## NP-Completeness

## Recap from Last Time

## Analyzing NTMs

- When discussing deterministic TMs, the notion of time complexity is (reasonably) straightforward.
- Recall: One way of thinking about nondeterminism is as a tree.
- The time complexity is the height of the tree (the length of the longest possible choice we could make).
- Intuition: If you ran all possible branches in parallel, how long would it take before all branches completed?

## The Complexity Class NP

- The complexity class NP (nondeterministic polynomial time) contains all problems that can be solved in polynomial time by an NTM.
- Formally:
$\mathbf{N P}=\{L \mid$ There is a nondeterministic
TM that decides $L$ in
polynomial time. $\}$

## Another View of NP

- Theorem: $L \in$ NP iff there is a deterministic TM $V$ with the following properties:
- $w \in L$ iff there is some $c \in \Sigma^{*}$ such that $V$ accepts $\langle w, c\rangle$.
- $V$ runs in time polynomial in $|w|$.
- Some terminology:
- A TM $V$ with the above property is called a polynomial-time verifier for $L$.
- The string $c$ is called a certificate for $w$.
- You can think of $V$ as checking the certificate that proves $w \in L$.

NP and Reductions

## Polynomial-Time Reductions

- Suppose that we know that $B \in \mathbf{N P}$.
- Suppose that $A \leq_{\mathrm{p}} B$ and that the reduction $f$ can be computed in time $\mathrm{O}\left(n^{k}\right)$.

## B

Solvable by NTM in $\mathrm{O}\left(n^{r}\right)$

## Polynomial-Time Reductions

- Suppose that we know that $B \in \mathbf{N P}$.
- Suppose that $A \leq_{\mathrm{p}} B$ and that the reduction $f$ can be computed in time $\mathrm{O}\left(n^{k}\right)$.

Input size: $\boldsymbol{n}$

## B

Solvable by NTM in O( $n^{r}$ )

## Polynomial-Time Reductions

- Suppose that we know that $B \in \mathbf{N P}$.
- Suppose that $A \leq_{\mathrm{p}} B$ and that the reduction $f$ can be computed in time $\mathrm{O}\left(n^{k}\right)$.

Input size: $\boldsymbol{n}$

| $A$ |
| :---: | :---: |
| Solvable? | | Compute $f(w)$ |
| :---: |
| $\left.\begin{array}{c}\text { Solvable by } \\ \text { NTM in O( } n\end{array}\right)$ |

## Polynomial-Time Reductions

- Suppose that we know that $B \in \mathbf{N P}$.
- Suppose that $A \leq_{\mathrm{p}} B$ and that the reduction $f$ can be computed in time $\mathrm{O}\left(n^{k}\right)$.

Input size: $\boldsymbol{n}$ Time required: $\mathbf{O}\left(\boldsymbol{n}^{\boldsymbol{k}}\right)$

## Polynomial-Time Reductions

- Suppose that we know that $B \in \mathbf{N P}$.
- Suppose that $A \leq_{\mathrm{p}} B$ and that the reduction $f$ can be computed in time $\mathrm{O}\left(n^{k}\right)$.

Input size: $\boldsymbol{n}$

Time required: $\mathbf{O}\left(\boldsymbol{n}^{\boldsymbol{k}}\right)$ Input size: $\mathbf{O}\left(\boldsymbol{n}^{\boldsymbol{k}}\right)$

## Polynomial-Time Reductions

- Suppose that we know that $B \in \mathbf{N P}$.
- Suppose that $A \leq_{\mathrm{p}} B$ and that the reduction $f$ can be computed in time $\mathrm{O}\left(n^{k}\right)$.

Input size: $\boldsymbol{n}$

Time required: $\mathbf{O}\left(\boldsymbol{n}^{\boldsymbol{k}}\right)$ Input size: $\mathbf{O}\left(\boldsymbol{n}^{\boldsymbol{k}}\right)$

## B

Solvable by NTM in $\mathrm{O}\left(n^{r}\right)$

## Polynomial-Time Reductions

- Suppose that we know that $B \in \mathbf{N P}$.
- Suppose that $A \leq_{\mathrm{p}} B$ and that the reduction $f$ can be computed in time $\mathrm{O}\left(n^{k}\right)$.

