(Same as PHIL 242) Dewey's pragmatic philosophy and educational thought; his debt to Darwin, Hegel, Peirce, and James; his educational writings including Democracy and Education; and his call for a revolution in philosophy in Reconstruction in Philosophy. (SSPEP)
4 units, not given this year

EDUC 305X. Deprivation and Alienation in Fiction and Education
3-4 units, Spr (McDermott, R)

EDUC 306A. Economics of Education in the Global Economy
Case material considers development problems in the U.S. and abroad. Discussion sections on economic aspects of educational development. (SSPEP/ICE)
5 units, Aut (Carnoy, M)

EDUC 306B. Politics, Policy Making, and Schooling Around the World
Education policy, politics, and development. Topics include: politics, interests, institutions, policy, and civil society; how schools and school systems operate as political systems; how policy making occurs in educational systems; and theories of development.
3-4 units, Spr (Adams, J)

EDUC 306C. Political Economy of the Mind
Theories of political economy related to theories of the learning mind, emphasizing theories of genius. Readings from Pascal, Defoe, Smith, Balzac, Emerson, Marx, Veblen, Joyce, and Morrison. (SSPEP)
3-4 units, not given this year

EDUC 306D. World, Societal, and Educational Change: Comparative Perspectives
(Same as EDUC 136, SOC 231) Theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation building; education, mobility, and equality; education, international organizations, and world culture.
4-5 units, Win (Martin, P)

EDUC 306Y. Economic Support Seminar for Education and Economic Development
Core economic concepts that address issues in education in developing and developed countries. Supply and demand, elasticity, discount rates, rate of return analysis, utility functions, and production functions. Corequisite: 306A. (Carnoy)
1 unit, Aut (Carnoy, M)

EDUC 307X. Organizing for Diversity: Opportunities and Obstacles in Groups and Organizations
Obstacles in organizations and groups that prevent people from participating, working effectively, and developing relationships in the context of diversity. How to create conditions in which diversity enhances learning and effectiveness? Experiential exercises;

students experiment with conceptual and analytic skills inside and outside of the classroom.

3-4 units, not given this year

EDUC 308X. Mobile Learning Technology for the Marginalized

Learning design principles as a basis for developing and evaluating mobile learning systems to address educational inequalities in underserved communities. Students analyze mobile learning scenarios, prototypes, and authoring tools while collaborating with research teams to develop a small-scale mobile empowerment scenario addressing education needs such as language, math, health, and civic and life skills in developing countries.

1-3 units, Spr (Kim, H)

EDUC 309X. Educational Issues in Contemporary China

(Same as EDUC 109X) Reforms such as the decentralization of school finance, emergence of private schools, expansion of higher education, and reframing of educational policy to focus on issues of quality. Have these reforms exacerbated educational inequality.

3-4 units, Spr (Adams, J)

EDUC 310. Sociology of Education: The Social Organization of Schools

(Same as EDUC 110, SOC 132, SOC 332) Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy.

4 units, Win (Carter, P)

EDUC 311X. Designing Learning for Development: Learning Theories, Techonology Design and Social Change

Perspectives on learning and human development as they relate to prior technological interventions in the development sphere. Case studies in the international development context; historical perspective on learning and development. Methods of inquiry useful in a design process engaging technology within a development framework.

3 units, not given this year

EDUC 312A. Traditions of Microsociology

(Same as SOC 224A) The educational applications of sociological and social psychological theory and research to interaction processes in schools. Readings include: foundational works by Mead, Schutz, and Simmel; contemporary work by Goffman, Homans, Merton, Blau, and Harold. Readings span empirical settings such as work, classrooms, gangs, primate societies, and children's games. Topics: processes of influence, role differentiation, identity formation, social mechanisms, and intra/inter group dynamics of peer relations. Methods for observation and analysis of small groups. (SSPEP)

4 units, not given this year

EDUC 312B. Microsociology: Social Structure and Interaction

(Same as SOC 224B) How to interpret interpersonal situations using microsociological theories. Focuses on the role of intention, identity, routines, scripts, rituals, conceptual frameworks, talk and emotions in social interaction. Processes by which interactions reverberate outward to transform groups and social structures. Special consideration will be placed on organizational contexts like schools, workplaces and policy decision arenas.

4 units, Aut (McFarland, D)

EDUC 314. Workshop in Economics of Education

Research by students and faculty engaged in problems in the economics of education. Prerequisites: advanced graduate training in economics theory and methodology; current ongoing research. May be repeated for credit. (SSPEP)

1-2 units, not given this year

EDUC 315X. Race and Ethnicity in Society and Institutions

(Same as SOC 347) Primarily for doctoral students. Major theories and empirical research. Emphasis is on schooling and race, racial identity, urban issues, and the impact of immigration on race relations.

1-5 units, not given this year

EDUC 316. Social Network Analysis

(Same as SOC 369) Introduction to social network theory, methods, and research applications in sociology. Network concepts of interactionist (balance, cohesion, centrality) and structuralist (structural equivalence, roles, duality) traditions are defined and applied to topics in small groups, social movements, organizations, communities. Students apply these techniques to data on schools and classrooms. (SSPEP)

4-5 units, Aut (McFarland, D)

EDUC 317X. Workshop: Social Networks

(Same as SOC 317W) Yearlong workshop where doctoral students are encouraged to collaborate with peers and faculty who share an interest in researching the network dynamics, histories and theories of action that help explain particular social phenomena. Students present their own research and provide helpful feedback on others' work. Presentations may concern dissertation proposals, grants, article submissions, book proposals, datasets, methodologies and other texts. Repeatable for credit.

1-2 units, Aut (McFarland, D; Parigi, P), Win (McFarland, D; Parigi, P), Spr (McFarland, D; Parigi, P)

EDUC 318X. The Discourses of Teaching Reading

Students examine language, social relationships, and students' textual sense-making to further develop their conceptions of reading comprehension and their pedagogical practice as reading teachers. What it means to comprehend text; how classroom discourse matters in the development of textual understanding; and what understandings, purposes, and relationships should matter in classroom talk about text. Field work in which students facilitate small group text discussions for the duration of the quarter at a location of their choice.

3-5 units, Win (Aukerman, M)

EDUC 319. Research on Teaching

Introduction and historical perspective to theory, methods, and substantive findings of research on teaching.

1-4 units, not given this year

EDUC 320X. Sociology of Knowledge Creation

(Same as EDUC 120X, SOC 330) The sociology of knowledge creation explores systematic relationships between thought and social structure in order to examine how human beings construct, interpret, and view reality. How knowledge is socially constructed, patterned, and used, and how everyday and tacit forms of knowledge are achieved. Emphasis is on the creation and patterning of scientific paradigms, social science disciplines, and the field of education.

3-4 units, Win (McFarland, D)

EDUC 321B. Analysis of Social Interaction

Practicum on discourse, interactional, and cultural analysis of videotaped data. Analysis of interactional data, and the basis on which analytic claims can be founded. The transcription of speech and movement in social interaction, and how to identify the patterns which participants use to display and interpret cultural meanings. The theoretical assumptions hidden in transcription systems. Prerequisite: first- or second-year graduate student. (SSPEP/ICE)

4 units, Spr (Staff)

EDUC 322. Discourse of Liberation and Equity in Schools and Society

Issues and strategies for studying oral and written discourse as a means for understanding classrooms, students, and teachers, and teaching and learning in educational contexts. The forms and functions of oral and written language in the classroom, emphasizing teacher-student and peer interaction, and student-produced texts. Individual projects utilize discourse analytic techniques. Prerequisite: graduate status or consent of instructor. (SSPEP)

3-5 units, Win (Ball, A)

EDUC 323A. The Practice of Education Policy Analysis

Key issues in the K-12 education policy. Modern theories about the making of policy and its implementation. Preparation to do policy analysis in education. (SSPEP)

3 units, Win (Kelemen, M)

EDUC 325A. Proseminar 1

Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized; how are educational systems organized; and what are the roles of education in society?

3 units, Aut (Carnoy, M; Willinsky, J)

EDUC 325B. Proseminar 2
Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized; how are educational systems organized; and what are the roles of education in society?
3 units, Win (Borko, H; Barron, B)

EDUC 325C. Proseminar 3
Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized; how are educational systems organized; and what are the roles of education in society?
2 units, Spr (Labaree, D; Ramirez, F)

EDUC 327A. The Conduct of Qualitative Inquiry
(Same as SOC 331) Two quarter sequence for doctoral students to engage in research that anticipates, is a pilot study for, or feeds into their dissertations. Prior approval for dissertation study not required. Students engage in common research processes including: developing interview questions; interviewing; coding, analyzing, and interpreting data; theorizing; and writing up results. Participant observation as needed. Preference to students who intend to enroll in 327C.
3-4 units, not given this year

EDUC 327C. The Conduct of Qualitative Inquiry
For doctoral students. Students bring research data for analysis and writing. Preference to those who have completed 327A.
1-4 units, Win (Carter, P)

EDUC 328X. Topics in Learning and Technology: Interactivity and Feedback
Content changes each year. Interactivity including manipulation of an object, talking to another person, or clicking on a mouse. Proposals for the active learning ingredient of interactivity, and how different technologies capitalize on these ingredients.
3 units, not given this year

EDUC 329X. Seminar on Teacher Professional Development
For master's and doctoral students. Theories, principles, and models of professional development. Issues include: different conceptions of teaching, practice, and development; what gets developed in professional development; pedagogies of professional development; structures to support teacher learning; evaluating professional development; and policy issues.
1-4 units, Aut (Borko, H)

EDUC 330X. Economic Approaches to Education Policy Analysis
(Same as GSBGEN 347) Policy issues in education using the tools of microeconomics. How schools are funded; implications for efficiency, equity, and adequacy of resources. The impact of school resources on educational and economic well-being. Teacher labor markets. How teachers impact student achievement. How systems of school choice affect schools and students. How accountability has changed schooling. The effects of changes in affirmative action and financial aid in higher education. Prerequisites: intermediate microeconomics and regression analysis.
4 units, not given this year

EDUC 331A. Introduction to Research Design in Administration and Policy Analysis
Required for first-year APA doctoral students; SSPEP first-year doctoral students with consent of instructor. How to conduct literature reviews. How to use literature to frame and formulate problem statements, research questions, and conceptual frameworks. (APA)
3 units, Spr (Stevens, M)

EDUC 332X. Theory and Practice of Environmental Education
Foundational understanding of the history, theoretical underpinnings, and practice of environmental education as a tool for addressing today's pressing environmental issues. The purpose, design, and implementation of environmental education in formal and nonformal settings with youth and adult audiences. Field trip and community-based project offer opportunities for experiencing and engaging with environmental education initiatives.
3 units, Spr (Ardoin, N)

EDUC 333A. Understanding Learning Environments
Advanced seminar. Theoretical approaches to learning used to analyze learning environments and develop goals for designing resources and activities to support effective learning practices.
3 units, Win (McDermott, R; Pea, R)

EDUC 333B. Imagining the Future of Learning
How to understand and forecast social, educational, technological trends; how to develop concepts and ideas for engaging learning and technology. Presentations of scenarios for future learning concepts from education, government, technology, business and leisure sectors. Experiments with the research and visioning processes.
3 units, not given this year

EDUC 334X. Education Advocacy Clinic
(Same as LAW 660.) For students enrolled in the Education (M.A.) and Law (J.D.) joint degree program and those who already possess Law degrees only. Students participate in educational rights and reform work with clients and communities, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. May be repeated for credit. Prerequisite: consent of instructor.
2-10 units, Win (Koski, W), Spr (Staff)

EDUC 336. Language, Identity, and Classroom Learning
As contemporary research focuses on how people act and recognize each other, analyzing interaction while acknowledging identity allows for a dynamic examination of cultural interaction. Broad cultural categorization can be overly expansive in identifying the characteristics of large groups of individuals.
1-3 units, Aut (Brown, B)

EDUC 337. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices
(Same as EDUC 103B) Focus is on classrooms with students from diverse racial, ethnic and linguistic backgrounds. Studies, writing, and media representation of urban and diverse school settings; implications for transforming teaching and learning. Issues related to developing teachers with attitudes, dispositions, and skills necessary to teach diverse students.
3-5 units, Win (Ball, A)

EDUC 338X. Innovations in Education: Designing the teaching experience
Immersive experiences and real world projects focused around issues facing the teaching profession. Human capital as a top priority for the U.S. and other educational systems. Topics include teacher career ladders, induction, retention, and teacher knowledge sharing.
3-4 units, Spr (Goldman, S; Crandall, R)

EDUC 339. Advanced Topics in Quantitative Policy Analysis
For doctoral students. How to develop a researchable question and research design, identify data sources, construct conceptual frameworks, and interpret empirical results. Presentation by student participants and scholars in the field. May be repeated for credit.
1-2 units, Aut (Reardon, S; Loeb, S), Win (Reardon, S; Loeb, S), Spr (Reardon, S; Loeb, S)

EDUC 340. Psychology and American Indian Mental Health
Western medicine's definition of health as the absence of sickness, disease, or pathology; Native American cultures' definition of health as the beauty of physical, spiritual, emotional, and social things, and sickness as something out of balance. Topics include: historical trauma; spirituality and healing; cultural identity; values and acculturation; and individual, school, and community-based interventions. Prerequisite: experience working with American Indian communities.
3-5 units, Win (LaFromboise, T)

EDUC 341X. Urban School System Reform
Strategies for large-scale reform of complex school systems. Case studies of urban school systems. Sources include approaches developed in management studies, organizational behavior, and school reform. Political and community contexts; the role of urban superintendents and administrators in creating reform strategies. Factors such as labor relations and the regulatory environment. Guest speakers.
4 units, not given this year

EDUC 342. Child Development and New Technologies
Focus is on the experiences computing technologies afford children and how these experiences might influence development. Sociocultural theories of development as a conceptual framework for understanding how computing technologies interact with the social ecology of the child and how children actively use technology to meet their own goals. Emphasis is on influences of interactive technology on cognitive development, identity, and social development equity.
1-3 units, not given this year

EDUC 343X. Navigating the Academic Profession
For DARE doctoral fellows only. The roles and responsibilities of faculty members in American colleges and universities in the 21st century. How to become productive faculty members within the higher education enterprise.
1-2 units, Aut (Golde, C)

EDUC 344. Child Development and Schooling
How the practices and activities of schooling influence the social, emotional, and cognitive development of children. Metatheoretical approaches (mechanistic, organismic, developmental contextualist metamodels) and methods of conducting research on schooling and development (experimental, survey, ethnographic, intervention). Topics: how teaching practices influence cognitive growth in academic domains; how the organizational structures of schools (grade related transitions, class organizations) fit or fail to fit developmental needs; how friendship groups create contexts for learning and can lead to different trajectories of development; and how grading and other evaluative practices influence motivational orientations. Focus is on elementary school years. (PSE)
3-4 units, not given this year

EDUC 346. Research Seminar in Higher Education
Required for higher education students. Major issues, current structural features of the system, the historical context that shaped it, and theoretical frameworks. The purposes of higher education in light of interest groups including students, faculty, administrators, and external constituents. Issues such as diversity, stratification, decentralization, and changes that cut across these groups. (APA)
4 units, Aut (Antonio, A)

EDUC 347. The Economics of Higher Education
Topics: the worth of college and graduate degrees, and the utilization of highly educated graduates; faculty labor markets, careers, and workload; costs and pricing; discounting, merit aid, and access to higher education; sponsored research; academic medical centers; and technology and productivity. Emphasis is on theoretical frameworks, policy matters, and the concept of higher education as a public good. Stratification by gender, race, and social class.
4 units, Win (Bettinger, E)

EDUC 348X. Policy and Practice in Science Education
Values and beliefs that dominate contemporary thinking about the role and practice of science education, what the distinctive features of science are, and the arguments for its value as part of compulsory education. Research on the conceptual and affective outcomes of formal science education, how the changing nature of contemporary society challenges current practice, and the rationale for an alternative pedagogy, curriculum and assessment.
3-4 units, Spr (Osborne, J)

EDUC 350A. Psychological Studies in Education
Required of first-year doctoral students in Psychological Studies; others by consent of instructor. Introduction to the doctoral program in Psychological Studies in Education and to faculty and student research. (PSE)
2 units, not given this year

EDUC 350C. Psychological Studies in Education
Individual research projects in a group context. (PSE)
1-2 units, not given this year

EDUC 351A. Design and Analysis of Longitudinal Research
The analysis of longitudinal data is central to empirical research on learning and development. Topics: measurement of change, growth models, reciprocal effects, stability, analysis of durations including survival analysis, and experimental and non-experimental group comparisons. See http://www-stat.stanford.edu/~rag/ed351longit/ . Prerequisite: intermediate statistical methods. (PSE)
1-2 units, Spr (Rogosa, D)

EDUC 351C. Workshop in Technical Quality of Educational Assessments and Accountability
Topics include: determinations of accuracy for individual scores and group summaries; design and reporting of educational assessments; achievement instruments in state-level accountability systems; and policy implications of statistical properties. See http://www.stanford.edu/~rag/.
3 units, not given this year

EDUC 352X. Education Schools: Historical and Sociological Perspectives
The lowly status of the education school, defined as college, school, or department, within a university. Why does the education school get no respect? Its historical development, how it evolved into its current position in the academic hierarchy, and contemporary factors that help to reinforce that position. (SSPEP) (Labaree)
2-4 units, not given this year

EDUC 353A. Problems in Measurement: Item Response Theory
Alternative mathematical models used in test construction, analysis, and equating. Emphasis is on applications of item response theory (latent trait theory) to measurement problems, including estimation of item parameters and person abilities, test construction and scoring, tailored testing, mastery testing, vertical and horizontal test equating, and detection of item bias. Prerequisites: 252 and 257, or PSYCH 248 and 252, or equivalent. (PSE)
3 units, not given this year

EDUC 353C. Problems in Measurement: Generalizability Theory
Application to analysis of educational achievement data, including performance assessments. Fundamental concepts, computer programs, and actual applications. (PSE)
3 units, not given this year

EDUC 354X. School-Based Decision Making
Leadership and organizational issues. Leadership as it plays out in the pragmatic demands and tensions of site-level decision processes. The interdependence of factors critical to school achievement and equity outcomes: governance and culture, instruction, resource alignment, inquiry, community engagement. The complexity of decisions in these arenas and the capacity-building process of leadership for results.
3-4 units, Win (Hoagland, G)

EDUC 355X. Higher Education and Society
For undergraduates and graduate students interested in what colleges and universities do, and what society expects of them. The relationship between higher education and society in the U.S. from a sociological perspective. The nature of reform and conflict in colleges and universities, and tensions in the design of higher education systems and organizations.
3 units, not given this year

EDUC 356. Street History: Learning the Past in School and Out
(Same as HISTORY 337C) Interdisciplinary. Since Herodotus, history and memory have competed to shape minds: history cultivates doubt and demands interpretation; memory seeks certainty and detests that which thwarts its aims. History and memory collide in modern society, often violently. How do young people become historical amidst these forces; how do school, family, nation, and mass media contribute to the process?
3-5 units, Win (Wineburg, S)

EDUC 357X. Science and Environmental Education in Informal Contexts
There are ever-expanding opportunities to learn science in contexts outside the formal classroom, in settings such as zoos, museums, and science centers. How are issues around science and the environment presented in these contexts, how do people behave and learn in these contexts, and what messages do they take away? This course will cover the learning theories and empirical research that has been conducted in these settings. Case studies of nearby science centers will add an experiential dimension.
3-4 units, Win (Osborne, J; Ardoin, N)

EDUC 358X. Developments in Access to Knowledge and Scholarly Communication
Scholarly and educational implications of new academic communication systems. New dissemination methods in light of long-

standing issues of epistemology, intellectual property, propriety, access, value, and responsibility within the scholarly community. Contexts include publishing, archiving, indexing, and networking.

1-4 units, Win (Staff)

EDUC 359A. Research in Science and Mathematics Education: Assessment and Evaluation

Historical and international perspectives. Emphasis is on trends and issues in contemporary American research and policy. Opportunity to develop and discuss dissertation plans. (CTE) (Shavelson)

2-4 units, Aut (Shavelson, R)

EDUC 359B. Research in Science and Mathematics Education

For doctoral students interested in science education and literacy in school subjects.

2-3 units, Win (Brown, B)

EDUC 359C. Research in Science Education: Research in Science Teaching

The changing debate over conceptions of the nature of science and the calls to broaden it. Themes, directions, limitations, and epistemological foundations of the body of research on the nature of science.

2-3 units, not given this year

EDUC 359E. Research on Mathematics Education

Comparative and cultural perspectives on mathematics teaching and learning practices in the U.S. mathematics education in the context of cultural and educational systems. Teaching and learning as an interactive system, classroom discourse and math talk, teacher professional development, classroom culture and norms, educational equity, and issues of curriculum and standards.

2-4 units, not given this year

EDUC 360X. Developmental Psychopathology and Resilience

Theoretical, methodological, and empirical issues pertaining to developmental psychopathology and resilience of children and adolescents. Current conceptual and empirical issues; cognitive, affective, and motivational processes that underlie some of the most salient childhood mental health symptoms and disorders; family, school, and cultural factors that contribute to developmental psychopathology and resilience; and cutting-edge analytic methods that are currently employed in studies of developmental psychopathology and resilience.

3-4 units, Aut (Obradovic, J)

EDUC 361. Workshop: Networks and Organizations

(Same as SOC 361W) For students doing advanced research. Group comments and criticism on dissertation projects at any phase of completion, including data problems, empirical and theoretical challenges, presentation refinement, and job market presentations. Collaboration, debate, and shaping research ideas. Prerequisite: courses in organizational theory or social network analysis.

1-3 units, Aut (Powell, W), Win (Powell, W), Spr (Powell, W)

EDUC 362X. The Science Curriculum: Values and Ideology in a Contested Terrain

The issue of what should be taught in schools is a site of contestation where issues of beliefs, values and ideologies emerge. This course will use the school science curriculum and the history of its development to explore the common positions adopted and argued for in approaching curriculum development. Course will help students develop a knowledge of curriculum reform in school science and a deeper understanding of the arguments that have shaped its present form and their historical antecedents.

3-5 units, not given this year

EDUC 363X. Stress Reactivity and Biological Sensitivity to Context

Two biological systems: the autonomic nervous system (ANS) and the hypothalamic-pituitary-adrenal (HPA) axis that help children respond to and cope with daily challenges, stressors, and adversities. How the ANS and HPA systems respond to daily stressors, as well as experiences of poverty, maltreatment, and neglect; how different indices of stress reactivity independently and jointly relate to various domains of competence and psychopathology; andhow stress reactivity moderates contextual influences on children's adaptation.

3-4 units, Win (Obradovic, J)

EDUC 364. Cognition and Learning

Cognitive psychology is the study of human thought including topics including the nature of expertise, creativity, and memory. Emphasis is on learning. The role of cognitive psychology in helping people learn, and determining the most desirable type of learning and whether people have learned. Students design and conduct their own learning study.

3-4 units, Win (Schwartz, D)

EDUC 365. Social, Emotional, and Personality Development

Limited to doctoral students in PSE and those with a background in child and adolescent development. Developmental processes that account for psychological adaptation in social relationships, schools, and other interpersonal settings. Theoretical models of social, personality, and emotional development. Topics such as self-concept, empathy, motivation, aggression, and personality formation.

3 units, Win (Damon, W)

EDUC 366X. Learning in Formal and Informal Environments

How learning opportunities are organized in schools and non-school settings including museums, after-school clubs, community art centers, theater groups, aquariums, sports teams, and new media contexts. Sociocultural theories of development as a conceptual framework. Readings from empirical journals, web publications, and books.Collaborative written or multimedia research project in which students observe and document a non-school learning environment.

3 units, not given this year

EDUC 367. Cultural Psychology

(Formerly 292.) The relationship between culture and psychological processes; how culture becomes an integral part of cognitive, social, and moral development. Both historical and contemporary treatments of cultural psychology, including deficit models, cross-cultural psychology, ecological niches, culturally specific versus universal development, sociocultural frameworks, and minority child development. The role of race and power in research on cultural psychology.

3-5 units, Aut (LaFromboise, T)

EDUC 368. Cognitive Development in Childhood and Adolescence

Cognitive development from the prenatal period through adolescence. Theoretical, methodological, and empirical issues pertaining to different domains of cognitive development, such as neurobiological plasticity, infant cognition, theory of mind, memory, language, and executive functions. Methods that researchers have employed in their study of cognitive development; limitations of current research and directions for future research; and translation of research findings for practitioners and policy makers.

3-4 units, Spr (Obradovic, J)

EDUC 369. Human Cognitive Abilities

(Same as PSYCH 133) Psychological theory and research on human cognitive abilities; their nature, development, and measurement; and their importance in society. Persistent controversies and new areas of research, recent perspectives on the nature-nurture debate and the roles of genetics, health and education in shaping HCAs. Prerequisite: PSYCH 1 or equivalent. (PSE)

3 units, not given this year

EDUC 370X. Theories of Cognitive Development

The contributions of Jean Piaget and Lev Vygotsky to the study of the developing mind of the child. Their theories, concepts, perspectives, empirical work, and lives. Topics: Piaget's genetic epistemology, constructivism, and idea of sensorimotor through formal operational stages; Vygotsky's cultural-historical approach, egocentric speech, and the relation between learning and development.

3 units, not given this year

EDUC 371X. Social Psychology and Social Change

(Same as EDUC 107X, PSYCH 265) The major ideas, theories, and findings of social psychology and their applied status. Emphasis is on historical issues, classic experiments, and seminal theories, and their implications for topics relevant to education. Contemporary research also discussed. Advanced undergraduates and graduate students from other disciplines are welcome.

2-3 units, Spr (Cohen, G)

EDUC 374. Philanthropy and Civil Society

(Same as POLISCI 334, SOC 374) Associated with the Center for Philanthropy and Civil Society (PACS). Year-long workshop for doctoral students and advanced undergraduates writing senior theses on the nature of civil society or philanthropy. Focus is on pursuit of progressive research and writing contributing to the current

scholarly knowledge of the nonprofit sector and philanthropy. Accomplished in a large part through peer review. Readings include recent scholarship in aforementioned fields. May be repeated for credit for a maximum of 9 units.

1-3 units, Aut (Powell, W; Reich, R), Win (Powell, W; Reich, R), Spr (Powell, W; Reich, R)

EDUC 375A. Seminar on Organizational Theory

(Same as MS&E 389, SOC 363A) The social science literature on organizations assessed through consideration of the major theoretical traditions and lines of research predominant in the field.

5 units, Aut (Powell, W)

EDUC 375B. Seminar on Organizations: Institutional Analysis

(Same as SOC 363B) Seminar. Key lines of inquiry on organizational change, emphasizing network, institutional, and evolutionary arguments.

3-5 units, not given this year

EDUC 376. State Theory and Educational Policy

The relationship between political system structures and educational change by analyzing theories and interpretations of how political systems function, and the implications of these theories for understanding education. Classical and Marxist interpretations. (SSPEP/ICE)

4 units, not given this year

EDUC 377. Comparing Institutional Forms: Public, Private, and Nonprofit

(Same as GSBGEN 346, PUBLPOL 317, SOC 377) Seminar. For students interested in the nonprofit sector, and those in the joint Business and Education program. The missions, functions, and capabilities of nonprofit, public, and private organizations. Focus is on sectors with significant competition among institutional forms, including health care, social services, the arts, and education. Sources include scholarly articles, cases, and historical materials. Advanced undergraduates require consent of instructor.

4 units

EDUC 377B. Strategic Management of Nonprofits

Strategic, governance, and management issues facing nonprofit organizations and their leaders in the era of venture philanthropy and social entrepreneurship. Development and fundraising, investment management, performance management, and nonprofit finance. Case studies include smaller, social entrepreneurial and larger, more traditional organizations, including education, social service, environment, health care, religion, NGOs, and performing arts.

4 units, Win (Staff)

EDUC 377C. Strategic Issues in Philanthropy

(Also GSBGEN 381). Operational and strategic distinctions between traditional philanthropic entities, such as community, private, and corporate foundations, and contemporary models, such as funding intermediaries and venture philanthropy partnerships. Philanthropic strategies as they relate to foundation mission, grant making, evaluation, financial management, infrastructure, and board governance. Guest speakers include philanthropists, foundation presidents, and Silicon Valley business leaders. Group project in which students solicit a grant proposal from a local nonprofit organization and make a funding recommendation to a Silicon Valley-based foundation.

4 units, Aut (Arrillaga, L)

EDUC 377D. Strategic Leadership of Nonprofits

(Same as STRAMGT 378) Formulating, evaluating, and implementing mission and strategy. Case studies from nonprofits in social services, health care, education, and arts and culture. The interaction of strategy and mission, industry structure and evolution, strategic change, growth and replication, corporate strategy, governance, commercialization, alliances, capacity building, and leadership.

4 units

EDUC 378X. Seminar on Social Change Processes and Organizations

Theories of social change and influence processes within and through organizations. Social change organizations. The interaction of philanthropic institutions and other social change organizations within civil society. Meso-level theories of change.

3-4 units, not given this year

EDUC 380. Supervised Internship

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 381. Multicultural Issues in Higher Education

(Same as EDUC 181) The primary social, educational, and political issues that have surfaced in American higher education due to the rapid demographic changes occurring since the early 80s. Research efforts and the policy debates include multicultural communities, the campus racial climate, and student development; affirmative action in college admissions; multiculturalism and the curriculum; and multiculturalism and scholarship.

4 units, not given this year

EDUC 382. Student Development and the Study of College Impact

The philosophies, theories, and methods that undergird most research in higher education. How college affects students. Student development theories, models of college impact, and issues surrounding data collection, national databases, and secondary data analysis.

4 units, Win (Antonio, A)

EDUC 384. Advanced Topics in Higher Education

Topics vary each year and may include faculty development, legal issues, curricular change, knowledge production, professional socialization, management of organizational decline, leadership and innnovation, authority and power, diversity and equity, and interactions with government and industry. May be repeated for credit. Prerequisites: 346, consent of instructor. (APA)

3-5 units, not given this year

EDUC 386X. Leadership and Administration in Higher Education

Definitions of leadership and leadership roles within colleges and universities. Leadership models and organizational concepts. Case study analysis of the problems and challenges facing today's higher education administrators.

4 units, Spr (Ehrlich, T)

EDUC 387A. Workshop: Comparative Studies of Educational and Political Systems

(Same as SOC 311A) Analysis of quantitative and longitudinal data on national educational systems and political structures. May be repeated for credit. Prerequisite: consent of instructor. (SSPEP/ICE)

1-5 units, Aut (Ramirez, F)

EDUC 387B. Workshop: Comparative Systems of Educational and Political Systems

(Same as SOC 311B) Analysis of quantitative and longitudinal data on national educational systems and political structures. May be repeated for credit. Prerequisite: consent of instructor. (SSPEP/ICE)

1-5 units, Win (Ramirez, F; Meyer, J)

EDUC 387C. Workshop: Comparative Studies of Educational and Political Systems

(Same as SOC 311C) Analysis of quantitative and longitudinal data on national educational systems and political structures. Prerequisite: consent of instructor. May be repeated for credit. (SSPEP/ICE)

1-5 units, Spr (Ramirez, F; Meyer, J)

EDUC 388A. Language Policies and Practices

For STEP teacher candidates seeking to meet requirements for the English Learner Authorization on their preliminary credential. Historical, political, and legal foundations of education programs for English learners. Theories of second language learning, and research on the effectiveness of bilingual education. Theory-based methods to facilitate and measure English learners' growth in language and literacy acquisition, and create environments which promote English language development and content area learning through specially designed academic instruction in English. (STEP)

2 units, Win (Goldenberg, C; Rutherford Quach, S)

EDUC 389X. Race, Ethnicity, and Language

(Same as ANTHRO 320A, LINGUIST 253) Seminar. The linguistic construction of race and ethnicity across a wide variety of contexts and communities. The course takes a comparative perspective and highlights how different racial/ethnic formations participate in similar, yet different, ways of doing race though language, interaction and culture. Readings draw heavily from perspectives in linguistic anthropology and sociolinguistics.

3-4 units, Win (Alim, H)

EDUC 391X. Web-Based Technologies in Teaching and Learning
Project-based. Overview of instructional design theories and educational technologies to evaluate and develop a web-based educational application or system. Web-based applications and technologies designed for online interactions and collaborations. Instructional systems strategies to develop online environments that support and facilitate interactive learning. Students create a small-scale, web-based learning system.
3 units, not given this year

EDUC 393. Proseminar on Research in Education
Overview of the field of education for joint degree (M.B.A./M.A.) students. (SSPEP) (Strober)
4 units, Spr (Cohen, G)

EDUC 395. Scholarly Writing in Education and the Social Sciences
Focus is on producing articles for scholarly journals in education and the social sciences. Ethics and craft of scholarly publishing. Writing opinion articles for lay audiences on issues of educational and social import.
3-5 units, Aut (Wineburg, S)

EDUC 396X. The Design of Technologies for Casual Learning
(Same as EDUC 196X) Studio-based, participatory, and user-centered development of casual learning technologies is explored, using the Apple iPhone as a prototype platform. The term casual is borrowed from casual gaming to denote that the learning technologies are meant for learners to use in extreme informal learning circumstances (while on the go, any time and any place). The class builds on learning about and synthesizing knowledge, theory and development activity in four areas including learning theories, mobile technologies, games and participatory design processes.
3 units, Win (Goldman, S)

EDUC 401A. Mini Courses in Methodology: Statistical Packages for the Social Sciences
Statistical analysis using SPSS, including generating descriptive statistics, drawing graphs, calculating correlation coefficients, conducting t-tests, analysis of variance, and linear regression. Building up datasets, preparing datasets for analysis, conducting statistical analysis, and interpreting results.
1 unit, Aut (Staff), Win (Staff)

EDUC 401B. Mini Courses in Methodology: Stata
The computer as research tool. Statistical software Stata for data analysis, including t-tests, correlation, ANOVA, and multivariate linear regression.
1 unit, Aut (Arshan, N), Win (Arshan, N)

EDUC 405X. The Teaching of Literature: How We Teach and Why
(Same as ENGLISH 397X) For graduate students in English and English Education who are interested in questions surrounding the teaching of literature at both the secondary and collegiate level. The course weaves together theoretical considerations of the purposes for teaching literature, including assumptions about the kinds of readings and readers literature teachers are trying to create, with investigation of pedagogical practices.
2-4 units, not given this year

EDUC 410. Second-Year Research Workshop
For second-year doctoral students in APA and ICE. Issues in conceptualizing and designing research in the social sciences: methodology and epistemology; research proposals; and findings by students and faculty. Prerequisites: 306A,B,C,D or equivalents. (APA/ICE)
2-5 units, Aut (Antonio, A)

EDUC 412X. Organization Studies Research Workshop
For graduate students whose research is rooted in organization theory. Participants to present and receive feedback on their work including paper drafts, proposals and dissertation chapter. Sources include recent scholarship. May be repeated for credit.
1-2 units, not given this year

EDUC 417. Research and Policy on Postsecondary Access
(Same as EDUC 117) The transition from high school to college. K-16 course focusing on high school preparation, college choice, remediation, pathways to college, and first-year adjustment. The role of educational policy in postsecondary access. Service Learning Course (certified by Haas Center).
3 units, Spr (Antonio, A)

EDUC 418. Foundations of Case Study Research
Rationales for case study research in academic organizations emphasizing colleges and universities; high schools and related organizational contexts. Methodological training in fieldwork through hands-on data collection and analysis from interviews and documents. For doctoral students developing qualifying papers or dissertation proposals; required for higher education doctoral students; APA, SSE, and C&TE students with consent of instructor. (APA)
3-5 units, not given this year

EDUC 419X. Academic Achievement of Language Minority Students
Emphasis is on the current state of knowledge in the research literature and comparisons to students' experiences and observations in bilingual education, English as a second language, reading instruction, cultural issues in education, and research methods.
3-5 units, not given this year

EDUC 424. Introduction to Research in Curriculum and Teacher Education
Limited to second-year doctoral students in CTE. How to conceptualize, design, and interpret research. How to read, interpret, and critique research; formulate meaningful research questions; evaluate and conduct a literature review; and conceptualize a study. Readings include studies from different research paradigms. Required literature review in an area students expect to explore for their qualifying paper. (Darling-Hammond)
2-5 units, Spr (Borko, H)

EDUC 435X. Research Seminar in Applied Linguistics
(Same as LINGUIST 293) For graduate students in the schools of Education and Humanities and Sciences who are engaged in research pertaining to applied linguistic topics in original research. Topics: language policies and planning, language and gender, writing and critical thinking, foreign language education, and social applications of linguistic science. (SSPEP)
1-4 units, not given this year

EDUC 453. Doctoral Dissertation
For doctoral students only. (all areas)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 465. Seminar in the Pedagogy of Teacher Education
For doctoral students interested in working in teacher education. Pedagogical approaches, including the use of modeling and simulations and hypermedia materials. Theoretical considerations of how teachers learn to teach.
3 units, Aut (Grossman, P)

EDUC 466. Doctoral Seminar in Curriculum Research
Required of all doctoral students in CTE, normally during their second year in the program. Students present their ideas regarding a dissertation or other research project, and prepare a short research proposal that often satisfies their second-year review. (CTE)
2-4 units, Aut (Goldenberg, C)

EDUC 470. Practicum
For advanced graduate students. (all areas)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 480. Directed Reading
For advanced graduate students. (all areas)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 490. Directed Research
For advanced graduate students. (all areas)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 493. Workshop in Design and Analysis of Comparative Studies
Research design activities, for second-year and later students with data analysis or research design activities including dissertation planning or analysis. Readings and exercises developed around participating student research. Topics have included: multilevel data analysis, within-subjects designs, and implementation of matching methods for comparing non-equivalent groups. Various

computing customs accommodated. See http://www-stat.stanford.edu/~rag/ed493/. Prerequisite: intermediate statistical methods course work.

1-3 units, Spr (Rogosa, D)

EDUC 496. Research in History and Social Science Education
For doctoral students. Literature on historical learning and teaching and corresponding social sciences research designs, assessment, and curriculum evaluation.

3-5 units, not given this year

EDUC 801. TGR Project
For advanced graduate students. Instructor consent required. (all areas)

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 802. TGR Dissertation
For advanced graduate students. Instructor consent required. (all areas)

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ELECTRICAL ENGINEERING (EE) COURSES

UNDERGRADUATE COURSES IN ELECTRICAL ENGINEERING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

EE 14N. Things about Stuff
(Stanford Introductory Seminar) Preference to freshmen. The stories behind disruptive inventions such as the telegraph, telephone, wireless, television, transistor, and chip are as important as the inventions themselves, for they elucidate broadly applicable scientific principles. Focus is on studying consumer devices; projects include building batteries, energy conversion devices and semiconductors from pocket change. Students may propose topics and projects of interest to them. The trajectory of the course is determined in large part by the students themselves. GER:DB-EngrAppSci

3 units, Aut (Lee, T)

EE 15N. The Art and Science of Engineering Design
(Stanford Introductory Seminar) The goal of this seminar is to introduce freshmen to the design process associated with an engineering project. The seminar will consist of a series of lectures. The first part of each lecture will focus on the different design aspects of an engineering project, including formation of the design team, developing a project statement, generating design ideas and specifications, finalizing the design, and reporting the outcome. Students will form teams to follow these procedures in designing a term project of their choice over the quarter. The second part of each lecture will consist of outside speakers, including founders of some of the most exciting companies in Silicon Valley, who will share their experiences about engineering design. On-site visits to Silicon Valley companies to showcase their design processes will also be part of the course. The seminar serves three purposes: (1) it introduces students to the design process of turning an idea into a final GER:DB-EngrAppSci

3 units, Win (Goldsmith, A; Le, M)

EE 17N. Engineering the Micro and Nano Worlds: From Chips to Genes
(Stanford Introductory Seminar) Preference to freshmen. Hands-on micro- and nano-fabrication including the Stanford Nanofabrication Facility (SNF) and the Stanford Nanocharacterization Laboratory (SNL) and field trips to local companies and other research centers to illustrate the many applications; these include semiconductor integrated circuits ('chips'), DNA microarrays, microfluidic bio-sensors and microelectromechanical systems (MEMS). Students create, design, propose, and execute a project. How to read critically a New York Times article on nanotechnology. GER:DB-EngrAppSci

3 units, Spr (Pease, R)

EE 21N. What is Nanotechnology?
(Stanford Introductory Seminar) Nanotechnology an often used word: scientists and engineers have some notion of what nanotechnology is, societal perception may be entirely different. The classic paper by Richard Feynman (There's Plenty of Room at the Bottom), which laid down the challenge to the nanotechnologists. Two classic books that offer a glimpse of what nanotechnology is: Engines of Creation: The Coming Era of Nanotechnology by Eric Drexler, and Prey by Michael Crichton. Drexler's thesis sparked the imagination of what nano machinery might do, whereas Crichton's popular novel channeled the public's attention to this subject by portraying a disastrous scenario of a technology gone astray. Course uses scientific knowledge to analyze the assumptions and predictions of these classic works. GER:DB-EngrAppSci

3 units, Win (Wong, P)

EE 25Q. Electric Automobiles and Aircraft
(Stanford Introductory Seminar) (Same as AA 116N) Transportation accounts for nearly one-third of American energy use and greenhouse gas emissions and three-quarters of American oil consumption. It has crucial impacts on climate change, air pollution, resource depletion, and national security. Students wishing to address these issues will need to reconsider how we move, finding sustainable transportation solutions. This course will provide an introduction to the issue, covering the past and present of transportation and its impacts; examining alternative fuel proposals; and digging deeper into the most promising option: battery electric vehicles. Energy requirements of air, ground, and maritime transportation; design of electric motors, power control systems, drive trains, and batteries; and technologies for generating renewable energy. Two fun opportunities for hands-on experiences with electric cars. Prerequisites: Introduction to calculus and Physics AP or elementary mechanics.

3 units, Aut (Cox, D; Enge, P)

EE 41. Physics of Electrical Engineering
How everything from electrostatics to quantum mechanics is used in common high-technology products. Electrostatics are critical in micro-mechanical systems used in many sensors and displays, and basic EM waves are essential in all high-speed communication systems. How to propagate energy in free space. Which aspects of modern physics are needed to generate light for the operation of a DVD player or TV. Introduction to semiconductors, solid-state light bulbs, and laser pointers. Hands-on labs to connect physics to everyday experience. GER:DB-EngrAppSci

5 units, Win (Solgaard, O)

EE 46. Engineering For Good: Save the World and Have Fun Doing It
Projects that provide immediate and positive impact on the world. Focus is on global health by learning from experts in this field. Students work on real-world projects with help from members of NGOs and social entrepreneurial companies as part of the hand-on learning experience. Prerequisite: ENGR 40 or EE 122A or CS 106B or consent of instructor.

3 units, not given this year

EE 47. Press Play: Interactive Device Design
Introduction to the human-centered and technical workings behind interactive devices ranging from cellphones and video controllers to smart cars and appliances. Students build a working MP3 player prototype of their own design, using embedded microcontrollers, digital audio decoders and component sensors, and other electronic hardware. Topics include electronics prototyping, interface prototyping, sensors and actuators, micro-controller development, physical prototyping, and user testing. Prerequisite: CS106A and X or consent of instructor.

3 units, not given this year

EE 48. Hacking Stuff
Students build miniature autonomous cars that compete in a race against the clock. How to design a complete system by bringing together the various disciplines of electrical engineering such as control theory, circuit design, microprocessor programming, and semiconductor device physics. Students design, build, and program each component of an autonomous vehicle and in doing so are introduced to the broad discipline of electrical engineering through lab work. GER:DB-EngrAppSci

3 units, Aut (Peumans, P)

EE 49. Building Networked Systems
Preference to sophomores. The design of a complete networked system by combining electrical engineering disciplines such as coding theory, communication theory and networking. Based on

programmable radios, the design and construction of a networked system capable of audio communication between any two nodes in a network, essentially building a simple phone network. Preference to sophomores. Application required. Prerequisites: CS106A, CS106B.

3 units, Spr (Katti, S)

EE 60N. Man versus Nature: Coping with Disasters Using Space Technology

(Stanford Introductory Seminar) (Same as GEOPHYS 60N) Preference to freshman. Natural hazards, such as earthquakes, volcanoes, floods, hurricanes, and fires, affect the lives of thousands of people worldwide everyday. Over the past twenty years developments in spaceborne imaging technology have made it possible to monitor and respond to such disasters much more rapidly than in the past, saving lives and money. Additionally, greater understanding of the physical processes involved allows anticipation and planning for mitigation of the consequences of the disasters. How these new tools are applied to natural disasters, and how the remotely-sensed data are manipulated and analyzed. The technical material consists of a summary of basic geophysical properties of the Earth, their physical characteristics that can be sensed remotely, and the design of satellite systems to measure these phenomena and predict/mitigate natural hazards. GER:DB-EngrAppSci

4 units, Aut (Zebker, H)

EE 100. The Electrical Engineering Profession

Lectures/discussions on topics of importance to the electrical engineering professional. Continuing education, professional societies, intellectual property and patents, ethics, entrepreneurial engineering, and engineering management.

1 unit, Aut (Staff)

EE 101A. Circuits I

First of two-course sequence. Introduction to circuit modeling and analysis. Topics include creating the models of typical components in electronic circuits and simplifying non-linear models for restricted ranges of operation (small signal model); and using network theory to solve linear and non-linear circuits under static and dynamic operations. Prerequisite: Physics 43 GER:DB-EngrAppSci

4 units, Win (Howe, R)

EE 101B. Circuits II

Second of two-course sequence. MOS large-signal and small-signal models. MOS amplifier design including DC bias, small signal performance, multistage amplifiers, frequency response, and feedback. Prerequisite: 101A. GER:DB-EngrAppSci

4 units, Spr (Hershenson, M)

EE 102A. Signal Processing and Linear Systems I

Concepts and mathematical tools in continuous-time signal processing and linear systems analysis, illustrated with examples from signal processing, communications, and control. Mathematical representation of signals and systems. Linearity and time-invariance. System impulse and step response. Frequency domain representations: Fourier series and Fourier transforms. Filtering and signal distortion. Time/frequency sampling and interpolation. Continuous-discrete time signal conversion and quantization.Stability and causality in linear systems. Laplace transforms and Bode plots. Feedback and control system design. Examples from filter design and linear control. Prerequisite: MATH 53 or ENGR 155A. GER:DB-EngrAppSci

4 units, Win (Pauly, J)

EE 102B. Signal Processing and Linear Systems II

Concepts and mathematical tools in discrete-time signal processing and linear systems analysis with examples from digital signal processing, communications, and control. Discrete-time signal models. Continuous-discrete-continuous signal conversion. Discrete-time impulse and step response. Frequency domain representations: Fourier series and transforms. Connection between continuous and discrete time frequency representations. Discrete Fourier transform (DFT) and fast Fourier transform (FFT). Digital filter and signal processing examples. Discrete-time and hybrid linear systems. Stability and causality. Z transforms and their connection to Laplace transforms. Frequency response of discrete-time systems. Discrete-time control. Prerequisite: 102A. GER:DB-EngrAppSci

4 units, Aut (Staff), Spr (Kahn, J), Sum (Staff)

EE 108A. Digital Systems I

Digital circuit, logic, and system design. Digital representation of information. CMOS logic circuits. Combinational logic design. Logic building blocks, idioms, and structured design. Sequential logic design and timing analysis. Clocks and synchronization. Finite state machines. Microcode control. Digital system design. Control and datapath partitioning. Lab. Prerequisite: ENGR 40. Corequisite for WIM: ENGR 102E. GER:DB-EngrAppSci, WIM

3-4 units, Aut (Mitra, S), Win (Mitra, S)

EE 108B. Digital Systems II

The design of processor-based digital systems. Instruction sets, addressing modes, data types. Assembly language programming, low-level data structures, introduction to operating systems and compilers. Processor microarchitecture, microprogramming, pipelining. Memory systems and caches. Input/output, interrupts, buses and DMA. System design implementation alternatives, software/hardware tradeoffs. Labs involve the design of processor subsystems and processor-based embedded systems. Prerequisite: 108A, CS 106B. GER:DB-EngrAppSci

3-4 units, Aut (Olukotun, O), Win (Dally, W)

EE 109. Digital Systems Design Lab

The design of integrated digital systems encompassing both customized software and hardware. Software/hardware design tradeoffs. Algorithm design for pipelining and parallelism. System latency and throughput tradeoffs. FPGA optimization techniques. Integration with external systems and smart devices. Firmware configuration and embedded system considerations. Enrollment limited to 25; preference to graduating seniors. Prerequisites: 108B, and CS 106B or X. GER:DB-EngrAppSci

4 units, Spr (Weaver, J)

EE 114. Fundamentals of Analog Integrated Circuit Design

Analysis and simulation of elementary transistor stages, current mirrors, supply- and temperature-independent bias, and reference circuits. Overview of integrated circuit technologies, circuit components, component variations and practical design paradigms. Performance evaluation using computer-aided design tools. Prerequisite: 101B.GER:DB-EngrAppSci GER:DB-EngrAppSci

3 units, Aut (Dutton, R)

EE 116. Semiconductor Device Physics

The fundamental operation of semiconductor devices and overview of applications. The physical principles of semiconductors, both silicon and compound materials; operating principles and device equations for junction devices (diodes, bipolar transistor, photodetectors). Introduction to quantum effects and band theory of solids. Prerequisite: ENGR 40. Corequisite: 101B. GER:DB-EngrAppSci

3 units, Spr (Peumans, P)

EE 122A. Analog Circuits Laboratory

Practical applications of analog circuits, including simple amplifiers, filters, oscillators, power supplies, and sensors. Design skills, computer-aided design, and circuit fabrication and debugging. The design process through proposing, designing, simulating, building, debugging, and demonstrating a project. Radio frequency and largely digital projects not suitable for EE 122. Prerequisite: ENGR 40 or equivalent. GER:DB-EngrAppSci

3 units, Aut (Giovangrandi, L)

EE 122B. Introduction to Biomedical Electronics

Key components of modern systems, their application in physiology measurements, and reduction to practice in labs. Fundamentals of analog/digital conversion and filtering techniques for biosignals, typical transducers (biopotential, electrochemical, temperature, pressure, acoustic, movement), and interfacing circuits. Issues of biomedical electronics (safety, isolation, noise). Prerequisite: EE122A

3 units, Spr (Giovangrandi, L)

EE 124. Introduction to Neuroelectrical Engineering

Fundamental properties of electrical activity in neurons, technology for measuring and altering neural activity, and operating principles of modern neurological and neural prosthetic medical systems. Topics: action potential generation and propagation, neuro-MEMS and measurement systems, experimental design and statistical data analysis, information encoding and decoding, clinical diagnostic systems, and fully-implantable neural prosthetic systems design. Prerequisite: EE 101B and EE 102B.

3 units, Win (Shenoy, K)

EE 133. Analog Communications Design Laboratory
(Same as EE 233) Design, testing, and applications. Amplitude modulation (AM) using multiplier circuits. Frequency modulation (FM) based on discrete oscillator and integrated modulator circuits such as voltage-controlled oscillators (VCOs). Phased-lock loop (PLL) techniques, characterization of key parameters, and their applications. Practical aspects of circuit implementations. Labs involve building and characterization of AM and FM modulation/demodulation circuits and subsystems. Enrollment limited to 30 undergraduates and coterminal EE students. Prerequisite: 101B. Undergraduate students enroll in EE133 and Graduate students enroll in EE233. GER:DB-EngrAppSci
3-4 units, Win (Dutton, R)

EE 134. Introduction to Photonics
Photonics, optical sensors, and fiber optics. Conceptual and mathematical tools for design and analysis of optical communication and sensor systems. Experimental characterization of semiconductor lasers, optical fibers, photodetectors, receiver circuitry, fiber optic links, optical amplifiers, and optical sensors. Class project aimed on confocal microscopy for biomedical applications. Laboratory experiments. Prerequisite: 41 or equivalent. GER:DB-EngrAppSci
4 units, Aut (Staff)

EE 136. Introduction to Nanophotonics and Nanostructures
Electromagnetic and quantum mechanical waves and semiconductors. Confining these waves, and devices employing such confinement. Localization of light and applications: metallic mirrors, photonic crystals, optical waveguides, microresonators, plasmonics. Localization of quantum mechanical waves: quantum wells, wires, and dots. Generation of light in semiconductors: spontaneous and stimulated emission, lasers, and light emitting diodes. Devices incorporating localization of both electromagnetic and quantum mechanical waves such as resonant cavity quantum well lasers and microcavity-based single photon sources. System-level applications such as optical communications, biochemical sensing, and quantum cryptography. Prerequisite: familiarity with electromagnetic and quantum mechanical waves and semiconductors at the level of EE 41 or equivalent. GER:DB-EngrAppSci
3 units, Aut (Vuckovic, J)

EE 140. The Earth From Space: Introduction to Remote Sensing
(Same as GEOPHYS 140) Global change science as viewed using space remote sensing technology. Global warming, ozone depletion, the hydrologic and carbon cycles, topographic mapping, and surface deformation. Physical concepts in remote sensing. EM waves and geophysical information. Sensors studied: optical, near and thermal IR, active and passive microwave. GER:DB-EngrAppSci
3 units, not given this year

EE 141. Engineering Electromagnetics
Lumped versus distributed circuits. Transient response of transmission lines with resistive and reactive loads. Reflection, transmission, attenuation and dispersion. Steady-state waves on transmission lines. Standing wave ratio, impedance matching, and power flow. Coulomb's law, electrostatic field, potential and gradient, electric flux and Gauss's Law and divergence. Metallic conductors, Poisson's and Laplace's equations, capacitance, dielectric materials. Electrostatic energy and forces. Steady electric currents, Ohm's Law, Kirchoff's Laws, charge conservation and the continuity equation, Joule's Law. Biot-Savart's law and the static magnetic field. Ampere's Law and curl. Vector magnetic potential and magnetic dipole. Magnetic materials, forces and torques. Faraday's Law, magnetic energy, displacement current and Maxwell's equations. Uniform plane waves. Prerequisites: 102A, MATH 52. GER:DB-EngrAppSci
3 units, Aut (Hesselink, L)

EE 168. Introduction to Digital Image Processing
Computer processing of digital 2-D and 3-D data, combining theoretical material with implementation of computer algorithms. Topics: properties of digital images, design of display systems and algorithms, time and frequency representations, filters, image formation and enhancement, imaging systems, perspective, morphing, and animation applications. Instructional computer lab exercises implement practical algorithms. Final project consists of computer animations incorporating techniques learned in class. Prerequisite: Matlab programming. GER:DB-EngrAppSci
3-4 units, not given this year

EE 169. Introduction to Bioimaging
Bioimaging is important for both clinical medicine, and medical researchIntroduction to several of the major imaging modalities, using a signal processing perspective. Multi-dimensional Fourier transforms, and image quality metrics. Projection imaging systems (projection X-Ray), backprojection based systems (CT, PET, and SPECT), systems that use beam forming (ultrasound), and systems that use Fourier encoding (MRI).
3 units, Aut (Pauly, J)

EE 178. Probabilistic Systems Analysis
Introduction to probability and statistics and their role in modeling and analyzing real world phenomena. Events, sample space, and probability. Discrete random variables, probability mass functions, independence and conditional probability, expectation and conditional expectation. Continuous random variables, probability density functions, independence and expectation, derived densities. Transforms, moments, sums of independent random variables. Simple random processes. Limit theorems. Introduction to statistics: significance, hypothesis testing, estimation and detection, Bayesian analysis. Prerequisites: basic calculus and linear algebra. GER:DB-EngrAppSci
3 units, Spr (El Gamal, A)

EE 179. Introduction to Communications
This course covers the design and performance analysis of both analog and digital communication systems. Topics include current communication systems (cellular, WLANs, radio and TV broadcasting, satellites, Internet), Fourier techniques, energy and power spectral density, random variables and random (noise) signals, filtering and modulation of noise, analog modulation (AM and FM) and its performance in noise, digital modulation (PSK and FSK), optimal receiver design, and probability of bit error for digital modulation. Prerequisite: 102A. GER:DB-EngrAppSci
3 units, Win (Goldsmith, A)

EE 190. Special Studies or Projects in Electrical Engineering
Independent work under the direction of a faculty member. Individual or team activities involve lab experimentation, design of devices or systems, or directed reading.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EE 191. Special Studies and Reports in Electrical Engineering
Independent work under the direction of a faculty member given for a letter grade only. If a letter grade given on the basis of required written report or examination is not appropriate, enroll in 190.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN ELECTRICAL ENGINEERING

Primarily for graduate students; undergraduates may enroll with consent of instructor.

EE 203. The Entrepreneurial Engineer
Seminar. For prospective entrepreneurs with an engineering background. Contributions made to the business world by engineering graduates. Speakers include Stanford and other engineering and M.B.A. graduates who have founded large and small companies in nearby communities. Contributions from EE faculty and other departments including Law, Business, and MS&E.
1 unit, Win (Melen, R)

EE 204. Business Management for Electrical Engineers and Computer Scientists
For graduate students with little or no business experience. Leading computer, high-tech, and Silicon Valley companies and their best practices. Tools and frameworks for analyzing decisions these companies face. Corporate strategy, new product development, marketing, sales, distribution, customer service, financial accounting, outsourcing, and human behavior in business organizations. Case studies. Prerequisite: graduate standing.
3 units, Spr (Gibbons, F; Siegel, M)

EE 212. Integrated Circuit Fabrication Processes
For students interested in the physical bases and practical methods of silicon VLSI chip fabrication, or the impact of technology on device and circuit design, or intending to pursue doctoral research

involving the use of Stanford's Nanofabrication laboratory. Process simulators illustrate concepts and provide a virtual lab experience. Topics: principles of integrated circuit fabrication processes, physical and chemical models for crystal growth, oxidation, ion implantation, etching, deposition, lithography, and back-end processing. Required for 410.

3 units, Aut (Plummer, J)

EE 214. Advanced Analog Integrated Circuit Design

Analysis and design of analog integrated circuits in advanced MOS and bipolar technologies. Device operation and compact modeling in support of circuit simulations needed for design. Emphasis is on quantitative evaluations of performance using hand calculations and circuit simulations; intuitive approaches to design. Analytical and approximate treatments of noise and distortion; analysis and design of feedback circuits. Design of archetypal analog blocks for networking and communications such as broadband gain stages and transimpedance amplifiers. Prerequisite: EE 114.

3 units, Win (Murmann, B)

EE 216. Principles and Models of Semiconductor Devices

Carrier generation, transport, recombination, and storage in semiconductors. Physical principles of operation of the p-n junction, heterojunction, metal semiconductor contact, bipolar junction transistor, MOS capacitor, MOS and junction field-effect transistors, and related optoelectronic devices such as CCDs, solar cells, LEDs, and detectors. First-order device models that reflect physical principles and are useful for integrated-circuit analysis and design. Prerequisite: 116 or equivalent.

3 units, Aut (Harris, J), Win (Saraswat, K; Howe, R)

EE 218. Introduction to Nanotechnology and Nanoelectronics

Device physics and operation principles. Device and material options beyond silicon FETs at the nanoscale. Topics identified by the International Technology Roadmap for Semiconductors, emerging research devices section; see http://public.itrs.net. Non-silicon-based devices such as carbon nanotubes, semiconductor nanowires, and molecular devices; and non-FET based devices such as single-electron transistors (SET), resonant tunneling diodes (RTD), and quantum dots. Logic and memory devices. Sources include current literature and reference books. Prerequisite: Undergraduate device physics. Recommended: Introductory graduate solid state physics.

3 units, not given this year

EE 222. Applied Quantum Mechanics I

Emphasis is on applications in modern devices and systems. Topics include: Schrödinger's equation, eigenfunctions and eigenvalues, operator approach to quantum mechanics, Dirac notation, angular momentum, hydrogen atom, perturbation theory, variational method, and time-dependent perturbation theory with applications to optical absorption, nonlinear optical coefficients, and Fermi's golden rule. Prerequisites: MATH 52 and 53, PHYSICS 65 (or PHYSICS 43 and 45).

3 units, Aut (Miller, D)

EE 223. Applied Quantum Mechanics II

Continuation of 222, including more advanced topics: quantum mechanics of crystalline materials, methods for one-dimensional problems, spin, systems of identical particles (bosons and fermions), introductory quantum optics (electromagnetic field quantization, coherent states), fermion annihilation and creation operators, interaction of different kinds of particles (spontaneous emission, optical absorption, and stimulated emission). Quantum information and interpretation of quantum mechanics. Other topics in electronics, optoelectronics, optics, and quantum information science. Prerequisite: 222.

3 units, Win (Miller, D)

EE 225. Bio-chips, Imaging and Nanomedicine

(Same as MATSCI 382) The course covers state-of-the-art and emerging bio-sensors, bio-chips, imaging modalities, and nano-therapies which will be studied in the context of human physiology including the nervous system, circulatory system and immune system. Medical diagnostics will be divided into bio-chips (in-vitro diagnostics) and medical and molecular imaging (in-vivo imaging). In-depth discussion on cancer and cardiovascular diseases and the role of diagnostics and nano-therapies.

3 units, Win (Wang, S)

EE 228. Basic Physics for Solid State Electronics

Topics: energy band theory of solids, energy bandgap engineering, classical kinetic theory, statistical mechanics, and equilibrium and non-equilibrium semiconductor statistics. Prerequisite: course in modern physics.

3 units, Aut (Fan, S)

EE 231. Introduction to Lasers

How lasers work, including quantum transitions in atoms, stimulated emission and amplification, rate equations, saturation, feedback, coherent optical oscillation, laser resonators, and optical beams. Limited primarily to steady-state behavior; classical models for atomic transitions with little quantum mechanics background required. Prerequisites: electromagnetic theory to the level of 142, preferably 241, and some atomic or modern physics such as PHYSICS 70 or 130, 131.

3 units, Win (Digonnet, M)

EE 232. Laser Dynamics

Continuation of 231, emphasizing dynamic and transient effects including spiking, Q-switching, mode locking, frequency modulation, frequency and spatial mode competition, linear and nonlinear pulse propagation, short pulse expansion, and compression. Prerequisite: 231.

3 units, not given this year

EE 233. Analog Communications Design Laboratory

(Same as EE 133) Design, testing, and applications. Amplitude modulation (AM) using multiplier circuits. Frequency modulation (FM) based on discrete oscillator and integrated modulator circuits such as voltage-controlled oscillators (VCOs). Phased-lock loop (PLL) techniques, characterization of key parameters, and their applications. Practical aspects of circuit implementations. Labs involve building and characterization of AM and FM modulation/demodulation circuits and subsystems. Enrollment limited to 30 undergraduates and coterminal EE students. Prerequisite: 101B. Undergraduate students enroll in EE133 and Graduate students enroll in EE233.

3-4 units, Win (Dutton, R)

EE 234. Photonics Laboratory

Photonics and fiber optics with a focus on communication and sensing. Experimental characterization of semiconductor lasers, optical fibers, photodetectors, receiver circuitry, fiber optic links, optical amplifiers, and optical sensors and photonic crystals. Prerequisite: EE 242 or equivalent.

3 units, Win (Vuckovic, J)

EE 235. Guided Wave Optical Devices

Guided wave optics, optical waveguide devices, and integrated optics. Wave propagation in layered media, slab waveguides, and optical fibers. Rectangular waveguides. Optical waveguide technology. Coupled-mode theory. Numerical analysis of complex waveguides. Photonic crystals and surface plasmon optics. Physics and design of waveguide devices. Fiber sensors, waveguide gratings, waveguide modulators, directional couplers, ring filters. Prerequisite: electromagnetic theory to the level of 142 or equivalent.

