The Myth of the Democratic Peace

The theory of the “Democratic Peace” raises important theoretical issues:¹ the contention that democratic states behave differently toward each other than toward non-democracies cuts to the heart of the international relations theory debate about the relative salience of second-image (domestic politics) and of third-image (systemic structure) explanations of international political outcomes. Democratic peace theory has also come to have a real-world importance as well: Policymakers who have embraced democratic peace theory see a crucial link between America’s security and the spread of democracy, which is viewed as the antidote that will prevent future wars. Indeed some democratic peace theorists, notably Bruce Russett, believe that in an international system comprising a critical mass of democratic states, “It may be possible in part to supersede the ‘realist’ principles (anarchy, the security dilemma of states) that have dominated practice to the exclusion of ‘liberal’ or ‘idealist’ ones since at least the seventeenth century.”² Because of its theoretical claims and

Christopher Layne of Los Angeles is an unaffiliated scholar. He is presently a consultant to the government contracts practice group of the law firm of Hill, Wynne, Troop and Meisinger, which represents major firms in the defense industry.

I am extremely grateful to the following colleagues who reviewed various drafts of this paper and offered helpful criticisms: John Arquilla, Ted Galen Carpenter, Kerry Andrew Chase, Jeffrey Frieden, John Mearsheimer, Benjamin C. Schwarz, Jack Snyder, Stephen Walt, and Kenneth Waltz. I also thank Stephen Van Evera and David Spiro for providing me copies of, and permission to quote from, their unpublished works.

1. I use the term “democratic peace theory” because it is a convenient shorthand term. However, strictly speaking, the claim that democracies do not fight democracies is a proposition, or hypothesis, rather than a theory. Democratic peace “theory” proposes a causal relationship between an independent variable (democratic political structures at the unit level) and the dependent variable (the asserted absence of war between democratic states). However, it is not a true theory because the causal relationship between the independent and dependent variables is neither proven nor, as I demonstrate in this article, adequately explained. See Stephen Van Evera, “Hypotheses, Laws and Theories: A User’s Guide,” unpub. memo, Department of Political Science, MIT.

2. Bruce Russett, *Grasping the Democratic Peace: Principles for a Post-Cold War World* (Princeton: Princeton University Press, 1993), chap. 7; and Russett, “Can A Democratic Peace Be Built?” *International Interactions*, Vol. 18, No. 3 (Spring 1993), pp. 277–282.

International Security, Vol. 19, No. 2 (Fall 1994), pp. 5–49

policy implications, the democratic peace theory merits careful examination.³ In this article, I focus primarily on a critique of the persuasiveness of democratic peace theory's causal logic and ask whether democratic peace theory or realism is a better predictor of international outcomes. I then briefly assess the robustness of democratic peace theory's empirical evidence in light of my conclusions about the strength of its explanatory power.

I begin by reviewing the explanations of the Democratic Peace advanced by democratic peace theorists. There are two strands to the theory's causal logic. One attributes the absence of war between democracies to institutional constraints: the restraining effects of public opinion, or of the checks and balances embedded in a democratic state's domestic political structure. The other posits that it is democratic norms and culture—a shared commitment to the peaceful adjudication of political disputes—that accounts for the absence of war between democratic states. As I demonstrate, the institutional-constraints argument fails to provide a compelling explanation for the absence of war between democracies. Thus, democratic peace theory's explanatory power rests on the persuasiveness of the contention that democratic norms and culture explain why, although democratic states fight with non-democracies, they do not go to war with each other.

This article's centerpiece is a test of the competing explanations of international outcomes offered by democratic peace theory and by realism. This test is based on case studies of four "near misses"—crises where two democratic states almost went to war with each other. These four cases are well-documented instances of democratic great powers going to the brink of war without going over it. As such, they present an opportunity to determine which of the competing hypotheses advanced respectively by democratic peace theory and realism best account for international political outcomes.⁴

3. In this article, I build upon and expand the criticisms of democratic peace theory found in John J. Mearsheimer, "Back to the Future: Instability in Europe After the Cold War," *International Security*, Vol. 15, No. 1 (Summer 1990), pp. 5–56; and Kenneth N. Waltz, "America as Model for the World? A Foreign Policy Perspective," *PS* (December 1991), pp. 667–670.

4. Other cases of crises between democratic great powers that might be studied include Anglo-French relations during the Liberal *entente cordiale* of 1832–48, Franco-Italian relations during the late 1880s and early 1890s and, if Wilhelmine Germany is classified as a democracy, the Moroccan crises of 1905–06 and 1911 and the Samoan crises of 1889 and 1899. These cases would support my conclusions. For example, from 1832 to 1848, the Foxite legacy disposed England's Whigs to feel a strong commitment to France based on a shared liberal ideology. Yet Anglo-French relations during this period were marked by intense geopolitical rivalry over Belgium, Spain, and the Near East, and the threat of war was always a factor in the calculations of policymakers in both London and Paris. Foreign Minister Lord Palmerston profoundly distrusted French ambitions and constantly urged that England maintain sufficient naval power to defend its

Moreover, they present an easy case for democratic peace theory and a hard case for realism. The selected cases favor democratic peace theory because, in each, the pacifying effect of democratic norms and culture was bolstered by complementary factors (e.g., economic interdependence, or special ties linking the disputants). I deduce, from both the democratic norms and culture argument and from realism, sets of indicators—testable propositions—that should be present if a crisis's outcome is explained by either of the two theories. Using a process-tracing approach, I examine each crisis in detail.

I conclude that realism is superior to democratic peace theory as a predictor of international outcomes. Indeed, democratic peace theory appears to have extremely little explanatory power in the cases studied. Doubts about the validity of its causal logic suggest that the empirical evidence purporting to support democratic peace theory should also be revisited. Democratic peace theorists contend that the theory is validated by a large number of cases. However, a powerful argument can be made that the universe of cases from which it can be tested is actually quite small. This is a crucial issue, because if the theory's empirical support is based on a small-N universe, this magnifies the importance of possible exceptions to the rule that democracies do not fight each other (for example, World War I, the War between the States, the War of 1812). I conclude by discussing democratic peace theory's troublesome implications for post-Cold War American foreign policy.

The Case for a Democratic Peace: Its Claims and its Logic

Democratic peace theory does not contend that democratic states are less war-prone than non-democracies; they are not. The theory does, however, make two important claims, first, that democracies never (or rarely; there is

interests against a French challenge. See Kenneth Bourne, *Palmerston: The Early Years, 1784–1841* (New York: Macmillan, 1982), p. 613. Also see Roger Bullen, *Palmerston, Guizot and the Collapse of the Entente Cordiale* (London: Athlone Press, 1974); and Sir Charles Webster, *The Foreign Policy of Palmerston, Vol. I: 1830–1841, Britain, The Liberal Movement and The Eastern Question* (London: G. Bell & Sons, 1951). Italy challenged France for Mediterranean ascendancy although the two nations were bound by liberalism, democracy, and a common culture. The two states engaged in a trade war and came close to a real war. France apparently was dissuaded from attacking Italy in 1888 when the British Channel Fleet was sent to the Italian naval base of La Spezia. Italy was prevented from attacking France by its military and economic weakness. See C.J. Lowe and F. Marzari, *Italian Foreign Policy, 1870–1940* (London: Routledge & Kegan Paul, 1975), chap. 4; C.J. Lowe, *The Reluctant Imperialists: British Foreign Policy 1879–1902* (London: Routledge & Kegan Paul, 1974), Vol. I, pp. 147–150; John A.C. Conybeare, *Trade Wars: The Theory and Practice of International Commercial Rivalry* (New York: Columbia University Press, 1987), pp. 183–188.

a good deal of variation about this) go to war with other democracies.⁵ As Jack S. Levy observes, the “absence of war between democracies comes as close as anything we have to an empirical law in international relations.”⁶ Second, when democracies come into conflict with one another, they only rarely threaten to use force, because it is “illegitimate” to do so.⁷ Democratic peace theory explicitly holds that it is the very nature of democratic political systems that accounts for the fact that democracies do not fight or threaten other democracies.

THE CAUSAL LOGIC

Democratic peace theory must explain an anomaly: democracies are no less war-prone than non-democratic states. Yet, while they will readily threaten and fight non-democracies, they do not threaten or fight other democracies. The key challenge for the theory, then, is to identify the special characteristics of democratic states that restrain them from using coercive threats against, or actually going to war with, other democracies. The theory advances two alternative explanations: (1) institutional constraints; and (2) democratic norms and cultures.⁸

There are two major variants of the institutional constraints argument. Michael Doyle, building on Immanuel Kant, explains that democratic governments are reluctant to go to war because they must answer to their

5. Melvin Small and J. David Singer first observed the pattern of democracies not fighting democracies in a 1976 article: Small and Singer, “The War-proneness of Democratic Regimes, 1816–1865,” *Jerusalem Journal of International Relations*, Vol. 1, No. 4 (Summer 1976), pp. 50–69. Their finding has been the subject of extensive further empirical testing which has produced a consensus around the propositions stated in the text. See Stuart A. Bremer, “Dangerous Dyads: Conditions Affecting the Likelihood of Interstate War, 1816–1865,” *Journal of Conflict Resolution*, Vol. 36, No. 2 (June 1992), pp. 309–341; Steve Chan, “Mirror, Mirror on the Wall . . . Are the Freer Countries More Pacific?” *Journal of Conflict Resolution*, Vol. 28, No. 4 (December 1984), pp. 617–648; Zeev Maoz and Nasrin Abdolali, “Regime Type and International Conflict,” *Journal of Conflict Resolution*, Vol. 33, No. 1 (March 1989), pp. 3–35; R.J. Rummel, “Libertarianism and International Violence,” *Journal of Conflict Resolution*, Vol. 27, No. 1 (March 1983), pp. 27–71; Erich Weede, “Democracy and War Involvement,” *Journal of Conflict Resolution*, Vol. 28, No. 4 (December 1984), pp. 649–664.

6. Jack S. Levy, “Domestic Politics and War,” in Robert I. Rotberg and Theodore K. Rabb, eds., *The Origin and Prevention of Major Wars* (Cambridge: Cambridge University Press, 1989), p. 88.

7. Russett, *Grasping the Democratic Peace*, p. 33; Michael W. Doyle, “Kant, Liberal Legacies and Foreign Affairs,” Part I, *Philosophy and Public Affairs*, Vol. 12, No. 3 (Summer 1983), p. 213.

8. This is the terminology employed by Russett, *Grasping the Democratic Peace*; also see Bruce Russett and Zeev Maoz, “Normative and Structural Causes of Democratic Peace,” *American Political Science Review*, Vol. 87, No. 3 (September 1993), pp. 624–638. Russett points out (pp. 40–42) that, although analytically distinct, these two explanations are intertwined.

citizens.⁹ Citizens pay the price for war in blood and treasure; if the price of conflict is high, democratic governments may fall victim to electoral retribution. Moreover, in democratic states, foreign policy decisions carrying the risk of war are debated openly and not made behind closed doors, which means that both the public and policymakers are sensitized to costs of fighting. A second version of the institutional constraints argument focuses on “checks and balances”; it looks at three specific features of a state’s domestic political structure: executive selection, political competition, and the pluralism of the foreign policy decisionmaking process.¹⁰ States with executives answerable to a selection body, with institutionalized political competition, and with decisionmaking responsibility spread among multiple institutions or individuals, should be more highly constrained and hence less likely to go to war.

The democratic norms explanation holds that “the *culture, perceptions, and practices* that permit compromise and the peaceful resolution of conflicts without the threat of violence *within countries* come to apply across national boundaries toward other democratic countries.”¹¹ Democratic states assume both that other democracies also subscribe to pacific methods of regulating political competition and resolving disputes, and that others will apply these norms in their external relations with fellow democracies. In other words, democratic states develop positive perceptions of other democracies. Consequently, Doyle says, democracies, “which rest on consent, presume foreign republics to be also consensual, just and therefore deserving of accommodation.”¹² Relations between democratic states are based on mutual respect

9. Doyle, “Kant, Liberal Legacies, and Foreign Affairs,” pp. 205–235. See also Doyle, “Liberalism and World Politics,” *American Political Science Review*, Vol. 80, No. 4 (December 1986), pp. 1151–1169; Russett, *Grasping the Democratic Peace*, pp. 38–40.

