# Create a profile

The screenshot shows a web browser window titled "FacePamphlet". The interface includes a menu bar with "File" and "Edit". Below the menu bar, there is a "Name" label followed by an empty text input field. To the right of the input field are three buttons: "Add", "Delete", and "Lookup". On the left side of the page, there is a vertical sidebar containing three sections, each with an empty text input field and a corresponding button: "Change Status", "Change Picture", and "Add Friend". The main content area of the browser is currently blank.

# Create a profile

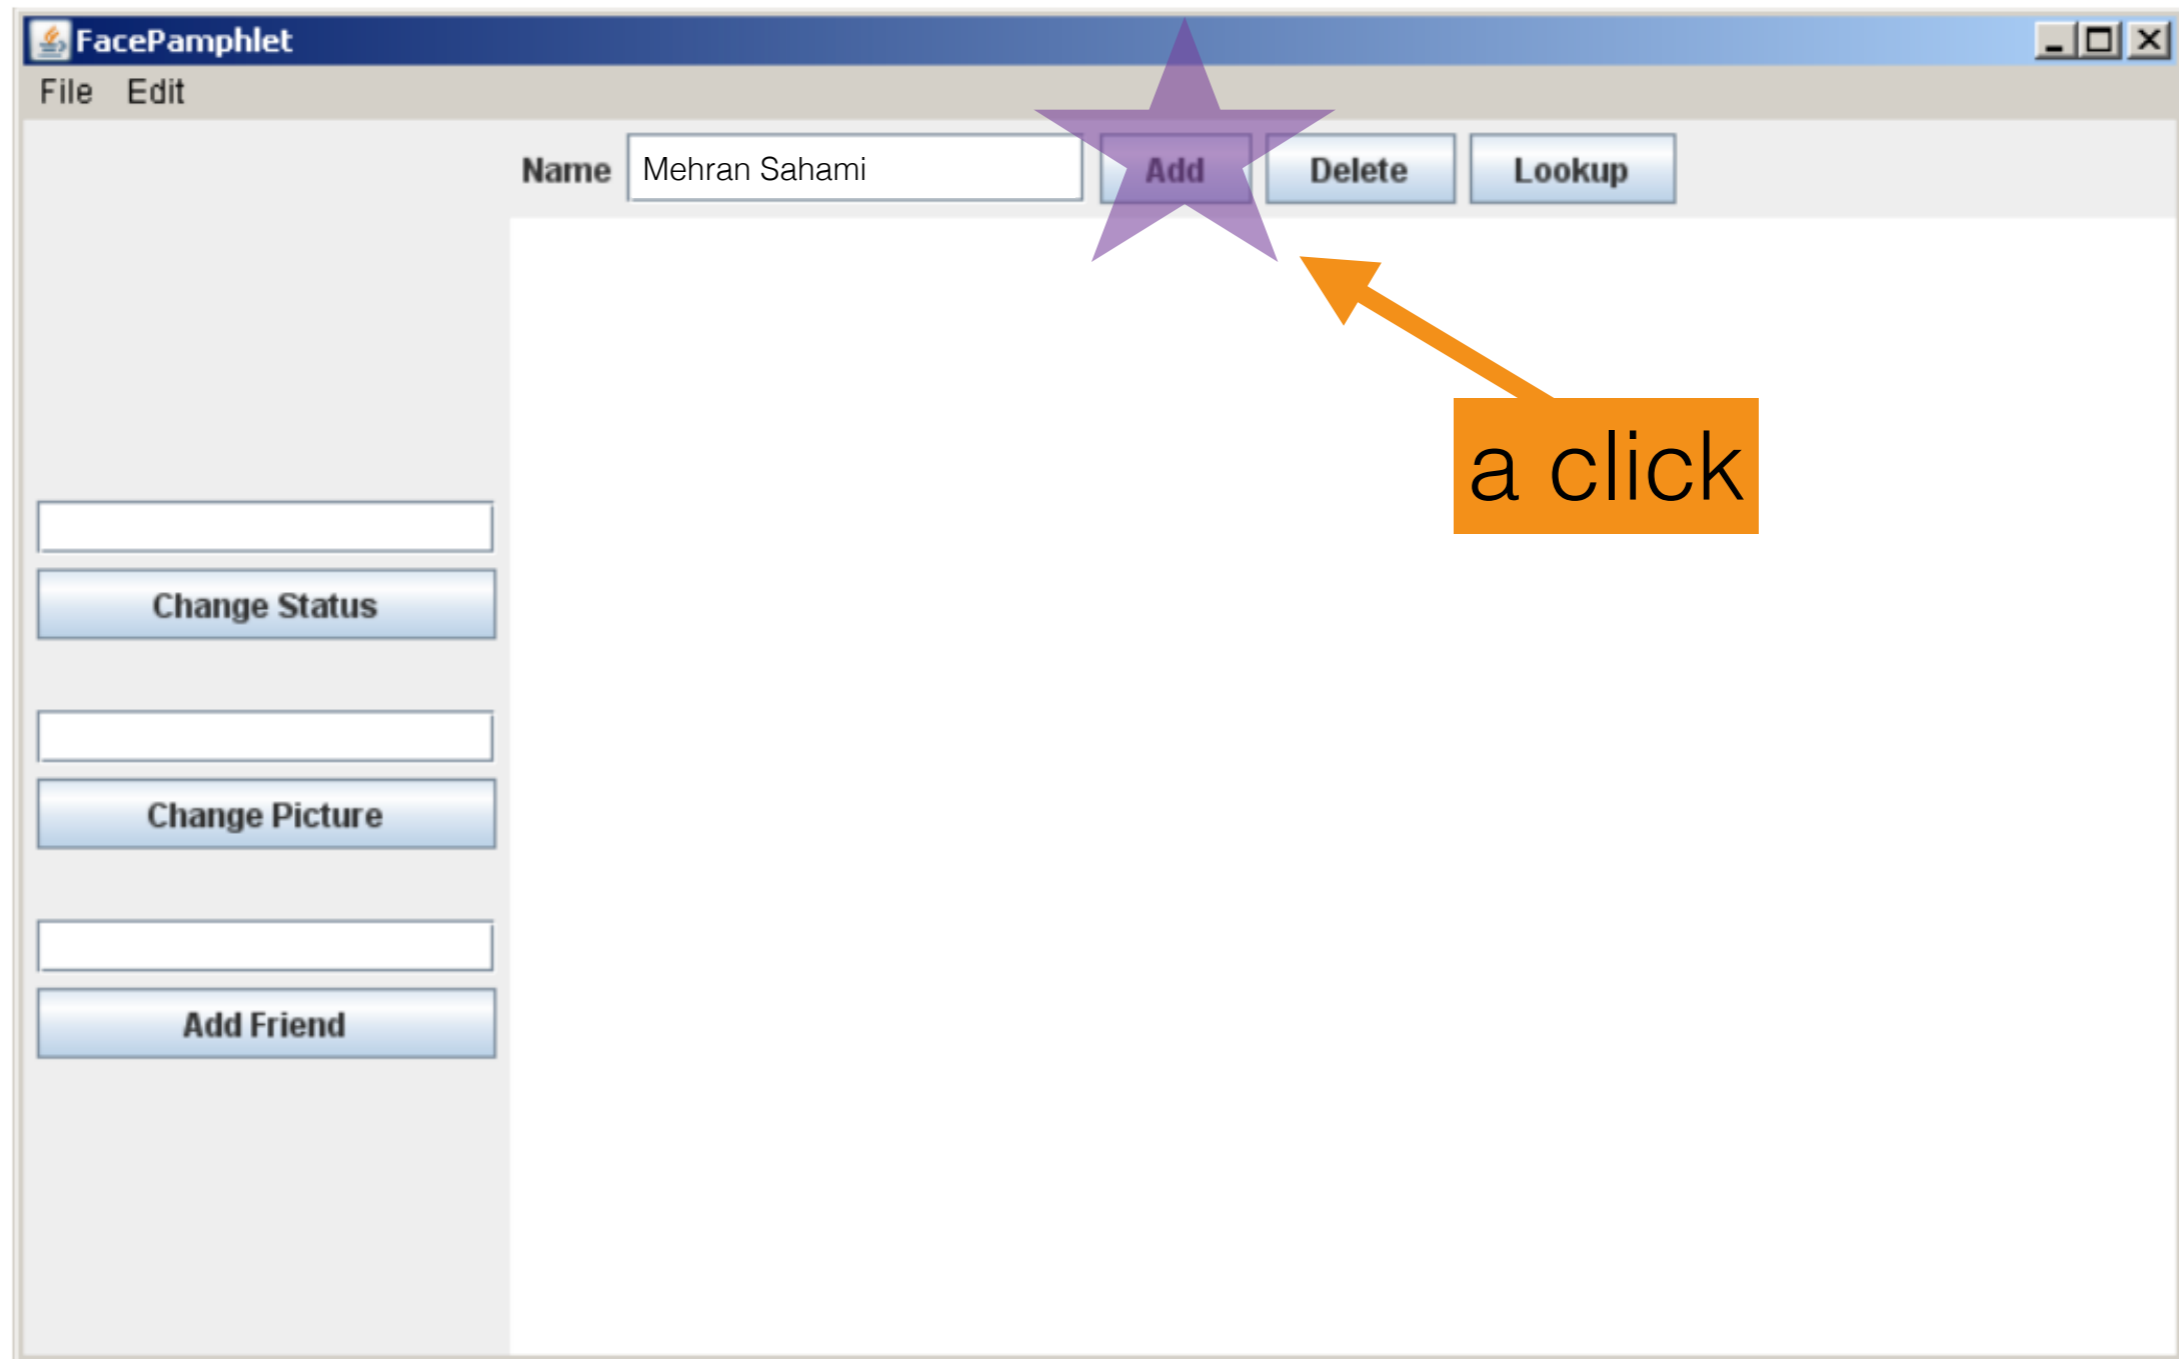

The screenshot shows a web browser window titled "FacePamphlet". The interface includes a menu bar with "File" and "Edit". Below the menu bar, there is a "Name" label followed by a text input field containing "Mehran Sahami". To the right of the input field are three buttons: "Add", "Delete", and "Lookup". On the left side of the page, there is a vertical sidebar with three sections, each consisting of a text input field and a button below it: "Change Status", "Change Picture", and "Add Friend". The main content area of the browser is currently blank.

# Create a profile

The screenshot shows a web browser window titled "FacePamphlet". The browser's address bar and menu bar are visible, with "File" and "Edit" as menu options. The main content area features a form for creating a profile. At the top of the form, there is a label "Name" followed by a text input field containing "Mehran Sahami". To the right of this input field are three buttons: "Add", "Delete", and "Lookup". A large purple star is overlaid on the "Add" button. Below the name input field, there is a vertical sidebar on the left side of the page. This sidebar contains three sections, each with a text input field and a button below it: "Change Status", "Change Picture", and "Add Friend". The main content area below the name input field is currently empty.

