After the
Union of Utrecht 1579

The Modern Nations of Belgium and The Netherlands

The entrance to the International Telephone Company is on the corner of Broad and South William Street. According to the Costello Plan, this is the exact location of the tavern that belonged to Adrian Vincent.

frame or reference from which to explore, organize, and refine his motor responses. This enables the child to program for himself, as nearly as possible, the natural progression of steps along the developmental hierarchy.

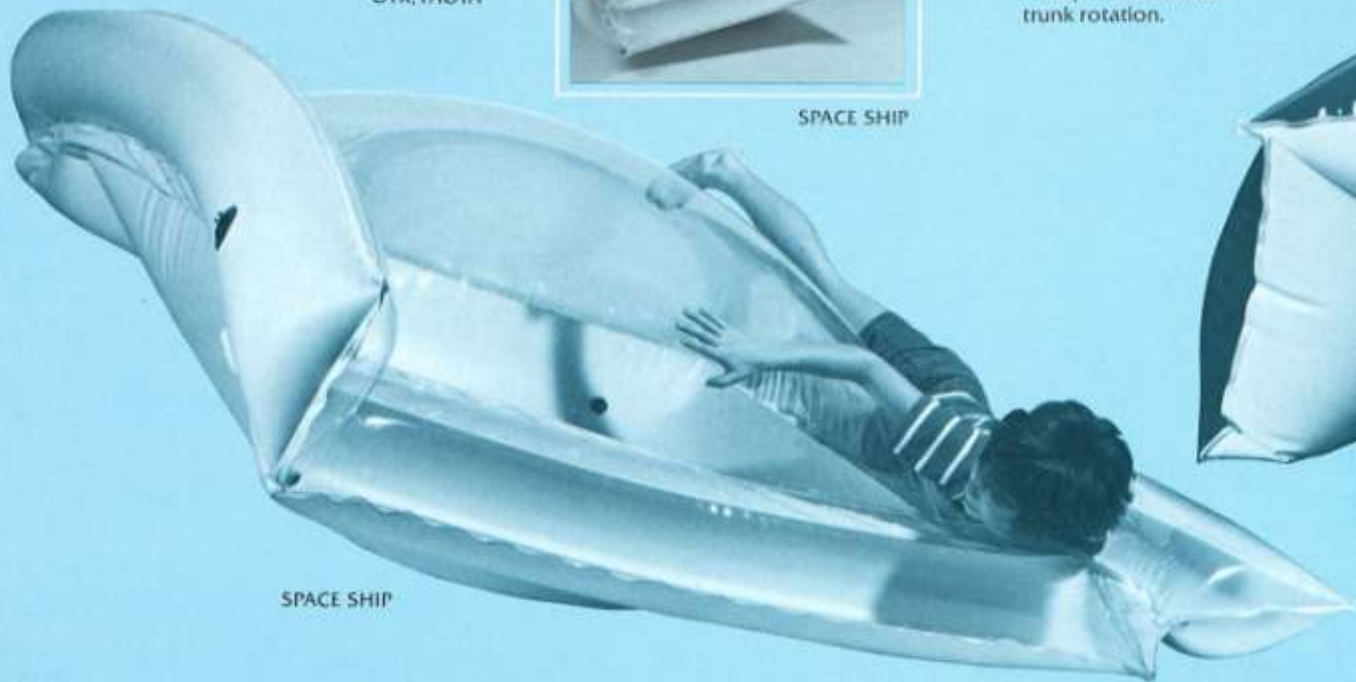

SPACE SHIP

The Space Ship™ appeals to the "tile defensive" child because he doesn't have to be touched or held on top.

For the more severely handicapped child who needs "hands-on" techniques, the Space Ship™ can gradually supplement the therapist's actions until his own control suffices. The transparent surface permits full visibility of patient's response.

Vigorous rocking action, standing the bumper, allows a strong weightshift, which assists the therapist to facilitate trunk rotation.