3 units, Spr (Fan, S)

EE 237. Solar Energy Conversion

Basics of solar energy conversion in photovoltaic devices and solar thermal systems. Solar cell device physics: electrical and optical. Solar system issues including module assembly, inverters, and micro-inverters. Concentrated solar power. Students design solar cells. Prerequisite: EE 116 or EE 216.

3 units, Win (Peumans, P)

EE 242. Electromagnetic Waves

Continuation of 141. Maxwell's equations. Plane waves in lossless and lossy media. Skin effect. Flow of electromagnetic power (Poynting's theorem). Reflection and refraction of waves at planar boundaries. Snell's law and total internal reflection. Reflection and refraction from lossy media. Guided waves. Parallel-plate and dielectric-slab waveguides. Hollow wave-guides, cavity resonators, microstrip waveguides, optical fibers. Interaction of fields with matter and particles. Antennas and radiation of electromagnetic energy. Prerequisite: 141 or PHYSICS 120.

3 units, Win (Fraser-Smith, A)

EE 243. Semiconductor Optoelectronic Devices

Semiconductor physics and optical processes in semiconductors. Operating principles and practical device features of semiconductor optoelectronic materials and heterostructures. Devices include:

optical detectors (p-i-n, avalanche, and MSM); light emitting diodes; electroabsorptive modulators (Franz-Keldysh and QCSE), electrorefractive (directional couplers, Mach-Zehnder), switches (SEEDs); and lasers (waveguide and vertical cavity surface emitting). Prerequisites: semiconductor devices and solid state physics such as EE 216 or equivalent.

3 units, Win (Harris, J)

EE 247. Introduction to Optical Fiber Communications

Fibers: single- and multi-mode, attenuation, modal dispersion, group-velocity dispersion, polarization-mode dispersion. Nonlinear effects in fibers: Raman, Brillouin, Kerr. Self- and cross-phase modulation, four-wave mixing. Sources: light-emitting diodes, laser diodes, transverse and longitudinal mode control, modulation, chirp, linewidth, intensity noise. Modulators: electro-optic, electroabsorption. Photodiodes: p-i-n, avalanche, responsivity, capacitance, transit time. Receivers: high-impedance, transimpedance, bandwidth, noise. Digital intensity modulation formats: nonreturn-to-zero, return-to-zero. Receiver performance: Q factor, bit-error ratio, sensitivity, quantum limit. Sensitivity degradations: extinction ratio, intensity noise, jitter, dispersion. Wavelength-division multiplexing. System architectures: local-area, access, metropolitan-area, long-haul. Prerequisites: 102A, 242 or consent of instructor.

3 units, Aut (Kahn, J)

EE 248. Fundamentals of Noise Processes

Fundamentals of statistic, Fourier analysis, statistical and quantum mechanics, and linear and nonlinear circuit theory. Thermal, quantum and 1/f noise in resistors, pn junctions, lasers, and parametric amplifiers. Energy efficiency (bit/photon) and spectral efficiency (bit/s/Hz) in coherent and single photon optical communications. Protocols and security in quantum cryptography. Decoherence of qubits in quantum computation. Prerequisites: elementary device, circuit, and electromagnetic waves to the level of 101A,B and 242.

3 units, Aut (Yamamoto, Y)

EE 252. Antennas for Telecommunications and Remote Sensing

Fundamental properties. Dipoles, loops, reflectors, Yagis, helices, slots, horns, micro-strips. Antennas as transitions between guided and free radiation, ultrasound analogue. Famous antennas. Pattern measurements. Friis and radar equations. Feeds, matching, baluns. Broadbanding. Arrays, aperture synthesis, interferometry, very-long-baseline interferometry. Thermal radiation, antenna temperature, microwave passive remote sensing. Prerequisite: 242 or equivalent.

3 units, not given this year

EE 254. Principles of Radar Systems

Analysis and design. Radar equation and systems parameters, components of radar systems, radar cross-section and target characteristics, signal detection in noise, ambiguity function (with applications to measurement precision, resolution, clutter rejection, and waveform design); pulse compression waveforms, synthetic aperture radar, tracking and scanning radars, HF (OTH) radar, radar environmental and remote sensing, radar astronomy. Prerequisite: senior or graduate standing.

3 units, not given this year

EE 256. Numerical Electromagnetics

Principles and applications of numerical techniques for solving practical electromagnetics problems. Time domain solutions of Maxwell's equations. Finite difference time domain (FDTD) methods. Numerical stability, dispersion, and dissipation. Absorbing boundary conditions. Perfectly matched layer methods. Explicit and implicit methods. FDTD modeling of propagation and scattering in dispersive and anisotropic media. Near-to-far-zone transformations. Computational problems require programming and use of MATLAB and other tools. Prerequisite: 242 or equivalent.

3 units, not given this year

EE 257. Scientific Data Processing

(Same as GEOPHYS 258) Assimilation, processing, and modeling of large observational data sets. Solution of scientific and engineering problems, especially those requiring large amounts of data. Inverse methods and transform domain analysis for indirect measurements, implemented on digital computers using scientific languages. Large-scale computing, including hardware architectures, input/output and data bus bandwidth, programming efficiency, parallel programming techniques. Student projects involve analyzing real data by implementing an observational system such as tomography for medical and Earth observation uses, radar and matched filtering, multispectral/multitemporal studies, or migration processing. Prequisites: Programming with high level language

3-4 units, Win (Zebker, H)

EE 261. The Fourier Transform and Its Applications

The Fourier transform as a tool for solving physical problems. Fourier series, the Fourier transform of continuous and discrete signals and its properties. The Dirac delta, distributions, and generalized transforms. Convolutions and correlations and applications; probability distributions, sampling theory, filters, and analysis of linear systems. The discrete Fourier transform and the FFT algorithm. Multidimensional Fourier transform and use in imaging. Further applications to optics, crystallography. Emphasis is on relating the theoretical principles to solving practical engineering and science problems. Prerequisites: Math through ODEs, Fourier series at the level of 102A, and linear algebra.

3 units, Aut (Osgood, B), Win (Gill, J), Sum (Staff)

EE 262. Two-Dimensional Imaging

Time and frequency representations, two-dimensional auto- and cross-correlation, Fourier spectra, diffraction and antennas, coordinate systems and the Hankel and Abel transforms, line integrals, impulses and sampling, restoration in the presence of noise, reconstruction and tomography, imaging radar. Tomographic reconstruction using projection-slice and layergarm methods. Students create software to form images using these techniques with actual data. Final project consists of design and simulation of an advanced imaging system. Prerequisite: 261. Recommended: 278, 279.

3 units, not given this year

EE 263. Introduction to Linear Dynamical Systems

(Same as CME 263) Applied linear algebra and linear dynamical systems with application to circuits, signal processing, communications, and control systems. Topics: least-squares approximations of over-determined equations and least-norm solutions of underdetermined equations. Symmetric matrices, matrix norm, and singular value decomposition. Eigenvalues, left and right eigenvectors, with dynamical interpretation. Matrix exponential, stability, and asymptotic behavior. Multi-input/multi-output systems, impulse and step matrices; convolution and transfer matrix descriptions. Control, reachability, and state transfer; observability and least-squares state estimation. Prerequisites: linear algebra and matrices as in MATH 103; differential equations and Laplace transforms as in EE 102A.

3 units, Aut (Boyd, S), Spr (Lall, S)

EE 264. Digital Signal Processing

The fundamentals of digital signal processing techniques and their applications. Topics include review of two sided Z-transform, linear time invariant discrete-time systems, and sampling theory; A/D and D/A conversion, rate conversion, and oversampling techniques for ADC and DAC; filter design; quantization in digital filter implementation; discrete Fourier analysis; and parametric signal modeling. Prerequisite: EE102A and EE102B . Recommended: EE261, EE278.

3 units, Win (Schafer, R), Sum (Staff)

EE 265. Digital Signal Processing Laboratory

Applying 102A,B to real-world signal processing applications. Lab exercises use a programmable DSP to implement signal processing tasks. Topics: A/D conversion and quantization, sampling theorem, Z-transform, discrete-time Fourier transform, digital filter design and implementation, spectral analysis, rate conversion, wireless data communication, and OFDM receiver design. Prerequisites: 102A,B. Recommended: 261.

3-4 units, Spr (Meng, T)

EE 268. Introduction to Modern Optics

Geometrical optics: ray matrices, Gaussian beams, optical instruments, and radiometry. Wave nature of light: Maxwell's equations, propagation through media with varying index of refraction (e.g., fibers). Interferometry: basic principles, practical systems, and applications.

3 units, Aut (Byer, R)

EE 271. Introduction to VLSI Systems

Provides a quick introduction to MOS transistors and IC fabrication and then creates abstractions to allow you to create and reason

about complex digital systems. It uses a switch resistor model of a transistor, uses it to model gates, and then shows how gates and physical layout can be synthesized from Verilog or SystemVerilog descriptions. Most of the class will be spent on providing techniques to create designs that can be validated, are low power, provide good performance, and can be completed in finite time. Prerequisites: 101A and 108B; familiarity with transistors, logic design, Verilog, and digital system organization.

3 units, Aut (Horowitz, M)

EE 272. Design Projects in VLSI Systems

Mixed signal design. Student teams create a small mixed-signal VLSI design using a modern design flow and CAD tools. The project involves writing a Verilog model of the chip, creating a testing/debug strategy for the chip, wrapping custom layout to fit into a std cell system, using synthesis and place and route tools to create the layout of your chip, and understanding all the stuff you need to do to tape-out a chip. Useful for those who plan to build a chip in their Ph.D. work. Prerequisites: EE 271 and experience in digital/analog circuit design.

3-4 units, Spr (Horowitz, M)

EE 273. Digital Systems Engineering

Electrical issues in the design of high-performance digital systems, including signaling, timing, synchronization, noise, and power distribution. High-speed signaling methods; noise in digital systems, its effect on signaling, and methods for noise reduction; timing conventions; timing noise (skew and jitter), its effect on systems, and methods for mitigating timing noise; synchronization issues and synchronizer design; clock and power distribution problems and techniques; impact of electrical issues on system architecture and design. Prerequisites: 102B and 108A, or equivalents. Recommended: 214.

3 units, Win (Weaver, J)

EE 276. Introduction to Wireless Personal Communications

Frequency reuse, cellular concepts, cochannel interference, handoff. Radio propagation in and around buildings: Friis equation, multipath, narrow-band and wide-band channels, small scale and large-scale statistics, space and time signal variation. Diversity. Receiver sensitivity, sources of noise, range. Performance statistics: coverage, margin, digital modulation, adjacent channel interference, and digital error rates. Wide band channels: maximum transmission rates. Multi-server queuing and traffic: Erlang formulas. Multiple access: FDMA, TDMA, CDMA; Duplexing: TDD, FDD. Prerequisites: 242 and 278 or equivalent. Corequisite: 279 or equivalent.

3 units, Spr (Cox, D)

EE 278. Introduction to Statistical Signal Processing

Random variables, vectors, and processes; convergence and limit theorems; IID, independent increment, Markov, and Gaussian random processes; stationary random processes; autocorrelation and power spectral density; mean square error estimation, detection, and linear estimation. Prerequisites: 178 or STATS 116, and linear systems and Fourier transforms at the level of 102A,B or 261.

3 units, Aut (Prabhakar, B), Win (Gray, R), Sum (Staff)

EE 279. Introduction to Communication Systems

Analysis and design of communication systems; analog and digital modulation and demodulation, frequency conversion, multiplexing, noise and distortion; spectral and signal-to-noise ratio analysis, probability of error in digital systems, spread spectrum. Prerequisites: 179 or 261, and 178 or 278.

3 units, Win (Cox, D)

EE 282. Computer Systems Architecture

Course focuses on how to build modern computing systems, namely notebooks, smartphones, and data centers, covering primarily their hardware architecture and certain system software aspects. For each system class, we cover the system architecture, processor technology, advanced memory hierarchy and I/O organization, power and energy management, and reliability. We will also cover topics such as interactions with system software, virtualization, solid state storage, and security. The programming assignments allow students to explore performance/energy tradeoffs when using heterogeneous hardware resources on smartphone devices. Prerequisite: EE108B. Recommended: CS 140.

3 units, Spr (Staff)

EE 284. Introduction to Computer Networks

Structure and components of computer networks; functions and services; packet switching; layered architectures; OSI reference model; physical layer; data link layer; error control; window flow control; media access control protocols used in local area networks (Ethernet, Token Ring, FDDI) and satellite networks; network layer (datagram service, virtual circuit service, routing, congestion control, Internet Protocol); transport layer (UDP, TCP); application layer.

3 units, Aut (Tobagi, F)

EE 290A. Curricular Practical Training for Electrical Engineers

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, candidacy for Engineer or Ph.D. in Electrical Engineering; for 290C, candidacy for Ph.D. degree in Electrical Engineering; for 290D, consent of instructor.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EE 290B. Curricular Practical Training for Electrical Engineers

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, candidacy for Engineer or Ph.D. in Electrical Engineering; for 290C, candidacy for Ph.D. degree in Electrical Engineering; for 290D, consent of instructor.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EE 290C. Curricular Practical Training for Electrical Engineers

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, candidacy for Engineer or Ph.D. in Electrical Engineering; for 290C, candidacy for Ph.D. degree in Electrical Engineering; for 290D, consent of instructor.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EE 290D. Curricular Practical Training for Electrical Engineers

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, candidacy for Engineer or Ph.D. in Electrical Engineering; for 290C, candidacy for Ph.D. degree in Electrical Engineering; for 290D, consent of instructor.

1 unit, Spr (Staff), Sum (Staff)

EE 292E. Analysis and Control of Markov Chains

Finite-state and countable-state Markov chains. Controlled Markov chains and dynamic programming algorithms. Application to modeling and analysis of engineering systems. Prerequisites: 263, 278.

3 units, not given this year

EE 292G. Switch Mode Power Conversion

Power conversion fundamentals including linear/shunt regulators, charge pumps, Buck, Boost, Buck-Boost, SEPIC, Cuk, and Flyback converters, magnetic components, volt second balance, continuous/discontinuous mode, synchronous/non-synchronous operation, voltage/current mode control, fixed frequency PWM and constant on or off time control, control loop analysis, compensator design, RMS/average value calculations for PWM current waveforms, inductor, capacitor, and MOSFET parasitics, output ripple, transient response, gate drive strategies, efficiency prediction, soft start, current limit, efficiency and power loss plots. Prerequisites: EE114

3 units, Spr (Leman, B)

EE 293A. Fundamentals of Energy Processes

(Same as ENERGY 293A) For seniors and graduate students. Thermodynamics, heat engines, thermoelectics, biomass. Recommended: MATH 41, 43; PHYSICS 41, 43, 45

3-4 units, Aut (Brandt, A)

EE 293B. Fundamentals of Energy Processes

(Same as ENERGY 293B) For seniors and graduate students. Fuel cells. Production of hydrogen: electrolytic, chemical, thermolytic, photolytic. Hydrogen storage: hydrides. Photoelectric converters; photo-thermovoltaic converters. Wind turbines. Recommended: EE 293A; MATH 41; PHYSICS 41, 43, 45

3 units, Win (da Rosa, A)

EE 300. Master's Thesis and Thesis Research
Independent work under the direction of a department faculty. Written thesis required for final letter grade. The continuing grade 'N' is given in quarters prior to thesis submission. See 390 if a letter grade is not appropriate.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EE 302. Biomedical Electronics
Biomedical electronics and instruments based on electrical engineering for diagnostics and therapeutic treatments of biological systems, focusing on the theory and design principles in modern biomedical electronics using electromagnetic properties. Topics include circuit design for implanted medical devices, physics and signal processing for medical imaging systems, techniques for neural measurements and neuro-decoding, and electronics for drug delivery. Prerequisites: EE 214, 264,and 265.
3 units, Win (Poon, A)

EE 303. Autonomous Implantable Systems
How implantable systems can revolutionize health care in the coming decades. Potential applications include implantable sensors and monitoring devices for preventive and post-surgery monitoring; drug delivery systems that can be placed closer to cancer cells and are able to administer dosage automatically; medical robots that perform surgery inside patients with greater precision and less pain; and neural implants for brain-machine interface. Focus is on the analysis and design of remotely-powered, miniature implantable devices for those applications. Prerequisites: EE114
3 units, Spr (Poon, A)

EE 309. Semiconductor Memory Devices and Technology
Focus is on the device physics and operation principles of nanoelectric devices. Topics identified by the International Technology Roadmap for Semiconductors, emerging research devices sec-tion; see http://www.itrs.net. Non-silicon-based devices such as carbon nanotubes, grapheme, semiconductor na-nowires, and molecular devices; and non-FET based devices such as single electron transistors (SET) and resonant tunneling diodes (RTD). Logic and memory devices are covered. Prerequisite: undergra-duate device physics, EE 222, EE 216. Recommended: EE 212, EE 223, EE 228, EE 311, and EE 316 Offered Alternate years. Offered in Spring, 2011 Prerequisite: 216. Recommended: 212, 311, 316.
3 units, alternate years, not given this year

EE 310. Integrated Circuits Technology and Design Seminar
State-of-the-art micro- and nanoelectronics, nanotechnology, advanced materials, and nanoscience for device applications. Prerequisites: EE216, EE316.
1 unit, Win (Nishi, Y; Wong, P; Saraswat, K)

EE 311. Advanced Integrated Circuits Technology
What are the practical and fundamental limits to the evolution of the technology of modern MOS devices and interconnects? How are modern devices and circuits fabricated and what future changes are likely? Advanced techniques and models of MOS devices and back-end (interconnect and contact) processing. What are future device structures and materials to maintain progress in integrated electronics? MOS front-end and back-end process integration. Prerequisites: EE212, EE216 or equivalent.
3 units, Spr (Saraswat, K)

EE 312. Micromachined Sensors and Actuators
Solid-state sensors and actuators, focusing on the use of integrated circuit fabrication technology for their realization. Categories of sensors and actuators include biological, chemical, mechanical, optical, and thermal. Mechanisms of transduction, fabrication techniques, and relative merits of different technologies. Micromachining techniques for monolithic integration of active circuits with sensors or actuators. Directions for future research. Prerequisite: 212 or equivalent.
3 units, Win (Giovangrandi, L)

EE 313. Digital MOS Integrated Circuits
Looks a little more deeply at how digital circuits operate, what makes a gate digital, and how to ""cheat"" to improve performance or power. To aid this analysis we create a number of different models for MOS transistors and choose the simplest one that can explain our the circuit's operation, using both hand and computer analysis. We explore static, dynamic, pulse-mode, and current mode logic, and show how they are are used in SRAM design. Topics include sizing for min delay, noise and noise margins, power dissipation. The class uses memory design (SRAM) as a motivating example. DRAM and EEPROM design issues are also covered. Prerequisites: 101B, 108A. Recommended: 271.
3 units, Win (Staff)

EE 314. RF Integrated Circuit Design
Design of RF integrated circuits for communications systems, primarily in CMOS. Topics: the design of matching networks and low-noise amplifiers at RF, mixers, modulators, and demodulators; review of classical control concepts necessary for oscillator design including PLLs and PLL-based frequency synthesizers. Design of low phase noise oscillators. Design of high-efficiency (e.g., class E, F) RF power amplifiers, coupling networks. Behavior and modeling of passive and active components at RF. Narrowband and broadband amplifiers; noise and distortion measures and mitigation methods. Overview of transceiver architectures. Prerequisite: 214.
3 units, Spr (Lee, T)

EE 315A. VLSI Signal Conditioning Circuits
Design and analysis of integrated circuits for active filters, precision gain stages, and sensor interfaces in CMOS VLSI technology. Operational transconductance amplifiers; sampled-data and continuous-time analog filters. Analysis of noise and amplifier imperfections; compensation techniques such as correlated double sampling. Sensor interfaces for micro-electromechanical and biomedical applications. Layout techniques for analog integrated circuits. Prerequisites: EE214
3 units, Spr (Murmann, B)

EE 315B. VLSI Data Conversion Circuits
Architectural and circuit level design and analysis of integrated analog-to-digital and digital-to-analog interfaces in CMOS VLSI technology. Fundamental circuit elements such as sampling circuits and voltage comparators. Circuits and architectures for Nyquist-rate and oversampling analog-to-digital and digital-to-analog conversion; digital decimation and interpolation filters. Examples of calibration and digital enhancement techniques. Prerequisite: EE 214. Recommended: EE 315A.
3 units, Aut (Murmann, B)

EE 316. Advanced VLSI Devices
In modern VLSI technologies, device electrical characteristics are sensitive to structural details and therefore to fabrication techniques. How are advanced VLSI devices designed and what future changes are likely? What are the implications for device electrical performance caused by fabrication techniques? Physical models for nanometer scale structures, control of electrical characteristics (threshold voltage, short channel effects, ballistic transport) in small structures, and alternative device structures for VLSI. Prerequisites: 212 and 216, or equivalent.
3 units, Win (Wong, P)

EE 317. Micropatterning for Integrated Circuits
The fundamentals of generating submicron patterns in integrated circuit manufacturing. Technologies include the formation of submicron images of ultraviolet light, the resulting exposure of polymeric resists, the subsequent development of resist patterns and their transfer into functional circuit material patterns through plasma etching and other techniques. Use of phase-shifting masks and other wavefront-engineering approaches. Hands-on computer simulations. Prerequisites: 141 or equivalent, 212 or equivalent.
3 units, not given this year

EE 319. Advanced Nanoelectronic Devices and Technology
Recent advances in materials science, device physics and structures, and processing technology, to extend VLS1 device scaling towards atomistic and quantum-mechanical physics boundaries. Topics include: mobility-enhancement techniques; nanomaterial structures including tube, wire, beam, and crystal; conducting polymer; 3D FET; gate-wraparound FET; nonvolatile memory phenomena and devices; self-assembly; flash annealing; plasma doping; and nano pattering. Prerequisites: 216, 316.
3 units, not given this year

EE 320. Nanoelectronics
Focus is on the device physics and operation principles of nanoelectric devices. Topics identified by the International Technology Roadmap for Semiconductors, emerging research devices section; see http://www.itrs.net. Non-silicon-based devices such as carbon nanotubes, grapheme, semiconductor nanowires, and molecular devices; and non-FET based devices such as single electron transistors (SET) and resonant tunneling diodes (RTD). Logic and memory devices. Offered alternative years. Prerequisites: under-

graduate device physics, EE 222, 216. Recommended: EE 223, 228, or 316.

3 units, Spr (Wong, P)

EE 322. Molecular Electronics and Photonics

Physics of charge and energy transfer in molecular systems and connection with traditional mesoscopic transport theories. Analysis of molecular organic light-emitting diodes, photovoltaic cells and transistors. Technology and applications of molecular semiconductors. Prerequisite: 228 or equivalent.

3 units, not given this year

EE 327. Properties of Semiconductor Materials

Modern semiconductor devices and integrated circuits are based on unique energy band, carrier transport, and optical properties of semiconductor materials. How to choose these properties for operation of semiconductor devices. Emphasis is on quantum mechanical foundations of the properties of solids, energy bandgap engineering, semi-classical transport theory, semi-conductor statistics, carrier scattering, electro-magneto transport effects, high field ballistic transport, Boltzmann transport equation, quantum mechanical transitions, optical absorption, and radiative and non-radiative recombination that are the foundations of modern transistors and optoelectronic devices. Prerequisites: EE216 or equivalent.

3 units, Spr (Harris, J)

EE 328. Physics of Advanced Semiconductor Devices

Principles governing the operation of modern semiconductor devices. Assumptions and approximations commonly made in analyzing devices. Emphasis is on the application of semiconductor physics to the development of advanced semiconductor devices such as heterojunctions, HJ-bipolar transistors, HJ-FETs, nanostructures, tunneling, single electron transistor and photonic devices. Use of SENTARUS, a 2-D Poisson solver, for simulation of ultra-small devices. Examples related to state-of-the-art devices and current device research. Prerequisite: 216. Recommended: 316.

3 units, not given this year

EE 329. The Electronic Structure of Surfaces and Interfaces

Physical concepts and phenomena for surface science techniques probing the electronic and chemical structure of surfaces, interfaces and nanomaterials. Microscopic and atomic models of microstructures; applications including semiconductor device technology, catalysis and energy. Physical processes of UV and X¿ray photoemission spectroscopy, Auger electron spectroscopy, surface EXAFS, low energy electron diffraction, electron/photon stimulated ion desorption, scanning tunneling spectroscopy, ion scattering, energy loss spectroscopy and related imaging methods; and experimental aspects of these surface science techniques. Prerequisites: PHYSICS 70 and MATSCI 199/209, or consent of instructor.

3 units, Aut (Pianetta, P)

EE 334. Micro and Nano Optical Device Design

Lecture and project course on design and analysis of optical devices with emphasis on opportunities and challenges created by scaling to the micrometer and nanometer ranges. The emphasis is on fundamentals, combined with some coverage of practical implementations. Prerequisite: 242 or equivalent

3 units, Aut (Solgaard, O)

EE 336. Nanophotonics

(Same as MATSCI 346) Recent developments in micro- and nanophotonic materials and devices. Basic concepts of photonic crystals. Integrated photonic circuits. Photonic crystal fibers. Superprism effects. Optical properties of metallic nanostructures. Subwavelength phenomena and plasmonic excitations. Meta-materials. Prerequisite: electromagnetic theory at the level of 242.

3 units, Win (Fan, S; Brongersma, M)

EE 340. Optical micro- and nano-cavities

Optical micro- and nano-cavities and their device applications. Types of optical cavities (microdisks, microspheres, photonic crystal cavities, plasmonic cavities), and their electromagnetic properties, design, and fabrication techniques. Cavity quantum electrodynamics: strong and weak-coupling regime, Purcell factor, spontaneous emission control. Applications of optical cavities, including low-threshold lasers, optical modulators, quantum information processing devices, and bio-chemical sensors. Prerequisites: advanced undergraduate or basic graduate-level knowledge of electromagnetics, quantum mechanics, and physics of semiconductors.

3 units, Spr (Vuckovic, J)

EE 343. Advanced Optoelectronic Devices

Semiconductor quantum well structures; superlattices and coupled quantum wells; optical properties of quantum wells; valence band structure; effects of strain; quantum well lasers; intersubband detectors; excitons in quantum wells; absorption saturation; electroabsorption; quantum well modulators and switches. Prerequisites: 222 or equivalent quantum mechanics, 243. Recommended: 223.

3 units, not given this year

EE 344. High Frequency Laboratory

Lecture/lab emphasizing lab. Techniques in the 1MHz-1GHz range useful in designing and measuring oscillators, amplifiers, and mixers. High frequency measurement techniques including s-parameter measurements, amplifier noise figure, and oscillator phase noise. Guest speakers from Lucent and Hewlett-Packard. Enrollment limited to 25. Prerequisites: transmission lines, Smith charts. Recommended: 314.

3 units, Aut (Scherer, D; Swain, H; Cox, D)

EE 345. Optical Fiber Communication Laboratory

Experimental techniques in optical fiber communications and networking. Experimental investigation of key optical communications components including fibers, lasers, modulators, photodiodes, optical amplifiers, and WDM multiplexers and demultiplexers. Fundamental optical communications systems techniques: eye diagrams, BER measurements, experimental evaluation of nonlinearties. Prerequisites: Undergraduate physics and optics.

3 units, Spr (Kazovsky, L)

EE 346. Introduction to Nonlinear Optics

Wave propagation in anisotropic, nonlinear, and time-varying media. Microscopic and macroscopic description of electric dipole susceptibilities. Free and forced waves-phasematching; slowly varying envelope approximation-dispersion, diffraction, space-time analogy; harmonic generation; frequency conversion; parametric amplification and oscillation; electro-optic light modulation; nonlinear processes in optical fibers. Prerequisites: 141, 242.

3 units, Spr (Fejer, M)

EE 347. Optical Methods in Engineering Science

Design and understanding of modern optical systems. Topics: geometrical optics; aberration theory; systems layout; applications such as microscopes, telescopes, optical processors. Computer ray tracing program as a design tool. Prerequisite: 268 or 366, or equivalent.

3 units, not given this year

EE 348. Advanced Optical Fiber Communications

Optical amplifiers: gain, saturation, noise. Semiconductor amplifiers. Erbium-doped fiber amplifiers. System applications: preamplified receiver performance, amplifier chains. Raman amplifiers, lumped vs. distributed amplification. Group-velocity dispersion management: dispersion-compensating fibers, filters, gratings. Interaction of dispersion and nonlinearity, dispersion maps. Multichannel systems. Wavelength-division multiplexing components: filters, multiplexers. WDM systems, crosstalk. Time, subcarrier, code and polarization-division multiplexing. Comparison of modulation techniques: differential phase-shift keying, phase-shift keying, quadrature-amplitude modulation. Comparison of detection techniques: noncoherent, differentially coherent, coherent. Prerequisite: 247.

3 units, not given this year

EE 349. Nano Optics and Grating Photonics

Coupled wave analysis of periodic structures, gratings structures for optical communcations, wave-matter interactions with periodic media and photonic crystals, applications of periodic structures. Prerequisite: 268 or 366, or equivalent.

3 units, Win (Hesselink, L)

EE 350. STARLab Seminar
Research topics from space physics, planetary exploration, ionospheric and magnetospheric physics, radar and remote sensing of the environment, applied electromagnetics, waves in optical fibers, and information systems with space applications. Applied research areas include wireless personal communications, high bandwidth wired and wireless transmission, optical communication systems, sensor networks, and related underlying and advancing technologies.
1 unit, not given this year

EE 354. Introduction to Radio Wave Scattering
Integral and differential equations of radio wave scattering; exact, approximate, and numerical solutions of single particle scattering for spheres, edges, points, and cylinders. Scattering from rough surfaces with large and small roughness scales, as time permits. Multiple scattering; formulation and solution techniques for equation of transfer in discrete media and scattering by continuous media in weak and strong regimes. Applications to radar, radar astronomy, remote sensing, and biological media. Prerequisites: electromagnetic theory through standard graduate engineering topics; partial differential equations, boundary value problems in rectangular and spherical coordinates; and consent of instructor.
3 units, not given this year

EE 355. Imaging Radar and Applications
(Same as GEOPHYS 265) Radar remote sensing, radar image characteristics, viewing geometry, range coding, synthetic aperture processing, correlation, range migration, range/Doppler algorithms, wave domain algorithms, polar algorithm, polarimetric processing, interferometric measurements. Applications: surfafe deformation, polarimetry and target discrimination, topographic mapping surface displacements, velocities of ice fields. Prerequisites: EE261
3 units, Win (Zebker, H)

EE 356. Elementary Plasma Physics: Principles and Applications
Plasmas in nature and industry. Single particle motions. Plasma kinetic theory. Boltzmann equation and its moments. Cold and warm plasma models. Plasma as a fluid. Magnetohydrodynamics. Plasma conductivity and diffusion. Langmuir oscillations. Debye shielding. Plasma sheath. Waves in cold, magnetized, warm, and hot plasmas. Electron and ion waves. MHD waves. Landau damping. Nonlinear effects. Applications in industry and space science. Prerequisite: 242 or PHYSICS 122.
3 units, not given this year

EE 359. Wireless Communications
This course will cover advanced topics in wireless communications for voice, data, and multimedia. Topics include: an overview of current and future wireless systems; wireless channel models including path loss, shadowing, and statistical multipath channel models; fundamental capacity limits of wireless channels; digital modulation and its performance in fading and intersymbol interference; techniques to combat fading including adaptive modulation, diversity, and multiple antenna systems (MIMO); techniques to combat intersymbol interference including equalization, multicarrier modulation (OFDM), and spread spectrum; and an overview of wireless network design. Prerequisite: 279.
3-4 units, Aut (Goldsmith, A)

EE 363. Linear Dynamic Systems
Continuation of 263. Optimal control and dynamic programming; linear quadratic regulator. Lyapunov theory and methods. Linear estimation and the Kalman filter. Perron-Frobenius theory. Examples and applications from digital filters, circuits, signal processing, and control systems. Prerequisites: 263 or equivalent; basic probability.
3 units, not given this year

EE 364A. Convex Optimization I
(Same as CME 364A) Convex sets, functions, and optimization problems. The basics of convex analysis and theory of convex programming: optimality conditions, duality theory, theorems of alternative, and applications. Least-squares, linear and quadratic programs, semidefinite programming, and geometric programming. Numerical algorithms for smooth and equality constrained problems; interior-point methods for inequality constrained problems. Applications to signal processing, communications, control, analog and digital circuit design, computational geometry, statistics, machine learning, and mechanical engineering. Prerequisite: linear algebra such as 263.
3 units, Win (Boyd, S)

EE 364B. Convex Optimization II
(Same as CME 364B) Continuation of 364. Subgradient, cutting-plane, and ellipsoid methods. Decentralized convex optimization via primal and dual decomposition. Exploiting problem structure in implementation. Convex relaxations of hard problems. Global optimization via branch and bound. Robust and stochastic optimization. Applications in areas such as control, circuit design, signal processing, and communications. Substantial project. Prerequisite: 364A.
3 units, Spr (Boyd, S)

EE 366. Introduction to Fourier Optics
Applications of Fourier theory to the analysis and synthesis of optical imaging and optical data processing systems. Propagation and diffraction of light, Fresnel and Fraunhofer approximations, Fourier transforming properties of lenses, image formation with coherent and incoherent light, transform functions of imaging systems, optical data processing, and holography. Prerequisite: familiarity with Fourier analysis. Recommended: 261.
3 units, not given this year

EE 368. Digital Image Processing
Image sampling and quantization color, point operations, segmentation, morphological image processing, linear image filtering and correlation, image transforms, eigenimages, multiresolution image processing, wavelets, noise reduction and restoration, feature extraction and recognition tasks, image registration. Emphasis is on the general principles of image processing. Students write and investigate image processing algorithms in Matlab. Term project. Prerequisites: 261, 278.
3 units, Spr (Girod, B)

EE 369A. Medical Imaging Systems I
Imaging internal structures within the body using high-energy radiation studied from a systems viewpoint. Modalities covered: x-ray, computed tomography, and nuclear medicine. Analysis of existing and proposed systems in terms of resolution, frequency response, detection sensitivity, noise, and potential for improved diagnosis. Prerequisite: 261.
3 units, Win (Nishimura, D)

EE 369B. Medical Imaging Systems II
Imaging internal structures within the body using non-ionizing radiation studied from a systems viewpoint. Modalities include ultrasound and magnetic resonance. Analysis of ultrasonic systems including diffraction and noise. Analysis of magnetic resonance systems including physics, Fourier properties of image formation, and noise. Prerequisite: 261.
3 units, Spr (Nishimura, D)

EE 369C. Medical Image Reconstruction
Reconstruction problems from medical imaging, including magnetic resonance imaging (MRI), computed tomography (CT), and positron emission tomography (PET). Problems include reconstruction from non-uniform frequency domain data, automatic deblurring, phase unwrapping, reconstruction from incomplete data, and reconstruction from projections. Prerequisite: 369B.
3 units, not given this year

EE 371. Advanced VLSI Circuit Design
Design of high-performance digital systems, the things that cause them to fail, and how to avoid these problems. Topics will focus on current issues including: wiring resistance and how to deal with it, power and Gnd noise and regulation, clock (or asynchronous) system design and how to minimize clocking overhead, high-speed I/O design, energy minimization including leakage control, and structuring your Verilog code to result in high-performance, low energy systems. Extensive use of modern CAD tools. Prerequisites: 271 and 313, or consent of instructor.
3 units, not given this year

EE 374. Inference in Graphical Models
Probabilistic models with sparse graphical structures, low-complexity inference algorithms, and their analysis. Algorithmic methods: variational inference; message passing algorithms; belief propagation; generalized belief propagation; survey propagation. Learning graphical models, structural learning. Applications/examples include: Gaussian models with sparse inverse covariance; hidden Markov models (Viterbi and BCJR algorithms,

Kalman filter); computer vision (segmentation, tracking, etc); constraint satisfaction problems; machine learning (clustering, classification); communications. Prerequisite: 278, STATS 116, or CS 228. Recommended: 376A or STATS 217/218.

3 units, not given this year

EE 376A. Information Theory

(Same as STATS 376A) The fundamental ideas of information theory. Entropy and intrinsic randomness. Data compression to the entropy limit. Huffman coding. Arithmetic coding. Channel capacity, the communication limit. Gaussian channels. Kolmogorov complexity. Asymptotic equipartition property. Information theory and Kelly gambling. Applications to communication and data compression. Prerequisite: EE178 or EE278 or STATS 116, or equivalent.

3 units, Win (Cover, T)

EE 376B. Information Theory

(Same as STATS 376B) Rate distortion theory and Kolmogorov complexity. Information theory and statistics. Method of types. Stein's lemma. AEP. Information capacity of networks. Slepian-Wolf theorem. Optimal investment and information theory. Universal portfolios and universal data compression. Maximum entropy and Burg's theorem. Prerequisite: EE376A.

3 units, Spr (Cover, T)

EE 378A. Statistical Signal Processing

Random signals in electrical engineering. Discrete-time random processes: stationarity and ergodicity, covariance sequences, power spectral density, parametric models for stationary processes. Fundamentals of linear estimation: minimum mean squared error estimation, optimum linear estimation, orthogonality principle, the Wold decomposition. Causal linear estimation of stationary processes: the causal Wiener filter, Kalman filtering. Parameter estimation: criteria of goodness of estimators, Fisher information, Cramer-Rao inequality, Chapman-Robbins inequality, maximum likelihood estimation, method of moments, consistency, efficiency. ARMA parameter estimation: Yule-Walker equations, Levinson-Durbin algorithm, least squares estimation, moving average parameter estimation, modified Yule-Walker method for model order selection. Spectrum estimation: sample covariances, covariance estimation, Bartlett formula, periodogram, periodogram averaging, windowed periodograms. Prerequisites: EE 278

3 units, Win (Weissman, I)

EE 378B. Inference, Estimation, and Information Processing

Techniques and models for signal, data and information processing, with emphasis on incomplete data, non-ordered index sets and robust low-complexity methods. Linear models; regularization and shrinkage; dimensionality reduction; streaming algorithms; sketching; clustering, search in high dimension; low-rank models; principal component analysis. Applications include: positioning from pairwise distances; distributed sensing; measurement/traffic monitoring in networks; finding communities/clusters in networks; recommendation systems; inverse problems. Prerequisites: EE278 and EE263 or equivalent. Recommended but not required: EE378 A

3 units, Spr (Montanari, A)

EE 379. Digital Communication

Modulation methods and bandwidth requirements, baseband and passband system analysis, minimum-probability-of-error and maximum-likelihood detection, error-probability analysis, intersymbol interference, maximum-likelihood sequence detection, equalization methods, orthogonal frequency-division multiplexing. Prerequisite: EE102B, EE278

3 units, Win (Kahn, J)

EE 380. Colloquium on Computer Systems

Live presentations of current research in the design, implementation, analysis, and applications of computer systems. Topics range over a wide range and are different every quarter. Topics may include fundamental science, mathematics, cryptography, device physics, integrated circuits, computer architecture, programming, programming languages, optimization, applications, simulation, graphics, social implications, venture capital, patent and copyright law, networks, computer security, and other topics of related to computer systems.

1 unit, Aut (Allison, D; Freeman, J), Win (Allison, D; Freeman, J), Spr (Allison, D; Freeman, J), Sum (Allison, D; Freeman, J)

EE 382A. Advanced Processor Architecture

Provides in-depth coverage of fundamental architecture and implementation techniques for modern processor chips. Course covers topics such as advanced pipelining, superscalar execution, out-of-order processing, speculative execution, VLIW, data parallelism, multithreading, graphics processors, and multi-core chips. The students will become familiar with complex trade-offs between performance-power-complexity and the common techniques for addressing the challenges in historical and modern processors. A central part of EE382A is a group project on an open research question. Prerequisites: EE108B, CS140. Recommended: EE282, CS315A

3 units, Aut (Kozyrakis, C)

EE 382C. Interconnection Networks

The architecture and design of interconnection networks used to communicate from processor to memory, from processor to processor, and in switches and routers. Topics: network topology, routing methods, flow control, router microarchitecture, and performance analysis. Enrollment limited to 30. Prerequisite: 282.

3 units, Spr (Dally, W)

EE 382D. Advanced Computer Arithmetic

Number systems, floating point representation, state of the art in arithmetic algorithms, problems in the design of high speed arithmetic units. Prerequisite: 282.

3 units, not given this year

EE 384A. Internet Routing Protocols and Standards

Local area networks addressing and switching; IEEE 802.1 bridging protocols (transparent bridging, virtual LANs). Internet routing protocols: interior gateways (RIP, OSPF) and exterior gateways (BGP); multicast routing; multiprotocol label switching (MPLS). Routing in mobile networks: Mobile IP, Mobile Ad Hoc Networks (MANET), Wireless Mesh Networks. Prerequisite: 284 or CS 144.

3 units, Win (Tobagi, F)

EE 384B. Multimedia Communication over the Internet

Applications and requirements. Traffic generation and characterization: voice encoding (G.711, G.729, G.723); image and video compression (JPEG, H.261, MPEG-2, H.263, H.264), TCP data traffic. Quality impairments and measures. Networking technologies: LAN technologies; home broadband services (ADSL, cable modems, PONs); and wireless LANs (802.11). Network protocols for multimedia applications: resource reservation (ST2+, RSVP); differentiated services (DiffServ); and real-time transport protocol (RTP, RTCP). Audio-video-data conferencing standards: Internet architecture (SDP, SAP, SIP); ITU recommendations (H.320, H.323 and T.120); and real-time streaming protocol (RTSP). Prerequisite: 284 or CS 144. Recommended: 384A.

3 units, not given this year

EE 384C. Wireless Local Area Networks

Characteristics of wireless communication: multipath, noise, and interference. Communications techniques: spread-spectrum, CDMA, and OFDM. IEEE 802.11 physical layer specifications: FHSS, DSSS, IEEE 802.11b (CCK), and 802.11a/g (OFDM). IEEE 802.11 media access control protocols: carrier sense multiple access with collision avoidance (CSMA/CA), point coordination function (PCF), IEEE802.11e for differentiated services. IEEE 802.11 network architecture: ad hoc and infrastructure modes, access point functionality. Management functions: synchronization, power management and association. Current research papers in the open literature. Prerequisite: 284 or CS 244A.

3 units, Spr (Tobagi, F)

EE 384E. Wireless Networking

(Same as CS 244E) Design and implementation of wireless networks and mobile systems. The course will commence with a short retrospective of wireless communication and initially touch on some of the fundamental physical layer properties of various wireless communication technologies. The focus will then shift to design of media access control and routing layers for various wireless systems. The course will also examine adaptations necessary at transport and higher layers to cope with node mobility and error-prone nature of the wireless medium. Finally, it will conclude with a brief overview of other related issues including emerging wireless/mobile applications. Prerequisites: EE 284

3 units, Win (Katti, S; Levis, P)

EE 384M. Network Science
Modern large-scale networks consist of (i) Information Networks, such as the Web and Social Networks, and (ii) Data Centers, which are networks interconnecting computing and storage elements for servicing the users of an Information Network. This course is concerned with the mathematical models and the algorithms used in Information Networks and Data Centers. Prerequisite: 278 or CS 365.

3 units, not given this year

EE 384P. Projects: The Programmable Open Mobile Internet (POMI)
A new Stanford research program in EE and CS to define the next generation of mobile computing: from the handheld device and its operating system to the network, radios, and cloud computing that supports the user. Small student teams prototype part of the next Internet architecture. Emphasis is on how the Internet can support billions of mobile users. Prerequisite: EE 284, CS 244A, CS 144, or equivalents, and programming skills.

3 units, not given this year

EE 384S. Performance Engineering of Computer Systems and Networks
Modeling and control methodologies for high-performance network engineering, including: Markov chains and stochastic modeling, queueing networks and congestion management, dynamic programming and task/processor scheduling, network dimensioning and optimization, and simulation methods. Applications for design of high-performance architectures for wireline/wireless networks and the Internet, including: traffic modeling, admission and congestion control, quality of service support, power control in wireless networks, packet scheduling in switches, video streaming over wireless links, and virus/worm propagation dynamics and countermeasures. Enrollment limited to 30. Prerequisites: basic networking technologies and probability.

3 units, Spr (Bambos, N)

EE 384X. Packet Switch Architectures I
The theory and practice of designing packet switches, such as Internet routers, and Ethernet switches. Introduction: evolution of switches and routers. Output queued switches: motivation and methods for providing bandwidth and delay guarantees. Switching: output queueing, parallelism in switches, distributed shared memory switches, input-queued switches, combined input-output queued switches, how to make fast packet buffers, buffered crossbar switches. Scheduling input queued crossbars: connections with bipartite graph matching, algorithms for 100% throughput, practical algorithms and heuristics. Looking forward: Architectures and switches for data center networks. Prerequisites: EE284 or CS 244A. Recommended: EE 178 or EE 278 or STAT 116.

3 units, not given this year

EE 385A. Robust and Testable Systems Seminar
Student/faculty discussions of research problems in the design of reliable digital systems. Areas: fault-tolerant systems, design for testability, production testing, and system reliability. Emphasis is on student presentations and Ph.D. thesis research. May be repeated for credit. Prerequisite: consent of instructor.

1-4 units, Aut (McCluskey, E; Mitra, S), Win (McCluskey, E; Mitra, S), Spr (McCluskey, E; Mitra, S), Sum (McCluskey, E)

EE 386. Robust System Design
Causes of system malfunctions; techniques for building robust systems that avoid or are resilient to such malfunctions through built-in error detection and correction, prediction, self-test, self-recovery, and self-repair; case studies and new research problems. Prerequisites: 108A,B, 282.

3 units, Spr (Mitra, S)

EE 387. Algebraic Error Control Codes
Theory and implementation of algebraic codes for detection and correction of random and burst errors. Introduction to finite fields. Linear block codes, cyclic codes, Hamming codes, BCH codes, Reed-Solomon codes. Decoding algorithms for BCH and Reed-Solomon codes. Prerequisites: elementary probability, linear algebra.

3 units, Aut (Gill, J)

EE 388. Modern Coding Theory
Tools for analysis and optimization of iterative coding systems. LDPC, turbo and, RA codes. Optimized ensembles, message passing algorithms, density evolution, and analytic techniques. Prerequisite: 376A.

3 units, not given this year

EE 390. Special Studies or Projects in Electrical Engineering
Independent work under the direction of a faculty member. Individual or team activities may involve lab experimentation, design of devices or systems, or directed reading.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EE 391. Special Studies and Reports in Electrical Engineering
Independent work under the direction of a faculty member; written report or written examination required. Letter grade given on the basis of the report; if not appropriate, student should enroll in 390.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EE 392J. Digital Video Processing
Spatio-temporal sampling, motion analysis, parametric motion models, motion-compensated filtering, and video processing operations including noise reduction, restoration, superresolution, deinterlacing and video sampling structure conversion, and compression (frame-based and object-based methods). Video segmentation and layered video representations, video streaming, compressed-domain video processing, and digital TV. Prerequisite: 368.

3 units, not given this year

EE 392T. Seminar in Chip Test and Debug
Seminars by industry professionals in digital IC manufacturing test and silicon debug. Topics include yield and binsplit modeling, defect types and detection, debug hardware, physical analysis, and design for test/debug circuits. Case studies of silicon failures. Prerequisite: basic digital IC design (271 or 371).

1 unit, Win (Stinson, J)

EE 392V. Signal Processing in VoIP Systems
VoIP protocols: RTP and SIP. Voice encoding standards: PCM, ADPCM, and LPC. Speech quality measurement: MOS, PESQ, and E-model. Characterization of VoIP impairments: delay, jitter, packet loss, and clock skew. Signal processing algorithms to improve VoIP quality: echo cancellation, adaptive jitter buffering, packet loss concealment, and decoder clock synchronization. Prerequisites: 261 and 278, or equivalents.

3 units, not given this year

EE 395. Electrical Engineering Instruction: Practice Teaching
Open to advanced EE graduate students who plan to make teaching their career. Students conduct a section of an established course taught in parallel by an experienced instructor. Enrollment limited.

1-15 units, Aut (Nishimura, D), Win (Nishimura, D), Spr (Nishimura, D)

EE 398A. Image and Video Compression
Replaces EE398. The principles of source coding for the efficient storage and transmission of still and moving images. Entropy and lossless coding techniques. Run-length coding and fax compression. Arithmetic coding. Rate-distortion limits and quantization. Lossless and lossy predictive coding. Transform coding, JPEG. Subband coding, wavelets, JPEG2000. Motion-compensated coding, MPEG. Students investigate image and video compression algorithms in Matlab or C. Term project. Prerequisites: 261, 278.

3 units, Win (Girod, B)

EE 398B. Video Communication Systems
Explore multimedia networking and communication, with emphasis on systems for video delivery. In-depth discussion of video coding techniques. Standards: MPEG-1, MPEG-2, MPEG-4, ITU-T H.261, H.263, H264. Coder control, rate adaptation, Scalable video. Error resilient coding. Network adaptive video transport. Distributed coding, authentication, watermarking. Videoconferencing, digital TV broadcasting, HDTV, Internet media streaming, IPTV, digital cinema, mobile media systems. Peer-to-peer media delivery. Video summarization and retrieval. Students investigate video coding algorithms in Matlab or C. Term project.Prerequisite: EE 398A.

3 units, not given this year

EE 400. Thesis and Thesis Research
Limited to candidates for the degree of Engineer or Ph.D.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EE 402A. Topics in International Technology Management
Theme for Autumn 2010 is Asia technology management in energy and cleantech technology and business trends, innovations,

and challenges such as standards, IPR, and differing regulatory regimes in major Asian economies. Implications for US firms and researchers. Distinguished speakers from industry and government.
1 unit, Aut (Dasher, R)

EE 402S. Topics in International Advanced Technology Research
Theme for Spring 2011 is recent approaches to chip-level integration. Survey of advanced research into 3D integration, CMOS on encapsulated MEMS, III-V on Si, multi-processor architectures. Distinguished speakers from industry and universities. May be repeated for credit. Recommended: basic electronics.
1 unit, Spr (Dasher, R)

EE 402T. Entrepreneurship in Asian High Tech Industries
Distinctive patterns and challenges of entrepreneurship in Asia; update of business and technology issues in the creation and growth of start-up companies in major Asian economies. Distinguished speakers from industry, government, and academia.
1 unit, Spr (Dasher, R)

EE 410. Integrated Circuit Fabrication Laboratory
Fabrication, simulation, and testing of a submicron CMOS process. Practical aspects of IC fabrication including silicon wafer cleaning, photolithography, etching, oxidation, diffusion, ion implantation, chemical vapor deposition, physical sputtering, and electrical testing. Students also simulate the CMOS process using process simulator TSUPREM4 of the structures and electrical parameters that should result from the process flow. Taught in the Stanford Nanofabrication Facility (SNF). Preference to students pursuing doctoral research program requiring SNF facilities. Enrollment limited to 20. Prerequisites: 212, 216, consent of instructor.
3-4 units, Win (Saraswat, K)

EE 412. Advanced Nanofabrication Laboratory
Experimental projects and seminars on integrated circuit fabrication using epitaxial, oxidation, diffusion, evaporation, sputtering, and photolithographic processes with emphasis on techniques for achieving advanced device performance. May be repeated for additional credit. Prerequisites: ENGR341 or EE410 or consent of instructor.
3 units, Aut (Howe, R; Solgaard, O), Win (Pruitt, B)

EE 414. RF Transceiver Design Laboratory
Students design, build, and test GHz transceivers using microstrip construction techniques and discrete components. The design, construction, and experimental characterization of representative transceiver building blocks: low noise amplifiers (LNAs), diode ring mixers, PLL-based frequency synthesizers, voltage-controlled oscillators (VCOs), power amplifiers (PAs), and microstrip filters and patch antennas. The characteristics of passive microstrip components (including interconnect). Emphasis is on a quantitative reconciliation of theoretical predictions and extensive experimental measurements performed with spectrum and network analyzers, time-domain reflectometers (TDRs), noise figure meter and phase noise analyzers. Prerequisites: EE 314, EE 344.
3 units, Win (Lee, T)

EE 418. Topics in Neuroengineering
Neuroscience and electrical engineering, focusing on principles and theory in modern neural prosthetic systems (brain-computer or brain-machine interfaces). Electrical properties of neurons, information encoding, neural measurement techniques and technology, processing electronics, information decoding and estimators, and statistical data analysis. Prerequisites: EE 214, EE 278.
3 units, not given this year

EE 453. Geomagnetically Trapped Radiation
Research on the radiation belts of Earth and other planets. Physical processes which lead to magnetic trapping of electrons and ions. Analytical tools for trapped radiation research. The nature of radiation belts, source and loss mechanisms, and the relation of radiation belts to other geophysical phenomena.
3 units, not given this year

EE 469B. RF Pulse Design for Magnetic Resonance Imaging
Magnetic resonance imaging (MRI) and spectroscopy (MRS) based on the use of radio frequency pulses to manipulate magnetization. Analysis and design of major types of RF pulses in one and multiple dimensions, analysis and design of sequences of RF pulses for fast imaging, and use of RF pulses for the creation of image contrast in MRI. Prerequisite: 369B.
3 units, not given this year

EE 476. Network Information Theory
Network information theory deals with the fundamental limits on information flow in networks and the optimal coding schemes that achieve these limits. It aims to extend Shannon's point-to-point information theory and the Ford-Fulkerson max-flow min-cut theorem to networks with multiple sources and destinations. The course presents the basic results and tools in the field in a simple and unified manner. Topics covered include: multiple access channels, broadcast channels, interference channels, channels with state, distributed source coding, multiple description coding, network coding, relay channels, interactive communication, and noisy network coding. Prerequisites: EE376A or equivalent.
3 units, Aut (El Gamal, A)

EE 477. Universal Schemes in Information Theory
Universal schemes for lossless and lossy compression, channel coding and decoding, prediction, denoising, and filtering. Characterization of performance limitations in the stochastic settting: entropy rate, rate-distortion function, channel capacity, Bayes envelope for prediction, denoising, and filtering. Lempel-Ziv lossless compression, and Lempel-Ziv based schemes for lossy compression, channel coding, prediction, and filtering. Discrete universal denoising. Compression-based approach to denoising. The compound decision problem. Prerequisites: 278, 376A,B.
3 units, Aut (Staff)

EE 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EE 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY RESOURCES ENGINEERING (ENERGY) COURSES

UNDERGRADUATE COURSES IN ENERGY RESOURCES ENGINEERING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ENERGY 24. Making Molehills out of Mountains: Energy and Development in Appalachia
Preparation for Alternative Spring Break trip to examine the past, present, and future role of energy in Appalachia. Positive and negative impacts of energy production; meetings with energy industry leaders, community groups, and policymakers. The larger role of energy development and energy issues in society. May be repeated for credit.
1 unit, not given this year

ENERGY 101. Energy and the Environment
(Same as EARTHSYS 101) Energy use in modern society and the consequences of current and future energy use patterns. Case studies illustrate resource estimation, engineering analysis of energy systems, and options for managing carbon emissions. Focus is on energy definitions, use patterns, resource estimation, pollution. Recommended: MATH 21 or 42, ENGR 30. GER:DB-EngrAppSci
3 units, Win (Kovscek, A; Durlofsky, L)

ENERGY 102. Renewable Energy Sources and Greener Energy Processes
(Same as EARTHSYS 102) The energy sources that power society are rooted in fossil energy although energy from the core of the Earth and the sun is almost inexhaustible; but the rate at which energy can be drawn from them with today's technology is limited. The renewable energy resource base, its conversion to useful forms, and practical methods of energy storage. Geothermal, wind, solar, biomass, and tidal energies; resource extraction and its consequences. Recommended: 101, MATH 21 or 42. GER:DB-EngrAppSci
3 units, Spr (Kovscek, A; Gerritsen, M)

ENERGY 104. Technology in the Greenhouse
Technologies that might be employed to reduce emissions of greenhouse materials, such as carbon dioxide, methane, nitrous

oxide, and black soot, produced by the generation and use of energy. Sources of greenhouse materials in the current energy mix and evidence for global geochemical and climate changes. Advantages and limitations of technologies to reduce emissions. Examples include renewable sources such as wind and solar energy, more efficient use of energy, hydrogen, capture and storage of carbon dioxide, and nuclear power.

3 units, Spr (Benson, S; Krause, M; Brandt, A)

ENERGY 120. Fundamentals of Petroleum Engineering

(Same as ENGR 120) Lectures, problems, field trip. Engineering topics in petroleum recovery; origin, discovery, and development of oil and gas. Chemical, physical, and thermodynamic properties of oil and natural gas. Material balance equations and reserve estimates using volumetric calculations. Gas laws. Single phase and multiphase flow through porous media. GER:DB-EngrAppSci

3 units, Aut (Horne, R; Wilcox, J)

ENERGY 121. Fundamentals of Multiphase Flow

(Same as ENERGY 221) Multiphase flow in porous media. Wettability, capillary pressure, imbibition and drainage, Leverett J-function, transition zone, vertical equilibrium. Relative permeabilities, Darcy's law for multiphase flow, fractional flow equation, effects of gravity, Buckley-Leverett theory, recovery predictions, volumetric linear scaling, JBN and Jones-Rozelle determination of relative permeability. Frontal advance equation, Buckley-Leverett equation as frontal advance solution, tracers in multiphase flow, adsorption, three-phase relative permeabilities. GER:DB-EngrAppSci

3 units, Win (Tchelepi, H)

ENERGY 125. Modeling and Simulation for Geoscientists and Engineers

Hands-on. Topics include deterministic and statistical modeling applied to problems such as flow in the subsurface, atmospheric pollution, biological populations, wave propagation, and crustal deformation. Student teams define and present a modeling problem.

3 units, Win (Mukerji, T)

ENERGY 130. Well Log Analysis I

For earth scientists and engineers. Interdisciplinary, providing a practical understanding of the interpretation of well logs. Lectures, problem sets using real field examples: methods for evaluating the presence of hydrocarbons in rock formations penetrated by exploratory and development drilling. The fundamentals of all types of logs, including electric and non-electric logs.

3 units, Aut (Lindblom, R)

ENERGY 141. Seismic Reservoir Characterization

(Same as GEOPHYS 241A, ENERGY 241) (Same as GP241) Practical methods for quantitative characterization and uncertainty assessment of subsurface reservoir models integrating well-log and seismic data. Multidisciplinary combination of rock-physics, seismic attributes, sedimentological information and spatial statistical modeling techniques. Student teams build reservoir models using limited well data and seismic attributes typically available in practice, comparing alternative approaches. Software provided (SGEMS, Petrel, Matlab). Recommended: ERE240/260, or GP222/223, or GP260/262 or GES253/257; ERE246, GP112

3-4 units, Spr (Mukerji, T; Jia, B)

ENERGY 146. Reservoir Characterization and Flow Modeling with Outcrop Data

(Same as GES 246, ENERGY 246) Project addressing a reservoir management problem by studying an outcrop analog, constructing geostatistical reservoir models, and performing flow simulation. How to use outcrop observations in quantitative geological modeling and flow simulation. Relationships between disciplines. Weekend field trip.

3 units, Aut (Graham, S; Tchelepi, H; Boucher, A; Stright, L; Kuralkhanov, D)

ENERGY 153. Carbon Capture and Sequestration

(Same as ENERGY 253) CO2 separation from syngas and flue gas for gasification and combustion processes. Transportation of CO2 in pipelines and sequestration in deep underground geological formations. Pipeline specifications, monitoring, safety engineering, and costs for long distance transport of CO2. Comparison of options for geological sequestration in oil and gas reservoirs, deep unmineable coal beds, and saline aquifers. Life cycle analysis.

3-4 units, Aut (Wilcox, J; Benson, S)

ENERGY 155. Undergraduate Report on Energy Industry Training

On-the-job practical training under the guidance of on-site supervisors. Required report detailing work activities, problems, assignments and key results. Prerequisite: written consent of instructor.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 160. Modeling Uncertainty in the Earth Sciences

(Same as ENERGY 260) Whether Earth Science modeling is performed on a local, regional or global scale, for scientific or engineering purposes, uncertainty is inherently present due to lack of data and lack of understanding of the underlying phenomena. This course highlights the various issues, techniques and practical modeling tools available for modeling uncertainty of complex 3D/4D Earth systems. The course focuses on a practical breath rather than theoretical depth. Topics covered are: the process of building models, sources of uncertainty, probabilistic techniques, spatial data analysis and geostatistics, grid and scale, spatio-temporal uncertainty, visualizing uncertainty in large dimensions, Monte Carlo simulation, reducing uncertainty with data, value of information. Applications to both local (reservoir, aquifer) and global (climate) are covered through literature study. Extensive software use with SGEMS and Petrel. Project homework. Prerequisites: algebra (CME 104 or equivalent), introductory stat

3 units, Win (Caers, J; Honarkhah, M)

ENERGY 161. Statistical Methods for the Earth and Environmental Sciences: Geostatistics

(Same as EESS 161, EARTHSYS 161) Statistical analysis and graphical display of data, common distribution models, sampling, and regression. The variogram as a tool for modeling spatial correlation; variogram estimation and modeling; introduction to spatial mapping and prediction with kriging; integration of remote sensing and other ancillary information using co-kriging models; spatial uncertainty; introduction to geostatistical software applied to large environmental, climatological, and reservoir engineering databases; emphasis is on practical use of geostatistical tools. GER:DB-NatSci

3-4 units, Win (Staff)

ENERGY 167. Engineering Valuation and Appraisal of Oil and Gas Wells, Facilities, and Properties

(Same as ENERGY 267) Appraisal of development and remedial work on oil and gas wells; appraisal of producing properties; estimation of productive capacity, reserves; operating costs, depletion, and depreciation; value of future profits, taxation, fair market value; original or guided research problems on economic topics with report. Prerequisite: consent of instructor. GER:DB-EngrAppSci

3 units, Win (Kourt, W; Pande, K)

ENERGY 175. Well Test Analysis

Lectures, problems. Application of solutions of unsteady flow in porous media to transient pressure analysis of oil, gas, water, and geothermal wells. Pressure buildup analysis and drawdown. Design of well tests. Computer-aided interpretation.

3 units, not given this year

ENERGY 180. Oil and Gas Production Engineering

(Same as ENERGY 280) Design and analysis of production systems for oil and gas reservoirs. Topics: well completion, single-phase and multi-phase flow in wells and gathering systems, artificial lift and field processing, well stimulation, inflow performance. Prerequisite: 120. Recommended: 130. GER:DB-EngrAppSci

3 units, not given this year

ENERGY 191. Optimization of Energy Systems

(Same as ENERGY 291) Introductory mathematical programming and optimization using examples from energy industries. Emphasis on problem formulation and solving, secondary coverage of algorithms. Problem topics include optimization of energy investment, production, and transportation; uncertain and intermittent energy resources; energy storage; efficient energy production and conversion. Methods include linear and nonlinear optimization, as well as multi-objective and goal programming. Tools include Microsoft Excel and AMPL mathematical programming language. Prerequisites: MATH 41, MATH 51, or consent of instructor. Programming experience helpful (e.g, CS 106A-B).

3 units, Win (Brandt, A; Ahn, S)

ENERGY 192. Undergraduate Teaching Experience
Leading field trips, preparing lecture notes, quizzes under supervision of the instructor. May be repeated for credit.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 193. Undergraduate Research Problems
Original and guided research problems with comprehensive report. May be repeated for credit.