Input size: $\boldsymbol{n}$ Time required: $\mathbf{O}\left(\boldsymbol{n}^{\boldsymbol{k}}\right)$ Input size: $\mathbf{O}\left(\boldsymbol{n}^{\boldsymbol{k}}\right)$

Time required: $\mathbf{O}\left(n^{k r}\right)$

## Polynomial-Time Reductions

- Suppose that we know that $B \in \mathbf{N P}$.
- Suppose that $A \leq_{\mathrm{p}} B$ and that the reduction $f$ can be computed in time $\mathrm{O}\left(n^{k}\right)$.

Input size: $\boldsymbol{n}$

Time required: $\mathbf{O}\left(\boldsymbol{n}^{\boldsymbol{k}}\right)$ Input size: $\mathbf{O}\left(\boldsymbol{n}^{\boldsymbol{k}}\right)$

## B

$$
f(w) \in B \text { iff } w \in A
$$

Time required: $\mathbf{O}\left(n^{k r}\right)$

## Polynomial-Time Reductions

- Suppose that we know that $B \in \mathbf{N P}$.
- Suppose that $A \leq_{\mathrm{p}} B$ and that the reduction $f$ can be computed in time $\mathrm{O}\left(n^{k}\right)$.
- Then $A \in \mathbf{N P}$ as well.

Input size: $\boldsymbol{n}$

Time required: $\mathbf{O}\left(\boldsymbol{n}^{\boldsymbol{k}}\right)$ Input size: $\mathbf{O}\left(\boldsymbol{n}^{\boldsymbol{k}}\right)$

## B

$$
f(w) \in B \text { iff } w \in A
$$

Solvable by NTM in O( $\left.n^{r}\right)$

Time required: $\mathbf{O}\left(n^{k r}\right)$

A Sample Reduction

$$
\begin{gathered}
U=\{1,2,3,4,5,6\} \\
S=\left\{\begin{array}{c}
\{1,2,5\},\{2,5\},\{1,3,6\}, \\
\{2,3,4\},\{4\},\{1,5,6\}
\end{array}\right\}
\end{gathered}
$$

## Let $U$ be a set of elements (the universe)

 and $S \subseteq \wp(U)$. An exact covering of $U$ is a collection of sets $I \subseteq S$ such that every element of $U$ belongs to exactly one set in $I$.$$
\begin{gathered}
\mathbf{U}=\{\mathbf{1}, \mathbf{2}, \mathbf{3}, \mathbf{4}, \mathbf{5}, \mathbf{6}\} \\
\mathbf{S}=\left\{\begin{array}{c}
\{1,2,5\},\{2,5\},\{1,3,6\}, \\
\{\mathbf{2}, \mathbf{3}, \mathbf{4}\},\{4\},\{\mathbf{1}, \mathbf{5}, \mathbf{6}\}
\end{array}\right\}
\end{gathered}
$$

Let $U$ be a set of elements (the universe) and $S \subseteq \wp(U)$. An exact covering of $U$ is a collection of sets $I \subseteq S$ such that every element of $U$ belongs to exactly one set in $I$.

$$
\begin{gathered}
\mathbf{U}=\{\mathbf{1}, \mathbf{2}, \mathbf{3}, \mathbf{4}, \mathbf{5}, \mathbf{6}\} \\
\mathbf{S}=\left\{\begin{array}{c}
\{1,2,5\},\{\mathbf{2}, \mathbf{5}\},\{\mathbf{1}, \mathbf{3}, \mathbf{6}\}, \\
\{2,3,4\},\{\mathbf{4}\},\{1,5,6\}
\end{array}\right\}
\end{gathered}
$$

Let $U$ be a set of elements (the universe) and $S \subseteq \wp(U)$. An exact covering of $U$ is a collection of sets $I \subseteq S$ such that every element of $U$ belongs to exactly one set in $I$.

$$
\begin{gathered}
\mathbf{U}=\{\mathbf{1}, \mathbf{2}, \mathbf{3}, \mathbf{4}, \mathbf{5}, \mathbf{6}\} \\
\mathbf{S}=\left\{\begin{array}{l}
\{1,2,5\},\{2,5\},\{1,3,6\}, \\
\{2,3,4\},\{4\},\{1,5,6\}
\end{array}\right\}
\end{gathered}
$$

Let $U$ be a set of elements (the universe) and $S \subseteq \wp(U)$. An exact covering of $U$ is a collection of sets $I \subseteq S$ such that every element of $U$ belongs to exactly one set in $I$.

$$
\begin{gathered}
U=\{1,2,3,4,5,6\} \\
S=\left\{\begin{array}{l}
\{1,2,5\},\{2,5\},\{1,3,6\}, \\
\{2,3,4\}\{4\},\{1,5,6\}
\end{array}\right\}
\end{gathered}
$$

Let $U$ be a set of elements (the universe) and $S \subseteq \wp(U)$. An exact covering of $U$ is a collection of sets $I \subseteq S$ such that every element of $U$ belongs to exactly one set in $I$.

