# o4: Conditional Probability and Bayes

Jerry Cain April 8<sup>th</sup>, 2024

Lecture Discussion on Ed

# Conditional Probability

### Dice, our misunderstood friends

```
Roll two, fair 6-sided dice,
yielding values D_1 and D_2.
Let E be event: D_1 + D_2 = 4.
                                 Let F be event: D_1 = 2.
What is P(E)?
                                  What is P(E, knowing F already observed)?
|S| = 36
E = \{(1,3), (2,2), (3,1)\}
P(E) = 3/36 = 1/12
```

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

### **Conditional Probability**

Event  $\rightarrow$ 

The **conditional probability** of *E* given *F* is the probability that *E* occurs given that F has already occurred. This is known as conditioning on F.

Written as:P(E|F)Means:"P(E, knowing F already observed)"Sample space  $\rightarrow$ all possible outcomes in F

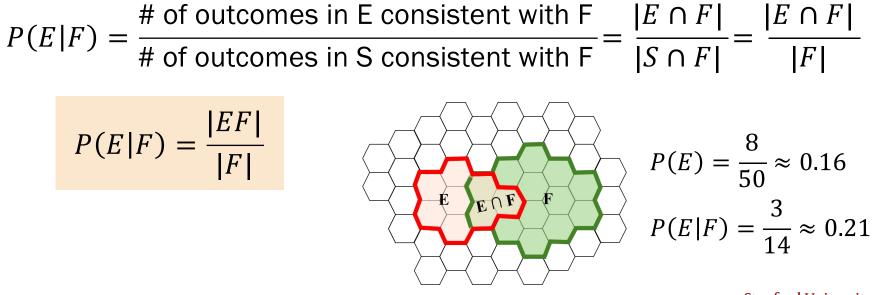

all possible outcomes in  $E \cap F$ 

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

### Conditional Probability, equally likely outcomes

The **conditional probability** of *E* given *F* is the probability that *E* occurs given that F has already occurred. This is known as conditioning on F.

### With equally likely outcomes:

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

Slicing up the spar	n	$P(E F) = \frac{ EF }{ F }$	Equally likely outcomes		
<ul><li>24 emails are sent, 6 ea</li><li>10 of the 24 emails are</li><li>All possible outcomes are</li></ul>	are spam.				
Let $E$ = user 1 receives 3 spam emails. What is $P(E)$ ?	Let $F$ = user 2 receives 6 spam emails. What is $P(E F)$ ?		er 3 receives spam emails. (G F)?		

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

### Slicing up the spam

 $P(E|F) = \frac{|EF|}{|E|}$ 

Equally likely outcomes

24 emails are sent, 6 each to 4 users.

- 10 of the 24 emails are spam.
- All possible outcomes are equally likely.

Let F = user 2 receives Let E = user 1 receives Let G = user 3 receives 3 spam emails. 6 spam emails. 5 spam emails. What is P(E)? What is P(E|F)? What is P(G|F)?  $P(G|F) = \frac{\binom{4}{5}\binom{14}{1}}{\binom{18}{5}}$  $P(E|F) = \frac{\binom{4}{3}\binom{14}{3}}{\binom{18}{5}}$  $P(E) = \frac{\binom{10}{3}\binom{14}{3}}{\binom{24}{6}}$ = 0 $\approx 0.3245$  $\approx 0.0784$ No way to choose 5 spam from 4 remaining spam emails! Stanford University 7

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

### Conditional probability in general

General definition of conditional probability:

$$P(E|F) = \frac{P(EF)}{P(F)}$$

The Chain Rule (aka Product rule):

$$P(EF) = P(F)P(E|F)$$

These properties hold even when outcomes are not equally likely.

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

# NETELX

 $P(E|F) = \frac{P(EF)}{P(F)}$  Definition of Cond. Probability

Let E = a user watches Life is Beautiful. What is P(E)?

Equally likely outcomes?