1-3 units, Aut (Staff), Win (Staff), Spr (Durlofsky, L; Gerritsen, M; Horne, R; Kovscek, A; Tchelepi, H), Sum (Staff)

ENERGY 194. Special Topics in Energy and Mineral Fluids
May be repeated for credit.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 199. Senior Project and Seminar in Energy Resources
Individual or group capstone project in Energy Resources Engineering. Emphasis is on report preparation. May be repeated for credit.

1-4 units, Aut (Staff), Win (Staff), Spr (Kovscek, A; Horne, R), Sum (Staff)

GRADUATE COURSES IN ENERGY RESOURCES ENGINEERING

Primarily for graduate students; undergraduates may enroll with consent of instructor.

ENERGY 210. Energy Policy for Scientists and Engineers
Graduate level seminar that addresses energy policy issues through discussion, invited talks and visits/field trips to policy making organizations and industry leaders.

1 unit, Spr (Staff)

ENERGY 211. Computer Programming in C++ for Earth Scientists and Engineers
(Same as CME 211) Computer programming methodology emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and modularity. Fundamental data structures. Time and space complexity analysis. The basic facilities of the programming language C++. Numerical problems from various science and engineering applications.

3 units, Win (Caulfield, E; Aboud, S)

ENERGY 212. Introduction to Large-Scale Computing in Engineering
(Same as CME 212) Advanced programming methodologies for solving fundamental engineering problems using algorithms with pervasive application across disciplines. Overview of computer systems from a programming perspective including processor architectures, memory hierarchies, machine arithmetic, performance tuning techniques. Algorithms include iterative, direct linear solvers, fft, and divide and conquer strategies for n-body problems. Software development; other practical UNIX tools including shell scripting, vi/emacs, gcc, make, gdb, gprof, version control systems and LaTeX. Prerequisites: CME 200/ME 300A, CME 211, and CS 106X or equivalent level of programming in C/C++.

3 units, Spr (Caulfield, E)

ENERGY 221. Fundamentals of Multiphase Flow
(Same as ENERGY 121) Multiphase flow in porous media. Wettability, capillary pressure, imbibition and drainage, Leverett J-function, transition zone, vertical equilibrium. Relative permeabilities, Darcy's law for multiphase flow, fractional flow equation, effects of gravity, Buckley-Leverett theory, recovery predictions, volumetric linear scaling, JBN and Jones-Rozelle determination of relative permeability. Frontal advance equation, Buckley-Leverett equation as frontal advance solution, tracers in multiphase flow, adsorption, three-phase relative permeabilities.

3 units, Win (Tchelepi, H)

ENERGY 222. Advanced Reservoir Engineering
Lectures, problems. General flow equations, tensor permeabilities, steady state radial flow, skin, and succession of steady states. Injectivity during fill-up of a depleted reservoir, injectivity for liquid-filled reservoirs. Flow potential and gravity forces, coning. Displacements in layered reservoirs. Transient radial flow equation, primary drainage of a cylindrical reservoir, line source solution, pseudo-steady state. May be repeated for credit. Prerequisite: 221.

3 units, Spr (Durlofsky, L; Rousset, M)

ENERGY 223. Reservoir Simulation
Fundamentals of petroleum reservoir simulation. Equations for multicomponent, multiphase flow between gridblocks comprising a petroleum reservoir. Relationships between black-oil and compositional models. Techniques for developing black-oil, compositional, thermal, and dual-porosity models. Practical considerations in the use of simulators for predicting reservoir performance. Class project. Prerequisite: 221 and 246, or consent of instructor. Recommended: CME 206.

3-4 units, Win (Durlofsky, L; Tchelepi, H; Gerritsen, M)

ENERGY 224. Advanced Reservoir Simulation
Topics include modeling of complex wells, coupling of surface facilities, compositional modeling, dual porosity models, treatment of full tensor permeability and grid nonorthogonality, local grid refinement, higher order methods, streamline simulation, upscaling, algebraic multigrid solvers, unstructured grid solvers, history matching, other selected topics. Prerequisite: 223 or consent of instructor. May be repeated for credit.

3 units, Aut (Durlofsky, L; Tchelepi, H; Aziz, K)

ENERGY 225. Theory of Gas Injection Processes
Lectures, problems. Theory of multicomponent, multiphase flow in porous media. Miscible displacement: diffusion and dispersion, convection-dispersion equations and its solutions. Method of characteristic calculations of chromatographic transport of multicomponent mixtures. Development of miscibility and interaction of phase behavior with heterogeneity. May be repeated for credit. Prerequisite: CME 200.

3 units, alternate years, not given this year

ENERGY 226. Thermal Recovery Methods
Theory and practice of thermal recovery methods: steam drive, cyclic steam injections, and in situ combustion. Models of combined mass and energy transport. Estimates of heated reservoir volume and oil recovery performance. Wellbore heat losses, recovery production, and field examples.

3 units, alternate years, not given this year

ENERGY 227. Enhanced Oil Recovery
The physics, theories, and methods of evaluating chemical, miscible, and thermal enhanced oil recovery projects. Existing methods and screening techniques, and analytical and simulation based means of evaluating project effectiveness. Dispersion-convection-adsorption equations, coupled heat, and mass balances and phase behavior provide requisite building blocks for evaluation.

3 units, alternate years, not given this year

ENERGY 230. Advanced Topics in Well Logging
State of the art tools and analyses; the technology, rock physical basis, and applications of each measurement. Hands-on computer-based analyses illustrate instructional material. Guest speakers on formation evaluation topics. Prerequisites: 130 or equivalent; basic well logging; and standard practice and application of electric well logs.

3 units, Spr (Lindblom, R; Suman, A)

ENERGY 240. Geostatistics for Spatial Phenomena
(Same as GES 240) Probabilistic modeling of spatial and/or time dependent phenomena. Kriging and cokriging for gridding and spatial interpolation. Integration of heterogeneous sources of information. Multiple-point geostatistics and training image-based stochastic imaging of reservoir/field heterogeneities. Introduction to GSLIB and SGEMS software. Case studies from the oil and mining industry and environmental sciences. Prerequisites: introductory calculus and linear algebra, STATS 116, GES 161, or equivalent.

3-4 units, Spr (Staff)

ENERGY 241. Seismic Reservoir Characterization
(Same as GEOPHYS 241A, ENERGY 141) (Same as GP241) Practical methods for quantitative characterization and uncertainty assessment of subsurface reservoir models integrating well-log and seismic data. Multidisciplinary combination of rock-physics, seismic attributes, sedimentological information and spatial statistical modeling techniques. Student teams build reservoir models using limited well data and seismic attributes typically available in practice, comparing alternative approaches. Software provided (SGEMS, Petrel, Matlab). Recommended: ERE240/260, or GP222/223, or GP260/262 or GES253/257; ERE246, GP112

3-4 units, Spr (Mukerji, T; Jia, B)

ENERGY 242. Topics in Advanced Geostatistics
(Same as EESS 263) Conditional expectation theory and projections in Hilbert spaces; parametric versus non-parametric geostatistics; Boolean, Gaussian, fractal, indicator, and annealing approaches to stochastic imaging; multiple point statistics inference and reproduction; neural net geostatistics; Bayesian methods for data integration; techniques for upscaling hydrodynamic properties. May be repeated for credit. Prerequisites: 240, advanced calculus, C++/Fortran.

3-4 units, not given this year

ENERGY 246. Reservoir Characterization and Flow Modeling with Outcrop Data
(Same as GES 246, ENERGY 146) Project addressing a reservoir management problem by studying an outcrop analog, constructing geostatistical reservoir models, and performing flow simulation. How to use outcrop observations in quantitative geological modeling and flow simulation. Relationships between disciplines. Weekend field trip.

3 units, Aut (Graham, S; Tchelepi, H; Boucher, A; Stright, L; Kuralkhanov, D)

ENERGY 247. Stochastic Simulation
Characterization and inference of statistical properties of spatial random function models; how they average over volumes, expected fluctuations, and implementation issues. Models include point processes (Cox, Poisson), random sets (Boolean, truncated Gaussian), and mixture of Gaussian random functions. Prerequisite: 240.

3 units, not given this year

ENERGY 251. Thermodynamics of Equilibria
Lectures, problems. The volumetric behavior of fluids at high pressure. Equation of state representation of volumetric behavior. Thermodynamic functions and conditions of equilibrium, Gibbs and Helmholtz energy, chemical potential, fugacity. Phase diagrams for binary and multicomponent systems. Calculation of phase compositions from volumetric behavior for multicomponent mixtures. Experimental techniques for phase-equilibrium measurements. May be repeated for credit.

3 units, Aut (Kovscek, A)

ENERGY 252. Chemical Kinetics and Modeling
Fundamentals of chemical reaction kinetics in homogeneous and heterogeneous reaction systems from a molecular perspective. Development and application of the theory of chemical kinetics, including collision, transition state, and surface reactivity approaches. Relationships between thermodynamics and kinetics to overall mechanism predictions. Introduction to Gaussian 03. Lab involves chemical modeling including ab initio electronic structure calculations (Hartree-Fock, configuration interaction, coupled cluster, and many-body pertrubation theory) and thermodynamic predictions.

3 units, Spr (Wilcox, J; Sasmaz, E)

ENERGY 253. Carbon Capture and Sequestration
(Same as ENERGY 153) CO2 separation from syngas and flue gas for gasification and combustion processes. Transportation of CO2 in pipelines and sequestration in deep underground geological formations. Pipeline specifications, monitoring, safety engineering, and costs for long distance transport of CO2. Comparison of options for geological sequestration in oil and gas reservoirs, deep unmineable coal beds, and saline aquifers. Life cycle analysis.

3-4 units, Aut (Wilcox, J; Benson, S)

ENERGY 255. Master's Report on Energy Industry Training
On-the-job training for master's degree students under the guidance of on-site supervisors. Students submit a report detailing work activities, problems, assignments, and key results. May be repeated for credit. Prerequisite: consent of adviser.

1-3 units, Sum (Staff)

ENERGY 259. Presentation Skills
For teaching assistants in Energy Resources Engineering. Five two-hour sessions in the first half of the quarter. Awareness of different learning styles, grading philosophies, fair and efficient grading, text design; presentation and teaching skills, PowerPoint slide design; presentation practice in small groups. Taught in collaboration with the Center for Teaching and Learning.

1 unit, Spr (Gerritsen, M)

ENERGY 260. Modeling Uncertainty in the Earth Sciences
(Same as ENERGY 160) Whether Earth Science modeling is performed on a local, regional or global scale, for scientific or engineering purposes, uncertainty is inherently present due to lack of data and lack of understanding of the underlying phenomena. This course highlights the various issues, techniques and practical modeling tools available for modeling uncertainty of complex 3D/4D Earth systems. The course focuses on a practical breath rather than theoretical depth. Topics covered are: the process of building models, sources of uncertainty, probabilistic techniques, spatial data analysis and geostatistics, grid and scale, spatio-temporal uncertainty, visualizing uncertainty in large dimensions, Monte Carlo simulation, reducing uncertainty with data, value of information. Applications to both local (reservoir, aquifer) and global (climate) are covered through literature study. Extensive software use with SGEMS and Petrel. Project homework. Prerequisites: algebra (CME 104 or equivalent), introductory stat

3 units, Win (Caers, J; Honarkhah, M)

ENERGY 267. Engineering Valuation and Appraisal of Oil and Gas Wells, Facilities, and Properties
(Same as ENERGY 167) Appraisal of development and remedial work on oil and gas wells; appraisal of producing properties; estimation of productive capacity, reserves; operating costs, depletion, and depreciation; value of future profits, taxation, fair market value; original or guided research problems on economic topics with report. Prerequisite: consent of instructor.

3 units, Win (Kourt, W; Pande, K)

ENERGY 269. Geothermal Reservoir Engineering
Conceptual models of heat and mass flows within geothermal reservoirs. The fundamentals of fluid/heat flow in porous media; convective/conductive regimes, dispersion of solutes, reactions in porous media, stability of fluid interfaces, liquid and vapor flows. Interpretation of geochemical, geological, and well data to determine reservoir properties/characteristics. Geothermal plants and the integrated geothermal system.

3 units, not given this year

ENERGY 273. Special Topics in Petroleum Engineering

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 280. Oil and Gas Production Engineering
(Same as ENERGY 180) Design and analysis of production systems for oil and gas reservoirs. Topics: well completion, single-phase and multi-phase flow in wells and gathering systems, artificial lift and field processing, well stimulation, inflow performance. Prerequisite: 120. Recommended: 130.

3 units, not given this year

ENERGY 281. Applied Mathematics in Reservoir Engineering
The philosophy of the solution of engineering problems. Methods of solution of partial differential equations: Laplace transforms, Fourier transforms, wavelet transforms, Green¿s functions, and boundary element methods. Prerequisites: CME 204 or MATH 131, and consent of instructor.

3 units, alternate years, not given this year

ENERGY 284. Optimization: Deterministic and Stochastic Approaches
Deterministic and stochastic methods for optimization in earth sciences and engineering. Linear and nonlinear regression, classification and pattern recognition using neural networks, simulated annealing and genetic algorithms. Deterministic optimization using non-gradient-based methods (simplex) and gradient-based methods (conjugated gradient, steepest descent, Levenberg-Marquardt, Gauss-Newton), eigenvalue and singular value decomposition. Applications in petroleum engineering, geostatistics, and geophysics. Prerequisite: CME 200 or consent of instructor.

3 units, Aut (Caers, J)

ENERGY 285A. SUPRI-A Research Seminar: Enhanced Oil Recovery
Focused study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-A group. May be repeated for credit. Prerequisite: consent of instructor.

1 unit, Aut (Staff)

ENERGY 285B. SUPRI-B Research Seminar: Reservoir Simulation
Focused study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in SUPRI-B (reservoir simulation) program. May be repeated for credit. Prerequisite: consent of instructor.
1 unit, Aut (Staff), Win (Staff)

ENERGY 285C. SUPRI-C Research Seminar: Gas Injection Processes
Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-D well test analysis group. May be repeated for credit. Prerequisite: consent of instructor.
1 unit, Aut (Staff), Win (Staff)

ENERGY 285D. SUPRI-D Research Seminar: Well Test Analysis
Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-D well test analysis group. May be repeaqted for credit. Prerequisite: consent of instructor. (Horne)
1 unit, Aut (Staff), Win (Staff)

ENERGY 285F. SCRF Research Seminar: Geostatistics and Reservoir Forecasting
Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SCRF (Stanford Center for Reservoir Forecasting) program. Prerequisite: consent of instructor.
1 unit, Aut (Staff), Win (Staff)

ENERGY 285G. Geothermal Reservoir Engineering Research Seminar
Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the geothermal energy group. Presentation required for credit. Prerequisite: consent of instructor.
1 unit, Aut (Staff), Win (Staff)

ENERGY 285H. SUPRI-HW Research Seminar: Horizontal Well Technology
Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in SUPRI-HW (productivity and injectivity of horizontal wells) program. Prerequisite: consent of instructor.
1 unit, Aut (Staff), Win (Staff)

ENERGY 290. Numerical Modeling of Fluid Flow in Heterogeneous Porous Media
How to mathematically model and solve elliptic partial differential equations with variable and discontinuous coefficients describing flow in highly heterogeneous porous media. Topics include finite difference and finite volume approaches on structured grids, efficient solvers for the resulting system of equations, Krylov space methods, preconditioning, multi-grid solvers, grid adaptivity and adaptivity criteria, multiscale approaches, and effects of anistropy on solver efficiency and accuracy. MATLAB programming and application of commercial or public domain simulation packages. Prerequisite: CME 200, 201, and 202, or equivalents with consent of instructor.
3 units, not given this year

ENERGY 291. OPTIMIZATION OF ENERGY SYSTEMS
(Same as ENERGY 191) Introductory mathematical programming and optimization using examples from energy industries. Emphasis on problem formulation and solving, secondary coverage of algorithms. Problem topics include optimization of energy investment, production, and transportation; uncertain and intermittent energy resources; energy storage; efficient energy production and conversion. Methods include linear and nonlinear optimization, as well as multi-objective and goal programming. Tools include Microsoft Excel and AMPL mathematical programming language. Prerequisites: MATH 41, MATH 51, or consent of instructor. Programming experience helpful (e.g, CS 106A-B).
3 units, Win (Brandt, A; Ahn, S)

ENERGY 293A. Fundamentals of Energy Processes
(Same as EE 293A) For seniors and graduate students. Thermodynamics, heat engines, thermoelectics, biomass. Recommended: MATH 41, 43; PHYSICS 41, 43, 45
3-4 units, Aut (Brandt, A)

ENERGY 293B. Fundamentals of Energy Processes
(Same as EE 293B) For seniors and graduate students. Fuel cells. Production of hydrogen: electrolytic, chemical, thermolytic, photolytic. Hydrogen storage: hydrides. Photoelectric converters; photothermovoltaic converters. Wind turbines. Recommended: EE 293A; MATH 41; PHYSICS 41, 43, 45
3 units, Win (da Rosa, A)

ENERGY 301. The Energy Seminar
(Same as CEE 301) Interdisciplinary exploration of current energy challenges and opportunities, with talks by faculty, visitors, and students. May be repeated for credit.
1 unit, Aut (Benson, S), Win (Benson, S), Spr (Benson, S)

ENERGY 355. Doctoral Report on Energy Industry Training
On-the-job training for doctoral students under the guidance of on-site supervisors. Students submit a report on work activities, problems, assignments, and results. May be repeated for credit. Prerequisite: consent of adviser.
1-3 units, Sum (Staff)

ENERGY 359. Teaching Experience in Energy Resources Engineering
For TAs in Energy Resources Engineering. Course and lecture design and preparation; lecturing practice in small groups. Classroom teaching practice in an Energy Resources Engineering course for which the participant is the TA (may be in a later quarter). Taught in collaboration with the Center for Teaching and Learning.
1 unit, Spr (Gerritsen, M)

ENERGY 360. Advanced Research Work in Energy Resources Engineering
Graduate-level work in experimental, computational, or theoretical research. Special research not included in graduate degree program. May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 361. Master's Degree Research in Energy Resources Engineering
Experimental, computational, or theoretical research. Advanced technical report writing. Limited to 6 units total. (Staff)
1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 362. Engineer's Degree Research in Energy Resources Engineering
Graduate-level work in experimental, computational, or theoretical research for Engineer students. Advanced technical report writing. Limited to 15 units total, or 9 units total if 6 units of 361 were previously credited.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 363. Doctoral Degree Research in Energy Resources Engineering
Graduate-level work in experimental, computational, or theoretical research for Ph.D. students. Advanced technical report writing.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 365. Special Research Topics in Energy Resources Engineering
Graduate-level research work not related to report, thesis, or dissertation. May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 369. Practical Energy Studies
Students work on realistic industrial reservoir engineering problems. Focus is on optimization of production scenarios using secondary or tertiary recovery techniques. When possible, projects are conducted in direct collaboration with industry. May be repeated for credit.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENERGY 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGINEERING (ENGR) COURSES

UNDERGRADUATE COURSES IN ENGINEERING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ENGR 10. Introduction to Engineering Analysis
Integrated approach to the fundamental scientific principles that are the cornerstones of engineering analysis: conservation of mass, atomic species, charge, momentum, angular momentum, energy, production of entropy expressed in the form of balance equations on carefully defined systems, and incorporating simple physical models. Emphasis is on setting up analysis problems arising in engineering. Topics: simple analytical solutions, numerical solutions of linear algebraic equations, and laboratory experiences. Provides the foundation and tools for subsequent engineering courses. GER:DB-EngrAppSci
4 units, Win (Cappelli, M)

ENGR 14. Applied Mechanics: Statics
The mechanics of particles, rigid bodies, trusses, frames, and machines in static equilibrium emphasizing the use of free-body diagrams. Frictional effects and internal forces in structural members. Lab in Autumn; no lab in Spring. Prerequisite: PHYSICS 41 or consent of instructor. GER:DB-EngrAppSci
3 units, Aut (Sheppard, S), Spr (Kuhl, E)

ENGR 15. Dynamics
The application of Newton's Laws to solve static and dynamic problems, particle and rigid body dynamics, freebody diagrams, and writing equations of motion. 2-D and 3-D cases including gyroscopes, spacecraft, and rotating machinery. Solution of equations of motion and dynamic response of simple mechanical systems. Prerequisites: MATH 23 or 43, PHYSICS 41. GER:DB-EngrAppSci
3 units, Aut (Mitiguy, P), Spr (Lew, A)

ENGR 20. Introduction to Chemical Engineering
(Same as CHEMENG 20) Overview of chemical engineering through discussion and engineering analysis of physical and chemical processes. Topics: overall staged separations, material and energy balances, concepts of rate processes, energy and mass transport, and kinetics of chemical reactions. Applications of these concepts to areas of current technological importance: biotechnology, energy, production of chemicals, materials processing, and purification. Prerequisite: CHEM 31. GER:DB-EngrAppSci
3 units, Spr (Hwang, L; Khosla, C)

ENGR 25B. Biotechnology
(Same as CHEMENG 25B) Biology and chemistry fundamentals, genetic engineering, cell culture, protein production, pharmaceuticals, genomics, viruses, gene therapy, evolution, immunology, antibodies, vaccines, transgenic animals, cloning, stem cells, intellectual property, governmental regulations, and ethics. Prerequisites: CHEM 31 and MATH 41 or equivalent courage. GER:DB-EngrAppSci
3 units, Spr (Wang, C)

ENGR 25E. Energy: Chemical Transformations for Production, Storage, and Use
(Same as CHEMENG 25E) An introduction and overview to the challenges and opportunities of energy supply and consumption. Emphasis on energy technologies where chemistry and engineering play key roles. Review of energy fundamentals along with historical energy perspectives and current energy production technologies. In depth analysises of solar thermal systems, biofuels, photovoltaics and electrochemical devices (batteries and fuel cells). Prerequisites: high school chemistry or equivalent. GER:DB-EngrAppSci
3 units, Win (Robertson, C; Bent, S)

ENGR 30. Engineering Thermodynamics
Concepts of energy and entropy from elementary considerations of the microscopic nature of matter. Use of basic thermodynamic concepts in the solution of engineering problems. Methods and problems in socially responsible economic generation and utilization of energy in central power stations, solar systems, gas turbine engines, refrigeration devices, and automobile engines. Prerequisites: MATH 19, 20, 21, or 41, 42, and PHYSICS 45 (formerly 51) or equivalent high school physics. GER:DB-EngrAppSci
3 units, Aut (Zheng, X), Win (Mitchell, R)

ENGR 31. Chemical Principles with Application to Nanoscale Science and Technology
Preparation for engineering disciplines emphasizing modern technological applications of solid state chemistry. Topics include: crystallography; chemical kinetics and equilibria; thermodynamics of phase changes and reaction; quantum mechanics of chemical bonding, molecular orbital theory, and electronic band structure of crystals; and the materials science of basic electronic and photonic devices. Prerequisite: high school or college chemistry background in stoichiometry, periodicity, Lewis and VSEPR structures, dissolution/precipitation and acid/base reactions, gas laws, and phase behavior. GER:DB-NatSci
4 units, Aut (McIntyre, P)

ENGR 40. Introductory Electronics
Overview of electronic circuits and applications. Electrical quantities and their measurement, including operation of the oscilloscope. Basic models of electronic components including resistors, capacitors, inductors, and the operational amplifier. Frequency response of linear circuits, including basic filters, using phasor analysis. Digital logic fundamentals, logic gates, and basic combinatorial logic blocks. Lab assignments. Enrollment limited to 200. Lab. Prerequisite: PHYSICS 43. GER:DB-EngrAppSci
5 units, Aut (Lee, T), Spr (Howe, R)

ENGR 50. Introduction to Materials Science, Nanotechnology Emphasis
The structure, bonding, and atomic arrangements in materials leading to their properties and applications. Topics include electronic and mechanical behavior, emphasizing nanotechnology, solid state devices, and advanced structural and composite materials. GER:DB-EngrAppSci
4 units, Spr (Sinclair, R)

ENGR 50E. Introduction to Materials Science - Energy Emphasis
Materials structure, bonding and atomic arrangements leading to their properties and applications. Topics include electronic, thermal and mechanical behavior; emphasizing energy related materials and challenges.
4 units, Win (Melosh, N)

ENGR 50M. Introduction to Materials Science, Biomaterials Emphasis
Topics include: the relationship between atomic structure and macroscopic properties of man-made and natural materials; mechanical and thermodynamic behavior of surgical implants including alloys, ceramics, and polymers; and materials selection for biotechnology applications such as contact lenses, artificial joints, and cardiovascular stents. No prerequisite. GER:DB-EngrAppSci
4 units, Aut (Heilshorn, S)

ENGR 60. Engineering Economy
Fundamentals of economic analysis. Interest rates, present value, and internal rate of return. Applications to personal and corporate financial decisions. Mortgage evaluation, insurance decision, hedging/risk reduction, project selection, capital budgeting, and investment valuation. Decisions under uncertainty and utility theory. Prerequisite: MATH 41 or equivalent. Recommended: sophomore or higher class standing; knowledge of elementary probability. GER:DB-EngrAppSci
3 units, Aut (Chiu, S), Win (Weber, T)

ENGR 62. Introduction to Optimization
(Same as MS&E 111) Formulation and analysis of linear optimization problems. Solution using Excel solver. Polyhedral geometry and duality theory. Applications to contingent claims analysis, production scheduling, pattern recognition, two-player zero-sum games, and network flows. Prerequisite: MATH 51. GER:DB-EngrAppSci
4 units, Aut (Van Roy, B), Spr (Goel, A)

ENGR 70A. Programming Methodology
(Same as CS 106A) Introduction to the engineering of computer applications emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and testing. Uses the Java programming language. Emphasis is on

good programming style and the built-in facilities of the Java language. No prior programming experience required. GER:DB-EngrAppSci

3-5 units, Aut (Sahami, M), Win (Roberts, E), Spr (Cain, G), Sum (Staff)

ENGR 70B. Programming Abstractions

(Same as CS 106B) Abstraction and its relation to programming. Software engineering principles of data abstraction and modularity. Object-oriented programming, fundamental data structures (such as stacks, queues, sets) and data-directed design. Recursion and recursive data structures (linked lists, trees, graphs). Introduction to time and space complexity analysis. Uses the programming language C++ covering its basic facilities. Prerequisite: 106A or equivalent. GER:DB-EngrAppSci

3-5 units, Aut (Cain, G), Win (Roberts, E), Spr (Cain, G), Sum (Staff)

ENGR 70X. Programming Abstractions (Accelerated)

(Same as CS 106X) Intensive version of 106B for students with a strong programming background interested in a rigorous treatment of the topics at an accelerated pace. Additional advanced material and more challenging projects. Prerequisite: excellence in 106A or equivalent, or consent of instructor. GER:DB-EngrAppSci

3-5 units, Aut (Cain, G), Win (Cain, G)

ENGR 80. Introduction to Bioengineering

(Same as BIOE 80) Overview of biological engineering focused on engineering analysis and design of biological processes. Topics include overall material and energy balances, rates of biochemical reactions and processes, genetic programming of biological systems, links between information and function, and technologies to probe and manipulate biological systems. Applications of these concepts to areas of current technological importance, including biotechnology, biosynthesis, molecular/cellular therapeutics, and personalized medicine and gene therapy. GER:DB-EngrAppSci

4 units, Spr (Smolke, C)

ENGR 100. Teaching Public Speaking

The theory and practice of teaching public speaking and presentation development. Lectures/discussions on developing an instructional plan, using audiovisual equipment for instruction, devising tutoring techniques, and teaching delivery, organization, audience analysis, visual aids, and unique speaking situations. Weekly practice speaking. Students serve as apprentice speech tutors. Those completing course may become paid speech instructors in the Technical Communications Program. Prerequisite: consent of instructor.

5 units, Aut (Eisele, M), Win (Eisele, M), Spr (Eisele, M)

ENGR 102E. Technical/Professional Writing for Electrical Engineers

Required of Electrical Engineering majors. The process of writing technical/professional documents. Lectures, writing assignments, individual conferences. Prerequisies: freshman English. Corequisite for WIM: EE 108A.

1 unit, Aut (McDevitt, M), Win (McDevitt, M)

ENGR 102M. Technical/Professional Writing for Mechanical Engineers

Required of Mechanical Engineering majors. The process of writing technical/professional documents. Lecture, writing assignments, individual conferences. Corequisite for WIM: ME 203.

1 unit, Aut (Sullivan, E), Win (Sullivan, E)

ENGR 103. Public Speaking

Priority to Engineering students. Introduction to speaking activities, from impromptu talks to carefully rehearsed formal professional presentations. How to organize and write speeches, analyze audiences, create and use visual aids, combat nervousness, and deliver informative and persuasive speeches effectively. Weekly class practice, rehearsals in one-on-one tutorials, videotaped feedback. Limited enrollment.

3 units, Aut (Eisele, M), Win (Eisele, M), Spr (Eisele, M)

ENGR 105. Feedback Control Design

Design of linear feedback control systems for command-following error, stability, and dynamic response specifications. Root-locus and frequency response design techniques. Examples from a variety of fields. Some use of computer aided design with MATLAB. Prerequisite: EE 102, ME 161, or equivalent. GER:DB-EngrAppSci

3 units, Win (Gerdes, C), Sum (Emami-Naeini, A)

ENGR 110. Perspectives in Assistive Technology

(Same as ENGR 210) Seminar and student team project. Medical, social, psychological, and technical challenges surrounding the design, development, and use of assistive technologies to improve the lives of people with disabilities. Guest speakers include professionals, clinicians, and individuals with disabilities. 1 unit for seminar attendance only. 3 units for students who pursue a team-based assistive technology project. Projects can be continued in ME113 or CS194 or as independent study in Spring Quarter. See http://www.stanford.edu/class/engr110. Service Learning Course (certified by Haas Center).

1-3 units, Win (Jaffe, D; Nelson, D)

ENGR 115. Design the Tech Challenge

(Same as ENGR 215) Students work with Tech Museum of San Jose staff to design the Tech Challenge, a yearly engineering competition for 6-12th grade students. Brainstorming, field trips to the museum, prototyping, coaching, and presentations to the Tech Challenge advisory board. See at http://techchallenge.thetech.org. May be repeated for credit.

2 units, Win (Sheppard, S)

ENGR 120. Fundamentals of Petroleum Engineering

(Same as ENERGY 120) Lectures, problems, field trip. Engineering topics in petroleum recovery; origin, discovery, and development of oil and gas. Chemical, physical, and thermodynamic properties of oil and natural gas. Material balance equations and reserve estimates using volumetric calculations. Gas laws. Single phase and multiphase flow through porous media. GER:DB-EngrAppSci

3 units, Aut (Horne, R; Wilcox, J)

ENGR 130. Science, Technology, and Contemporary Society

(Same as STS 101, STS 201) Key social, cultural, and values issues raised by contemporary scientific and technological developments; distinctive features of science and engineering as socio-technical activities; major influences of scientific and technological developments on 20th-century society, including transformations and problems of work, leisure, human values, the fine arts, and international relations; ethical conflicts in scientific and engineering practice; and the social shaping and management of contemporary science and technology. GER:DB-SocSci

4-5 units, Aut (McGinn, R)

ENGR 131. Ethical Issues in Engineering

(Same as STS 115) Moral rights and responsibilities of engineers in relation to society, employers, colleagues, and clients; cost-benefit-risk analysis, safety, and informed consent; the ethics of whistle blowing; ethical conflicts of engineers as expert witnesses, consultants, and managers; ethical issues in engineering design, manufacturing, and operations; ethical issues arising from engineering work in foreign countries; and ethical implications of the social and environmental contexts of contemporary engineering. Case studies, guest practitioners, and field research. Limited enrollment. GER:DB-Hum

4 units, Spr (McGinn, R)

ENGR 140A. Leadership of Technology Ventures

First of three-part sequence for students selected to the Mayfield Fellows Program. Management and leadership within high technology startups, focusing on entrepreneurial skills related to product and market strategy, venture financing and cash flow management, team recruiting and organizational development, and the challenges of managing growth and handling adversity in emerging ventures. Other engineering faculty, founders, and venture capitalists participate as appropriate. Recommended: accounting or finance course (MS&E 140, ECON 90, or ENGR 60).

3-4 units, Spr (Byers, T)

ENGR 140B. Leadership of Technology Ventures

Open to Mayfield Fellows only; taken during the summer internship at a technology startup. Students exchange experiences and continue the formal learning process. Activities journal. Credit given following quarter.

1-2 units, Aut (Byers, T)

ENGR 140C. Leadership of Technology Ventures

Open to Mayfield Fellows only. Capstone to the 140 sequence. Students, faculty, employers, and venture capitalists share recent internship experiences and analytical frameworks. Students develop living case studies and integrative project reports.

2-3 units, Aut (Byers, T)

ENGR 145. Technology Entrepreneurship
How do you create a successful start-up? What is entrepreneurial leadership in a large firm? What are the differences between an idea and true opportunity? How does an entrepreneur form a team and gather the resources necessary to create a great enterprise? This class mixes mentor-guided team projects, in-depth case studies, research on the entrepreneurial process, and the opportunity to network and ask questions of Silicon Valley's top entrepreneurs and venture capitalists. For undergraduates of all majors who seek to understand the formation and growth of high-impact start-ups in areas such as information, green/clean, medical and consumer technologies. No prerequisites. Limited enrollment. GER:DB-SocSci

4 units, Aut (Byers, T), Win (Eesley, C), Sum (Kosnik, T)

ENGR 150. Social Innovation and Entrepreneurship
(Same as ENGR 250) (Graduate students register for 250.) The art of innovation and entrepreneurship for social benefit. Project team develops, tests, and iteratively improves technology-based social innovation and business plan to deploy it. Feedback and coaching from domain experts, product designers, and successful social entrepreneurs. Limited enrollment; application required. See http://sie.stanford.edu.

1-6 units, Aut (Behrman, W), Win (Behrman, W), Spr (Behrman, W)

ENGR 154. Vector Calculus for Engineers
(Same as CME 100) Computation and visualization using MATLAB. Differential vector calculus: analytic geometry in space, functions of several variables, partial derivatives, gradient, unconstrained maxima and minima, Lagrange multipliers. Integral vector calculus: multiple integrals in Cartesian, cylindrical, and spherical coordinates, line integrals, scalar potential, surface integrals, Green's, divergence, and Stokes' theorems. Examples and applications drawn from various engineering fields. Prerequisites: MATH 41 and 42, or 10 units AP credit. GER:DB-Math

5 units, Aut (Khayms, V)

ENGR 155A. Ordinary Differential Equations for Engineers
(Same as CME 102) Analytical and numerical methods for solving ordinary differential equations arising in engineering applications: Solution of initial and boundary value problems, series solutions, Laplace transforms, and non-linear equations; numerical methods for solving ordinary differential equations, accuracy of numerical methods, linear stability theory, finite differences. Introduction to MATLAB programming as a basic tool kit for computations. Problems from various engineering fields. Prerequisite: CME 100/ENGR 154 or MATH 51. GER:DB-Math

5 units, Win (Darve, E)

ENGR 155B. Linear Algebra and Partial Differential Equations for Engineers
(Same as CME 104) Linear algebra: matrix operations, systems of algebraic equations, Gaussian elimination, undertermined and overdetermined systems, coupled systems of ordinary differential equations, eigensystem analysis, normal modes. Fourier series with applications, partial differential equations arising in science and engineering, analytical solutions of partial differential equations. Numerical methods for solution of partial differential equations: iterative techniques, stability and convergence, time advancement, implicit methods, von Neumann stability analysis. Examples and applications from various engineering fields. Prerequisite: CME 102/ENGR 155A. GER:DB-Math

5 units, Spr (Khayms, V)

ENGR 155C. Introduction to Probability and Statistics for Engineers
(Same as CME 106) Probability: random variables, independence, and conditional probability; discrete and continuous distributions, moments, distributions of several random variables. Topics in mathematical statistics: random sampling, point estimation, confidence intervals, hypothesis testing, non-parametric tests, regression and correlation analyses; applications in engineering, industrial manufacturing, medicine, biology, and other fields. Prerequisite: CME 100/ENGR154 or MATH 51. GER:DB-Math

3-4 units, Win (Khayms, V), Sum (Khayms, V)

ENGR 159Q. Japanese Companies and Japanese Society
(Stanford Introductory Seminar) (Same as MATSCI 159Q) Preference to sophomores. The structure of a Japanese company from the point of view of Japanese society. Visiting researchers from Japanese companies give presentations on their research enterprise. The Japanese research ethic. The home campus equivalent of a Kyoto SCTI course. GER:DB-SocSci

3 units, Spr (Sinclair, R)

ENGR 192. Engineering Public Service Project
Volunteer work on a public service project with a technical engineering component. Project requires a faculty sponsor and a community partner such as a nonprofit organization, school, or individual. Required report. See http://soe.stanford.edu/publicservice. May be repeated for credit. Prerequisite: consent of instructor.

1-2 units, Aut (Staff), Spr (Staff), Sum (Sheppard, S)

ENGR 199. Special Studies in Engineering
Special studies, lab work, or reading under the direction of a faculty member. Often research experience opportunities exist in ongoing research projects. Students make arrangements with individual faculty and enroll in the section number corresponding to the particular faculty member. May be repeated for credit. Prerequisite: consent of instructor.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

ENGR 199W. Writing of Original Research for Engineers
Technical writing in science and engineering. Students produce a substantial document describing their research, methods, and results. Prerequisite: completion of freshman writing requirements; prior or concurrent in 2 units of research in the major department; and consent of instructor. WIM for BioMedical Computation.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN ENGINEERING

Primarily for graduate students; undergraduates may enroll with consent of instructor.

ENGR 202S. Writing: Special Projects
Writing tutorial for students working on non-course projects such as theses, journal articles, and conference papers. Weekly individual conferences.

1-3 units, Aut (Reichard, C), Win (Reichard, C), Spr (Reichard)

ENGR 202W. Technical Writing
How to write clear, concise, and well-ordered technical prose. Principles of editing for structure and style. Applications to a variety of genres in engineering and science.

3 units, Aut (Reichard, C), Win (Reichard, C), Spr (Reichard, C)

ENGR 204. Research Ethics for Engineers and Scientists
Ethical responsibilities of engineering and science researchers in relation to laboratory safety, data acquisition and management, experiment and product design, collaborative research, authorship and peer review, mentorship, human subjects research, funding applications and funded research, media accounts of research, and new and emerging technologies such as in nanotechnology and bioengineering. Responsibilities of researchers toward society at large, and Stanford and government policies regarding the conduct of engineering and science research. Lectures, discussion, guest researchers, and real case studies. Primarily for graduate students and postdoctoral researchers in engineering and science. Limited enrollment.

1-2 units, Spr (McGinn, R)

ENGR 205. Introduction to Control Design Techniques
Review of root-locus and frequency response techniques for control system analysis and synthesis. State-space techniques for modeling, full-state feedback regulator design, pole placement, and observer design. Combined observer and regulator design. Lab experiments on computers connected to mechanical systems. Prerequisites: 105, MATH 103, 113. Recommended: Matlab.

3 units, Aut (Rock, S)

ENGR 206. Control System Design
Design and construction of a control system and working plant. Topics include: linearity, actuator saturation, sensor placement, controller and model order; linearization by differential actuation and sensing; analog op-amp circuit implementation. Emphasis is on qualitative aspects of analysis and synthesis, generation of candidate design, and engineering tradeoffs in system selection. Large team-based project. Limited enrollment. Prerequisite: 105.

3-4 units, not given this year

ENGR 207A. Linear Control Systems I
Introduction to control of discrete-time linear systems. State-space models. Controllability and observability. The linear quadratic regulator. Prerequisite: 105 or 205.
3 units, not given this year

ENGR 207B. Linear Control Systems II
Probabilistic methods for control and estimation. Statistical inference for discrete and continuous random variables. Linear estimation with Gaussian noise. The Kalman filter. Prerequisite: EE 263.
3 units, Win (Lall, S)

ENGR 207C. Linear Control Systems III
Continuation of 207B. Introduction to stochastic control. Markov decision processes and stochastic dynamic programming. Separation of control and estimator design. Stochastic optimal control. Prerequisite: 207B.
3 units, Aut (Lall, S)

ENGR 209A. Analysis and Control of Nonlinear Systems
Introduction to nonlinear phenomena: multiple equilibria, limit cycles, bifurcations, complex dynamical behavior. Planar dynamical systems, analysis using phase plane techniques. Describing functions. Lyapunov stability theory. SISO feedback linearization, sliding mode control. Design examples. Prerequisite: 205.
3 units, Win (Rock, S)

ENGR 210. Perspectives in Assistive Technology
(Same as ENGR 110) Seminar and student team project. Medical, social, psychological, and technical challenges surrounding the design, development, and use of assistive technologies to improve the lives of people with disabilities. Guest speakers include professionals, clinicians, and individuals with disabilities. 1 unit for seminar attendance only. 3 units for students who pursue a team-based assistive technology project. Projects can be continued in ME113 or CS194 or as independent study in Spring Quarter. See http://www.stanford.edu/class/engr110. Service Learning Course (certified by Haas Center).
1-3 units, Win (Jaffe, D; Nelson, D)

ENGR 210A. Robust Control
Analysis and design techniques for multivariable feedback systems. Stability and robustness of feedback loops, passivity, and the small-gain theorem. Prerequisite: 207A or EE 263.
3 units, not given this year

ENGR 210B. Advanced Topics in Computation for Control
Recent developments in computational techniques for feedback control systems. The use of convex optimization to solve problems in control. Prerequisites: Background in convex optimization, such as EE 364, and background in control, such as ENGR 207B.
3 units, not given this year

ENGR 215. Design the Tech Challenge
(Same as ENGR 115) Students work with Tech Museum of San Jose staff to design the Tech Challenge, a yearly engineering competition for 6-12th grade students. Brainstorming, field trips to the museum, prototyping, coaching, and presentations to the Tech Challenge advisory board. See at http://techchallenge.thetech.org. May be repeated for credit.
2 units, Win (Sheppard, S)

ENGR 222. ADVANCED DYNAMICS
0-60 units

ENGR 231. Transformative Design
(Same as ANTHRO 332) Project-based. How interactive technologies can be designed to encourage behavioral transformation. Topics such as self-efficacy, social support, and mechanism of cultural change in domains such as weight-loss, energy conservation, or safe driving. Lab familiarizes students with hardware and software tools for interaction prototyping. Students teams create functional prototypes for self-selected problem domains. Prerequisite: consent of instructor.
3-5 units, not given this year

ENGR 240. Introduction to Micro and Nano Electromechanical Systems
Miniaturization technologies now have important roles in materials, mechanical, and biomedical engineering practice, in addition to being the foundation for information technology. This course will target an audience of first-year engineering graduate students and motivated senior-level undergraduates, with the goal of providing an introduction to M/NEMS fabrication techniques, selected device applications, and the design tradeoffs in developing systems. The course has no specific prerequisites, other than graduate or senior standing in engineering; otherwise, students will require permission of the instructors.
3 units, Aut (Howe, R), Spr (Pruitt, B)

ENGR 245. Technology Entrepreneurship and Lean Startups
Students teams apply emerging entrepreneurship principles including the popular lean startups and customer development frameworks to prototype, test, and iterate their products while discovering if they have a profitable business model. Proposal required during first week of the quarter. Proposals can be software, physical good, or service of any kind. Projects are treated as real startups.
3-4 units, Win (Blank, S; Miura-Ko, R)

ENGR 250. Social Innovation and Entrepreneurship
(Same as ENGR 150) (Graduate students register for 250.) The art of innovation and entrepreneurship for social benefit. Project team develops, tests, and iteratively improves technology-based social innovation and business plan to deploy it. Feedback and coaching from domain experts, product designers, and successful social entrepreneurs. Limited enrollment; application required. See http://sie.stanford.edu.
1-6 units, Aut (Behrman, W), Win (Behrman, W), Spr (Behrman, W)

ENGR 251. Work Seminar
Students participate in the Creating Research Examples Across the Teaching Enterprise (CREATE) writing program. Goal is for students to produce, through a peer reviewed process, 1,000 word statements describing their research in ways that are understandable and compelling to undergraduates and other novices in the field. Unit credit when the final approved statements appear on the CREATE web site.
1 unit, not given this year

ENGR 280. From Play to Innovation
Project-based and team-centered. Enhancing the innovation process with playfulness. The human state of play and its principal attributes and importance to creative thinking. Play behavior, and its development and biological basis. Students apply those principles through design thinking to promote innovation in the corporate world with real-world partners on design projects with widespread application.
2-4 units, Spr (Boyle, B; Brown, S; Thompson, S)

ENGR 281. Designing Media that Matters
Design practicum; project-based. The shift from a consumer culture to a creative society as old media institutions are collapsing while participatory media frameworks are emerging. Opportunity and responsibility for media designers to make this change positive. Frameworks of the new media landscape; applications to design media experiences that have a positive social impact. Topics include: roots of social media, game design, communication design, and digital design.
3 units, Spr (Doorley, S; Baggeroer, D)

ENGR 290. Graduate Environment of Support
For course assistants (CAs) and tutors in the School of Engineering tutorial and learning program. Interactive training for effective academic assistance. Pedagogy, developing course material, tutoring, and advising. Sources include video, readings, projects, and role playing.
1 unit, Aut (Osgood, B; Lozano, N)

ENGR 298. Seminar in Fluid Mechanics
Interdepartmental. Problems in all branches of fluid mechanics, with talks by visitors, faculty, and students. Graduate students may register for 1 unit, without letter grade; a letter grade is given for talks. May be repeated for credit.
1 unit, Aut (Lele, S), Win (Koseff, J), Spr (Alonso, J)

ENGR 299. Special Studies in Engineering
Special studies, lab work, or reading under the direction of a faculty member. Often research experience opportunities exist in ongoing research projects. Students make arrangements with individual faculty and enroll in the corresponding section. Prerequisite: consent of instructor.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGR 310B. Project-Based Engineering Design, Innovation, and Development
(Same as ME 310B) Three quarter sequence; for engineering graduate students intending to lead projects related to sustainability, automotive, biomedical devices, communication, and user interaction. Student teams collaborate with academic partners in Europe, Asia, and Latin America on product innovation challenges presented by global corporations to design requirements and construct functional prototypes for consumer testing and technical evaluation. Design loft format such as found in Silicon Valley consultancies. Typically requires international travel. Prerequisites: undergraduate engineering design project; consent of instructor.
4 units, not given this year

ENGR 311A. Women's Perspectives
Master's and Ph.D. seminar series driven by student interests. Possible topics: time management, career choices, health and family, diversity, professional development, and personal values. Guest speakers from academia and industry, student presentations with an emphasis on group discussion. Graduate students share experiences and examine scientific research in these areas. May be repeated for credit.
1 unit, Win (Sheppard, S)

ENGR 311B. Designing the Professional: Inventing Your Life
Continuation of ENGR 311A.
1 unit, Spr (Sheppard, S; Evans, D)

ENGR 312. Science and Engineering Course Design
(Same as CTL 312) For students interested in an academic career and who anticipate designing science courses at the undergraduate or graduate level. Goal is to apply research on science learning to the design of effective course materials. Topics include syllabus design, course content and format decisions, assessment planning and grading, and strategies for teaching improvement.
2-3 units, Win (Wright-Dunbar, R; Sheppard, S)

ENGR 313. Topics in Engineering Education
Master's and Ph.D. seminar series driven by student interests.Weekly group discussions of engineering education literature led by students.Possible topics include: fostering engagement, misconceptions, retention, theories on how people learn, and assessment, all in an engineering context.May be repeated for credit.
1 unit, Spr (Sheppard, S)

ENGR 341. Micro/Nano Systems Design and Fabrication
Laboratory course in micro and nano fabrication technology that combines lectures on theory and fundamentals with hands-on training in the Stanford Nanofabrication Facility. Prerequisite: ENGR 240 or equivalent.
3-5 units, not given this year

ENGR 342. MEMS Laboratory II
Emphasis is on implementation of fabricated N/MEMS-based solutions. Student teams collaborate to develop, fabricate and test N/MEMS solutions proposed in E341. Design alternatives fabricated and tested in SNF with emphasis on manufacturability, assembly, test, and design. Limited enrollment. Prerequisite: ENGR 341.
3-4 units, Aut (Pruitt, B)

ENGLISH (ENGLISH) COURSES

UNDERGRADUATE COURSES IN ENGLISH

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ENGLISH 14Q. Tis All in Pieces: John Donne and the Early Modern World
(Stanford Introductory Seminar) One of the most innovative and dramatic poets in literary history, John Donne¿s writing bears the marks of the profound changes that were occurring on the threshold of the modern world, in such areas as science, astronomy, religion, exploration, theatre, and art. Donne¿s dramatic realism exerted a shaping influence on such modern poets as Browning, Eliot, and Rich; on contemporary composers such as Bob Dylan, Van Morrison, and Benjamin Britten; and on Pulitzer Prize-winning playwright: Margaret Edson. Topics include Donne's work within the vibrant historical and cultural milieu of the early modern world and related developments in early modern art and theatre. GER:DB-Hum
2-3 units, Win (Brooks, H)

ENGLISH 19SI. Science Fiction for Writers
A survey of several genres of fantasy and science fiction (soft or social science fiction, cyberpunk, dystopian fiction, new wave, zombies, etc.) with an eye towards exploring techniques for imbuing stories thematic depth and complex imaginings. Students will compose their own story for end-of-quarter workshop. Readings (may) include: Jonathan Lethem, Philip K. Dick, Adam Johnson, Neil Gaiman, William Gibson, Tzvetan Todorov, film.
1-2 units, Aut (Greene, R)

ENGLISH 21. Masterpieces of American Literature
(Same as AMSTUD 121, ENGLISH 121) (English majors and others taking 5 units, register for 121.) A survey of some of the definitive texts of American writing, such as Leaves of Grass, Benito Cereno, Adventures of Huckleberry Finn, The Waste Land, The Sun Also Rises, The Golden Apples, and The Crying of Lot 49. GER:DB-Hum
3-5 units, Spr (Rampersad, A)

ENGLISH 22N. Virginia Woolf: Art and Politics
(Stanford Introductory Seminar) Introduction to Woolf's diverse oeuvres: her novels, essays, short stories, diaries, and letters focusing on how she devised an art form shaped by political consciousness but not subordinate to it. How, for Woolf, were art and politics, the private and the public, the artist and the activist conjoined. Navigation of the multiple intersections of Woolf's artistic experimentation and sociopolitical consciousness from 1917 to 1941. GER:DB-Hum
3 units, Aut (Staveley, A)

ENGLISH 43. Introduction to African American Literature
(Same as AFRICAAM 43, AMSTUD 143, ENGLISH 143) (English majors and others taking 5 units, register for 143.) African American literature from its earliest manifestations in the spirituals, trickster tales, and slave narratives to recent developments such as black feminist theory, postmodern fiction, and hip hop lyricism. The defining debates and phenomena within African American cultural history, including the status of realist aesthetics in black writing; the contested role of literature in black political struggle; the question of diaspora; the problem of intra-racial racism; and the emergence of black internationalism. Attention to the discourse of the Enlightenment, modernist aesthetics, and the role of Marxism in black political and literary history. GER:DB-Hum, EC-AmerCul
3-5 units, Aut (Rasberry, G)

ENGLISH 43A. American Indian Mythology, Legend, and Lore
(Same as NATIVEAM 143A, ENGLISH 143A) (English majors and others taking 5 units, register for 143A.)Readings from American Indian literatures, old and new. Stories, songs, and rituals from the 19th century, including the Navajo Night Chant. Tricksters and trickster stories; war, healing, and hunting songs; Aztec songs from the 16th century. Readings from modern poets and novelists including N. Scott Momaday, Louise Erdrich, and Leslie Marmon Silko, and the classic autobiography, Black Elk Speaks. GER:DB-Hum
3-5 units, Aut (Fields, K)

ENGLISH 47. Masterpieces of Contemporary Literature
(Same as ENGLISH 147) Examination of seven predominately twentieth-century novels juxtaposed to interrogate the contemporary moment. How do novelists understand the present by representing the past? How and why do novelists rewrite, reinvent, or renounce the plotlines of influential forebears? Narrative forms include Realism, Romance, Modernism, Postmodernism, Utopia/Dystopia. Topics include narrative voice, intertextuality, social satire, politics and war, time and memory, gender and race in novels by Charlotte Bronte, Jean Rhys, George Orwell, Margaret Atwood, Virginia Woolf, Michael Cunningham and Ian McEwan. Relevant clips from recent film adaptations. GER:DB-Hum
3-5 units, Aut (Staveley, A)

ENGLISH 62N. Eros in Modern American Poetry
(Stanford Introductory Seminar) Preference to freshmen. Anne Carson, treating love from Sappho to Socrates, shows how the Greeks derived their philosophy from the erotic poetic tradition.

Readings include: Carson's poetry which locates erotic desire in the larger context of the desire for knowledge; classic Japanese haiku masters such as Basho; and William Carlos Williams, Louise Bogan, and C.K. Williams. GER:DB-Hum

3 units, Spr (Fields, K)

ENGLISH 65N. Contemporary Women Fiction Writers

(Stanford Introductory Seminar) Preference to freshmen. Novels and story collections by women writers whose work explores: domestic and global politics; love, sexuality, and orientation; and spirituality and its meanings. Readings includes Dandicant, Eisenberg, Munro, Morrison, O'Brien, and Erdrich. GER:DB-Hum

3 units, Aut (Tallent, E)

ENGLISH 73N. Conflict and Resolution in the Novel

(Stanford Introductory Seminar) Preference to freshmen. The social work of the novel, its strategies for articulating difference, and its capacity to objectify points of view and posit resolutions to ideological disputes. The novel as an artistic device, part of material history, and style of social consciousness. Its relationship to language and cultural systems of representation. Readings from Franz Kafka, Milan Kundera, Toni Morrison, Umberto Eco, and John Coetzee. GER:DB-Hum

3 units, Aut (Shloss, C)

ENGLISH 74N. Race and Ethnicity in Contemporary American Fiction: Boundaries and Border Crossings

(Stanford Introductory Seminar) (Same as ASNAMST 74N) The question of place and locality in studies of identity and racial formation. Goal is to engage and examine texts with a critical eye both toward the social contexts represented and to the imaginative aesthetic techniques that American writers of color offer to bring their fictional worlds to life. Theme of border hopping and boundary crossing in works by authors including Charles Johnson, Toni Morrison, Alejandro Morales, Julie Otsuka, Stephen Graham Jones, and Lan Samantha Chang. GER:DB-Hum

3 units, Win (Sohn, S)

ENGLISH 77N. Living in the Past: Italy in the Anglo-American Imagination

(Stanford Introductory Seminar) Preference to freshmen. Italy as metaphor, in depictions by British and American writers from Shakespeare and Byron to D.H.Lawrence and Robert Hellenga. GER:DB-Hum

3 units, Win (Evans, M)

ENGLISH 81. Philosophy and Literature

(Same as CLASSGEN 81, COMPLIT 181, FRENGEN 181, ITALGEN 181, GERGEN 181) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum

4-5 units, Win (Anderson, L; Landy, J)

ENGLISH 81N. Lyric Voice

(Stanford Introductory Seminar) Preference to freshmen. Lyric poetry asks its reader to imagine a speaking voice. But whose voice inhabits the lyric poem? How have historical developments such as new printing technologies, the rise of liberal individualism, or the emergence of sound recording, influenced a sense of how a lyric should sound? Treatment of poems from a variety of historical periods while stressing the crucial role of the poetry of British Romanticism in shaping the modern sense of the lyric voice. GER:DB-Hum

3 units, Spr (Rovee, C)

ENGLISH 82Q. Shakespeare's Plays

(Stanford Introductory Seminar) Preference to sophomores. Eight representative plays; sonnets. Student papers provide topics for discussion. Students direct and perform scenes from the plays studied. GER:DB-Hum

5 units, Aut (Rebholz, R)

ENGLISH 90. Fiction Writing

The elements of fiction writing: narration, description, and dialogue. Students write complete stories and participate in story workshops. May be repeated for credit. Prerequisite: PWR 1 (waived in summer quarter).

5 units, Aut (Clark, H), Win (Clark, H), Spr (Kealey, T), Sum (Tanaka, S)

ENGLISH 91. Creative Nonfiction

(Formerly 94A.) Historical and contemporary as a broad genre including travel and nature writing, memoir, biography, journalism, and the personal essay. Students use creative means to express factual content.

5 units, Aut (Hummel, M), Win (Michas-Martin, S), Spr (Antopol-Johnson, M)

ENGLISH 92. Reading and Writing Poetry

Prerequisite: PWR 1. Issues of poetic craft. How elements of form, music, structure, and content work together to create meaning and experience in a poem. May be repeated for credit.

5 units, Aut (Evans, J), Win (Evans, J), Spr (Michas-Martin, S)

ENGLISH 94. Writing Across Genres

For minors in creative writing. The forms and conventions of the contemporary short story and poem. How form, technique, and content combine to make stories and poems organic. Prerequisite: 90, 91, or 92.

5 units, Win (Ekiss, K), Spr (Ekiss, K)

ENGLISH 100A. Literary History I

First in a three quarter sequence. Team-taught, and ranging in subject matter across almost a millennium from the age of parchment to the age of Facebook, this required sequence of classes is the department's account of the major historical arc traced so far by literature in English. It maps changes and innovations as well as continuities, ideas, and aesthetic forms, providing a grid of knowledge and contexts for other, more specialized classes. GER:DB-Hum

5 units, Aut (Greene, R; Summit, J)

ENGLISH 100B. Literary History II

Second in a three quarter sequence. Team-taught, and ranging in subject matter across almost a millennium from the age of parchment to the age of Facebook, this required sequence of classes is the department's account of the major historical arc traced so far by literature in English. It maps changes and innovations as well as continuities, ideas as well as aesthetic forms, providing a grid of knowledge and contexts for other, more specialized classes. GER:DB-Hum

5 units, Win (Gigante, D; Hoxby, B; Richardson, J)

ENGLISH 100C. Literary History III

Third in a three quarter sequence. Team-taught, and ranging in subject matter across almost a millennium from the age of parchment to the age of Facebook, this required sequence of classes is the department's account of the major historical arc traced so far by literature in English. It maps changes and innovations as well as continuities, ideas as well as aesthetic forms, providing a grid of knowledge and contexts for other, more specialized classes. GER:DB-Hum

5 units, Spr (Heise, U; Jenkins, N; Moretti, F)

ENGLISH 103Q. Reading and Writing Poetry about Science

(Stanford Introductory Seminar) (Same as STS 103Q) Preference to sophomores. Recent poetry inspired by the phenomena and history of the sciences in order to write such poems themselves. These poems bring sensuous human experience to bear on biology, ecology, neuroscience, physics, astronomy, and geology, as well as on technological advances and missteps. Poets such as Mark Doty, Jody Gladding, Albert Goldbarth, Jorie Graham, Sarah Lindsay, Adrienne Rich, W.S. Merwin, and C. K. Williams. Grounding in poetics, research in individually chosen areas of science, weekly analytical and creative writing. Enrollment limited to 12.

4 units, Win (Roberts, E; Rusk, L)

ENGLISH 105H. Medievalism

The medievalism of 19th-century British writers, their adoption of medieval subjects and themes, within the context of medieval literature. Leading questions cluster around three topics: romance, nation, and space. Readings include Marie de France's Lais, Sir Gawain and the Green Knight, Malory's Morte D'Arthure, Chaucer's House of Fame, Spenser's Faerie Queene, Scott's Ivanhoe, poems by Morris, R. Browning, D. G. Rossetti, and Hopkins, criti-

cism by Arnold and Ruskin, and selections from Tennyson's Idylls of the Kings. GER:DB-Hum

5 units, Aut (Karnes, M; Jarvis, C)

ENGLISH 111. Age of Chaucer

Survey of late-medieval English literature. Major authors include Chaucer, Langland, Margery Kempe, and the Pearl-poet. Genres include dream vision, romance, and lyric. Issues include the politics of writing in Middle English, the Christianization of Arthurian romance, and the construction of social class. GER:DB-Hum

5 units, Win (Karnes, M)

ENGLISH 112. Literature and ....

