantum Science Research Nanotechnology Symposium, Palo Alto, CA, March 2005.
- American Physical Society National Meeting, Los Angeles, CA, March 2005.
- Southern California Inorganic Photochemistry Conference, Two Harbors, CA, September 2004.
- Materials Research Society Fall Meeting, Boston, MA, December 2003.
- Materials Research Society Spring Meeting, San Francisco, CA, April 2003.

PRESS COVERAGE

Y. Carts-Powell, "Supercharging Microscope Resolution," Optics & Photonics News (July/August 2008).

R.J. Walters, Julie S. Biteen, G.I. Bourianoff, and H.A. Atwater, "Nanocrystal research targets optoelectronic components," Laser Focus World (September 2004).

SKILLS

Optical and Electronic Characterization:

Photoluminescence measurements in UV-visible and IR ranges, including time-resolved decay dynamics and confocal microscope spectroscopy. Electroluminescence measurements. Ellipsometry. Single-molecule epifluorescence microscopy in live cells. Fluorimetry.

Surface Science Techniques:

Atomic-force, scanning-electron and transmission-electron microscopy, X-ray photoelectron spectroscopy (including synchrotron experience), X-ray and reflection high energy electron diffraction.

Fabrication:

Optical and electron-beam lithography. Wet chemical synthesis, including sample preparation and handling in inert atmosphere using a glove box. Class 100 clean room experience.

Cell Biology:

Bacteria cell growth, maintenance and handling.

Computer Programming:

Finite difference time domain (FDTD) simulations in Mafia, image processing in Matlab, programming in Mathematica, numerical calculations in C and C++, instrument control in Labview, scientific typesetting in LaTeX.

Project Management:

Supervising undergraduate and graduate researchers, coordinated the purchase of large instruments.

Languages Spoken and Written Fluently:

English and French.

POSTDOCTORAL PROFESSIONAL DEVELOPMENT

Physics Machine Shop Certification Course (Stanford University)	2007
Responsible Conduct of Research Bioethics Course (Stanford University)	2007
Physical Biology Boot Camp (California Institute of Technology)	2006

TEACHING EXPERIENCE

Stanford University

Occasional Lecturer, Ch 175: Physical Chemistry 2008
Physics Summer Research Program Mentor: Oversaw the research of an undergraduate student 2007

California Institute of Technology

Teaching Assistant, Occasional Lecturer, APh 132: Optoelectronic Devices and Nanophotonics 2005
Teaching Assistant, Occasional Lecturer, APh 114: Solid State Physics 2005
Summer Undergraduate Research Fellowship Mentor: Oversaw the research of an undergraduate student 2004
Teaching Assistant, APh/EE 183: Device Physics 2004
Teaching Assistant, Ch 3a: Undergraduate General Chemistry Lab 2001 – 2002

Princeton University

Teaching Assistant, Ch 372: Junior Experimental Chemistry Lab 2001
Peer Tutor: Undergraduate Math, Physics, and Chemistry 1998 – 2001

OTHER ACTIVITIES

Professional Society Memberships:

American Physical Society (APS), Materials Research Society (MRS), The International Society for Optical Engineering (SPIE), American Chemical Society (ACS), American Society for Cell Biology (ASCB).

Stanford Distinguished Women in Science Seminar Series Steering Committee

Caltech Women in Engineering, Science and Technology (WEST)