10. T. Clifton Morgan and Sally H. Campbell, “Domestic Structure, Decisional Constraints and War: So Why Kant Democracies Fight?” *Journal of Conflict Resolution*, Vol. 35, No. 2 (June 1991), pp. 187–211; and T. Clifton Morgan and Valerie L. Schwebach, “Take Two Democracies and Call Me in the Morning: A Prescription for Peace?” *International Interactions*, Vol. 17, No. 4 (Summer 1992), pp. 305–420.

11. Russett, *Grasping the Democratic Peace*, p. 31 (second emphasis added).

12. Doyle, “Kant, Liberal Legacies, and Foreign Affairs,” p. 230. It is also argued that the predisposition of democratic states to regard other democracies favorably is reinforced by the fact that liberal democratic states are linked by mutually beneficial ties of economic interdependence. Democracies thus have strong incentives to act towards each other in a manner that enhances cooperation and to refrain from acting in a manner that threatens their stake in mutually beneficial cooperation. *Ibid.*, pp. 230–232; Rummel, “Libertarianism and International Violence,” pp. 27–28. For the “interdependence promotes peace” argument see Richard Rosecrance, *The Rise of the Trading State* (New York: Basic Books, 1986). In fact, however, for great powers economic interdependence, rather than promoting peace, creates seemingly important

rooted in the fact that democracies perceive each other as dovish (that is, negotiation or the status quo are the only possible outcomes in a dispute). This perception, it is argued, is based on a form of learning. Democratic states benefit from cooperative relations with one another and they want to expand their positive interactions. In turn, this desire predisposes them to be responsive to the needs of other democratic states, and ultimately leads to creation of a community of interests. As democracies move towards community, they renounce the option to use (or even to threaten to use) force in their mutual interactions.¹³

The democratic ethos—based on “peaceful competition, persuasion and compromise”—explains the absence of war and war-like threats in relations between democratic states.¹⁴ Conversely, the absence of these norms in relations between democracies and non-democracies, it is said, explains the paradox that democracies do not fight each other even though in general they are as war-prone as non-democracies: “When a democracy comes into conflict with a nondemocracy, it will not expect the nondemocratic state to be restrained by those norms [of mutual respect based on democratic culture]. It may feel obliged to adapt to the harsher norms of international conduct of the latter, lest it be exploited or eliminated by the nondemocratic state that takes advantage of the inherent moderation of democracies.”¹⁵ Thus it is a fundamental postulate of democratic peace theory that democracies behave in a qualitatively different manner in their relations with each other than they do in their relations with non-democracies.

The Realist Case: The Same Things Over and Over Again

If history is “just one damn thing after another,” then for realists international politics is the same damn things over and over again: war, great power security and economic competitions, the rise and fall of great powers, and the formation and dissolution of alliances. International political behavior is characterized by continuity, regularity, and repetition because states are con-

interests that must be defended by overseas military commitments (commitments that carry with them the risk of war). See Christopher Layne and Benjamin C. Schwarz, “American Hegemony—Without an Enemy,” *Foreign Policy*, No. 92 (Fall 1993), pp. 5–23.

13. Doyle, “Kant, Liberal Legacies, and Foreign Affairs”; and Harvey Starr, “Democracy and War: Choice, Learning and Security Communities,” *Journal of Peace Research*, Vol. 29, No. 2 (1992), pp. 207–213.

15. Russett, *Grasping the Democratic Peace*, p. 33.

strained by the international system's unchanging (and probably unchangeable) structure.

The realist paradigm explains why this is so.¹⁶ International politics is an anarchic, self-help realm. "Anarchy," rather than denoting chaos or rampant disorder, refers in international politics to the fact that there is no central authority capable of making and enforcing rules of behavior on the international system's units (states). The absence of a rule-making and enforcing authority means that each unit in the system is responsible for ensuring its own survival and also that each is free to define its own interests and to employ means of its own choice in pursuing them. In this sense, international politics is fundamentally competitive. And it is competitive in a manner that differs crucially from domestic politics in liberal societies, where the losers can accept an adverse outcome because they live to fight another day and can, therefore, ultimately hope to prevail. In international politics, states that come out on the short end of political competition face potentially more extreme outcomes, ranging from constraints on autonomy to occupation to extinction.

It is anarchy that gives international politics its distinctive flavor. In an anarchic system, a state's first goal is to survive. To attain security, states engage in both internal and external balancing for the purpose of deterring aggressors, and of defeating them should deterrence fail. In a realist world, cooperation is possible but is hard to sustain in the face of the competitive pressures that are built into the international political system's structure. The imperative of survival in a threatening environment forces states to focus on strategies that maximize their power relative to their rivals. States have powerful incentives both to seek the upper hand over their rivals militarily and to use their edge not only for self-defense but also to take advantage of others. Because military power is inherently offensive rather than defensive in nature, states cannot escape the security dilemma: measures taken by a state as self-defense may have the unintended consequence of threatening others. This is because a state can never be certain that others' intentions are benign; consequently its policies must be shaped in response to others' capabilities. In the international system, fear and distrust of other states is the normal state of affairs.

16. Classic explications of realism are Kenneth N. Waltz, *Theory of International Politics* (Reading, Mass.: Addison-Wesley, 1979) and Hans J. Morgenthau, rev. by Kenneth W. Thompson, *Politics Among Nations: The Struggle for Power and Peace*, 6th ed. (New York: Knopf, 1985).

Here democratic peace and realism part company on a crucial point. The former holds that changes within states can transform the nature of international politics. Realism takes the view that even if states change internally, the structure of the international political system remains the same. As systemic structure is the primary determinant of international political outcomes, structural constraints mean that similarly placed states will act similarly, regardless of their domestic political systems. As Kenneth Waltz says: "In self-help systems, the pressures of competition weigh more heavily than ideological preferences or internal political pressures."¹⁷ Changes at the unit level do not change the constraints and incentives imbedded at the systemic level. States respond to the logic of the situation in which they find themselves even though this may result in undesirable outcomes, from the breakdown of cooperation to outright war. States that ignore the imperatives of a realist world run the risk of perishing. In a realist world, survival and security are always at risk, and democratic states will respond no differently to democratic rivals than to non-democratic ones.

Testing Democratic Peace Theory

Institutional constraints do not explain the democratic peace. If democratic public opinion really had the effect ascribed to it, democracies would be peaceful in their relations with all states, whether democratic or not. If citizens and policymakers of a democracy were especially sensitive to the human and material costs of war, that sensitivity should be evident whenever their state is on the verge of war, regardless of whether the adversary is democratic: the lives lost and money spent will be the same. Nor is democratic public opinion, *per se*, an inhibitor of war. For example, in 1898 it was public opinion that impelled the reluctant McKinley administration into war with Spain; in 1914 war was enthusiastically embraced by public opinion in Britain and France. Domestic political structure—"checks and balances"—does not explain the democratic peace either. "This argument," as Morgan and Schwebach state, "does not say anything directly about the war-proneness of democracies," because it focuses on an independent variable—decisional constraints embedded in a state's domestic political structure—that is associated with, but not exclusive to, democracies.

17. Kenneth N. Waltz, "A Reply to My Critics," in Robert O. Keohane, ed., *Neorealism and Its Critics* (New York: Columbia University Press, 1986), p. 329.

Because these explanations fall short, the democratic norms and culture explanation must bear the weight of the democratic peace theory's causal logic. It is there we must look to find that "something in the internal makeup of democratic states" that explains the democratic peace.¹⁸

Democratic peace theory not only predicts a specific outcome—no war between democracies—but also purports to explain why that outcome will occur. It is thus suited to being tested by the case study method, a detailed look at a small number of examples to determine if events unfold and actors act as the theory predicts. The case study method also affords the opportunity to test the competing explanations of international political outcomes offered by democratic peace theory and by realism. To test the robustness of democratic peace theory's causal logic, the focus here is on "near misses," specific cases in which democratic states had both opportunity and reason to fight each other, but did not.

The case studies in this article use the process-tracing method (opening up the "black box") to identify the factors to which decisionmakers respond, how those factors influence decisions, the actual course of events, and the possible effect of other variables on the outcome.¹⁹ As Stephen Van Evera says, if a theory has strong explanatory power, process-tracing case studies provide a robust test because decisionmakers "should speak, write, and otherwise behave in a manner consistent with the theory's predictions."²⁰

Democratic peace theory, if valid, should account powerfully for the fact that serious crises between democratic states ended in near misses rather than in war. If democratic norms and culture explain the democratic peace, in a near-war crisis, certain indicators of the democratic peace theory should be in evidence: First, public opinion should be strongly pacific. Public opinion is important not because it is an institutional constraint, but because it is an indirect measure of the mutual respect that democracies are said to have for each other. Second, policymaking elites should refrain from making military threats against other democracies and should refrain from making preparations to carry out threats. Democratic peace theorists waffle on this point by

18. Maoz and Russett, "Normative and Structural Causes," p. 624.

19. Alexander L. George and Timothy J. McKeown, "Case Studies and Theories of Organizational Decision Making," in Robert F. Coulam and Richard A. Smith, eds., *Advances in Information Processing in Organizations*, Vol. 2 (Greenwich, Conn.: JAI Press, 1985), p. 35.

20. Stephen Van Evera, "What Are Case Studies? How Should They Be Performed?" unpub. memo, September 1993, Department of Political Science, MIT, p. 2.

suggesting that the absence of war between democracies is more important than the absence of threats. But this sets the threshold of proof too low. Because the crux of the theory is that democracies externalize their internal norms of peaceful dispute resolution, then especially in a crisis, one should not see democracies threatening other democracies. And if threats are made, they should be a last-resort option rather than an early one. Third, democracies should bend over backwards to accommodate each other in a crisis. Ultimata, unbending hard lines, and big-stick diplomacy are the stuff of *Realpolitik*, not the democratic peace.

A realist explanation of near misses would look at a very different set of indicators. First, realism postulates a ratio of national interest to democratic respect: in a crisis, the more important the interests a democracy perceives to be at stake, the more likely that its policy will be shaped by realist imperatives rather than by democratic norms and culture. When vital interests are on the line, democracies should not be inhibited from using threats, ultimata, and big-stick diplomacy against another democracy. Second, even in a crisis involving democracies, states should be very attentive to strategic concerns, and the relative distribution of military capabilities between them should crucially—perhaps decisively—affect their diplomacy. Third, broader geopolitical considerations pertaining to a state's position in international politics should, if implicated, account significantly for the crisis's outcome. Key here is what Geoffrey Blainey calls the "fighting waterbirds' dilemma," involving concerns that others watching from the sidelines will take advantage of a state's involvement in war; that war will leave a state weakened and in an inferior relative power position *vis-à-vis* possible future rivals; and that failure to propitiate the opposing state in a crisis will cause it to ally with one's other adversaries or rivals.²¹

I have chosen to study four modern historical instances in which democratic great powers almost came to blows: (1) the United States and Great Britain in 1861 ("the *Trent* affair"); (2) the United States and Great Britain in 1895–96 (the Venezuela crisis); France and Great Britain in 1898 (the Fashoda crisis); and France and Germany in 1923 (the Ruhr crisis).²² I focus on great

21. Geoffrey Blainey, *The Causes of War*, 3rd ed. (South Melbourne: Macmillan Co. of Australia, 1988), pp. 57–67. As the parable goes, while the waterbirds fight over the catch, the fisherman spreads his net.

22. My classification of the United States in 1861 and 1895 and of Germany in 1923 as great powers might be challenged. By the mid-nineteenth century British policymakers viewed the United States, because of its size, population, wealth, and growing industrial strength (and

powers for several reasons. First, international relations theory is defined by great powers: they are the principal components of the international system, and their actions—especially their wars—have a greater impact on the international system than do those of small powers.²³ Moreover, while democratic peace theory should apply to both great and small powers, realist predictions about great power behavior are not always applicable to small powers, because the range of options available to the latter is more constrained.²⁴ Crises between democratic great powers are a good head-to-head test because democratic peace theory and realism should both be applicable.²⁵

The cases selected should favor democratic peace theory for more than the obvious reason that none of them led to war. In each crisis, background factors were present that should have reinforced democratic peace theory's predictions. In the two Anglo-American crises, a common history, culture and language, and economic interdependence were important considerations.²⁶ In the Fashoda crisis, the factors that led to the 1904 Anglo-French entente were already present and both countries benefited significantly from their economic relations.²⁷ The Franco-German Ruhr crisis tested both the Wilsonian prescription for achieving security in post-World War I Europe and the belief (increasingly widespread among French and German business elites, and to a lesser extent the political elites) that the prosperity of both states hinged on their economic collaboration.

latent military power), as "a great world power," notwithstanding the fact that it was not an active participant in the European state system. Ephraim Douglass Adams, *Great Britain and the American Civil War* (New York: Russell and Russell, 1924), Vol. I, p. 10. In 1895 the perception of American power had heightened in Britain and in other leading European powers. In 1923, Germany, although substantially disarmed pursuant to Versailles, remained Europe's most economically powerful state. As most statesmen realized, it was, because of its population and industry, a latent continental hegemon. Democratic peace theorists have classified all eight states as having been democracies at the time of their involvement in the crises under discussion. See Doyle, "Kant, Liberal Legacies, and Foreign Affairs," part I, pp. 214–215. Russett, *Grasping the Democratic Peace*, pp. 5–9, briefly discusses the Venezuela and Fashoda crises, but his bibliography has few historical references to these two crises (and related issues), and omits most standard sources.