# Create a profile

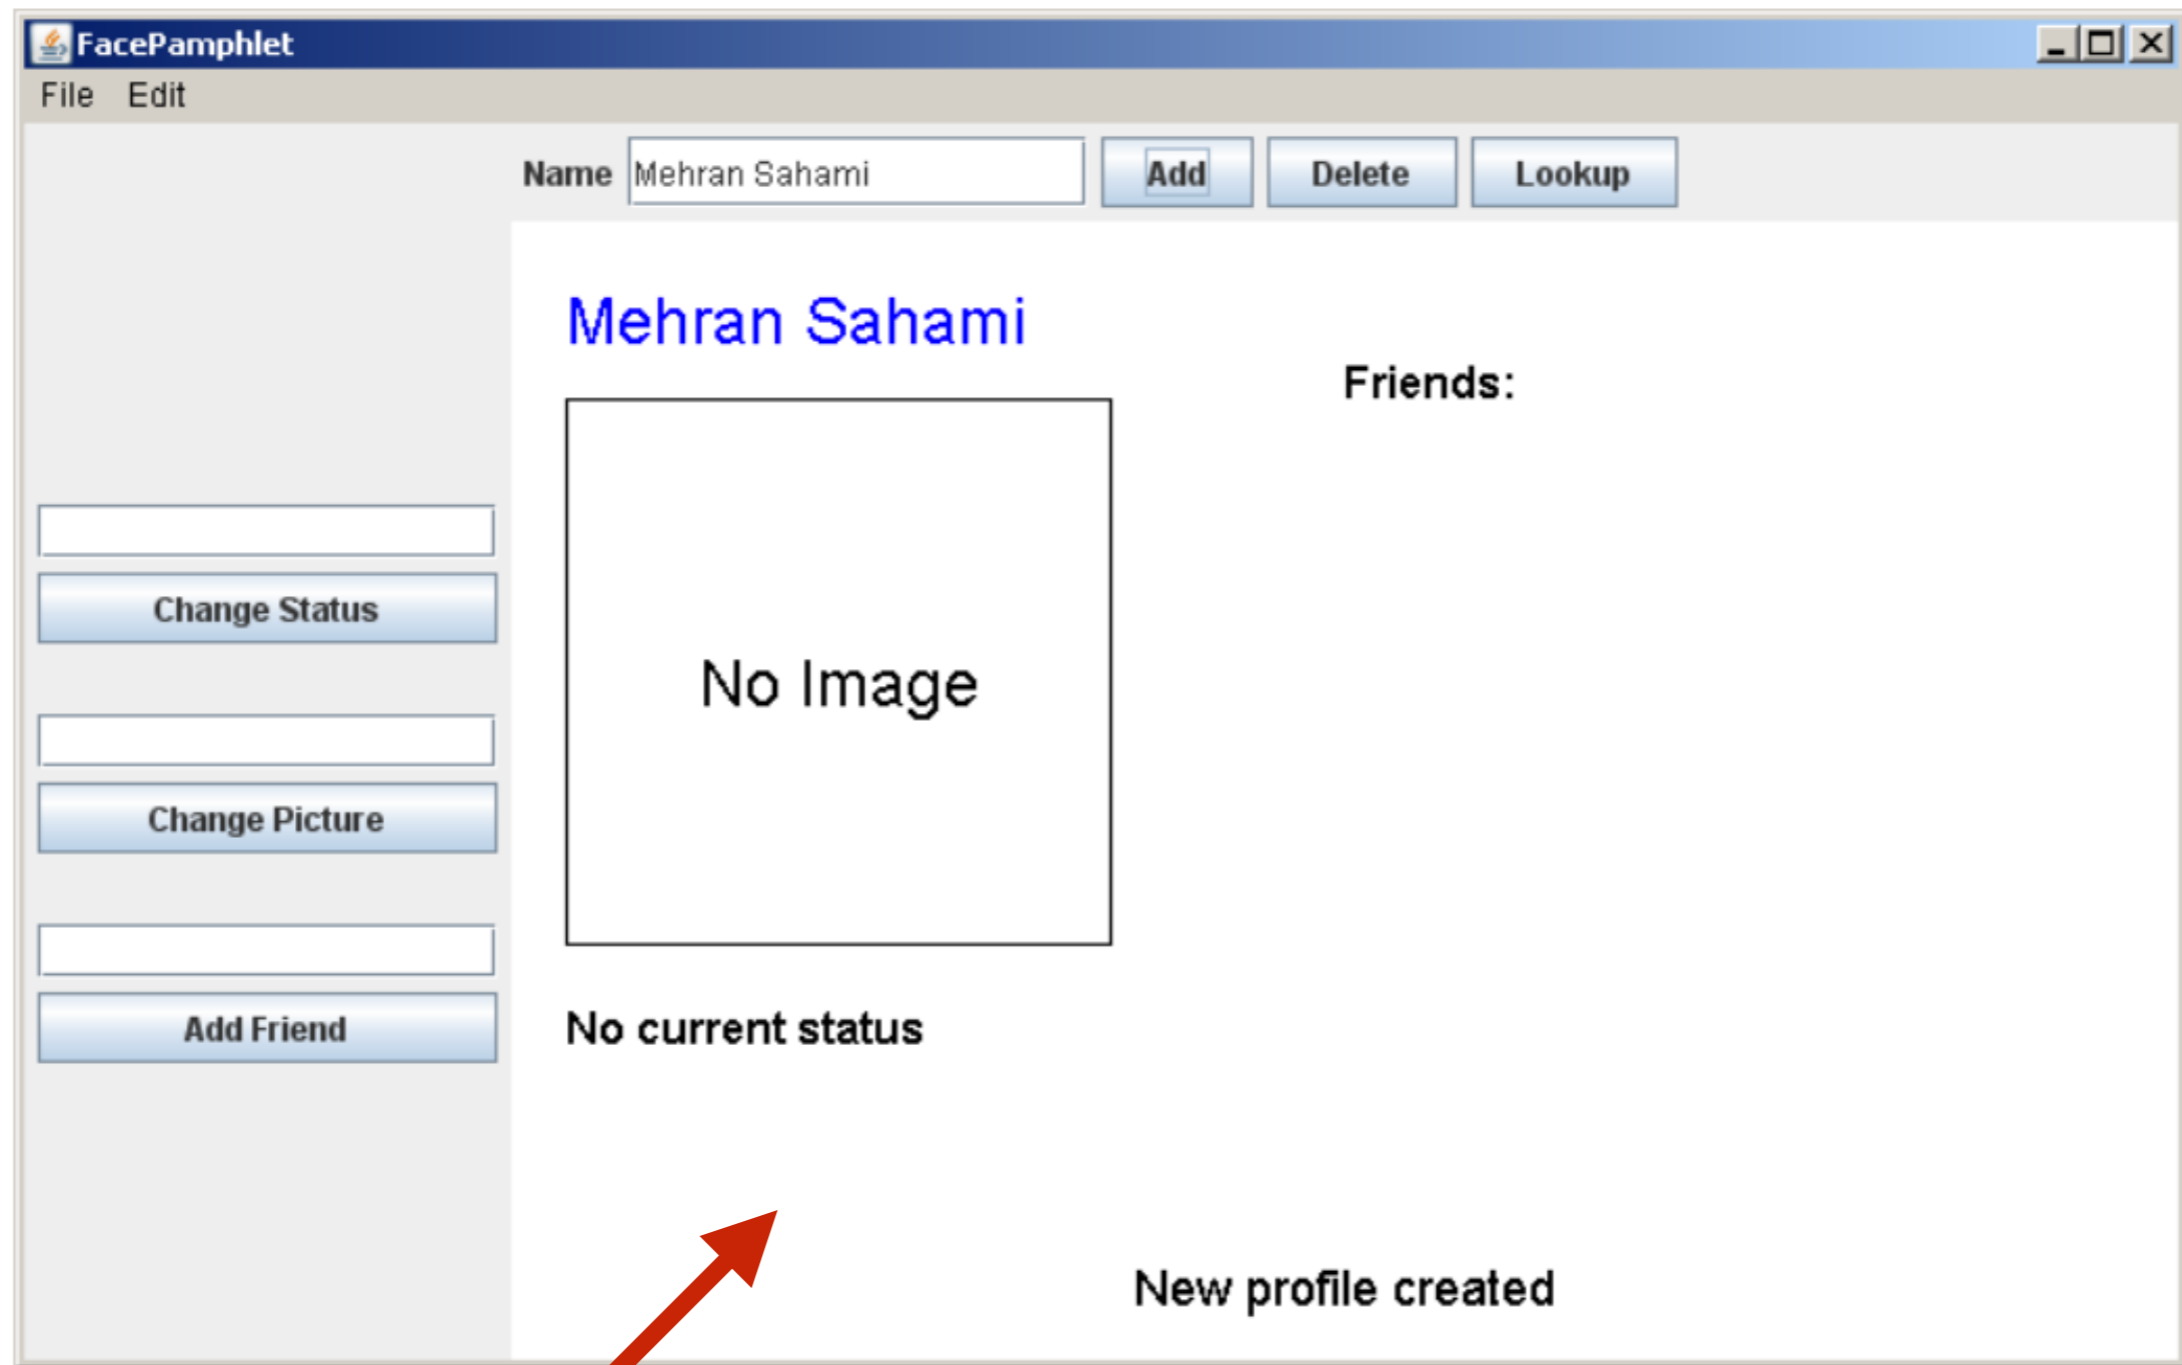

# Lookup an existing profile

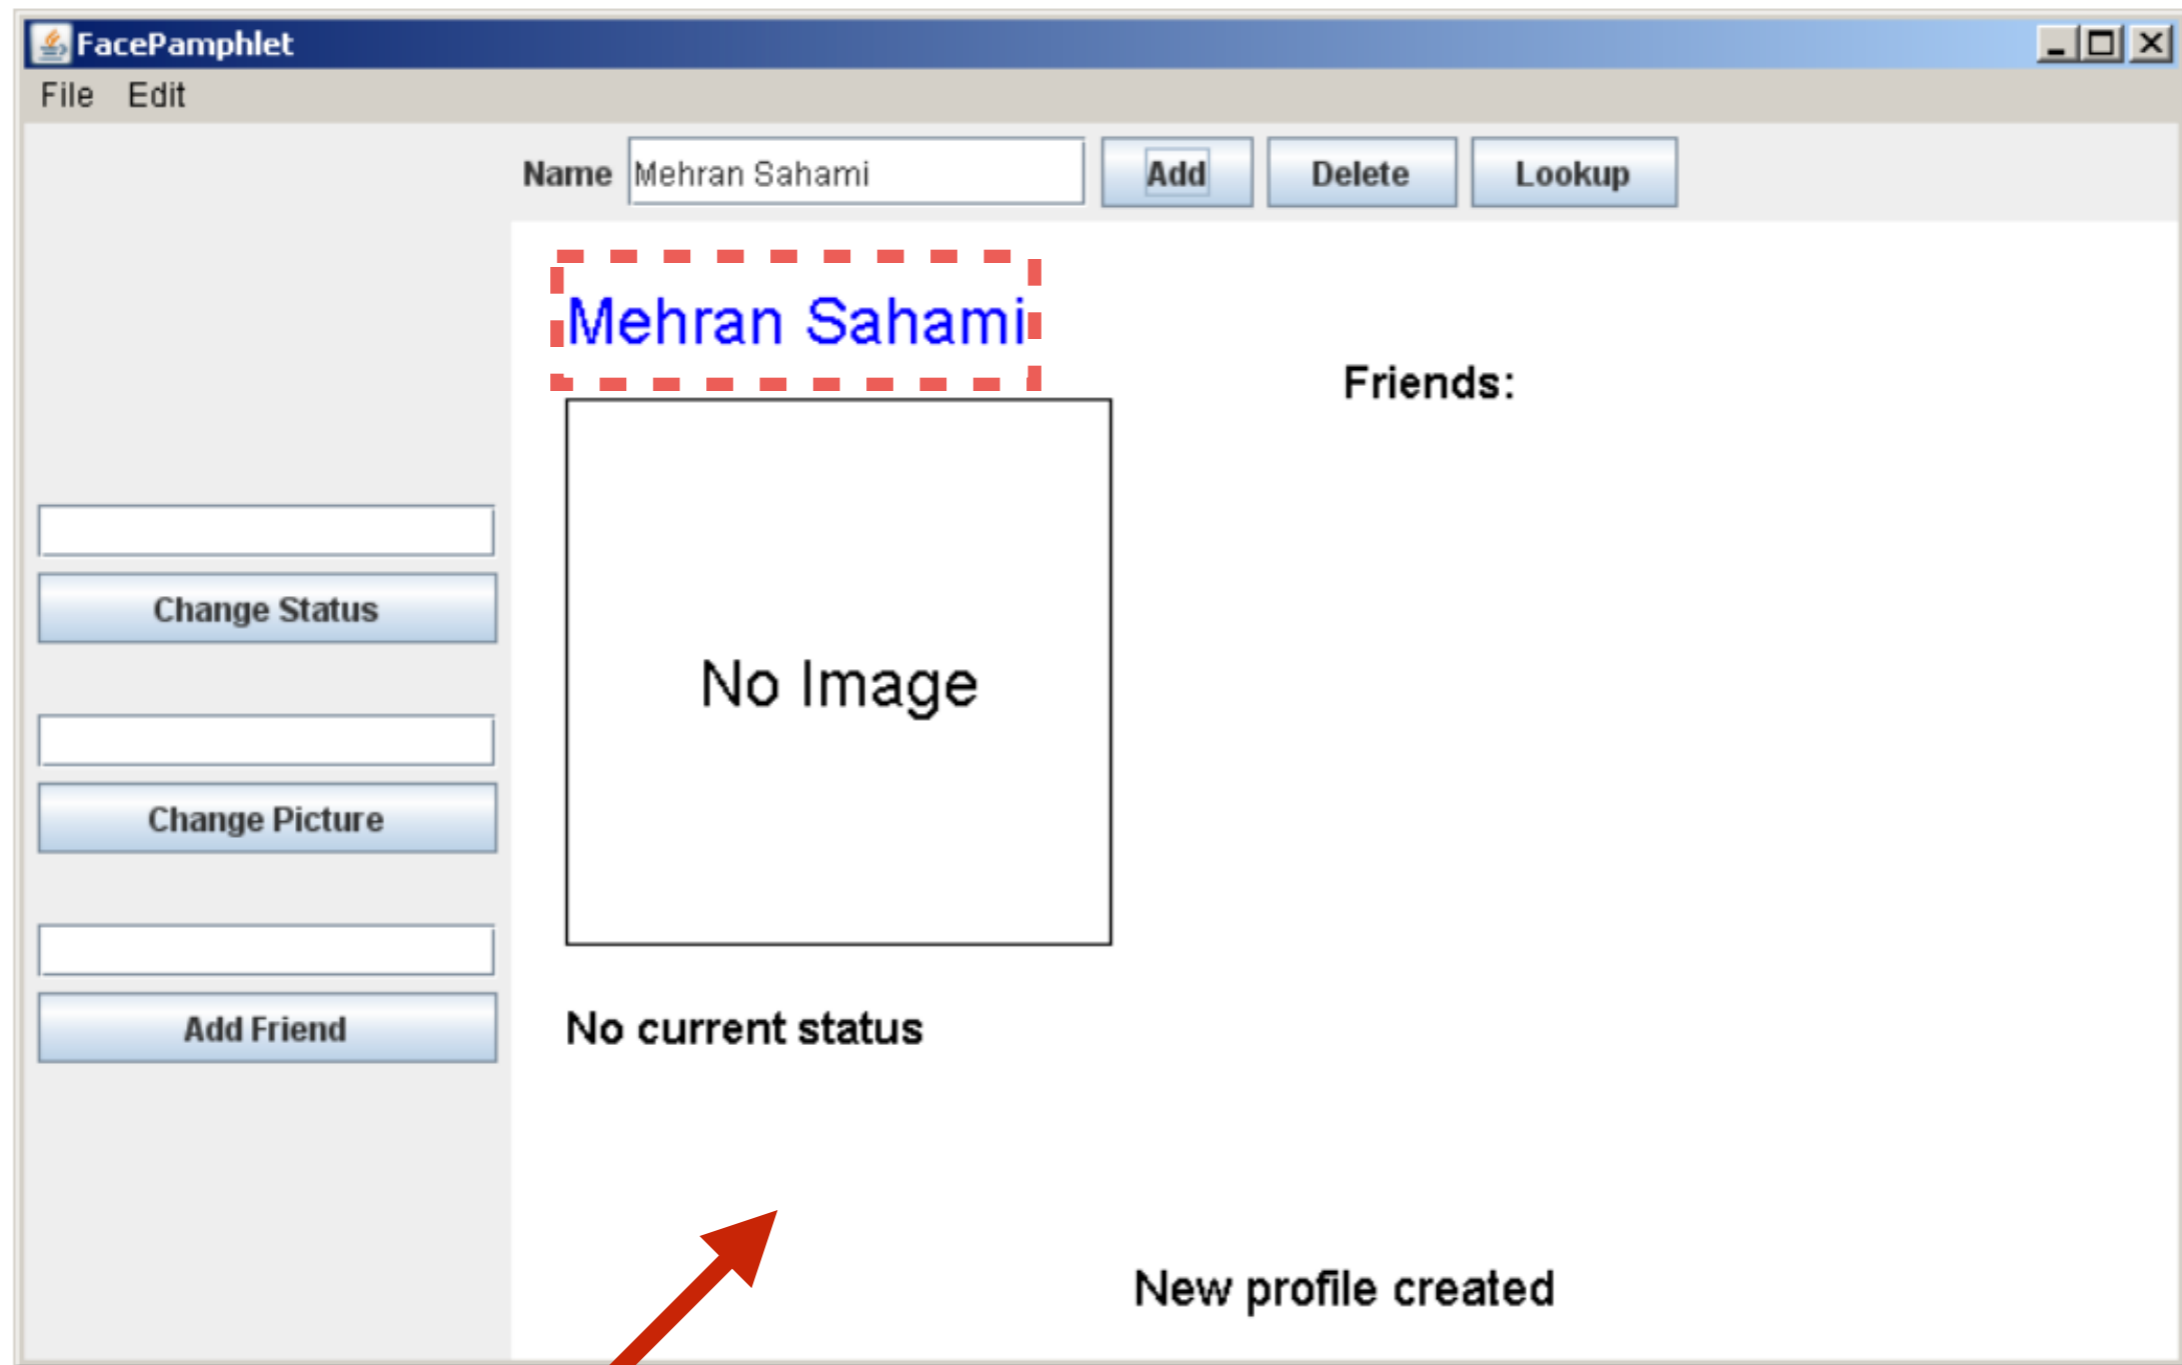

The screenshot shows a web browser window titled "FacePamphlet" with a menu bar containing "File" and "Edit". The main interface features a search bar with the text "Name Mehran Sahami" and three buttons: "Add", "Delete", and "Lookup". Below the search bar, the profile for "Mehran Sahami" is displayed. The name "Mehran Sahami" is shown in blue text. To the right of the name is the label "Friends:". Below the name is a large rectangular box containing the text "No Image". Below this box is the text "No current status". At the bottom right of the profile area, the text "New profile created" is displayed. On the left side of the interface, there are three input fields, each followed by a button: "Change Status", "Change Picture", and "Add Friend".

The screenshot shows a web application window titled "FacePamphlet" with a menu bar containing "File" and "Edit". At the top, there is a "Name" field containing "Julie Zelenski" and three buttons: "Add", "Delete", and "Lookup". A purple star is overlaid on the "Add" button. Below this, the profile for "Mehran Sahami" is displayed. It features a profile picture of a man with glasses, a status field containing "coding like a fiend", and a "Change Status" button. Below the status field is a file input field containing "MehranS.jpg" and a "Change Picture" button. At the bottom of the profile section is an "Add Friend" button. To the right of the profile picture, the text "Friends:" is visible. Below the profile picture, the text "Mehran Sahami is coding like a fiend" is displayed. At the bottom right of the window, the text "Picture updated" is shown.

The screenshot shows the 'FacePamphlet' application window. At the top, there is a menu bar with 'File' and 'Edit'. Below the menu bar, there is a search bar labeled 'Name' containing the text 'Mehran Sahami'. To the right of the search bar are three buttons: 'Add', 'Delete', and 'Lookup'. A purple star is overlaid on the 'Lookup' button. Below the search bar, there is a large empty area. On the left side of the window, there is a sidebar with three sections: 1. A text input field containing 'coding like a fiend' and a 'Change Status' button below it. 2. A text input field containing 'MehranS.jpg' and a 'Change Picture' button below it. 3. A text input field containing 'Mehran Sahami' and an 'Add Friend' button below it. At the bottom center of the window, the text 'Profile of Julie Zelenski deleted' is displayed.

starter classes

- `FacePamphletConstants.java` — This interface is provided for you and defines a set of constants that you can use in the rest of the program simply by having your classes implement the `FacePamphletConstants` interface, as they do in the starter files.

- `FacePamphletConstants.java` — This interface is provided for you and defines a set of constants that you can use in the rest of the program simply by having your classes implement the `FacePamphletConstants` interface, as they do in the starter files.
- `FacePamphlet.java` — This is the main program class that ties together the application. It has the responsibility for creating the other objects and for responding to the interactors in the program.

