Some GDP data was missing. PR = political rights, CL = civil liberties, score = sum of the two. Higher scores are less democratic. Source: World Development Indicators, CIA World Factbook, Freedom House. **The cutoff in the data between microstates and non-microstates is between Cape Verde and Equatorial Guinea. The countries marked by **s are not considered microstates for the purposes of this study and are included to avoid too-heavily selecting on the dependent variable.