23. Waltz, *Theory of International Politics*, pp. 72–73.

24. See Robert L. Rothstein, *Alliances and Small Powers* (New York: Columbia University Press, 1968), especially chap. 1.

25. As noted above, other such crises also support my argument.

26. For a brief discussion of the cultural, social, and economic bonds between Britain and the United States during the mid-nineteenth century, see Martin Crawford, *The Anglo-American Crisis of the Mid-Nineteenth Century: The Times and America, 1850–1862* (Athens: University of Georgia Press, 1987), pp. 39–55.

ANGLO-AMERICAN CRISIS I: THE *TRENT* AFFAIR, 1861

In 1861, tensions arising from the War Between the States brought the Union and Britain to the brink of war. The most important causes of Anglo-American friction stemmed from the Northern blockade of Confederate ports and the consequent loss to Britain of the cotton upon which its textile industry depended. The immediate precipitating cause of the Anglo-American crisis, however, was action of the *USS San Jacinto* which, acting without express orders from Washington, intercepted the British mail ship *Trent* on November 8, 1861. The *Trent* was transporting James M. Mason and John Slidell, the Confederacy's commissioners-designate to Great Britain and France; they had boarded the *Trent*, a neutral vessel, in Havana, Cuba, a neutral port. A boarding party from the *San Jacinto*, after searching the *Trent*, placed Mason and Slidell under arrest. The *Trent* was allowed to complete its voyage while the *San Jacinto* transported Mason and Slidell to Fort Warren in Boston harbor, where they were incarcerated.

When word was received in Britain, the public was overcome with war fever. "The first explosion of the Press, on receipt of the news of the *Trent*, had been a terrific one."²⁸ An American citizen residing in England reported to Secretary of State William H. Seward, "The people are frantic with rage, and were the country polled I fear 999 men out of 1000 would declare for war."²⁹ From Edinburgh, another American wrote, "I have never seen so intense a feeling of indignation in my life."³⁰

The British government was hardly less bellicose than the public and the press. Fortified by legal opinions holding that Mason and Slidell had been removed from the *Trent* in contravention of international law, the Cabinet adopted a hard-line policy that mirrored the public mood. Prime Minister Lord Palmerston's first reaction to the news of the *Trent* incident was to write to the Secretary of State for War that, because of Britain's "precarious" relations with the United States, the government reconsider cuts in military expenditures planned to take effect in 1862.³¹ At the November 29 Cabinet meeting, Palmerston reportedly began by flinging his hat on the table and

declaring to his colleagues, "I don't know whether you are going to stand this, but I'll be damned if I do!"³²

The Cabinet adopted a dual-track approach towards Washington: London used military threats to coerce the United States into surrendering diplomatically, while on the diplomatic side, Foreign Secretary Lord John Russell drafted a note to the Union government in which, while holding firm to the demand that Mason and Slidell be released, he offered Washington an avenue of graceful retreat by indicating that London would accept, as tantamount to an apology, a declaration that the *San Jacinto* had acted without official sanction. Nevertheless, the note that was actually transmitted to Washington was an ultimatum. Although the British minister in Washington, Lord Lyons, was instructed to present the communication in a fashion calculated to maximize the chances of American compliance, his charge was clear: unless within seven days of receipt the Union government unconditionally accepted Britain's demands, Lyons was to ask for his passports and depart the United States. As Russell wrote to Lyons: "What we want is a plain Yes or a plain No to our very simple demands, and we want that plain Yes or No within seven days of the communication of the despatch."³³

Although some, notably including Russell, hoped that the crisis could be resolved peacefully, the entire Cabinet recognized that its decision to present an ultimatum to Washington could lead to war. The British believed that there was one hope for peace: that Washington, overawed by Britain's military power and its readiness to go to war, would bow to London's demands rather than resisting them.³⁴ As the Undersecretary of State for Foreign Affairs stated, "Our only chance of peace is to be found in working on the fears of the Government and people of the United States."³⁵

Driven by the belief that Washington would give in only to the threat of force, London's diplomacy was backed up by ostentatious military and naval preparations. Anticipating a possible conflict, the Cabinet embargoed the export to the United States of saltpeter (November 30) and of arms and ammunition (December 4). Underscoring the gravity of the crisis, for only

the fourth time in history the Cabinet created a special war committee to oversee strategic planning and war preparations. Urgent steps were taken to reinforce Britain's naval and military contingents in North America. Beginning in mid-December, a hastily organized sealift increased the number of regular British army troops in Canada from 5,000 to 17,658, and Royal Navy forces in North American waters swelled from 25 to forty warships, with 1,273 guns (compared to just 500 before the crisis).³⁶ These measures served two purposes: they bolstered London's diplomacy and, in the event diplomacy failed, they positioned Britain to prevail in a conflict.

London employed big-stick diplomacy because it believed that a too-conciliatory policy would simply embolden the Americans to mount increasingly serious challenges to British interests.³⁷ Moreover, British policymakers believed that England's resolve, credibility, and reputation were at stake internationally, not just in its relations with the United States. The comments of once and future Foreign Secretary Lord Clarendon were typical: "What a figure . . . we shall cut in the eyes of the world, if we lamely submit to this outrage when all mankind will know that we should unhesitatingly have poured our indignation and our broadsides into any weak nation . . . and what an additional proof it will be of the universal . . . belief that we have two sets of weights and measures to be used according to the power or weakness of our adversary."³⁸ Thus "the British were prepared to accept the cost of an Anglo-American war . . . rather than sacrifice their prestige as a great power by headlong diplomatic defeat."³⁹

London's hard-line policy was fortified by its "general optimism about the ultimate outcome" of an Anglo-American war.⁴⁰ Queen Victoria said a war would result in "utter destruction to the North Americans" and Secretary of

36. The figures are from Warren, *Fountain of Discontent*, pp. 130, 136. For an overview of British military and naval activities during the Trent crisis see Kenneth Bourne, "British Preparations for War with the North, 1861–1862," *English Historical Review*, Vol. 76, No. 301 (October 1961), pp. 600–632.

37. Ferris, *Trent Affair*, p. 56; Wilbur Devereux Jones, *The American Problem in British Diplomacy, 1841–1861* (London: Macmillan, 1974), p. 203. In international relations theory terms, London's view of Anglo-American relations was based on a deterrence model rather than a spiral model. See Robert Jervis, *Perception and Misperception in International Politics* (Princeton: Princeton University Press, 1976), pp. 58–111. Coexisting uneasily with the positive view of an Anglo-American community was the British image of the United States as a vulgar "mobocracy" that, unless firmly resisted, would pursue a rapacious and bullying foreign policy. Warren, *Fountain of Discontent*, pp. 47–51.

38. Quoted in Bourne, *Balance of Power*, p. 247.

40. Bourne, *Balance of Power*, p. 247.

State for War George Cornwall Lewis said “we shall soon *iron the smile* out of their face.”⁴¹ Palmerston was therefore untroubled by the discomfiture imposed on the Union by London’s uncompromising policy. In his view, regardless of whether the crisis was resolved peacefully or resulted in war, Britain’s interests would be upheld. He wrote to Queen Victoria:

If the Federal Government comply with the demands it will be honorable to England and humiliating to the United States. If the Federal Government refuse compliance, Great Britain is in a better state than at any former time to inflict a severe blow upon, and to read a lesson to the United States which will not soon be forgotten.⁴²

In late 1861, the war against the Confederacy was not going well for Washington and the one major engagement, the first Battle of Manassas, had resulted in a humiliating setback for the Union army. Whipped up by Secretary of State Seward, who was a master at “twisting the lion’s tail” for maximum domestic political effect, Northern opinion was hostile in London and resented especially Queen Victoria’s May 1861 neutrality proclamation, which Northerners interpreted as *de facto* British recognition of Southern independence. News of the seizure of Mason and Slidell had a double effect on Northern public opinion. First, it was a tonic for sagging Northern morale. Second, it was seen as a warning to Britain to refrain from interfering with the Union’s prosecution of the war against the Confederacy. Thus, although some papers (notably the *New York Times* and the *New York Daily Tribune*) urged that Washington should placate the British, public opinion strongly favored a policy of standing up to London and refusing to release Mason and Slidell.⁴³ In response to Britain’s hard line, “a raging war cry reverberated across the Northern states in America.”⁴⁴ Charles Francis Adams, Jr., whose father was U.S. minister in London at the time, wrote later of the affair: “I do not remember in the whole course of the half-century’s retrospect . . . any occurrence in which the American people were so completely swept off their feet, for the moment losing possession of their senses, as during the weeks which immediately followed the seizure of Mason and Slidell.”⁴⁵

41. Quoted in *ibid.*, pp. 245–246, emphasis in original.

45. Quoted in Adams, *Britain and the Civil War*, Vol. I, p. 218.

The Lincoln administration was aware of the strength of anti-British sentiment among the public and in Congress (indeed, in early December, Congress passed a resolution commending the *San Jacinto's* captain for his action). There is some evidence that in order to placate public opinion, President Lincoln was inclined toward holding on to Mason and Slidell, notwithstanding the obvious risks of doing so.⁴⁶ Nevertheless, after first toying with the idea of offering London arbitration in an attempt to avoid the extremes of war or a humiliating climb-down, the United States elected to submit to Britain's demands. Given that Washington "could not back down easily," it is important to understand why it chose to do so.

The United States bowed to London because, already fully occupied militarily trying to subdue the Confederacy, the North could not also afford a simultaneous war with England, which effectively would have brought Britain into the War Between the States on the South's side.⁴⁷ This was clearly recognized by the Lincoln administration when the cabinet met for two days at Christmas to decide on the American response to the British note. The cabinet had before it two critical pieces of information. First, Washington had just been informed that France supported London's demands (ending American hopes that Britain would be restrained by its own "waterbird" worries that France would take advantage of an Anglo-American war).⁴⁸ Second, Washington had abundant information about the depth of the pro-war sentiment of the British public. The American minister in London, Charles Francis Adams, wrote that the English "were now all lashed up into hostility" and that: "The leading newspapers roll out as much fiery lava as Vesuvius is doing, daily. The Clubs and the army and the navy and the people in the streets generally are raving for war."⁴⁹ Senator Charles Sumner passed on to the Lincoln administration letters from the noted Radical members of parliament, Richard Cobden and John Bright. While deploring their government's policy and the tenor of British public opinion, both Cobden and Bright

46. Warren, *Fountain of Discontent*, pp. 184–185; Adams, *Britain and the Civil War*, p. 231. Howard Jones, however, suggests that Lincoln probably intended to give up Mason and Slidell and that he may have been posturing in order to shift to other members of his cabinet the onus of advancing the argument for surrendering them. Jones, *Union in Peril*, pp. 91–92.

47. Ferris, *Trent Affair*, pp. 177–182; Jenkins, *War for the Union*, pp. 223–226; Warren, *Fountain of Discontent*, pp. 181–182.

48. See Jenkins, *War for the Union*, pp. 225–226.

stressed that war would result unless the United States gave in to London. Cobden observed:

Formerly England feared a war with the United States as much from the dependence on your cotton as from a dread of your power. *Now* the popular opinion (however erroneous) is that a war would give us cotton. And we, of course, consider your power weakened by your Civil War.⁵⁰

Facing the choice of defying London or surrendering to its demands, Washington was compelled to recognize both that Britain was serious about going to war and that such a war almost certainly would result in the Union's permanent dissolution. During the cabinet discussions, Attorney General Edward Bates suggested that Britain was seeking a war with the United States in order to break the Northern blockade of Southern cotton ports and he worried that London would recognize the Confederacy. The United States, he said, "cannot afford such a war." He went on to observe, "In such a crisis, with such a civil war upon our hands, we cannot hope for success in a . . . war with England, backed by the assent and countenance of France. We must evade it—with as little damage to our own honor and pride as possible."⁵¹ Secretary of State Seward concurred, stating that it was "no time to be diverted from the cares of the Union into controversies with other powers, even if just causes for them could be found."⁵² When the United States realized that Britain's threat to go to war was not a bluff, strategic and national interest considerations—the "waterbird dilemma"—dictated that Washington yield to Britain.

