

Tautologies

Tautologies are sentences that cannot be false, due to their structure and the meanings of the truth-functional connectives they contain.

A	B	C	Main connective
T	T	T	T
T	T	F	T
T	F	T	T
T	F	F	T
F	T	T	T
F	T	F	T
F	F	T	T
F	F	F	T

Tautological Equivalence

We can use test two sentences for tautological equivalence by creating a joint truth table for the sentences and determining whether the values under their main connectives are the same in all rows.

A	B	C	S ₁ : Main connective	S ₂ : Main connective
T	T	T	T	T
T	T	F	F	F
T	F	T	F	F
T	F	F	T	T
F	T	T	T	T
F	T	F	F	F
F	F	T	T	T
F	F	F	F	F

Logical Equivalence

Two sentences that are not tautologically equivalent are considered to be **logically equivalent** if the only mismatches under their main connectives occur in rows that are impossible if we consider the meanings of the predicates.

S_1 : Main connective

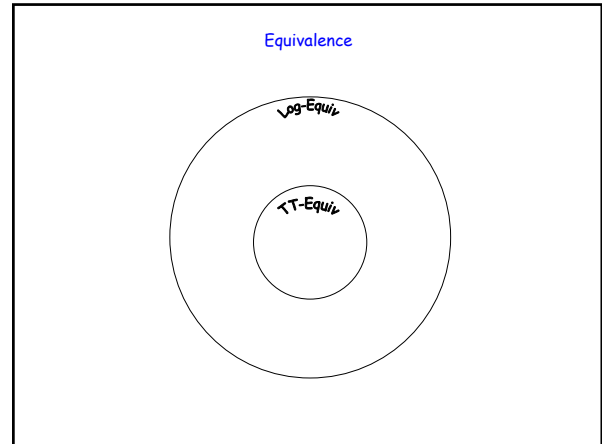

↓

S_2 : Main connective

↓

$L(a,b)$	$L(b,a)$
T	T	T	F
T	F	F	F
T	T	F	F
T	F	T	T
F	T	T	T
F	F	F	F
F	T	T	T
F	F	F	F

(where L means Larger)

Important Equivalences Discussed in the Text

Idempotent Laws	$P \vee P \Leftrightarrow P$ $P \wedge P \Leftrightarrow P$
Double Negation	$\neg(\neg P) \Leftrightarrow P$
Commutative Laws	$P \vee Q \Leftrightarrow Q \vee P$ $P \wedge Q \Leftrightarrow Q \wedge P$
Associative Laws	$(P \vee Q) \vee R \Leftrightarrow P \vee (Q \vee R)$ $(P \wedge Q) \wedge R \Leftrightarrow P \wedge (Q \wedge R)$
Distributive Laws	$P \vee (Q \wedge R) \Leftrightarrow (P \vee Q) \wedge (P \vee R)$ $P \wedge (Q \vee R) \Leftrightarrow (P \wedge Q) \vee (P \wedge R)$
DeMorgan's Laws	$\neg(P \wedge Q) \Leftrightarrow \neg P \vee \neg Q$ $\neg(P \vee Q) \Leftrightarrow \neg P \wedge \neg Q$

Consequence

The notion that we are really interested in is **consequence**, since in a proof we are trying to show that a conclusion Q is a consequence of some premises P_1, P_2, \dots, P_n .

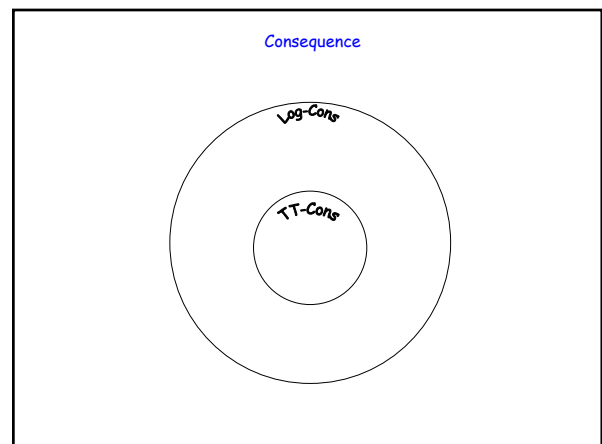

Consequence

The notion that we are really interested in is **consequence**, since in a proof we are trying to show that a conclusion Q is a consequence of some premises P_1, P_2, \dots, P_n .

Q is a **tautological consequence** of P_1, P_2, \dots, P_n if every row in a joint truth table that assigns T to each of P_1, P_2, \dots, P_n also assigns T to Q.

Q is a **logical consequence** of P_1, P_2, \dots, P_n if Q is true in every possible circumstance where P_1, P_2, \dots, P_n are true.

.....	P_1	P_2	...	P_n	Q

Consequence

Be sure you read and understand the **Con** rules in Fitch:

Taut Con: a theorem prover that ignores the meanings of predicates

FO Con: pays attention to the identity predicate

Ana Con: pays attention to the identity predicate and most blocks world predicates

Consequence

Be sure you read and understand the **Con** rules in Fitch:

Taut Con: a theorem prover that ignores the meanings of predicates

FO Con: pays attention to the identity predicate

Ana Con: pays attention to the identity predicate and most blocks world predicates

Larger(b, a)

Smaller(a, b)