 $S = \{ watch, not watch \}$  $E = \{ watch \}$ P(E) = 1/2 ?

 $\mathbf{\nabla} P(E) = \lim_{n \to \infty} \frac{n(E)}{n} \approx \frac{\# \text{ people who have watched movie}}{\# \text{ people on Netflix}}$ 

 $= 10,234,231 / 50,923,123 \approx 0.20$ 

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

 $P(E|F) = \frac{P(EF)}{P(F)}$  Definition of Cond. Probability

#### Let *E* be the event that a user watches the given movie.

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

Let E = a user watches Life is Beautiful.

Let F = a user watches Amelie.

What is the probability that a user watches Life is Beautiful, given they watched Amelie?

P(E|F)

Definition of

 $P(E|F) = \frac{P(EF)}{P(F)}$  Definition of Cond. Probability

 $P(E|F) = \frac{P(EF)}{P(F)} = \frac{\frac{\# \text{ people who have watched both}}{\# \text{ people on Netflix}}}{\frac{\# \text{ people on Netflix}}{\# \text{ people on Netflix}}}$  $= \frac{\# \text{ people who have watched both}}{\# \text{ people who have watched Amelie}}$ 

 $\approx 0.42$ 

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

 $P(E|F) = \frac{P(EF)}{P(F)}$  Definition of Cond. Probability

Let *E* be the event that a user watches the given movie. Let *F* be the event that the same user watches Amelie.

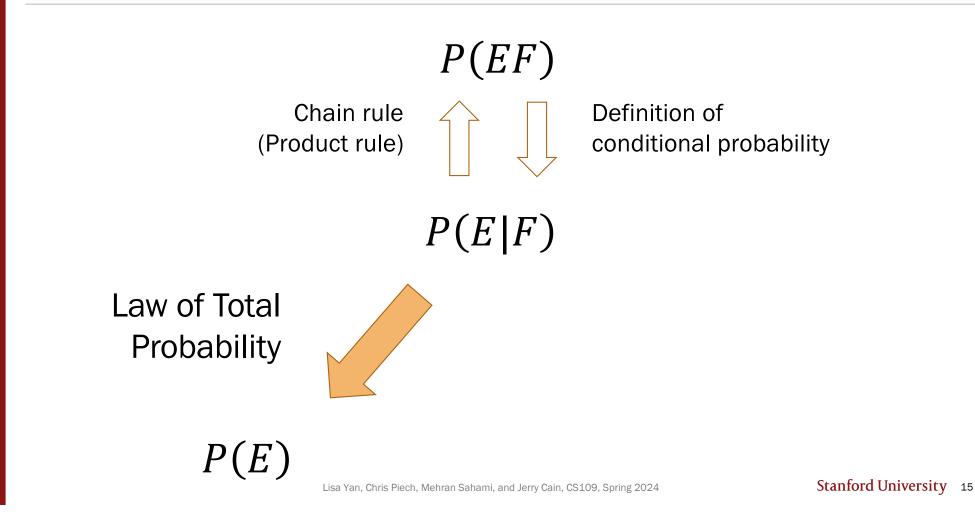

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

# Law of Total Probability

### Today's tasks

### Law of Total Probability

<u>Thm</u> Let F be an event where P(F) > 0. For any event E,  $P(E) = P(E|F)P(F) + P(E|F^{C})P(F^{C})$ 

<u>Proof</u>

1.  $F, F^C$  are disjoint such that  $F \cup F^C = S$ Def. of complement2.  $E = (EF) \cup (EF^C)$ (see diagram)3.  $P(E) = P(EF) + P(EF^C)$ Additivity axiom4.  $P(E) = P(E|F)P(F) + P(E|F^C)P(F^C)$ Chain rule (product rule)

Note: disjoint sets are, by definition, mutually exclusive events

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

### General Law of Total Probability

<u>Thm</u> For mutually exclusive events  $F_1, F_2, ..., F_n$ such that  $F_1 \cup F_2 \cup \cdots \cup F_n = S$ ,

$$P(E) = \sum_{i=1}^{n} P(E|F_i)P(F_i)$$

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

## Finding P(E) from P(E|F)

- Flip a fair coin.
- If heads: roll a fair 6-sided die.
- Else: roll a fair 3-sided die.