The *Trent* affair's outcome is explained by realism, not democratic peace theory. Contrary to democratic peace theory's expectations, the mutual respect between democracies rooted in democratic norms and culture had no influence on British policy. Believing that vital reputational interests affecting its global strategic posture were at stake, London played diplomatic hardball, employed military threats, and was prepared to go to war if necessary. Both the public and the elites in Britain preferred war to conciliation. Across the Atlantic, public and governmental opinion in the North was equally bellicose. An Anglo-American conflict was avoided only because the Lincoln admin-

istration came to understand that diplomatic humiliation was preferable to a war that would have arrayed Britain with the Confederacy and thus probably have secured the South's independence.

ANGLO-AMERICAN CRISIS II: VENEZUELA, 1895–96

In 1895–96, the United States and Great Britain found themselves embroiled in a serious diplomatic confrontation arising out of an obscure long-standing dispute between London and Caracas over the Venezuela–British Guiana boundary. By 1895, Caracas was desperately beseeching Washington to pressure London to agree to arbitrate the dispute. The Cleveland administration decided to inject the United States diplomatically into the Anglo-Venezuelan disagreement, but not out of American solicitude for Venezuela's interests or concern for the issue's merits.⁵³ For the United States, the Anglo-Venezuelan affair was part of a larger picture. By 1895, American policymakers, conscious of the United States's status as an emerging great power, were increasingly concerned about European political and commercial intrusion into the Western Hemisphere.⁵⁴ For Washington, the controversy between London and Caracas was a welcome pretext for asserting America's claim to geopolitical primacy in the Western hemisphere. It was for this reason that the United States provoked a showdown on the Anglo-Venezuelan border dispute.⁵⁵

The American position was set forth in Secretary of State Richard Olney's July 20, 1895, note to the British government.⁵⁶ The United States stated that its "honor and its interests" were involved in the Anglo-Venezuelan dispute, "the continuance of which it cannot regard with indifference." Washington demanded that London submit the dispute to arbitration. In grandiloquent terms, Olney asserted that the Monroe Doctrine not only gave the United

53. Walter LaFeber demonstrates that the United States injected itself into the crisis to protect its own interests, not Venezuela's. LaFeber, *The New Empire: An Interpretation of American Expansion, 1860–1898* (Ithaca: Cornell University Press, 1963), chap. 6.

54. The relationship between security concerns and American foreign and strategic policy is discussed in Richard D. Challener, *Admirals, General and Foreign Policy, 1898–1914* (Princeton: Princeton University Press, 1973) and J.A.S. Grenville and George B. Young, *Politics, Strategy, and American Diplomacy: Studies in American Foreign Policy, 1873–1917* (New Haven: Yale University Press, 1966).

56. The full text of the note can be found in *Foreign Relations of the United States, 1895* (Washington, D.C.: U.S. Government Printing Office), Vol. 1, pp. 542–576.

States the right to intervene in the Venezuela affair but also a more general right to superintend the affairs of the Western hemisphere.

In challenging Britain, President Grover Cleveland and his secretary of state realized they were taking a serious step. Although they almost certainly hoped to score a peaceful diplomatic victory, their strategy was one that could have led instead to an armed confrontation. Olney's July 20 note (praised by Cleveland as "the best thing of the kind I have ever read") was deliberately brusque and, as Henry James pointed out, under prevailing diplomatic custom, London could justifiably have regarded it as an ultimatum.⁵⁷ Moreover, Washington intended Olney's note for publication. Olney and Cleveland believed that their strong language would get London's attention and that, by using the Monroe Doctrine as a lever, the United States could ram a diplomatic settlement down Britain's throat.⁵⁸ Cleveland and Olney expected London to back down and agree to arbitration and they hoped that Britain's positive response could be announced when Congress reconvened in December.

To the administration's consternation, however, London refused to give in to Washington's demands. British Prime Minister and Foreign Secretary Salisbury's unyielding reply prompted Cleveland's December 17, 1895, message to Congress. While acknowledging that the prospect of an Anglo-American war was an unhappy one to contemplate, the president declared there was "no calamity which a great nation can invite which equals that which follows a supine submission to wrong and injustice and the consequent loss of national self-respect and honor beneath which are shielded and defended a people's safety and greatness." Cleveland strongly defended the validity of the Monroe Doctrine, which he described as vital to America's national security and to the integrity of its domestic political institutions. He asserted that London's exercise of jurisdiction over any territory that the United States determined to belong properly to Venezuela was "willful aggression upon [America's] rights and interests."

In taking this position, Cleveland declared that he was "fully alive to the responsibility incurred and keenly realize[d] all the consequences that may follow." Notwithstanding his strong rhetoric, however, Cleveland did leave

57. Henry James, *Richard Olney and His Public Service* (New York: DaCapo Press, 1971, reprint ed.), p. 109. President Cleveland quoted in May, *Imperial Democracy*, p. 40.

the British with some maneuvering room. Before acting against Britain, he said, the United States would set up a commission to investigate the Anglo-Venezuelan dispute and Washington would take no steps until the commission's report was made and accepted. Nevertheless, the import of Cleveland's message was clear: the United States was willing to fight Britain if necessary in order to establish America's primacy in the Western hemisphere.⁵⁹

As Kenneth Bourne points out, during the Venezuela crisis the risk of war was quite real.⁶⁰ Salisbury flatly rejected the terms for resolving the crisis set out in Olney's July 20 note. J.A.S. Grenville wrote: "nothing could be plainer than Salisbury's rejoinder to Olney: the United States had no business interfering in the dispute, the Monroe Doctrine had no standing as an international treaty and did not in any case apply to the controversy; the British government would accordingly continue to refuse arbitration of the Venezuelan claims as a whole."⁶¹ Salisbury understood the risk that Washington would maintain its stance and that the crisis would escalate. But as Grenville points out, he was willing to run this risk because "he did not believe the danger to Britain would be serious. The country and empire would have united in defence of British possessions, and in the face of their determination he believed the United States would give way."⁶² Either Washington would understand the significance of the disparity between its military power and Britain's, or the United States would be defeated.

In late 1895 Britain and the United States clearly were on a collision course, and conflict almost certainly would have occurred had Britain held fast to the policy line adopted by Salisbury in November 1895. London did not do so, however, and by late January 1896 London and Washington had embarked upon a diplomatic process that culminated in November 1896 in an amicable settlement of Anglo-American differences. The crucial question is, why did Britain suddenly reverse course at the beginning of 1896?

59. Both Walter LaFeber and Ernest May come to this conclusion. See LaFeber, *The New Empire*, p. 268 and May, *Imperial Democracy*, p. 42.

60. Kenneth Bourne, *Balance of Power*, p. 319. It should be noted that not all historians agree with Bourne. For example, J.A.S. Grenville has argued that the Venezuelan crisis was synthetic and that there was no real risk of war during the crisis; Grenville, *Lord Salisbury and Foreign Policy at the Close of the Nineteenth Century* (London: Athlone Press, 1964), p. 55. However, in later work, Grenville wrote: "Given the mood of the British Cabinet . . . a serious Anglo-American conflict seemed inevitable." Grenville and Young, *Politics, Strategy and American Diplomacy*, p. 169.

61. Grenville, *Lord Salisbury*, p. 63.

62. *Ibid.*, p. 65.

Although there is no “smoking gun,” compelling circumstantial evidence supports the historians’ consensus opinion that Britain was constrained from going to war in 1896 by an unfavorable distribution of military capabilities *vis-à-vis* the United States and by a deteriorating international situation. London, Lord Salisbury excepted, had become concerned about the outcome of an Anglo-American war because of Britain’s inability, due to threats elsewhere, to spare warships to reinforce its naval presence in North American waters; fears that Canada would be conquered by the United States; and fears that in a prolonged war, the United States would be able to force a stalemate and possibly even prevail because of its enormous economic strength.⁶³ Moreover, between November 1895 and mid-January 1896, Britain’s international position took a sharp turn for the worse: “England stood completely isolated at the beginning of 1896. Her position was scarcely endurable.”⁶⁴ Anglo-German relations had been plunged into crisis by the Krueger telegram that Kaiser Wilhelm II had dispatched in the wake of the Jameson raid on the Transvaal. Elsewhere, the threats from Britain’s main rivals, Russia and France, seemed only slightly less menacing.

Britain concluded that it must settle with Washington because it could not afford yet another enemy. At the critical January 11, 1896, Cabinet meeting, Salisbury remained steadfastly committed to his November “no negotiations” policy, but his colleagues decided to resolve the crisis with Washington peacefully. As Grenville and Young point out: “In November they believed that Britain held all the trump cards [but] the mood was no longer confident. The Cabinet was now inclined to cut Britain’s losses in a world which appeared to have become suddenly hostile.”⁶⁵ Overruled by the Cabinet, Salisbury—who believed that eventual war with the United States was “some-

63. See Bourne, *The Balance of Power in North America*, p. 340–341; A.E. Campbell, *Britain and the United States*, pp. 29–40; Eggert, *Richard Olney*, pp. 232–233; Paul Kennedy, *The Realities Behind Diplomacy: Background Influences on British External Policy, 1865–1980* (London: George Allen & Unwin, 1981), pp. 107–109; Arthur J. Marder, *The Anatomy of British Sea Power: A History of British Naval Policy in the Pre-Dreadnought Era, 1880–1905* (New York: Knopf, 1940), pp. 254–257. In an early January 1896 letter to Theodore Roosevelt, Lord Bryce said that nothing could be farther from his countrymen’s minds than interfering with America’s rights or the hemispheric balance of power because: “Our hands are more than sufficiently full elsewhere.” Quoted in A.E. Campbell, *Britain and the United States*, pp. 59–60.

65. Grenville and Young, *Politics, Strategy and American Diplomacy*, p. 170; Grenville, *Lord Salisbury*, pp. 67–69.

thing more than a possibility”—apparently considered resigning the premiership.⁶⁶

There is virtually no evidence that supports a democratic peace theory explanation of the Venezuela crisis's outcome. Although the crisis ended before either London or Washington could make war-like threats, both the United States and Britain began planning militarily for a possible conflict.⁶⁷ This suggests that both British and American policymakers considered that war, or at least the preparation for it, was a legitimate component of their diplomatic strategies.

It does not appear, either, that public opinion affected policy on either side of the Atlantic. In Britain, the Cleveland administration's demands initially were greeted with hostility. Nevertheless, even before January 1896, British public opinion overwhelmingly favored a peaceful settlement of the Anglo-American crisis. There is, however, no evidence in the historical record that public opinion had any effect on the Cabinet's January 11 decision to resolve the crisis peacefully. Indeed, during the Venezuela crisis, Britain's policy-making elite had a different view of Anglo-American relations than did the British public. At the time of the Venezuela crisis there was still “an enormous gulf” between the advocates of an Anglo-American rapprochement based on racial kinship “and the hard-headed realism of the school of professional politicians and strategists headed by Salisbury.”⁶⁸

On the American side of the Atlantic, Cleveland's bellicose December 17 message elicited widespread public support. As Walter LaFeber notes, “Expansionist-minded Americans heartily endorsed the President's message, though most of them also fully shared his hopes that no war would result.”⁶⁹ However the public's enthusiasm rather quickly subsided, and important groups, especially the churches and some elements of the financial and manufacturing sectors, recoiled at the prospect of an Anglo-American war. Nevertheless, if war had occurred, the public would probably have united behind the Cleveland administration. American public opinion viewed the prospect of war with England “not with enthusiasm but as, though regret-

67. Both London and Washington planned for a North American war during early 1896. American planning focused on invading Canada, Britain's on defending it. See Bourne, *The Balance of Power in North America*, pp. 319–331.

68. Bourne, *Balance of Power*, p. 340. Marder, *Anatomy of British Sea Power*, pp. 254–255, shows that Britain's national security elites took a very hard-line stance during the Venezuela crisis.