## Exact Covering

- Given a universe $U$ and a set $S \subseteq \wp(U)$, the exact covering problem is

## Does $S$ contain an exact covering of $\boldsymbol{U}$ ?

- As a formal language: EXACT-COVER =
$\{\langle U, S\rangle \mid S \subseteq \wp(U)$ and
$S$ contains an exact covering of $\boldsymbol{U}\}$

## EXACT-COVER $\in \mathbf{N P}$

- Here is a polynomial-time verifier for EXACT-COVER:
- $V=$ "On input $\langle U, S, I\rangle$, where $U, S$, and $I$ are sets:
- Verify that every set in $S$ is a subset of $U$.
- Verify that every set in $I$ is an element of $S$.
- Verify that every element of $U$ belongs to an element of $I$.
- Verify that every element of $U$ belongs to at most one element of $I . "$

# Trust me, these reductions matter. 

We'll see why in a few minutes.

## The

Most Important Question
in
Theoretical Computer Science

What is the connection between $\mathbf{P}$ and $\mathbf{N P}$ ?

# $\mathbf{P}=\{L \mid$ There is a polynomial-time decider for $L$ \} 

$\mathbf{N P}=\left\{L \left\lvert\, \begin{array}{l}\text { There is a nondeterministic } \\ \text { polynomial-time decider for } L\}\end{array}\right.\right.$
$\mathbf{P} \subseteq \mathbf{N P}$

## Which Picture is Correct?

## Which Picture is Correct?

P
NP

## Does $\mathbf{P}=\mathbf{N P}$ ?

## $\mathbf{P} \xlongequal{=} \mathbf{N} \mathbf{P}$

- The $\mathbf{P} \stackrel{2}{=} \mathbf{N P}$ question is the most important question in theoretical computer science.
- With the verifier definition of NP, one way of phrasing this question is

If a solution to a problem can be verified efficiently, can that problem be solved efficiently?

- An answer either way will give fundamental insights into the nature of computation.

## Why This Matters

- The following problems are known to be efficiently verifiable, but have no known efficient solutions:
- Determining whether an electrical grid can be built to link up some number of houses for some price (Steiner tree problem).
- Determining whether a simple DNA strand exists that multiple gene sequences could be a part of (shortest common supersequence).
- Determining the best way to assign hardware resources in a compiler (optimal register allocation).
- Determining the best way to distribute tasks to multiple workers to minimize completion time (job scheduling).
- And many more.
- If $\mathbf{P}=\mathbf{N P}$, all of these problems have efficient solutions.
- If $\mathbf{P} \neq \mathbf{N P}$, none of these problems have efficient solutions.

## Why This Matters

- If $\mathbf{P}=\mathbf{N P}$ :
- A huge number of seemingly difficult problems could be solved efficiently.
- Our capacity to solve many problems will scale well with the size of the problems we want to solve.
- If $\mathbf{P} \neq \mathbf{N P}$ :
- Enormous computational power would be required to solve many seemingly easy tasks.
- Our capacity to solve problems will fail to keep up with our curiosity.

## What We Know

- Resolving $\mathbf{P} \stackrel{?}{=} \mathbf{N P}$ has proven extremely difficult.
- In the past 35 years:
- Not a single correct proof either way has been found.
- Many types of proofs have been shown to be insufficiently powerful to determine whether $\mathbf{P}=\mathbf{N P}$.
- A majority of computer scientists believe $\mathbf{P} \neq \mathbf{N P}$, but this isn't a large majority.
- Interesting read: Interviews with leading thinkers about $\mathbf{P} \stackrel{?}{=} \mathbf{N P}$ :
- http://web.ing.puc.cl/~jabaier/iic2212/poll-1.pdf

## The Million-Dollar Question

The Clay Mathematics Institute has offered a $\$ \mathbf{1 , 0 0 0 , 0 0 0}$ prize to anyone who proves or disproves $\mathbf{P}=\mathbf{N P}$.

## The Million-Dollar Question ChALLENGE ACCEPTED

The Clay Mathematics Institute has offered a $\mathbf{\$ 1 , 0 0 0 , 0 0 0}$ prize to anyone who proves or disproves $\mathbf{P}=\mathbf{N P}$.