A study of the relationship between literary texts ranging from Boccaccio's Decameron and Montaigne's Essays to T.S.Eliot's Murder in the Cathedral and such issues as morality, politics, religion, and nationality. GER:DB-Hum

5 units, Win (Evans, M)

ENGLISH 114B. Renaissance Poetry and Drama

Major playwrights who were also major poets; the relation both between the drama and the non-dramatic poetry, and between text and performance, manuscript, and publication. Both stage history and the history of the texts. Plays include Doctor Faustus, the three texts of Hamlet and the two of Troilus and Cressida, and Volpone and The Alchemist. Poetry includes Venus and Adonis and Lucrece, the Shakespeare sonnets, poems of Jonson's, and Marlowe's Hero and Leander. GER:DB-Hum

5 units, Aut (Orgel, S)

ENGLISH 115A. Shakespeare and Modern Critical Developments

Approaches include gender studies and feminism, race studies, Shakespeare's geographies in relation to the field of cultural geography, and the importance of religion in the period. GER:DB-Hum

5 units, Spr (Parker, P)

ENGLISH 116A. The Poetry of John Milton

Milton did not just write Paradise Lost. Living through one of England's most turbulent periods, which saw him defending the right of free speech, liberty of conscience, divorce, and even regicide, Milton wrote examples of almost every genre (sacred hymn, masque, pastoral elegy, epic, brief epic, and tragedy), often blending the biblical and the classical. Readings include the major poems and selected prose, paying close attention to literary form and historical context. GER:DB-Hum

5 units, Spr (Hoxby, B)

ENGLISH 121. Masterpieces of American Literature

(Same as AMSTUD 121, ENGLISH 21) (English majors and others taking 5 units, register for 121.) A survey of some of the definitive texts of American writing, such as Leaves of Grass, Benito Cereno, Adventures of Huckleberry Finn, The Waste Land, The Sun Also Rises, The Golden Apples, and The Crying of Lot 49. GER:DB-Hum

3-5 units, Spr (Rampersad, A)

ENGLISH 122A. Austen and Woolf

Reading of three novels by Jane Austen, arguably the most influential and gifted of British female novelists,and three novels by Virginia Woolf, whose debt to Austen was immense. Topics include the relationship between women writers and the evolution of the English novel; the predominance of the marriage plot in Austen's fiction, and the various transformations Woolf works on it; and each novelist's relationship to the cultural and social milieu in which she wrote. GER:DB-Hum

5 units, not given this year

ENGLISH 123. American Literature and Culture to 1855

(Same as AMSTUD 150) Sources include histories, poetry, autobiography, captivity and slave narratives, drama, and fiction. Authors include Mather, Bradstreet, Rowlandson, Franklin, Brockden Brown, Emerson, Douglass, Hawthorne, and Melville. GER:DB-Hum, EC-AmerCul

5 units, Spr (Richardson, J)

ENGLISH 123D. American Literature, 1855 to World War I

(Same as AMSTUD 123D) A survey of American writers from Whitman to T.S. Eliot, including Emily Dickinson, Mark Twain, Stephen Crane, Frank Norris, Kate Chopin, Theodore Dreiser, and Henry James. Topics include the tension between romance and realism, the impact of naturalism and modernism, as well as race, gender, and the literary evolution of the American language. GER:DB-Hum

5 units, Aut (Rampersad, A)

ENGLISH 126B. The Major Victorian Novel

The Victorian novel was a hugely influential cultural form, not unlike serial television dramas or role playing video games today. Examination of key Victorian novels with an eye to contextualizing themes, categorizing technical achievements and tracing each novel's position in the development of this major literary form. GER:DB-Hum

5 units, Win (Jarvis, C)

ENGLISH 126D. Victorian Sex

How can we make sense of a culture of extraordinary sexual repression that nevertheless seemed fully preoccupied with sex? Examination of the depictions of sex in Victorian literary and cultural texts. Authors include: Collins, Braddon, the Brownings, Swinburne, Stoker and Wilde. GER:DB-Hum

5 units, Win (Jarvis, C)

ENGLISH 131. Representations of Women in 18th-Century British Literature

Literary incarnations of the 18th-century woman: virgin, harlot, matron, monster, feminist. Topics include representations of women in the 18th- century satiric tradition, in the poetry of Pope and Swift, and visual works such as Hogarth's Harlot's Progress and Marriage à la Mode. Emphasis on fictional representations, and the complex revolutionary heroines of Richardson, Cleland, Burney, and Wollstonecraft. GER:DB-Hum

5 units, Spr (Castle, T)

ENGLISH 134. The Marriage Plot

The marriage plot in British fiction. Novels include Pamela, Pride and Prejudice, Middlemarch, Jude the Obscure and Mrs. Dalloway. GER:DB-Hum

5 units, Aut (Jarvis, C)

ENGLISH 136D. Wordsworth and Hopkins

Comparative survey of the works of William Wordsworth and Gerard Manley Hopkins, who helped shape modern poetry. Emphasis on their innovative approaches to poetics, distinctive but profound spiritualism, idiosyncratic conceptions of masculinity, and pioneering writing about the natural environment. GER:DB-Hum

5 units, Aut (Rovee, C)

ENGLISH 140A. Creative Resistance and the Holocaust

(Same as JEWISHST 150A) Creative resistance, a little-known phenomenon and a new term, emerges during times of devastation. Under the Nazis, it took form in graffiti, diaries, chronicles, poems, paintings, photos, and music. How did a human spirit of creativity arise from such duress, and to what end? Why would acts of imagination, incapable of stopping destruction, count as resistance? Guests include a string quartet playing music by a prisoner; and a guest speaker who was a survivor of seven camps. Works include Goya's counter-Napoleon etchings, poems from WW I and Iraq, and contemporary examples. GER:DB-Hum

5 units, Win (Felstiner, J; Felstiner, M)

ENGLISH 141A. British Literary Culture, 1900-1922

The first two decades of the twentieth century were a period of unparalleled social, political, and cultural change in Britain, beginning in the last year of Queen Victoria's reign, through the Great War of 1914-18, and ending in 1922, the year when The Waste Land and Ulysses were published. How did writers and readers get from the Victorian novel to the modernist one, from metered verse to experiments in free verse? Themes include: violence and resistance (aesthetic and actual); the inner life and outer life; shifting relations between classes, genders, and generations; and the relationship between literary form and historical process. GER:DB-Hum

5 units, Spr (Sullivan, H)

ENGLISH 143. Introduction to African American Literature

(Same as AFRICAAM 43, AMSTUD 143, ENGLISH 43) (English majors and others taking 5 units, register for 143.) African Ameri-

can literature from its earliest manifestations in the spirituals, trickster tales, and slave narratives to recent developments such as black feminist theory, postmodern fiction, and hip hop lyricism. The defining debates and phenomena within African American cultural history, including the status of realist aesthetics in black writing; the contested role of literature in black political struggle; the question of diaspora; the problem of intra-racial racism; and the emergence of black internationalism. Attention to the discourse of the Enlightenment, modernist aesthetics, and the role of Marxism in black political and literary history. GER:DB-Hum, EC-AmerCul

3-5 units, Aut (Rasberry, G)

ENGLISH 143A. American Indian Mythology, Legend, and Lore

(Same as NATIVEAM 143A, ENGLISH 43A) (English majors and others taking 5 units, register for 143A.)Readings from American Indian literatures, old and new. Stories, songs, and rituals from the 19th century, including the Navajo Night Chant. Tricksters and trickster stories; war, healing, and hunting songs; Aztec songs from the 16th century. Readings from modern poets and novelists including N. Scott Momaday, Louise Erdrich, and Leslie Marmon Silko, and the classic autobiography, Black Elk Speaks. GER:DB-Hum

3-5 units, Aut (Fields, K)

ENGLISH 144. British Modernism, 1890-1950

The history and theory of modernism, with particular focus on literature written in Britain from 1890 to 1950. Major authors include James, Conrad, Yeats, Joyce, Woolf, Eliot, Pound, and Beckett. Why was it necessary to ""make it new""? What were the ambitions, strategies, and limitations of modernism as a project? GER:DB-Hum

5 units, Spr (Sullivan, H)

ENGLISH 144B. Contemporary British Fiction

How do British novelists chart the dramatic changes in culture, class, gender and race relations, economy, and nation that followed the end of the Second World War? Particular focus on writers who came of age during this period and the generation who succeeded them, including some of today¿s most internationally acclaimed authors. What political, cultural, and historical concerns shape the narrative poetics of works by Margaret Drabble, Martin Amis, AS Byatt, Julian Barnes, Kazuo Ishiguro, Salman Rushdie, Zadie Smith, and Ian McEwan. GER:DB-Hum

5 units, Spr (Staveley, A)

ENGLISH 146. Development of the Short Story: Continuity and Innovation

The dual concepts of continuity and innovation. The illumination of love, death, desire, violence, and empathy. Texts include Maupassant, Babel, Chopin, D.H. Lawrence, Woolf, and Flannery O'Connor. Required for Creative Writing emphasis. GER:DB-Hum

5 units, Spr (Tallent, E)

ENGLISH 147. Masterpieces of Contemporary Literature

(Same as ENGLISH 47) Examination of seven predominately 20th-century novels juxtaposed to interrogate the contemporary moment. How do novelists understand the present by representing the past? How and why do novelists rewrite, reinvent, or renounce the plotlines of influential forebears? Narrative forms include realism, romance, modernism, postmodernism, utopia/dystopia. Topics include narrative voice, intertextuality, social satire, politics and war, time and memory, gender and race in novels by Charlotte Bronte, Jean Rhys, George Orwell, Margaret Atwood, Virginia Woolf, Michael Cunningham and Ian McEwan. Relevant clips from recent film adaptations. GER:DB-Hum

3-5 units, Aut (Staveley, A)

ENGLISH 150. Modern Poetry and the Visual Arts

The relationship between photography, painting, and sculpture, and poetry in the 20th century. GER:DB-Hum

5 units, Win (Di Piero, S)

ENGLISH 151A. T. S. Eliot and 20th Century Poetry

Introduction to the full range of Eliot's work in poetry, prose, and drama. The formal properties of Eliot's writing including his metrics, syntax, use of allusion, and wit, alongside its recurring preoccupation with history, landscape, death, and redemption. How and why did he become the most influential poet-critic of the 20th century? GER:DB-Hum

5 units, Aut (Sullivan, H)

ENGLISH 151B. John Berryman's Dream Songs and His Archive

When John Berryman published the first volume of this Dream Songs in 1964, readers were baffled and intrigued by this stylistically radical work. Even his friend Robert Lowell was angered by the difficulty of this powerful, eccentric book, which won the Pulitzer Prize that year. Readings include The Dream Songs and works of some of the writers that formed Berryman's archive: Shakespeare, Freud, Hopkins, Yeats, Rilke, Frost, Hemingway, Williams, Lowell, Plath. GER:DB-Hum

5 units, Spr (Fields, K)

ENGLISH 152A. Mutually Assured Destruction: American Culture and the Cold War

(Same as AMSTUD 152A) The temperature of the early Cold War years via readings of Soviet and U.S. propaganda; documentary film and film noir; fiction by Bellow, Ellison, O'Connor, and Mailer; social theory by Arendt, the New York Intellectuals, and the Frankfurt School; and political texts such as Kennan's Sources of Soviet Conduct, the Truman Doctrine speech, and the National Security Council Report 68. Major themes include the discourse of totalitarianism, MacCarthyism, strategies of containment, the nuclear threat, the figure of the outsider and the counterculture, and the cultural shift from sociological to psychological idioms. GER:DB-Hum

5 units, Aut (Rasberry, G)

ENGLISH 152G. Global Harlem Renaissance

(Same as AFRICAAM 152G, AMSTUD 152G) The explosion of African American artistic expression during 20s and 30s New York known as the Harlem Renaissance. Amiri Baraka once referred to the Renaissance as a kind of vicious modernism, as a BangClash, that impacted and was impacted by political, cultural, and aesthetic changes in the U.S., Europe, the Caribbean, and Latin America. Focus is on the literature, graphic arts, and the music of the era in this global context. GER:DB-Hum, EC-AmerCul

5 units, Aut (Elam, M)

ENGLISH 153F. The Moment in Modernism

Examines modernist obsession with time (looking at texts by Bergson, Benjamin, Ricoeur, Doane, and Mulvey) and emergence of moments of epiphany and revelation as pressing category in modernist texts (by Joyce, Woolf, Proust, Rilke, Wittgenstein) and their precursors (Wordsworth, Kant) and attends to the relationship among cinematic, photographic and literary representations of the moment and its role in the ethical and aesthetic projects of modernism. GER:DB-Hum

5 units, Spr (Zumhagen-Yekple, K)

ENGLISH 154B. Everything but Modernism: Low to Middling Genres

Since the era of modernism (circa 1890-1945), scholars have learned to distinguish between high literature (difficult, serious, advanced) and low, popular, or even bourgeois literature. Some have tended to think only the Joyce's, Woolf's, and Eliot's worthy of study. But what about that great discarded mass of other kinds of writing? Survey of works from the early 1900s in the modes scorned by the modernists, exploring the ancestry of the ever-popular but still-stigmatized realm of genre fiction. Genres include: mystery, dialect poetry, early scifi, melodrama, sentimental lyric, the arrière-garde realist novel. Knowledge of modernism not required. GER:DB-Hum

5 units, Aut (Goldstone, A)

ENGLISH 154C. Modern British Poetry

Poets include Thomas Hardy, G. M. Hopkins, Thom Gunn, and W. S. Graham. GER:DB-Hum

5 units, Win (Di Piero, S)

ENGLISH 154E. Twentieth-Century Irish Literature

Plays, poems, short stories, and novels. Writers include James Joyce, William Yeats, Mary Lavin, Kate O'Brien,William Trevor, Seamus Heaney, and Samuel Beckett. How the writer can sustain imaginative freedom and literary experiment in the face of a turbulent history. GER:DB-Hum

5 units, Win (Boland, E)

ENGLISH 156A. The Poetry of Wallace Stevens

One of the most challenging 20th-century poets, Wallace Stevens, from his early, playful lyrics to his monumental meditative sequences of the 40s and 50s. Topics include: modernism 1910-1955, abstraction, literary politics in the 30s, poetry and war, the

late-Romantic lyric, philosophical poetry, the sequence form, poetic sound, humor, late style, concluding with a survey of Stevens's influence on later poets. GER:DB-Hum

5 units, Win (Goldstone, A)

ENGLISH 160. Poetry and Poetics

Introduction to the reading of poetry, with emphasis on how the sense of poems is shaped through diction, imagery, and technical elements of verse. GER:DB-Hum, WIM

5 units, Aut (Greene, R), Win (Jenkins, N), Spr (Rovee, C)

ENGLISH 161. Narrative and Narrative Theory

An introduction to stories and storytelling--that is, to narrative. What is narrative? When is narrative fictional and when nonfictional? How is it done, word by word, sentence by sentence? Must it be in prose? Can it be in pictures? How has storytelling changed over time? Focus on various forms, genres, structures, and characteristics of narrative. GER:DB-Hum

5 units, Aut (Sohn, S), Win (Bender, J), Spr (Moya, P)

ENGLISH 162. Critical Methods

Introduction to the different intellectual models which help us explain and interpret literary texts, genres, and movements.

5 units, Aut (Sullivan, H), Win (Majumdar, S), Spr (Evans, M)

ENGLISH 163. Shakespeare

GER:DB-Hum

5 units, Win (Orgel, S)

ENGLISH 170H. Textual Selves

A survey of the way in which human identity has been constructed in a variety of different literary texts ranging from Augustine's Confessions and Dante's Divine Comedy to Thomas Hardy's Mayor of Casterbridge and Graham Greene's The Quiet American. GER:DB-Hum

5 units, Spr (Evans, M)

ENGLISH 172. Modern Indian Literature

Engagement with the various vernacular and Anglophone literary traditions of modern India. What is gained, and what is lost for the large and complex phenomenon of modern Indian literature, when its most visible representative, Anglophone fiction, threatens to overshadow the rest and sits easy with the new image of rise and growth that engulfs the nation and its diaspora today? Texts by Dutt, Chatterjee, Tagore, Devi, Premchand, Verma, Sobti, Manto, Murthy, Ambai, Narayan, Rao, Ezekiel, Lal, Ghosh, Rushdie, and others. GER:DB-Hum

5 units, Spr (Majumdar, S)

ENGLISH 172D. Introduction to Comparative Studies in Race and Ethnicity

(Same as CSRE 196C, PSYCH 155, SOC 146) How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. GER:DB-SocSci, EC-AmerCul

5 units, Win (Markus, H; Moya, P)

ENGLISH 172E. The Literature of the Americas

(Same as COMPLIT 142) The intellectual and aesthetic problems of inter-American literature conceived as an entirety. Emphasis is on continuities and crises relevant to N., Central, and S. American literatures. Issues such as the encounters between world views, the emergence of creole and racially mixed populations, slavery, the New World voice, myths of America as paradise or utopia, the coming of modernism, 20th-century avant gardes, and distinctive modern episodes such as the Harlem Renaissance, the Beats, magical realism, and Noigandres in comparative perspective. GER:DB-Hum, EC-AmerCul

5 units, Spr (Greene, R; Saldivar, R)

ENGLISH 174H. The Triumph of the Normal: The English Novel from Bunyan to Orwell

Unlike French, Russian, North and Latin American novels, with their often oppositional or marginal heroes, the English novel has given a central role to the figure of the normal hero/ine, viewed as both normative and common. Focus is on uncovering the social logic behind this choice, and following the parallel evolution of novelistic style towards normal language. GER:DB-Hum

5 units, Win (Moretti, F)

ENGLISH 180. The Bible as Literature

English literature abounds with references to the Bible that register not only the cultural and religious significance of the text but also its power and beauty as literature. Focus on its literary qualities, reading selections from the Hebrew Bible and the New Testament. Study of the text's form, style, structure, and themes, as well as the historical circumstances of the text's composition. No prior knowledge of the Bible is necessary. GER:DB-Hum

5 units, Aut (Karnes, M)

ENGLISH 183C. Feminism and American Literature

(Same as AMSTUD 183C, JEWISHST 153C) How writers have endeavored to enlarge the canvas on which women can paint their lives. Fiction, journalism, and poetry engaging how women come to understand who they might become; women's role in the home and outside the home; motherhood, marriage, work; etc. Writing by Euro-American, African-American, Asian-American and Latino writers. Particular focus on feminists' use of humor to undercut demeaning assumptions, stereotypes and texts. Readings will include feminist parodies of advice manuals, cookbooks, literary criticism and fairy tales. GER:DB-Hum, EC-Gender

5 units, Spr (Fishkin, S)

ENGLISH 183E. First Person: Autobiography and Memoir

Study of classic literary autobiographies and memoirs, including Gertrude Stein's Autobiography Of Alice B. Toklas; Ernest Hemingway's A Moveable Feast; and J.R. Ackerley's My Father And Myself, plus various more recent autobiographical experiments---e.g., graphic memoirs (Art Spiegelman's Maus and Alison Bechdel's Fun Home) as well as certain recent autobiographical films such as Capturing The Friedmans. GER:DB-Hum

5 units, not given this year

ENGLISH 184B. Text and Context in Humanities: Oedipus and His Vicissitudes

(Same as HUMNTIES 100) Tales of Modernity from Sophocles, Freud, Chekhov, Babel, and Woolf. Introduction to cross-disciplinary approach in humanities through foundational texts in the modern tradition. The main focus is on Sigmund Freud's Totem and Taboo (1913), alongside his ancillary writings. Contemporary social thought and historical scholarship provide the context (Georg Simmel, Norbert Elias, Karl Schorske, John Murray Cuddihy) while works of imaginative literature (Sophocles, Anton Chekhov, Isaac Babel, and Virginia Woolf) illuminate the significance of the Oedipus myth for understanding the inter-generational conflict in antiquity and modernity. GER:DB-Hum

3 units, not given this year

ENGLISH 185. Sex, Sacrifice, and Civilization: Baroque Opera and Tragedy

The revival of ancient tragedy in the Baroque opera house. The central mysteries of tragedy: knowledge of suffering, necessity of sacrifice, pleasure of pathos. How tragic drama and opera used poetry, dance, and music to sway the passions and prompt reflection. Greek myths of Medea, Iphigenia, Alceste, Idomeneo. Plays by Euripides and Racine; operas by Mozart, Gluck, and Charpentier. GER:DB-Hum

4-5 units, not given this year

ENGLISH 185A. The Trauma Narrative

It's expected that literary characters grow and change. It's accepted that characters value insight and discovery and are willing to face conflict, overcome obstacles and make meaningful choices on their paths toward satisfying deeply held desires. But what of characters whose stories are of loss, dislocation and marginalization? What shapes and structures are organic to painful stories? By combining a critical and creative approach, this seminar will examine essays, short stories and novels to reveal how trauma narratives make special use of architecture, temporality and narrative strategy to produce forms that challenge traditional conventions and reader's expectations.

5 units, Win (Johnson, A)

ENGLISH 185B. Mammy-Made Right Here at Home: Twain, Hemingway, Faulkner, Ellison

Examination of four novels, Twain's Huckleberry Finn, Hemingway's The Sun Also Rises, Faulkner's Absalom, Absalom and Ellison's Invisible Man, each centrally motivated by the complex and ongoing literary project of describing and creating the concept of Americanness. Each of the four authors uses the novel genre to explore complex configurations of culture, race and class through distinct (and distinctive) masculinist narrative modes that ventriloquize the fantasies and realities of the American Hero they speak into being. Careful readings of these four rich and difficult texts

alongside significant critical responses and with an emphasis on historical context. GER:DB-Hum

5 units, Spr (Heard, D; Zumhagen-Yekple, K)

ENGLISH 185J. Creative Non-Fiction: A Form for Our Times

In the early decades of the novel, relatively few questioned what the form was and how it came into fashion. Examination of creative non-fiction, a genre that has appeared, Athena-like, armed with verisimilitude, emotional truth and narrative drive. Readings across the genre, a survey of its influences and an attempt at definition. Topics include personal and critical writing in the hopes that students will better appreciate this mode of discourse not only as a rare glimpse at a genre forming itself, but as a powerful tool for creative expression.

5 units, Spr (Johnson, A)

ENGLISH 186. Tales of Three Cities: New York, Chicago, Los Angeles

(Same as AMSTUD 186) How urban form and experience shape literary texts and how literary texts participate in the creation of place, through the literature of three American cities as they ascended to cultural and iconographical prominence: New York in the early to mid 19th century; Chicago in the late 19th and early 20th centuries; and Los Angeles in the mid to late 20th century. GER:DB-Hum

5 units, Win (Richardson, J)

ENGLISH 187J. Lady Sings the Blues: Blues, Literature, and Black Feminism

(Formally ENGLISH 187H) Examination of a long tradition of feminist articulations in black women's blues expressed in sound and literature over the course of the twentieth century. Familiarity with the recurrent tropes of black women's blues and how these coalesce in a feminism based on the intersections of race, gender, class, and sexuality by bringing together black women writers, thinkers, and songstresses such as Gayl Jones, Bessie Smith, Zora Neale Hurston, Alice Walker, Nina Simone, and Billie Holiday. Supplemental readings from cultural theorists such as Angela Davis, Hazel Carby, Farah Jasmine Griffin, and others in order to build a critical framework for interpreting, historicizing, and theorizing black women's blues. GER:DB-Hum, EC-Gender

5 units, Win (Heard, D)

ENGLISH 187P. Updike, Cheever and Roth

Close reading and discussion of fiction by John Updike, John Cheever, and Philip Roth, closely connected writers whose work has altered the course of American fiction. Primary focus will be style, as will questions of craft in general: approach will be writerly rather than theoretical. Texts include short stories, essays, letters, interviews, and novels including Updike's Centaur and Rabbit, Run, Cheever's short stories and his novel Falconer, Roth's Ghost Writer and The Dying Animal. GER:DB-Hum

5 units, Win (Tallent, E)

ENGLISH 190. Intermediate Fiction Writing

May be taken twice for credit. Lottery. Priority to last quarter/year in school, majors in English with Creative Writing emphasis, and Creative Writing minors. Prerequisite: 90 or 91.

5 units, Aut (Horack, B), Win (Horack, B), Spr (Clark, H)

ENGLISH 190F. Fiction into Film

Workshop. For screenwriting students. Story craft, structure, and dialogue. Assignments include short scene creation, character development, and a long story. How fictional works are adapted to screenplays, and how each form uses elements of conflict, time, summary, and scene. Priority to seniors and Film Studies majors. Prerequisite: 90.

5 units, Win (Tanaka, S)

ENGLISH 190G. The Graphic Novel

Interdisciplinary. Evolution, subject matter, form, conventions, possibilities, and future of the graphic novel genre. Guest lectures. Collaborative creation of a graphic novel by a team of writers, illustrators, and designers. Prerequisite: consent of instructor.

5 units, not given this year

ENGLISH 190T. Special Topics in Intermediate Fiction Writing

Focus on a particular topic or process. Work includes aspects of reading short stories and novels, writing at least 30-50 pages of fiction, and responding to peers' work in workshop. May be repeated for credit. Prerequisite: 91 or 90.

5 units, Aut (Kealey, T; Hutchins, S), Spr (Antopol-Johnson, M; Horack, B)

ENGLISH 190V. Reading for Writers

Taught by the Stein Visiting Fiction Writer. Prerequisite: 90.

5 units, Spr (Baxter, C)

ENGLISH 191. Intermediate Creative Nonfiction

Continuation of 91. Workshop. The application of advanced storytelling techniques to fact-based personal narratives, emphasizing organic writing, discovering audience, and publication. Guest lecturers, collaborative writing, and publication of the final project in print, audio, or web formats. Prerequisite: 91 or 90.

5 units, Aut (Antopol-Johnson, M), Win (Frisch, S), Spr (Frisch, S)

ENGLISH 191T. Special Topics in Intermediate Creative Nonfiction

Workshop. Continuation of 91. Focus is on forms of the essay. Works from across time and nationality for their craft and technique; experimentation with writing exercises. Students read and respond to each other's longer nonfiction projects. May be repeated for credit. Prerequisite: 91 or 90.

5 units, Win (Antopol-Johnson, M), Spr (Hummel, M)

ENGLISH 192. Intermediate Poetry Writing

May be taken twice. Lottery. Priority to last quarter/year in school, majors in English with Creative Writing emphasis, and Creative Writing minors. Prerequisite: 92.

5 units, Aut (Hummel, M), Win (Hummel, M), Spr (Evans, J)

ENGLISH 192V. The Occasions of Poetry

Taught by the Mohr Visiting Poet. Prerequisite: 92.

5 units, Win (Dobyns, S)

ENGLISH 194. Individual Research

See section above on Undergraduate Programs, Opportunities for Advanced Work, Individual Research.

5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGLISH 195W. Writing Center Peer Tutor Seminar

(Same as PWR 195) For students selected to serve as peer writing tutors in the Stanford Writing Center and/or at other campus sites. Readings on and reflection about writing processes, the dynamics of writing and tutoring situations, tutoring techniques, learning styles, diversity, and ethics. Observation of tutoring sessions, written responses to readings, and other written work.

3 units, Spr (Lunsford, A)

ENGLISH 196A. Honors Seminar: Critical Approaches to Literature

Required of students in the English honors program. Reading and writing advanced literary criticism. Critical writings and approaches. Goal is to support the development of students' honors theses.

3 units, Aut (Rovee, C)

ENGLISH 196B. Honors Essay Workshop

Required of English honors students.

2 units, Aut (Obenzinger, H)

ENGLISH 197. Seniors Honors Essay

In two quarters.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff)

ENGLISH 198. Individual Work

Undergraduates who wish to study a subject or area not covered by regular courses may, with consent, enroll for individual work under the supervision of a member of the department. 198 may not be used to fulfill departmental area or elective requirements without consent. Group seminars are not appropriate for 198.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGLISH 198L. Individual Work: Levinthal Tutorial

Undergraduate writers work individually with visiting Stegner Fellows in poetry, fiction, and if available, nonfiction. Students design their own curriculum; Stegner Fellows act as writing mentors and advisers. Prerequisites: 90, 91, or 92; submitted manuscript.

5 units, Win (Staff), Spr (Staff)

ENGLISH 199. Senior Independent Essay
Open, with department approval, to seniors majoring in non-Honors English who wish to work throughout the year on a 10,000 word critical or scholarly essay. Applicants submit a sample of their expository prose, proposed topic, and bibliography to the Director of Undergraduate Studies before preregistration in May of the junior year. Each student accepted is responsible for finding a department faculty adviser. May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff)

ENGLISH 233. Baroque and Neobaroque
(Same as COMPLIT 233, SPANLIT 293E) The literary, cultural, and political implications of the 17th-century phenomenon formed in response to the conditions of the 16th century including humanism, absolutism, and early capitalism, and dispersed through Europe, the Americas, and Asia. If the Baroque is a universal code of this period, how do its vehicles, such as tragic drama, Ciceronian prose, and metaphysical poetry, converse with one another? The neobaroque as a complex reaction to the remains of the baroque in Latin American cultures, with attention to the mode in recent Brazilian literary theory and Mexican poetry.
5 units, not given this year

ENGLISH 253. Literary Studies and the Digital Library
Ways of reading, interpreting, and understanding literature at the macro scale as an aggregate system. Theoretical issues; landmark essays in the field; how digital libraries and literary corpora invite new types of literary research that challenge conventional approaches.
5 units, Aut (Jockers, M)

ENGLISH 260G. Century's End: Race, Gender, and Ethnicity at the Turn of the Century
(Same as AMSTUD 260G, JEWISHST 250G) How race, gender and ethnicity were constructed and construed in American culture from 1890 to 1914. Readings include stories, poetry, drama, and journalism by Euro-American, African-American, Asian-American, Jewish-American and Native American writers that illuminate how race, gender and ethnicity inflected such issues as the performance of identity, the purpose of education, the uses of dialect, and the dynamics of violence during this period. GER:EC-AmerCul
5 units, Win (Fishkin, S)

ENGLISH 290. Advanced Fiction Writing
Workshop critique of original short stories or novel. Prerequisites: manuscript, consent of instructor, and 190-level fiction workshop.
5 units, Aut (MacDonald, D), Win (Kealey, T)

ENGLISH 292. Advanced Poetry Writing
Focus is on generation and discussion of student poems, and seeking published models for the work.
5 units, Spr (Hummel, M)

GRADUATE COURSES IN ENGLISH

Primarily for graduate students; undergraduates may enroll with consent of instructor.

ENGLISH 201. The Bible and Literature
Differences in translations of the Bible into English. Recognizing and interpreting biblical allusion in texts from the medieval to modern periods. Readings from the Bible and from British, Canadian, American, and African American, and African literature in English.
5 units, Win (Parker, P)

ENGLISH 202. History of the Book
The book as developing concept and material object, from scroll to codex, manuscript to print, cold type to electronic medium. Bibliographical and paleographical techniques. History and theory. The use of books; the history of reading practices, including marginalia and other marks of ownership. Students develop individual projects from Stanford's rare book collection.
5 units, Win (Orgel, S)

ENGLISH 214. Three modern epics: Paradise Lost, The Prelude, Don Juan
To speak of a modern epic is something of a paradox because epic is the oldest genre in the Western poetic tradition and the one with the most imposing ancient exemplars. And yet the genre proves an irresistible challenge to poets even after the rise of the novel, a genre which might seem more appropriate to a mercantile class and to philosophies of individualism. How Milton, Wordsworth, and Byron respond to the conditions and challenges of modernity through and against epic conventions; and how the genre itself is transformed as a result.
5 units, Win (Halmi, N)

ENGLISH 227. Melville's Moby-Dick
A close reading of Melville's 1850 masterpiece, Moby-Dick; or, The Whale. Focus on the novel's 19th-century literary-historical context and on 20th- and 21st-century critical, literary-theoretical, and political-theoretical readings of Moby-Dick.
5 units, Spr (Ruttenburg, N)

ENGLISH 257. Journalism and Imaginative Writing in America
(Same as AMSTUD 257, COMM 278) Walt Whitman spent twenty-five years as a journalist before publishing his first book of poems. Mark Twain was a journalist for twenty years before publishing his first novel. Topics include examination of how writers¿ backgrounds in journalism shaped the poetry or fiction for which they are best known; study of recent controversies surrounding writers who blurred the line between journalism and fiction. Writers include Whitman, Fanny Fern, Twain, Pauline Hopkins, Theodore Dreiser, Charlotte Perkins Gilman, Ernest Hemingway, Meridel LeSueur.
5 units, Spr (Fishkin, S)

ENGLISH 261A. Geography, Time, and Trauma in Asian American Literature
(Same as AMSTUD 261A, ASNAMST 187) The notion that homes can be stable locations for cultural, racial, ethnic, and similarly situated identity categories. Tthe possibility that there really is no place like home for Asian American subjects. How geography, landscape, and time situate traumas within fictional Asian American narratives.
5 units, Aut (Sohn, S)

ENGLISH 261E. Mixed Race Literature in the U.S. and South Africa
(Same as AFRICAAM 261E, AMSTUD 261E) As scholar Werner Sollors recently suggested, novels, poems, stories about interracial contacts and mixed race constitute an orphan literature belonging to no clear ethnic or national tradition. Yet the theme of mixed race is at the center of many national self-definitions, even in the U.S. post-civil rights and South Africa's post-Apartheid era. Aesthetic engagements with mixed race politics in these trans- and post-national dialogues, beginning in the 1700s and focusing on the 20th and 21st centuries.
5 units, Win (Elam, M; Parker, G)

ENGLISH 261F. Gender and Sexuality in Asian American Literature
(Same as AMSTUD 261F, ASNAMST 188) How writers and representations dialogue, challenge, resist, and complicate such formative constructions of gendered/sexual identities. How queer Asian Americans face multiple negations that include potential expulsion from their own families and from various communities. Authors include Bharati Mukherjee, Russell Leong, Suki Kim, Shawn Wong, Louis Chu, Lawrence Chua, Catherine Liu, Jessica Hagedorn, Timothy Liu, Shani Mootoo, David Mura, among others. Secondary readings include literary criticism, and feminist and queer theory.
5 units, Win (Sohn, S)

ENGLISH 262C. African American Literature and the Retreat of Jim Crow
(Same as AMSTUD 262C) After the unprecedented carnage of WWII, the postwar era witnessed the slow decline of the segregated Jim Crow order and the onset of landmark civil rights legislation. What role did African American literature and culture play in this historical process? What does this shift in racial theory and praxis mean for black literary production, a tradition constituted by the experience of slavery and racial oppression? Focus on these questions against the backdrop of contemporaneous developments: the onset of the Cold War, decolonization and the formation of the Third World, and the emergence of the new liberalism.
5 units, Spr (Rasberry, G)

ENGLISH 262D. African American Poetics
(Same as AFRICAAM 262D, AMSTUD 262D) Examination of African American poetic expressive forms from the 1700s to the 2000s, considering the central role of the genre--from sonnets to

spoken word, from blues poetry to new media performance--in defining an evolving literary tradition and cultural identity.

5 units, Win (Elam, M)

ENGLISH 271B. Chaucer

An introduction to Chaucer's writings, including the Canterbury Tales, the Book of the Duchess, and the Parliament of Fowls. Readings in Middle English. No prior knowledge of Middle English or medieval literature is expected.

5 units, Win (Karnes, M)

ENGLISH 279D. James Joyce and Ulysses

Close reading of Ulysses as one of the most significant literary works of modernism and 20th-century literary history. The nature and variety of its significance, and the meanings that Joyce's epic of modernism generates.

5 units, Win (Shloss, C)

ENGLISH 293. Literary Translation

An overview of translation theories and practices over time. The aesthetic, ethical, and political questions raised by the act and art of translation and how these pertain to the translator's tasks. Discussion of particular translation challenges and the decision processes taken to address these issues. Coursework includes assigned theoretical readings, comparative translations, and the undertaking of an individual translation project.

3-5 units, Spr (Santana, C)

ENGLISH 303. Experiment and the Novel

A double exploration of experiment in the novel from 1750 into the 19th century. Taking off from Zola's The Experimental Novel, consideration of the novel's aspect as scientific instrument. Taking the idea of experimental fiction in the usual sense of departures from standard practice, consideration of works that seem to break away from techniques of realism devised prior to 1750. Possible texts by: Lennox, Sterne, Walpole, Goldsmith, Godwin, Lewis, Shelley, Hogg, Emily Bronte, and Diderot.

5 units, Aut (Bender, J)

ENGLISH 303D. Thinking in Fiction

(Same as COMPLIT 303D) Narrative and cognition in 18th-century fictional, philosophical, scientific, and cultural texts. Probable readings: Hobbes, Locke, Newton, Swift, Defoe, Hume, Lennox, Sterne, Adam Smith, Wollstonecraft, and Bentham.

5 units, not given this year

ENGLISH 310. The Transatlantic Renaissance

(Same as COMPLIT 332) The emergence of early modern transatlantic culture, emphasizing how canonical works of the Renaissance may be reimagined in a colonial context and how the productions of the colonial Americas make sense as Renaissance works. Topics: mestizaje and creole identity, gender and sexuality, law, religion and the church, mining, commerce, and government. European and American authors: Thomas More, Philip Sidney, Thomas Lodge, William Shakespeare, the Inca Garcilaso de la Vega, and lesser known figures.

5 units, not given this year

ENGLISH 311. Female Modernists: Women Writers in Paris Between the Wars

Focus on expatriate women writers, American and British, who lived and wrote in Paris between the wars including Edith Wharton, Stein and Toklas, Djuna Barnes, Margaret Anderson, Janet Flanner, Natalie Barney, Kay Boyle, Mina Loy, Romaine Brooks, Mary Butts, Radclyffe Hall, Colette, and Jean Rhys. Central theme will be Paris as a lure and inspiration for bohemian female modernists, and the various alternative and emancipatory literary communities they created.

5 units, Aut (Castle, T)

ENGLISH 314. Epic and Empire

(Same as COMPLIT 320A) Focus is on Virgil's Aeneid and its influence, tracing the European epic tradition (Ariosto, Tasso, Camoes, Spenser, and Milton) to New World discovery and mercantile expansion in the early modern period.

5 units, Spr (Staff)

ENGLISH 314D. Late 17th Century English Literature

From the preface to Gondibert to Pope¿s Dunciad, English literature produced a frenzied series of epic experiments, some in rhyme, some in blank verse, some even written for the stage. Survey of the literary landscape of the late seventeenth-century through a single lens: the problem posed by the imperative to write in the heroic vein. Genres will include panegyric, epic, heroic play, tragedy, and opera. Authors will include Davenant, Dennis, Dryden, Marvell, Milton, Rochester, and Addison.

5 units, Spr (Hoxby, B)

ENGLISH 334B. Concepts of Modernity 2: Aesthetics and the Public Sphere

(Same as MTL 334B) A selection of 20th-century theory focusing on the relation of aesthetics and the public sphere. Themes include the conceptualization of the public sphere, the debates over the relation of art and politics, aesthetics as form of public rhetoric, the social mission of literature and other arts. Readings from Habermas, Adorno, Horkheimer, Arendt, Lukacs, Bloch, Brecht, Jameson, Negt and Kluge, Kristeva, Spivak, Appiah, Coetzee.

5 units, Win (Majumdar, S)

ENGLISH 336. Victorian Literature and Photography

The theoretical implications of photography; its relationship to concepts such as realism and surrealism, and to the study of material culture and book history; its conceptual emergence in Romantic (pre-photographic) writing and its expression in Victorian writing; its peculiar literariness (including its significance for our study of literature); and the lively, surprising culture of early photography.

5 units, Aut (Rovee, C)

ENGLISH 360. North American Literature in Comparative Context: Revolution

Tracing the articulation of a new transatlantic symbolic order in political-theoretical and literary texts written in the age of democratic revolutions. How insights or convictions related to the political and social realm are translated into fictional forms, and the ways in which literature, insofar as it figures the excess of revolutionary change, supplements its other, whether historiography or political philosophy.

5 units, Win (Ruttenburg, N)

ENGLISH 360B. The Theory of the Novel

Topics will include: theories of the novel¿s origin; novelistic subjectivity; voice and text; body and text; the problem of the quotidian; democracy, revolution and novelistic form; and the peculiar dynamic of the novelistic trinity (author, character, reader).

5 units, Spr (Ruttenburg, N)

ENGLISH 363. The Bourgeois

(Same as COMPLIT 330) Goal is to define the ruling class of modern times. Social history (Weber, Hirschmann, Marx); literary texts (Defoe, Goethe, Gaskell); and Henrik Ibsen who produced an intransigent criticism of the bourgeois ethos.

5 units, Spr (Moretti, F)

ENGLISH 366G. Poetics Now and Then

The fundamental issues and recent problems in poetics. Exploration of both classic statements and current scholarship to obtain an overview of a field in the process of renewal. Topics may include the nature of the poetic; figurative language; technical, social and historical approaches; poetological accounts of major periods and movements (e.g. the baroque, classicism, symbolism, modernism, Language poetry); and recent experiments in poetry that respond to developments in poetics. Both the scholarship and the poems under consideration come from multiple traditions, national and ideological. Readings include works by Auerbach, Jakobson, De Man, Paz, Hartman, Forrest-Thomson, and Agamben.

5 units, Spr (Greene, R; Jenkins, N)

ENGLISH 373C. Text of Shakespeare

The nature and history of the Shakespearean text from its beginnings, from script and performance to quartos, to the folios, to the multitude of editions, and constantly back to script and performance. What, historically, has constituted a good text of Shakespeare, and what is bad about bad quartos? What have been, historically, the ethics and politics of editing, and what has been the relation of editorial practice to stage practice on the one hand, and to what we want Shakespeare to be on the other? Plays with multiple original texts studied, (such as Romeo and Juliet, Hamlet, King Lear) through the lenses of theatrical history, bibliography, and editorial theory.

5 units, Aut (Orgel, S)

ENGLISH 373D. Shakespeare, Islam, and Others

(Same as COMPLIT 311) Shakespeare and other early modern writers in relation to new work on Islam and the Ottoman Turk in early modern studies. Othello, Twelfth Night, Titus Andronicus, The Merchant of Venice, and other Shakespeare plays. Kyd's

Solyman and Perseda, Daborne's A Christian Turned Turk, Massinger's The Renegado, Marlowe's The Jew of Malta, and literary and historical materials.

5 units, not given this year

ENGLISH 381B. Theories of Race and Ethnicity

Race theory in the humanities is a heterogeneous field with diverse theoretical frameworks deriving from poststructuralism, postcolonialism, historical materialism, psychoanalysis, and realism. Various theorizations of race and ethnicity as they have developed in literary and cultural studies, performance studies, visual studies, and philosophy. How they illuminate issues under current debate: subjectivity, identity, biological difference, racial representation, and political activism. Theorists may include Alcoff, Appiah, Bogues, DuBois, Elam, Fanon, Flores, Gilroy, Goldberg, Gordon, Hames-Garcia, Hartman, Haslanger, Lugones, Mendieta, Mercer, Ong, Shelby, Taylor, Wallis, West, Wiegman, Wynter, and Zack.

5 units, Aut (Moya, P)

ENGLISH 382. Race, Formalisms, & Narrative Theory

Concerned with understanding how the traditional forms of the novel are altered in the context of the contemporary drive to represent a new stage in global and hemispheric race relations. How do modern versions of literary realism change to represent the experiences of decolonization, modernization, and postmodernity? Addresses the poetics of genre and the generative power of generic hybridity in classic narrative forms in order to examine how aesthetics and conceptions of history are fundamentally reshaped by modernization and globalization.

5 units, Win (Saldivar, R)

ENGLISH 389. Modernism's Everyday

An approach to literary modernism's commitment to the motifs of everyday life. Topics include newer aesthetic meanings of the ordinary, its relationship with late 19th- and early 20th-century developments in ethnography, art, emergent landscapes of urban modernity, flanerie and the poetics of space, advertising, consumerism and the quotidian embodiment of imperialist ideologies, gender relations, representations of domesticity and boredom. Texts include James Joyce, Virginia Woolf, William Carlos Williams, T.S. Eliot, Katherine Mansfield, Michel De Certeau, Bronislaw Malinowski, Alice Kaplan, Kristin Ross, Henry Lefebvre, Erving Goffman, Patricia Meyer Spacks, Stanley Cavell, Elizabeth Goodstein.

5 units, Spr (Majumdar, S)

ENGLISH 389B. Beckett

(Same as DRAMA 152, DRAMA 358C) Beckett's plays and late writing, which have been described as proto-performance art. Recent Beckett scholarship, including new work about his analysis with Bion.

3-5 units, Spr (Phelan, M)

ENGLISH 390. Graduate Fiction Workshop

For Stegner fellows in the writing program. May be repeated for credit. Prerequisite: consent of instructor.

3 units, Aut (Tallent, E), Win (Johnson, A), Spr (Wolff, T)

ENGLISH 392. Graduate Poetry Workshop

For Stegner fellows in the writing program. May be repeated for credit. Prerequisite: consent of instructor.

3 units, Aut (Fields, K), Win (Boland, E), Spr (Di Piero, S)

ENGLISH 394. Independent Study

Preparation for first-year Ph.D. qualifying examination.

1-10 units, Sum (Staff)

ENGLISH 395. Ad Hoc Graduate Seminar

Three or more graduate students who wish in the following quarter to study a subject or an area not covered by regular courses and seminars may plan an informal seminar and approach a member of the department to supervise it.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

ENGLISH 396. Introduction to Graduate Study for Ph.D. Students

For incoming Ph.D. students. The major historical, professional, and methodological approaches to the study of literature in English.

5 units, Aut (Saldivar, R)

ENGLISH 396L. Pedagogy Seminar I

(Same as COMPLIT 396L) Required for first-year Ph.D students in English, Modern Thought and Literature, and Comparative Literature. Preparation for surviving as teaching assistants in undergraduate literature courses. Focus is on leading discussions and grading papers.

2 units, Aut (Bender, J)

ENGLISH 397A. Pedagogy Seminar II

Apprenticeship for second-year graduate students in English, Modern Thought and Literature, and Comparative Literature who teach in the Program in Writing and Rhetoric. Each student is assigned as an apprentice to an experienced teacher and sits in on classes, conferences, and tutorials, with eventual responsibility for conducting a class, grading papers, and holding conferences. Meetings explore rhetoric, theories and philosophies of composition, and the teaching of writing. Each student designs a syllabus in preparation for teaching PWR 1.

1 unit, Aut (Lunsford, A; Diogenes, M)

ENGLISH 397W. What is the Future of English Studies?

The origins of English departments from the 19th century to the present, attempting to answer not only MLA President William Riley Parker's 1967 question, where do English departments come from, but the more pressing, where are English departments going in the future, and what does that trajectory suggest for graduate students preparing to enter the profession? Readings from Bourdieu, Graff, Guillory, Berlin, Elbow, Hutcheon, Menand. Colloquium planned around this set of questions, with guest speakers.

3-5 units, Aut (Lunsford, A)

ENGLISH 397X. The Teaching of Literature: How We Teach & Why

(Same as EDUC 405X) This course is designed for graduate students in English and English Education who are interested in questions surrounding the teaching of literature at both the secondary and collegiate level. The course weaves together theoretical considerations of the purposes for teaching literature, including assumptions about the kinds of readings and readers literature teachers are trying to create, with investigation of pedagogical practices.

2-4 units, not given this year

ENGLISH 398. Research Course

A special subject of investigation under supervision of a member of the department. Thesis work is not registered under this number.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGLISH 398L. Literary Lab

Gathering and analyzing data, constructing hypotheses and designing experiments to test them, writing programs [if needed], preparing visuals and texts for articles or conferences. Requires a yearlong participation in the activities of the Lab.

5 units, Aut (Moretti, F; Jockers, M), Win (Moretti, F; Jockers, M), Spr (Moretti, F; Jockers, M)

ENGLISH 398R. Revision and Development of a Paper

Students revise and develop a paper under the supervision of a faculty member with a view to possible publication.

4-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGLISH 398W. Orals, Publication and Dissertation Workshop

For third- and fourth-year graduate students in English. Strategies for studying for and passing the oral examination, publishing articles, and for writing and researching dissertations and dissertation proposals. May be repeated for credit.

2 units, Aut (Bender, J), Win (Bender, J), Spr (Bender, J)

ENGLISH 399. Thesis

For M.A. students only. Regular meetings with thesis advisers required.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGLISH 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENVIRONMENT AND RESOURCES (ENVRES) COURSES

GRADUATE COURSES IN ENVIRONMENT AND RESOURCES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

ENVRES 200. Sustaining Action: Research, Analysis and Writing for the Public
Preference to graduate students and senior undergraduates in environmental, natural and social sciences, engineering, journalism. Students help produce and publish SAGE, an eco advice column, by choosing, researching, and answering questions about sustainable living submitted by Stanford alumni. Prerequisite: admission by application, available from instructor, thayden@stanford.edu, and due 9/15/10.
3 units, Aut (Hayden, T), Spr (Hayden, T)

ENVRES 210. Communication and Leadership Skills
(Same as BIO 388) Focus is on delivering information to policy makers and the lay public. How to speak to the media, Congress, and the general public; how to write op-eds and articles; how to package ideas including titles, abstracts, and CVs; how to survive peer review, the promotion process, and give a job talk; and how to be a responsible science advocate.
2 units, not given this year

ENVRES 220. Special Topics Seminar
For E-IPER Ph.D. and Joint M.S. students; other graduate students with consent of instructor. Challenges of interdisciplinary research; collaborations across disciplines. Topical or methodological focus depending on faculty and student interests. May not be offered every quarter. May be repeated for credit.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENVRES 220A. Special Topics Seminar
For E-IPER Ph.D. and Joint M.S. students; other graduate students with consent of instructor. Challenges of interdisciplinary research; collaborations across disciplines. Topical or methodological focus depending on faculty and student interests. May not be offered every quarter. May be repeated for credit.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENVRES 220B. Special Topics Seminar
For E-IPER Ph.D. and Joint M.S. students; other graduate students with consent of instructor. Challenges of interdisciplinary research; collaborations across disciplines. Topical or methodological focus depending on faculty and student interests. May not be offered every quarter. May be repeated for credit.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENVRES 220C. Special Topics Seminar
For E-IPER Ph.D. and Joint M.S. students; other graduate students with consent of instructor. Challenges of interdisciplinary research; collaborations across disciplines. Topical or methodological focus depending on faculty and student interests. May not be offered every quarter. May be repeated for credit.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENVRES 225. E-IPER Current Topics Seminar
For E-IPER Ph.D and Joint M.S. students only. Weekly presentations of E-IPER students' research and other program-related projects. Occasional guest speakers. Active participation including individual or team presentation and attendance required for credit. May be repeated once for credit. Grading C/NC only.
1 unit, Aut (Staff), Win (Staff), Spr (Staff)

ENVRES 242. Negotiating Sustainable Development
(Same as CEE 142A, CEE 242A) How to be effective at achieving sustainability by learning the skills required to negotiate differences between stakeholders who advocate for their own interests. How ecological, social, and economic interests can be effectively balanced and managed. How to be effective actors in the sustainability movement, and use frameworks to solve complex, multi-party processes. Case study analysis of domestic and international issues. Students negotiate on behalf of different interest groups in a variety of arenas including energy, climate, land use, and the built environment. One Saturday all day field trip. No prerequisites.
3 units, Win (Christensen, S)

ENVRES 243. Energy and Environmental Policy Analysis
(Same as MS&E 243) Concepts, methods, and applications. Energy/environmental policy issues such as automobile fuel economy regulation, global climate change, research and development policy, and environmental benefit assessment. Group project. Prerequisite: MS&E 241 or ECON 50, 51.
3 units, Spr (Sweeney, J)

ENVRES 270. Graduate Practicum in Environment and Resources
Opportunity for E-IPER students to pursue areas of specialization in an institutional setting such as a laboratory, clinic, research institute, governmental agency, non-governmental organization, or multilateral organization. Meets US CIS requirements for off-campus employment with endorsement from designated school official.
1-9 units, Aut (Vitousek, P), Win (Vitousek, P), Spr (Vitousek, P), Sum (Vitousek, P)

ENVRES 277C. Specialized Writing and Reporting: Environmental Journalism
(Same as COMM 177C, COMM 277C) (Graduate students register for COMM / ENVRES 277C.) Practical, collaborative, writing-intensive course in environmental journalism. Science and journalism students learn how to identify and write engaging stories about environmental issues and science, how to assess the quality and relevance of environmental news, how to cover the environment and science beats effectively, and how to build bridges between the worlds of journalism and science. Limited enrollment: preference to journalism students and students in the natural and environmental sciences. Prerequisite: 104 or consent of instructor.
4-5 units, Spr (Hayden, T)

ENVRES 290. Capstone Project Seminar in Environment and Resources
Required for E-IPER Joint M.S. students; optional for E-IPER Ph.D. students. Propose, conduct and publicly present final individual or team projects demonstrating the integration of professional (M.B.A., J.D., or M.D.) and M.S. in Environment and Resources degrees. Presentation and submission of final product required.
1-3 units, Aut (Vitousek, P; Phillips, K), Win (Vitousek, P; Phillips, K), Spr (Vitousek, P; Phillips, K)

ENVRES 310. Environmental Forum Seminar
Required core course for first year E-IPER Ph.D. students and all Joint M.S. students, other than Joint M.B.A./M.S. students; optional for joint M.B.A./M.S. students and other graduate students with consent of instructor. Conceptual frameworks, analytical approaches, validity of conclusions from an interdisciplinary perspective. Participants attend various environmentally-focused seminars on campus selected by faculty and students, followed by student-facilitated discussions.
1-2 units, Aut (Staff)

ENVRES 315. Environmental Research Design Seminar
Required core course for first year E-IPER Ph.D. students; optional for Joint M.S. students; other graduate students with instructor's permission. Series of faculty presentations and student-led discussions on interdisciplinary research design as exemplars of the research design theories discussed in ENVRES 320. Designing Environmental Research. Topics parallel the ENVRES 320 syllabus. Corequisite: ENVRES 320.
1-2 units, Win (Christensen, J)

ENVRES 320. Designing Environmental Research
Required core course restricted to first year E-IPER Ph.D. students. Research design options for environmentally related research. Major philosophies of knowledge and how they relate to

research objectives and design choices. Evaluation of strengths and weaknesses of alternative research designs, emphasizing methods, data, and argument. Development of individual research design proposals, including description and justification understandable to a non-specialist.

3-4 units, Win (Davis, J)

ENVRES 330. Research Approaches for Environmental Problem Solving

Required core course for first year E-IPER Ph.D. students. How to develop and implement interdisciplinary research in environment and resources. Assignments include development of research questions, a preliminary literature review, and a summer funding proposal. Course is structured on peer critique and student presentations of work in progress. Corequisite: ENVRES 398 with a faculty member chosen to explore a possible dissertation topic.

3 units, Spr (Vitousek, P; Ardoin, N)

ENVRES 336. Environmental Innovation, Sustainability, And Entrepreneurship

Conceptual frameworks and practical approaches to better understand innovation and entrepreneurship focused on environmental and sustainability issues such as increasing awareness by businesses, consumers and policy makers that the scope and scale of economic activity is altering the dynamics of natural systems in historically unprecedented ways. Course explores ways in which sustainability innovation is being integrated into routine operation, product design and corporate strategy. Case studies, books and chapters, reports, in-class and homework exercises, videos, and guests, and a final project.

4 units, Aut (Reichelstein, S; Larson, A)

ENVRES 338. Environmental Science for Managers and Policy Makers

(Same as LAW 608, OIT 338.) Fundamental science of ecosystems, climate and energy systems by building decision-support models for managing these systems, development of widely-applicable skills in model representation in a spreadsheet, optimization, and Monte Carlo simulation. This course is open only to students in the E-IPER PhD program or Joint M.S. in Environment and Resources program and is required for Joint M.B.A. with M.S. in Environment and Resources students. ENVRES 338 does not assume knowledge of environment science or proficiency in quantitative analysis beyond admission requirements for the MBA program. GSB students should register under OIT 338. GSB students students planning to apply to the E-IPER joint M.S. program should take either OIT 338 or 339 in their first year.

4 units, Win (Plambeck, E)

ENVRES 339. Advanced Environmental Science for Managers and Policy Makers

(Same as LAW 619 and OIT 339.) Fundamental science of ecosystems, climate and energy. Spreadsheet modeling, optimization, and Monte Carlo simulation applied to resource management and environmental policy. Accelerated version of ENVRES 338 for students with background in modeling. Allocates more class time to environmental/energy science and implications for management and policy, and less class time to fundamentals of modeling/optimization/simulation. This course is open only to students in the E-IPER Ph.D. program or Joint M.S. in Environment and Resources program. ENVRES 339 does not assume knowledge of environmental science or proficiency in quantitative analysis beyond admission requirements for the MBA program. GSB students should register under OIT 339. GSB students planning to apply to the E-IPER joint M.S. program should take either OIT 338 or 399 in their first year.

4 units, Win (Plambeck, E)

ENVRES 398. Directed Individual Study in Environment and Resources

Under supervision of an E-IPER affiliated faculty member on a subject of mutual interest. Joint M.S. students must submit an Independent Study Agreement for approval.

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENVRES 399. Directed Research in Environment and Resources

For advanced graduate students. Under supervision of an E-IPER affiliated faculty member. Joint M.S. students must submit an Independent Study Agreement for approval.

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENVRES 410. Ph.D. Qualifying Tutorial

For Ph.D. students only. Under supervision of an E-IPER affiliated faculty member.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENVRES 460. Proposal Writing Tutorial

Practical training in proposal writing methods. Students draft research proposals relevant to individual interests with supervision from E-IPER affiliated faculty member.

1-2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENVRES 480. Dissertation Writing Tutorial in Environment and Resources

For students who have completed the oral qualifying examination. Under supervision of an E-IPER affiliated faculty member. May be repeated for credit.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENVRES 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENVRES 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ENGLISH FOR FOREIGN STUDENTS (EFSLANG) COURSES

UNDERGRADUATE COURSES IN ENGLISH FOR FOREIGN STUDENTS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

EFSLANG 197. Directed Study

1-3 units, Aut (Hubbard, P), Win (Staff), Spr (Staff), Sum (Staff)

EFSLANG 683S. Workshop in Oral Communication for International Students

Provides support in the development of listening and speaking skills in English, including academic listening, small group discussion, oral presentation, and intercultural communication. Weekly classroom sessions with individual or small group tutorials. Limited to visiting undergraduates and students in the High School Summer College program.

1-2 units, Sum (Mawson, C)

EFSLANG 683W. Workshop in Written Communication for International Students

Provides support in the development of English reading and writing skills and vocabulary development for non-natives. Writing assignments are negotiated with the instructor and may include practice in composition, SAT or TOEFL writing, and writing university application essays and statements of purpose. Weekly classroom sessions with individual or small group tutorials. Limited to visiting undergraduates and students in the High School Summer College program

1-2 units, Sum (Hubbard, P)

GRADUATE COURSES IN ENGLISH FOR FOREIGN STUDENTS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

EFSLANG 397. Directed Study

1-3 units, Aut (Hubbard, P), Win (Staff), Spr (Staff), Sum (Staff)

EFSLANG 688V. Intensive English and Academic Orientation for Stanford Visiting Scholars

Goal is to improve English proficiency and introduce the university environment. Writing, pronunciation, listening, discussion, oral presentation, and spoken usage. Enrollment limited to 14.

5 units, Sum (Rylance, C)

EFSLANG 689E. Learning English on Your Own

Independent English language learning. Learning strategies and objectives, setting and maintaining practice schedules, and evaluating progress. Focus is on exploiting web-based resources. Individual meetings.

1 unit, Sum (Hubbard, P)

EFSLANG 689H. American Humor
Analysis of jokes, humorous stories, and situations through modern media. Practice in advanced listening comprehension and English idioms.

1 unit, Sum (Streichler, S)

EFSLANG 689L. Living in the USA
Life and relationships outside the University classroom. Goal is to familiarize international students with the cultural expectations and forms of language use in a variety of situations in the University community and in other social situations. Enrollment limited to 14.

1 unit, Sum (McPherron, P)

EFSLANG 689P. Pronunciation
The sounds of English, and stress, intonation, and rhythm patterns important to natural-sounding speech. Enrollment limited to 14.

2 units, Sum (Mawson, C)

EFSLANG 689T. Interacting in California's Vineyard Culture
Focuses on communicative skills in the context of California's renowned wine culture. Emphasis on the language of wine using appropriate terminology, and interacting knowledgeably with restaurant and retail wine staff. Topics include learning the fundamentals of vineyard techniques, varietal characteristics, tasting techniques, drinking and ordering etiquette. Course is co-taught by a wine expert and an ESL instructor. Class consists of a short interactive lecture, a communicative activity such as role playing, and a tasting of four specially selected wines. Participants must be at least 21 years old. Fee.

1 unit, Sum (Staff)

EFSLANG 689V. Vocabulary and Idiom
Building vocabulary for academic success. Idiomatic language, and what idioms and metaphors reflect about American culture. Enrollment limited to 14.

1 unit, Sum (Hubbard, P)

EFSLANG 689W. Working in the USA
The language and culture of the workplace. Goal is to familiarize international students with the cultural expectations of situations in the business setting and in social situations related to business.

1 unit, Sum (Kevech, A)

EFSLANG 690A. Interacting in English
Strategies for communicating effectively in social and academic settings. Informal and formal language used in campus settings, including starting and maintaining conversations, asking questions, making complaints, and contributing ideas and opinions. Simulations and discussions, with feedback on pronunciation, grammar, and usage. Enrollment limited to 14.

1-3 units, Aut (Streichler, S), Win (Lockwood, R), Spr (Lockwood, R)

EFSLANG 690B. Academic Discussion
Skills for effective participation in classroom settings, seminars, and research group meetings. Pronunciation, grammar, and appropriateness for specific tasks. Feedback on language and communication style. Enrollment limited to 14. May be repeated once for credit. Prerequisite: 690A or consent of instructor.

1-3 units, Aut (Rylance, C), Win (Rylance, C), Spr (Lockwood, R)

EFSLANG 690C. Advanced Interacting in English
Communication skills for extended discourse such as storytelling and presenting supported arguments. Development of interactive listening facility and overall intelligibility and accuracy. Goal is advanced fluency in classroom, professional and social settings. Identification of and attention to individual patterned errors. May be repeated once for credit. Prerequisite: 690B or consent of instructor. Enrollment limited to 14.

1-3 units, Spr (Streichler, S)

EFSLANG 691. Oral Presentation
For advanced graduate students. Practice in academic presentation skills; strategy, design, organization, and use of visual aids. Focus is on improving fluency and delivery style, with videotaping for feedback on language accuracy and usage. Enrollment limited to 14. May be repeated once for credit.

1-3 units, Aut (Oman, A), Win (Streichler, S), Spr (Streichler, S), Sum (Shabrami, C)

EFSLANG 692. Speaking and Teaching in English
For non-native speakers who must teach in English. Focus is on developing clarity, intelligibility, and effectiveness through weekly presentations simulating actual teaching assistant responsibilities. Enrollment limited to 14. May be repeated once for credit.

1-3 units, Aut (Rylance, C), Win (Mawson, C), Spr (Rylance, C)

EFSLANG 693A. Listening Comprehension
Strategies for effective listening in an academic setting, focusing on identifying key ideas in lectures. Practice in understanding words and phrases commonly encountered in classroom settings. Computer-based exercises for comprehension of rapid, natural speech. Enrollment limited to 14.

1-3 units, Aut (Lockwood, R)

EFSLANG 693B. Advanced Listening Comprehension, and Vocabulary Development
Listening strategies and vocabulary for understanding English in academic and non-academic contexts. Discussion and interpretation of communicative intent. Computer-based and video exercises across a range of genres; individual project. May be repeated once for credit. Prerequisite: 693A or consent of instructor.

1-3 units, Aut (Hubbard, P), Win (Romeo, K), Spr (Hubbard, P)

EFSLANG 694. Communication Strategies in Professional Life
For advanced graduate students. Task-based practice of language appropriate for professional settings in industry and related teamwork. Simulation of the roles of manager, applicant, subordinate, and coworker. Prerequisite: 693A, or consent of instructor. Enrollment limited to 14.

1-3 units, Aut (Rylance, C), Spr (Rylance, C)

EFSLANG 695A. Pronunciation and Intonation
Recognition and practice of American English sounds, stress, and intonation patterns for greater comprehension and intelligibility. Analysis of problem areas. Biweekly tape assignments and tutorials. May be repeated once for credit. Enrollment limted to 14.

1-3 units, Aut (Mawson, C), Win (Mawson, C), Spr (Mawson, C), Sum (Mawson, C)

EFSLANG 695B. Advanced Pronunciation and Intonation
Continuation of 695A, focusing on American English sounds, stress, rhythm, and intonation patterns. Emphasis is on self-monitoring, integrated with short presentations. Biweekly tape assignments and tutorials. Enrollment limited to 14. May be repeated for credit three times. Prerequisite: 695A.

1-3 units, Aut (Mawson, C), Win (Mawson, C), Spr (Mawson, C)

EFSLANG 696. Understanding American Humor
Recognizing rhetorical devices, jokes, and character types common to spoken humor in film and television programs. Crosscultural discussion. Prerequisites: 690B, 693B or consent of the instructor. Enrollment limited to 14.

1-3 units, Spr (Streichler, S)

EFSLANG 697. Writing Fundamentals
Focus is on improving grammatical accuracy and vocabulary, building fluency, and learning the structure and conventions of English correspondence, reports, and short academic papers. Enrollment limited to 14.

1-3 units, Aut (Rylance, C), Win (Lockwood, R), Spr (Lockwood, R)

EFSLANG 698A. Writing Academic English
Strategies and conventions for graduate writing. Emphasis is on fluency, organization, documentation, and appropriateness for writing tasks required in course work. Enrollment limited to 14. May be repeated once for credit.

1-3 units, Aut (Kevech, A), Win (Streichler, S), Spr (Rylance, C), Sum (Streichler, S)

EFSLANG 698B. Advanced Graduate Writing
Focus on clarity, accuracy, and appropriate style. For graduate students experienced in English writing and currently required to write for courses and research. Class meetings and individual conferences. Prerequisite: 698A. Enrollment limited to 14. May be repeated once for credit.