NORMAL VISION

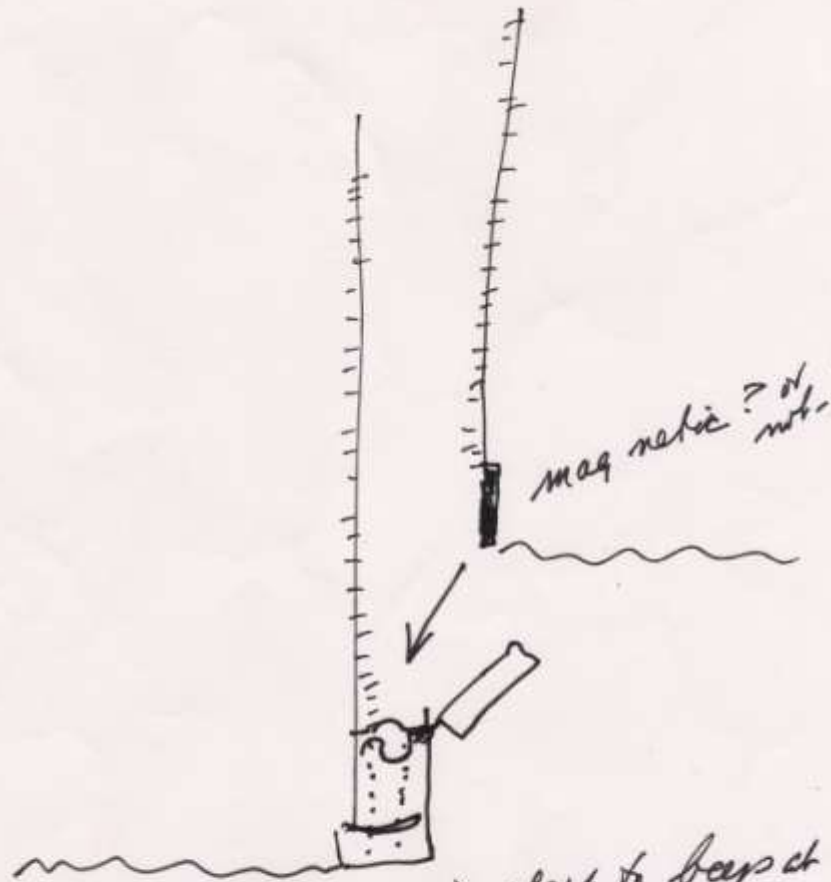

PICTURE AS SEEN BY SOMEONE WHO
HAS MACULAR DEGENERATION

sockets for each ear piece to be recharged during the night.