You win if you roll a 6. What is P(winning)?

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

### Finding P(E) from P(E|F)

- Flip a fair coin.
- If heads: roll a fair 6-sided die.
- Else: roll a fair 3-sided die.

You win if you roll a 6. What is P(winning)?

Define events
 & state goal

Let: E: win, F: flip heads Want: P(win)= P(E) 2. Identify <u>known</u> probabilities

> $P(\min|H) = P(E|F) = 1/6 \qquad P(E) = (1/6)(1/2)$   $P(H) = P(F) = 1/2 \qquad +(0)(1/2)$  $P(\min|T) = P(E|F^{C}) = 0 \qquad = \frac{1}{12} \approx 0.083$

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

Stanford University 19

 $P(E) = P(E|F)P(F) + P(E|F^{C})P(F^{C})$  Law of Total Probability

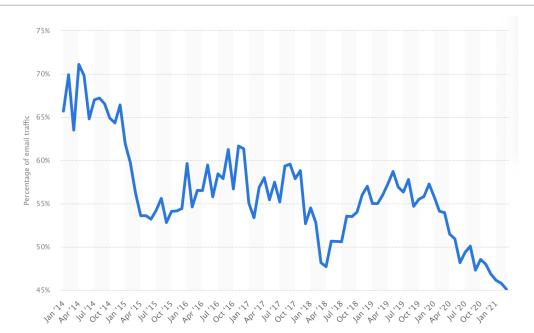

3. Solve

# Bayes' Theorem I

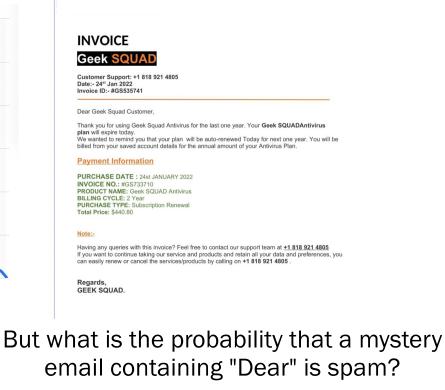

### Today's tasks

### Detecting spam email

We can easily calculate how many existing spam emails contain "Dear":  $P(E|F) = P\left(\text{"Dear"} \middle| \begin{array}{c} \text{Spam} \\ \text{email} \end{array}\right)$ 

$$P(F|E) = P\left(\begin{array}{c} \text{Spam} \\ \text{email} \end{array} \middle| \text{"Dear"} \right)$$

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

ŀ

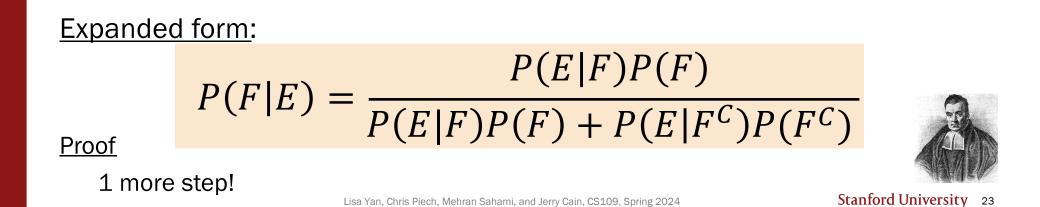

### Bayes' Theorem

 $P(E|F) \square P(F|E)$ 

# <u>Thm</u> For any events *E* and *F* where P(E) > 0 and P(F) > 0, $P(F|E) = \frac{P(E|F)P(F)}{P(E)}$

<u>Proof</u>

2 steps!