69. LaFeber, *New Empire*, p. 270.

table, necessary if there were no other way of establishing the paramount position of the United States in the western hemisphere."⁷⁰

Recent generations have come to regard the Anglo-American "special relationship" as an immutable fact of international life. Indeed, in some ways it is considered an archetype of relations between democratic states. The "great rapprochement" upon which the special relationship was built was the epilogue to the Venezuelan crisis. But whatever Anglo-American relations arguably have become, the impetus for the rapprochement between London and Washington (like the impetus for the settlement of the Venezuelan crisis itself) was, as C.S. Campbell points out, rooted in geostrategic concerns and not in the considerations that underlie democratic peace theory.⁷¹

By 1898, the effects of Britain's by then not-so-splendid isolation were being painfully felt, and London's overtures to Washington must be viewed as part of the dramatic "end of isolation" process of strategic and diplomatic readjustment that London undertook after the Boer War.⁷² The British did not welcome the rapid expansion of American power; rather they reconciled themselves to something they could not prevent and which, unlike the German, Russian and French challenges, did not seem immediately threatening to vital British interests. The Anglo-American rapprochement was possible because on every issue in dispute between them, London yielded to Washington's demands. As Bourne dryly observes, "All this was not simply or even perhaps at all significant of any special goodwill towards the United States."⁷³ Britain could not afford to make any more enemies, and least of all could London afford to incur the enmity of the United States, with which the British knew they could no longer compete geopolitically. For London, the "special relationship" was a myth devised "to enable Britain

70. A.E. Campbell, *Britain and the United States*, p. 41.

71. Charles S. Campbell, *Anglo-American Understanding, 1898–1903* (Baltimore: Johns Hopkins University Press, 1957), pp. 8–24. Kenneth Bourne and Paul Kennedy both point out that many of the same non-strategic factors underlying the Anglo-American rapprochement ("Anglo-Saxonism," economic interdependence) had been strongly present since at least 1850. They did not, however, noticeably mitigate Anglo-American hostility. These factors only came into play after the changing international situation forced London to reassess its grand strategy. Bourne, *Balance of Power*, p. 343; Kennedy, *Realities Behind Diplomacy*, p. 118.

72. There is strong consensus on this point among diplomatic historians. Bourne, *Balance of Power*, pp. 409–410; A.E. Campbell, *Britain and the United States*, pp. 208; C.S. Campbell, *Anglo-American Understanding*, p. 346, 184–185; Bradford Perkins, *The Great Rapprochement: England and the United States, 1895–1914* (New York: Atheneum, 1968) pp. 156–157; Kennedy, *Realities Behind Diplomacy*, pp. 118–119.

73. Bourne, *Balance of Power*, p. 343.

to withdraw gracefully” from those areas where British interests clashed with Washington’s, and its function was to make the “pill” of appeasing the United States “more palatable to swallow.”⁷⁴

The outcome of the Venezuelan crisis is better explained by realism than by democratic peace theory. Consistent with realist expectations, both Britain and the United States began planning for war. Although, as democratic peace theory would predict, there was no war fever in either Britain or the United States, there is no evidence that public opinion played any role in London’s decision-making process. It was London’s decision to reverse its initially uncompromising stance and instead seek an amicable diplomatic solution with Washington that allowed Britain and the United States to avoid war. All available evidence supports the realist explanation that London made this decision solely for strategic reasons.

THE ANGLO-FRENCH STRUGGLE FOR CONTROL OF THE NILE: FASHODA, 1898

The Fashoda crisis marked the culmination of the Anglo-French struggle for supremacy over Egypt and the headwaters of the Nile.⁷⁵ Until 1882 Egypt, although nominally part of the Ottoman Empire, had been administered by an Anglo-French condominium. In 1882, Britain intervened unilaterally to suppress a nationalist revolt. Because the Suez canal was the vital artery linking Britain with India and its other far eastern imperial interests, strategic considerations overrode London’s initial inclination to withdraw quickly from Egypt after the 1882 intervention. By the early 1890s, Lord Salisbury and other British policymakers had determined that in order to safeguard Egypt, Britain had to exert control over the Nile’s source and its entire valley.

For France, Britain’s post-1882 Egyptian primacy was an affront and, spurred by France’s colonial party, Paris periodically looked for ways in which it could compel London to honor its pledge to withdraw from Egypt.

75. For accounts of the Fashoda crisis and its background, the following are excellent sources: William L. Langer, *The Diplomacy of Imperialism, 1890–1902*, 2d ed. (New York: Knopf, 1965), pp. 101–144, 259–302; Ronald Robinson and John Gallagher with Alice Denny, *Africa and the Victorians: The Official Mind of Imperialism* (London: Macmillan, 1981, rev. ed.), pp. 76–159, 290–306; G.N. Sanderson, *England, Europe, and the Upper Nile, 1882–1899* (Edinburgh: Edinburgh University Press, 1965), chaps. 12–15; and Sanderson, “The Origins and Significance of the Anglo-French Confrontation at Fashoda,” in Prosser Gifford and William Roger Louis, eds., *France and Britain in Africa: Imperial Rivalry and Colonial Rule* (New Haven: Yale University Press, 1971), pp. 285–332.

The immediate impetus for the French expedition to Fashoda appears to have come from a January 1893 talk given by the hydraulic engineer Victor Prompt at the Egyptian Institute in Paris, which suggested that the flow of water to Egypt could be restricted by damming the Upper Nile. After reviewing Prompt's speech, President of the French Republic Sadi Carnot exclaimed, "we must occupy Fashoda!"⁷⁶

The plan to advance on Fashoda was eagerly embraced by Theophile Delcassé during his 1893–95 tenure first as undersecretary and then as minister for colonies. As a journalist and as a politician, he had been obsessed by the Egyptian question. For Delcassé and other French colonialists, France's prestige and its Mediterranean interests required an end to Britain's occupation of Egypt.⁷⁷ In 1896, a plan by marine captain Jean-Baptiste Marchand for an overland expedition to establish French control at Fashoda was approved by Foreign Minister Gabriel Hanotaux and Colonial Minister Emile Chautemps. They did not seek to precipitate an armed confrontation with Britain; they favored an eventual Anglo-French rapprochement and entente. However, they were convinced that French opinion would not accept an entente unless the two powers could reach settlement on the points of dispute between them, including Egypt. Thus, for Hanotaux and Delcassé, the Fashoda expedition was conceived as a lever to force the British to negotiate the Egyptian question and thus to increase France's great-power prestige.

In September 1898, Delcassé was foreign minister. As the conflict loomed, he hoped that it might be averted by Marchand's failure to reach his objective or, if the French expedition did run into British forces, by an agreement that the crisis would be settled diplomatically by London and Paris, not militarily by the opposing forces at Fashoda. Apparently relying on Salisbury's reputation for making "graceful concessions," Delcassé hoped to defuse the crisis by exchanging Marchand's withdrawal for Britain's agreement to reopen the Egyptian question and to discuss giving France an outlet on the Nile.⁷⁸ The British, however, had no intention of negotiating. London's position was simple: "Marchand should go, without quibbles or face saving."⁷⁹

76. Quoted in A.J.P. Taylor, "Prelude to Fashoda: The Question of the Upper Nile, 1894–5," *English Historical Review*, Vol. 65, No. 254 (January 1950), p. 54.

French policymakers “deluded themselves” into thinking that by taking Fashoda they could force London to negotiate the Egyptian issue.⁸⁰ As early as March 1895, when London had its first intimations about French designs on the upper Nile, Sir Edward Grey, then parliamentary undersecretary for foreign affairs, had stated bluntly that such a move “would be an unfriendly act and would be so viewed in England.”⁸¹ In spring 1898, responding to reports that France was driving on the upper Nile, London decided on an all-out reconquest of Sudan.

After victory at Khartoum, Field Marshal Lord Kitchener was ordered to advance to Fashoda and instructed, in the event he encountered French forces, to do nothing that “would in any way imply a recognition on behalf of Her Majesty’s Government of a title on behalf of France . . . to any portion of the Nile Valley.”⁸² On September 19, 1898, Kitchener’s forces reached Fashoda, where they were greeted by Marchand’s band. Although the opposing forces treated each other with elaborate military courtesy, their meeting plunged London and Paris into a deep diplomatic crisis. The Anglo-French “quarrel was not about Fashoda, or about the fate of the Sudan, or even about the security of the Nile waters and of Egypt; it was about the relative status of France and Britain as Powers.”⁸³

Once the crisis began, Delcassé quickly recognized that France was in an untenable position. The British ambassador in Paris reported that Delcassé was “prepared to retreat . . . if we can build him a golden bridge.”⁸⁴ Delcassé believed his maneuvering room was seriously circumscribed by the potentially volatile domestic political situation in France stemming from the Dreyfus affair. To accept a humiliating diplomatic defeat would probably mean the Brisson cabinet’s fall and, it was widely feared, even a military coup.⁸⁵ Delcassé reportedly begged London, “Do not drive me into a corner.”⁸⁶ On October 11, he told the British ambassador that if London made it easy for

him "in form he would be conciliatory in substance."⁸⁷ On October 27 the French ambassador to London, telling Salisbury that Marchand would soon leave Fashoda, pleaded for Britain to make some concession in return.⁸⁸

Meanwhile, notwithstanding both the pleading tone of French diplomacy and the possible repercussions of Britain's stance on French internal politics, London adamantly refused to give Paris an alternative to the bleak choice of ordering Marchand's humiliating withdrawal or going to war. On September 18, the British ambassador in Paris told Delcassé "categorically" that London would not consent to any compromise of the Fashoda dispute.⁸⁹ On September 30, responding to Delcassé's statement that France would fight rather than submit to a British ultimatum, the British ambassador reiterated that there could be no discussions until Marchand withdrew from Fashoda. Salisbury was determined "to compel, rather than persuade, the French to withdraw."⁹⁰

London's hard-line diplomacy was overwhelmingly supported by bellicose public opinion. Even before Fashoda, because of the tensions engendered by the Anglo-French colonial rivalry, "war with France was not exactly desired in England, but it would be accepted without hesitation if the occasion arose."⁹¹ Once the crisis began, the press overwhelmingly supported the government's decision to refuse negotiations with France, and during the crisis "the British popular press indulged in an orgy of scurrility."⁹² "There was plenty of warlike spirit in the country," and British public opinion was "aggressively jingoistic" over Fashoda.⁹³ "The unequivocal expression of British opinion" was solidly behind the Cabinet's hard-line policy.⁹⁴ This no doubt was true because the British public believed England's prestige was at stake and consequently was "in a mood to respond vigorously" to the French challenge.⁹⁵

The public mood was matched by that of Britain's political elite. As Chancellor of the Exchequer Michael Hicks Beach said on October 19, "The country

has put its foot down."⁹⁶ The government's uncompromising stance was supported strongly by the opposition Liberal Imperialists, notably Lord Rosebery, H.H. Asquith, and Sir Edward Grey.⁹⁷ Rosebery, a former prime minister and foreign secretary, recalled that his Cabinet had warned the French away from the Upper Nile in 1895 and declared that any Cabinet that showed signs of conciliating Paris over Fashoda would be replaced within a week. Indeed when, in the crucial October 27 Cabinet meeting, Salisbury left the impression in some minds that he was leaning towards compromise with Paris, the majority of ministers quickly poured cold water on that idea and the Admiralty was ordered to put the navy on a war footing.

The British knew that if Paris did not capitulate, armed conflict would ensue. London regarded that prospect with equanimity and, indeed, confidence. Because they believed both Britain's credibility and its reputation as a great power to be at stake, the British felt they had no alternative to forcing a showdown with the French: "Had Britain followed a less intransigent policy in the circumstances of October 1898, there would certainly have been a temptation, not only in Paris but also in St. Petersburg and Berlin, to write her off as a Power who would never risk a war, however great the provocation."⁹⁸

In October 1898 the British navy enjoyed a decisive superiority over the French fleet in both numbers and quality, and the outcome of an Anglo-French war was a foregone conclusion.⁹⁹ London manifested no reluctance in pressing its strategic advantage. During October, the Royal Navy made preparations for a war with France.¹⁰⁰ On October 15, the Channel fleet was assembled. By October 26, the Royal Navy had drawn up detailed war plans. On October 28 the reserve squadron was activated and concentrated at Portland; soon the Channel fleet was deployed to Gibraltar and the Mediterranean fleet was moved to Malta. As these measures became known in Paris from intelligence reports and stories in the British press, they made a strong impression on French policymakers.