1-3 units, Aut (Hubbard, P), Win (Rylance, C), Spr (Streichler, S), Sum (Shabrami, C)

ENVIRONMENTAL EARTH SYSTEM SCIENCE (EESS) COURSES

UNDERGRADUATE COURSES IN ENVIRONMENTAL EARTH SYSTEM SCIENCE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

EESS 2. Earth System History
(Same as EARTHSYS 2) The evolution of Earth's systems from formation to the present. Couplings and relationships among biosphere, lithosphere, hydrosphere, and atmosphere. Topics include the evolution of life, origin of the oceans, atmosphere and continents, and changes in climate. Modern climate change and anthropogenic effects. GER:DB-NatSci
3 units, Win (Chamberlain, P)

EESS 8. The Oceans: An Introduction to the Marine Environment
(Same as EARTHSYS 8) For non-majors and majors in earth science or environmental science. The major ocean ecosystems and how they function both naturally and under the influence of human activities. Emphasis on the dominant organisms of each ecosystem and how they interact with each other and their physical and chemical environment. The types of ecosystems include coral reefs, deep-sea hydrothermal vents, coastal upwelling systems, blue-water oceans, estuaries, near-shore dead zones. Lectures, multimedia presentations, and group activities.
4 units, Spr (Arrigo, K)

EESS 38N. The Worst Journey in the World: The Science, Literature, and History of Polar Exploration
(Stanford Introductory Seminar) (Same as EARTHSYS 38N, GES 38N) Preference to freshmen. The isolation of polar explorers under the harshest conditions on Earth, and the chronicles of their explorations and hardships dating to the 1500s for the Arctic and the 1700s for the Antarctic. Focus is on scientific and geographic achievements. Sources include The Worst Journey in the World by Apsley Cherry-Garrard who in 1911 participated in a midwinter Antarctic sledging trip to recover emperor penguin eggs. Class jointly authors essay on themes from such literature. Optional field trip into the high Sierra in December. (Dunbar) GER:DB-NatSci
3 units, Win (Dunbar, R)

EESS 46N. Exploring the Critical Interface between the Land and Monterey Bay: Elkhorn Slough
(Stanford Introductory Seminar) (Same as EARTHSYS 46N) Preference to freshmen. Field trips to sites in the Elkhorn Slough, a small agriculturally impacted estuary that opens into Monterey Bay, a model ecosystem for understanding the complexity of estuaries, and one of California's last remaining coastal wetlands. Readings include Jane Caffrey's Changes in a California Estuary: A Profile of Elkhorn Slough. Basics of biogeochemistry, microbiology, oceanography, ecology, pollution, and environmental management.
3 units, Spr (Francis, C)

EESS 57Q. Climate Change from the Past to the Future
(Stanford Introductory Seminar) (Same as EARTHSYS 57Q) Preference to sophomores. Numeric models to predict how climate responds to increase of greenhouse gases. Paleoclimate during times in Earth's history when greenhouse gas concentrations were elevated with respect to current concentrations. Predicted scenarios of climate models and how these models compare to known hyperthermal events in Earth history. Interactions and feedbacks among biosphere, hydrosphere, atmosphere, and lithosphere. Topics include long- and short-term carbon cycle, coupled biogeochemical cycles affected by and controlling climate change, and how the biosphere responds to climate change. Possible remediation strategies.
3 units, Aut (Chamberlain, P)

EESS 101. Environmental and Geological Field Studies in the Rocky Mountains
(Same as EARTHSYS 100, GES 101) Three-week, field-based program in the Greater Yellowstone/Teton and Wind River Mountains of Wyoming. Field-based exercises covering topics including: basics of structural geology and petrology; glacial geology; western cordillera geology; paleoclimatology; chemical weathering; aqueous geochemistry; and environmental issues such as acid mine drainage and changing land-use patterns.
3 units, Aut (Chamberlain, P)

EESS 105. Food and Community: New Visions for a Sustainable Future
(Same as EARTHSYS 105) Service and research focused on providing healthy and environmentally friendly food for the under served in our community. Hands-on collaboration with the Stanford Glean student group, the Stanford Community Garden, and San Francisco nonprofits. Coverage of the broad spectrum from garden development to food dispersal to the needy. Design and implementation of projects that address an aspect of food and social justice, such as urban farming in low-income communities and sustainable food networks for the elderly. Service Learning Course (certified by Haas Center).
3-5 units, Aut (Chamberlain, P), Win (Chamberlain, P), Spr (Chamberlain, P), Sum (Staff)

EESS 111. Biology and Global Change
(Same as BIO 117, EARTHSYS 111) The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biology or Human Biology core or graduate standing. GER:DB-NatSci
4 units, Win (Vitousek, P; Arrigo, K)

EESS 112. Human Society and Environmental Change
(Same as EARTHSYS 112, HISTORY 103D) Interdisciplinary approaches to understanding human-environment interactions with a focus on economics, policy, culture, history, and the role of the state. Prerequisite: ECON 1A
4 units, Aut (Naylor, R; Frank, Z; Pizarro Gariazzo, R)

EESS 117. Earth Sciences of the Hawaiian Islands
(Same as EARTHSCI 117, EARTHSYS 117) Progression from volcanic processes through rock weathering and soil-ecosystem development to landscape evolution. The course starts with an investigation of volcanic processes, including the volcano structure, origin of magmas, physical-chemical factors of eruptions. Factors controlling rock weathering and soil development, including depth and nutrient levels impacting plant ecosystems, are explored next. Geomorphic processes of landscape evolution including erosion rates, tectonic/volcanic activity, and hillslope stability conclude the course. Methods for monitoring and predicting eruptions, defining spatial changes in landform, landform stability, soil production rates, and measuring biogeochemical processes are covered throughout the course. This course is restricted to students accepted into the Earth Systems of Hawaii Program.
4 units, Aut (Fendorf, S), alternate years, not given next year

EESS 131. Communicating Environmental Research Using Narratives and Stories
(Same as EESS 231, EARTHSYS 131, EARTHSYS 231) Creative strategies by which earth scientists can overcome impediments to scientific literacy. Construction of stories and narratives out of research. The role of imagination and cognitive perception in environmental issues. Barriers and problems that arise in risk and science awareness. Connections between environmentalism and environmental science. Environmental issues in fictional narratives. The responsible function for earth scientists in public debates. Reflections on the role of science in current and future issues likely to involve members outside of science. Priority given to students seeking degrees in the School of Earth Sciences.
1 unit, not given this year

EESS 134. Stable Isotopes in Biogeochemistry
(Same as EESS 234, EARTHSYS 134, EARTHSYS 234) Light stable isotopes and their application to geological, ecological, and environmental problems. Isotopic systematics of hydrogen, carbon, nitrogen, oxygen, and sulfur; chemical and biogenic fractionation

of light isotopes in the atmosphere, hydrosphere, and rocks and minerals. GER:DB-NatSci

3 units, Spr (Chamberlain, P)

EESS 141. Remote Sensing of the Oceans

(Same as EESS 241, EARTHSYS 141, EARTHSYS 241) How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features. GER:DB-NatSci

3-4 units, Win (Arrigo, K)

EESS 143. Marine Biogeochemistry

(Same as EESS 243, EARTHSYS 143, EARTHSYS 243) (Graduate students register for 243.) Processes that control the mean concentration and distribution of biologically utilized elements and compounds in the ocean. Processes at the air-sea interface, production of organic matter in the upper ocean, remineralization of organic matter in the water column, and processing of organic matter in the sediments. Cycles of carbon, oxygen, and nutrients; the role of the ocean carbon cycle in interannual to decadal variability, paleoclimatology, and the anthropogenic carbon budget. GER:DB-NatSci

3-4 units, alternate years, not given this year

EESS 146A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation

(Same as EARTHSYS 146A, EARTHSYS 246A, EESS 246A, GEOPHYS 146A, GEOPHYS 246A) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

3 units, Win (Thomas, L; Diffenbaugh, N)

EESS 146B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation

(Same as EARTHSYS 146B, EARTHSYS 246B, EESS 246B, GEOPHYS 146B, GEOPHYS 246B) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. Structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic circumpolar current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A/246A or CEE 164/262D or consent of instructor.

3 units, Spr (Thomas, L; Diffenbaugh, N)

EESS 155. Science of Soils

(Same as EARTHSYS 155) Physical, chemical, and biological processes within soil systems. Emphasis is on factors governing nutrient availability, plant growth and production, land-resource management, and pollution within soils. How to classify soils and assess nutrient cycling and contaminant fate. Recommended: introductory chemistry and biology. GER:DB-NatSci

4 units, Spr (Fendorf, S)

EESS 156. Soil and Water Chemistry

(Same as EESS 256, EARTHSYS 156, EARTHSYS 256) (Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology. GER:DB-NatSci

1-4 units, alternate years, not given this year

EESS 160. Statistical Methods for Earth and Environmental Sciences: General Introduction

(Same as EARTHSYS 160) Extracting information from data using statistical summaries and graphical visualization, statistical measures of association and correlation, distribution models, sampling, error estimation and confidence intervals, linear models and regression analysis, introduction to time-series and spatial data with geostatistics, applications including environmental monitoring, natural hazards, and experimental design. GER:DB-Math

3 units, not given this year

EESS 161. Statistical Methods for the Earth and Environmental Sciences: Geostatistics

(Same as EARTHSYS 161, ENERGY 161) Statistical analysis and graphical display of data, common distribution models, sampling, and regression. The variogram as a tool for modeling spatial correlation; variogram estimation and modeling; introduction to spatial mapping and prediction with kriging; integration of remote sensing and other ancillary information using co-kriging models; spatial uncertainty; introduction to geostatistical software applied to large environmental, climatological, and reservoir engineering databases; emphasis is on practical use of geostatistical tools. GER:DB-NatSci

3-4 units, Win (Staff)

EESS 162. Remote Sensing of Land

(Same as EARTHSYS 142, EARTHSYS 242) The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.

4 units, Win (Lambin, E)

EESS 164. Fundamentals of Geographic Information Science (GIS)

(Same as EARTHSYS 144) Survey of geographic information including maps, satellite imagery, and census data, approaches to spatial data, and tools for integrating and examining spatially-explicit data. Emphasis is on fundamental concepts of geographic information science and associated technologies. Topics include geographic data structure, cartography, remotely sensed data, statistical analysis of geographic data, spatial analysis, map design, and geographic information system software. Computer lab assignments. GER:DB-NatSci

4 units, Aut (Nickel, B)

EESS 173. Aquaculture and the Environment: Science, History, and Policy

(Same as EARTHSYS 173, EARTHSYS 273, EESS 273) Can aquaculture feed billions of people without degrading aquatic ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical case studies (salmon farming in Chile, tuna ranching in the Mediterranean, shrimp farming in Vietnam), current federal/state legislation. Field trip to aquaculture farm and guest lectures.

3 units, alternate years, not given this year

EESS 180. Fundamentals of Sustainable Agriculture

(Same as EARTHSYS 180, EARTHSYS 280, EESS 280) Ecological, economic, and social dimensions of sustainable agriculture in the context of a growing world population. Focus is on management and technological approaches, and historical content of agricultural growth and change, organic agriculture, soil and water resource management, nutrient and pest management, biotechnology, ecosystem services, and climate change. GER:DB-NatSci

3 units, not given this year

EESS 180B. Principles and Practices of Sustainable Agriculture

(Same as EARTHSYS 180B) Field-based training in ecologically sound agricultural practices at the Stanford Community Farm. Weekly lessons, field work, and group projects. Field trips to educational farms in the area. Topics include: soils, composting, irrigation techniques, IPM, basic plant anatomy and physiology, weeds, greenhouse management, and marketing.

3-4 units, Aut (Wiederkehr, S), Spr (Wiederkehr, S)

EESS 181. Concepts of Urban Agriculture

(Same as EARTHSYS 181, EARTHSYS 281, EESS 281) For advanced undergraduates and graduate students from all fields. Seminar. Current status of and potential for global urban agriculture. Topics include: environmental and economic dimensions of urban food production and sourcing; city policy and land-use plan-

ning; and an ecosystem services approach to urban agriculture. Developed and developing world contexts. Two field trips to nearby cities; guest lectures; case studies; group projects. Enrollment limited.

3 units, not given this year

EESS 182. Current Issues in Sustainable Agriculture
(Same as EARTHSYS 182, EARTHSYS 282, EESS 282) Sustainability and ethics of animal production in the U.S. Demystification of the marketing of agricultural products. The past, present, and future of small family farms. Farm labor issues. Students lead discussions and write response papers.

2 units, Win (Wiederkehr, S)

EESS 183. Food Matters: Agriculture in Film
(Same as EARTHSYS 183, EARTHSYS 283, EESS 283) Film series presenting historical and contemporary issues dealing with food and agriculture across the globe. Students discuss reactions and thoughts in a round table format. May be repeated for credit.

1 unit, Win (Wiederkehr, S)

EESS 184. Climate and Agriculture
(Same as EARTHSYS 184, EARTHSYS 284, EESS 284) The effects of climate change on global food and agricultural systems. Climate assessment and socioeconomic modeling approaches to quantify the impacts of climate on agro-ecosystems and society. Enrollment limited to 25; priority to graduate students, seniors, and juniors. Prerequisites: ECON 106/206.

3-4 units, alternate years, not given this year

EESS 189. Field Studies in Earth Systems
(Same as BIO 206, EARTHSYS 189) For advanced upper-division undergraduates and graduate students. Field-based, focusing on the components and processes by which terrestrial ecosystems function. Topics from biology, chemistry, ecology, geology, and soil science. Lecture, field, and lab studies emphasize standard field techniques, experimental design, analysis of data, and written and oral presentation. Small team projects test the original questions in the functioning of natural ecosystems. Admission by application; see Axess. Prerequisites: BIO 141 or EESS 160 (formerly GES 160), or equivalent. GER:DB-NatSci

5 units, not given this year

EESS 241. Remote Sensing of the Oceans
(Same as EESS 141, EARTHSYS 141, EARTHSYS 241) How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features. GER:DB-NatSci

3-4 units, Win (Arrigo, K)

GRADUATE COURSES IN ENVIRONMENTAL EARTH SYSTEM SCIENCE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

EESS 253S. Hopkins Microbiology Course
(Same as BIO 274S, BIOHOPK 274, CEE 274S) (Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A,B, or equivalents.

9-12 units, Sum (Spormann, A; Francis, C)

EESS 323. Stanford at Sea
(Same as BIOHOPK 182H, BIOHOPK 323H, EARTHSYS 323) (Graduate students register for 323H.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major.

16 units, Spr (Block, B; Dunbar, R), alternate years, not given next year

EESS 158. Geomicrobiology
(Same as EESS 258, EARTHSYS 158, EARTHSYS 258) How microorganisms shape the geochemistry of the Earth's crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

3 units, given next year

EESS 211. Fundamentals of Modeling
(Same as EARTHSYS 211) Simulation models are a powerful tool for environmental research, if used properly. The major concepts and techniques for building and evaluating models. Topics include model calibration, model selection, uncertainty and sensitivity analysis, and Monte Carlo and bootstrap methods. Emphasis is on gaining hands-on experience using the R programming language. Prerequisite: asic knowledge of statistics.

3 units, Aut (Lobell, D)

EESS 213. Spatial Statistics and Analysis for Environmental Data
Introduction to common algorithms and concepts of data analysis and spatial statistics as used in environmental sciences. Methods usually performed on remote sensing data set such as clustering, classification, and landscape fragmentation. Spatial statistics such as, variogram, kriging estimators and change of support models. Each algorithm is coded using the python language with an emphasis on programming styles and designs to foster a collaborative research environment. No programming experience is required. Undergraduates require consent of instructor.

3-4 units, Win (Staff)

EESS 215. Earth System Dynamics
Qualitative understanding of key components of the earth system (lithosphere, hydrosphere/oceans, biogeochemistry, biosphere, atmosphere, humans, climate change) at the regional-to-global scale, and the mass, energy, and momentum transport processes that govern dynamics with and between these system components. Governing equations presented but a qualitative process understanding and graduate-level Earth System literacy emphasized. Potential for regional to global scale integrative projects rising from the skills developed in EESS 211 and 213.

4 units, Spr (Diffenbaugh, N; Lambin, E; Field, C)

EESS 216. Terrestrial Biogeochemistry
(Same as BIO 216) Nutrient cycling and the regulation of primary and secondary production in terrestrial, freshwater, and marine ecosystems; land-water and biosphere-atmosphere interactions; global element cycles and their regulation; human effects on biogeochemical cycles. Prerequisite: graduate standing in science or engineering; consent of instructor for undergraduates or coterminal students.

3 units, Spr (Vitousek, P), alternate years, not given next year

EESS 217. Climate of the Cenozoic
For upper-division undergraduate and graduate students. The paleoclimate of the Cenozoic and how climate changes in the past link to the carbon cycle. Topics include long- and short-term records of climate on continents and oceans, evidence for and causes of hyperthermal events, how the Earth's climate has responded in increased carbon dioxide in the atmosphere. Guest speakers, student presentations.

3 units, not given this year

EESS 220. Physical Hydrogeology
(Same as CEE 260A) (Formerly GES 230.) Theory of underground water occurrence and flow, analysis of field data and aquifer tests, geologic groundwater environments, solution of field problems,

and groundwater modeling. Introduction to groundwater contaminant transport and unsaturated flow. Lab. Prerequisite: elementary calculus.

4 units, Aut (Gorelick, S)

EESS 221. Contaminant Hydrogeology

(Same as CEE 260C) (Formerly GES 231.) For earth scientists and engineers. Environmental and water resource problems involving contaminated groundwater. The processes affecting contaminant migration through porous media including interactions between dissolved substances and solid media. Conceptual and quantitative treatment of advective-dispersive transport with reacting solutes. Predictive models of contaminant behavior controlled by local equilibrium and kinetics. Modern methods of contaminant transport simulation and optimal aquifer remediation. Prerequisite: GES 230 or CEE 260A or equivalent.

4 units, Spr (Gorelick, S)

EESS 231. Communicating Environmental Research Using Narratives and Stories

(Same as EESS 131, EARTHSYS 131, EARTHSYS 231) Creative strategies by which earth scientists can overcome impediments to scientific literacy. Construction of stories and narratives out of research. The role of imagination and cognitive perception in environmental issues. Barriers and problems that arise in risk and science awareness. Connections between environmentalism and environmental science. Environmental issues in fictional narratives. The responsible function for earth scientists in public debates. Reflections on the role of science in current and future issues likely to involve members outside of science. Priority given to students seeking degrees in the School of Earth Sciences.

1 unit, not given this year

EESS 234. Stable Isotopes in Biogeochemistry

(Same as EESS 134, EARTHSYS 134, EARTHSYS 234) Light stable isotopes and their application to geological, ecological, and environmental problems. Isotopic systematics of hydrogen, carbon, nitrogen, oxygen, and sulfur; chemical and biogenic fractionation of light isotopes in the atmosphere, hydrosphere, and rocks and minerals.

3 units, Spr (Chamberlain, P)

EESS 240. Advanced Oceanography

For upper-division undergraduates and graduate students in the earth, biologic, and environmental sciences. Topical issues in marine science/oceanography. Topics vary each year following or anticipating research trends in oceanographic research. Focus is on links between the circulation and physics of the ocean with climate in the N. Pacific region, and marine ecologic responses. Participation by marine scientists from research groups and organizations including the Monterey Bay Aquarium Research Institute.

3 units, Aut (Dunbar, R)

EESS 242. Antarctic Marine Geology

(Same as EARTHSYS 272) For upper-division undergraduates and graduate students. Intermediate and advanced topics in marine geology and geophysics, focusing on examples from the Antarctic continental margin and adjacent Southern Ocean. Topics: glaciers, icebergs, and sea ice as geologic agents (glacial and glacial marine sedimentology, Southern Ocean current systems and deep ocean sedimentation), Antarctic biostratigraphy and chronostratigraphy (continental margin evolution). Students interpret seismic lines and sediment core/well log data. Examples from a recent scientific drilling expedition to Prydz Bay, Antarctica. Up to two students may have an opportunity to study at sea in Antarctica during Winter Quarter.

3 units, Aut (Staff), alternate years, not given this year

EESS 243. Marine Biogeochemistry

(Same as EESS 143, EARTHSYS 143, EARTHSYS 243) (Graduate students register for 243.) Processes that control the mean concentration and distribution of biologically utilized elements and compounds in the ocean. Processes at the air-sea interface, production of organic matter in the upper ocean, remineralization of organic matter in the water column, and processing of organic matter in the sediments. Cycles of carbon, oxygen, and nutrients; the role of the ocean carbon cycle in interannual to decadal variability, paleoclimatology, and the anthropogenic carbon budget.

3-4 units, alternate years, not given this year

EESS 244. Marine Ecosystem Modeling

Practical background necessary to construct and implement a 2-dimensional (space and time) numerical model of a simple marine ecosystem. Computer programming, model design and parameterization, and model evaluation. Students develop and refine their own multi-component marine ecosystem model.

3 units, Aut (Arrigo, K)

EESS 245. Advanced Biological Oceanography

For upper-division undergraduates and graduate students. Themes vary annually but include topics such as marine bio-optics, marine ecological modeling, and phytoplankton primary production. Hands-on laboratory and computer activities, and field trips into local waters. May be repeated for credit.

3-4 units, not given this year

EESS 246A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation

(Same as EARTHSYS 146A, EARTHSYS 246A, EESS 146A, GEOPHYS 146A, GEOPHYS 246A) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

3 units, Win (Thomas, L; Diffenbaugh, N)

EESS 246B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation

(Same as EARTHSYS 146B, EARTHSYS 246B, EESS 146B, GEOPHYS 146B, GEOPHYS 246B) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. Structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic circumpolar current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A/246A or CEE 164/262D or consent of instructor.

3 units, Spr (Thomas, L; Diffenbaugh, N)

EESS 250. Elkhorn Slough Microbiology

(Formerly GES 270.) The microbial ecology and biogeochemistry of Elkhorn Slough, an agriculturally-impacted coastal estuary draining into Monterey Bay. The diversity of microbial lifestyles associated with estuarine physical/chemical gradients, and the influence of microbial activity on the geochemistry of the Slough, including the cycling of carbon, nitrogen, sulfur, and metals. Labs and field work. Location: Hopkins Marine Station.

3 units, Sum (Staff)

EESS 256. Soil and Water Chemistry

(Same as EESS 156, EARTHSYS 156, EARTHSYS 256) (Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology.

1-4 units, alternate years, not given this year

EESS 258. Geomicrobiology

(Same as EESS 158, EARTHSYS 158, EARTHSYS 258) How microorganisms shape the geochemistry of the Earth's crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

3 units, given next year

EESS 259. Environmental Microbial Genomics
The application of molecular and environmental genomic approaches to the study of biogeochemically-important microorganisms in the environment without the need for cultivation. Emphasis is on genomic analysis of microorganisms by direct extraction and cloning of DNA from natural microbial assemblages. Topics include microbial energy generation and nutrient cycling, genome structure, gene function, physiology, phylogenetic and functional diversity, evolution, and population dynamics of uncultured communities.
1-3 units, Win (Francis, C)

EESS 263. Topics in Advanced Geostatistics
(Same as ENERGY 242) Conditional expectation theory and projections in Hilbert spaces; parametric versus non-parametric geostatistics; Boolean, Gaussian, fractal, indicator, and annealing approaches to stochastic imaging; multiple point statistics inference and reproduction; neural net geostatistics; Bayesian methods for data integration; techniques for upscaling hydrodynamic properties. May be repeated for credit. Prerequisites: 240, advanced calculus, C++/Fortran.
3-4 units, not given this year

EESS 273. Aquaculture and the Environment: Science, History, and Policy
(Same as EARTHSYS 173, EARTHSYS 273, EESS 173) Can aquaculture feed billions of people without degrading aquatic ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical case studies (salmon farming in Chile, tuna ranching in the Mediterranean, shrimp farming in Vietnam), current federal/state legislation. Field trip to aquaculture farm and guest lectures.
3 units, alternate years, not given this year

EESS 280. Fundamentals of Sustainable Agriculture
(Same as EARTHSYS 180, EARTHSYS 280, EESS 180) Ecological, economic, and social dimensions of sustainable agriculture in the context of a growing world population. Focus is on management and technological approaches, and historical content of agricultural growth and change, organic agriculture, soil and water resource management, nutrient and pest management, biotechnology, ecosystem services, and climate change.
3 units, not given this year

EESS 281. Concepts of Urban Agriculture
(Same as EARTHSYS 181, EARTHSYS 281, EESS 181) For advanced undergraduates and graduate students from all fields. Seminar. Current status of and potential for global urban agriculture. Topics include: environmental and economic dimensions of urban food production and sourcing; city policy and land-use planning; and an ecosystem services approach to urban agriculture. Developed and developing world contexts. Two field trips to nearby cities; guest lectures; case studies; group projects. Enrollment is limited.
3 units, not given this year

EESS 282. Current Issues in Sustainable Agriculture
(Same as EARTHSYS 182, EARTHSYS 282, EESS 182) Sustainability and ethics of animal production in the U.S. Demystification of the marketing of agricultural products. The past, present, and future of small family farms. Farm labor issues. Students lead discussions and write response papers.
2 units, Win (Wiederkehr, S)

EESS 283. Food Matters: Agriculture in Film
(Same as EARTHSYS 183, EARTHSYS 283, EESS 183) Film series presenting historical and contemporary issues dealing with food and agriculture across the globe. Students discuss reactions and thoughts in a round table format. May be repeated for credit.
1 unit, Win (Wiederkehr, S)

EESS 284. Climate and Agriculture
(Same as EARTHSYS 184, EARTHSYS 284, EESS 184) The effects of climate change on global food and agricultural systems. Climate assessment and socioeconomic modeling approaches to quantify the impacts of climate on agro-ecosystems and society. Enrollment limited to 25; priority to graduate students, seniors, and juniors. Prerequisites: ECON 106/206.
3-4 units, alternate years, not given this year

EESS 301. Topics in Environmental Earth System Science
Current topics, issues, and research related to interactions that link the oceans, atmosphere, land surfaces and freshwater systems. May be repeated for credit.
1 unit, Aut (Lobell, D), Win (Staff), Spr (Staff)

EESS 322A. Seminar in Hydrogeology
Current topics. May be repeated for credit. Autumn Quarter has open enrollment, For Winter Quarter, consent of instructor is required.
1 unit, not given this year

EESS 322B. Seminar in Hydrogeology
Current topics. May be repeated for credit. Prerequisite: consent of instructor.
1 unit, Win (Gorelick, S)

EESS 330. Advanced Topics in Hydrogeology
Topics: questioning classic explanations of physical processes; coupled physical, chemical, and biological processes affecting heat and solute transport. May be repeated for credit.
1-2 units, Win (Staff)

EESS 342. Geostatistics
Classic results and current research. Topics based on interest and timeliness. May be repeated for credit.
1-2 units, Aut (Staff)

EESS 342B. Geostatistics
Classic results and current research. Topics based on interest and timeliness. May be repeated for credit.
1-2 units, not given this year

EESS 342C. Geostatistics
Classic results and current research. Topics based on interest and timeliness. May be repeated for credit.
1-2 units, not given this year

EESS 363F. Oceanic Fluid Dynamics
(Same as CEE 363F) Dynamics of rotating stratified fluids with application to oceanic flows. Topics include: inertia-gravity waves; geostrophic and cyclogeostrophic balance; vorticity and potential vorticity dynamics; quasi-geostrophic motions; planetary and topographic Rossby waves; inertial, symmetric, barotropic and baroclinic instability; Ekman layers; and the frictional spin-down of geostrophic flows. Prerequisite: CEE 262A or a graduate class in fluid mechanics.
3 units, Spr (Thomas, L)

EESS 385. Practical Experience in the Geosciences
On-the-job training, that may include summer internship, in applied aspects of the geosciences, and technical, organizational, and communication dimensions. Meets USCIS requirements for F-1 curricular practical training. May be repeated for credit.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EESS 398. Current Topics in Ecosystem Modeling
1-2 units, not given this year

EESS 400. Graduate Research
May be repeated for credit. Prerequisite: consent of instructor.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EESS 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EESS 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ETHICS IN SOCIETY (ETHICSOC) COURSES

UNDERGRADUATE COURSES IN ETHICS IN SOCIETY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ETHICSOC 10. Ethics in Theory and Practice
(Same as PHIL 22) Weekly talks by Stanford faculty on important questions of ethics that arise in private and public life. These questions arise in all disciplines and are central to many of the main problems confronting humanity today. Such questions include: what is our obligation to future generations; are there any human

rights; what is the appropriate role of religion in politics; is capital punishment ever justified?; what are the ethical obligations of a researcher; should the university teach moral values?; what principles of justice should govern the distribution of K-12 education?

1 unit, Aut (Reich, R), Win (Reich, R), Spr (Reich, R)

ETHICSOC 20. Introduction to Moral Philosophy

(Same as PHIL 2) What is the basis of moral judgment? What makes right actions right and wrong actions wrong? What makes a state of affairs good or worth promoting? What is it to have a good or virtuous character? Answers to classic questions in ethics through the works of traditional and contemporary authors. Fulfills the Philosophy ethical reasoning requirement. GER:DB-Hum

5 units, Aut (Schapiro, T)

ETHICSOC 132X. Theories of Civil Society, Philanthropy, and the Nonprofit Sector

(Same as POLISCI 132S, POLISCI 132X, POLISCI 332S) Students taking this course for a WIM, register for POLISCI 132S. The historical development and modern structure of civil society emphasizing philanthropy and the nonprofit sector. What is the basis of private action for the public good? How are charitable dollars distributed and what role do nonprofit organizations and philanthropic dollars play in a modern democracy? How do nongovernmental organizations operate domestically and globally? Readings in political philosophy, political sociology, and public policy.

5 units, Spr (Sievers, B; Reich, R)

ETHICSOC 133. Ethics and Politics of Public Service

(Same as HUMBIO 178, PHIL 175A, PHIL 275A, POLISCI 133, PUBLPOL 103D) Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. GER:DB-SocSci

5 units, not given this year

ETHICSOC 136R. Introduction to Global Justice

(Same as INTNLREL 136R, PHIL 76, POLISCI 136R, POLISCI 336) Recent work in political theory on global justice. Topics include global poverty, human rights, fair trade, immigration, climate change. Do developed countries have a duty to aid developing countries? Do rich countries have the right to close their borders to economic immigrants? When is humanitarian intervention justified? Readings include Charles Beitz, Thomas Pogge, John Rawls.

5 units, Spr (Oberman, K)

ETHICSOC 137R. Justice at Home and Abroad: Civil Rights in the 21st Century

(Same as EDUC 261X, POLISCI 137R, POLISCI 337R) Focus is on theories of justice. How the core ideals of freedom, equality, and security animate theories which John Rawls considers the first virtue of social institutions. Topics include the U.S. Constitution as a legal framework for the operation of these ideals, civil rights legislation and litigation as the arena of tensions between those ideals, and how ideas of justice function both at home and abroad to impact civil liberties in today's war on terror.

5 units, Win (Reich, R; Steyer, J; Karlan, P)

ETHICSOC 157. Moral Foundations of Capitalism

Preference to sophomores and juniors. An interdisciplinary examination of alternative and largely incompatible 20th-century defenses of the morality of capitalism, with a concentration on economic, objectivist, and Christian arguments, considered historically, economically, politically, and philosophically. Readings from Adam Smith, Karl Marx, authors for and against slavery, John Maynard Keynes, Theodore Roosevelt, Herbert Hoover, Austrian School economists, Milton Friedman, Dinesh D'Souza, and George Gilder. A reading of Ayn Rand's Atlas Shrugged. A concluding application of studied theories to a few recent public policy issues. GER:DB-Hum

5 units, Win (McCaskey, J)

ETHICSOC 170. Ethical Theory

(Same as PHIL 170) Major strands in contemporary ethical theory. Readings include Bentham, Mill, Kant, and contemporary authors. GER:DB-Hum, EC-EthicReas

4 units, Spr (Schapiro, T)

ETHICSOC 171. Justice

(Same as IPS 208, PHIL 171, PHIL 271, POLISCI 3P, POLISCI 136S) Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include protecting religious liberty, financing schools and elections, regulating markets, assuring access to health care, and providing affirmative action and group rights. Issues of global justice including human rights and global inequality. GER:DB-Hum, EC-EthicReas

4-5 units, Aut (Cohen, J)

ETHICSOC 174A. Moral Limits of the Market

(Same as PHIL 174A, PHIL 274A) Morally controversial uses of markets and market reasoning in areas such as organ sales, procreation, education, and child labor. Would a market for organ donation make saving lives more efficient; if it did, would it thereby be justified? Should a nation be permitted to buy the right to pollute? Readings include Walzer, Arrow, Rawls, Sen, Frey, Titmuss, and empirical cases. GER:DB-Hum

4 units, not given this year

ETHICSOC 175M. The Ethics of War

(Same as PHIL 90B) Issues both in contemporary just war theory and political philosophy. Relevant questions include: Can conscription ever be justified? If not, is there anything wrong with targeting poor people as part of efforts to recruit a 'volunteer' military? If, during war itself, combatants act in ways prohibited by the moral requirements governing war's conduct, then does it make any moral difference whether they were acting as ordered? And how do we identify these moral requirements in the first place? For example, what distinguishes a legitimate target from an illegitimate one? What determines whether military action is disproportionate? What, if anything, is morally distinctive about terrorism? Explores the complexities behind these questions and others, with a view to evaluating the potential answers to them.

4 units, Win (Halliday, D)

ETHICSOC 177M. Human Rights and Moral Questions

(Same as ETHICSOC 277M, PHIL 177M, PHIL 277M) The proliferation of human rights in the discourse of international justice has raised questions in both moral and legal theory such as: What are human rights? How should they be conceptualized? Who ought to bear the duties associated with them? Can their protection justify military interventions into sovereign states? Course focus is on topics in moral and legal theory surrounding human rights including: the question of what these rights are; the various substantive moral justifications for the protection of human rights; the moral issues raised by the dominance of human rights in international law and relations; can any rights be universal? How are these rights to be framed in the light of crosscultural values and claims about cultural dominance? The connections between these questions.

5 units, Aut (Thomas, J)

ETHICSOC 178M. ENVIRONMENTAL JUSTICE

(Same as ETHICSOC 278M, PHIL 178M, PHIL 278M, POLISCI 134L) Explores the normative questions that arise in environmental policy debates, including arguments over pollution permit markets, conservation regulations, and global warming mitigation efforts. What are the morally relevant ways in which the environment is different from other economic resources? How should the environment be valued? What are our obligations to conserve for future generations? How should the burdens of conservation be distributed? Engages with a variety of philosophical traditions including utilitarianism, deep ecology, liberalism, and communitarianism.

4 units, Win (Staff)

ETHICSOC 185M. Contemporary Moral Problems

(Same as PHIL 72) As individuals and as members of societies, we make choices that can be evaluated from a moral point of view. What choices should we make, and how should we justify these choices? For example, can we justify buying expensive sunglasses or MP3 players when the money could instead be given to provide others with basic nutrition? Does a preference for the taste of meat

over that of other proteins justify killing animals? Focus is on our obligations to aid, and to avoid harming. Topics include aid and its allocation, abortion, animal rights and euthanasia. GER:EC-EthicReas

4 units, Win (Staff)

ETHICSOC 190. Ethics in Society Honors Seminar
(Same as PHIL 178) For students planning honors in Ethics in Society. Methods of research. Students present issues of public and personal morality; topics chosen with advice of instructor.

3 units, Win (Reich, R)

ETHICSOC 198. Community Engagement Internship
Restricted to Ethics in Society minors with the citizenship option. Opportunities for students to engage in community work via the Haas Center for Public Service. Students work with Haas Center staff to design an internship involving community-based research or supported by a Haas Center fellowship or community service work/study, or to serve for an academic year as a tutor in one of the Haas Center's several K-12 programs in East Palo Alto. May be repeated for credit.

3-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ETHICSOC 199. Independent Studies in Ethics in Society
May be repeated for credit.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ETHICSOC 200A. Ethics in Society Honors Thesis
Limited to Ethics in Society honors students, who must enroll once in A and once in B.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ETHICSOC 200B. Ethics in Society Honors Thesis
Limited to Ethics in Society honors students, who must enroll once in A and once in B.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ETHICSOC 277M. Human Rights and Moral Questions
(Same as ETHICSOC 177M, PHIL 177M, PHIL 277M) The proliferation of human rights in the discourse of international justice has raised questions in both moral and legal theory such as: What are human rights? How should they be conceptualized? Who ought to bear the duties associated with them? Can their protection justify military interventions into sovereign states? Course focus is on topics in moral and legal theory surrounding human rights including: the question of what these rights are; the various substantive moral justifications for the protection of human rights; the moral issues raised by the dominance of human rights in international law and relations; can any rights be universal? How are these rights to be framed in the light of crosscultural values and claims about cultural dominance? The connections between these questions.

5 units, Aut (Thomas, J)

ETHICSOC 278M. ENVIRONMENTAL JUSTICE
(Same as ETHICSOC 178M, PHIL 178M, PHIL 278M, POLISCI 134L) Explores the normative questions that arise in environmental policy debates, including arguments over pollution permit markets, conservation regulations, and global warming mitigation efforts. What are the morally relevant ways in which the environment is different from other economic resources? How should the environment be valued? What are our obligations to conserve for future generations? How should the burdens of conservation be distributed? Engages with a variety of philosophical traditions including utilitarianism, deep ecology, liberalism, and communitarianism.

4 units, Win (Staff)

FEMINIST STUDIES (FEMST) COURSES

UNDERGRADUATE COURSES IN FEMINIST STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

FEMST 101. Introduction to Feminist Studies
(Same as CSRE 108, HISTORY 107) Introduction to interdisciplinary feminist scholarship, which seeks to understand the creation, perpetuation, and critiques of gender inequalities. Topics include the historical emergence of feminist politics and contemporary analysis of work and family, health and sexuality, creativity, and politics. Close attention to the intersections of race, gender, ethnicity, and sexuality and to international, as well as U.S., perspectives. Students learn to think critically about gender in the past, present, and future.

5 units, Aut (Freedman, E)

FEMST 103. Feminist Theories and Methods Across the Disciplines
(Same as FEMST 203, PHIL 153, PHIL 253) The interdisciplinary foundations of feminist thought. The nature of disciplines and of interdisciplinary work. Challenges of feminism for scholarship and research. GER:EC-Gender

4-5 units, Win (Longino, H)

FEMST 104A. Junior Seminar and Practicum
Preference to and required of Feminist Studies majors; others require consent of instuctor. Feminist experiential learning projects related to critical studies in gender and sexuality. Identifying goals, grant proposal writing, and negotiating ethical issues in feminist praxis. Developing the relationship between potential projects and their academic focus in the major.

1 unit, Win (Coll, K)

FEMST 104B. Senior Seminar and Practicum
Required for Feminist Studies majors. Non-majors enrolled with consent of instructor. Students develop oral reports on their practicum and its relationship to their academic work, submit a report draft and revised written analysis of the practicum, and discuss applications of feminist scholarship. May be repeated once for credit.

2 units, Aut (Coll, K)

FEMST 105. Honors Work
(Staff)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

FEMST 108. Internship in Feminist Studies
For non-majors. Supervised field, community, or lab experience in law offices, medical research and labs, social service agencies, legislative and other public offices, or local and national organizations that address issues related to gender and/or sexuality. One unit represents approximately three hours work per week. Required paper. May be repeated for credit. Service Learning Course (certified by Haas Center). Prerequisites: course in Feminist Studies, consent of program office, written consent of faculty sponsor, application.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

FEMST 120. Introduction to Queer Studies
A historical overview of key theoretical developments in queer studies. Multidisciplinary perspective from a social constructionist approach to gender and sexual identity, which not only affects understandings of queer people, but straight as well. How queer theory has been influential across disciplines and in popular culture, refining not only an understanding of gender and sexuality but also providing new critical perspectives for social theory more broadly. Engagement with contemporary debates and controversies in the public domain. GER:EC-Gender

4-5 units, Spr (Staff)

FEMST 138. Violence Against Women: Theory, Issues, and Prevention
Interdisciplinary feminist perspective. Causes of abuse, approaches to ending violence against women, and its relationship to other forms of oppression such as racism, economic exploitation, heterosexism, and social class. Institutional barriers maintaining this violence; individual, community, political, legal, national, and global dimensions of possible solutions. Limited enrollment. Prerequisite: consent of instructor.

2-4 units, Aut (Baran, N)

FEMST 139. Rereading Judaism in Light of Feminism
During the past three decades, Jewish feminists have asked new questions of traditional rabbinic texts, Jewish law, history, and religious life and thought. Analysis of the legal and narrative texts, rituals, theology, and community to better understand contemporary Jewish life as influenced by feminism. GER:EC-Gender

4-5 units, given next year

FEMST 140C. Gender Transgression
Exploration of gender as a category and (compulsory) identification. What happens when people challenge or refuse gender categories and stereotypes? Participating in conversations initiated in queer and feminist theory, anthropology, history, science, and popular culture, we will examine how gender works and consider the experiences, writing, and art of people who challenge it. Course culminates in an ethnographic research project.
4-5 units, Aut (Staff)

FEMST 140D. LGBT History in the United States
LGBT social, cultural, and political history in the U.S. How categories of sexuality have changed over time, with emphasis on the relationship among homosexuality, heterosexuality, and transgenderism. How the intersections of race, class, and sexuality influenced the constitution of these categories and the politics of social relations. Historical and literary sources used to examine changes in LGBT experiences and identities, primarily in the 20th century.
4-5 units, Spr (Staff)

FEMST 153. Women and the Creative Imagination
(Same as FEMST 253) Interdisciplinary. The lives of women artists in different cultures and generations. Students write about art forms, the role of artists in the academy, and their social responsibilities. Similarities and differences among artists. GER:DB-Hum, EC-Gender
4-5 units, Aut (Miner, V)

FEMST 166. Feminist Theories of Knowledge
(Same as PHIL 184F, PHIL 284F) Feminist critique of traditional approaches in epistemology and alternative feminist approaches to such topics as reason and rationality, objectivity, experience, truth, the knowing subject, knowledge and values, knowledge and power. GER:DB-Hum, EC-Gender
4 units, not given this year

FEMST 188N. Imagining Women: Writers in Print and in Person
(Stanford Introductory Seminar) Gender roles, gender relations, and sexual identity explored in contemporary literature and conversation with guest authors. Poetry and narrative examining relationships between race and gender set in 19th-21st centuries in the Phillippines, Jamaica, Japan, China, and various parts of the U.S. Expository writing and oral skills are emphasized. Writing experience not necessary. GER:DB-Hum, EC-Gender
4-5 units, Win (Miner, V)

FEMST 191Q. Writing Women's Lives
(Stanford Introductory Seminar) Creative writing through dialogue focusing on prose about the lives of women in different cultures and generations. Novels, short stories, and micro-narrative including fiction and memoir. Students produce work using research, memory, imagination, and metaphor.
2 units, Aut (Miner, V)

FEMST 195. Directed Reading
May be repeated for credit. (Staff)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

FEMST 260. Seminar in Women's Health: Women and Disabilities
(Same as FEMST 360) Explores visible and invisible disabilities, women's psychological as well as physical health, issues of access, caretaking, self-definition and the diversity of disabled women's identities. Prerequisite: consent of instructor. GER:DB-SocSci, EC-Gender
5 units, Spr (Krieger, S)

GRADUATE COURSES IN FEMINIST STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

FEMST 203. Feminist Theories and Methods Across the Disciplines
(Same as FEMST 103, PHIL 153, PHIL 253) The interdisciplinary foundations of feminist thought. The nature of disciplines and of interdisciplinary work. Challenges of feminism for scholarship and research.
4-5 units, Win (Longino, H)

FEMST 253. Women and the Creative Imagination
(Same as FEMST 153) Interdisciplinary. The lives of women artists in different cultures and generations. Students write about art forms, the role of artists in the academy, and their social responsibilities. Similarities and differences among artists.
4-5 units, Aut (Miner, V)

FEMST 360. Seminar in Women's Health: Women and Disabilities
(Same as FEMST 260) Explores visible and invisible disabilities, women's psychological as well as physical health, issues of access, caretaking, self-definition and the diversity of disabled women's identities. Prerequisite: consent of instructor.
5 units, Spr (Krieger, S)

FILM STUDIES (FILMSTUD) COURSES

UNDERGRADUATE COURSES IN FILM STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

FILMSTUD 4. Introduction to Film Study
Formal, historical, and cultural issues in the study of film. Classical narrative cinema compared with alternative narrative structures, documentary films, and experimental cinematic forms. Issues of cinematic language and visual perception, and representations of gender, ethnicity, and sexuality. Aesthetic and conceptual analytic skills with relevance to cinema. GER:DB-Hum
5 units, Aut (Bukatman, S)

FILMSTUD 6. Introduction to Digital Media
Media beyond the horizon of cinema and television present unique problems of definition and analysis. Taking the digital (information represented as discrete values) as a reasonable approximation of the mechanics and fantasies of computation, course surveys theoretical approaches to code, networks, and cyberculture. Taking familiar formations like web sites and video games as objects by which to learn how thinkers have understood and envisioned emerging media from the mid-20th century to the present. Students to develop own methodological tools for becoming more critical users of digital media.
5 units, not given this year

FILMSTUD 7. Introduction to Television Studies
Television is arguably the most influential and ubiquitous mass medium of the last half century. Because of its familiarity and popularity, it is also often the medium most overlooked, dismissed, and maligned. Drawing from the history of television and of television scholarship, this course builds a theoretical framework for understanding this pivotal cultural form. Course covers interdisciplinary approaches to studying TV texts, TV audiences, and TV industries, including questions of the boundaries of television (from independent and avant-garde video to convergence). In the process students develop methodological tools as critical television viewers.
5 units, Aut (Russo, J)

FILMSTUD 100A. History of World Cinema I, 1895-1929
(Same as FILMSTUD 300A) From cinema's precursors to the advent of synchronized sound. GER:DB-Hum
4 units, Aut (Staff)

FILMSTUD 100B. History of World Cinema II, 1930-1959
(Same as FILMSTUD 300B) The impact of sound to the dissolution of Hollywood's studio system. GER:DB-Hum
4 units, Win (Staff)

FILMSTUD 100C. History of World Cinema III, 1960-Present
(Same as FILMSTUD 300C) From the rise of the French New Wave to the present. GER:DB-Hum
4 units, not given this year

FILMSTUD 101. Fundamentals of Cinematic Analysis
(Same as FILMSTUD 301) The close analysis of film. Emphasis is on formal and narrative techniques in structure and style, and detailed readings of brief sequences. Elements such as cinematography, mise-en-scène, composition, sound, and performance. Films

from various historical periods, national cinemas, directors, and genres. Prerequisite: FILMSTUD 4 or equivalent. Recommended: ARTHIST 1 or FILMSTUD 102. GER:DB-Hum, WIM

4 units, Win (Staff)

FILMSTUD 102. Theories of the Moving Image

(Same as FILMSTUD 302) Major theoretical arguments and debates about cinema: realism,formalism, poststructuralism, feminism, postmodernism, and phenomenology. Prerequisites: ARTHIST 1, FILMSTUD 4. GER:DB-Hum

4 units, Spr (Levi, P)

FILMSTUD 111. The Body in American Genre Film: From Chaplin to The Matrix

(Same as FILMSTUD 311) The American genre film as a mass form that shares elements with a carnivalesque, folk culture such as a rejection of politeness and piety, and an emphasis on the physical. Genres include comedy, western, war, science fiction, musical, horror, melodrama, gangster, and cult, exploitation, and blaxploitation films. The place of the body onscreen. How does the body exist in relation to the world, other bodies, and the act of perception? What meaning does bodily movement have in relation to narrative? GER:DB-Hum

4 units, not given this year

FILMSTUD 113. Queer Film and Media

(Same as FILMSTUD 313) According to identity politics, visibility is a key tactic in the fight for societal acceptance and civil rights. But how is sexuality visible? Course addresses this question by analyzing queer film and media since the 1970s, focusing primarily on explicit representations of GLBTQ characters and communities in US cinema, television, and cyberculture. Themes include positive images, AIDS, coming out, celebrity, and the gay market. Through queer theory and criticism, analysis of the contested relationships between spectators and texts, identity and commodities, realism and fantasy, activism and entertainment, desire and politics.

4 units, Win (Russo, J)

FILMSTUD 114. Comics

(Same as FILMSTUD 314) The modern medium of comics, a history that spans 150 years. The flexibility of the medium encountered through the genres of humorous and dramatic comic strips, superheroes, undergrounds, independents, journalism, and autobiography. Innovative creators including McCay, Kirby, Barry, Ware, and critical writings including McCloud, Eisner, Groenstee. Topics include text/image relations, panel-to-panel relations, the page, caricature, sequence, seriality, comics in the context of the fine arts, and relations to other media. GER:DB-Hum

4 units, not given this year

FILMSTUD 115. Documentary Issues and Traditions

(Same as FILMSTUD 315) Issues include objectivity/subjectivity, ethics, censorship, representation, reflexivity, responsibility to the audience, and authorial voice. Parallel focus on form and content. GER:DB-SocSci

4 units, not given this year

FILMSTUD 116. International Documentary

(Same as FILMSTUD 316) Historical, aesthetic, and formal developments of documentary through nonfiction films in Europe, Asia, Latin America, and Africa. GER:DB-Hum

4 units, Aut (Meltzer, J)

FILMSTUD 122. Kubrick

(Same as FILMSTUD 322) Thematic and stylistic richness of the cinema of Stanley Kubrick. Methodological approaches to the subject. Emphasis is on questions of close textual analysis, authorship and genre, and critique of ideology. Focus is on A Clockwork Orange. Other films include: 2001: A Space Odyssey, Barry Lyndon, Killer's Kiss, and The Shining.

4 units, not given this year

FILMSTUD 132. East Asian Cinema

(Same as FILMSTUD 332) Social, historical, and aesthetic dimensions of the cinemas of Japan, Hong Kong, Taiwan, mainland China, and Korea. Topics such as nation and gender, form and genre, and local and transnational conditions of practice and reception. Screenings include popular and art films from the silent to contemporary eras, including, Zhang Yimou, Wong Kar-wai, Hou Hsiao-hsien, Ozu Yasujiro, Kurosawa Akira, and Im Kwon-taek.

4 units, not given this year

FILMSTUD 133A. Latin American Cinema

(Same as FILMSTUD 333A) Emphasis is on Mexico, Brazil, Argentina, and Cuba. How filmmakers represent and sometimes rewrite key moments in national history. When have filmmakers constructed a dialogue with older cinematic traditions versus breaking from past practices? How have political concerns shaped cinematic practices. Directors include Fernando de Fuentes, Luis Buñuel, Leopoldo Torre Nilsson, Patricio Guzmán, Humberto Solas, Nelson Pereira dos Santos, Lucrecia Martel, and Héctor Babenco.

4 units, not given this year

FILMSTUD 134A. Poetic Cinema: The Soviet School

(Same as FILMSTUD 334A) The poetic or archaic school of Soviet cinema which emerged primarily in the non-Russian Soviet Republics in the 60s and 70s and traced its aesthetic to the films of Aleksandr Dovzhenko. Films by Dovzhenko, Andrei Tarkovsky, Sergei Parajanov, Tengiz Abuladze, and Otar Ioseliani. GER:DB-Hum

4 units, not given this year

FILMSTUD 135. History of Video Art

(Same as FILMSTUD 335) Focus is on artists who have contributed to the history of video art. Topics include: theoretical analyses of the medium; challenges to the performer-spectator dynamic (Dan Graham and Vito Acconci); feminist culture critique (Martha Rosler and Dara Birnbaum); closed-circuit installations and performances (Peter Campus and Joan Jonas); combinations of linguistic and bodily investigations (Bruce Nauman and Gary Hill); representations of girl culture (Sadie Benning); guerrilla television (TVTV and Ant Farm); image processing (Woody and Steina Vasulka); the turn toward cinematic installations (Stan Douglas and Douglas Gordon); and more recent trends (Cory Arcangel and Ryan Trecartin).

4 units, not given this year

FILMSTUD 136. Gender and Sexuality in Chinese Cinema

(Same as FILMSTUD 336) Representations of gender and sexuality in the cinemas of China, Taiwan, and Hong Kong, covering key periods and genres such as the golden age of Shanghai film, Hong Kong action pictures, opera films, post-socialist art films, and new queer cinema. Historical and contemporary perspectives on cinematic constructions of femininity, masculinity, and sexuality as they relate to issues of nationalism, modernity, globalization, and feminist and queer politics. Weekly screening required. GER:EC-Gender

4 units, not given this year

FILMSTUD 137. European New Wave Cinemas

(Same as FILMSTUD 337) an exploration of the major currents, movements, and schools in the European cinema of the post-war era from the late 1940s to the 1970s. A mixture of historical, aesthetic, and theoretical concerns will inform the study of French New Wave, British Free Cinema, Italian cinema in the 1960s, the New German Cinema of the 1970s, and more.

4 units, Win (Levi, P)

FILMSTUD 145. Politics and Aesthetics in East European Cinema

(Same as FILMSTUD 345) From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica. GER:DB-Hum

4 units, not given this year

FILMSTUD 150. Cinema and the City

(Same as FILMSTUD 350) Utopian built environments of vast perceptual and experiential richness in the cinema and city. Changing understandings of urban space in film. The cinematic city as an arena of social control, social liberation, collective memory, and complex experience. Films from international narrative traditions, industrial films, experimental cinema, documentaries, and musical sequences. Recommended: 4 or equivalent. GER:DB-Hum, EC-GlobalCom

4 units, not given this year

FILMSTUD 153A. Transmedia TV

(Same as FILMSTUD 353A) Beginning from theoretical questions about the structure of media texts and their production, distribu-

tion, reception, and regulation, this course analyzes how the collision of broadcast and broadband is reshaping the media landscape. Course investigates the definition of television and its articulation across multiple platforms, including streaming video, online tie-ins, fan remixes, and web shows. Such convergence involves both intensified corporate consolidation and intensified viewer participation. As the boundary between producers and consumers of entertainment breaks down, course explores renegotiating the possibilities of the TV experience.

4 units, not given this year

FILMSTUD 156. Copy This Class (The Art of the Remix)
(Same as FILMSTUD 356) Mashups, sampling, parodies, fan video, DIY media, memes: we are in the midst of an explosion in vernacular creativity that appropriates, celebrates, critiques, and transforms commercial entertainment. New digital technologies and Internet platforms support a developing ecology of remix forms with unprecedented reach, richness, and cultural influence. At the same time, the value and legitimacy of this popular production is hotly contested on the basis of artistic merit, traditional literacies, and intellectual property. Course analyzes and engages in contemporary remix culture via precursors like appropriation art and hip hop, exploring theoretical questions about originality, capitalism, law, and digital media.

4 units, Spr (Russo, J)

FILMSTUD 167. The Hollywood Musical
(Same as AMSTUD 167, FILMSTUD 367) The sense of physical, emotional, aesthetic, and social liberation in this most colorful of film genres. Musicals as a place for the staging of issues of identity, including the impact of African American and Jewish culture, and issues of gay reception and interpretation. Attention to technologies of sound and color, the relation to vaudeville and Broadway, and ethnic and aesthetic diversity. Musicals as the epitome of filmic illusionism and the Hollywood studio system; the implications of their seduction of audiences; the meaning of spectacle, the centrality of performance. Busby Berkeley, Fred Astaire, Judy Garland, Bob Fosse, Stanley Donen, Gene Kelly, Vincente Minnelli.

4 units, Spr (Bukatman, S)

FILMSTUD 220. Being John Wayne
John Wayne's imposing corporeality and easy comportment combined to create an icon of masculinity, the American West, and America itself. Focus is on the films that contributed most to the establishment, maturation, and deconstruction of the iconography and mythology of the John Wayne character. The western and war film as genres; the crisis of and performance of masculinity in postwar culture; gender and sexuality in American national identity; relations among individualism, community, and the state; the Western and national memory; and patriotism and the Vietnam War.

5 units, not given this year

FILMSTUD 231. Contemporary Chinese Auteurs
New film cultures and movements in Taiwan, Hong Kong, and mainland China in the 80s. Key directors including Jia Zhangke, Wu Wenguang, Tsai Ming-liang, Hou Hsiao-hsien, Wong Kar-wai, Ann Hui. Topics include national cinema in the age of globalization, the evolving parameters of art cinema, and authorship.

5 units, not given this year

FILMSTUD 240A. History and Poetics of Cinematography
The history of cinematographic devices and styles through the work of such cinematographers as Billy Bitzer, Eduard Tisse, Greg Toland, Kazuo Miyagawa, John Alton, James Wong Howe, Sergei Urusevskii, Raoul Coutard, and Jack Cardiff.

5 units, not given this year

FILMSTUD 250A. Politics of Representation
Counterpoising viewpoints on media visibility drawn from identity politics and post-structuralist theory, course explores the questions entangled in negotiating a politics of representation: Can images show how things really are? Who is seen and who isn't? Can interpretation go beyond stereotypes? How are we situated as media content and consumers? Focusing primarily on gender, race, sexuality, and their intersections, course analyzes specific invocations of these categories in film, television, and cyberculture. Texts presenting opposing perspectives by theorists, critics, and activists to scaffold each example. Ultimate objective to explore how different media forms open or close possibilities for progressive representation, reception, and political change.

5 units, not given this year

FILMSTUD 251. Media in Transition
In a culture obsessed with new media, we are bombarded with hype about the present as a revolutionary phase of convergence. But everything old was once new, and pioneering media of the past also had to negotiate existing technologies, ideologies, and fantasies. This seminar is organized around case studies of transitional media moments from the long 20th century, including protocinema, ham radio, early television, hypertext, and digital film. In exploring the material and discursive aspects of remediation through theoretical, historical, and media archaeological readings, we will ask: what is a medium and how do they emerge and evolve.

5 units, Aut (Russo, J)

FILMSTUD 279. Asian American Experiences and Documentary Practice
(Same as ASNAMST 179, CSRE 179) Focus is on documentary cinema as a technology for understanding Asian Americans in the U.S. The social and historical context of the formation of the Asian American filmmaker, an authorial position that emerges in the 60s and 70s as part of the civil rights movement. Works include films by Loni Ding, Bob Nakamura and Curtis Choy; readings about the establishment of Asian American media industries and Asian American film criticism as a multi-genre. Social issue documentaries that represent new ethnographies of social experience including transnational adoption (Daughter From Danang), refugee experience (AKA Don Bonus), and sex tourism (The Women Outside). Readings include analyses of the implications of these works for cinema studies, ethnic studies, and the politics of film in everyday life. Experimental documentaries and their interrogation of the limits of the documentary form in representing identities and social problems. How does representation matter within and for Asian America in framing the complexities of race and racial identity? Screenings include works by Marlon Fuentes, Rea Tajiri and Trinh T. Minh-ha.

5 units, Spr (Shimizu, C)

FILMSTUD 290. Senior Seminar: Movies and Methods
Capstone course for majors. Topics vary year to year. Focus is on historiography and theory.

5 units, Spr (Levi, P)

FILMSTUD 297. Honors Thesis Writing
May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

FILMSTUD 299. Independent Study: Film and Media Studies
May be repeated for credit.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

GRADUATE COURSES IN FILM STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

FILMSTUD 300A. History of World Cinema I, 1895-1929
(Same as FILMSTUD 100A) From cinema's precursors to the advent of synchronized sound.

4 units, Aut (Staff)

FILMSTUD 300B. History of World Cinema II, 1930-1959
(Same as FILMSTUD 100B) The impact of sound to the dissolution of Hollywood's studio system.

4 units, Win (Staff)

4 units, not given this year

FILMSTUD 336. Gender and Sexuality in Chinese Cinema
(Same as FILMSTUD 136) Representations of gender and sexuality in the cinemas of China, Taiwan, and Hong Kong, covering key periods and genres such as the golden age of Shanghai film, Hong Kong action pictures, opera films, post-socialist art films, and new queer cinema. Historical and contemporary perspectives on cinematic constructions of femininity, masculinity, and sexuality as they relate to issues of nationalism, modernity, globalization, and feminist and queer politics. Weekly screening required.
4 units, not given this year

FILMSTUD 337. European New Wave Cinemas
(Same as FILMSTUD 137) an exploration of the major currents, movements, and schools in the European cinema of the post-war era from the late 1940s to the 1970s. A mixture of historical, aesthetic, and theoretical concerns will inform the study of French New Wave, British Free Cinema, Italian cinema in the 1960s, the New German Cinema of the 1970s, and more.
4 units, Win (Levi, P)

FILMSTUD 345. Politics and Aesthetics in East European Cinema
(Same as FILMSTUD 145) From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica.
4 units, not given this year

FILMSTUD 350. Cinema and the City
(Same as FILMSTUD 150) Utopian built environments of vast perceptual and experiential richness in the cinema and city. Changing understandings of urban space in film. The cinematic city as an arena of social control, social liberation, collective memory, and complex experience. Films from international narrative traditions, industrial films, experimental cinema, documentaries, and musical sequences. Recommended: 4 or equivalent.
4 units, not given this year

FILMSTUD 353A. Transmedia TV
(Same as FILMSTUD 153A) Beginning from theoretical questions about the structure of media texts and their production, distribution, reception, and regulation, this course analyzes how the collision of broadcast and broadband is reshaping the media landscape. Course investigates the definition of television and its articulation across multiple platforms, including streaming video, online tie-ins, fan remixes, and web shows. Such convergence involves both intensified corporate consolidation and intensified viewer participation. As the boundary between producers and consumers of entertainment breaks down, course explores renegotiating the possibilities of the TV experience.

4 units, not given this year

FILMSTUD 356. Copy This Class (The Art of the Remix)
(Same as FILMSTUD 156) Mashups, sampling, parodies, fan video, DIY media, memes: we are in the midst of an explosion in vernacular creativity that appropriates, celebrates, critiques, and transforms commercial entertainment. New digital technologies and Internet platforms support a developing ecology of remix forms with unprecedented reach, richness, and cultural influence. At the same time, the value and legitimacy of this popular production is hotly contested on the basis of artistic merit, traditional literacies, and intellectual property. Course analyzes and engages in contemporary remix culture via precursors like appropriation art and hip hop, exploring theoretical questions about originality, capitalism, law, and digital media.

4 units, Spr (Russo, J)

FILMSTUD 367. The Hollywood Musical
(Same as AMSTUD 167, FILMSTUD 167) The sense of physical, emotional, aesthetic, and social liberation in this most colorful of film genres. Musicals as a place for the staging of issues of identity, including the impact of African American and Jewish culture, and issues of gay reception and interpretation. Attention to technologies of sound and color, the relation to vaudeville and Broadway, and ethnic and aesthetic diversity. Musicals as the epitome of filmic illusionism and the Hollywood studio system; the implications of their seduction of audiences; the meaning of spectacle, the centrality of performance. Busby Berkeley, Fred Astaire, Judy Garland, Bob Fosse, Stanley Donen, Gene Kelly, Vincente Minnelli.

4 units, Spr (Bukatman, S)

FILMSTUD 404. Postwar American Avant Garde Cinema
History and theory of post-WW II American independent and experimental film. Emphasis is on issues of audiovisual form, structure, and medium specificity. Films and writings include Maya Deren, Stan Brakhage, Michael Snow, and Hollis Frampton.

5 units, Aut (Levi, P)

FILMSTUD 406. Montage
Graduate seminar in film aesthetics. Theoretical and practical approaches to editing/montage. Stylistic, semiotic, epistemological, and ideological functions of montage considered in film-historical contexts including: development of the continuity system of editing; flourishing of the Soviet montage school; and achievements of the post-war new waves. Filmmakers include D. W. Griffith, Sergei Eisenstein, Jean-Luc Godard, and Dusan Makavejev.

5 units, not given this year

FILMSTUD 407. The Still Moving Image
Tension and overlap between cinema and photography as technological media, beginning with Frankfurt school critiques of media theory, classical film, and photography theory through recent considerations of the post-cinematic age of digital and virtual images. How ideas of indexicality, medium specificity, memory, duration, narrativity, chance, stasis, repetition have informed accounts of the relationship of these media.

5 units, not given this year

FILMSTUD 410A. Documentary Perspectives I
Restricted to M.F.A. documentary film students. Topics in nonfiction media. Presentations and screenings by guest filmmakers. Prerequisite: consent of instructor.

4 units, Win (Samuelson, K)

FILMSTUD 410B. Documentary Perspectives II
Restricted to M.F.A. documentary film students. Continuation of 410A. Topics in nonfiction media. Presentations and screenings by guest filmmakers. Prerequisite: consent of instructor.