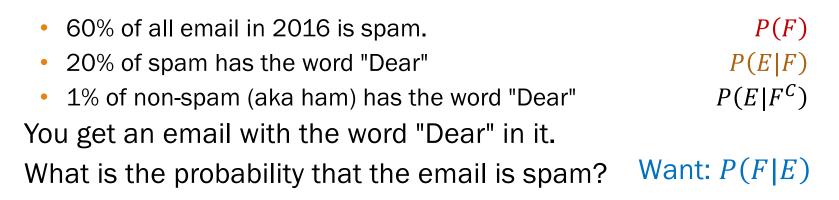

# Detecting spam email $P(F|E) = \frac{P(E|F)P(F)}{P(E|F)P(F) + P(E|F^{c})P(F^{c})}$ Bayes'<br/>Theorem• 60% of all email in 2016 is spam.• 20% of spam has the word "Dear"• 1% of non-spam (aka ham) has the word "Dear"You get an email with the word "Dear" in it.

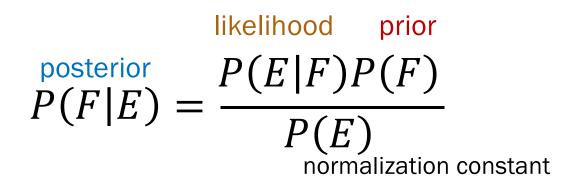

What is the probability that the email is spam?

- Define events
   & state goal
- Let: E: "Dear", F: spam Want: P(spam|"Dear")= P(F|E)
- 2. Identify <u>known</u> probabilities

3. Solve

### Bayes' Theorem terminology

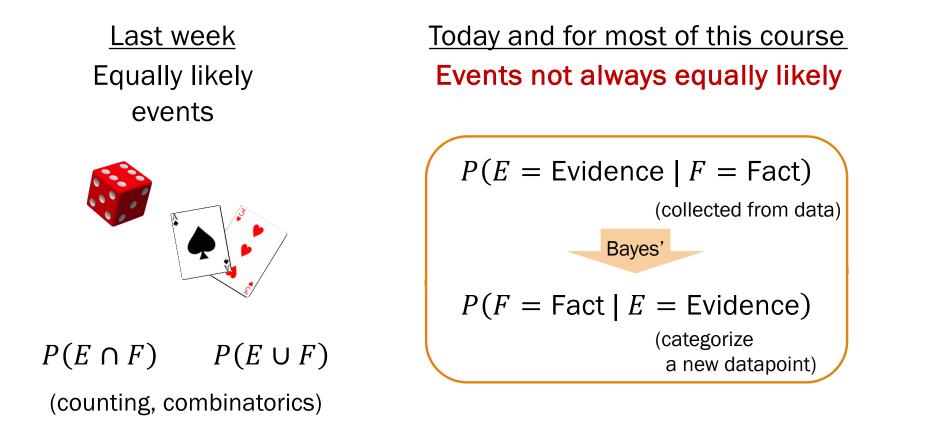

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

# Bayes' Theorem II

### This class going forward

### Bayes' Theorem

Review

posteriorlikelihoodprior
$$P(F|E) = \frac{P(E|F)P(F)}{P(E)}$$

Mathematically:

$$P(E|F) \to P(F|E)$$

Real-life application:

Given new evidence *E*, update belief of fact *F* Prior belief  $\rightarrow$  Posterior belief  $P(F) \rightarrow P(F|E)$ 