There is no question that France was finally compelled to accept a crushing diplomatic defeat because of its military inferiority *vis-à-vis* Britain. The Royal

Navy's power contrasted sharply with the numerical and qualitative deficiencies, and unpreparedness, of the French fleet. When Paris calculated the prevailing Anglo-French military balance, an embarrassing diplomatic climb-down emerged as a more attractive alternative than decisive defeat in a war.¹⁰¹ As Delcassé admitted, he and President of the Republic Faure were compelled to order Marchand's withdrawal by "the necessity of avoiding a naval war which we are absolutely incapable of carrying on, even with Russian help."¹⁰² In the end, "Delcassé had no real alternative but to yield; except as an irrational gesture of defiance, war with England was not a possible choice."¹⁰³ The Fashoda crisis's outcome was, as Grenville says, "a demonstration of British power and French weakness."¹⁰⁴

The outcome of the Fashoda crisis is explained by realism, not by democratic peace theory. Believing that vital strategic and reputational interests were at stake, the British ruled out diplomatic accommodation with Paris notwithstanding Delcassé's pleas to be given a face-saving way to extricate France from the crisis. Britain's intransigence runs directly counter to democratic peace theory's expectation that relations between democratic states are governed by mutual respect based on democratic norms and culture. Backed strongly by public and elite opinion, London adopted a policy that left Paris with two stark choices: diplomatic humiliation or military defeat in a war. Counter to democratic peace theory's expectations, but consistent with those of realism, Britain made, and was prepared to carry out, military threats against France. Paris caved in to British demands rather than fight a war it could not win.

FRANCO-GERMAN CRISIS: THE RUHR, 1923

The Ruhr occupation, culmination of the post-1918 cold peace, "practically amounted to the renewal of war."¹⁰⁵ The occupation arose from the collision

101. Two other factors weighed heavily in Britain's favor: First, Kitchener had an enormous local superiority over Marchand on the ground at Fashoda. Second, France's Russian ally made it clear that it would not support Paris and, in any event, even if St. Petersburg had wanted to intervene there was little the Russian navy could do to offset Britain's maritime superiority. See Langer, *Diplomacy of Imperialism*, pp. 559–563; Marder, *Anatomy of British Sea Power*, pp. 323, 328–329. As Paul Kennedy observes, "all the best cards were in Britain's hands." Kennedy, *Realities Behind Diplomacy*, pp. 112–113.

of France's policy of security and Germany's policy of seeking revision of the Versailles Treaty system. The reparations issue was the immediate cause of the Ruhr occupation, but although it had economic significance in itself, its true importance was that Paris and Berlin regarded it as symbolic of the geopolitical competition between them.¹⁰⁶

For Paris, compelling Germany to adhere strictly to its reparations obligations was seen as crucial to maintaining the Versailles system. Moreover reparations were, as the Ruhr occupation demonstrated, a lever for France to revise Versailles in its favor by imposing political and territorial sanctions on Germany when Berlin defaulted on its payments. For Germany, obtaining modification of reparations was a wedge to open the issue of revising the entire Versailles framework. The "fulfillment" policies adopted by Berlin were designed to force revision by demonstrating that strict compliance with reparations obligations was beyond Germany's capacity and would lead inevitably to Germany's financial and economic collapse.¹⁰⁷

Although Germany had been defeated and its short-term power constrained by the Versailles settlement, the underlying sources of its geopolitical strength—its industrial base and population—remained intact. French policymakers were obsessed about the resurgence of a German security threat and determined to prevent it by imposing military, territorial and economic restrictions on Germany.

France's postwar German policy was rooted in the aims that Paris had pursued during the war. As early as 1915, Foreign Minister Delcassé had envisioned breaking up the German Reich into a number of small states, coupled with annexation by France, Holland, and Belgium of the Rhine's left bank.¹⁰⁸ By late 1917, Paris had decided to leave a truncated Reich intact while annexing Alsace-Lorraine and the Saar, and creating an independent

French satellite state in the Rhineland.¹⁰⁹ France's military and economic security would be enhanced by imposing reparations on Germany and by giving France control of the iron and coal that were crucial to West European industrial supremacy.

After the war, France's objectives did not change. Paris sought military security, reparations, and the establishment of France as Europe's leading steel producer. At Versailles, to avoid alienating Britain and the United States, France abandoned its annexationist aspirations in the Rhineland; however, throughout the period from the Armistice to the Ruhr occupation, Paris covertly supported Rhenish separatism while continuing to harbor hopes of controlling the left bank.¹¹⁰ Even while appearing to abandon France's territorial claims in the Rhineland, French Premier Clemenceau had achieved much of their essence by coupling the reparations and security issues: under the Versailles Treaty's provisions, as long as Germany remained in default on reparations, French troops could remain in the Rhineland.

The government's German policy was strongly supported by the French public. French public opinion had demanded a peace settlement that would "impose the greatest possible restrictions on Germany's influence and power," and the French public's Germanophobia carried over into the post-war period.¹¹¹ Public and policymakers alike believed that Germany should be forced to pay all of the costs France had sustained in connection with the war (including reconstruction of German-occupied French territory), and official and public opinion were mutually reinforcing. Indeed, French public opinion, which French Prime Minister Poincaré had done much to shape, was so anti-German in late 1922 that it is doubtful that he would have survived politically had he not moved to occupy the Ruhr.¹¹²

The French military invasion of the Ruhr was prompted by Paris's mounting frustration with Germany's campaign to obtain a significant reduction of its reparations obligations. Although there is some disagreement as to the exact nature of Poincaré's objectives in occupying the Ruhr, the balance of

109. On French war aims see Walter A. McDougall, *France's Rhineland Diplomacy, 1914–1924: The Last Bid for a Balance of Power in Europe* (Princeton: Princeton University Press, 1978), p. 25; Schmidt, *Versailles to the Ruhr*, pp. 22–23; Stevenson, *French War Aims*, pp. 38–39.

110. Stevenson, *French War Aims*, pp. 195–196. The definitive account of France's Rhenish policy is McDougall, *Rhineland Diplomacy*.

111. Stevenson, *French War Aims*, pp. 135–136. Leaders such as Poincaré actively promoted anti-German attitudes, not a particularly difficult task. See Schmidt, *From Versailles to the Ruhr*, p. 231.

112. Rupieper, *The Cuno Government*, pp. 88, 96; Schmidt, *From Versailles to the Ruhr*, p. 52.

opinion is that the Ruhr occupation was undertaken in an attempt to advance France's goals of revising the Versailles system in its favor. The Ruhr occupation clearly was intended to bolster French security by crippling Germany's economy while simultaneously enabling Paris to realize its ambition of establishing France as Europe's leading economic power. At a minimum, Paris hoped that the Ruhr occupation would inflame Rhenish separatism and lead the Rhineland to break away from the Reich; there is some evidence that the Ruhr occupation was undertaken specifically to advance the French aims of annexing the Rhineland and dissolving the Reich.¹¹³ Once the Ruhr crisis commenced, France actively abetted the Rhenish separatists.

In the Ruhr crisis, France did not hesitate to use military force against democratic Weimar Germany in pursuit of French security interests. Indeed, what leaps out from histories of the period between 1915 (when French policymakers began to think seriously about their war aims) and 1923 is the repeated French rejection of "second image" arguments that France's postwar security position would be enhanced if Germany were transformed into a democracy. Unlike the British, who soon after the war came to believe a democratic Germany was the key to maintaining the peace in Europe, France preferred to put German democracy at risk rather than abandon its strategy of protecting its security with tangible guarantees. As Walter McDougall observes:

The Quai d'Orsay perceived little connection between forms of government and foreign policies. The Wilsonian idea that democracies choose peaceful foreign policies, while authoritarian regimes are aggressive, found few disciples in the French government and military A strong united Germany, whether monarchist or republican, would pose a threat to France and surely come to dominate the economies of the Danubian and Balkan regions.¹¹⁴

The French military occupation of the Ruhr provoked a major crisis—if not a Franco-German war, at least a quasi-war. A real war was avoided only because Germany lacked the capabilities to wage it. Still the Germans resisted the occupation fiercely. If anything united the fractious Germans of the

113. McDougall argues that Rhenish separation from the Reich was Poincaré's hope but not his specific goal in the Ruhr operation. McDougall, *Rhineland Diplomacy*, pp. 247–249. Schmidt argues that Poincaré undertook the Ruhr occupation for the specific purpose of gaining permanent territorial control of the Ruhr and Rhineland and promoting the Reich's disintegration. Schmidt, *From Versailles to the Ruhr*, pp. 232–233.

114. McDougall, *Rhineland Diplomacy*, p. 114.

Weimar Republic, it was hatred for the Versailles system and a determination to overturn it. The Germans believed that the French move was designed to bring about the dissolution of the Reich. Because of Germany's military weakness, the Reichswehr ruled out a policy of active resistance to the French occupation; however, steps were taken to facilitate military resistance in the event the French attempted to advance beyond the Ruhr.¹¹⁵ Although unable to oppose France militarily, the Berlin government did adopt a policy of resistance to the French occupation, based on the noncooperation of German workers, civil servants, and railway personnel with French occupation authorities. The resistance was not entirely passive; the Reichswehr coordinated an active campaign of sabotage against the French occupation forces.¹¹⁶ To sustain the resistance, the Berlin government provided the Ruhr population with food and unemployment subsidies. Passive resistance was financed by printing money, a practice that triggered Germany's financial collapse (due to hyperinflation and the concomitant collapse of the mark); this ultimately compelled Berlin to abandon its resistance to the Ruhr occupation. Over the long term, the Ruhr occupation had even more important effects on German domestic politics and public opinion: France's hard line policies strengthened the position of the right-wing nationalist parties in Germany and served to discredit the Weimar democracy.

The Ruhr crisis strongly disconfirms democratic peace theory. In World War I's aftermath, both the public and the elites in France perceived Germany as a dangerous threat to France's security and its great power status, even though Weimar Germany was a democracy. What mattered to the French was Germany's latent power, not its domestic political structure. Contrary to democratic peace theory's predictions, French policy toward democratic Germany reflected none of the mutual respect based on democratic norms and culture that democracies are supposed to display in their relations with each other. On the contrary, driven by strategic concerns, the French used military power coercively to defend the Versailles system upon which they believed their safety depended, rather than entrust their national security to

115. See F.L. Carsten, *The Reichswehr and Politics, 1918 to 1933* (Oxford: Clarendon Press, 1966) pp. 154–155. German preparations included mobilization of reserve units (whose existence was illegal under the terms of Versailles), the purchase of fighter aircraft from Holland and seaplanes from Sweden, and the training of secret units to conduct guerrilla operations behind the lines of any French advance beyond the Ruhr.

116. *Ibid.*, pp. 154–155.

the hope that Germany's postwar democratic institutions would mitigate the geopolitical consequences flowing from the underlying disparity between German and French power.

Theoretical Conclusions

Proponents have made sweeping theoretical claims for, and have drawn important policy conclusions from, democratic peace theory. These claims rest on a shaky foundation, however. The case studies presented above subject both democratic peace theory and realism to a robust test. It is striking that in each of these four cases realism, not democratic peace theory, provides the more compelling explanation of why war was avoided. Indeed, the democratic peace theory indicators appear not to have played *any* discernible role in the outcome of these crises.

In each of these crises, at least one of the democratic states involved was prepared to go to war (or, in the case of France in 1923, to use military force coercively) because it believed it had vital strategic or reputational interests at stake. In each of these crises, war was avoided only because one side elected to pull back from the brink. In each of the four crises, war was avoided not because of the "live and let live" spirit of peaceful dispute resolution at democratic peace theory's core, but because of realist factors. Adverse distributions of military capabilities explain why France did not fight over Fashoda, and why Germany resisted the French occupation of the Ruhr passively rather than forcibly. Concerns that others would take advantage of the fight (the "waterbirds dilemma") explain why Britain backed down in the Venezuela crisis, and the Union submitted to Britain's ultimatum in the *Trent* affair. When one actually looks beyond the *result* of these four crises ("democracies do not fight democracies") and attempts to understand *why* these crises turned out as they did, it becomes clear that democratic peace theory's causal logic has only minimal explanatory power.

Although democratic peace theory identifies a correlation between domestic structure and the absence of war between democracies, it fails to establish a causal link. Because democratic peace theory's deductive logic lacks explanatory power, a second look at the theory's empirical support is warranted to see if the evidence is as strong as is commonly believed. The statistical evidence that democracies do not fight each other seems impressive but in fact, it is inconclusive, because the universe of cases providing empirical support for democratic peace theory is small, and because several important

cases of wars between democratic states are not counted for reasons that are not persuasive.

QUANTITATIVE SUPPORT FOR THE THEORY: HOW BIG AN N?