4 units, not given this year

FILMSTUD 411. Animation
The fantasy of an image coming to life dates back centuries, and artists have long sought to imbue their images with liveliness, but it wasn't until the cinema that the fantasy was actualized. It is sometimes argued that animation is the ground against which cinema situates itself: the history of moving pictures begins with optical toys that greatly predate the invention of the cinema, and mainstream cinema is increasingly dominated by films that are computer animated, in whole or in part. The implications of animation, considering its underlying fantasies (in art and literature), its phenomenologies, its relation to the uncanny, its status as a pure cinema, and its place in film theory. Different modes of production and style explored, including realist animation, abstract animation; animistic animation; animated drawings, objects, and puppets; CGI, and live/animation hybrids.

5 units, not given this year

FILMSTUD 440. Sound Technology
Development of sound technology and reproduction in context of modernity, with some emphasis on the crossings of sound and image in the history and theory of technological reproduction. Topics include phonography, recording, and mass culture (Adorno, Sterne, Thompson, Lastra); cinematic sound and music (Chion, Altman, Gorbman); filmic and compositional practices in the American avant-garde (Joseph, Kahn); acoustic ecology (Schafer). Weekly screenings or listenings.

5 units, not given this year

FILMSTUD 441. Theories of Cinematic Spectacle
How cinematic spectacle has been theorized; the adoption of new technologies such as sound, color, or special effects; theories of the sublime and the grotesque. Spectacle as a vehicle for propaganda or pedagogy, and its relation to narrative and gender. The role of spectacle in experimental cinema and its deconstruction by Godard and others. Recommended: 4 or equivalent.

5 units, Spr (Bukatman, S)

FILMSTUD 620. Area Core Examination Preparation
For Art History Ph.D. candidates. Prerequisite: consent of instructor.

5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

FILMSTUD 660. Independent Study
For graduate students only. Approved independent research projects with individual faculty members.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

FILMSTUD 660E. Extended Seminar
May be repeated for credit. (Staff)

4 units, Aut (Staff), Win (Staff), Spr (Staff)

FILM, PRACTICE OF (FILMPROD) COURSES

UNDERGRADUATE COURSES IN FILM, PRACTICE OF

Primarily for undergraduates; graduate students may enroll with consent of adviser.

FILMPROD 10AX. Dcoumentary Film
The fundamentals of digital video production. The process of expressing ideas in an audiovisual medium from the concept stage through post-production. Examples of narrative, documentary, and experimental work screened and discussed. Hands-on experience in directing, shooting, editing on Final Cut Pro, sound design, and a fuller understanding of film production. The components of a film and the concepts of visual storytelling. Emphasis is on the conceptual and technical aspects of filmmaking.

2 units, Aut (Krawitz, J)

FILMPROD 101. Screenwriting
(Same as FILMPROD 301) Priority to Film and Media Studies majors. Craft, form, and approaches to writing for the screen. Prerequisites: ENGLISH 90, 190F, and consent of instructor.

5 units, Spr (Tobin, A)

FILMPROD 103. Adaptation
A close analysis of film adaptation, using various source materials to examine the demands form makes on content and the creative

choices made in adaptation to film. Source materials include plays, fiction, biography, history, graphic novels, and reference to video games and amusement park rides. Weekly film screening.
4 units, Spr (Tobin, A)

FILMPROD 104. Visual Writing
A writing workshop that is an exploration of visual storytelling. Beginning with visual literacy, the class progresses from basic cinematic techniques through scene exercises to revisions and ultimately to connecting scenes in order to build sequences of script pages. Open to all majors; NOT a prerequisite for FP101.
4 units, Win (Tobin, A)

FILMPROD 105. Script Analysis
(Same as FILMPROD 305) Analysis of screenplay and film from the writer's perspective, with focus on ideation, structure, and dramatic tension in narrative features. Sources include screenplays and screenings.
4 units, Aut (Tobin, A)

FILMPROD 114. Introduction to Film and Video Production
Hands-on. Techniques of film and video making including conceptualization, visualization, story structure, cinematography, sound recording, and editing.
5 units, Aut (Samuelson, K)

GRADUATE COURSES IN FILM, PRACTICE OF

Primarily for graduate students; undergraduates may enroll with consent of instructor.

FILMPROD 301. Screenwriting
(Same as FILMPROD 101) Priority to Film and Media Studies majors. Craft, form, and approaches to writing for the screen. Prerequisites: ENGLISH 90, 190F, and consent of instructor.
5 units, Spr (Tobin, A)

FILMPROD 305. Script Analysis
(Same as FILMPROD 105) Analysis of screenplay and film from the writer's perspective, with focus on ideation, structure, and dramatic tension in narrative features. Sources include screenplays and screenings.
4 units, Aut (Tobin, A)

FILMPROD 400. Film/Video Writing and Directing
Restricted to M.F.A. documentary students. Emphasis is on the development of the research, conceptualization, visualization, and preproduction skills required for nonfiction filmmaking. Prerequisite: consent of instructor.
4 units, Aut (Meltzer, J)

FILMPROD 401. Nonfiction Film Production
Restricted to M.F.A documentary students. 16mm production techniques and concepts. Final project is a short black-and-white film with multitrack sound design. Prerequisite: consent of instructor.
4 units, Aut (Krawitz, J)

FILMPROD 402. Digital Video
Restricted to M.F.A. documentary students. Fundamentals of digital storytelling. Working with small format cameras, interviewing techniques, and nonlinear editing skills. Prerequisite: consent of instructor.
4 units, Win (Krawitz, J)

FILMPROD 403. Advanced Documentary Directing
Restricted to M.F.A. documentary students. Further examination of structure, empasizing writing and directing nonfiction film. Prerequisite: consent of instructor.
4 units, Spr (Samuelson, K)

FILMPROD 404. Advanced Film and Video Production
Restricted to M.F.A. documentary students. Techniques of visual storytelling and observational shooting. Final quarter of professional training in 16mm motion picture production. Prerequisite: consent of instructor.
4 units, Spr (Meltzer, J)

FILMPROD 405. Producing Practicum
Restricted to M.F.A. documentary students. Advanced producing principles through the preproduction of the M.F.A. thesis project, including development of a professional film proposal. Practical training in fundraising. Prerequisite: consent of instructor.
4 units, Aut (Samuelson, K)

FILMPROD 406A. Documentary M.F.A. Thesis Seminar I
Restricted to M.F.A. documentary students. Production of film or video project. Focus is on shooting strategies, ethical challenges, and practical production issues. Prerequisite: consent of instructor.
4 units, Win (Krawitz, J)

FILMPROD 406B. Documentary M.F.A.Thesis Seminar II
Restricted to M.F.A. documentary students. Editing and post-production of film or video project. Emphasis is on aesthetic choices (structure, narration, music), distribution, contracts, and audience. Prerequisite: consent of instructor.
4 units, Spr (Meltzer, J)

FRENCH GENERAL (FRENGEN) COURSES

UNDERGRADUATE COURSES IN FRENCH GENERAL

Primarily for undergraduates; graduate students may enroll with consent of adviser.

FRENGEN 55N. After Epic: Romance, Lyric, and Novelistic Responses in Western European Literature
(Stanford Introductory Seminar) Stanford Introductory Seminar. Preference to freshmen. Exploration of the quest in diverse genres: medieval romance (Chrétien de Troyes), Ovidian fables (Marie de France), allegorical dream quests (Roman de la Rose), and the novel (Cervantes¿ Don Quixote). How do stories of bodily transformation or animal fables challenge epic narratives of patriarchy or moral transcendence, and grand narratives of civilization? How does the art of courtly love and medieval allegory replace the mythology of classical epics? Focus on close analysis of primary texts with secondary research.
3-4 units, Spr (Galvez, M)

FRENGEN 168. American Writers in 20th-Century Paris
Paris as inspiration and refuge for American writers when it was the cultural capital of the world. Role of artistic movements (Cubism, Surrealism, Existentialism) and cultural institutions such as the cafés, librairies and salons in the life and creativity of the expatriate. Birth of their writing selves and existential questioning around issues of national and individual identities. A cross-cultural inquiry into Paris as a part of American culture, a myth, a longing, and source of inspiration. Readings: Gertrude Stein, Hemingway, Fitzgerald, Anaïs Nin, Baldwin. In English.
3-5 units, Win (Alduy, C)

FRENGEN 172. Dream Visions: The Roman de la Rose
(Same as FRENGEN 272, ITALGEN 172, ITALGEN 272) What truths are in dreams? How does the quest for a symbolic object embody a moral struggle? What motivates a personal search for divine love? Study of arguably the most influential work of the European Middle Ages, the Roman de la Rose of Guillaume de Lorris and Jean de Meun. Focus on the work as erotic, allegorical quest for the mystical Rose, and scholastic encyclopedia through close analysis, secondary readings, and study of manuscript illumination. Use of medieval and modern French edition.
3-5 units, Spr (Galvez, M)

FRENGEN 181. Philosophy and Literature
(Same as CLASSGEN 81, COMPLIT 181, ENGLISH 81, ITALGEN 181, GERGEN 181) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum
4-5 units, Win (Anderson, L; Landy, J)

FRENGEN 190Q. Parisian Cultures of the 19th and Early 20th Centuries
(Stanford Introductory Seminar) Preference to sophomores. Political, social, and cultural events in Paris from the Napoleonic era and the Romantic revolution to the 30s. The arts and letters of bourgeois, popular, and avant garde cultures. Illustrated with slides. GER:DB-Hum

4 units, Win (Bertrand, M)

FRENGEN 192E. Images of Women in French Cinema: 1930-1990
The myth of the feminine idol in French films in historical and cultural context. The mythology of stars as the imaginary vehicle that helped France to change from traditional society to modern nation after 1945. Filmmakers include Renoir, Truffaut, and Nelly Kaplan. The evolution of the role of women in France over 60 years. Lectures in English; films in French with English subtitles. This course must be taken for either 3 units or 5 units; cannot be taken for 4 units. GER:DB-Hum, EC-Gender

3-5 units, alternate years, not given this year

GRADUATE COURSES IN FRENCH GENERAL

Primarily for graduate students; undergraduates may enroll with consent of instructor.

FRENGEN 219. The Renaissance Body
The body as locus for desire, pleasure, disease, mortality, sexuality, and gender; and as canon of beauty and reflection of cosmic harmony. How literature responded to the development of an anatomical gaze in arts and medicine; how it staged the aesthetic, religious, philosophical, and moral issues related to such a promotion or deconstruction of the body. Does literature aim at representing the body, or use it as signifier for intellectual, emotional, and political ideas? Readings from Rabelais, Ronsard, Labé, Montaigne; medical texts and archival documents from http://renaissancebodyproject.stanford.edu.

3-5 units, Win (Alduy, C)

FRENGEN 242. Women Mystics from the Middle Ages to the Present
(Same as ITALGEN 242) The predominantly female mystical experience or direct-embodied encounter with a spiritual reality that is difficult, perhaps impossible, to reduce to words, or to explain rationally. Sources include European texts from the Middle Ages to the present by women and men who attempt to convey the experience metaphorically, to interpret it theologically and philosophically, and to transmit it actively to others.

3-5 units, not given this year

FRENGEN 260. Voltaire's Work and Life, or: Managing Enlightenment
A textual look at one of the figures that invented, embodied, and operated -- in their roles as intense agents of communication -- the European Enlightenment. Voltaire will be seen, above all, from the angle of his correspondence which, despite its seemingly personal nature, was mostly written for large groups or (often) paying readers looking for both instruction and entertainment.

3-5 units, Win (Gumbrecht, H)

FRENGEN 269. Transfigurative Lyric: Baudelaire and Mallarmé
Key lyrical works, prose poems, and theoretical essays by Charles Baudelaire and Stéphane Mallarmé. The rise of modernity and the birth of Modernism. Referential, non-referential, and anti-referential dimensions of the new lyric. Artifice and impersonality. Literary reflexivity and lucid illusion. The musical turn and the paradox of silence. The hundred-word sublime. The disenchantment and re-enchantment of the world.

3-5 units, Aut (Landy, J)

FRENGEN 272. Dream Visions: The Roman de la Rose
(Same as FRENGEN 172, ITALGEN 172, ITALGEN 272) What truths are in dreams? How does the quest for a symbolic object embody a moral struggle? What motivates a personal search for divine love? Study of arguably the most influential work of the European Middle Ages, the Roman de la Rose of Guillaume de Lorris and Jean de Meun. Focus on the work as erotic, allegorical quest for the mystical Rose, and scholastic encyclopedia through close analysis, secondary readings, and study of manuscript illumination. Use of medieval and modern French edition.

3-5 units, Spr (Galvez, M)

FRENGEN 277. Introduction to René Girard¿s Theory: Mimesis, Desire, Violence, and the Sacred
René Girard's ¿uvre has been hailed as one of the most powerful and influential theories in the human sciences. This reading seminar will provide a critical introduction to Girard's theory, emphasizing its epistemological and philosophical underpinnings and its potential for interdisciplinarity. Its relevance for anthropology, economics, political and social philosophy, religious studies and literary theory will be fully explored.

3-5 units, Spr (Dupuy, J)

FRENGEN 284. Philosophy and Poetry in 20th-Century French and Italian Theory
(Same as ITALGEN 284) To what extent is poetry the other of modern philosophy? How does modern aesthetic theory understand the distinction and blur the boundaries between philosophical and poetic thinking? Authors include Croce, Gentile, Sartre, Bataille, Agamben, Ricoeur, Cacciari, Derrida, and Vattimo.

3-5 units, Aut (Wittman, L)

FRENGEN 286. Michel Foucault and Literary Theory
Michel Foucault can be seen as a philosopher, an historian or a theoretician of literature. In this course, we will study Michel Foucault's work in the perspective of literary theory. Using some of his major works as well as his numerous articles (published in 4 volumes after his death), we will see him as a major 20th Century literary theoretician.

3-5 units, Spr (Apostolides, J)

FRENGEN 289. French and Italian Women Writers
(Same as ITALGEN 289) How does women's writing evolve from the very early 20th century, when women's liberation movements first began and WW I brought major social changes, to the flowering of feminine writing in the 70s and beyond? What is the relationship between women writers and filmmakers, and feminism? Is it legitimate to consider women writers in a separate category? To what extent does a reevaluation of women writers mean reconsidering modern literary history? Authors and filmmakers include Aleramo, Yourcenar, de Beauvoir, Banti, Duras, Cavani.

3-5 units, not given this year

FRENGEN 301E. New Methods and Sources in French and Italian Studies
(Same as ITALGEN 301E) Based on student interest. Changes in research methods: the use of digitized texts, resources, and databases available through Stanford Libraries¿ gateways. Emphasis is on strategies for exploration of broad and specialized topics through new and traditional methods. Using a flexible schedule based on enrollment and the level of students¿ knowledge, may be offered in forms including a shortened version on the basics, independent study, or a syllabus split over two quarters. Unit levels adjusted accordingly.

1-4 units, alternate years, not given this year

FRENGEN 338. Biohumanities: Continental Philosophy and the Human and Social Sciences
(Same as ANTHRO 338A) This course will consider theoretical topics that arose in post-war continental philosophy (for example, Deleuze's ontology, Foucault's biopolitics, and Latour's collective of humans and non-humans) and which have served as a basis for recent attempts to reconcile the human and social sciences with the natural sciences around big picture questions (ecological crisis, biotechnological progress) and around such bridging concepts as human and non-human agency, assemblage, emergence, force, habitus, and mimicry. Focusing on case studies drawn from archaeology, anthropology, history, literature, film and bio-art, the course tries to indicate what sort of topics, research questions, approaches, theories, and concepts might lead to an integration of these various kinds of knowledges.

5 units, Spr (Domanska, E)

FRENGEN 356. Theories of the Novel
(Same as COMPLIT 322A) The novel as the literary genre most closely identified with the development of cultural modernity by literary historians and theorists. Critical models for defining the novel's poetics and cultural work. Critical readings such as texts by Lukacs, Bakhtin, Auerbach, Barthes, Armstrong, Gallagher, Bourdieu, Macherey, Jameson, Said and Spivak. Tutor texts such as

Defoe's Robinson Crusoe,Flaubert's Madame Bovary, and Woolf's To the Lighthouse.

3-5 units, not given this year

FRENGEN 369. Introduction to Graduate Studies: Criticism as Profession

(Same as COMPLIT 369, ITALGEN 369, GERLIT 369) Major texts of modern literary criticism in the context of professional scholarship today. Readings of critics such as Lukács, Auerbach, Frye, Ong, Benjamin, Adorno, Szondi, de Man, Abrams, Bourdieu, Vendler, and Said. Contemporary professional issues including scholarly associations, journals, national and comparative literatures, university structures, and career paths.

5 units, Aut (Berman, R)

FRENGEN 395. Philosophical Reading Group

(Same as COMPLIT 359A, ITALGEN 395) Discussion of one contemporary or historical text from the Western philosophical tradition per quarter in a group of faculty and graduate students. For admission of new participants, a conversation with H. U. Gumbrecht is required. May be repeated for credit.

1 unit, Aut (Gumbrecht, H), Win (Gumbrecht, H)

FRENCH LANGUAGE (FRENLANG) COURSES

UNDERGRADUATE COURSES IN FRENCH LANGUAGE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

FRENLANG 1. First-Year French, First Quarter

Proficiency-based. Development of discourse appropriate in French and Francophone contexts.

5 units, Aut (Staff), Win (Dozer-Rabedeau, J), Spr (Lasnier, M)

FRENLANG 1A. Accelerated First-Year French, Part 1

Completes first-year language sequence in two rather than three quarters. Recommended for students with previous knowledge of French who place into 1A on the placement test or who are familiar with another Romance language. 2A fulfills the University foreign language requirement. Prerequisite: French placement test and consent of instructor. Win, Spr

5 units, Aut (Lasnier, M), Win (Staff)

FRENLANG 2. First-Year French, Second Quarter

Continuation of 1. Prerequisite 1 or equivalent

5 units, Aut (Kershaw, M), Win (Staff), Spr (Staff)

FRENLANG 2A. Accelerated First-Year French, Part 2

Continuation of 1A. Fulfills the University foreign language requirement. Prerequisite: 1A, or French placement test and consent of instructor.

5 units, Win (Lasnier, M), Spr (Lasnier, M)

FRENLANG 3. First-Year French, Third Quarter

Continuation of 2. Prerequisite: 2 or equivalent. Fulfills the language requirement.

5 units, Aut (Saint-Jude, A), Win (Kershaw, M), Spr (Staff)

FRENLANG 5A. Intensive First-Year French, Part A

Accelerated. Written exercises, compositions, conversational practice, and daily work.

5 units, Sum (Gardner, D)

FRENLANG 5B. Intensive First-Year French, Part B

Continuation of 5B.

5 units, Sum (Dozer-Rabedeau, J)

FRENLANG 5C. Intensive First-Year French, Part C

Continuation of 5B. Fulfills the University language requirement.

5 units, Sum (Giachetti, L)

FRENLANG 10. Beginning French Oral Communication

For students who have completed 2 or equivalent. Emphasis is on speaking skills, vocabulary, and pronunciation. May be repeated once for credit.

2 units, Aut (Dozer-Rabedeau, J), Win (Lasnier, M), Spr (Dozer-Rabedeau, J)

FRENLANG 15. Intermediate French Oral Communication

For students who have completed the first-year language requirement. May be repeated once for credit.

2 units, Aut (Dozer-Rabedeau, J), Win (Lasnier, M), Spr (Dozer-Rabedeau, J)

FRENLANG 15S. Intermediate Conversation: French in Everyday Life

Same content as 15. May be repeated once for credit. Prerequisite: one year of college French or equivalent.

3 units, not given this year

FRENLANG 20A. France and Francophonie

Second-year French conversation based on themes from the regions of France and the Francophone world. Intermediate-level speaking skills and advanced-level functions. Topics include travel, food, and crosscultural comparisons. Students returning from study abroad programs are encouraged to enroll. May be repeated once for credit. Prerequisite: 22 or equivalent.

2 units, Aut (Staff)

FRENLANG 20B. French Cinema

Second-year French conversation based on films. Intermediate-level speaking skills and advanced-level functions. Themes include: French filmmakers, stars, and trends. Required film viewing in and outside class in French. May be repeated once for credit. Prerequisite: 22 or equivalent.

2 units, Win (Staff)

FRENLANG 20C. Contemporary French Language

Second-year French conversation. Intermediate-level speaking skills and advanced-level functions for formal and informal situations. Useful for students planning to travel or study abroad. May be repeated once for credit. Prerequisite: 22 or equivalent.

2 units, Spr (Staff)

FRENLANG 21C. Second-Year French: Cultural Emphasis, First Quarter

Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socioculturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: one year of college French or consent of coordinator.

4-5 units, Aut (Lewallen, J), Win (Dozer-Rabedeau, J), Spr (Lasnier, M)

FRENLANG 22C. Second-Year French: Cultural Emphasis, Second Quarter

Continuation of 21C. Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socioculturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: 21C or consent of coordinator.

4-5 units, Aut (Lasnier, M), Win (Kershaw, M), Spr (Dozer-Rabedeau, J)

FRENLANG 23C. Second-Year French: Cultural Emphasis, Third Quarter

Continuation of 22C. Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socioculturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: 22Cor consent of coordinator.

4-5 units, Aut (Comsa, M), Win (Lasnier, M), Spr (Kershaw, M)

FRENLANG 24C. Second-Year French: Literary Texts

Proficiency oriented. Discussion, writing, reading, and listening comprehension based on literary texts. Prerequisite: 23.

3-4 units, not given this year

FRENLANG 24R. Second-Year French: International Relations, Political Science, and Economics Emphasis

Proficiency-based. Discussion, writing, reading, and listening comprehension based on political, economic, and social topics. Prerequisite: 23.

3-4 units, not given next year

FRENLANG 50. Reading French
For seniors or graduate students seeking to meet the University reading requirement for advanced degrees. Reading strategies for comprehension of secondary literature for academic research. Fulfills the University foreign language requirement for advanced degrees if student earns a grade of 'B.' Prerequisite: one year or reading proficiency in another Romance language.
4 units, Aut (Staff)

FRENLANG 50S. Reading French
Same content as 50.
2-4 units, Sum (Saint-Jude, A)

FRENLANG 60A. Beginning French Conversation
(AU)
1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)

FRENLANG 60B. Intermediate French Conversation
(AU) (Staff)
1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)

FRENLANG 60C. Advanced French Conversation
(AU)
1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)

FRENLANG 60D. French Viticulture
See http://www.stanford.edu/class/frenlang60d/. Prerequisite: 21 or older. (AU)
1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)

FRENLANG 60E. French Cooking
(AU)
1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)

FRENLANG 60F. French Cinema
May be repeated for credit. (AU)
1 unit, Win (de Castries, P)

FRENLANG 60K. Introduction to BOSP Paris
(AU)
1 unit, Aut (de Castries, P)

FRENLANG 60N. French cheese
1 unit, not given this year

FRENLANG 60P. Advanced Viticulture
Prerequisite: Completion of 60D. (AU)
1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)

FRENLANG 60T. Teaching French Conversation
(AU)
1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)

FRENLANG 120. Advanced French Oral Communication
Speaking skills and functions including narration, description, supporting opinions, and hypothesizing about current events and issues in France. May be repeated once for credit. Prerequisites: 23 or equivalent, and consent of instructor.
3 units, Aut (Staff), Win (Staff), Spr (Staff)

FRENLANG 121. Introduction to French Texts
Readings of major literary figures and themes from medieval times to the present. Prerequisite: 23 or consent of coordinator. Recommended: 124.
3-4 units, not given this year

FRENLANG 122. Introduction to French Culture and Civilization
Discussion of French art, geography, history, political change, and social institutions. Prerequisite: 23 or equivalent.
3-4 units, not given this year

FRENLANG 123. French Creative Writing
Advanced. Model texts introduce students to genres and styles; review of grammar and vocabulary. Discussion of original writing by students. Prerequisite: 23 or equivalent.
3-4 units, not given this year

FRENLANG 124. Advanced French Grammar
Required for students majoring or minoring in French; recommended for students planning to take literature courses. Review of difficulties in French. Grammatical and logical analysis. Prerequisite: 23 or equivalent.
3-4 units, Aut (Howard, H), Win (Howard, H), Spr (Staff)

FRENLANG 125. French Phonetics
For majors and other students who plan to enroll in advanced courses. Study and practice of the French language sound system. Language lab. Prerequisite: 23 or equivalent.
3-4 units, not given this year

FRENLANG 199. Language Specials
Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN FRENCH LANGUAGE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

FRENLANG 33G. Business French III
For GSB students only. Enrollment limited to 18. (Staff)
4 units, not given this year

FRENLANG 205A. Intensive First-Year French, Part A
Accelerated. Written exercises, compositions, conversational practice, and daily work. Stanford graduate students restricted to 9 units may take 205A,B,C courses for a total of 9 units.
3-5 units, Sum (Staff)

FRENLANG 205B. Intensive First-Year French, Part B
Continuation of 205A. Prerequisite 205B or equivalent.
3-5 units, Sum (Staff)

FRENLANG 205C. Intensive First-Year French - Part C
Accelerated. Written exercises, compositions, conversational practice, and daily work. Stanford graduate students restricted to 9 units may take both courses for a total of 9 units.
3-5 units, Sum (Staff)

FRENLANG 250S. Reading French
For graduate students only. Same content as 50.
2-4 units, Sum (Staff)

FRENLANG 394. Graduate Studies in French Conversation
Prerequisite: consent of the instructor.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

FRENLANG 395. Graduate Studies in French
Prerequisite: consent of instructor.
2-5 units, Aut (Staff), Win (Staff), Spr (Staff)

FRENCH LITERATURE (FRENLIT) COURSES

UNDERGRADUATE COURSES IN FRENCH LITERATURE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

FRENLIT 120. Coffee and Cigarettes: The Making of French Intellectual Culture
Explore this unique characteristic of French culture by reading some of its greatest works. Readings and discussion in French. Texts by Sartre, Camus, Voltaire, Molière, and many others. GER:DB-Hum
3-5 units, Aut (Edelstein, D)

FRENLIT 122. Great Moments in French Culture and History
How did France stay in the global limelight for over three centuries? Discover and discuss some of its cultural high points such as Versailles and the French Revolution in this gateway course to French studies. Prerequisite: FRENLANG 23 or equivalent. GER:DB-Hum
3-5 units, Spr (Calefas-Strebelle, A)

FRENLIT 130. Introduction to Medieval and Renaissance French Literature
Introduction to the Middle Ages and the Renaissance. The birth of a national literature and its evolution. Literature as addressing cultural, philosophical, and artistic issues which question assumptions on love, ethics, art, and the nature of the self. Readings: epics

(La Chanson de Roland), medieval romances (Tristan, Chrétien de Troyes' Yvain), post-Petrarchan poetics (Du Bellay, Ronsard, Labé), and prose humanists (Rabelais, Montaigne). Prerequisite: FRENLANG 126 or consent of instructor. GER:DB-Hum, WIM

4 units, Aut (Alduy, C)

FRENLIT 131. Absolutism, Enlightenment, and Revolution in 17th- and 18th-Century France

The literature, culture, and politics of France from Louis XIV to Olympe de Gouges. How this period produced the political and philosophical foundations of modernity. Readings include Corneille, Molière, Racine, Lafayette, Voltaire, Diderot, Rousseau, Beaumarchais, and Gouges. Prerequisite: FRENLANG 126 or consent of instructor. GER:DB-Hum, WIM

4 units, Win (Robert, Y)

FRENLIT 132. Literature, Revolutions, and Changes in 19th- and 20th-Century France

Major literary genres, and social and cultural contexts. Focus is on the emergence of new literary forms such as surréalisme, nouveau roman, and nouveau théâtre. Topics of colonization, decolonization, and feminism. Readings include Balzac, Baudelaire, Césaire, Colette, and Ionesco. Prerequisite: FRENLANG 126 or consent of instructor. GER:DB-Hum, WIM

4 units, Spr (Apostolides, J)

FRENLIT 133. Literature and Society in Africa and the Caribbean

(Same as COMPLIT 141) Major African and Caribbean writers. Issues raised in literary works which reflect changing aspects of the societies and cultures of Francophone Africa and the French Caribbean. Topics include colonization and change, quest for identity, tradition and modernity, and new roles and status for women. Readings in fiction and poetry. Authors include Laye Camara, Mariama Ba, and Joseph Zobel. In French. Prerequisite: FRENLANG 126 or consent of instructor. GER:DB-Hum, EC-GlobalCom, WIM

4 units, Win (Boyi, E)

FRENLIT 152. Fashion and Image in Post-Romantic Paris

The roles of fashion and image in the literature and visual culture of late-19th-century Paris. Topics ranging from the formation of aesthetic values to the impact of the media on popular taste. Visual genres such as caricature, cosmopolitan portraiture, and advertising. Readings include essays and short fiction by Balzac, Gautier, Baudelaire, Mallarmé, Flaubert, de Maupassant, and Zola. GER:DB-Hum

3-5 units, Win (Gardner, D)

FRENLIT 159. Confessions in 19th-Century French Literature

Evolution of confessional mode in 19th-century first-person narrative. In what way the confessional mode of the Christian practice was preserved in literature and what changes it underwent in the narratives about the self. How did the religious crisis in 19th century France invest the literary confessions? The topics are confessors, conversion, sincerity, repentance, guilt. Authors include Saint Augustine, Rousseau, Musset, Constant, Sainte-Beuve, Fouché, Guizot, Lamartine, Verlaine, Nerval. Taught in French. GER:DB-Hum

3-5 units, Spr (Samokhina, D)

FRENLIT 189A. Honors Research

Senior honors students enroll for 5 units in Winter while writing the honors thesis, and may enroll in 189B for 2 units in Spring while revising the thesis. Prerequisite: DLCL 189.

5 units, Win (Staff)

FRENLIT 189B. Honors Research

Open to juniors with consent of adviser while drafting honors proposal. Open to senior honors students while revising honors thesis. Prerequisites for seniors: 189A, DLCL 189.

2 units, Spr (Staff)

FRENLIT 199. Individual Work

Restricted to French majors with consent of department. Normally limited to 4-unit credit toward the major. May be repeated for credit.

1-12 units, Aut (Staff), Win (Staff), Spr (Staff)

FRENLIT 204. Revolutions in Prose: The 19th-Century French Novel

How the French Revolution and its aftershocks were represented in novels; how this political imperative revolutionized literary form. Readings from Stendhal, Hugo, Balzac, Flaubert, Sand, and Zola. GER:DB-Hum

3-5 units, Win (Edelstein, D)

GRADUATE COURSES IN FRENCH LITERATURE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

FRENLIT 219. The Renaissance Body

The body as locus for desire, pleasure, disease, mortality, sexuality, and gender; and as canon of beauty and reflection of cosmic harmony. How literature responded to the development of an anatomical gaze in arts and medicine; how it staged the aesthetic, religious, philosophical, and moral issues related to such a promotion or deconstruction of the body. Does literature aim at representing the body, or use it as signifier for intellectual, emotional, and political ideas? Readings from Rabelais, Scève, Ronsard, Labé, d¿Aubigné, Montaigne, and medical texts.

3-5 units, not given this year

FRENLIT 222. The Political Unconscious of the Ancien Regime

The lasting influence in Europe of absolutism. Topics include political theories, the importance of court life, art as a political tool, modifications in human sensibility, literature, and social transformations.

3-5 units, not given this year

FRENLIT 225. Multicultural Moliere

Molière's life and work as a point of departure for the notion of multiculturalism. Born in a bourgeois family, Molière was in contact with social milieux including the French peasantry for whom he wrote farces, and the court of Louis XIV for whom he provided spectacles at Versailles. Major plays, including Tartuffe, Le bourgeois gentilhomme, and Le malde imaginaire as the expression of the new court culture. Sociohistorical and contemporary literary approaches: Molière as the unifying artistic figure in a multicultural France.

3-5 units, not given this year

FRENLIT 244. The Politics of Spectacle in a Time of Revolution

Emphasis on the rise, in the decades preceding and following the French Revolution, of a modern conception of the state, the theater, and their interaction. Topics include the /drame/, the festival, the ethics of acting, the politically engaged playwright, the democracy of the parterre, and innovations in theater design. Authors include Plato, Diderot, Rousseau, Mercier, Rétif, and Madame de Staël.

3-5 units, Spr (Robert, Y)

FRENLIT 248. Literature, History, and Representation

(Same as COMPLIT 250) Literary works as historical narratives; texts which envision ways of reconstructing or representing an ancient or immediate past through collective or individual narratives. Narration and narrator; relation between individual and collective history; historical events and how they have shaped the narratives; master narratives; and alternative histories. Reading include Glissant, Césaire, Dadié, Cixous, Pérec, Le Clézio, Mokkedem, Benjamin, de Certeau, and White.

3-5 units, not given this year

FRENLIT 256. Mind and Body in 20th-Century French Fiction

How fiction articulates the tensions among the sensuous, the sensual, the embodied, and the aspiration to purity, abstraction, and transcendence. Focus is on questioning dichotomies such as nature/culture, masculine/feminine, sacred/profane, and written word/voice. Authors include Gide, Camus, Butor, Duras, and Tournier.

3-5 units, not given this year

FRENLIT 267. National Literatures, Littérature-monde: A New Comparatism

(Same as COMPLIT 267) This course will focus on the implications of a ¿global francophonie,¿ through discussion of texts produced in different francophone times and spaces. Among the topics to be explored: confrontation of inward/outward territories and the questions of otherness, identity and minority status, the relation between history and literature, transnationality, métissage of lan-

guages and transnationality. Readings include Montaigne and Calvin, Tzetan Todorov, Lise Gauvin, Aimé Césaire, Bernard Dadié, Edouard Glissant, Leila Sebbar and others.

3-5 units, Win (Boyi, E)

FRENLIT 272. Francophone Literature: Bilingualism and Cultural Polyphonies in North African Literature

Francophone Maghrebian literature (Abdelkébir Khatibi, Colette Fellous essentially). Emphasis on bilingualism and multilingualism within the North African context in which literary language follows the contact between languages (spoken or merely heard). Not always to be considered in terms of conflict, it generates a new cultural identity, including the feeling, as Derrida says, to be at the edge of French. Topics also include dialogism and heteroglossy.

2 units, Aut (Staff)

FRENLIT 278. Special Topics (Francophone Literature): From Exoticism to a Discourse of Auto-Representation

(Same as AFRICAST 278, COMPLIT 278) Critical analysis of major issues relating to literatures in French language in and outside France. Focus is on exoticism and and self-representation, with an emphasis on the evolution of mentalities, new sensitivities and the role of literature in developing individual or collective identity. Readings include Le Clézio, Memmi, Malouf, Lopes, Schwarz-Bart, Delaygue, Glissant, Todorov, Kane and others. Primary sources, secondary sources and film. Taught in French.

3-5 units, not given this year

FRENLIT 280. Women in Print: Gender, Authorship, and Book Culture in Early Modern France

The relationships between gender, concepts of authorship, and early modern book culture in Renaissance France. What rhetorical, commercial, or textual strategies were used by printers, publishers, and writers, male and female alike, to create a new commodity, the female-authored book, and a new notion, that of ""female author,"" at a time when the phrase was still an oxymoron. Readings from Marguerite de Navarre, Helisenne de Crenne, Pernette du Guillet, Louise Labé, the Dame des Roches, and Marie de Gournay.

3-5 units, given next year

FRENLIT 293A. Topics in French Literature and Philosophy

Five-week course. May be repeated for credit.

2 units, Aut (Serres, M)

FRENLIT 293B. Topics in French Literature and Philosophy

Five-week course. May be repeated for credit.

2 units, Spr (Serres, M)

FRENLIT 299. Individual Work

May be repeated for credit.

1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

FRENLIT 399. Individual Work

For students in French working on special projects or engaged in predissertation research.

1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

FRENLIT 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GENETICS (GENE) COURSES

UNDERGRADUATE COURSES IN GENETICS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

GENE 25SI. The Art and Science of Beer

Colloquium-style lecture series. Topics include: basics of beer brewing, the science behind the brew, history of beer brewing, government regulation, regional traditions and techniques, American micro-brewing. Includes hands-on brewing experience.

1 unit, Spr (Sherlock, G)

GENE 109Q. Genomics: A Technical and Cultural Revolution

(Stanford Introductory Seminar) (Same as BIOMEDIN 109Q) Preference to sophomores. Concepts of genomics, high-throughput methods of data collection, and computational approaches to analysis of data. The social, ethical, and economic implications of genomic science. Students may focus on computational or social aspects of genomics.

3 units, Win (Altman, R)

GENE 199. Undergraduate Research

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN GENETICS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

GENE 202. Human Genetics

Theoretical and experimental basis for the genetics of human health and disease. Molecular, chromosomal, biochemical, developmental, cancer, and medical genetics, emphasizing the last. Clinical case discussions. Prerequisites: biochemistry; basic genetics.

4 units, Aut (Ormond, K; Hudgins, L)

GENE 203. Advanced Genetics

(Same as BIO 203, DBIO 203) For graduate students in Bioscience programs; may be appropriate for graduate students in other programs. The genetic toolbox. Examples of analytic methods, genetic manipulation, genome analysis, and human genetics. Emphasis is on use of genetic tools in dissecting complex biological pathways, developmental processes, and regulatory systems. Faculty-led discussion sections with evaluation of papers. Students with minimal experience in genetics should prepare by working out problems in college level textbooks.

4 units, Aut (Stearns, T; Sidow, A; Kim, S)

GENE 206. Epigenetics

(Same as BIO 156, BIO 256, PATH 206) For graduate students in the Biosciences and upper level Biology undergraduates. Mechanisms by which phenotypes not determined by the DNA sequence are stably inherited in successive cell divisions. From the discovery of position-effect variegation in Drosophila in the 1920s to present-day studies of covalent modifications of histones and DNA methylation. Topics include: position effect, gene silencing, heterochromatin, centromere identity, genomic imprinting, histone code, variant histones, and the role of epigenetics in cancer. Prerequisite: BIO41 and BIO42 , or GENE 203, or consent of instructor.

2 units, Spr (Lipsick, J; Gozani, O), alternate years, not given next year

GENE 210. Genomics and Personalized Medicine

Principles of genetics underlying associations between genetic variants and disease susceptibility and drug response. Topics include: genetic and environmental risk factors for complex genetic disorders; design and interpretation of genome-wide association studies; pharmacogenetics; full genome sequencing for disease gene discovery; population structure and genetic ancestry; use of personal genetic information in clinical medicine; ethical, legal, and social issues with personal genetic testing. Hands-on workshop making use of personal or publicly available genetic data. Prerequisite: GENE 202 or 203.

2 units, Sum (Kim, S; Salari, K)

GENE 211. Genomics

Genome evolution, organization, and function; technical, computational, and experimental approaches; hands-on experience with representative computational tools used in genome science; and a beginning working knowledge of PERL.

3 units, Win (Cherry, J; Sherlock, G)

GENE 212. Introduction to Biomedical Informatics Research Methodology

(Same as BIOE 212, BIOMEDIN 212, CS 272) Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Prerequisites: BIOMEDIN 210, 211, 214, 217 or consent of instructor.

3 units, Spr (Altman, R)

GENE 214. Representations and Algorithms for Computational Molecular Biology

(Same as BIOE 214, BIOMEDIN 214, CS 274) Topics: introduction to bioinformatics and computational biology, algorithms for

alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, Gibbs Sampling, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisites: programming skills; consent of instructor for 3 units.

3-4 units, Aut (Altman, R)

GENE 215. Frontiers in Biological Research

(Same as BIOC 215, DBIO 215) Literature discussion in conjunction with the Frontiers in Biological Research seminar series in which investigators present current work. Students and faculty meet beforehand to discuss papers from the speaker¿s primary research literature. Students meet with the speaker after the seminar to discuss their research and future direction, commonly used techniques to study problems in biology, and comparison between the genetic and biochemical approaches in biological research.

1 unit, Aut (Harbury, P; Calos, M; Villeneuve, A), Win (Harbury, P; Villeneuve, A; Calos, M)

GENE 218. Computational Analysis of Biological Images

(Same as PATH 218) Physical and computational tools for acquisition, processing, interpretation, and archiving of biological images. Emphasis is on digital microscopy.

2 units, Spr (Staff)

GENE 221. Current Issues in Aging

(Same as DBIO 221) Current research literature on genetic mechanisms of aging in animals and human beings. Topics include: mitochondria mutations, insulin-like signaling, sirtuins, aging in flies and worms, stem cells, human progeria, and centenarian studies. Prerequisite: GENE 203.

2 units, Spr (Kim, S; Brunet, A), alternate years, not given next year

GENE 222. Method and Logic in Experimental Genetics

For graduate students only. How experimental strategies are applied to biological questions irrespective of discipline boundaries. Examples include purifying activities from complex mixtures, localizing molecules in space and time, discovering macromolecular interactions, inferences from sequence similarity, using structure to elucidate function, and applying genomics to biological problems. Weekly discussion of two representative papers selected by faculty and a student presentation of a third paper which illustrate principles of biochemistry and cell and molecular biology, and the historical context of important scientific advances.

3 units, Win (Baker, J; Pringle, J)

GENE 233. The Biology of Small Modulatory RNAs

(Same as MI 233, PATH 233) Open to graduate and medical students. How recent discoveries of miRNA, RNA interference, and short interfering RNAs reveal potentially widespread gene regulatory mechanisms mediated by small modulatory RNAs during animal and plant development. Required paper proposing novel research.

2 units, Aut (Chen, C; Fire, A)

GENE 234. Fundamentals of RNA Biology

(Same as MI 234, PATH 234) For graduate or medical students and (if space allows) to active participants from other segments of the Stanford Community (e.g., TGR students); undergraduates by instructor consent. Fundamental issues of RNA biology, with the goal of setting a foundation for students to explore the expanding world of RNA-based regulation. Each week a topic is covered by a faculty lecture and journal club presentations by students.

2 units, alternate years, not given this year

GENE 235. C. Elegans Genetics

Genetic approaches to C. elegans, practice in designing experiments and demonstrations of its growth and anatomy. Probable topics include: growth and genetics, genome map and sequence, mutant screens that start with a desired phenotype, reverse genetics and RNAi screens, genetic duplications, uses of null phenotype non-null alleles, genetic interactions and pathway analysis, and embryogenesis and cell lineage. Focus of action, mosaic analysis, and interface with embryological and evolutionary approaches.

2 units, alternate years, not given this year

GENE 243. Scientific Evidence and Expert Testimony: Patent Litigation

Open to clinical MD and graduate students. How to explain science to judge and jury; how litigators determine which legal issues to argue. Patent and expert testimony law. Student teams choose patents for final simulation projects, prepare claim charts, devise a design-around, and present simulations of expert testimony. Prerequisite: Graduate students must have completed all coursework in their departments for the PhD degree.

3 units, Aut (Morris, R)

GENE 244. Introduction to Statistical Genetics

Statistical methods for analyzing human genetics studies of Mendelian disorders and common complex traits. Probable topics include: principles of population genetics; epidemiologic designs; familial aggregation; segregation analysis; linkage analysis; linkage-disequilibrium-based association mapping approaches; and genome-wide analysis based on high-throughput genotyping platforms. Prerequisite: STATS 116 or equivalent or consent of instructor.

3 units, Aut (Tang, H), alternate years, not given next year

GENE 245. Computational Algorithms for Statistical Genetics

(Same as STATS 345) Computational algorithms for human genetics research. Topics include: permutation, bootstrap, expectation maximization, hidden Markov model, and Markov chain Monte Carlo. Rationales and techniques illustrated with existing implementations commonly used in population genetics research, disease association studies, and genomics analysis. Prerequisite: GENE 244 or consent of instructor.

2-3 units, alternate years, not given this year

GENE 260. Supervised Study

Genetics graduate student lab research from first quarter to filing of candidacy. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GENE 271. Human Molecular Genetics

For genetic counseling students, graduate students in genetics, medical students, residents, and postdoctoral fellows interested in the practice of medical genetics. Gene structure and function; the impact of mutation and polymorphism as they relate to developmental pathways and health and human disease; population based genetics; approaches to the study of complex genetic conditions; GWAS and genome sequencing technologies; gene therapy, proteomics, stem cell biology, and pharmacogenetics. Undergraduates require consent of instructor and a basic genetics course.

4 units, Aut (Kwan, A; Francke, U)

GENE 272. Introduction to Medical Genetics

For genetic counseling students, graduate students in human genetics, medical students, residents, and fellows; undergraduates with consent of instructor. Principles of medical genetics including taking a family history, modes of inheritance, and mathematical principles of medical genetics (Bayes theorem, population genetics). An additional problem set is required for 3 units.

2-3 units, Aut (Hudgins, L; Ormond, K)

GENE 273. Introduction to Clinical Genetics Testing

For genetic counseling students, graduate students in genetics, medical students, residents, and fellows; undergraduates with consent of instructor. Principles of cytogenetic, molecular, and biochemical laboratory analysis. How to select the appropriate laboratory for testing and laboratory quality assurance, including the CLIA process. An additional problem set is required for 3 units.

2-3 units, Aut (Kwan, A)

GENE 274A. A Case Based Approach to Clinical Genetics

For genetic counseling students, graduate students in genetics, medical students, residents and fellows. Case-based scenarios and guest expert lectures. Students learn skills in case preparation, management, and presentation, as well as content around common genetic disorders.

2 units, Win (Hudgins, L; Kwan, A)

GENE 274B. A Case Based Approach to Clinical Genetics

For genetic counseling students, graduate students in genetics, medical students, residents, and fellows. Case-based scenarios and guest expert lectures. Students learn skills in case preparation, management, and presentation, as well as content around common genetic disorders.

2 units, Spr (Hudgins, L; Ormond, K)

GENE 275. Role Play and Genetic Counseling Observations
Students role play aspects of genetic counseling sessions and learn through clinical observations. Observation includes genetic counseling sessions in prenatal, pediatric, and cancer settings.

2 units, Aut (Kwan, A; Ormond, K)

GENE 276. Genetic Counseling Clinical Rotations
For genetic counseling students only. Supervised clinical experiences. May be repeated for credit. Prerequisite: GENE 275.

4-7 units, Aut (Ormond, K; Kwan, A), Win (Ormond, K; Kwan, A), Spr (Ormond, K; Kwan, A), Sum (Ormond, K; Kwan, A)

GENE 278. Prenatal Genetic Counseling
Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial prenatal genetics rotation. Topics include prenatal genetic screening and diagnosis in the first and second trimesters, ultrasound, teratology, and genetic carrier screening.

1 unit, Aut (Ormond, K), Win (Ormond, K), Spr (Ormond, K), Sum (Ormond, K)

GENE 279. Pediatric and Adult Genetic Counseling
Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial general genetics rotation. Topics include: common genetic conditions; assessment of child development and medical history in the context of a genetic workup; dysmorphology; development of a differential diagnosis; and resources for case management and family support.

1 unit, Aut (Kwan, A), Win (Kwan, A), Spr (Kwan, A), Sum (Ormond, K)

GENE 280. Metabolic Genetic Counseling
Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their metabolic genetics rotation. Topics include: overview of metabolic diseases; common pathways; diagnosis, management, and treatment of metabolic disorders; and newborn screening.

1 unit, Aut (Kwan, A), Win (Kwan, A), Spr (Kwan, A), Sum (Ormond, K)

GENE 281. Cancer Genetic Counseling
Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial cancer genetics rotation. Topics include: cancer biology and cytogenetics; diagnosis and management of common cancer genetic syndromes; predictive testing; psychology of cancer genetic counseling; and topics recommended by ASCO guidelines.

1 unit, Aut (Ormond, K), Win (Ormond, K), Spr (Ormond, K), Sum (Ormond, K)

GENE 282A. Genetic Counseling Research Seminar
For genetic counseling students only. Facilitated discussions on identifying a topic and mentor for genetic counseling departmental research projects.

1 unit, Win (Ormond, K)

GENE 282B. Genetic Counseling Research Seminar
For genetic counseling students only. Lectures and facilitated discussions on research methodology for genetic counseling departmental research projects. Prerequisite: GENE 282A,

1 unit, Spr (Ormond, K)

GENE 283. Genetic Counseling Research
Genetic counseling students conduct clinical research projects as required by the department for graduation. May be repeated for credit. Pre- or corequisite:GENE 282.

1-8 units, Aut (Ormond, K; Kwan, A), Win (Ormond, K; Kwan, A), Spr (Ormond, K; Kwan, A), Sum (Ormond, K; Kwan, A)

GENE 284. Medical Genetics Seminar
Presentation of research and cases. Students enrolling for 2 units also attend and report on external seminars. May be repeated for credit.

1-2 units, Aut (Kwan, A), Win (Kwan, A), Spr (Kwan, A)

GENE 285A. Genetic Counseling Seminar
Year-long seminar primarily for genetic counseling students. Autumn: basics of medical communication; crosscultural and disability sensitive communication about genetics, and principles of providing genetic counseling. Winter: the impact of chronic illness and genetic disease in a developmental manner. Spring: applying therapeutic counseling approaches to the practice of genetic counseling. Undergraduates may enroll in Autumn Quarter with consent of instructor.

2-3 units, Aut (Ormond, K)

GENE 285B. Genetics Counseling Seminar
Year-long seminar primarily for genetic counseling students. Autumn: basics of medical communication; crosscultural and disability sensitive communication about genetics, and principles of providing genetic counseling. Winter: the impact of chronic illness and genetic disease in a developmental manner. Spring: applying therapeutic counseling approaches to the practice of genetic counseling. Prerequisite: GENE 285A.

2-3 units, Win (Ormond, K)

GENE 285C. Genetic Counseling Seminar
Year-long seminar primarily for genetic counseling students. Autumn: basics of medical communication; crosscultural and disability sensitive communication about genetics, and principles of providing genetic counseling. Winter: the impact of chronic illness and genetic disease in a developmental manner. Spring: applying therapeutic counseling approaches to the practice of genetic counseling. Prerequisite: 285 A/B.

2-3 units, Spr (Ormond, K)

GENE 286A. Advanced Genetic Counseling Seminar
For genetic counseling students only. Psychosocial issues associated with genetic counseling cases are discussed through presentation of cases that students have seen throughout their training. Professional development topics including: the expanding roles of genetic counselors; billing, reimbursement, and licensing; the role of genetic counseling in the changing healthcare system; the incorporation of genetics into all areas of medicine and public health; and implications of direct-to-consumer genetic testing. Prerequisites: GENE 285 A,B,C and 276.

2 units, Aut (Ormond, K; Kwan, A)

GENE 286B. Advanced Genetic Counseling Seminar
Continuation of GENE 286A. For genetic counseling students only. Psychosocial issues associated with genetic counseling cases are discussed through presentations of cases that students have seen throughout their training. Professional development topics including: the expanding roles of genetic counselors; billing, reimbursement, and licensing; the role of genetic counseling in the changing healthcare system; the incorporation of genetics into all areas of medicine and public health; and implications of direct-to-consumer genetic testing. Prerequisites: GENE 285 A,B,C and 276.

2 units, Win (Ormond, K; Kwan, A)

GENE 286C. Advanced Genetic Counseling Seminar
Continuation of 286A/B. For genetic counseling students only. Psychosocial issues associated with genetic counseling cases are discussed through presentation of cases that students have seen throughout their training. Professional development topics including: the expanding roles of genetic counselors; billing, reimbursement, and licensing; the role of genetic counseling in the changing healthcare system; the incorporation of genetics into all areas of medicine and public health; and implications of direct-to-consumer genetic testing. Prerequisites: GENE 285 A,B,C and 276.

2 units, Spr (Ormond, K; Kwan, A)

GENE 299. Directed Reading in Genetics
Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GENE 399. Graduate Research
Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GENE 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GENE 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GEOLOGICAL AND ENVIRONMENTAL SCIENCES (GES) COURSES

UNDERGRADUATE COURSES IN GEOLOGICAL AND ENVIRONMENTAL SCIENCES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

GES 1A. Introduction to Geology: The Physical Science of the Earth
For non-majors or prospective majors in the Earth Sciences. Lectures, hands-on laboratories, and three one-day weekend field trips. Focus is on the physical and chemical processes of heat and mass transfer within the earth and its fluid envelopes, including deep-earth, crustal, surface, and atmospheric processes. Topics include the dynamics of and interactions between the inner earth, plate tectonics, surface processes, and atmospheric processes such as climate change and global warming. Only one of GES 1A, 1B, or 1C may be taken for credit. Prerequisites: MATH 19 or equivalent. GER:DB-NatSci
5 units, Aut (Hilley, G)

GES 1BN. Introductory to Geology: California Desert Field Geology
(Stanford Introductory Seminar) California's Death Valley and Owens Valley are used as natural laboratories for studying active geologic processes and a billion years of earth history: ancient ocean sediments, mountain building, earthquake faulting, glacial landscapes, volcanic eruptions, hot springs and ore deposits, prehistoric climate changes, and historic human impacts. The course culminates in a 6-day field trip to these areas during Spring Break. Class lectures provide the basics of plate tectonics and physical geology. Laboratory exercises involve rock identification and interpreting topographic and geologic maps and remote sensing imagery. Camping and moderate hiking required. Limited enrollment. Only one of GES 1A, 1B, or 1C may be taken for credit. Recommended: high school chemistry. GER:DB-NatSci
4 units, Win (Mahood, G)

GES 1C. Introduction to Geology: Dynamic Earth
For non-majors or prospective majors in the Earth Sciences. Integrated lecture-lab includes hands-on activities and local field trips. Focus is on reading the dynamic geological landscape, with an emphasis on California¿primarily Bay Area¿geology. Topics include plate tectonics, earthquakes and volcanoes, Earth materials, geologic time, stream processes, and climate change over geologic time. Only one of GES 1A, 1B, or 1C may be taken for credit. GER:DB-NatSci
4 units, Spr (Egger, A)

GES 4. Evolution and Extinction: Introduction to Historical Geology
(Same as EARTHSYS 4) Focus is on the end-Cretaceous mass extinction. Principles of stratigraphy, correlation, the geological timescale, the history of biodiversity, and the interpretation of fossils. The use of data from sedimentary geology, geochemistry, and paleontology to test theories to explain the mass extinction event. Two half-day field trips. GER:DB-NatSci
4 units, alternate years, not given this year

GES 7A. An Introduction to Wilderness Skills
Living, traveling, and working in the wilderness for those planning fieldwork in the back country. Local geology, environmental ethics, trip planning, first aid, and leadership techniques. Four mandatory weekend outings focus on back country travel, minimum impact camping, equipment use and maintenance, rock climbing, and navigation. 7A emphasizes wilderness travel and climbing. 7B emphasizes winter camping skills and back country skiing. Food, group, and major personal gear provided. Guest speakers. Fee. See http://www.stanford.edu/class/ges7, or email oep-teachers@lists.stanford.edu.
1 unit, Aut (Bird, D)

GES 7B. An Introduction to Wilderness Skills
Living, traveling, and working in the wilderness for those planning fieldwork in the backcountry. Local geology, environmental ethics, trip planning, first aid, and leadership techniques. Four mandatory weekend outings focus on backcountry travel, minimum impact camping, equipment use and maintenance, rock climbing, and navigation. 7A emphasizes wilderness travel and climbing. 7B emphasizes winter camping skills and backcountry skiing. Food, group, and major personal gear provided. Guest speakers. Fee. See http://www.stanford.edu/class/ges7, or email oep-teachers@lists.stanford.edu.
1 unit, Win (Bird, D)

GES 7C. Advanced Wilderness Skills
For students with prior backcountry experience. Backcountry skiing, mountaineering, climbing, first aid, and trip planning. Focus is on outdoor leadership experience and trip management techniques. Food, group, and major personal gear provided. Four mandatory weekend trips. Fee. See http://www.stanford.edu/class/ges7/ for information or contact oep-teachers@lists.stanford.edu. Prerequisite: application.
1 unit, Spr (Bird, D)

GES 8. Oceanography: An Introduction to the Marine Environment
For non-majors and earth science and environmental majors. Topics: topography and geology of the sea floor; evolution of ocean basins; circulation of ocean and atmosphere; nature of sea water, waves, and tides; and the history of the major ocean basins. The interface between continents and ocean basins, emphasizing estuaries, beaches, and continental shelves with California margin examples. Relationships among the distribution of inorganic constituents, ocean circulation, biologic productivity, and marine environments from deep sea to the coast. One-day field trip to measure and analyze waves and currents. GER:DB-NatSci
3 units, Sum (Ingle, J)

GES 38N. The Worst Journey in the World: The Science, Literature, and History of Polar Exploration
(Stanford Introductory Seminar) (Same as EESS 38N, EARTHSYS 38N) Preference to freshmen. The isolation of polar explorers under the harshest conditions on Earth, and the chronicles of their explorations and hardships dating to the 1500s for the Arctic and the 1700s for the Antarctic. Focus is on scientific and geographic achievements. Sources include The Worst Journey in the World by Apsley Cherry-Garrard who in 1911 participated in a midwinter Antarctic sledging trip to recover emperor penguin eggs. Class jointly authors essay on themes from such literature. Optional field trip into the high Sierra in December. (Dunbar) GER:DB-NatSci
3 units, Win (Dunbar, R)

GES 39N. Forensic Geoscience: Stanford CSI
(Stanford Introductory Seminar) Preference to freshmen. Geological principles, materials, and techniques indispensable to modern criminal investigations. Basic earth materials, their origin and variability, and how they can be used as evidence in criminal cases and investigations such as artifact provenance and environmental pollution. Sources include case-based, simulated forensic exercises and the local environments of the Stanford campus and greater Bay Area. Local field trips; research presentation and paper. GER:DB-NatSci
3 units, Aut (Maher, K)

GES 40N. Diamonds
(Stanford Introductory Seminar) Preference to freshmen. Topics include the historyof diamonds as gemstones, prospecting and mining, and their often tragic politics. How diamond samples provide clues for geologists to understand the Earth's deep interior and the origins of the solar system. Diamond's unique materials properties and efforts in synthesizing diamonds. GER:DB-NatSci
3 units, Spr (Mao, W)

GES 43Q. Environmental Problems
(Stanford Introductory Seminar) (Same as EARTHSYS 43Q) Preference to sophomores. Components of multidisciplinary environmental problems and ethical questions associated with decision making in the regulatory arena. Students lead discussions on environmental issues such as groundwater contamination from point and nonpoint sources, cumulative watershed effects related to tim-

ber and mining practices, acid rain, and subsurface disposal of nuclear waste. GER:DB-NatSci

3 units, Win (Loague, K)

GES 55Q. The California Gold Rush: Geologic Background and Environmental Impact

(Stanford Introductory Seminar) Preference to sophomores. Topics include: geologic processes that led to the concentration of gold in the river gravels and rocks of the Mother Lode region of California; and environmental impact of the Gold Rush due to population increase, mining operations, and high concentrations of arsenic and mercury in sediments from hard rock mining and milling operations. Recommended: introductory geology. GER:DB-NatSci

3 units, Win (Bird, D)

GES 90. Introduction to Geochemistry

The chemistry of the solid earth and its atmosphere and oceans, emphasizing the processes that control the distribution of the elements in the earth over geological time and at present, and on the conceptual and analytical tools needed to explore these questions. The basics of geochemical thermodynamics and isotope geochemistry. The formation of the elements, crust, atmosphere and oceans, global geochemical cycles, and the interaction of geochemistry, biological evolution, and climate. Recommended: introductory chemistry. GER:DB-NatSci

3-4 units, Win (Stebbins, J)

GES 101. Environmental and Geological Field Studies in the Rocky Mountains

(Same as EESS 101, EARTHSYS 100) Three-week, field-based program in the Greater Yellowstone/Teton and Wind River Mountains of Wyoming. Field-based exercises covering topics including: basics of structural geology and petrology; glacial geology; western cordillera geology; paleoclimatology; chemical weathering; aqueous geochemistry; and environmental issues such as acid mine drainage and changing land-use patterns.

3 units, Aut (Chamberlain, P)

GES 102. Earth Materials: Introduction to Mineralogy

The minerals and materials that comprise the earth and their uses in modern society. How to identify, classify, and interpret rock-forming minerals. Emphasis is on information provided by common minerals about the nature of the Earth's interior and processes such as magmatism and metamorphism that operate there, as well as the major processes of weathering and erosion that link plate tectonics to earth cycles. Prerequisite: introductory geology course. Recommended: introductory chemistry. GER:DB-NatSci

3 units, Aut (Brown, G; Mao, W)

GES 102L. Introductory Mineralogy Laboratory

One weekly 3-hour laboratory to identify and interpret rock-forming minerals, industrially important minerals, and gems. Introduction to the use of hand lens, petrographic microscope and x-ray diffraction. Prerequisite: GES102 taken concurrently.

1 unit, Aut (Brown, G; Mao, W)

GES 103. Earth Materials: Rocks in Thin Section

Use of petrographic microscope to identify minerals and common mineral associations in igneous, metamorphic, and sedimentary rocks. Crystallization histories, mineral growth and reaction relations, deformation textures in metamorphic rocks, and provenance of siliciclastic rocks. Prerequisite 102.

3 units, Win (Miller, E)

GES 104. Earth Materials: Introduction to Petrology

The origin of different rock types as a function of geologic and plate tectonic setting. How mineral and energy resources occur in rocks. Prerequisite: introductory geology course. Recommended: GES102.

3 units, Spr (Mahood, G)

GES 104L. Introductory Petrology Laboratory

One weekly 3-hour laboratory on how to identify igneous, metamorphic, and sedimentary rocks, and interpret their mode and conditions of formation using hand lens and petrographic microscope. Prerequisite: GES 102L; GES103; GES104 taken concurrently.

1 unit, Spr (Mahood, G)

GES 105. Introduction to Field Methods

Two-week, field-based course in the White Mountains of eastern California. Introduction to the techniques for geologic mapping and geologic investigation in the field: systematic observations and data collection for lithologic columns and structural cross-sections. Interpretation of field relationships and data to determine the stratigraphic and deformational history of the region. Prerequisite: GES 1. Recommended: GES 102.

3 units, Aut (Grove, M; Maher, K)

GES 107. Journey to the Center of the Earth

(Same as GEOPHYS 184) The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth's formation and evolution.

3 units, alternate years, not given this year

GES 110. Structural Geology and Tectonics

Theory, principles, and practical techniques to measure, describe, analyze, and interpret deformation-related structures on Earth. Collection of fault and fold data in the field followed by lab and computer analysis; interpretation of geologic maps and methods of cross-section construction; structural analysis of fault zone and metamorphic rocks; measuring deformation; regional structural styles and associated landforms related to plate tectonic convergence, rifting, and strike-slip faulting; the evolution of mountain belts and formation of sedimentary basins. Prerequisite: GES 1, calculus. Recommended: 102. GER:DB-NatSci

3-5 units, Spr (Miller, E)

GES 111A. Fundamentals of Structural Geology

(Same as CEE 195A) Techniques for structural mapping; using differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; measurement and analysis of stress. Sources include field and laboratory data integrated with conceptual and mechanical models. Models of tectonic processes are constructed and solutions visualized using MATLAB. Prerequisites: GES 1, MATH 51, 52. GER:DB-NatSci

3 units, Aut (Pollard, D)

GES 111B. Fundamentals of Structural Geology

(Same as CEE 195B) Continuation of GES 111A/CEE 195A. Conservation of mass and momentum in a deformable continuum; linear elastic deformation and elastic properties of rock; brittle deformation including fracture and faulting; linear viscous flow including folding and magma dynamics; model development and methodology. Sources include field and laboratory data integrated with conceptual and mechanical models. Models of tectonic processes are constructed and solutions visualized using MATLAB. Prerequisite: GES 111A/CEE 195B.