## Time-Out For Announcements

# Please evaluate this course in Axess. 

## Your feedback really does make a difference.

## Final Exam Logistics

- Final exam is this upcoming Monday, December $9^{\text {th }}$ from 12:15PM - 3:15PM.
- Room information TBA; we're still finalizing everything.
- Exam is cumulative, but focuses primarily on material from DFAs onward.
- Take a look a the practice exams for a sense of what the coverage will be like.

## Practice Finals

- We have three practice exams available right now:
- An extra credit practice exam worth +5 EC points.
- Two actual final exams from previous quarters, which are good for studying but not worth any extra credit.
- Solutions to the two additional practice finals will be released Wednesday.
- Please take the additional final exams under realistic conditions so that you can get a sense of where you stand. Most of the problems are "nondeterministically trivial."

A Note on Honesty and Integrity

## Review Sessions

- We will be holding at least one final exam review session later this week.
- We will announce date and time information once it's finalized.
- Feel free to show up with any questions you'd like answered!

## Casual CS Dinner

- The second biquarterly Casual CS Dinner for Women in CS is tonight at 6PM on the fifth floor of Gates.
- Everyone is welcome!
- RSVP appreciated; check the email sent to the CS103 list.

Back to CS103!

## The Tantalizing Truth

Theorem: If any $\mathbf{N P}$-complete language is in $\mathbf{P}$, then $\mathbf{P}=\mathbf{N P}$.

## The Tantalizing Truth

Theorem: If any NP-complete language is in $\mathbf{P}$, then $\mathbf{P}=\mathbf{N P}$.
Proof: If $L \in \mathbf{N P C}$ and $L \in \mathbf{P}$, we know for any $L^{\prime} \in \mathbf{N P}$ that $L^{\prime} \leq_{\mathrm{p}} L$, because $L$ is NP-complete.

## The Tantalizing Truth

Theorem: If any NP-complete language is in $\mathbf{P}$, then $\mathbf{P}=\mathbf{N P}$.
Proof: If $L \in \mathbf{N P C}$ and $L \in \mathbf{P}$, we know for any $L^{\prime} \in \mathbf{N P}$ that $L^{\prime} \leq_{\mathrm{P}} L$, because $L$ is NP-complete. Since $L^{\prime} \leq_{\mathrm{P}} L$ and $L \in \mathbf{P}$, this means that $L^{\prime} \in \mathbf{P}$ as well.

## The Tantalizing Truth

Theorem: If any NP-complete language is in $\mathbf{P}$, then $\mathbf{P}=\mathbf{N P}$.
Proof: If $L \in \mathbf{N P C}$ and $L \in \mathbf{P}$, we know for any $L^{\prime} \in \mathbf{N P}$ that $L^{\prime} \leq_{\mathrm{p}} L$, because $L$ is NP-complete. Since $L^{\prime} \leq_{\mathrm{P}} L$ and $L \in \mathbf{P}$, this means that $L^{\prime} \in \mathbf{P}$ as well. Since our choice of $L^{\prime}$ was arbitrary, any language $L^{\prime} \in \mathbf{N P}$ satisfies $L^{\prime} \in \mathbf{P}$, so $\mathbf{N P} \subseteq \mathbf{P}$.

## The Tantalizing Truth

Theorem: If any NP-complete language is in $\mathbf{P}$, then $\mathbf{P}=\mathbf{N P}$.
Proof: If $L \in \mathbf{N P C}$ and $L \in \mathbf{P}$, we know for any $L^{\prime} \in \mathbf{N P}$ that $L^{\prime} \leq_{\mathrm{p}} L$, because $L$ is NP-complete. Since $L^{\prime} \leq_{\mathrm{P}} L$ and $L \in \mathbf{P}$, this means that $L^{\prime} \in \mathbf{P}$ as well. Since our choice of $L^{\prime}$ was arbitrary, any language $L^{\prime} \in \mathbf{N P}$ satisfies $L^{\prime} \in \mathbf{P}$, so $\mathbf{N P} \subseteq \mathbf{P}$. Since $\mathbf{P} \subseteq \mathbf{N P}$, this means $\mathbf{P}=\mathbf{N P}$.