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

### Zika, an autoimmune disease

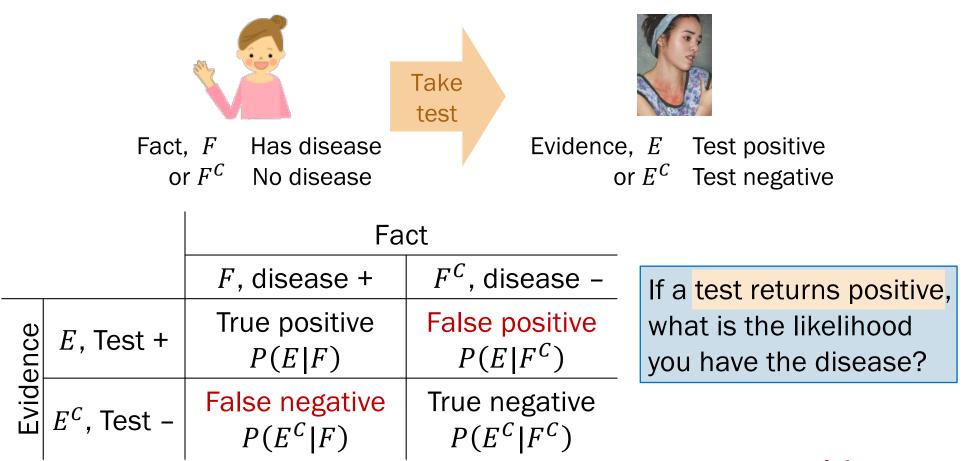

Ziika Forest, Uganda Rhesus monkeys https://www.nytimes.com/2016/04/06/world/africa/ugand a-zika-forest-mosquitoes.html

> If a test returns positive, what is the likelihood you have the disease?

A disease spread through mosquito bites. Generally, no symptoms, but can cause paralysis in very, very rare cases. During pregnancy: may cause birth defects. Very serious news story in 2015/2016.

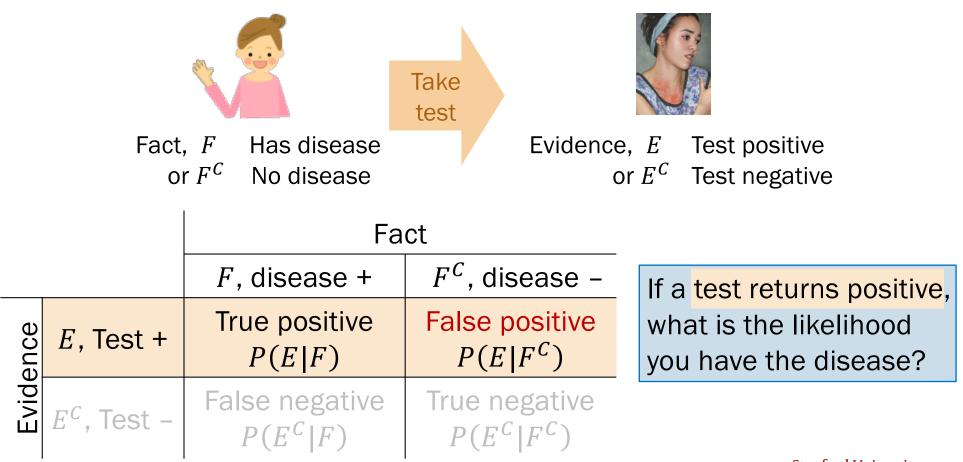

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

### Taking tests: Confusion matrix

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

### Taking tests: Confusion matrix

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

### Zika Testing

 $P(F|E) = \frac{P(E|F)P(F)}{P(E|F)P(F) + P(E|F^{C})P(F^{C})}$ Bayes' Theorem

- A test is 98% effective at detecting Zika ("true positive").
- However, the test has a "false positive" rate of 1%.
- 0.5% of the US population has Zika.

### What is the likelihood you have Zika if you test positive?

Why would you expect this number?

### Define events & state goal

Let: E = you test positive F = you actually have the disease

Want:

```
\begin{array}{l} \mathsf{P}(\mathsf{disease} \mid \mathsf{test+}) \\ = P(F|E) \end{array}
```

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

### Zika Testing

 $P(F|E) = \frac{P(E|F)P(F)}{P(E|F)P(F) + P(E|F^{C})P(F^{C})}$ Bayes' Theorem

- A test is 98% effective at detecting Zika ("true positive").
- However, the test has a "false positive" rate of 1%.
- 0.5% of the US population has Zika.