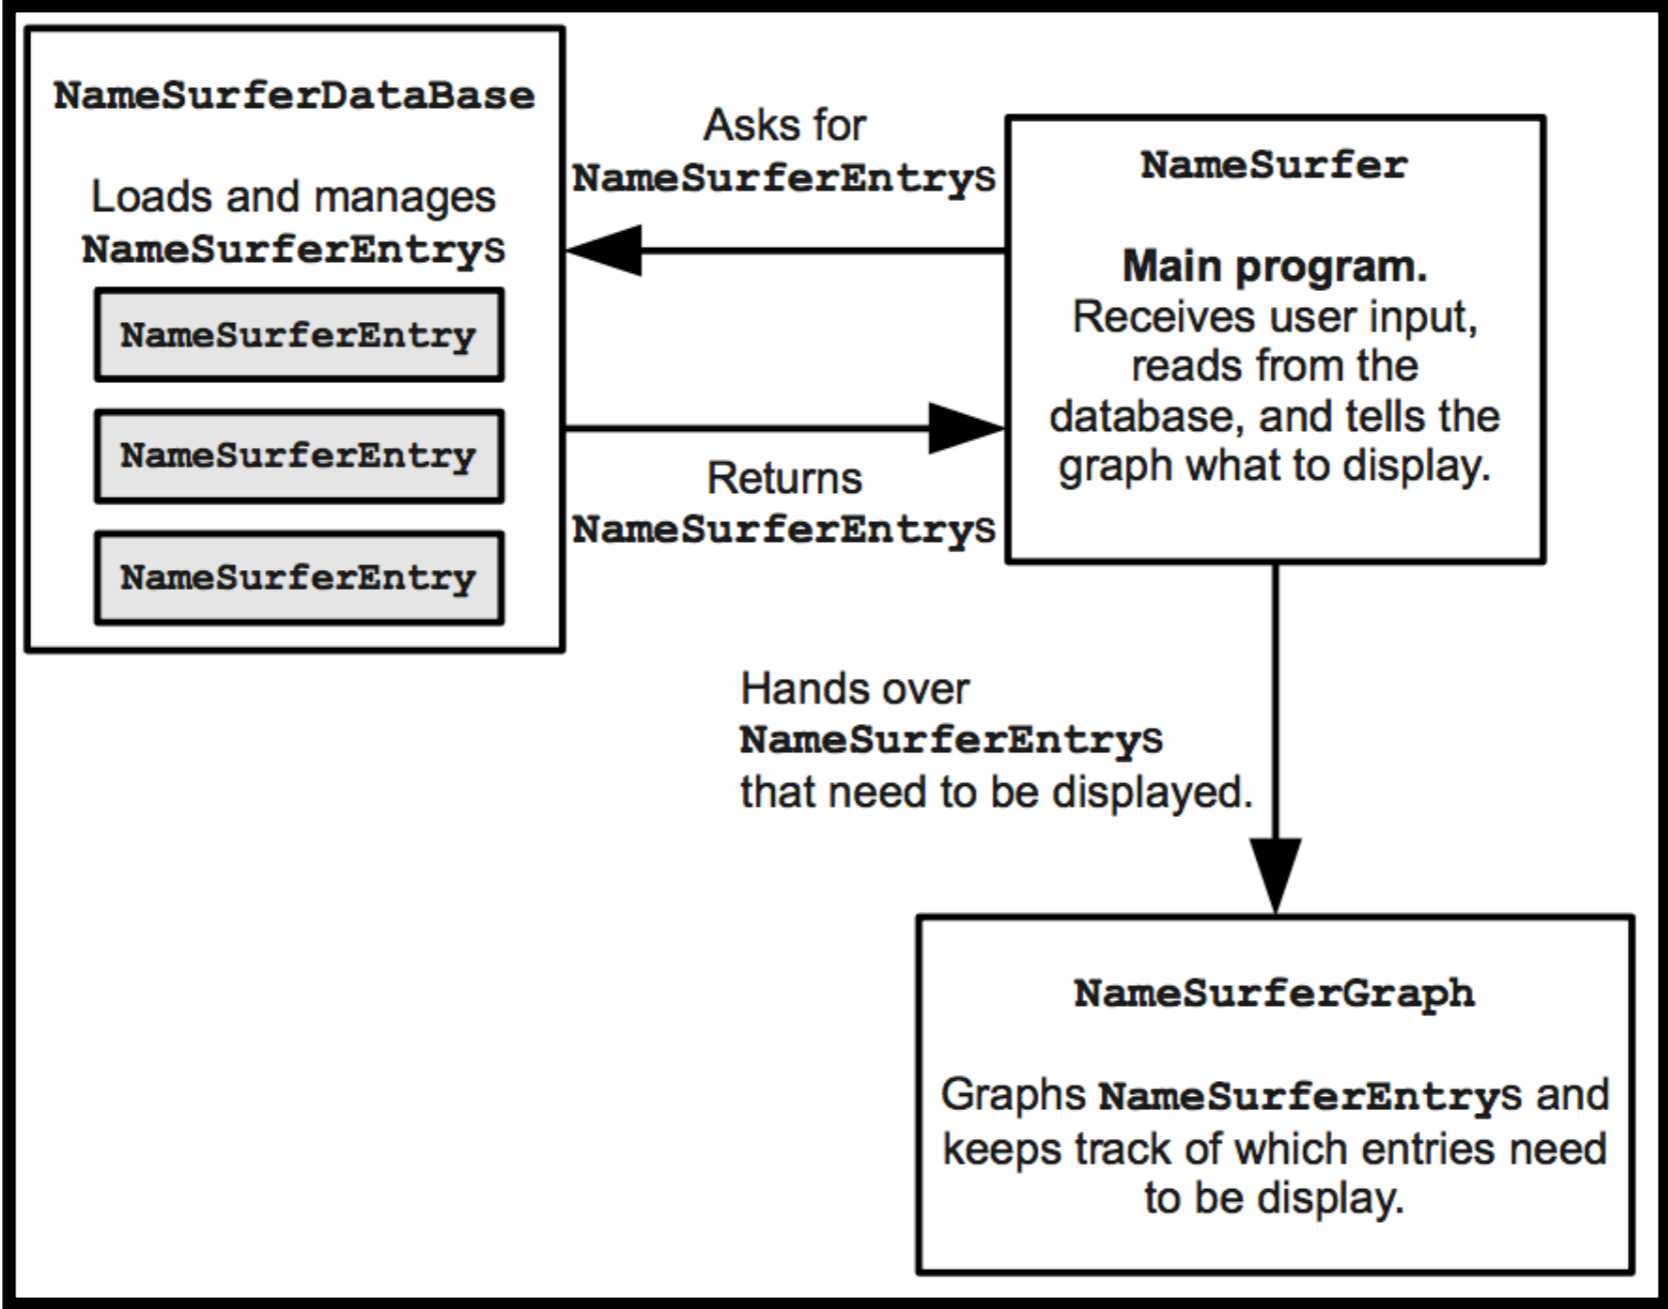

- `FacePamphletConstants.java` — This interface is provided for you and defines a set of constants that you can use in the rest of the program simply by having your classes implement the `FacePamphletConstants` interface, as they do in the starter files.
- `FacePamphlet.java` — This is the main program class that ties together the application. It has the responsibility for creating the other objects and for responding to the interactors in the program.
- `FacePamphletCanvas.java` — This class is a subclass of `GCanvas` that displays profiles as well as Application Messages on the display canvas. This canvas does not need to worry about updating the display as a result of window resizing. You got enough practice with that in `NameSurfer`, so you don't need to worry about that again here (unless you'd like to add it as a program extension).