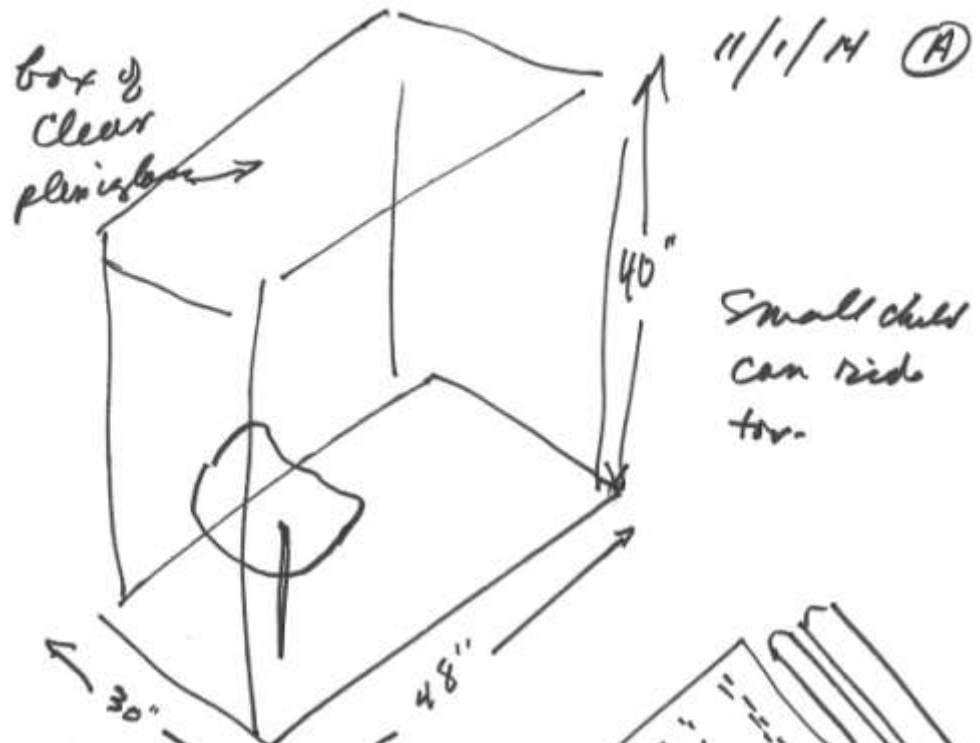

Face-recognition camera
registers who comes up and
gives their name - so next time
the audio in the car can give it back.

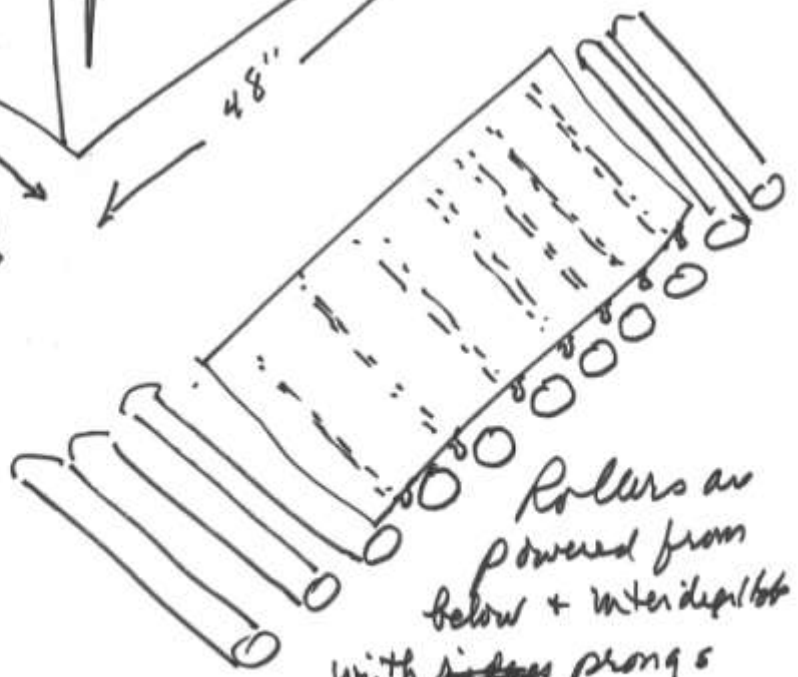

magnetic ? or not.

Sensors in the socket (left) start to beep at 3" and get faster - as the "prong" on the right approaches the socket -