3 units, Win (Pollard, D)

GES 115. Engineering Geology Practice

(Same as CEE 196) The application of geology and global change to the planning, design, and operation of engineering projects. Case histories taught in a seminar setting and field trips emphasize the impact of geology and global change on both individual engineering works and the built environment by considering Quaternary history and tectonics, anthropogenic sea level rise, active geologic processes, engineering properties of geologic deposits, site exploration, and professional ethics. Prerequisite: GES 1 or consent of instructor. GER:DB-NatSci

3 units, alternate years, not given this year

GES 120. Planetary and Early Biological Evolution Seminar

(Same as GES 220) Interdisciplinary. For upper division science undergraduates and graduate students. Synthesis of biology, geology, physics, and chemistry. Recent approaches for identifying traces of past life on Earth. How to look for life on other planets such as Mars, Europa, and Titan. May be repeated for credit.

2-3 units, not given this year

GES 121. What Makes a Habitable Planet?

(Same as GES 221) Physical processes affecting habitability such as large impacts and the atmospheric greenhouse effect, comets, geochemistry, the rise of oxygen, climate controls, and impact cratering. Detecting and interpreting the spectra of extrasolar terrestrial planets. Student-led discussions of readings from the scientific literature. Team taught by planetary scientists from NASA Ames Research Center.

3 units, Aut (Lissauer, J; Marley, M; Zahnle, K)

GES 122. Planetary Systems: Dynamics and Origins

(Students with a strong background in mathematics and the physical sciences should register for 222.) Motions of planets and smaller bodies, energy transport in planetary systems, composition,

structure and dynamics of planetary atmospheres, cratering on planetary surfaces, properties of meteorites, asteroids and comets, extrasolar planets, and planetary formation. Prerequisite: some background in the physical sciences, especially astronomy, geophysics, or physics.

3-4 units, alternate years, not given this year

GES 123. Paleobiology

(Same as EARTHSYS 122) Introduction to the fossil record with emphasis on marine invertebrates. Major debates in paleontological research. The history of animal life in the oceans. Topics include the nature of the fossil record, evolutionary radiations, mass extinctions, and the relationship between biological evolution and environmental change. Fossil taxa through time. Exercises in phylogenetics, paleoecology, biostratigraphy, and statistical methods. GER:DB-NatSci

4 units, Spr (Harnik, P)

GES 130. Soil Physics and Hydrology

(Same as EARTHSYS 130) The occurrence, distribution, circulation, and reaction of water at the surface and within the near surface. Topics: precipitation, evapotranspiration, infiltration and vadose zone, groundwater, surface water and streamflow generation, and water balance estimates. Current and classic theory in soil physics and hydrology. Urban, rangeland, and forested environments. GER:DB-NatSci

3 units, Aut (Loague, K)

GES 131. Hydrologically-Driven Landscape Evolution

(Same as EARTHSYS 131H) Materials of the Earth and hydrologically driven landscape processes. Topics: hillslope hydrology, weathering of rocks and soils, erosion, flow failures, mass wasting, and conceptual models of landscape evolution. Current and classic theory in geomorphology. GER:DB-NatSci

3 units, Win (Loague, K)

GES 150. Senior Seminar: Issues in Earth Sciences

Focus is on written and oral communication in a topical context. Topics from current frontiers in earth science research and issues of concern to the public. Readings, oral presentations, written work, and peer review.

3 units, Aut (Bird, D; Egger, A)

GES 151. Sedimentary Geology and Petrography: Depositional Systems

Topics: weathering, erosion and transportation, deposition, origins of sedimentary structures and textures, sediment composition, diagenesis, sedimentary facies, tectonics and sedimentation, and the characteristics of the major siliciclastic and carbonate depositional environments. Lab: methods of analysis of sediments in hand specimen and thin section. Field trips. Prerequisites: 1, 102, 103. GER:DB-NatSci

4 units, Win (Graham, S; Lowe, D)

GES 163. Introduction to Isotope Geochemistry

(Same as GES 263) Stable, cosmogenic, and radiogenic isotopes; processes that govern isotopic variations. Application of isotopes to geologic, biologic, and hydrologic questions. Major isotopic systems and their applications. Simple modeling techniques used in isotope geochemistry.

3 units, alternate years, not given this year

GES 170. Environmental Geochemistry

(Same as EARTHSYS 170) Solid, aqueous, and gaseous phases comprising the environment, their natural compositional variations, and chemical interactions. Contrast between natural sources of hazardous elements and compounds and types and sources of anthropogenic contaminants and pollutants. Chemical and physical processes of weathering and soil formation. Chemical factors that affect the stability of solids and aqueous species under earth surface conditions. The release, mobility, and fate of contaminants in natural waters and the roles that water and dissolved substances play in the physical behavior of rocks and soils. The impact of contaminants and design of remediation strategies. Case studies. Prerequisite: 90 or consent of instructor. GER:DB-NatSci

4 units, Win (Brown, G)

GES 171. Geochemical Thermodynamics

Introduction to the application of chemical principles and concepts to geologic systems. The chemical behavior of fluids, minerals, and gases using simple equilibrium approaches to modeling the geochemical consequences of diagenetic, hydrothermal, metamorphic, and igneous processes. Topics: reversible thermodynamics, solution chemistry, mineral-solution equilibria, reaction kinetics, and the distribution and transport of elements by geologic processes. Prerequisite: GES 102. GER:DB-NatSci

3 units, Aut (Bird, D)

GES 180. Igneous Processes

For juniors, seniors and beginning graduate students in Earth Sciences. Structure and physical properties of magmas; use of phase equilibria and mineral barometers and thermometers to determine conditions of magmatic processes; melting and magmatic lineages as a function of tectonic setting; processes that control magma composition including fractional crystallization, partial melting, and assimilation; petrogenetic use of trace elements and isotopes. Labs emphasize identification of volcanic and plutonic rocks in thin section and interpretation of rock textures. Prerequisite 102, 103, or consent of instructor.

4 units, alternate years, not given this year

GES 181. Metamorphic Processes

For juniors, seniors, and beginning graduate students in Earth Sciences. Thermodynamics and phase equilibria of multiple component systems; use of phase equilibria to determine pressure and temperature of metamorphic assemblages; geochronology of metamorphic rocks; heat flow in the lithosphere; links between tectonics and metamorphism; and the role of heat and mass transfer in the Earth's crust and mantle. Labs emphasize identification of metamorphic rocks and minerals for common pelitic and basic rocks and interpretation of rock textures. May be taken for 3 units without lab. Prerequisites: 102, 103, or consent of instructor. GER:DB-NatSci

3-5 units, not given this year

GES 182. Field Seminar on Continental-Margin Volcanism

For juniors, seniors, and graduate students in the earth sciences and archeology. One weekend-long, and two one-day field trips to study Cenozoic volcanism associated with subduction and with passage of the Mendocino Triple Junction off the west coast of California: Mt. Lassen/Mt. Shasta/Modoc plateau; Clear Lake/Sonoma volcanics; Pinnacles National Monument. Andesite and basalt lavas, cinder cones, mixed magmas, blast deposit, debris avalanches, volcanic mudflows, hydrologic controls of springs in volcanic terrains, hydrothermal alteration and modern geothermal systems, Hg mineralization, obsidian source. Prerequisite: 1, 104 or equivalent.

2 units, given occasionally

GES 183. California Desert Geology

Field seminar. Six-day field trip over Spring Break to Mojave Desert, Death Valley, and Owens Valley. Basin-and-range faulting, alluvial fans, playas, sand dunes, metamorphic rocks, granites of the Sierra Nevada, obsidian lava flows and the deposits of major explosive eruptions, hot springs and ore deposits, and desert landscapes. Camping and moderate hiking. Recommended: introductory geology.

1 unit, Win (Mahood, G)

GES 185. Volcanology

For juniors, seniors, and beginning graduate students. Volcanic landforms and deposits and eruptive processes. How they relate to physical properties of magmas and the modes of emplacement. Volcanic hazards and the effects of eruptions on climate; volcanic-hosted geothermal systems and mineral resources. Required 4-day field trip over Memorial Day weekend to study silicic and mafic volcanism associated with the western margin of the Basin and Range Province. Those taking the class for 4 units will complete a 3-hour weekly lab involving hand specimen and thin section identification and interpretation, which emphasizes recognizing types of lavas and products of explosive eruptions. Prerequisite: 1, for those taking the course for 3 units; 103 and 104 or equivalent for those taking the course for 4 units. GER:DB-NatSci

3-4 units, alternate years, not given this year

GES 186. Geoarchaeology

For juniors, seniors, and beginning graduate students with interests in archaeology or geosciences. Geological concepts, techniques, and data in the study of artifacts and the interpretation of the archaeological record. Topics include: sediments and soils; sedimentary settings of site formation; postdepositional processes that disturb sites; paleoenvironmental reconstruction of past climates and landscapes using plant and animal remains and isotopic studies; raw materials (minerals, metals, stone, shells, clay, building mate-

rials) and methods used in sourcing; estimating age based on stratigraphic and radiometric techniques. Weekly lab; weekend field trip to local archaeological/geological site. GER:DB-NatSci

5 units, not given this year

GES 190. Field Research

Two-three week field research projects. Written report required. May be repeated three times.

2-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 191. GES Field Trips

Four- to seven-day field trips to locations of geologic and environmental interest. Includes trips offered during Thanksgiving and Spring breaks. May be repeated for credit. See http://pangea.stanford.edu/GES/undergraduates/courses/.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 192. Undergraduate Research in Geological and Environmental Sciences

Field-, lab-, or literature-based. Faculty supervision. Written reports. May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 197. Senior Thesis

For seniors who wish to write a thesis based on research in 192 or as a summer research fellow. May not be repeated for credit; may not be taken if enrolled in 199.

3-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 198. Special Problems in Geological and Environmental Sciences

Reading and instruction under faculty supervision. Written reports. May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 199. Honors Program

Research on a topic of special interest. May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN GEOLOGICAL AND ENVIRONMENTAL SCIENCES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

GES 209. Microstructures

Microstructures in metamorphic rocks reveal temperature, pressure, and rates of deformation in the crust and variations in its thermo-mechanical behavior. Topics include the rheology of rocks and minerals, strain partitioning, shear zones and brittle-ductile transition in the crust, mechanisms of foliation and lineation development, preferred crystallographic fabrics, and geochronologic methods useful for dating deformation. Labs involve microstructure analysis of suites of rocks from classic localities. 5 units for extra project.

3-5 units, not given this year

GES 210. Geologic Evolution of the Western U.S. Cordillera

The geologic and tectonic evolution of the U.S. Cordillera based on its rock record through time. This region provides good examples of large-scale structures and magmatic activity generated during crustal shortening, extension, and strike-slip faulting and affords opportunity to study crustal-scale processes involved in mountain building in context of plate tectonic motions.

2-3 units, given next year

GES 211. Topics in Regional Geology and Tectonics

May be repeated for credit.

2-3 units, Aut (Miller, E), Win (Miller, E), Spr (Staff)

GES 212. Topics in Tectonic Geomorphology

For upper-division undergraduates and graduate students. Topics vary and may include coupling among erosional, tectonic, and chemical weathering processes at the scale of orogens; historical review of tectonic geomorphology; hillslope and fluvial process response to active uplift; measures of landscape form and their relationship to tectonic uplift and bedrock lithology. May be repeated for credit.

2 units, Aut (Hilley, G)

GES 213. Topics in Sedimentary Geology

For upper division undergraduates and graduate students. Topics vary each year but the focus is on current developments and problems in sedimentary geology, sedimentology, and basin analysis. These include issues in deep-water sediments, their origin, facies, and architecture; sedimentary systems on the early Earth; and relationships among tectonics, basin development, and basin fill. May be repeated for credit.

2 units, by arrangement

GES 214. Topics in Paleobiology

For upper division undergraduates and graduate students. Topics vary each year; focus is on paleontological, sedimentological, and geochemical approaches to the history of life. Topics may include: mass extinction events; evolutionary radiations; the history of global biodiversity; links between evolutionary histories of primary producers and consumers; and the quality of the fossil record. Term paper. May be repeated for credit.

2 units, given occasionally

GES 215A. Structural Geology and Rock Mechanics

(Same as CEE 297G, GEOPHYS 251A) Quantitative field and laboratory data integrated with solutions to initial and boundary-value problems of continuum mechanics introduce tectonic processes in Earth's crust that lead to the development of geological structures including folds, faults, fractures and fabrics. Topics include: techniques and tools for structural mapping; using differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; traction and stress analysis. Data sets analyzed using MATLAB. Prerequisites: GES 1, MATH 53, MATLAB or equivalent.

3-5 units, Aut (Pollard, D)

GES 215B. Structural Geology and Rock Mechanics

(Same as CEE 297H, GEOPHYS 251B) Field equations for elastic solids and viscous fluids derived from conservation laws to develop mechanical models for tectonic processes and their structural products. Topics include: conservation of mass and momentum in a deformable continuum; linear elastic deformation and elastic properties of rock; brittle deformation including fracture and faulting; linear viscous flow including folding, model development, and methodology. Models constructed and solutions visualized using MATLAB. Prerequisite: GES 215A.

3-5 units, Win (Staff)

GES 216. Rock Fracture Mechanics

Principles and tools of elasticity theory and fracture mechanics are applied to the origins and physical behaviors of faults, dikes, joints, veins, solution surfaces, and other natural structures in rock. Field observations, engineering rock fracture mechanics, and the elastic theory of cracks. The role of natural fractures in brittle rock deformation, and fluid flow in the earth's crust with applications to crustal deformation, structural geology, petroleum geology, engineering, and hydrogeology. Prerequisite: 215 or equivalent.

3-5 units, Spr (Pollard, D)

GES 217. Faults, Fractures, and Fluid Flow

Process-based approach to rock failure; the microstructures and overall architectures of the failure products including faults, joints, solution seams, and types of deformation bands. Fluid flow properties of these structures are characterized with emphasis on sealing and transmitting of faults and their role in hydrocarbon flow, migration, and entrapment. Case studies of fracture characterization experiments in aquifers, oil and gas reservoirs, and waste repository sites. Guest speakers; weekend field trip. Prerequisite: first-year graduate student in Earth Sciences.

3 units, Win (Aydin, A)

GES 220. Planetary and Early Biological Evolution Seminar

(Same as GES 120) Interdisciplinary. For upper division science undergraduates and graduate students. Synthesis of biology, geology, physics, and chemistry. Recent approaches for identifying traces of past life on Earth. How to look for life on other planets such as Mars, Europa, and Titan. May be repeated for credit.

2-3 units, not given this year

GES 221. What Makes a Habitable Planet?

(Same as GES 121) Physical processes affecting habitability such as large impacts and the atmospheric greenhouse effect, comets, geochemistry, the rise of oxygen, climate controls, and impact cratering. Detecting and interpreting the spectra of extrasolar terrestrial planets. Student-led discussions of readings from the scientific literature. Team taught by planetary scientists from NASA Ames Research Center.

3 units, Aut (Lissauer, J; Marley, M; Zahnle, K)

GES 222. Planetary Systems: Dynamics and Origins
(For students with a strong background in mathematics and the physical sciences; other should register for 122.) Motions of planets, moons, and small bodies; energy transport in planetary systems; meteorites and the constraints they provide on the formation of the solar system; asteroids and Kuiper belt objects; comets; planetary rings; planet formation; and extrasolar planets. In-class presentation of student papers.

3-4 units, alternate years, not given this year

GES 223. Planetary Systems: Atmospheres, Surfaces, and Interiors
Focus is on physical processes, such as radiation transport, atmospheric dynamics, thermal convection, and volcanism, shaping the interiors, surfaces, and atmospheres of the major planets in the solar system. How these processes manifest themselves under various conditions in the solar system. Case study of the surface and atmosphere of Mars. Application of comparative planetary science to extrasolar planets and brown dwarfs. In-class presentation of student papers.

3 units, by arrangement

GES 224. Modeling Transport and Transformations in the Environment
An introduction to geochemical and reactive transport modeling using Geochemist¿s Workbench and other appropriate models. Students required to participate in a weekend-long short course at the beginning of the quarter. Throughout the quarter the students will use the principles and tools presented in the class to develop and analyze an environmental problem as part of a simulated consulting exercise. Topics covered include contaminant transport, mineral dissolution/precipitation and aquifer microbiology. Prerequisites: Either EESS 221 (CEE 260C) or EESS 220 (CEE 260A) and either GES 90, 170, or 171, or permission from instructors.

2-3 units, Aut (Maher, K; Bethke, C)

GES 237. Surface and Near-Surface Hydrologic Response
(Same as CEE 260B) Quantitative review of process-based hydrology and geomorphology. Introduction to finite-difference and finite-element methods of numerical analysis. Topics: biometeorology, unsaturated and saturated subsurface fluid flow, overland and open channel flow, and physically-based simulation of coupled surface and near-surface hydrologic response. Links hydrogeology, soil physics, and surface water hydrology.

3 units, alternate years, not given this year

GES 238. Soil Physics
Physical properties of the soil solid phase emphasizing the transport, retention, and transformation of water, heat, gases, and solutes in the unsaturated subsurface. Field experiments.

3 units, Aut (Loague, K)

GES 240. Geostatistics for Spatial Phenomena
(Same as ENERGY 240) Probabilistic modeling of spatial and/or time dependent phenomena. Kriging and cokriging for gridding and spatial interpolation. Integration of heterogeneous sources of information. Multiple-point geostatistics and training image-based stochastic imaging of reservoir/field heterogeneities. Introduction to GSLIB and SGEMS software. Case studies from the oil and mining industry and environmental sciences. Prerequisites: introductory calculus and linear algebra, STATS 116, GES 161, or equivalent.

3-4 units, Spr (Staff)

GES 246. Reservoir Characterization and Flow Modeling with Outcrop Data
(Same as ENERGY 146, ENERGY 246) Project addressing a reservoir management problem by studying an outcrop analog, constructing geostatistical reservoir models, and performing flow simulation. How to use outcrop observations in quantitative geological modeling and flow simulation. Relationships between disciplines. Weekend field trip.

3 units, Aut (Graham, S; Tchelepi, H; Boucher, A; Stright, L; Kuralkhanov, D)

GES 249. Petroleum Geochemistry in Environmental and Earth Science
How molecular fossils in crude oils, oil spills, refinery products, and human artifacts identify their age, origin, and environment of formation. The origin and habitat of petroleum, technology for its analysis, and parameters for interpretation, including: origins of molecular fossils; function, biosynthesis, and precursors; tectonic history related to the evolution of life, mass extinctions, and molecular fossils; petroleum refinery processes and the kinds of molecular fossils that survive; environmental pollution from natural and anthropogenic sources including how to identify genetic relationships among crude oil or oil spill samples; applications of molecular fossils to archaeology; worldwide petroleum systems through geologic time.

3 units, alternate years, not given this year

GES 250. Sedimentation Mechanics
The mechanics of sediment transport and deposition and the origins of sedimentary structures and textures as applied to interpreting ancient rock sequences. Dimensional analysis, fluid flow, drag, boundary layers, open channel flow, particle settling, erosion, sediment transport, sediment gravity flows, soft sediment deformation, and fluid escape. Field trip required.

4 units, alternate years, not given this year

GES 251. Sedimentary Basins
Analysis of the depositional framework and tectonic evolution of sedimentary basins. Topics: tectonic and environmental controls on facies relations, synthesis of basin development through time in terms of depositional systems and tectonic settings. Weekend field trip required. Prerequisites: 110, 151.

3 units, alternate years, not given this year

GES 252. Sedimentary Petrography
Siliciclastic sediments and sedimentary rocks. Research in modern sedimentary mineralogy and petrography and the relationship between the composition and texture of sediments and their provenance, tectonic settings, and diagenetic histories. Topics vary yearly. Prerequisite: 151 or equivalent.

4 units, Aut (Lowe, D)

GES 253. Petroleum Geology and Exploration
The origin and occurrence of hydrocarbons. Topics: thermal maturation history in hydrocarbon generation, significance of sedimentary and tectonic structural setting, principles of accumulation, and exploration techniques. Prerequisites: 110, 151. Recommended: GEOPHYS 223.

3 units, Spr (Graham, S)

GES 254. Carbonate Sedimentology
Processes of precipitation and sedimentation of carbonate minerals with emphasis on marine systems. Topics include: geographic and bathymetric distribution of carbonates in modern and ancient oceans; genesis and environmental significance of carbonate grains and sedimentary textures; carbonate rocks and sediments as sources of geochemical proxy data; carbonate diagenesis; changes in styles of carbonate deposition through Earth history; carbonate depositional patterns and the global carbon cycle. Lab exercises emphasize petrographic and geochemical analysis of carbonate rocks including map and outcrop scale, hand samples, polished slabs, and thin sections.

3-4 units, alternate years, not given this year

GES 255. Basin and Petroleum System Modeling
For advanced undergraduates or graduate students. Students use stratigraphy, subsurface maps, and basic well log, lithologic, paleontologic, and geochemical data to construct 1-D, 2-D, and 3-D models of petroleum systems that predict the extent of source-rock thermal maturity, petroleum migration paths, and the volumes and compositions of accumulations through time (4-D). Recent software such as PetroMod designed to reconstruct basin geohistory. Recommended: 251 or 253.

3 units, Aut (Peters, K)

GES 256. Quantitative Methods in Paleobiology
Introduction to statistical methods relevant to the analysis of paleobiological data. Methods include principles of inference, linear and logistic regression, principal components analysis, time-series, and re-sampling methods. Paleobiological problems include assessment of spatial and temporal patterns in biodiversity, selectivity of extinction and origination, and evolutionary trends. Readings, examples, and problems from the primary literature. Term paper. Prerequisite: Previous course in paleobiology or permission of the instructor.

3 units, given occasionally

GES 257. Clastic Sequence Stratigraphy
Sequence stratigraphy facilitates integration of all sources of geologic data, including seismic, log, core, and paleontological, into a

time-stratigraphic model of sediment architecture. Tools applicable to regional and field scales. Emphasis is on practical applications and integration of seismic and well data to exploration and field reservoir problems. Examples from industry data; hands-on exercises.

3 units, Spr (McHargue, T)

GES 258. Introduction to Depositional Systems
The characteristics of the major sedimentary environments and their deposits in the geologic record, including alluvial fans, braided and meandering rivers, aeolian systems, deltas, open coasts, barred coasts, marine shelves, and deep-water systems. Emphasis is on subdivisions; morphology; the dynamics of modern systems; and the architectural organization and sedimentary structures, textures, and biological components of ancient deposits.

3 units, not given this year

GES 259. Stratigraphic Architecture
The stratigraphic architecture of deposits associated with a spectrum of depositional environments, using outcrop and subsurface data. Participants read and discuss selected literature.

1 unit, Aut (McHargue, T)

GES 260. Laboratory Methods in Organic Geochemistry
Knowledge of components in geochemical mixtures to understand geological and environmental samples. The presence and relative abundance of these compounds provides information on the biological source, depositional environment, burial history, biodegradation, and toxicity of organic materials. Laboratory methods to detect and quantify components of these mixtures. Methods for separation and analysis of organic compounds in geologic samples: extraction, liquid chromatography, absorption by zeolites, gas chromatography and gas chromatography-mass spectrometry. Student samples considered as material for analysis. Prerequisite: GES 249 or consent of instructor.

2-3 units, not given this year

GES 261. Physics and Chemistry of Minerals and Mineral Surfaces
The concepts of symmetry and periodicity in crystals; the physical properties of crystals and their relationship to atomic-level structure; basic structure types; crystal chemistry and bonding in solids and their relative stability; the interaction of x-rays with solids and liquids (scattering and spectroscopy); structural variations in silicate glasses and liquids; UV-visible spectroscopy and the color of minerals; review of the mineralogy, crystal chemistry, and structures of selected rock-forming silicates and oxides; mineral surface and interface geochemistry.

4 units, alternate years, not given this year

GES 262. Thermodynamics and Disorder in Minerals and Melts
The thermodynamic properties of crystalline, glassy, and molten silicates and oxides in light of microscopic information about short range structure and ordering. Measurements of bulk properties such as enthalpy, density, and their pressure and temperature derivatives, and structural determination by spectroscopies such as nuclear magnetic resonance and Mössbauer. Basic formulations for configurational entropy, heats of mixing in solid solutions, activities; and the energetics of exsolution, phase transitions, and nucleation. Quantitative models of silicate melt thermodynamics are related to atomic-scale views of structure. A general view of geothermometry and geobarometry. Prerequisites: introductory mineralogy and thermodynamics.

3 units, Spr (Stebbins, J)

GES 263. Introduction to Isotope Geochemistry
(Same as GES 163) Stable, cosmogenic, and radiogenic isotopes; processes that govern isotopic variations. Application of isotopes to geologic, biologic, and hydrologic questions. Major isotopic systems and their applications. Simple modeling techniques used in isotope geochemistry.

3 units, alternate years, not given this year

GES 264. Mathematical Modeling in Biogeochemistry
The basics of translating a conceptual model into a numerical model is presented. Emphasis on building models, box modeling, methods of solving models. Lab exercises draw from examples in biogeochemistry, including modeling global biogeochemical cycles, sediment biogeochemistry, and microbial processes.

3 units, Win (Meyer, K)

GES 267. Solution-Mineral Equilibria: Theory
Procedures for calculating and evaluating the thermodynamic properties of reversible and irreversible reactions among rock-forming minerals and aqueous solutions in geologic systems. Emphasis is on the generation and utility of phase diagrams depicting solution-mineral interaction relevant to phase relations associated with weathering diagenetic, hydrothermal, and metamorphic processes, and the prediction of temperature, pressure, and the chemical potential of thermodynamic components compatible with observed mineralogic phase relations in geologic outcrops. Individual research topics. Prerequisite: 171.

3 units, given occasionally

GES 273. Isotope Geochemistry Seminar
Current topics including new analytical techniques, advances in isotopic measurements, and new isotopic approaches and systems.

1-3 units, Win (Maher, K)

GES 275. Electron Probe Microanalytical Techniques
The practical and theoretical aspects of x-ray generation and detection, and the behavior of electron beams and x-rays in solids. The basic principles needed to quantitatively analyze chemically complex geological materials. Operation of the JEOL 733 electron microprobe and associated computer software for quantitatively analyzing materials. X-ray chemical mapping. Enrollment limited to 8.

2-3 units, Win (Jones, R)

GES 277. Flood Basalts and Mass Extinctions
Recent work in geochronology and paleobiology supports the temporal coincidence of the eruption of continental flood basalts with mass extinction in the marine and terrestrial realms. The mechanisms and timescale of flood basalt eruptions, their likely environmental and biological consequences, and the evidence for flood basalt eruptions as the triggers of many mass extinction events. Sources include recent primary literature.

3 units, given occasionally

GES 282. Interpretative Methods in Detrital Geochronology
Over the past decade, the number of studies that make use of isotopic provenance data has sky-rocketed. This type of data is now routinely used throughout the geosciences to solve a broad range of geologic problems. This seminar examines the state-of-the-art of existing interpretative methods for detrital geo/thermochronology data in provenance studies and critically examines their strengths and weaknesses. While this course will touch upon sampling approaches analytical aspects of data collection, focus is primarily upon data interpretation.

1-5 units, Spr (Grove, M)

GES 283. Thermochronology and Crustal Evolution
Thermochronology analyzes the competition between radioactive in-growth and temperature-dependant loss of radiogenic isotopes within radioactive mineral hosts in terms of temperature-time history. Coupled with quantitative understanding of kinetic phenomena and crustal- or landscape-scale interpretational models, thermochronology provides an important source of data for the Earth Sciences, notably tectonics, geomorphology, and petrogenesis. The underpinning concepts and key developments in thermochronology, focusing upon analytical and interpretative innovations developed over the past decade.

4 units, Spr (Grove, M)

GES 284. Field Seminar on Eastern Sierran Volcanism
For graduate students in the earth sciences and archaeology. Four-day trip over Memorial Day weekend to study silicic and mafic volcanism associated with the western margin of the Basin and Range province: basaltic lavas and cinder cones erupted along normal faults bounding Owens Valley, Long Valley caldera, post-caldera rhyolite lavas, hydrothermal alteration and hot springs, Holocene rhyolite lavas of the Inyo and Mono craters, volcanism of the Mono Basin with subaqueous basaltic eruptions, floating pumice blocks, and cryptodomes punching up lake sediments. If snow-level permits, silicic volcanism associated with the Bodie gold district. Prerequisite: 1.

1 unit, Spr (Mahood, G)

GES 285. Igneous Petrogenesis
Radiogenic isotopes, stable isotopes, and trace elements applied to igneous processes; interaction of magmas with mantle and crust; convergent-margin magmatism; magmatism in extensional terrains; origins of rhyolites; residence times of magmas and magma

chamber processes; granites as imperfect mirrors of their source regions; trace element modeling of igneous processes; trace element discriminant diagrams in tectonic analysis; phase equilibria of partial melting of mantle and crust; geothermometry and geobarometry. Topics emphasize student interest. Prerequisite: 180 or equivalent.

4 units, alternate years, not given this year

GES 290. Departmental Seminar in Geological and Environmental Sciences

Current research topics. Presentations by guest speakers from Stanford and elsewhere. May be repeated for credit.

1 unit, Win (Maher, K; Mao, W), Spr (Maher, K; Mao, W)

GES 291. GES Field Trips

Field trips for teaching and research purposes. Trips average 5-10 days. Prerequisite: consent of instructor.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 292. Directed Reading with Geological and Environmental Sciences Faculty

May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 299. Field Research

Two-three week field research projects. Written report required. May be repeated three times.

2-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 310. Climate Change, Climate Variability, and Landscape Development

The impact of long-term climate change on erosional processes and the evolution of Cenozoic landscapes. Climate data that highlight recurring climate variability on inter-annual to decadal timescales. The behavior of climate on multi-decadal to tectonic timescales over which significant changes in topography take place. The effects of climate change and variability on landscape development, sedimentary environments, and the deposits of these events. May be repeated for credit.

1 unit, not given this year

GES 315. Literature of Structural Geology

Classic studies and current journal articles. May be repeated for credit.

1 unit, Aut (Pollard, D), Win (Staff)

GES 328. Seminar in Paleobiology

For graduate students. Current research topics including paleobotany, vertebrate and invertebrate evolution, paleoecology, and major events in the history of life on Earth.

1 unit, Spr (Payne, J)

GES 336. Stanford Alpine Project Seminar

Seminar on the geology of the Himalaya, Tibetan plateau, and India. Weekly student presentations on continental collision tectonics, structure, petrology, geomorphology, culture, and other topics of interest. Students create a guidebook of geologic stops in advance of field trip to northwestern India in summer 2011. May be repeated for credit.

1 unit, Aut (Hilley, G), Win (Staff), Spr (Staff)

GES 355. Advanced Stratigraphy Seminar and Field Course

Student-led presentations; poster-sized display on assigned topic; field trip.

1-3 units, given occasionally

GES 381. Igneous Petrology and Petrogenesis Seminar

Topics vary by quarter. May be repeated for credit.

1-2 units, given occasionally

GES 384. Volcanology Seminar

Specialized and advanced topics vary by offering. May be repeated for credit.

1-2 units, given occasionally

GES 385. Practical Experience in the Geosciences

On-the-job training in the geosciences. May include summer internship; emphasizes training in applied aspects of the geosciences, and technical, organizational, and communication dimensions. Meets USCIS requirements for F-1 curricular practical training. (Staff)

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 399. Advanced Projects

Graduate research projects that lead to reports, papers, or other products during the quarter taken. On registration, students designate faculty member and agreed-upon units.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 400. Graduate Research

Faculty supervision. On registration, students designate faculty member and agreed-upon units.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GES 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GEOPHYSICS (GEOPHYS) COURSES

UNDERGRADUATE COURSES IN GEOPHYSICS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

GEOPHYS 25. Hands-on Introduction to Astrobiology

Are human beings alone; are microbes common in the universe? Historical development and modern status of topics such as: the vastness of space and time; star evolution; planetary climate; effects of geological processes and asteroid impacts on life; other habitable places in the solar system with updates on Mars; the Earth as a biological organism; maintenance of society for a geologically long time; and the search for intelligent extraterrestrials. Outdoor lab exercises designed to work in K-12 science classes. Non-science majors welcome.

3 units, Aut (Sleep, N)

GEOPHYS 60N. Man versus Nature: Coping with Disasters Using Space Technology

(Stanford Introductory Seminar) (Same as EE 60N) Stanford Introductory Seminar. Preference to freshman. Natural hazards, such as earthquakes, volcanoes, floods, hurricanes, and fires, affect the lives of thousands of people worldwide everyday. Over the past twenty years developments in spaceborne imaging technology have made it possible to monitor and respond to such disasters much more rapidly than in the past, saving lives and money. Additionally, greater understanding of the physical processes involved allows us to anticipate and plan for mitigation of the consequences of the disasters. In this course we will explore these new tools, how they are applied to natural disasters, and learn how the remotely-sensed data are manipulated and analyzed. The technical material consists of a summary of basic geophysical properties of the Earth, their physical characteristics that can be sensed remotely, and the design of satellite systems to measure these phenomena and predict/mitigate natural hazards. GER:DB-EngrAppSci

4 units, Aut (Zebker, H)

GEOPHYS 100. Directed Reading

(Staff)

1-2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GEOPHYS 104. The Water Course

(Same as EARTHSYS 104) The pathway that water takes from rainfall to the tap using student home towns as an example. How the geological environment controls the quantity and quality of water; taste tests of water from around the world. Current U.S. and world water supply issues. GER:DB-NatSci

3 units, not given this year

GEOPHYS 110. Earth on the Edge

Introduction to the foundations of contemporary geophysics. Topics drawn from four broad themes in: whole Earth geodynamics, geohazards, natural resources, and environment/sustainability. In each case the focus is on how the interpretation of a variety of geophysical measurements (e.g., gravity, seismology, heat flow, magnetism, electromagnetics, and geodesy) can be used to provide fundamental insight into the behavior of the Earth's complex geo-

systems. Prerequisite: CME 100 or MATH 51, or co-registration in either.

3 units, Win (Beroza, G)

GEOPHYS 112. Exploring Geosciences with MATLAB

How to use MATLAB as a tool for research and technical computing, including 2-D and 3-D visualization features, numerical capabilities, and toolboxes. Practical skills in areas such as data analysis, regressions, optimization, spectral analysis, differential equations, image analysis, computational statistics, and Monte Carlo simulations. Emphasis is on scientific and engineering applications.

1-3 units, Aut (Mukerji, T)

GEOPHYS 112. Exploring Geosciences with MATLAB

How to use MATLAB as a tool for research and technical computing, including 2-D and 3-D visualization features, numerical capabilities, and toolboxes. Practical skills in areas such as data analysis, regressions, optimization, spectral analysis, differential equations, image analysis, computational statistics, and Monte Carlo simulations. Emphasis is on scientific and engineering applications.

1-3 units, Aut (Mukerji, T)

GEOPHYS 113. Earthquakes and Volcanoes

(Same as EARTHSYS 113) Earthquake location, magnitude and intensity scales, seismic waves, styles of eruptions and volcanic hazards, tsunami waves, types and global distribution of volcanoes, volcano forecasting. Plate tectonics as a framework for understanding earthquake and volcanic processes. Forecasting; earthquake resistant design; building codes; and probabilistic hazard assessment. For non-majors and potential earth scientists. GER:DB-EngrAppSci

3 units, Win (Segall, P)

GEOPHYS 120. Ice, Water, Fire

Introductory application of continuum mechanics to natural phenomena, including deformation of ice sheets and glaciers, volcanoes, water waves, and fluid flow in porous media. Emphasis on underlying physical processes and mathematical description using balance of mass, momentum, and energy, combined with constitutive equations for fluids and solids. Prerequisites: CME 102 or MATH 53 and PHYSICS 45.

3 units, Win (Dunham, E)

GEOPHYS 130. Introductory Seismology

Introduction to seismology including: elasticity and the wave equation, P, S, and surface waves, dispersion, ray theory, reflection and transmission of seismic waves, seismic imaging, large-scale Earth structure, earthquake location, earthquake statistics and forecasting, magnitude scales, seismic source theory. (Beroza, G)

3 units, not given this year

GEOPHYS 140. The Earth From Space: Introduction to Remote Sensing

(Same as EE 140) Global change science as viewed using space remote sensing technology. Global warming, ozone depletion, the hydrologic and carbon cycles, topographic mapping, and surface deformation. Physical concepts in remote sensing. EM waves and geophysical information. Sensors studied: optical, near and thermal IR, active and passive microwave. GER:DB-EngrAppSci

3 units, not given this year

GEOPHYS 146A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation

(Same as EARTHSYS 146A, EARTHSYS 246A, EESS 146A, EESS 246A, GEOPHYS 246A) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

3 units, Win (Thomas, L; Diffenbaugh, N)

GEOPHYS 146B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation

(Same as EARTHSYS 146B, EARTHSYS 246B, EESS 146B, EESS 246B, GEOPHYS 246B) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. Structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic circumpolar current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A/246A or CEE 164/262D or consent of instructor.

3 units, Spr (Thomas, L; Diffenbaugh, N)

GEOPHYS 150. Our Dynamic Earth

In this course we cover the dynamic forces acting upon the Earth. We will investigate how geophysical forces effect the bending of tectonic plates, the flow of heat, sea level topography, the breaking point of rocks, porous flow, and how faults store and release energy. Math 52 or CME 102, GP 107 or permission from instructor. More detailed course description to come. GER:DB-NatSci

3 units, Spr (Lawrence, J)

GEOPHYS 160. Introduction to SES Computing (ISESC)

For beginning undergraduates and graduate students in the School of Earth Sciences. Computer concepts. What are computers and networks, and how do they work? Web page authoring. Introduction to scientific programming. Free computing tools for plotting data. Computer resources available to students in the school. An online repository of source codes useful for and developed by SES students, faculty, and staff. Specialists from around the school provide practical instruction and concrete examples of how to achieve basic computing needs. 2 units requires a class project: code development to be uploaded to the course's code repository.

2-3 units, Aut (Lawrence, J)

GEOPHYS 162. Laboratory Methods in Geophysics

Lab. Types of equipment used in experimental rock physics. Principles and measurements of geophysical properties such as porosity, permeability, acoustic wave velocity, and resistivity through lectures and laboratory experiments. Training in analytical project writing skills and understanding errors for assessing accuracy and variability of measured data. Students may investigate a scientific problem to support their own research.

2-3 units, Win (Vanorio, T)

GEOPHYS 170. Global Tectonics

The architecture of the Earth's crust; regional assembling of structural or deformational features and their relationship, origin and evolution. The plate-tectonic cycle: rifting, passive margins, seafloor spreading, subduction zones, and collisions. Case studies.

3 units, Aut (Cruz, L)

GEOPHYS 171. Tectonics Field Trip

Long weekend field trip to examine large-scale features in the crust. Destinations may include the San Andreas fault, Mendocino Triple Junction, Sierra Nevada, and western Basin and Range province.

3 units, Spr (Staff)

GEOPHYS 181. Fluids and Flow in the Earth: Computational Methods

(Same as GEOPHYS 200) Interdisciplinary problems involving the state and movement of fluids in crustal systems, and computational methods to model these processes. Examples of processes include: nonlinear, time-dependent flow in porous rocks; coupling in porous rocks between fluid flow, stress, deformation, and heat and chemical transport; percolation of partial melt; diagenetic processes; pressure solution and the formation of stylolites; and transient pore pressure in fault zones. MATLAB, Lattice-Boltzmann, and COMSOL Multiphysics. Term project. No experience with COMSOL Multiphysics required.

3 units, Win (Mukerji, T)

GEOPHYS 182. Reflection Seismology

(Same as GEOPHYS 222) The principles of seismic reflection profiling, focusing on methods of seismic data acquisition and seismic data processing for hydrocarbon exploration. (Klemperer, S) GER:DB-NatSci

3 units, alternate years, not given this year

GEOPHYS 183. Reflection Seismology Interpretation
(Same as GEOPHYS 223) The structural and stratigraphic interpretation of seismic reflection data, emphasizing hydrocarbon traps in two and three dimensions on industry data, including workstation-based interpretation. Lectures only, 1 unit. Prerequisite: 222, or consent of instructor.

1-4 units, alternate years, not given this year

GEOPHYS 184. Journey to the Center of the Earth
(Same as GES 107) The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth's formation and evolution.

3 units, alternate years, not given this year

GEOPHYS 185. Rock Physics for Reservoir Characterization
(Same as GEOPHYS 260) How to integrate well log and laboratory data to determine and theoretically generalize rock physics transforms between sediment wave properties (acoustic and elastic impendence), bulk properties (porosity, lithology, texture, permeability), and pore fluid conditions (pore fluid and pore pressure). These transforms are used in seismic interpretation for reservoir properties, and seismic forward modeling in what-if scenarios. (Dvorkin, J)

3 units, alternate years, not given this year

GEOPHYS 186. Tectonophysics
(Same as GEOPHYS 290) The physics of faulting and plate tectonics. Topics: plate driving forces, lithospheric rheology, crustal faulting, and the state of stress in the lithosphere. Exercises: lithospheric temperature and strength profiles, calculation of seismic strain from summation of earthquake moment tensors, slip on faults in 3D, and stress triggering and inversion of stress from earthquake focal mechanisms.

3 units, Win (Zoback, M)

GEOPHYS 187. Environmental Soundings Image Estimation
(Same as GEOPHYS 211) Imaging principles exemplified by means of imaging geophysical data of various uncomplicated types (bathymetry, altimetry, velocity, reflectivity). Adjoints, back projection, conjugate-gradient inversion, preconditioning, multidimensional autoregression and spectral factorization, the helical coordinate, and object-based programming. Common recurring issues such as limited aperture, missing data, signal/noise segregation, and nonstationary spectra. See http://sep.stanford.edu/sep/prof/.

3 units, Aut (Claerbout, J)

GEOPHYS 190. Near Surface Geophysics
Applications of geophysical methods for imaging and characterizing the top 100 meters of Earth. The link between the measured properties of rocks, soils, and sediments, and their material properties. Forward modeling and inversion of geophysical data sets. Each week includes two hours of lectures; plus one three-hour lab that involves acquisition of data at campus and near-by sites, or computer modeling of data. Pre-requisite: CME 100 or Math 51, or co-registration in either. GER:DB-EngrAppSci

3 units, Spr (Knight, R), alternate years, not given next year

GEOPHYS 196. Undergraduate Research in Geophysics
Field-, lab-, or computer-based. Faculty supervision. Written reports.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GEOPHYS 197. Senior Thesis in Geophysics
For seniors writing a thesis based on research in 196 or as a summer research fellow.

3-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GEOPHYS 197. Undergraduate Research in Geophysics
Field-, lab-, or computer-based. Faculty supervision. Written reports.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GEOPHYS 199. Senior Seminar: Issues in Earth Sciences
Focus is on written and oral communication in a topical context. Topics from current frontiers in earth science research and issues of concern to the public. Readings, oral presentations, written work, and peer review. For 2010-11, enroll in GES 150.

3 units, Aut (Staff)

GRADUATE COURSES IN GEOPHYSICS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

GEOPHYS 198. Honors Program
Experimental, observational, or theoretical honors project and thesis in geophysics under supervision of a faculty member. Students who elect to do an honors thesis should begin planning it no later than Winter Quarter of the junior year. Prerequisites: department approval.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GEOPHYS 200. Fluids and Flow in the Earth: Computational Methods
(Same as GEOPHYS 181) Interdisciplinary problems involving the state and movement of fluids in crustal systems, and computational methods to model these processes. Examples of processes include: nonlinear, time-dependent flow in porous rocks; coupling in porous rocks between fluid flow, stress, deformation, and heat and chemical transport; percolation of partial melt; diagenetic processes; pressure solution and the formation of stylolites; and transient pore pressure in fault zones. MATLAB, Lattice-Boltzmann, and COMSOL Multiphysics. Term project. No experience with COMSOL Multiphysics required.

3 units, Win (Mukerji, T)

GEOPHYS 201. Frontiers of Geophysical Research at Stanford: Faculty Lectures
Required for new students entering the department. Second-year and other graduate students may attend either for credit or as auditors. Department faculty and senior research staff introduce the frontiers of research problems and methods being employed or developed in the department and unique to department faculty and students: what the current research is, why the research is important, what methodologies and technologies are being used, and what the potential impact of the results might be.

1 unit, Aut (Beroza, G)

GEOPHYS 202. Reservoir Geomechanics
Basic principles of rock mechanics and the state of stress and pore pressure in sedimentary basins related to exploitation of hydrocarbon and geothermal reservoirs. Mechanisms of hydrocarbon migration, exploitation of fractured reservoirs, reservoir compaction and subsidence, hydraulic fracturing, utilization of directional and horizontal drilling to optimize well stability.

3 units, alternate years, not given this year

GEOPHYS 210. Basic Earth Imaging
Echo seismogram recording geometry, head waves, moveout, velocity estimation, making images of complex shaped reflectors, migration by Fourier and integral methods. Anti-aliasing. Dip moveout. Computer labs. See http://sep.stanford.edu/sep/prof/.

3-4 units, Aut (Claerbout, J; Clapp, R)

GEOPHYS 211. Environmental Soundings Image Estimation
(Same as GEOPHYS 187) Imaging principles exemplified by means of imaging geophysical data of various uncomplicated types (bathymetry, altimetry, velocity, reflectivity). Adjoints, back projection, conjugate-gradient inversion, preconditioning, multidimensional autoregression and spectral factorization, the helical coordinate, and object-based programming. Common recurring issues such as limited aperture, missing data, signal/noise segregation, and nonstationary spectra. See http://sep.stanford.edu/sep/prof/.

3 units, Aut (Claerbout, J)

GEOPHYS 222. Reflection Seismology
(Same as GEOPHYS 182) The principles of seismic reflection profiling, focusing on methods of seismic data acquisition and seismic data processing for hydrocarbon exploration. (Klemperer, S)

3 units, alternate years, not given this year

GEOPHYS 223. Reflection Seismology Interpretation
(Same as GEOPHYS 183) The structural and stratigraphic interpretation of seismic reflection data, emphasizing hydrocarbon traps in two and three dimensions on industry data, including workstation-based interpretation. Lectures only, 1 unit. Prerequisite: 222, or consent of instructor.

1-4 units, alternate years, not given this year

GEOPHYS 224. Seismic Reflection Processing
(Formerly 184.) Workshop in computer processing of seismic reflection data. Students individually process a commercial seismic reflection profile from field tapes to migrated stack, using interactive software on a workstation. Prerequisite: consent of instructor.
2 units, Win (Klemperer, S)

GEOPHYS 240. Crosswell Seismic Profiling
Seismic imaging between boreholes for applications to subsurface characterization, reservoir imaging, and reservoir monitoring. Topics include data acquisition, data analysis, data processing and imaging. Inversion models for transmitted, reflected, and diffracted waves for imaging velocity, attenuation, and anisotropy in heterogeneous media. Use of field datasets and field applications. Prerequisites: 160 or equivalent; familiarity with Matlab or other programming language.
3 units, alternate years, not given this year

GEOPHYS 241A. Seismic Reservoir Characterization
(Same as ENERGY 141, ENERGY 241) (Same as GP241) Practical methods for quantitative characterization and uncertainty assessment of subsurface reservoir models integrating well-log and seismic data. Multidisciplinary combination of rock-physics, seismic attributes, sedimentological information and spatial statistical modeling techniques. Student teams build reservoir models using limited well data and seismic attributes typically available in practice, comparing alternative approaches. Software provided (SGEMS, Petrel, Matlab). Recommended: ERE240/260, or GP222/223, or GP260/262 or GES253/257; ERE246, GP112
3-4 units, Spr (Mukerji, T; Jia, B)

GEOPHYS 246A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation
(Same as EARTHSYS 146A, EARTHSYS 246A, EESS 146A, EESS 246A, GEOPHYS 146A) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.
3 units, Win (Thomas, L; Diffenbaugh, N)

GEOPHYS 246B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation
(Same as EARTHSYS 146B, EARTHSYS 246B, EESS 146B, EESS 246B, GEOPHYS 146B) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. Structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic circumpolar current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A/246A or CEE 164/262D or consent of instructor.
3 units, Spr (Thomas, L; Diffenbaugh, N)

GEOPHYS 251A. Structural Geology and Rock Mechanics
(Same as CEE 297G, GES 215A) Quantitative field and laboratory data integrated with solutions to initial and boundary-value problems of continuum mechanics introduce tectonic processes in Earth's crust that lead to the development of geological structures including folds, faults, fractures and fabrics. Topics include: techniques and tools for structural mapping; using differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; traction and stress analysis. Data sets analyzed using MATLAB. Prerequisites: GES 1, MATH 53, MATLAB or equivalent.
3-5 units, Aut (Pollard, D)

GEOPHYS 251B. Structural Geology and Rock Mechanics
(Same as CEE 297H, GES 215B) Field equations for elastic solids and viscous fluids derived from conservation laws to develop mechanical models for tectonic processes and their structural products. Topics include: conservation of mass and momentum in a deformable continuum; linear elastic deformation and elastic properties of rock; brittle deformation including fracture and faulting; linear viscous flow including folding, model development, and methodology. Models constructed and solutions visualized using MATLAB. Prerequisite: GES 215A.
3-5 units, Win (Staff)

GEOPHYS 255. Report on Energy Industry Training
On-the-job-training for master's and doctoral degree students under the guidance of on-site supervisors. Students submit a report detailing work activities, problems, assignment, and key results. May be repeated for credit. Prerequisite: written consent of adviser.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GEOPHYS 257. Introduction to Computational Earth Sciences
Techniques for mapping numerically intensive algorithms to modern high performance computers such as the Center for Computational Earth and Environmental Science¿s (CEES) high productivity technical computing (HPTC). Topics include: debugging, performance analysis, and concepts of parallel programming; efficient serial and parallel programs; OpenMP; and MPI. Exercises using SMP and cluster computers. See http://pangea.stanford.edu/research/cees/. Recommended: familiarity with MATLAB, C, or Fortran. May be repeated for credit.
2-4 units, Win (Staff), alternate years, not given next year

GEOPHYS 258. Scientific Data Processing
(Same as EE 257) Assimilation, processing, and modeling of large observational data sets. Solution of scientific and engineering problems, especially those requiring large amounts of data. Inverse methods and transform domain analysis for indirect measurements, implemented on digital computers using scientific languages. Large-scale computing, including hardware architectures, input/output and data bus bandwidth, programming efficiency, parallel programming techniques. Student projects involve analyzing real data by implementing an observational system such as tomography for medical and Earth observation uses, radar and matched filtering, multispectral/multitemporal studies, or migration processing. Prequisites: Programming with high level language
3-4 units, Win (Zebker, H)

GEOPHYS 260. Rock Physics for Reservoir Characterization
(Same as GEOPHYS 185) How to integrate well log and laboratory data to determine and theoretically generalize rock physics transforms between sediment wave properties (acoustic and elastic impendence), bulk properties (porosity, lithology, texture, permeability), and pore fluid conditions (pore fluid and pore pressure). These transforms are used in seismic interpretation for reservoir properties, and seismic forward modeling in what-if scenarios. (Dvorkin, J)
3 units, alternate years, not given this year

GEOPHYS 262. Rock Physics
Properties of and processes in rocks as related to geophysical exploration, crustal studies, and tectonic processes. Emphasis is on wave velocities and attenuation, hydraulic permeability, and electrical resistivity in rocks. Application to in situ problems, using lab data and theoretical results.
3 units, Aut (Mavko, G)

GEOPHYS 265. Imaging Radar and Applications
(Same as EE 355) Radar remote sensing, radar image characteristics, viewing geometry, range coding, synthetic aperture processing, correlation, range migration, range/Doppler algorithms, wave domain algorithms, polar algorithm, polarimetric processing, interferometric measurements. Applications: surfafe deformation, polarimetry and target discrimination, topographic mapping surface displacements, velocities of ice fields. Prerequisites: EE261
3 units, Win (Zebker, H)

GEOPHYS 270. Electromagnetic Properties of Geological Materials
Laboratory observations and theoretical modeling of the electromagnetic properties and nuclear magnetic resonance response of geological material. Relationships between these properties and water-saturated materials properties such as composition, water content, surface area, and permeability.
2-3 units, Win (Knight, R)

GEOPHYS 280. 3-D Seismic Imaging
The principles of imaging complex structures in the Earth subsurface using 3-D reflection seismology. Emphasis is on processing methodologies and algorithms, with examples of applications to field data. Topics: acquisition geometrics of land and marine 3-D seismic surveys, time vs. depth imaging, migration by Kirchhoff

methods and by wave-equation methods, migration velocity analysis, velocity model building, imaging irregularly sampled and aliased data. Computational labs involve some programming. Lab for 3 units.

2-3 units, Win (Biondi, B)

GEOPHYS 281. Geophysical Inverse Problems

Concepts of inverse theory, with application to geophysics. Inverses with discrete and continuous models, generalized matrix inverses, resolving kernels, regularization, use of prior information, singular value decomposition, nonlinear inverse problems, back-projection techniques, and linear programming. Application to seismic tomography, earthquake location, migration, and fault-slip estimation. Prerequisite: MATH 103.

3 units, Aut (Segall, P; Beroza, G)

GEOPHYS 284. Hydrogeophysics

The use of geophysical methods for imaging and characterizing the top 100 meters of Earth for hydrogeologic applications. Includes material properties, forward modeling, data acquisition, inversion, and integration with other forms of measurement. Each week includes three hours of lectures; plus one three-hour lab that involves acquisition of data at campus or near-by sites, or computer modeling of data.

3 units, Spr (Knight, R)

GEOPHYS 286. Global Seismology

How waves propagate through the whole Earth. How do body waves and surface waves behave within the Earth? What does that reveal about the Earth? How theory is applied to understand seismic observations. Prerequisites: MATH 52 or CME 102, GEOPHYS 130, or consent of instructor.

3 units, Win (Lawrence, J)

GEOPHYS 287. Earthquake Seismology

Theorems in elastodynamics, Green's functions, attenuation, wave propagation in layered media, ray theory, seismic moment tensors, finite-source effects, kinematics and dynamics of earthquakes, and engineering aspects of seismology.

3 units, Spr (Dunham, E)

GEOPHYS 288A. Crustal Deformation

Earthquake and volcanic deformation, emphasizing analytical models that can be compared to data from GPS, InSAR, and strain meters. Deformation, stress, and conservation laws. Dislocation models of strike slip and dip slip faults, in 2 and 3 dimensions. Crack models, including boundary element methods. Dislocations in layered and elastically heterogeneous earth models. Models of volcano deformation, including sills, dikes, and magma chambers.

3-5 units, alternate years, not given this year

GEOPHYS 288B. Crustal Deformation

Earthquake and volcanic deformation, emphasizing analytical models that can be compared to data from GPS, InSAR, and strain meters. Viscoelasticity, post-seismic rebound, and viscoelastic magma chambers. Effects of surface topography and earth curvature on surface deformation. Gravity changes induced by deformation and elastogravitational coupling. Poro-elasticity, coupled fluid flow and deformation. Earthquake nucleation and rate-state friction. Models of earthquake cycle at plate boundaries.

3-5 units, alternate years, not given this year

GEOPHYS 289. Global Positioning System in Earth Sciences

The basics of GPS, emphasizing monitoring crustal deformation with a precision of millimeters over baselines tens to thousands of kilometers long. Applications: mapping with GIS systems, airborne gravity and magnetic surveys, marine seismic and geophysical studies, mapping atmospheric temperature and water content, measuring contemporary plate motions, and deformation associated with active faulting and volcanism.

3-5 units, alternate years, not given this year

GEOPHYS 290. Tectonophysics

(Same as GEOPHYS 186) The physics of faulting and plate tectonics. Topics: plate driving forces, lithospheric rheology, crustal faulting, and the state of stress in the lithosphere. Exercises: lithospheric temperature and strength profiles, calculation of seismic strain from summation of earthquake moment tensors, slip on faults in 3D, and stress triggering and inversion of stress from earthquake focal mechanisms.

3 units, Win (Zoback, M)

GEOPHYS 385A. Reflection Seismology

Research in reflection seismology and petroleum prospecting. May be repeated for credit.

1-5 units, Aut (Biondi, B; Clapp, R), Win (Biondi, B; Clapp, R), Spr (Biondi, B; Clapp, R), Sum (Biondi, B; Clapp, R)

GEOPHYS 385B. Environmental Geophysics

Research on the use of geophysical methods for near-surface environmental problems. May be repeated for credit.

1-5 units, Aut (Knight, R), Win (Knight, R), Spr (Knight, R), Sum (Knight, R)

GEOPHYS 385D. Theoretical Geophysics

Research on physics and mechanics of earthquakes, volcanoes, ice sheets, and glaciers. Emphasis is on developing theoretical understanding of processes governing natural phenomena.

1-5 units, Aut (Dunham, E), Win (Dunham, E), Spr (Dunham, E), Sum (Dunham, E)

GEOPHYS 385E. Tectonics

Research on the origin, major structures, and tectonic processes of the Earth's crust. Emphasis is on use of deep seismic reflection and refraction data. May be repeated for credit.

1-5 units, Aut (Klemperer, S; Sleep, N), Win (Klemperer, S; Sleep, N), Spr (Klemperer, S; Sleep, N), Sum (Klemperer, S; Sleep, N)

GEOPHYS 385J. Global Seismic Techniques, Theory, and Application

Topics chosen from surface wave dispersion measurement, 1D inversion techniques, regional tomographic inversion, receiver functions, ray theory in spherical geometry, seismic attenuation, seismic anisotropy, seismic focusing, reflected phases, stacking, and interpretations of seismic results in light of other geophysical constraints. May be repeated for credit.

1-5 units, Aut (Lawrence, J), Win (Lawrence, J), Spr (Lawrence, J), Sum (Lawrence, J)

GEOPHYS 385K. Crustal Mechanics

Research in areas of petrophysics, seismology, in situ stress, and subjects related to characterization of the physical properties of rock in situ. May be repeated for credit.

1-5 units, Aut (Zoback, M), Win (Zoback, M), Spr (Zoback, M), Sum (Zoback, M)

GEOPHYS 385L. Earthquake Seismology, Deformation, and Stress

Research on seismic source processes, crustal stress, and deformation associated with faulting and volcanism. May be repeated for credit.

1-5 units, Aut (Beroza, G; Segall, P; Zoback, M), Win (Beroza, G; Segall, P; Zoback, M), Spr (Beroza, G; Segall, P; Zoback, M), Sum (Segall, P; Beroza, G; Zoback, M)

GEOPHYS 385S. Wave Physics

Theory, numerical simulation, and experiments on seismic and electromagnetic waves in complex porous media. Applications from Earth imaging and in situ characterization of Earth properties, including subsurface monitoring. Presentations by faculty, research staff, students, and visitors. May be repeated for credit.

1-5 units, Aut (Harris, J), Win (Harris, J), Spr (Harris, J), Sum (Harris, J)

GEOPHYS 385V. Poroelasticity

Research on the mechanical properties of porous rocks: dynamic problems of seismic velocity, dispersion, and attentuation; and quasi-static problems of faulting, fluid transport, crustal deformation, and loss of porosity. Participants define, investigate, and present an original problem of their own. May be repeated for credit.

1-5 units, Aut (Mavko, G), Win (Mavko, G), Spr (Mavko, G), Sum (Mavko, G)

GEOPHYS 385Z. Radio Remote Sensing

Research applications, especially crustal deformation measurements. Recent instrumentation and system advancements. May be repeated for credit.

1-5 units, Aut (Zebker, H), Win (Zebker, H), Spr (Zebker, H), Sum (Zoback, M)

GEOPHYS 400. Research in Geophysics

1-15 units, Aut (Staff), Win (Lawrence, J), Spr (Staff), Sum (Staff)

GEOPHYS 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GEOPHYS 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERMAN GENERAL (GERGEN) COURSES

UNDERGRADUATE COURSES IN GERMAN GENERAL

Primarily for undergraduates; graduate students may enroll with consent of adviser.