Democratic peace theory purports to be validated by a large number (“N”) of cases. A large N is achieved by aggregating the number of possible democratic dyads. Thus Switzerland and Sweden, or Austria and Israel, count as democratic dyads validating democratic peace theory. The result is the appearance of a large number of interactions with little or no conflict between democracies. Notwithstanding the theory’s claim, however, the universe of supporting cases is small. There are three reasons why this is so. First, between 1815 and 1945 there were very few democracies (and the N would shrink further if only dyads involving democratic great powers are considered). Second, the possibility of *any* dyad (whether democratic, mixed, or non-democratic) becoming involved in a war is small, because wars are a relatively rare occurrence. States, even great powers, do not spend most of their time at war.¹¹⁷ As David Spiro points out, if all nations are unlikely to fight wars, the claim that democracies do not fight each other loses much of its power. He states that if nations are rarely at war, and liberal dyads are a small proportion of all possible pairings of nation-states, then perhaps we should be surprised if democracies ever do go to war, but not at the absence of wars among democracies.¹¹⁸

Third, not all dyads are created equal. For the purposes of testing democratic peace theory, a dyad is significant only if it represents a case where there is a real possibility of two states going to war. To fight, states need both the *opportunity* (that is, the ability to actually project their power to reach an opponent) and a *reason* to do so. Only dyads meeting these preconditions are part of the appropriate universe of cases from which democratic peace theory can be tested.

117. On the striking decline in the frequency of great power war during the past two centuries see Jack S. Levy, *War and the Modern Great Power System, 1495–1975* (Lexington: University Press of Kentucky, 1983), chap. 6.

118. David E. Spiro, “The Insignificance of the Liberal Peace,” *International Security*, Vol. 19, No. 2 (Fall 1994), pp. 50–86. Spiro concludes that the statistical evidence for the liberal peace is weak: either the data are ambiguous, or random chance would predict the absence of wars between democracies. Spiro is sympathetic to the democratic peace theory. He suggests that the tendency of liberal states to ally with, instead of opposing, each other is important and probably is rooted in liberal norms.

WARS BETWEEN DEMOCRACIES: BIG EXCEPTIONS IN A SMALL-N WORLD. The size of the N is an important question. If the effective universe of cases from which democratic peace theory can be tested is a small N, the importance of exceptions to the rule that democracies do not fight each other is heightened. Here, by their own admissions, democratic peace theorists are on thin ice. For example, referring specifically to the classification of the War of 1812 as one not involving two democracies, Bruce Russett acknowledges that this decision “may seem like a cheap and arbitrary escape” but asserts it is not.¹¹⁹ It is only intellectual suppleness—the continual tinkering with definitions and categories—that allows democratic peace theorists to deny that democratic states have fought each other.¹²⁰

An important example of this is the War Between the States, which the democratic peace theorists generally rule out on the grounds that it was an internal conflict within a state rather an international conflict between sovereign states.¹²¹ Yet the events of 1861–65 seem especially relevant because the theory is based explicitly on the premise that the norms and culture that operate within democracies are externalized by them in their relations with other democratic states.¹²² Democratic peace theory itself makes relevant the

119. Russett, *Grasping the Democratic Peace*, p. 16. However, sometimes things are exactly as they seem. Russett excludes the War of 1812 on the grounds that, prior to the Reform Bill of 1832, Britain was not a democracy. Yet, until the “revolution” that followed Andrew Jackson’s 1828 election to the presidency, the United States was not appreciably more democratic than Britain. *The Federalist* and the Constitution itself, in its provision for an Electoral College and indirect election of senators, reflect the desire of the framers to circumscribe egalitarian democratic impulses. In early nineteenth-century America, suffrage was significantly restricted by property and other qualifications imposed at the state level. See Clinton Williamson, *American Suffrage: From Property to Democracy, 1750 to 1860* (Princeton: Princeton University Press, 1960); Paul Kleppner, et al., *The Evolution of American Electoral Systems* (Westport, Conn.: Greenwood Press, 1981).

120. A good example is James L. Ray, “Wars Between Democracies: Rare, or Nonexistent?” *International Interactions*, Vol. 18, No. 3 (1993), pp. 251–276. After readjusting the definition of democracy, Ray takes a brief look at five of the nineteen alleged exceptions to the rule that democratic states do not fight each other and concludes that over the last 200 to 250 years there are no exceptions to the rule.

121. Russett’s comments (*Grasping the Democratic Peace*, p. 17) notwithstanding, after secession the War Between the States did take on the cast of an international conflict between two sovereign democratic entities. It certainly was so regarded by contemporaneous observers (and had the Confederacy prevailed, it certainly would be so regarded today). For example, no less a figure than Prime Minister William Gladstone, the arch-apostle of British Liberalism, observed that: “Jefferson Davis and other leaders of the South have made an army; they are making, it appears, a navy; and they have made what is more than either: they have made a nation.” Quoted in James M. McPherson, *Battle Cry of Freedom: The Civil War Era* (New York: Oxford University Press, 1988), p. 552.

122. Democratic peace theory “extends to the international arena the cultural norms of live-and-let-

issue of whether democratic norms and culture do, in fact, result in the peaceful resolution of disputes within democracies. The War Between the States cuts to the heart of the democratic peace theory's causal logic: if democratic norms and culture fail to prevent the outbreak of civil war within democracies, what reason is there to believe that they will prevent the outbreak of interstate wars between democracies?

In the case of the Union and the Confederacy, the characteristics at the heart of democratic peace theory—the democratic ethos of respect for other democracies, a political culture that emphasizes the non-violent dispute resolution, the shared benefits of cooperation, the restraining effect of open debate and public opinion—failed conspicuously to assure a peaceful result. Indeed, if a democracy as tightly knit—politically, economically, culturally—as the United States was in 1861 could split into two warring successor states, we should have little confidence that democracy will prevent great power conflicts in an anarchic, competitive, self-help realm like international politics.

An even more important example is the issue of whether Wilhelmine Germany was a democracy. Even if World War I were the only example of democracies fighting each other, it would be so glaring an exception to democratic peace theory as to render it invalid. As even Michael Doyle concedes, the question of whether Wilhelmine Germany was a democracy presents a “difficult case.”¹²³ Indeed, it is such a difficult case that, in a footnote, Doyle creates a new category in which to classify Wilhelmine Germany—that of a bifurcated democracy: pre-1914 Germany was, he says, democratic with respect to domestic politics but not in the realm of foreign policy.¹²⁴ Doyle does not consider Imperial Germany to have been a democracy for foreign policy purposes because the executive was not responsible to the Reichstag and, consequently, the foreign policy making process remained, he argues, autocratic.

live and peaceful conflict resolution that operate *within* democracies.” *Ibid.*, p. 19 (emphasis added).

123. Doyle, “Kant, Liberal Legacies and Foreign Affairs,” part I, p. 216, fn 8.

124. *Ibid.* I do not address the issue of whether any state can in fact have such a tightly compartmentalized political system that it can be democratic in domestic politics but not in foreign policy. I know of no other example of a bifurcated democracy. If this concept of bifurcated democracy were accepted, proponents of democratic peace theory could defend their argument by asserting that, while democratic in the realm of domestic policy, in 1914 Britain and France, like Wilhelmine Germany, also were non-democratic in terms of foreign policy.

In fact, however, with respect to foreign policy, Wilhelmine Germany was as democratic as France and Britain. In all three countries, aristocratic or upper-middle-class birth and independent wealth were prerequisites for service in the diplomatic corps and the key political staffs of the foreign office.¹²⁵ In all three countries, foreign policy was insulated from parliamentary control and criticism because of the prevailing view that external affairs were above politics.

In democratic France, the Foreign Minister enjoyed virtual autonomy from the legislature, and even from other members of the cabinet.¹²⁶ As Christopher Andrew notes, "On the rare occasions when a minister sought to raise a question of foreign policy during a cabinet meeting, he was accustomed to the remark: 'Don't let us concern ourselves with that, gentlemen, it is the business of the foreign minister and the President of the Republic.'"¹²⁷ Treaties and similar arrangements were ratified by the president of the Republic (that is, by the cabinet) and the legislature played no role in the treaty making process (although the Senate did have the right to ask to be informed of treaty terms insofar as national security permitted).¹²⁸ Notwithstanding the formal principle of ministerial responsibility, the French legislature possessed no mechanisms for effectively supervising or reviewing the government's conduct of foreign policy.¹²⁹ Even in democratic France, the executive enjoyed unfettered power in the realm of foreign policy. This concentration of foreign policy-making power in the executive had a profound effect on the chain of events leading to World War I. The terms of the Franco-Russian alliance and military convention—the "fateful alliance" that ensured that an Austro-Russian war in the Balkans could not remain localized—were kept secret from the French legislature, public, and press.¹³⁰

In democratic Britain, too, as in France and Germany, crucial foreign policy decisions were taken without consulting Parliament. Notwithstanding the

profound implications of the Anglo-French staff talks, which began in January 1906, Foreign Secretary Sir Edward Grey and Prime Minister H.H. Asquith did not inform the Cabinet of their existence.¹³¹ Grey and Asquith feared (and rightly so) that a Cabinet majority would oppose the staff talks and indeed the very idea of more intimate Anglo-French strategic relations. When questioned in Parliament in 1910, 1911, and 1913 about the Anglo-French military discussions, Grey and Asquith consistently gave false or evasive answers that kept hidden both the nature and the implications of the strategic agreements between London and Paris.¹³² Even when Grey and Asquith had to account to the Cabinet, after it learned in November 1911 of the existence of staff talks, they left their colleagues with the incorrect impression that London had undertaken no binding obligations to France.¹³³ Notwithstanding Grey's and Asquith's constant reiteration (to the French, to Cabinet, and to Parliament) that London retained unimpaired freedom of maneuver, they had, in fact, undertaken a portentous commitment through a constitutionally doubtful process. In the Cabinet's debates about whether Britain should go to war in August 1914, Grey's argument that the Entente, and the concomitant military and naval agreements, had morally obligated Britain to support France proved decisive.¹³⁴

It is apparent that before World War I, the most important and consequential grand strategic decisions made by both Paris (on the Russian alliance) and London (on the entente and military arrangements with France) were made without any legislative control or oversight, notwithstanding both countries' democratic credentials. Form should not be confused with substance. In the realm of foreign policy, France and Britain were no more and no less democratic than the Second Reich.¹³⁵

131. See Samuel R. Williamson, *The Politics of Grand Strategy: Britain and France Prepare for War, 1904–1914* (Cambridge: Harvard University Press, 1969).

132. *Ibid.*, pp. 134, 137–138, pp. 202–204, 330–331.

133. *Ibid.*, pp. 198–200.

134. Grey threatened to resign from the Cabinet unless it agreed to take Britain into the war on France's side. Grey's resignation threat was determinative because the non-interventionist Cabinet Radicals realized that their refusal to declare war would lead to the Cabinet's replacement either by a Conservative-Unionist government or by a coalition between the Conservatives and the Liberal Imperialists. See K.M. Wilson, "The British Cabinet's Decision for War, 2 August 1914," *British Journal of International Studies*, Vol. 1, No. 2 (July 1975), pp. 148–159.

135. The classification of Wilhelmine Germany as a democracy is also supported by an analysis of the foreign policy making process of its successor, the Weimar Republic. Although the Weimar Republic invariably is classified as a democracy, in crucial respects, it closely resembled the Second Reich. During the Weimar Republic, the Foreign Office and the Army collaborated to ensure that the processes of formulating foreign policy and grand strategy were insulated from

The case of Wilhelmine Germany suggests that democratic great powers indeed have gone to war against one another (and could do so again in the future). Yet the prevailing view that the Second Reich was not a democracy has powerfully influenced the international relations–theory debate both on the broad question of how domestic political structure affects international outcomes and the specific issue of whether there is a “democratic peace.” However, the received wisdom about pre–World War I Germany has been badly distorted by a combination of factors: the liberal bias of most Anglo-American accounts of German history between 1860–1914; the ideologically tinged nature of post-1960 German studies of the Wilhelmine era; and the residual effects of Allied propaganda in World War I, which demonized Germany.¹³⁶ The question of whether Wilhelmine Germany should be classified as a democracy is an important one and it deserves to be studied afresh.