## The Tantalizing Truth

Theorem: If any NP-complete language is in $\mathbf{P}$, then $\mathbf{P}=\mathbf{N P}$.
Proof: If $L \in \mathbf{N P C}$ and $L \in \mathbf{P}$, we know for any $L^{\prime} \in \mathbf{N P}$ that $L^{\prime} \leq_{\mathrm{p}} L$, because $L$ is NP-complete. Since $\mathbf{P} \subseteq \mathbf{N P}$, this means $\mathbf{P}=\mathbf{N P} . \square$

## The Tantalizing Truth

Theorem: If any NP-complete language is in $\mathbf{P}$, then $\mathbf{P}=\mathbf{N P}$.
Proof: If $L \in \mathbf{N P C}$ and $L \in \mathbf{P}$, we know for any $L^{\prime} \in \mathbf{N P}$ that $L^{\prime} \leq_{\mathrm{p}} L$, because $L$ is NP-complete. Since $L^{\prime} \leq_{\mathrm{p}} L$ and $L \in \mathbf{P}$, this means that $L^{\prime} \in \mathbf{P}$ as well. Since our choice of $L^{\prime}$ was arbitrary, any language $L^{\prime} \in \mathbf{N P}$ satisfies $L^{\prime} \in \mathbf{P}$, so $\mathbf{N P} \subseteq \mathbf{P}$. Since $\mathbf{P} \subseteq \mathbf{N P}$, this means $\mathbf{P}=\mathbf{N P}$.

## The Tantalizing Truth

Theorem: If any NP-complete language is in $\mathbf{P}$, then $\mathbf{P}=\mathbf{N P}$.
Proof: If $L \in \mathbf{N P C}$ and $L \in \mathbf{P}$, we know for any $L^{\prime} \in \mathbf{N P}$ that $L^{\prime} \leq_{\mathrm{p}} L$, because $L$ is NP-complete. Since $L^{\prime} \leq_{\mathrm{P}} L$ and $L \in \mathbf{P}$, this means that $L^{\prime} \in \mathbf{P}$ as well. Since our choice of $L^{\prime}$ was arbitrary, any language $L^{\prime} \in \mathbf{N P}$ satisfies $L^{\prime} \in \mathbf{P}$, so $\mathbf{N P} \subseteq \mathbf{P}$. Since $\mathbf{P} \subseteq \mathbf{N P}$, this means $\mathbf{P}=\mathbf{N P}$.

## The Tantalizing Truth

Theorem: If any NP-complete language is in $\mathbf{P}$, then $\mathbf{P}=\mathbf{N P}$.
Proof: If $L \in \mathbf{N P C}$ and $L \in \mathbf{P}$, we know for any $L^{\prime} \in \mathbf{N P}$ that $L^{\prime} \leq_{\mathrm{p}} L$, because $L$ is NP-complete. Since $L^{\prime} \leq_{\mathrm{P}} L$ and $L \in \mathbf{P}$, this means that $L^{\prime} \in \mathbf{P}$ as well. Since our choice of $L^{\prime}$ was arbitrary, any language $L^{\prime} \in \mathbf{N} \mathbf{P}$ satisfies $L^{\prime} \in \mathbf{P}$, so $\mathbf{N P} \subseteq \mathbf{P}$. Since $\mathbf{P} \subseteq \mathbf{N P}$, this means $\mathbf{P}=\mathbf{N P}$.

## The Tantalizing Truth

Theorem: If any NP-complete language is in $\mathbf{P}$, then $\mathbf{P}=\mathbf{N P}$.
Proof: If $L \in \mathbf{N P C}$ and $L \in \mathbf{P}$, we know for any $L^{\prime} \in \mathbf{N P}$ that $L^{\prime} \leq_{\mathrm{p}} L$, because $L$ is NP-complete. Since $L^{\prime} \leq_{\mathrm{P}} L$ and $L \in \mathbf{P}$, this means that $L^{\prime} \in \mathbf{P}$ as well. Since our choice of $L^{\prime}$ was arbitrary, any language $L^{\prime} \in \mathbf{N P}$ satisfies $L^{\prime} \in \mathbf{P}$, so $\mathbf{N P} \subseteq \mathbf{P}$. Since $\mathbf{P} \subseteq \mathbf{N P}$, this means $\mathbf{P}=\mathbf{N P} . \square$

## The Tantalizing Truth

Theorem: If any NP-complete language is not in $\mathbf{P}$, then $\mathbf{P} \neq \mathbf{N P}$.
Proof: If $L \in \mathbf{N P C}$, then $L \in \mathbf{N P}$. Thus if $L \notin \mathbf{P}$, then $L \in \mathbf{N P}-\mathbf{P}$. This means that $\mathbf{N P}-\mathbf{P} \neq \varnothing$, so $\mathbf{P} \neq \mathbf{N P}$.