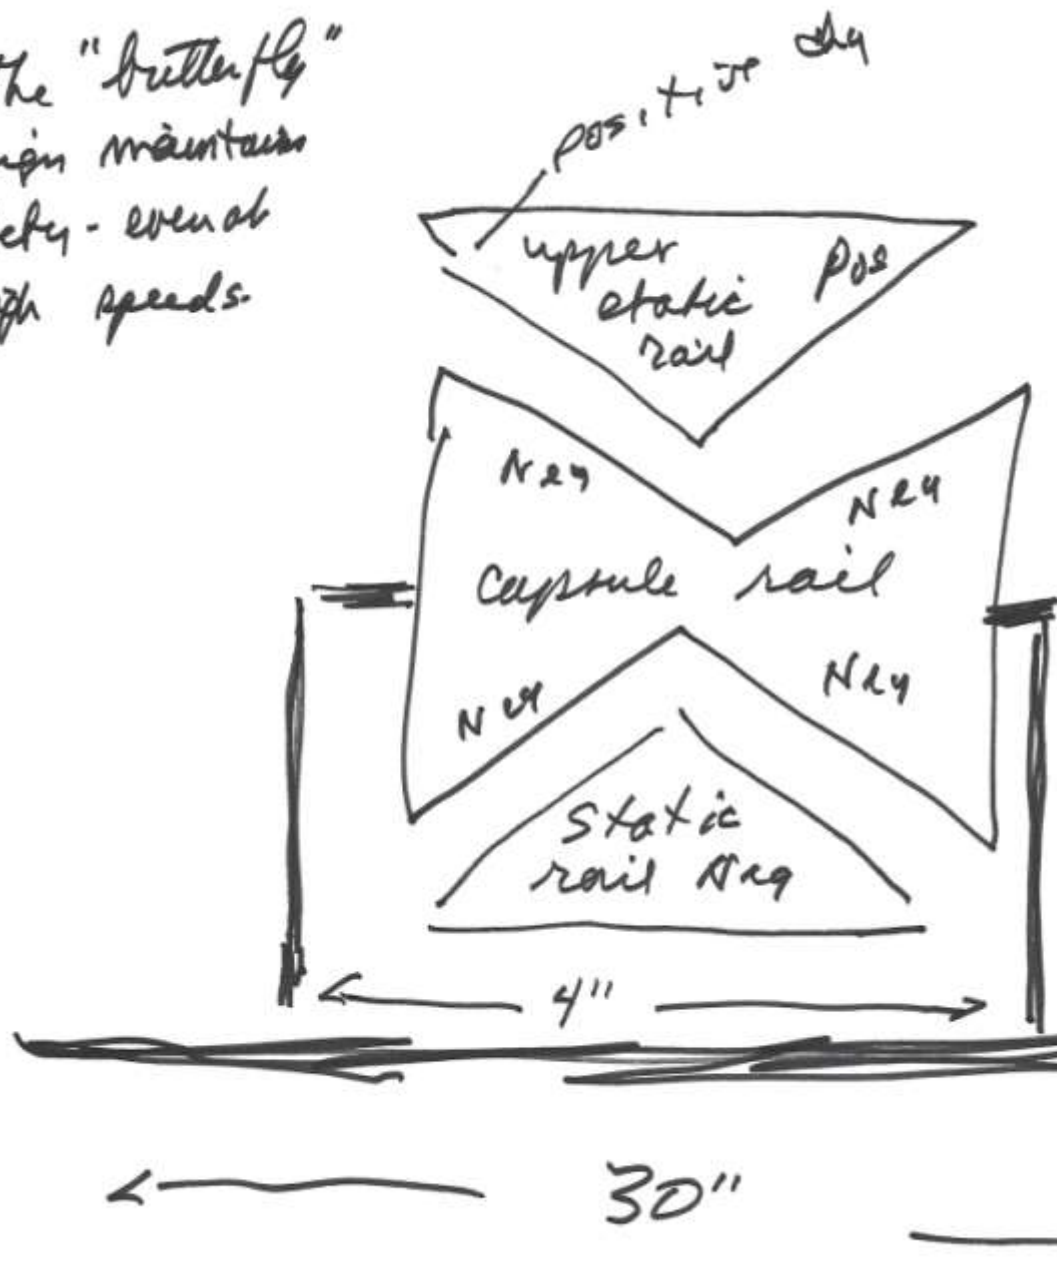

Once seated, seat lowers 6" for extra tall people.

Rollers are powered from below + interdigitate with ~~ridges~~ prongs from the structure above.

The "butterfly" design maintains safety - even at high speeds.

(A)

The weight of proposed capsule + passenger(s) is levitated by mag to mag ~~pressure~~ charge from below and positive to mag - from above - the strength ~~to~~ of the charge add used to maintain space above and below - hence \rightarrow motion

roof of capsule

8/29/14

(A)

(1) outside camera on a
movable arm - that is collapsed
for packaging -

(2) The camera focuses on the fish - bowl
to register constant movements in a
? 30 min / 15 m. loop.

(3) Known aberrant behaviors of fish at
varied strength of tremors are compared
electronically against m. q. virus behaviors of the
3 fish.

(4) Low level tremors (? 100/wk / S.F.) can utter a low volume
purr (?)

(5) All data is transmitted to a central Serminology Center, and only they
will sound a relevant warning level - in the home / office plus the
obvious alarms at high levels - when it actually occurs. (Minimal
risk of false positives.)

(6) A wide range of detailed data is available
at the center to chart rate / direction / level of tremors.