AN ALTERNATIVE HYPOTHESIS: THE SECOND IMAGE REVERSED

From a realist perspective, democratic peace theory has mistakenly reversed the linkage between international systemic constraints and domestic political institutions. Otto Hintze made the realist argument that a state’s internal political structure is highly influenced by external factors.¹³⁷ This creates a selection process that explains why some states become democracies while others do not. States that enjoy a high degree of security, like Britain and the United States at the beginning of the twentieth century, can afford the more minimalist state political structures of classical Anglo-American liber-

the Reichstag’s oversight and control. The leading study is Gaines Post, Jr., *The Civil-Military Fabric of Weimar Foreign Policy* (Princeton: Princeton University Press, 1973). Post observes (p. 358) that the Weimar Republic stands as a “model for the virtual exclusion of the parliamentary or legislative level from politico-military activity in a representative system of government.” If Weimar Germany is considered to be a democracy, then how can Wilhelmine Germany be classified as a non-democracy?

136. For a discussion of the leftist ideological biases that color the writings of Fritz Fischer’s disciples and a critique of Fischer, Bergahn, Kehr, and Wehler, see Wolfgang J. Mommsen, “Domestic Factors in German Foreign Policy before 1914,” *Central European History*, Vol. 6, No. 1 (March 1973), pp. 4–18. An insightful critique of the “failure of liberalism” school is Klaus P. Fischer, “The Liberal Image of German History,” *Modern Age*, Vol. 22, No. 4 (Fall 1978), pp. 371–383.

137. This thesis is developed in Otto Hintze, “The Formation of States and Constitutional Development: A Study in History and Politics”; Hintze, “Military Organization and the Organization of the State”; and Hintze, “The Origins of the Modern Ministerial System: A Comparative Study,” in Felix Gilbert, ed., *The Historical Essays of Otto Hintze* (New York: Oxford University Press, 1975).

alism, because there is no imminent external threat that necessitates a powerful governmental apparatus to mobilize resources for national security purposes. States that live in a highly threatening external environment are more likely to choose either more statist forms of democracy or even authoritarian structures, precisely because national security concerns require that the state have available to it the instruments for mobilizing national power resources.¹³⁸ The greater the external threat a state faces (or believes it does), the more “autocratic” its foreign policymaking process will be, and the more centralized its political structures will be.

If this hypothesis is true, it suggests that democratic peace theory is looking through the wrong end of the telescope. States that are, or that believe they are, in high-threat environments are less likely to be democracies because such states are more likely to be involved in wars, and states that are likely to be involved in wars tend to adopt autocratic governmental structures that enhance their strategic posture.¹³⁹ Thus, as realist theory would predict, international systemic structure is not only the primary determinant of a state’s external behavior but may also be a crucial element in shaping its domestic political system. This hypothesis may provide a more useful approach than democratic peace theory to investigating the links between domestic structure and foreign policy.

Policy Conclusions: Why It Matters

The validity of democratic peace theory is not a mere academic concern. Democratic peace theory has been widely embraced by policymakers and foreign policy analysts alike and it has become a lodestar that guides Amer-

138. This argument is developed in Brian M. Downing, *The Military Revolution and Political Change: Origins of Democracy and Political Change* (Princeton: Princeton University Press, 1992).

139. There is another way of visualizing this phenomenon. The more threatened a state is (or believes it is) the more it will move toward more centralized domestic structures. A state may move so far that it ceases to be democratic and becomes autocratic. This hypothesis conforms with the experience of liberal democratic great powers in this century. In both World Wars, the exigencies of conflict resulted in such a concentration of state power in both the United States and Britain that, for a time, arguably, both became autocratic. The Cold War, similarly, impelled the United States to become a “national security state,” still a democracy but one where the power of the state was vastly enhanced and the executive’s predominance over the legislature in the sphere of foreign policy was decisively established. Quincy Wright came to a similar conclusion about the effect of external environment on domestic political structure and observed that “autocracy, at least in the handling of foreign affairs, has been the prevailing constitutional form.” Wright, *A Study of War* (Chicago: University of Chicago Press, 1964, abridged ed.), p. 158.

ica's post-Cold War foreign policy. Michael Doyle's 1983 conception of a democratic "zone of peace" is now routinely used in both official and unofficial U.S. foreign policy pronouncements. Following the Cold War, a host of commentators have suggested that the export or promotion of democracy abroad should become the central focus of America's post-Cold War foreign policy.¹⁴⁰ From Haiti to Russia, America's interests and its security have been identified with democracy's success or failure. National Security Adviser Anthony Lake said that America's post-Cold War goal must be to expand the zone of democratic peace and prosperity because, "to the extent democracy and market economics hold sway in other nations, our own nation will be more secure, prosperous and influential."¹⁴¹

Those who want to base American foreign policy on the extension of democracy abroad invariably disclaim any intention to embark on a "crusade," and profess to recognize the dangers of allowing policy to be based on excessive ideological zeal.¹⁴² These reassurances are the foreign-policy version of "trust me." Because it links American security to the nature of other states' internal political systems, democratic peace theory's logic inevitably pushes the United States to adopt an interventionist strategic posture. If democracies are peaceful but non-democratic states are "troublemakers" the conclusion is inescapable: the former will be truly secure only when the latter have been transformed into democracies, too.

Indeed, American statesmen have frequently expressed this view. During World War I, Elihu Root said that, "To be safe democracy must kill its enemy when it can and where it can. The world cannot be half democratic and half autocratic."¹⁴³ During the Vietnam War, Secretary of State Dean Rusk claimed that the "United States cannot be secure until the total international environment is ideologically safe." These are not isolated comments; these views reflect the historic American propensity to seek absolute security and to

140. See for example Joshua Muravchik, *Exporting Democracy: Fulfilling America's Destiny* (Washington, D.C.: AEI Press, 1991); and Larry Diamond, "Promoting Democracy," *Foreign Policy*, No. 87 (Summer 1992), pp. 25–46.

141. "Remarks of Anthony Lake," Johns Hopkins School of Advanced International Studies, Washington, D.C., September 21, 1993 (Washington, D.C.: National Security Council Press Office).

142. Lake stated that the Clinton administration does not propose to embark on a "democratic crusade." Both Doyle and Russett acknowledge that democratic peace theory could encourage democratic states to pursue aggressive policies toward non-democracies, and both express worry at this. Doyle, "Kant, Liberal Legacies, and Foreign Affairs," part II; Russett, *Grasping the Democratic Peace*, p. 136.

143. Quoted in Russett, *Grasping the Democratic Peace*, p. 33.

define security primarily in ideological (and economic) terms. The political culture of American foreign policy has long regarded the United States, because of its domestic political system, as a singular nation. As a consequence, American policymakers have been affected by a “deep sense of being alone” and they have regarded the United States as “perpetually beleaguered.”¹⁴⁴ Consequently, America’s foreign and defense policies have been shaped by the belief that the United States must create a favorable ideological climate abroad if its domestic institutions are to survive and flourish.¹⁴⁵

Democratic peace theory panders to impulses which, however noble in the abstract, have led to disastrous military interventions abroad, strategic overextension, and the relative decline of American power. The latest example of the dangers of Wilsonianism is the Clinton administration’s Partnership for Peace. Under this plan, the asserted American interest in projecting democracy into East Central Europe is advanced in support of NATO security guarantees and eventual membership for Poland, Hungary, and the Czech Republic (and some form of U.S. security guarantee for Ukraine). The underlying argument is simple: democratic governments in these countries will guarantee regional peace in the post-Cold War era, but democracy cannot take root unless these countries are provided with the “reassurance” of U.S. or NATO security guarantees.

In fact, however, East Central Europe is bound to be a highly volatile region regardless of whether NATO “moves east.” The extension of NATO guarantees eastward carries with it the obvious risk that the United States will become embroiled in a future regional conflict, which could involve major powers such as Germany, Ukraine, or Russia. There is little wisdom in assuming such potentially risky undertakings on the basis of dubious assumptions about the pacifying effects of democracy.¹⁴⁶

144. William Appleman Williams, *Empire As A Way of Life: An Essay on the Causes and Character of America’s Present Predicament Along With a Few Thoughts About An Alternative* (New York: Oxford University Press, 1980), p. 53.

145. Lloyd C. Gardner, *A Covenant With Power: America and World Order from Wilson to Reagan* (New York: Oxford University Press, 1984), p. 27. For an excellent critique of the notion that America’s domestic ideology must be validated by its foreign policy, see Michael H. Hunt, *Ideology and U.S. Foreign Policy* (New Haven: Yale University Press, 1987).

146. It could be argued that if Hintze’s argument is correct (that secure states are more likely to become, or remain, democratic), then extending security guarantees to states like Ukraine, or preserving extant alliances with states like Germany, Japan, and South Korea, is precisely what the United States should do. Indeed, the Bush and Clinton administrations have both subscribed to a worldview that holds that the United States, as the sole remaining superpower, must take responsibility for maintaining regional power balances in Europe and East Asia. By

Democratic peace theory is dangerous in another respect, as well: it is an integral component of a new (or more correctly, recycled) outlook on international politics. It is now widely believed that the spread of democracy and economic interdependence have effected a "qualitative change" in international politics, and that war and serious security competitions between or among democratic great powers are now impossible.¹⁴⁷ There is therefore, it is said, no need to worry about future great power challenges from states like Japan and Germany, or to worry about the relative distribution of power between the United States and those states, unless Japan or Germany were to slide back into authoritarianism.¹⁴⁸ The reason the United States need not be concerned with the great-power emergence of Japan and Germany is said to be simple: they are democracies and democracies do not fight democracies.

Modern-day proponents of a liberal theory of international politics have constructed an appealing vision of perpetual peace within a zone of democracy and prosperity. But this "zone of peace" is a peace of illusions. There is no evidence that democracy at the unit level negates the structural effects of anarchy at the level of the international political system. Similarly, there is no evidence that supports the sister theory: that economic interdependence leads to peace. Both ideas have been around for a long time. The fact that they are so widely accepted as a basis for international relations theory shows that for some scholars, "theories" are confirmed by the number of real-world tests that they fail. Proponents of liberal international relations theory may contend, as Russett does, that liberal approaches to international politics have not failed, but rather that they have not been tried.¹⁴⁹ But this is what disappointed adherents of ideological worldviews always say when belief is overcome by reality.

preventing the "renationalization" of other states' security policies and by foreclosing the possibility of regional power vacuums, the United States, it is argued, can preserve the kind of international environment that is conducive to the spread of democracy and economic interdependence. For critiques of this policy see Christopher Layne, "The Unipolar Illusion: Why New Great Powers Will Rise," *International Security*, Vol. 17, No. 4 (Spring 1993), pp. 5–51; Layne, "American Grand Strategy After the Cold War: Primacy or Blue Water?" in Charles F. Hermann, ed., *American Defense Annual* (New York: Lexington Books, 1994); and Layne and Schwarz, "American Hegemony."

147. Robert Jervis, "The Future of World Politics: Will It Resemble the Past?" *International Security*, Vol. 16, No. 3 (Winter 1991/92), pp. 39–73.

148. For an example of this argument see James M. Goldgeier and Michael McFaul, "A Tale of Two Worlds: Core and Periphery in the Post-Cold War Era," *International Organization*, Vol. 46, No. 3 (Spring 1992), pp. 467–491.

149. Russett, *Grasping the Democratic Peace*, p. 9, says that Kantian and Wilsonian principles have not been given a real chance to operate in international politics.

If American policymakers allow themselves to be mesmerized by democratic peace theory's seductive—but false—vision of the future, the United States will be ill prepared to formulate a grand strategy that will advance its interests in the emerging world of multipolar great power competition. Indeed, as long as the Wilsonian worldview underpins American foreign policy, policymakers will be blind to the need to have such a grand strategy, because the liberal theory of international politics defines out of existence (except with respect to non-democracies) the very phenomena that are at the core of strategy: war, the formation of power balances, and concerns about the relative distribution of power among the great powers. But in the end, as its most articulate proponents admit, liberal international relations theory is based on hope, not on fact.¹⁵⁰ In the final analysis, the world remains what it always has been: international politics continues to occur in an anarchic, competitive, self-help realm. This reality must be confronted, because it cannot be transcended. Given the stakes, the United States in coming years cannot afford to have either its foreign policy, or the intellectual discourse that underpins that policy, shaped by theoretical approaches that are based on wishful thinking.

150. Russett, *Grasping the Democratic Peace*, p. 136, argues that, “understanding the sources of democratic peace can have the effect of a self-fulfilling prophecy. Social scientists sometimes create reality as well as analyze it. Insofar as norms do guide behavior, repeating those norms helps to make them effective. *Repeating the norms as descriptive principles can help to make them true.*” (Emphasis added.)