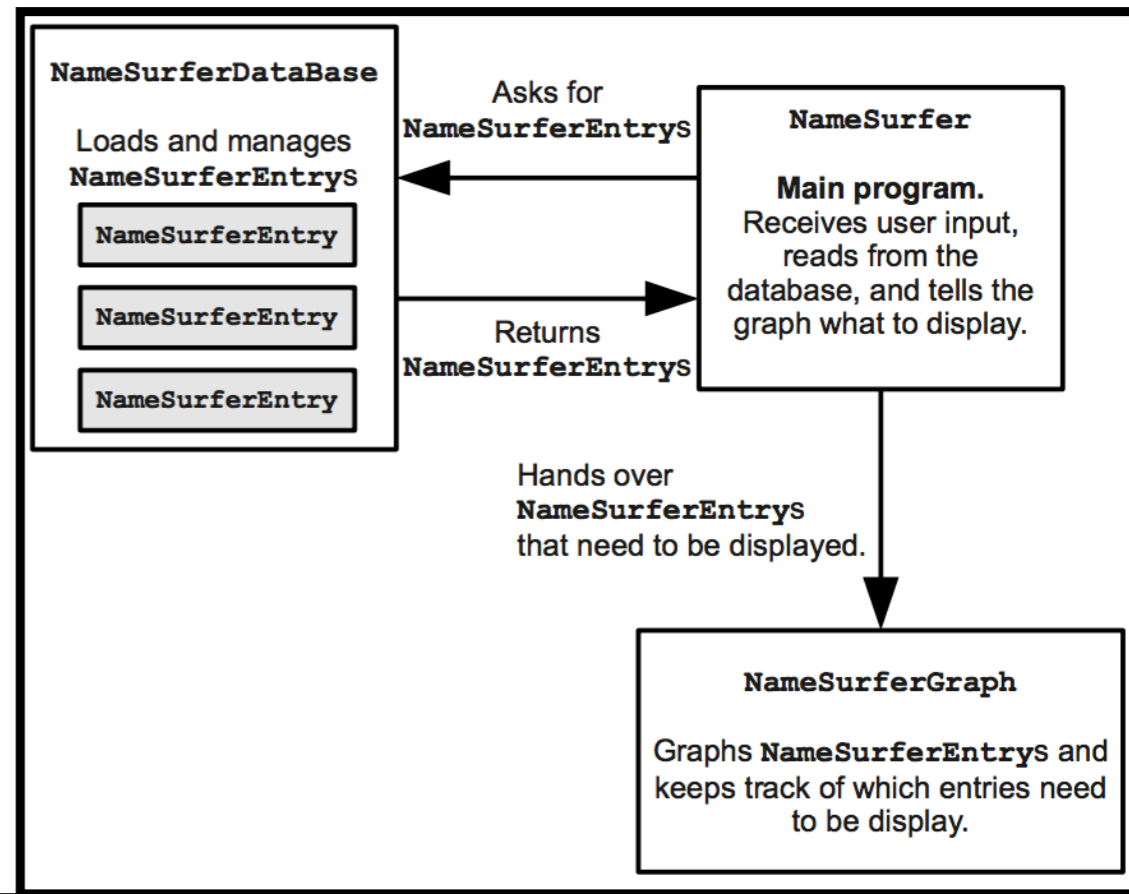

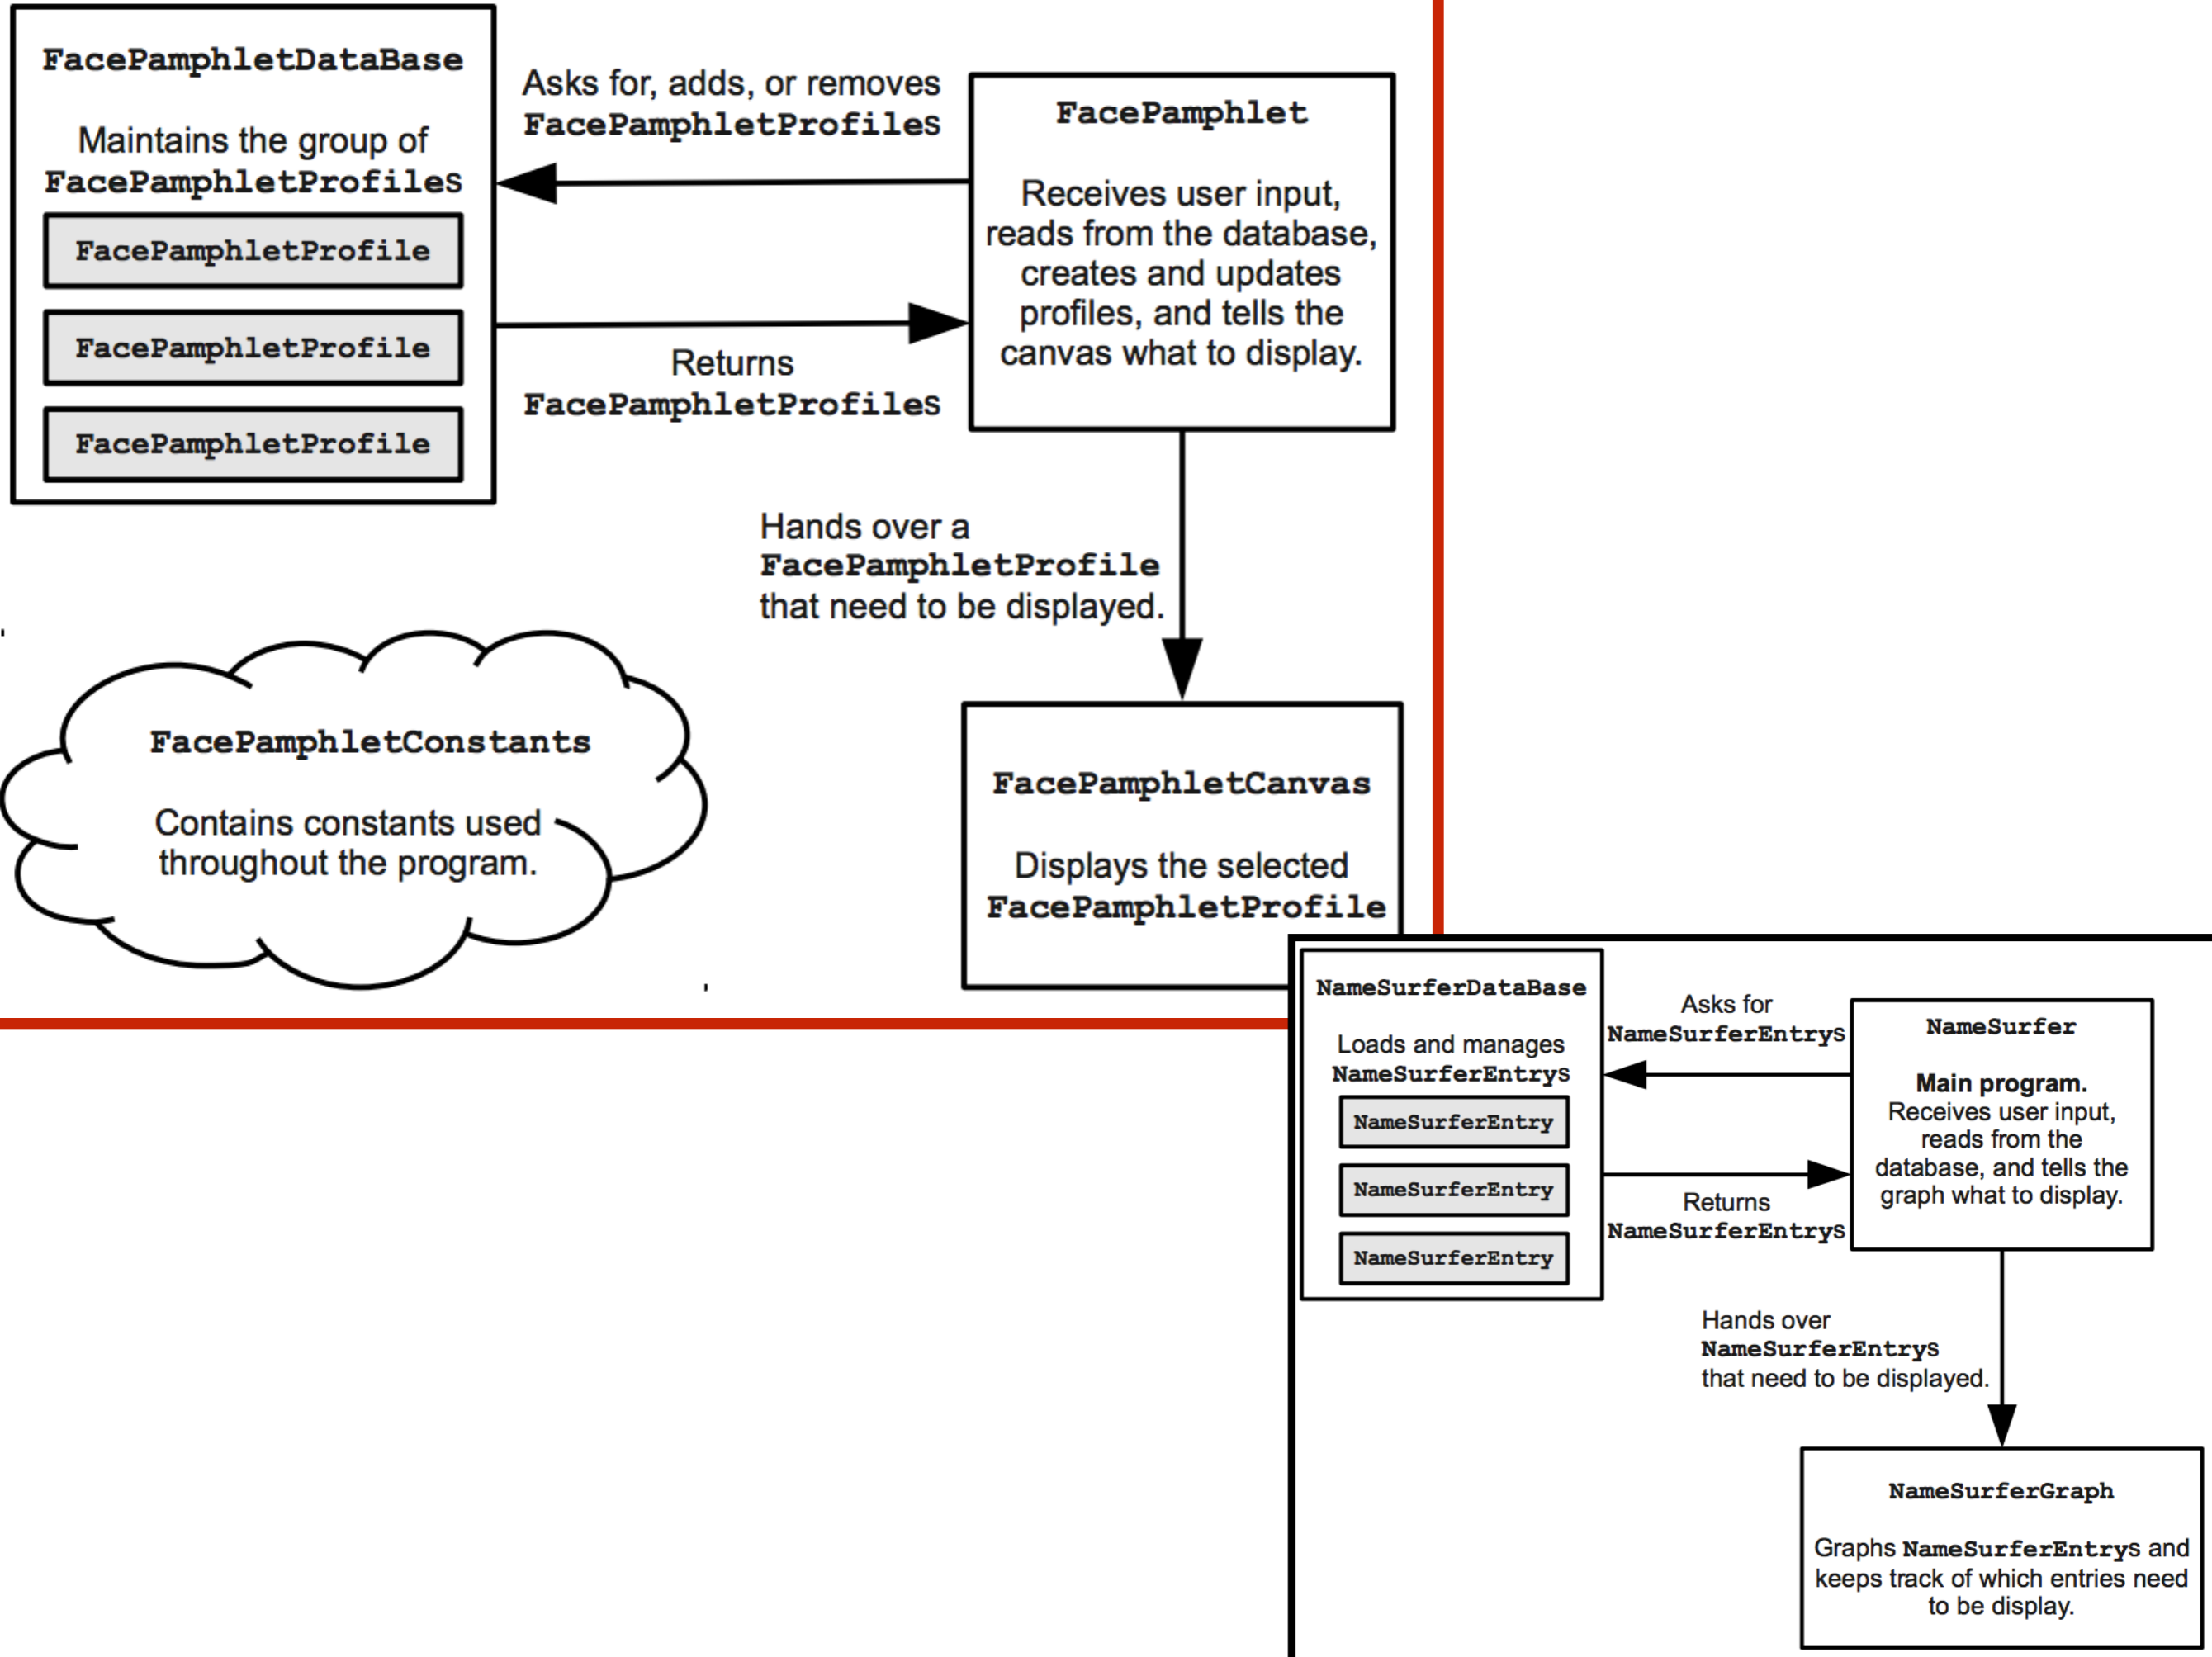

- `FacePamphletConstants.java` — This interface is provided for you and defines a set of constants that you can use in the rest of the program simply by having your classes implement the `FacePamphletConstants` interface, as they do in the starter files.

- `FacePamphletCanvas.java` — This class is a subclass of `GCanvas` that displays profiles as well as Application Messages on the display canvas. This canvas does not need to worry about updating the display as a result of window resizing. You got enough practice with that in `NameSurfer`, so you don't need to worry about that again here (unless you'd like to add it as a program extension).
- `FacePamphletProfile.java` — This class should encapsulate all the information for a single profile in the social network. Given a `FacePamphletProfile` object, you can find out that profile's name, associated image (or lack thereof), associated status (or lack thereof), and the list of names of friends for that profile.

- `FacePamphletConstants.java` — This interface is provided for you and defines a set of constants that you can use in the rest of the program simply by having your classes implement the `FacePamphletConstants` interface, as they do in the starter files.
- `FacePamphlet.java` — This is the main program class that ties together the application. It has the responsibility for creating the other objects and for responding to the interactors in the program.
- `FacePamphletCanvas.java` — This class is a subclass of `GCanvas` that displays profiles as well as Application Messages on the display canvas. This canvas does not need to worry about updating the display as a result of window resizing. You got enough practice with that in `NameSurfer`, so you don't need to worry about that again here (unless you'd like to add it as a program extension).
- `FacePamphletProfile.java` — This class should encapsulate all the information for a single profile in the social network. Given a `FacePamphletProfile` object, you can find out that profile's name, associated image (or lack thereof), associated status (or lack thereof), and the list of names of friends for that profile.
- `FacePamphletDatabase.java` — This class keeps track of all the profiles in the `FacePamphlet` social network. Note that this class is completely separate from the user interface. It is responsible for managing profiles (adding, deleting, looking-up).