What is the likelihood you have Zika if you test positive?

Why would you expect this number?

 Define events & state goal 2. Identify <u>known</u> probabilities

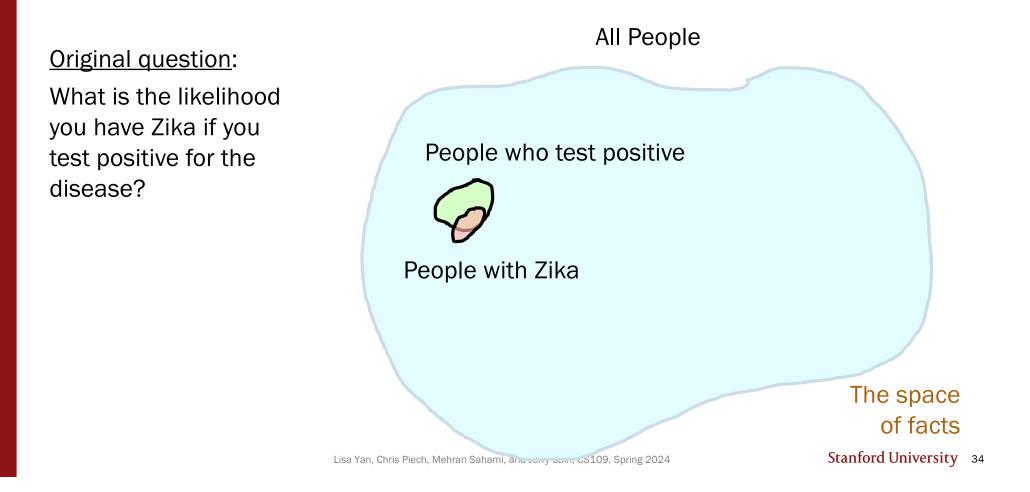

3. Solve

Let: E = you test positive F = you actually have the disease

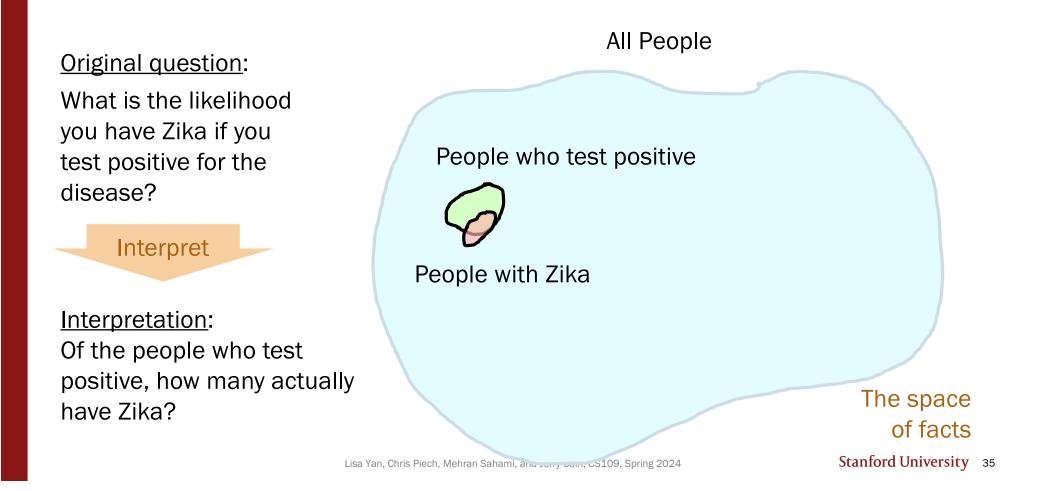

#### Want:

```
P(\text{disease } | \text{ test+}) \\= P(F|E)
```

### Bayes' Theorem intuition

### Bayes' Theorem intuition

### Bayes' Theorem intuition

#### Original question:

What is the likelihood you have Zika if you test positive for the disease?

