# Thinking Recursively Part III 

## Assignment 3

## Assignment 3

- Assignment 3 (Recursion!) goes out today. It's due one week from today at the start of class.
- You are permitted to work with a partner on this assignment. Please make sure you understand the requirements for doing so before beginning. They're on the website.
- There are two optional warm-up problems. We'll release solutions on Wednesday.
- Anton is holding YEAH hours (Your Early Assignment Help hours) tonight in 420-040 from 7PM - 8PM. Highly recommended!

## Analyzing Our Function

- Useful fact: Given any $n$-element set, there are $2^{n}$ subsets of that set.
- The returned collection of sets will need to have space for at least $2^{n}$ sets.
- For a modest value of $n$ (say, $n=50$ ), this will completely exceed system resources!

## Reducing Memory Usage

- In many cases, we need to perform some operation on each subset, but don't need to actually store those subsets.
- Idea: Generate each subset, process it, and then discard it.
- Question: How do we do this?

## Permutations

- A permutation of a sequence is a sequence with the same elements, though possibly in a different order.

## Permutations

- A permutation of a sequence is a sequence with the same elements, though possibly in a different order.

## Permutations

- A permutation of a sequence is a sequence with the same elements, though possibly in a different order.
- For example:
- E Pluribus Unum
- E Unum Pluribus
- Pluribus E Unum
- Pluribus Unum E
- Unum E Pluribus
- Unum Pluribus E

## Your Action Items

- Start working on Assignment 3.
- Don't put this one off! It's going to require some thought.
- Stop by YEAH Hours to get some help on how to get started on this assignemtn.
- Read Chapter 8, if you haven't yet done so.
- Start reading Chapter 9 in preparation for Wednesday’s lecture.

## Next Time

- Generating Combinations
- How do we find the best group of people to pick for a task?
- Recursive Backtracking
- How do we determine whether something is feasible?