## A Feel for NP-Completeness

- If a problem is NP-complete, then under the assumption that $\mathbf{P} \neq \mathbf{N P}$, there cannot be an efficient algorithm for it.
- In a sense, NP-complete problems are the hardest problems in NP.
- All known NP-complete problems are enormously hard to solve:
- All known algorithms for NP-complete problems run in worst-case exponential time.
- Most algorithms for NP-complete problems are infeasible for reasonably-sized inputs.

## How do we even know NP-complete problems exist in the first place?

## Satisfiability

- A propositional logic formula $\varphi$ is called satisfiable if there is some assignment to its variables that makes it evaluate to true.
- $p \wedge q$ is satisfiable.
- $p \wedge \neg p$ is unsatisfiable.
- $p \rightarrow(q \wedge \neg q)$ is satisfiable.
- An assignment of true and false to the variables of $\varphi$ that makes it evaluate to true is called a satisfying assignment.

## SAT

- The boolean satisfiability problem (SAT) is the following:

Given a propositional logic formula $\varphi$, is $\varphi$ satisfiable?

- Formally:

$$
\begin{aligned}
& \text { SAT }=\{\langle\varphi\rangle \mid \underset{\text { formula }}{ }\}
\end{aligned}
$$

## Theorem (Cook-Levin): SAT is NP-complete.

A Simpler NP-Complete Problem

## Literals and Clauses

- A literal in propositional logic is a variable or its negation:
- $X$
- $\neg y$
- But not $x \wedge y$.
- A clause is a many-way OR (disjunction) of literals.
- $\neg x \vee y \vee \neg z$
- $X$
- But not $x \vee \neg(y \vee z)$

## Conjunctive Normal Form

- A propositional logic formula $\varphi$ is in conjunctive normal form (CNF) if it is the many-way AND (conjunction) of clauses.
- ( $x \vee y \vee z) \wedge(\neg x \vee \neg y) \wedge(x \vee y \vee z \vee \neg w)$
- $x \vee z$
- But not $(x \vee(y \wedge z)) \vee(x \vee y)$
- Only legal operators are $\neg, \mathrm{v}, \wedge$.
- No nesting allowed.

## The Structure of CNF

$(x \vee y \vee \neg z) \wedge(\neg x \vee \neg y \vee z) \wedge(\neg x \vee y v \neg z)$

Each clause must have at least one
true literal in it.

## The Structure of CNF

$(x \vee y \vee \neg z) \wedge(\neg x \vee \neg y \vee z) \wedge(\neg x \vee y v \neg z)$

We should pick at least one true literal from each clause

## The Structure of CNF

$(\underbrace{x \vee y \vee \neg z}) \wedge(\underbrace{\neg x \vee \neg y \vee z}) \wedge(\underbrace{\neg x \vee y \vee \neg z})$
... subject to the constraint
that we never choose a literal and its negation

## 3-CNF

- A propositional formula is in 3-CNF if
- It is in CNF, and
- Every clause has exactly three literals.
- For example:
- ( $x \vee y \vee z) \wedge(\neg x \vee \neg y \vee z)$
- ( $x \vee x \vee x) \wedge(y \vee \neg y \vee \neg x) \wedge(x \vee y \vee \neg y)$
- But not ( $x \vee y \vee z \vee w) \wedge(x \vee y)$
- The language 3SAT is defined as follows:

## 3SAT $=\{\langle\varphi\rangle \mid \varphi$ is a satisfiable 3-CNF formula \}

## Theorem: 3SAT is NP-Complete

## Using the Cook-Levin Theorem

- When discussing decidability, we used the fact that $\mathrm{A}_{\mathrm{TM}} \notin \mathbf{R}$ as a starting point for finding other undecidable languages.
- Idea: Reduce $\mathrm{A}_{\mathrm{TM}}$ to some other language.
- When discussing NP-completeness, we will use the fact that 3SAT $\in$ NPC as a starting point for finding other NPC languages.
- Idea: Reduce 3SAT to some other language.

## NP-Completeness

Theorem: Let $L_{1}$ and $L_{2}$ be languages. If $L_{1} \leq_{\mathrm{P}} L_{2}$ and $L_{1}$ is NP-hard, then $L_{2}$ is NP-hard.

## NP-Completeness

Theorem: Let $L_{1}$ and $L_{2}$ be languages. If $L_{1} \leq_{\mathrm{P}} L_{2}$ and $L_{1}$ is NP-hard, then $L_{2}$ is NP-hard.