#### Interpret

Interpretation: Of the people who test positive, how many actually have Zika?

#### People who test positive

People who test positive but don't have Zika

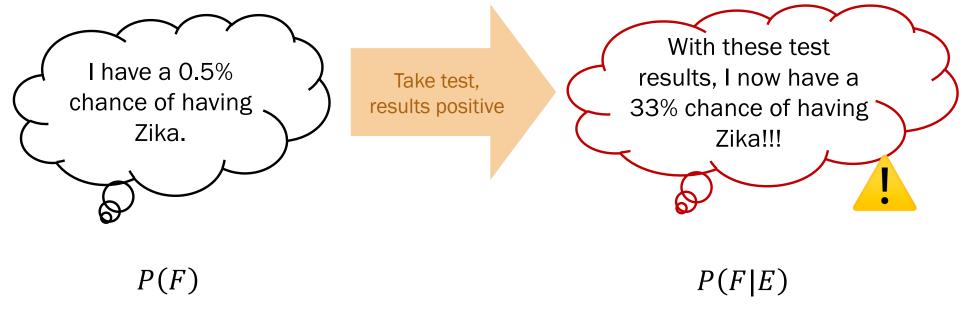

People who test positive and have Zika

## The space of facts, **conditioned** on a positive test result

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

### Update your beliefs with Bayes' Theorem

E = you test positive for Zika F = you have the disease

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

- $P(F|E) = \frac{P(E|F)P(F)}{P(E|F)P(F) + P(E|F^{C})P(F^{C})} \frac{\text{Bayes'}}{\text{Theorem}}$
- A test is 98% effective at detecting Zika ("true positive").
- However, the test has a "false positive" rate of 1%.
- 0.5% of the US population has Zika.

What is  $P(F|E^{C})$ ?

Let:	F = you actually have - the disease		F, disease +	F <sup>C</sup> , disease –
		E, Test +	True positive $P(E F) = 0.98$	False positive $P(E F^{C}) = 0.01$
Let:	<i>E<sup>C</sup></i> = you test negative for Zika with this test.		I(L I') = 0.90	I(E I') = 0.01

(ruminating) Stanford University 38

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024

- $P(F|E) = \frac{P(E|F)P(F)}{P(E|F)P(F) + P(E|F^{C})P(F^{C})}$ Bayes' Theorem
- A test is 98% effective at detecting Zika ("true positive").
- However, the test has a "false positive" rate of 1%.
- 0.5% of the US population has Zika.

What is  $P(F|E^{C})$ ?

Let: $E =$ you test positive F = you actually have			F, disease +	F <sup>C</sup> , disease –
Let:	the disease $E^{C}$ = you test negative for Zika with this test.	E, Test +	True positive $P(E F) = 0.98$	False positive $P(E F^{C}) = 0.01$

 $P(F|E) = \frac{P(E|F)P(F)}{P(E|F)P(F) + P(E|F^{C})P(F^{C})}$ Bayes' Theorem

- A test is 98% effective at detecting Zika ("true positive").
- However, the test has a "false positive" rate of 1%.
- 0.5% of the US population has Zika.

Let: $E =$ you test positive F = you actually have			F, disease +	F <sup>C</sup> , disease –
	the disease	E, Test +	True positive	False positive
Let:	$E^{C}$ = you test negative		P(E F) = 0.98	$P(E F^C) = 0.01$
_00	for Zika with this test.	E <sup>C</sup> , Test –	False negative	True negative
What	t is $P(F E^{C})$ ?		$P(\boldsymbol{E^{C}} F) = 0.02$	$P(E^{C} F^{C}) = 0.99$
,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,				

$$P(F|E^{C}) = \frac{P(E^{C}|F)P(F)}{P(E^{C}|F)P(F) + P(E^{C}|F^{C})P(F^{C})}$$

Lisa Yan, Chris Piech, Mehran Sahami, and Jerry Cain, CS109, Spring 2024