GERGEN 38A. Introduction to Germanic Languages
(Same as GERLIT 138) The oldest attested stages of the Germanic language family, including Gothic, Old Norse, Old Saxon, Old English, Old Frisian, Old Low Franconian (Old Dutch), and Old High German. The linguistic interrelationships, prehistory, Germanic tribal groupings, and literature. GER:DB-Hum
4 units, not given this year

GERGEN 104N. Resistance Writings in Nazi Germany
(Stanford Introductory Seminar) Preference to sophomores. The letters and diaries of individuals who resisted Nazi oppression and paid with their lives. Readings include the Scholl diaries, Bonhoeffer¿s letters and his Ethics, and letter exchanges from other crucial figures. No knowledge of German required; students may read texts in original if able. GER:DB-Hum
3 units, Win (Bernhardt, E)

GERGEN 109. Music, Poetry, and Prose
The relationship between music and literature. Looking at a range of literary and musical periods, how and to what effect did writers incorporate music into their texts? Conversely, how did composers transform literary texts by setting them to music? Cultural and historical standpoints. The tension and interplay between music and text. Writers such as Luther, Schiller, Goethe, Heine, ETA Hoffmann, T. Mann, and Brecht. Composers such as Bach, Beethoven, Schubert, Schumann, Wagner, and Weill. In German.
3-4 units, Win (Staff)

GERGEN 122Q. The Culture of Pessimism in 19th- and 20th-Century Europe
(Stanford Introductory Seminar) European culture long relied on a narrative of inexorable human progress. Starting in the 19th century, this triumphalist narrative was shadowed by another tradition that rejected such trust in progress. The pessimistic tradition in Europe in literature, philosophy, the study of history, anthropology, and psychology; the distinction between pessimism in the fields of morality, culture, and intellectual life. Authors include Giacomo Leopardi, Arthur Schopenhauer, Lautréamont, T. S. Eliot, and Sigmund Freud. GER:DB-Hum
3-5 units, Spr (Daub, A)

GERGEN 129. German Cinema
(Same as GERGEN 229) History of German cinema in the Weimar Republic, Nazi era, and the immediate aftermath of WWII. German thought, political valences, and social potential as portrayed in film.
5 units, not given next year

GERGEN 141. Fables of Retreat
Modern anti-heroes who assert themselves through feats of reduction and retreat. Writers include Rousseau, Tieck, Emerson, Thoreau, Melville, Dostoevsky, and Kafka.
3-5 units, not given this year

GERGEN 148. A Brief History of Misogyny
(Same as GERGEN 248) Genealogy of philosophical misogyny in 19th- and 20th-century German thought from German idealism. Authors include Schopenhauer, Nietzsche, Weininger, and the George circle. In English. GER:DB-Hum, EC-Gender
3-5 units, not given this year

GERGEN 160. Interiors and Interiority in the 19th Century
Interiority and the interior as focal points of 19th-century Europe. Domestic space, and its political dimensions and structures of feeling in 19th-century German literature, from the romance to the detective novel. Ideology of domesticity in German music, design, architecture, visual art, and science of the period. In German. GER:DB-Hum
4 units, not given this year

GERGEN 161. Wagnerian Echos: A Cultural History from Modernism to Popular Culture
(Same as MUSIC 150G) The afterlives of mythological themes from the operas and music dramas of Richard Wagner (The Flying Dutchman, Tannhäuser, Lohengrin, Ring Cycle, Parsifal) in literature, modernist aesthetics, fascist politics, film, philosophy, and contemporary media. GER:DB-Hum
3-5 units, Spr (Daub, A; Grey, T)

GERGEN 170A. Postwar: German Culture after World War II
(Same as GERGEN 270A) How did German culture react to WW II, the Holocaust, and the exile of Germans from E. Europe? Questions of representations, political debate, and the future of Germany in Europe. German cinema, architecture, and art related to the subject. Readings include: Adorno, Grass, Habermas, Kluge, Bachmann, Jelinek, and Beyer. Recommended: German, but not required.
3-5 units, not given this year

GERGEN 170Q. Prussia: Culture and Literature
The history and culture of a country that disappeared not too long ago, but about which most tend to know very little. In 1947, the Allied Control Council dissolved Prussia in the interest of maintaining world peace and security and the restoration of political life in Germany on a democratic basis. Many of the stereotypical images of Germany and Germanness, and certainly most negative images of Germany, from the spiked helmet to the iron cross, the Red Baron and the Blitzkrieg, are bound up with Prussia, its military, and its ruling class. Prussia's militaristic culture not only brought on a series of wars, while also often being a beacon of Enlightenment and religious tolerance; it brought together Germany's most traditional backwater with its most progressive metropolis.
3-5 units, Spr (Daub, A)

GERGEN 181. Philosophy and Literature
(Same as CLASSGEN 81, COMPLIT 181, ENGLISH 81, FRENGEN 181, ITALGEN 181) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum
4-5 units, Win (Anderson, L; Landy, J)

GERGEN 183. Scenarios of Dissolution in the Modern Novel
(Same as GERGEN 283) How do novels capture chaos? 20th-century novels responding to catastrophes such as: the disintegration of the Austro-Hungarian monarchy (Musil, Roth); demise of the Third Reich (Mann); chaotic forces in an oppressive order (Bulgakov); corrosion of imperial confidence through fear of barbarian invaders (Coetzee); and transformation of masses into a mob destroying the body politic from within (Krasznahorkai). GER:DB-Hum
4 units, not given this year

GERGEN 201. Conservative Revolution
(Same as COMPLIT 234) An examination of conservative critiques of modernity in the early 20th century, including topics such as German nationalism, the war experience, responses to democracy, anti-liberalism, cultural pessimism in the decline of the West, crises of authority, technology, geopolitics, existentialism, and tradition. Readings from authors such as Oswald Spengler, Thomas Mann, Carl Schmitt, Ernst Jünger, Hugo von Hofmannsthal,

Rudolf Borchardt, Karl Haushofer, Konrad Weiss. Readings in either English or German. GER:DB-Hum

3-5 units, not given this year

GERGEN 205. Technologies of the Self

Important moments in the history of the discursive and rhetorical construction of the subject. Emphasis is on tensions between uniqueness and exemplariness, chronology and repetition, narrative and archive, and aesthetics and ethics of retrospection. Works by Augustine, Teresa of Avila, Montaigne, Rousseau, Goethe, Nietzsche, Joyce, Gide, Sartre, Leiris, and Barthes. Theoretical and critical essays including by Lejeune, Starobinski, De Man, Derrida, Marin, Koerner, Foucault, and Beaujour. GER:DB-Hum

3-5 units, not given this year

GERGEN 212. The Invention of Experience

Experience viewed as a source of orientation irreducible to discursive knowledge in the 19th century. The encounter with art as the paradigm of experience; lived vs. cumulative experience; the modern crisis of experience; experiential openness and the authority conferred by experience. If it is neither pleasure nor knowledge sought in art, could it be experience? Role of Goethe in the cult of experience (Faust I, Elective Affinities). Montaigne, Hegel, Emerson, Rilke, Benjamin, Koselleck, and Gadamer. GER:DB-Hum

3-5 units, Spr (Dornbach, M)

GERGEN 221. Memory in the Modernist Novel

Preference to freshmen. The art of memory as one of the main characteristics of modernity. The relationship between memory and modernism through major narrative texts: Rainer Maria Rilke's The Notebooks of Malte Laurids Brigger; James Joyce's A Portrait of the Artist as a Young Man; and Marcel Proust's Combray.. How memory is represented in the novels, and its role in the perception of external reality. How memory helps to constitute personal identity. The metaphors used to define memory. Readings include theoretical and critical essays, and primary texts. GER:DB-Hum, DB-Hum

4 units, Spr (Douvaldzi, C)

GERGEN 221A. Modernism and the Jewish Voice in Europe

(Same as COMPLIT 247, SLAVGEN 221) Some of the most haunting literary voices of the 20th century emerged from the Jewish communities of Eastern and Central Europe. The Jewishness of the modernists is thematized, asking whether it contributed to shared attitudes toward text, history, or identity. Their works are situated in specific linguistic traditions: Yiddish, Hebrew, Russian, Polish, or German. Primary readings from Ansky, Bialik, Mandelstam, Babel, Schulz, Kafka, Celan; secondary readings in history, E. European literature, and theory, including Marx, Freud, Benjamin, and Arendt. GER:DB-Hum

3-4 units, not given this year

GERGEN 267. Freud and the Apostle Paul

(Same as GERGEN 367) Intersections between Freud's psychoanalysis of society and Paul's political theology. Emphasis is on the issues of law, love, justice, community, and language. Readings include Freud and Paul, and theoretical essays by Taubes, Badiou, Santner, Agamben, Assmann, Zizek, and Boyarin. GER:DB-Hum

3-5 units, not given this year

GRADUATE COURSES IN GERMAN GENERAL

Primarily for graduate students; undergraduates may enroll with consent of instructor.

GERGEN 200. The Arcades Project

When Walter Benjamin committed suicide while fleeing from the Nazis in 1940, he left behind a large corpus of unpublished writing, perhaps none more famous than the collection of notes, fragments, and drafts that are collectively known as the Arcades Project, which Benjamin entrusted to his friend Georges Bataille when forced to flee Paris. The Arcades Project undertakes an archaeology of the 19th century, combining literary scholarship, sociology, Marxism, mysticism, a theory of signification, and a philosophy of history. This course considers this projects in its totality, drawing on some of Benjamin's writings of the same period, and tracing some common readings and misreadings of the project's material. All readings and class discussions in English.

3-5 units, Win (Daub, A)

GERGEN 206. Narrative, Visuality, Memory

(Same as GERGEN 306) Moments in the history of the relationship between the verbal and the visual: the classical ars memoriae; the ekphrasis debates of the 18th century; the emergence of a new visuality and mnemonic art as structuring principles for modernist narrative. Authors include Plato, Aristotle, Cicero, Augustine, Winckelmann, Lessing, Diderot, Goethe, Moritz, Flaubert, Rilke, Joyce, and Proust.

3-5 units, not given this year

GERGEN 210. Nietzsche's Beginnings

The emergence of Nietzsche's main concerns from his influential critique of modern culture and his reinterpretation of Greek antiquity. Pessimism and affirmation, truth and illusion, art and science, scholarship and its limits, decadence and historicism. Focus on The Birth of Tragedy and the Untimely Meditations. In English

3-5 units, Aut (Dornbach, M)

GERGEN 229. German Cinema

(Same as GERGEN 129) History of German cinema in the Weimar Republic, Nazi era, and the immediate aftermath of WWII. German thought, political valences, and social potential as portrayed in film.

5 units, not given next year

GERGEN 230. Truth in Art

Does art disclose an ultimate truth or does it help people avoid, endure, or affirm a truth which would otherwise be hard to bear? How modern thinking about art is defined by the tension between the idea that pleasure in art is disinterested and outside striving for true knowledge or ethical orientation and the idea that art offers some kind of deeper insight into people's place in the world. How these tensions play out in Kant, Schopenhauer, Nietzsche, Heidegger, and Adorno. In English.

3-5 units, not given this year

GERGEN 248. A Brief History of Misogyny

(Same as GERGEN 148) Genealogy of philosophical misogyny in 19th- and 20th-century German thought from German idealism. Authors include Schopenhauer, Nietzsche, Weininger, and the George circle. In English.

3-5 units, not given this year

GERGEN 265. Art and Nature

The role of nature in aesthetic experience and artistic creativity; the historically changing relation between aesthetic attitudes toward nature and art. Readings in English by Winckelmann, Kant, Schelling, Hegel, and Adorno.

3-5 units, Spr (Staff)

GERGEN 270A. Postwar: German Culture after World War II

(Same as GERGEN 170A) How did German culture react to WW II, the Holocaust, and the exile of Germans from E. Europe? Questions of representations, political debate, and the future of Germany in Europe. German cinema, architecture, and art related to the subject. Readings include: Adorno, Grass, Habermas, Kluge, Bachmann, Jelinek, and Beyer. Recommended: German, but not required.

3-5 units, not given this year

GERGEN 283. Scenarios of Dissolution in the Modern Novel

(Same as GERGEN 183) How do novels capture chaos? 20th-century novels responding to catastrophes such as: the disintegration of the Austro-Hungarian monarchy (Musil, Roth); demise of the Third Reich (Mann); chaotic forces in an oppressive order (Bulgakov); corrosion of imperial confidence through fear of barbarian invaders (Coetzee); and transformation of masses into a mob destroying the body politic from within (Krasznahorkai).

4 units, not given this year

GERGEN 291A. Oedipus, Hamlet, Moses: Archetypes of the Hero

Texts that provided psychoanalysis with its foundational myths. Oedipus, Moses, and Hamlet as archetypes of the hero related to moments of emerging modernity: from mythos to logos, polytheism to monotheism, and action to thought. The interplay among knowledge, recognition, and desire; the role of sameness and alterity in the constitution of personal, familial, and national identities; and the relation between violence and the construction of history. Readings include: Exodus, Sophocles, Shakespeare, Freud, Aeschylus, Euripides, Cavafy, Hofmannsthal, and Wolf; theoreti-

cal and critical essays by Laplanche, Lyotard, Lacan, de Certeau, Kofman, Assmann, Said, and Cavell.

3-5 units, Spr (Douvaldzi, C)

GERGEN 306. Narrative, Visuality, Memory

(Same as GERGEN 206) Moments in the history of the relationship between the verbal and the visual: the classical ars memoriae; the ekphrasis debates of the 18th century; the emergence of a new visuality and mnemonic art as structuring principles for modernist narrative. Authors include Plato, Aristotle, Cicero, Augustine, Winckelmann, Lessing, Diderot, Goethe, Moritz, Flaubert, Rilke, Joyce, and Proust.

3-5 units, not given this year

GERGEN 367. Freud and the Apostle Paul

(Same as GERGEN 267) Intersections between Freud's psychoanalysis of society and Paul's political theology. Emphasis is on the issues of law, love, justice, community, and language. Readings include Freud and Paul, and theoretical essays by Taubes, Badiou, Santner, Agamben, Assmann, Zizek, and Boyarin.

3-5 units, not given this year

GERMAN LANGUAGE (GERLANG) COURSES

UNDERGRADUATE COURSES IN GERMAN LANGUAGE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

GERLANG 1. First-Year German, First Quarter

Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which German is spoken.

5 units, Aut (Staff), Win (Strachota, K), Spr (Nissler, P)

GERLANG 2. First-Year German, Second Quarter

Continuation of 1. Prerequisite 1 or equivalent.

5 units, Aut (Petig, W), Win (Staff), Spr (Strachota, K)

GERLANG 3. First-Year German, Third Quarter

Continuation of 2. Fulfills the University language requirement. Prerequiste 2 or equivalent.

5 units, Aut (Nissler, P), Win (Staff), Spr (Staff)

GERLANG 5A. Intensive First-Year German, Part A

Equivalent of 1,2,3 combined. Stanford graduate students restricted to 9 units register for 205A,B.

5 units, Sum (McQueen, K)

GERLANG 5B. Intensive First-Year German, Part B

Continuation of 5A. Fulfills the University language requirement. Prerequisite 5A or equivalent. Stanford graduate students restricted to 9 units register for 205B.

5 units, Sum (Staff)

GERLANG 10. Elementary German for Seniors and Graduate Students

Intensive. For students who need to acquire reading ability in German for the Ph.D. or for advanced research in their own field. 52 fulfills Ph.D. reading exam.

4 units, Win (Petig, W), Sum (Petig, W)

GERLANG 11P. Individually Programmed Beginning German

For those who wish to complete more or fewer than 5 units a quarter, have scheduling conflicts, or prefer to work independently. Self-paced work with text and tapes; instructor available for consultation on a regular basis. 3-unit minimum for beginners. Conversational practice available for additional unit.

1-12 units, Aut (Petig, W), Win (Strachota, K), Spr (Strachota, K)

GERLANG 20A. Beginning German Conversation

(AU)

1 unit, Aut (Balint, L), Win (Balint, L), Spr (Balint, L)

GERLANG 20B. Intermediate German Conversation

(AU)

1 unit, Aut (Balint, L), Win (Balint, L), Spr (Balint, L)

GERLANG 20C. Advanced German Conversation

(AU)

1 unit, Aut (Balint, L), Win (Balint, L), Spr (Balint, L)

GERLANG 20E. Fun Facts about Europe

(AU) (Staff)

1 unit, Win (Balint, L)

GERLANG 20K. Kuche Mitt (German Cooking Class)

(AU)

1 unit, Aut (Balint, L), Win (Balint, L), Spr (Balint, L)

GERLANG 20M. Mitt Movie Series

(AU)

1 unit, Aut (Balint, L), Win (Staff), Spr (Balint, L)

GERLANG 20P. Theme Projects

(AU)

1 unit, Aut (Balint, L), Win (Balint, L), Spr (Balint, L)

GERLANG 20T. Teaching German Conversation

(AU)

1 unit, Aut (Balint, L), Win (Balint, L), Spr (Balint, L)

GERLANG 21. Intermediate German I

Reading short stories, and review of German structure. Discussions in German, short compositions, videos.

4 units, Aut (Petig, W)

GERLANG 21S. Intermediate German

Reading short stories, and review of German structure. Discussions in German, short compositions, videos. Prerequisite: one year of college German; or two years high school German or equivalent, or AP German.

4 units, Sum (Petig, W)

GERLANG 21W. Intermediate German I: German for Business and International Relations

Equivalent to 21, but focus is on business and the political and economic geography of Germany. CDs and videos. For students planning to do a business internship in a German-speaking country. Prerequisite: 3.

4 units, Aut (Balint, L)

GERLANG 22. Intermediate German II

Continuation of 21, with greater emphasis on reading and writing skills. Literary texts of major 20th-century writers in historical context.

4 units, Win (Petig, W)

GERLANG 22W. Intermediate German II: German for Business and International Relations

Equivalent to 22, but continuation of 21W. Recommended for students planning to do a business internship in a German-speaking country. Prerequisite: 21 or 21W.

4 units, Win (Gingrich, B)

GERLANG 52. Readings in Humanities

For undergraduates and graduate students with a knowledge of German who want to acquire reading proficiency. Readings from scholarly works and professional journals. Recommended for students who need to pass the Ph.D. reading exam. Prerequisite: one year of German, or 10, or equivalent.

4 units, Spr (Petig, W)

GERLANG 99. Language Specials

Prerequisite: consent of instructor.

1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERLANG 100. Hundert Deutsche Jahre: One Hundred German Years

Hones German language skills while introducing the history and culture of Germany as experienced by ordinary people over the course of the 20th century. Themes include Germans and democracy, money, Hitler, books, the Wall, and food. Video series, parallel readings, discussion in German. Extra listening, reading, or speaking for fourth unit.

3-4 units, Win (Strachota, K)

GERLANG 101. Advanced Language Study I

Short fictional and expository readings, discussions, compositions. Review of grammatical structures. Vocabulary building with emphasis on common idiomatic expressions and troublesome lexical distinctions.

3-4 units, not given this year

GERLANG 102. Advanced Language Study II

Continuation of 101.

3-4 units, not given this year

GERLANG 105. Advanced Business German
For students planning to work in a German-speaking country and for preparation of the International Business German exams. Case studies of typical business situations with accompanying videos, listening comprehension exercises, and class simulations. Business correspondence and reports in German. Prerequisite: 22 or equivalent.
4 units, Spr (Petig, W)

GERLANG 110. German Newspapers
For intermediate and advanced students. Articles from current newspapers and magazines, reading comprehension strategies with online news updates, and vocabulary. Writing practice if desired. May be repeated once for credit
3-4 units, Spr (Strachota, K)

GERLANG 111. Television News from Germany
For intermediate and advanced students. Current news reports and features for listening comprehension and vocabulary. Extra listening, speaking, or writing practice for fourth unit.
3-4 units, not given this year

GERLANG 199. Individual Reading
Prerequisite: consent of instructor.
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN GERMAN LANGUAGE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

GERLANG 205A. Intensive First-Year German
Equivalent of 1,2,3 combined. Stanford graduate students restricted to 9 units may take 205A and B for a total of 9 units.
4-5 units, Sum (Staff)

GERLANG 210. Elementary German for Graduate Students
Restricted to Stanford graduate students. Prerequisite: consent of instructor.
3-4 units, Sum (Staff)

GERLANG 395. Graduate Studies in German
Prerequisite: consent of instructor.
2-5 units, Aut (Staff), Win (Staff), Spr (Staff)

GERLANG 399. Independent Study
Prerequisite: consent of instructor.
1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERMAN LITERATURE (GERLIT) COURSES

UNDERGRADUATE COURSES IN GERMAN LITERATURE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

GERLIT 110. Women and Protest Literature in Twentieth Century Germany and China
(Same as COMPLIT 136) An examination of works of fiction by women writers in German and China, the authors' responses to similar conditions such as the rise of Communism, and their treatment of gender, modernity, tradition, identity, and individual vs. collective interests. Readings are in English translation. Film adaptations are viewed and discussed as well.
3-5 units, Win (Staff)

GERLIT 120. Law, Justice, and the Literary Imagination
Have law and poetry risen from the same bed, as Jakob Grimm suggested in his essay Von der Poesie im Recht? Are there intrinsic connections between the legal and the literary? How narrative and drama articulate the relationship between law and justice, and represent the crisis of the legal system. Goal is to enhance reading fluency and textual analysis skills. Readings include texts by Schiller, Kleist, Kafka, Wedekind, and Brecht.
4 units, Spr (Staff)

GERLIT 121. The Viennese Coffeehouse
The cultural and literary significance of fin de siécle Vienna's most enduring symbol: the coffeehouse. What was the function of the café in aesthetic, literary and political debates central to Vienna at the turn of the century? How did coffeehouse and newspaper culture influence developments in modernist prose? Texts by Hermann Bahr, Arthur Schnitzler, Karl Kraus, Peter Altenberg, Felix Salten, Sigmund Freud, Egon Friedell, and Alfred Polgar, in English translation; German texts available upon request.
3-5 units, not given this year

GERLIT 123N. The Brothers Grimm and Their Fairy Tales
(Stanford Introductory Seminar) Preference to freshmen. Historical, biographical, linguistic, and literary look at the Kinder- and Hausmärchen of Jacob and Wilhelm Grimm. Readings from the fairy tales, plus materials in other media such as film and the visual arts. Small group performances of dramatized fairy tales. In German. Prerequisite: GERLANG 3 or equivalent. GER:DB-Hum
1-4 units, Spr (Robinson, O)

GERLIT 127. Uncanny Literature in the Nineteenth Century
From ghost children and animated statues, the walking dead to machine women and doppelgangers, 19th-century German literature teems with things that go bump in the night. The history of this tradition of fantastic literature in Germany, its origins, main authors, and defining features. Authors include E.T.A. Hoffmann, Wilhelm Hauff, Friedrich Schiller, Joseph von Eichendorff and Jeremias Gotthelf. Readings and writing in German. GER:DB-Hum
4 units, not given this year

GERLIT 127A. The German Ballad
History of the German ballad, from Goethe and Schiller, to Romantic and realist poets. Additional reading contextualize the German ballad in the European context. Musical ballads and song arrangements also considered. WIM
3-4 units, Aut (Daub, A)

GERLIT 130. Brecht and Modern Aesthetics
Bertolt Brecht's poetic and dramatic works, and analysis of his contribution to modern paradigms of poetic and dramatic practice. Readings in German include poetry, dramas such as Baal, Im Dickicht der Staedte, Die Dreigroschenoper, Aufstieg und Fall der Stadt Mahagonny, Mutter Courage und ihre Kinder, and theoretical writings on lyric poetry and drama.
3-3 units, not given this year

GERLIT 131. Goethe: Poetic Vision and Vocation in the Age of Reason
Introduction to Goethe's major works, reading across genres of poetry, drama, the novel, and autobiography; critical writings on art, nature, and aesthetics. Central trends in Goethe's thought; the interrelatedness of poetic vision and philosophical thinking in his works. Goethe in relation to other intellectual and philosophical movements of the period, including romanticism. GER:DB-Hum
3-5 units, not given next year

GERLIT 131A. Immigrant/Minority Literature and the Emergence of Multiculturalism in Germany
Immigrant culture and literature in Germany across genres, including stories, drama, memoirs, and film. What do immigrants in Germany write about? What role does immigrant literary culture play in the formation of notions of cultural difference and dialogue? How do the dynamics of ethnic and cultural diversity influence concepts and notions of culture and nationhood in Germany? GER:DB-Hum
3 units, not given this year

GERLIT 131B. German Lyric and the Oriental Tradition
German lyric and Oriental models: German poets' encounter with Persian and Arab literary culture; adaptation and transformation of poetic forms and stories; theories of lyric. Readings include poets such as Goethe (West-oestlicher Divan), Rueckert (Oestliche Rosen), Platen (Ghaselen), and Heine (poems) as well as Hafiz (poems in German translation). The development of informed reading skills through close analysis of poems and the idea of lyric poetry as a transcultural and transnational phenomenon, as well as lyric's relationship to music both in the context of Germany and the Orient. GER:DB-Hum
3-5 units, Win (Shamel, M)

GERLIT 131C. Eighteenth-Century Literature and Culture
Key topics in the age of reason: how does the enlightenment contribute to rethinking of love, religion, power, and freedom. Cultural modernization and the emergence of aesthetic autonomy. Readings

and discussions of major works from the classical age of German literature. Tests by Lessing, Goethe, and Schiller.

4 units, Aut (Berman, R)

GERLIT 132. Nineteenth-Century Literature and Culture

Major authors including Kleist, Buechner, Keller, and Storm. Readings in German, discussion in German and English.

4 units, Win (Staff)

GERLIT 133Q. Modernism and Fiction

Preference to sophomores. Innovative ideas and narrative forms in German modernism. International and specifically German features. Problems of narration. Texts such as Musil's Törless, Mann's Tod in Venedig, Kafka's Die Verwandlung, and Broch's Pasenow. Close reading technique. Prerequisite: reading knowledge of German. GER:DB-Hum

4 units, not given this year

GERLIT 135. Outsiders and Outcasts: introduction to German Prose Fiction

Close reading and discussion of literary works by Hebel, Tieck, Kleist, Hoffmann, Heine, Keller, Storm, R. Walser, and Kafka. Attention paid to writers' divergent responses to the artistic, ethical, and political challenges of modernity. Readings, discussion, and writing assignments in German; length of assignments adjusted to students' linguistic competence. Prerequisite: German language sequence at Stanford or equivalent. GER:DB-Hum, WIM

4 units, Win (Dornbach, M)

GERLIT 136. Berlin Topographies in the 20th Century

Development of Berlin¿s spatial imaginaries from the boulevards of the late 19th century to the Weimar Republic's urban agendas, and to the repeated reconstructions by the Nazis, the GDR and Berlin Republic. Sources: Walter Benjamin, Siegfried Kracauer, Berthold Brecht, Peter Weiss, Mascha Kaleko, Peter Schneider, Blixa Bargeld, Wolf Biermann, Christoph Hein, Monika Maron, Thomas Hettche, and Wim Wenders. In German. GER:DB-Hum

4 units, not given this year

GERLIT 137. Introduction to German Poetry

Introduction to the reading and interpretation of lyrical poetry from the 18th century to present. Major poets writing in German including Gryphius, Goethe, Hölderlin, Novalis, Eichendorff, Heine, Rilke, Lasker-Schüler, Trakl, Benn, Celan, Brecht, Enzensberger, and Falkner. Close reading technique. Interpretive tools and theoretical concepts. Poetic form, voice, figural language, and the interaction of sensory registers. In German. GER:DB-Hum

4 units, Aut (Dornbach, M)

GERLIT 138. Introduction to Germanic Languages

(Same as GERGEN 38A) The oldest attested stages of the Germanic language family, including Gothic, Old Norse, Old Saxon, Old English, Old Frisian, Old Low Franconian (Old Dutch), and Old High German. The linguistic interrelationships, prehistory, Germanic tribal groupings, and literature. GER:DB-Hum

4 units, not given this year

GERLIT 139. Love, Marriage and Passion in German Literature of the 19th and 20th Centuries

(Same as GERLIT 339) The thesis that love relationships, in shifting social, cultural, and communication contexts, reflect and determine the dominant value system of a society. How the concepts of romantic, passionate, and pragmatic love evolved and competed with one another in texts by Goethe, Schlegel, Keller, Sacher-Masoch, Fontane, and Böll. In German. GER:DB-Hum

3-5 units, not given this year

GERLIT 148. Heart to Heart: Theories of Expression at the Turns of Two Centuries

(Same as GERLIT 248) Paradigms of expression around 1800 and 1900, from Empfindsamkeit (sensibility) to German Expressionism. The heart that overflows into speech in the works of Klopstock, Goethe, Tieck, and Kleist, and the reformulation a century later of this idea as avant garde practice and modernist credo. Readings of poets, philosophers, and artists on relationships between inside and out, heart and voice, emotion and language, and self and art. Discussion in English. GER:DB-Hum

3-5 units, not given this year

GERLIT 150C. Postwar German Culture and Thought: 1945 to the Present

(Same as GERLIT 250C) How German culture and thought confronted the legacy of National Socialism, German guilt, and the possibility of a new beginning. German culture and the memory of communism (the German Democratic Republic) after 1989. Fiction of Thomas Mann, Gunter Grass, Alexander Kluge, and Hans Ulrich Treichel; poetry of Paul Celan and Ingeborg Bachmann; philosophical essays of Martin Heidegger, Theodor Adorno, Jürgen Habermas; films of Rainer Werner Fassbinder, Florian Henkel (The Life of Others), and Oliver Hirschbiegel (Downfall).

3-5 units, Spr (Eshel, A)

GERLIT 151. German Underworlds

(Same as GERLIT 251) German theories about what lies beneath: is it hell or the subterranean foundations that keep the world from collapsing? Cosmic architecture and the question of the inferno in Kant, Novalis, Wagner, Marx, Freud, Kafka, and the films of Fritz Lang.

3-5 units, not given this year

GERLIT 163. Readings in 19th-Century German Literature

(Same as GERLIT 263) Works by Goethe, Tieck, Kleist, Hoffmann, Heine, Büchner, Grillparzer, Droste-Hülshoff, Stifter, and Keller. Their divergent responses to artistic, ethical, and political challenges of modernity. Prerequisite: GERLANG 3 or equivalent. In German. GER:DB-Hum

4 units, not given this year

GERLIT 189A. Honors Research

Senior honors students enroll for 5 units in Winter while writing the honors thesis, and may enroll in 189B for 2 units in Spring while revising the thesis. Prerequisite: DLCL 189.

5 units, Win (Staff)

GERLIT 189B. Honors Research

Open to juniors with consent of adviser while drafting honors proposal. Open to senior honors students while revising honors thesis. Prerequisites for seniors: 189A, DLCL 189.

2 units, Spr (Staff)

GERLIT 190. German Capstone: Goethe's Faust

One of the central texts of the German literary tradition. Faust I and II read, performed, listened to, memorized, and recited. Different ways of responding to them in writing. (WIM)

3-5 units, Win (Staff)

GERLIT 197. Theories of Art after Idealism

(Same as GERLIT 297) Key responses to the failure of idealism to integrate artistic creation and aesthetic experience into a philosophical system. Works by Schopenhauer, Kierkegaard, Nietzsche, Dilthey, and Lukács.

3-5 units, not given this year

GERLIT 199. Independent Reading

36 hours of reading per unit, weekly conference with instructor. May be repeated for credit. Prerequisite: consent of instructor.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERLIT 206. Narrative, Visuality, Memory

(Same as GERLIT 306) Moments in the history of the relationship between verbal and visual: the classical ars memoriae; the ekphrasis debates of the 18th century; and the emergence of a new visuality and mnemonic art as structuring principles for modernist narrative. Authors include Plato, Aristotle, Cicero, Augustine, Winkelmann, Lessing, Diderot, Goethe, Moritz, Flaubert, Rilke, and Proust. GER:DB-Hum

3-5 units, not given this year

GERLIT 223. Literary Diaries of Classic Modernity

(Same as COMPLIT 223) Focus is on self-analysis in works of key modern writers. Since Montaigne's Essais and Rousseau's Confessions, analysis of the self has been a central topic for modern literature. Texts include Baudelaire's Intimate Journals, Kafka's Diaries, Gide's Journals, Woolf's Moments of Being, Benjamin's Berlin Childhood, and Pavese's Diaries. Analysis of the self as polarizing between the imagination of a utopian childhood and self-deprivation.

3-5 units, not given this year

GERLIT 241. Deutsche Geistesgeschichte I: German Aesthetic Thought, 1790-1872

The seminal tradition of writing about art including the German idealists (Kant, Schelling, Hegel, and Schiller), romantics (Schlegel, Novalis, and Hoffmann), and Schopenhauer, Kierkegaard, and Nietzsche. In English. GER:DB-Hum

4 units, not given this year

GERLIT 242. Narrative and Ethics
(Same as COMPLIT 226) Major terms of narratology; how different literary, cinematic, and popular culture narratives raise ethical issues, stir public debates and contribute to understanding human values. Readings include Biblical texts, Antigone, Kleist, Kafka, Coetzee, V for Vendetta, South Park, Kant, Arendt, Nussbaum, Rorty, and Levinas. GER:EC-EthicReas
3-5 units, Win (Eshel, A)

GRADUATE COURSES IN GERMAN LITERATURE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

GERLIT 133. Twentieth Century and Contemporary Literature and Culture
This course is designed to provide students with a representative overview of German literature, film and music from World War I to the early twenty-first century. It draws on major texts from many of the twentieth century's great literary and artistic movements, from Expressionism and New Objectivity, via the Gruppe 47 to pop art and postmodernism. In keeping with German Studies Department's new pilot program, this course will be taught in English and in German - particular periods or literary or cultural movements will be discussed in English, while individual text will be discussed (and read) entirely in German. German language proficiency is therefore assumed, as is some familiarity with the rough outlines of German history in the 20th century.
3-5 units, Spr (Daub, A)

GERLIT 217. Hölderlin's Poetry
(Same as COMPLIT 217) A discussion of key poems by Friedrich Hölderlin with regard to themes including the utopian fatherland as mythological landscape; the idea of the Greek gods; the concept of poetry as event; and the emphatic ""now"". The seminar also explores the relationship between the philosophy of history and poetic metaphor.
3-5 units, not given this year

GERLIT 219. German Utopias and Dystopias in the 20th Century
The fraught relationship of Geist and politics in 20th-century visions of a utopian republic of letters, mostly from Germany's conservative intellectuals: the George-circle's idea of a secret Germany, the conservative revolution of Hugo von Hofmannsthal, and Mann's Reflections of a Non-Political Man are the most influential such attempts at an aesthetic politics. Other texts instead interrogate and at times parody their attempts, for instance Hesse's Glass Bead Game and Arno Schmidt's Egghead Republic.
3-5 units, Win (Daub, A)

GERLIT 232. Realistic Fictions
(Same as COMPLIT 239) Realistic narratives in nineteenth-century literature. Structures of representation, temporality, and closure. Realism, history and political economy. Realism, modernism, and 20th-century revisions. Texts by authors such as Keller, Stifter, Fontane, Seghers, Lukacs, and Adorno.
3-5 units, Aut (Berman, R)

GERLIT 246. Memory, History, and the Contemporary Novel
(Same as COMPLIT 221) How the watershed events of the 20th century, the philosophic linguistic turn, and the debate regarding the end of history left their mark on the novel. How does the contemporary novel engage with the past? How does its interest in memory and history relate to late- or postmodern culture of time or to political and ethical concerns? Novels by Toni Morrison, W. G. Sebald, J. M. Coetzee, Kazuo Ishiguro, and A. B. Yehoshua; theoretical works by Nietzsche, Freud, Heidegger, Hannah Arendt, Walter Benjamin, Fredric Jameson, Paul Ricoeur Awishai Margalit, and Walter Benn Michaels.
3-5 units, Aut (Staff)

GERLIT 248. Heart to Heart: Theories of Expression at the Turns of Two Centuries
(Same as GERLIT 148) Paradigms of expression around 1800 and 1900, from Empfindsamkeit (sensibility) to German Expressionism. The heart that overflows into speech in the works of Klopstock, Goethe, Tieck, and Kleist, and the reformulation a century later of this idea as avant garde practice and modernist credo. Readings of poets, philosophers, and artists on relationships between inside and out, heart and voice, emotion and language, and self and art. Discussion in English.
3-5 units, not given this year

GERLIT 250A. Modern Drama
Problems of drama as genre, especially in relationship to problems of modernism. Transitions from classical and popular theater. New structures of action and conflict; epic theater; competition with film; transformed theatrical practices. Authors: Nestroy, Hauptmann, Hofmannsthal, Brecht, and Horvath. (Satisfied by enrollment in GERLIT 369 in 2008-09.)
3-5 units, not given this year

GERLIT 250B. German Romanticism and Its Repercussions
Works by Novalis, the Schlegel brothers, Tieck, Wackenroder, Hoffmann, Klingemann. Theory of the subject; transformative politics and conservative-religious retreat into inwardness; the fragment form and the novel; reflection, play, irony; the productive self-movement of language; the hieroglyph of nature; animating effects of Romantic desire and its impasses; interactions among literature, music, and painting. Ambivalent and critical responses to Romanticism (Hegel, Heine, Nietzsche) and recent revivals (Benjamin, Lacoue-Labarthe, Nancy, and Frank). Readings in German, discussion in English.
3-5 units, not given this year

GERLIT 250C. Postwar German Culture and Thought: 1945 to the Present
(Same as GERLIT 150C) How German culture and thought confronted the legacy of National Socialism, German guilt, and the possibility of a new beginning. German culture and the memory of communism (the German Democratic Republic) after 1989. Fiction of Thomas Mann, Gunter Grass, Alexander Kluge, and Hans Ulrich Treichel; poetry of Paul Celan and Ingeborg Bachmann; philosophical essays of Martin Heidegger, Theodor Adorno, Jürgen Habermas; films of Rainer Werner Fassbinder, Florian Henkel (The Life of Others), and Oliver Hirschbiegel (Downfall).
3-5 units, Spr (Eshel, A)

GERLIT 251. German Underworlds
(Same as GERLIT 151) German theories about what lies beneath: is it hell or the subterranean foundations that keep the world from collapsing? Cosmic architecture and the question of the inferno in Kant, Novalis, Wagner, Marx, Freud, Kafka, and the films of Fritz Lang.
3-5 units, not given this year

GERLIT 255. Middle High German
Introduction to medieval German language and culture. Readings include Hartmann von Aue and Gottfried von Strassburg; genres include Minnesang, epic, and romance. Grammar review; emphasis is on rapid and accurate reading.
3-5 units, not given this year

GERLIT 256. Old High German
Introduction to the grammar and the texts of the earliest attested stage of high German
3-4 units, not given this year

GERLIT 257. Gothic
Introduction to the grammar, texts, and history of this earliest extensively-documented Germanic language, a relative of German and English. Issues surrounding the Germanic parent language.
4 units, not given this year

GERLIT 258. German Dialects
Linguistic characteristics of dialect areas. History of the study of language variation in Germany; traditional dialect grammars; dialect-geographical revolution; and insights of modern sociolinguistics. Sources include native speakers, professionally-made tapes with transcripts, and secondary readings.
3-4 units, Win (Robinson, O)

GERLIT 263. Readings in 19th-Century German Literature
(Same as GERLIT 163) Works by Goethe, Tieck, Kleist, Hoffmann, Heine, Büchner, Grillparzer, Droste-Hülshoff, Stifter, and Keller. Their divergent responses to artistic, ethical, and political challenges of modernity. Prerequisite: GERLANG 3 or equivalent. In German.
4 units, not given this year

GERLIT 297. Theories of Art after Idealism
(Same as GERLIT 197) Key responses to the failure of idealism to integrate artistic creation and aesthetic experience into a philoso-

phical system. Works by Schopenhauer, Kierkegaard, Nietzsche, Dilthey, and Lukács.

3-5 units, not given this year

GERLIT 298. Individual Work

Open only to German majors and to students working on special projects, including written reports for internships. Honors students use this number for the honors essay. May be repeated for credit.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERLIT 306. Narrative, Visuality, Memory

(Same as GERLIT 206) Moments in the history of the relationship between verbal and visual: the classical ars memoriae; the ekphrasis debates of the 18th century; and the emergence of a new visuality and mnemonic art as structuring principles for modernist narrative. Authors include Plato, Aristotle, Cicero, Augustine, Winkelmann, Lessing, Diderot, Goethe, Moritz, Flaubert, Rilke, and Proust.

3-5 units, not given this year

GERLIT 339. Love, Marriage and Passion in German Literature of the 19th and 20th Centuries

(Same as GERLIT 139) The thesis that love relationships, in shifting social, cultural, and communication contexts, reflect and determine the dominant value system of a society. How the concepts of romantic, passionate, and pragmatic love evolved and competed with one another in texts by Goethe, Schlegel, Keller, Sacher-Masoch, Fontane, and Böll. In German.

3-5 units, not given this year

GERLIT 369. Introduction to Graduate Studies: Criticism as Profession

(Same as COMPLIT 369, FRENGEN 369, ITALGEN 369) Major texts of modern literary criticism in the context of professional scholarship today. Readings of critics such as Lukács, Auerbach, Frye, Ong, Benjamin, Adorno, Szondi, de Man, Abrams, Bourdieu, Vendler, and Said. Contemporary professional issues including scholarly associations, journals, national and comparative literatures, university structures, and career paths.

5 units, Aut (Berman, R)

GERLIT 399. Independent Study

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERLIT 400. Dissertation Research

For graduate students in German working on dissertations only.

1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GERLIT 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HEALTH RESEARCH AND POLICY (HRP) COURSES

UNDERGRADUATE COURSES IN HEALTH RESEARCH AND POLICY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

HRP 89Q. Introduction to Cross Cultural Issues in Medicine

(Stanford Introductory Seminar) Preference to sophomores. Introduction to social factors that impact health care delivery, such as ethnicity, immigration, language barriers, and patient service expectations. Focus is on developing a framework to understand culturally unique and non-English speaking populations in the health care system. GER:EC-AmerCul

3 units, Win (Corso, I)

HRP 199. Undergraduate Research

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN HEALTH RESEARCH AND POLICY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

HRP 206. Research Methods for Meta-Analysis

(Same as STATS 211) Meta-analysis as a quantitative method for combining the results of independent studies enabling researchers to evaluate available evidence. Examples of meta-analysis in medicine, education, and social and behavioral sciences. Statistical methods include nonparametric methods, contingency tables, regression and analysis of variance, and Bayesian methods. Project involving an existing published meta-analysis. Prerequisite: basic sequence in statistics.

3 units, Win (Olkin, I)

HRP 207. Introduction to Concepts and Methods in Health Services and Policy Research I

Primarily for medical students in the Health Services and Policy Research scholarly concentration. Topics include health economics, statistics, decision analysis, study design, quality measurement, cost benefit and effectiveness analysis, and evidence based guidelines.

2 units, Aut (Haberland, C)

HRP 208. Introduction to Concepts and Methods in Health Services and Policy Research II

Primarily for medical students in the Health Services and Policy Research scholarly concentration; continuation of 207. Topics include health economics, statistics, decision analysis, study design, quality measurement, cost benefit and effectiveness analysis, and evidence based guidelines. Recommended: 207.

2 units, Win (Haberland, C)

HRP 209. FDA's Regulation of Health Care

(Same as LAW 458) Open to law and medical students; other graduate students by consent of instructor. The FDA's regulatory authority over drugs, biologics, medical devices, and dietary supplements. The nature of the pharmaceutical, biotech, medical device, and nutritional supplement industries.

2-3 units, not given this year

HRP 210. Health Law and Policy

(Same as Law 313) Open to law , medicine, business, and graduate students. Focus this term is on the physician/patient relationship, medical ethics, and public health law.

3 units, Aut (Staff)

HRP 211. Law and the Biosciences

(Same as LAW 368) Legal, social, and ethical issues arising from advances in neuroscience, including effects upon law and society through improvements in predicting illnesses and behaviors, reading minds through neuroimaging, understanding responsibility and consciousness, treating criminal behavior, and cognitive enhancement. May be repeated for credit.

3 units, not given this year

HRP 212. Cross Cultural Medicine

Developing interviewing and behavioral skills needed to facilitate culturally relevant health care across all population groups. Discussions focus on explicit and implicit cultural influences operating in formal and informal medical contexts.

3 units, Spr (Corso, I)

HRP 214. Scientific Writing

Step-by-step through the process of writing and publishing a scientific manuscript. How to write effectively, concisely, and clearly. Preparation of an actual scientific manuscript. Students are encouraged to bring a manuscript on which they are currently working to develop and polish throughout the course.

2-3 units, Win (Sainani, K)

HRP 215. Scientific Writing for Basic and Translational Scientists

Teaches students in the basic sciences how to write clearly, concisely, and effectively. Focuses on the process of writing and publishing a scientific manuscript. Not intended for epidemiology graduate students.

2-3 units, Sum (Sainani, K)

HRP 216. Analytical and Practical Issues in the Conduct of Clinical and Epidemiologic Research
Topics include: advanced aspects of study design and data analyses; development of health measurement instruments; methods of summarizing literature and quantifying effect sizes; and multivariable nature of health events in human populations. 3 units requires a term paper. Prerequisites: 225, and 258 or 261, or consent of instructor.

2-3 units, Spr (Popat, R)

HRP 220. BIOTECHNOLOGY LAW AND POLICY
(Same as LAW 440) Open to all law or medical students; other graduate students by consent of instructor. Focus is on the biotechnology industry, with discussion of the med tech or medical device industry and the pharmaceutical industry. The life cycle of a biotech firm, from a good idea to a start-up company to FDA approval and beyond. Guest speakers. In addition to a final exam, students are required to participate in a group project during the term, making law and business recommendations about a biotech firm.

3 units, Spr (Staff)

HRP 221. Law and the Biosciences: Genetics
(Same as LAW 480) Open to all law or medical students; other graduate students by consent of the instructor. Ethical, legal, and social issues arising primarily from advances in knowledge of human genetics. May also include a section on stem cell research.

3 units, Spr (Staff)

HRP 223. Epidemiologic Analysis: Data Management and Statistical Programming
The skills required for management and analysis of biomedical data. Topics include importing and exporting data from multiple database systems, visualizing and cleaning data, data management for multicenter projects, and data security. Introduction to applied statistical programming relevant to epidemiologic and clinical research. No previous programming experience required.

2-3 units, Aut (Balise, R)

HRP 225. Design and Conduct of Clinical and Epidemiologic Studies
Intermediate-level. The skills to design, carry out, and interpret epidemiologic studies, particularly of chronic diseases. Topics: epidemiologic concepts, sources of data, cohort studies, case-control studies, cross-sectional studies, sampling, estimating sample size, questionnaire design, and the effects of measurement error. Prerequisite: introductory course in statistics or consent of instructor.

3-4 units, Aut (Popat, R)

HRP 226. Advanced Epidemiologic and Clinical Research Methods
The principles of measurement, measures of effect, confounding, effect modification, and strategies for minimizing bias in clinical and epidemiologic studies. Prerequisite: 225 or consent of instructor.

3-4 units, Win (Popat, R)

HRP 228. Genetic Epidemiology
Reading of seminal papers in genetic epidemiology. Topics include human genetic variation, genetics of complex diseases, genome-wide association studies, and new genomic technologies. Provides a background for clinicians, epidemiologists, and other scientists to incorporate the study of genetic factors into human disease research. Prerequisite: HRP 225 or consent of instructor.

2 units, Spr (Sieh, W)

HRP 230. Cancer Epidemiology
Descriptive epidemiology and sources of incidence/mortality data; the biological basis of carcinogenesis and its implications for epidemiologic research; methodological issues relevant to cancer research; causal inference; major environmental risk factors; genetic susceptibility; cancer control; examples of current research; and critique of the literature. 3 units requires paper or project. Prerequisite: 225, or consent of instructor.

2-3 units, alternate years, not given this year

HRP 231. Epidemiology of Infectious Diseases
Principles of the transmission of the infectious agents (viruses, bacteria, rickettsiae, mycoplasma, fungi, and protozoan and helminth parasites). The role of vectors, reservoirs, and environmental factors. Pathogen and host characteristics that determine the spectrum of infection and disease. Endemicity, outbreaks, and epidemics of selected infectious diseases. Principles of control and surveillance.

3 units, Win (Maldonado, Y; Parsonnet, J)

HRP 234. Foundations of Pharmacoepidemiology
Historical development of the field, the drug development process and pharmacoepidemiology's role in it, pharmacovigilance/drug safety systems, epidemiology in outcomes research, the role of pharmacoepidemiology in risk management, and classic examples of pharmacoepidemiologic investigations.

2-3 units, not given this year

HRP 236. Epidemiology Research Seminar
Weekly forum for ongoing epidemiologic research by faculty, staff, guests, and students, emphasizing research issues relevant to disease causation, prevention, and treatment. May be repeated for credit.

1 unit, Aut (Henderson, V), Win (Sieh, W), Spr (Whittemore, A)

HRP 238. Genes and Environment in Disease Causation: Implications for Medicine and Public Health
(Same as HUMBIO 159) The historical, contemporary, and future research and practice among genetics, epidemiology, clinical medicine, and public health as a source of insight for medicine and public health. Genetic and environmental contributions to multifactorial diseases; multidisciplinary approach to enhancing detection and diagnosis. The impact of the Human Genome Project on analysis of cardiovascular and neurological diseases, and cancer. Ethical and social issues in the use of genetic information. Prerequisite: basic course in genetics; for undergraduates, Human Biology core or equivalent or consent of instructor.

2-3 units, not given this year

HRP 239. Understanding Statistical Models and their Social Science Applications
(Same as EDUC 260X, STATS 209) Critical examination of statistical methods in social science applications, especially for cause and effect determinations. Topics: path analysis, multilevel models, matching and propensity score methods, analysis of covariance, instrumental variables, compliance, longitudinal data, mediating and moderating variables. See http://www-stat.stanford.edu/~rag/stat209. Prerequisite: intermediate-level statistical methods

3 units, Win (Rogosa, D)

HRP 240. Rethinking Global Health
(Same as MED 230) Issues and players that shape global health today. How to develop a road map for thoughtful, responsible action. Topics include: the role of the physician and health care worker; health as a human right; successful interventions; children's and women's health; issues in immunization; economic development; and NGOs. Online interviews with influential global health leaders.

2-3 units, Spr (Goldhaber-Fiebert, J)

HRP 251. Design and Conduct of Clinical Trials
The rationale for phases 1-3 clinical trials, the recruitment of subjects, techniques for randomization, data collection and endpoints, interim monitoring, and reporting of results. Emphasis is on the theoretical underpinnings of clinical research and the practical aspects of conducting clinical trials.

3 units, Spr (Henderson, V; Lavori, P)

HRP 252. Outcomes Analysis
(Same as BIOMEDIN 251) Methods of conducting empirical studies which use large existing medical, survey, and other databases to ask both clinical and policy questions. Econometric and statistical models used to conduct medical outcomes research. How research is conducted on medical and health economics questions when a randomized trial is impossible. Problem sets emphasize hands-on data analysis and application of methods, including reanalyses of well-known studies. Prerequisites: one or more courses in probability, and statistics or biostatistics.

3 units, Spr (Bhattacharya, J)

HRP 256. Economics of Health and Medical Care
(Same as BIOMEDIN 156, BIOMEDIN 256, ECON 126) Graduate students with research interests should take ECON 248. Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: institutions in the health sector; measurement and valuation of health; nonmedical determinants of health; medical technology and technology assessment; demand for medical care and medical insurance; physicians, hospitals, and

managed care; international comparisons. Prerequisites: ECON 50 and ECON 102A or equivalent statistics. Recommended: ECON 51.

5 units, Aut (Bhattacharya, J)

HRP 258. Introduction to Probability and Statistics for Clinical Research

Open to medical and graduate students; required of medical students in the Clinical Research Scholarly Concentration. Tools to evaluate medical literature. Topics include random variables, expectation, variance, probability distributions, the central limit theorem, sampling theory, hypothesis testing, confidence intervals, correlation, regression, analysis of variance, and survival analysis.

3 units, Spr (Sainani, K)

HRP 259. Introduction to Probability and Statistics for Epidemiology

Topics: random variables, expectation, variance, probability distributions, the central limit theorem, sampling theory, hypothesis testing, confidence intervals. Correlation, regression, analysis of variance, and nonparametric tests. Introduction to least squares and maximum likelihood estimation. Emphasis is on medical applications.

4-5 units, Aut (Sainani, K)

HRP 260A. Workshop in Biostatistics

(Same as STATS 260A) Applications of statistical techniques to current problems in medical science.

1-2 units, Aut (Olshen, R)

HRP 260B. Workshop in Biostatistics

(Same as STATS 260B) Applications of statistical techniques to current problems in medical science.

1-2 units, Win (Olshen, R)

HRP 260C. Workshop in Biostatistics

(Same as STATS 260C) Applications of statistical techniques to current problems in medical science.

1-2 units, Spr (Sabatti, C; Olshen, R)

HRP 261. Intermediate Biostatistics: Analysis of Discrete Data

(Same as BIOMEDIN 233, STATS 261) Methods for analyzing data from case-control and cross-sectional studies: the 2x2 table, chi-square test, Fisher's exact test, odds ratios, Mantel-Haenzel methods, stratification, tests for matched data, logistic regression, conditional logistic regression. Emphasis is on data analysis in SAS. Special topics: cross-fold validation and bootstrap inference.

3 units, Win (Sainani, K)

HRP 262. Intermediate Biostatistics: Regression, Prediction, Survival Analysis

(Same as STATS 262) Methods for analyzing longitudinal data. Topics include Kaplan-Meier methods, Cox regression, hazard ratios, time-dependent variables, longitudinal data structures, profile plots, missing data, modeling change, MANOVA, repeated-measures ANOVA, GEE, and mixed models. Emphasis is on practical applications. Prerequisites: basic ANOVA and linear regression.

3 units, Spr (Sainani, K)

HRP 263. Advanced Decision Science Methods and Modeling in Health

(Same as MED 263) Advanced methods currently used in published model-based cost-effectiveness analyses in medicine and public health, both theory and technical applications. Topics include: Markov and microsimulation models, model calibration and evaluation, and probabilistic sensitivity analyses. Prerequisites: a course in probability, a course in statistics or biostatistics, a course on cost-effectiveness such as HRP 392, a course in economics, and familiarity with decision modeling software such as TreeAge.

3 units, Spr (Goldhaber-Fiebert, J)

HRP 280. Spanish for Medical Students

(Same as SPANLANG 121M) Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on taking the medical history. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge.

3 units, Aut (Corso, I)

HRP 281. Spanish for Medical Students

(Same as SPANLANG 122M) Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on performing a physical examination. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge.

3 units, Win (Corso, I)

HRP 282. Spanish for Medical Students

(Same as SPANLANG 123M) Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on different specialties and medical conditions. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge.

3 units, Spr (Corso, I)

HRP 283. Health Services Research Core Seminar

Presentation of research in progress and tutorials in the field of health services research.

1 unit, Aut (Haberland, C), Win (Haberland, C), Spr (Haberland, C)

HRP 290. Advanced Medical Spanish Oral Communication

Enrollment limited to medical students. Designed to further develop linguistic skills, covering all medical specialties according to student needs. Sessions also include topics on patient education and diseases, such as diabetes, asthma, TB, and CVDs.

3 units, Aut (Corso, I), Win (Corso, I), Spr (Corso, I)

HRP 296. Current Topics in Bioethics

(Same as LAW 596) The ethical, legal, and public policy issues arising from recent advances in biomedicine and the biosciences. Approaches to bioethical reasoning including casuistry, social justice, resource allocation, and individual rights in areas such as refusal of treatment conception. Topics include: the use of forensic genetics in criminal law, neuroscience and national security, race and ethnicity in genetic research, experimentation on human subjects and prisoners, privacy of medical and genetic information in the information age, synthetic biology, and do-it-yourself medical and genetic testing. No prior knowledge in science, medicine, philosophy or related disciplines is required.

3 units, Spr (Farahany, N)

HRP 299. Directed Reading in Health Research and Policy

Epidemiology, health services research, preventive medicine, medical genetics, public health, economics of medical care, occupational or environmental medicine, international health, or related fields. May be repeated for credit. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HRP 351. Health Care Technology: From Innovators to Providers to Patients

(Same as GSBGEN 351) How health care businesses use biotechnology, medical technology and information technology to improve patient outcomes and manage costs. New technologies commercialized by innovator biotech and pharmaceutical companies, device manufacturers, diagnostics developers, and health IT companies, and adopted by hospitals and physicians in patient care and paid for by third-party payers. Case studies: how innovators finance and manage new product development; clinical trial management and gaining regulatory approval; strategies to drive product adoption; business models to drive innovation; clinical and business models for adopting new technology; organizational change; criteria for reimbursement and coverage decisions; selective provider network design to manage added costs; and IT-intensive business models. Guest speakers and panelists.

4 units, not given this year

HRP 370. Medical Scholars Research

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HRP 391. Health Care Regulation, Finance and Policy

(Same as PUBLPOL 231) (SAME AS LAW 348) Provides the legal, institutional, and economic background necessary to understand the financing and production of health services in the U.S. Potential topics include: health reform, health insurance (Medicare and Medicaid, employer-sponsored insurance, the uninsured),

medical malpractice and quality regulation, pharmaceuticals, the corporate practice of medicine, regulation of fraud and abuse, and international comparisons.

3 units, Win (Kessler, D)

HRP 392. Analysis of Costs, Risks, and Benefits of Health Care
(Same as BIOMEDIN 432) (Same as MGTECON 332) For graduate students. How to do cost/benefit analysis when the output is difficult or impossible to measure. How do M.B.A. analytic tools apply in health services? Literature on the principles of cost/benefit analysis applied to health care. Critical review of actual studies. Emphasis is on the art of practical application.

4 units, Aut (Garber, A; Owens, D)

HRP 399. Graduate Research
Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HRP 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HRP 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HISTORY (HISTORY) COURSES

UNDERGRADUATE COURSES IN HISTORY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

HISTORY 6N. Utopia: History of Nowhere Land
(Stanford Introductory Seminar) What would the perfect society be? How would work be organized, and education, honor and profit be distributed? How would children be raised, and who would govern? Such questions have engaged philosophers, revolutionaries, and dreamers in every historical age. Examines utopian literature from ancient Greece through the modern age, focusing on the early modern period. GER:DB-Hum

4 units, Win (Stokes, L)

HISTORY 10B. Early Modern Europe
(Same as HISTORY 110B. History majors and others taking 5 units, register for 110B.) Survey of early modern European history from the Reformation through the Enlightenment. Topics include religious war, state building and revolt, exploration and colonialism, gender and society. GER:DB-SocSci, EC-GlobalCom

3 units, Aut (Stokes, L)

HISTORY 10C. Introduction to Modern Europe
(SAME as HISTORY 110C. History majors and others taking 5 units, register for 110C.) From the late 18th century to the present. How Europeans responded to rapid social changes caused by political upheaval, industrialization, and modernization. How the experience and legacy of imperialism and colonialism both influenced European society and put in motion a process of globalization that continues to shape international politics today.

3 units, Win (Daughton, J)

HISTORY 11N. The Roman Empire: Its Grandeur and Fall
(Stanford Introductory Seminar) (Same as CLASSHIS 24N) Preference to Freshmen. Prerequisite: IHUM 69A. Explore themes on the Roman Empire and its decline from the 1st through the 5th centuries C.E.. What was the political and military glue that held this diverse, multi-ethnic empire together? What were the bases of wealth and how was it distributed? What were the possibilities and limits of economic growth? How integrated was it in culture and religion? What were the causes and consequences of the conversion to Christianity? Why did the Empire fall in the West? How suitable is the analogy of the U.S. in the 21st century?

3 units, Spr (Saller, R)

HISTORY 17S. Princesses, Politicians, and Patronesses: Identities of Early Modern Noble Women
Noble women, often overlooked a political agents, were integral to the functioning of European political networks as intriguers, mothers, wife, patronesses, warriors, and chroniclers. Examines the writings of noble women (autobiography, personal correspondences, and a novel) with particular emphasis on behavioral expectations and practices, letter-writing and self-representation, networks (both familial and political), and cultural exchange and influence. From the mid-sixteenth to late eighteenth century (Catherine deMedici to Marie Antoinette). Cases from Italy, France, England, Spain, and Germany.

5 units, Spr (Taylor-Poleskey, M), given once only

HISTORY 20Q. Russia in the Early Modern European Imagination
(Stanford Introductory Seminar) Preference to sophomores. The contrast between the early modern image of Europe as free, civilized, democratic, rational, and clean against the notion of New World Indians, Turks, and Chinese as savage. The more difficult, contemporary problem regarding E. Europe and Russia which seemed both European and exotic. Readings concerning E. Europe and Russia from the Renaissance to the Enlightenment; how they construct a positive image of Europe and conversely a negative stereotype of E. Europe. Prerequisite: PWR 1. GER:DB-Hum, EC-GlobalCom

5 units, Win (Kollmann, N)

HISTORY 30C. Culture and Society in Reformation England
(Same as History 130C. History majors and others taking 5 units, register for 130C.) Focuses on the appeal of both Reformed and Catholic ideas in the political and cultural contexts of early modern Europe. Topics include: the Lutheran revolt; the spread of Protestant ideas; Calvin's Geneva; the English Reformation; Tridentine reform and the Jesuits; toleration and the underground churches; wars and religious violence; and the making of European confessional identities. Sources include sermons, religious polemic, autobiographies, graphic prints, poetry, and music.

3 units, not given this year

HISTORY 30S. Travel, Adventure, Blood, and Espionage: The British Cultural Imagination in Afghanistan, 1813-1907
The British Empire's encounters with nineteenth century Afghanistan, experienced by Britons as a fundamentally contested space of profound tension, daring journeys, gruesome massacres, and exotic adventures. Topics include the early adventurers, the First and Second Anglo-Afghan Wars, the Great Game, imperial angst, memory, and contemporary parallels. Sources include travel accounts, paintings, novels, military diaries, songs, an official manifesto, adventurers' memoirs, political polemics, prisoners' letters, newspaper editorials/ and letters to the editor, short stories and photographs.

5 units, Aut (Lundberg, C), given once only

HISTORY 31. Science, Technology and Art: The Worlds of Leonardo da Vinci
(Same as HISTORY 131) What did Leonardo actually know? How did he acquire that knowledge? Leonardo's interests and accomplishments in such fields as painting, architecture, engineering, physics, mathematics, geology, anatomy, and physiology, and more generally the nature of Renaissance science, art, and technology. The relationship between the society of 15th-century Italy and the work of the man from Vinci: why did this world produce a Leonardo? How to use him to understand creativity, innovation, and invention in the Renaissance and beyond. What was his legacy and how did he become a myth? For students interested in the history of science, medicine, and technology and for students interested in the history and art of Renaissance Italy.

3-5 units, Win (Findlen, P)

HISTORY 31Q. British History Revealed by the Arts of the 20th Century
(Stanford Introductory Seminar) Discusses various art forms as works of their own but more importantly in the context of this course how they relate to British society. Students will select a particular work of art within the genre for the week-- building, novel, poem, image, musical piece, movie, etc.-- and report how it illuminates the history of Britain in the first half of the 20th century. Preference to sophomores, then freshman.

4 units, Spr (Stansky, P)

HISTORY 32A. Enlightenment and the Arts
(Same as HISTORY 132A. History majors and others taking 5 units, enroll in 132A.) Novels, poetry, music, paintings, and architecture, and what they reveal about the society that produced them.

3 units, Spr (Lougee Chappell, C)

HISTORY 32S. Gender and European Imperial Crisis through Media: 1880-2000
Focuses on gender as a critical idiom for examining the issues that afflicted European empires in the late nineteenth and twentieth centuries. Examines how European women and operative ideas about gender roles and norms were implicated in both the large and small crises that destabilized European colonial projects. Topics include feminism, the domestic sphere, women's activism,wars, and humanitarian crises.

5 units, Win (Monkman, L), given once only

HISTORY 33A. Blood and Roses: The Age of the Tudors
(Same as HISTORY 133A. History majors and others taking 5 units, register for 133A.) English society and state from the Wars of the Roses to the death of Elizabeth. Political, social, and cultural upheavals of the Tudor period and the changes wrought by the Reformation. The establishment of the Tudor monarchy; destruction of the Catholic church; rise of Puritanism; and 16th-century social and economic changes. GER:DB-Hum

3 units, not given this year

HISTORY 33B. Revolutionary England: The Stuart Age
(Same as HISTORY 133B. History majors and others taking 5 units, register for 133B.) From the accession of King James I in 1603 to the death of Queen Anne in 1714: a brutal civil war, the execution of one anointed king, and the deposition of another. Topics include the causes and consequences of the English Revolution, the origins of Anglo-American democratic thought, the rise and decline of Puritanism, and the emergence of England as an economic and colonial power. (Como)

3 units, Win (Como, D)

HISTORY 33S. The France of Louis XIV
Louis XIV's reign as the foundation of France's modern global eminence despite the imposition of governing practices that undermined France's chance of effective modernization. Sources include 17th-century documents and a computer simulation in game format to define the problems faced by the Sun King and his contemporaries in an era of economic, political, and social change. GER:DB-Hum

5 units, not given this year

HISTORY 35N. Industrial Revolution: History, Ethics & Consequences of Mod. Economic Development
(Stanford Introductory Seminar) Explores the enduring controversies surrounding the transformation of the British economy in the 18th century. Using iron, coal, steam, and cotton as examples, we will explore the historical and economic debates about its reach, speed, and relationship to other aspects of British and world history. Topics include: the social, political, environmental, and cultural consequences in Britain and the expanding British empire as well as an ethical assessment of the Industrial Revolution and the lessons it has offered for the theory and practice of economic development ever since. Readings will include historical and economic literature as well as contemporary accounts. GER:DB-SocSci

5 units, Spr (Satia, P)

HISTORY 36N. Gay Autobiography
(Stanford Introductory Seminar) Preference to freshmen. Gender, identity, and solidarity as represented in nine autobiographies: Isherwood, Ackerley, Duberman, Monette, Louganis, Barbin, Cammermeyer, Gingrich, and Lorde. To what degree do these writers view sexual orientation as a defining feature of their selves? Is there a difference between the way men and women view identity? What politics follow from these writers' experiences? GER:DB-Hum, EC-Gender

4 units, Spr (Robinson, P)

HISTORY 37S. Youth in Modern Europe, 1762-1968
What did it mean to be young in 18th-, 19th-, and 20th-century Europe? Why did generational revolt become such a powerful cultural symbol in modern times, invoked by revolutionaries and reactionaries alike? Music (classical, jazz, rock), manifestos, films, literature, memoirs, and art about how experiences of young men and women, as well as ideas about them, were transformed by the political, social, economic, and cultural revolutions of modern Europe. From the Enlightenment and French Revolution to the student movements of 1968.

5 units, Spr (Heller, D), given once only

HISTORY 38A. Germany and the World Wars, 1870-1990
(Same as HISTORY 138A. Majors and others taking 5 units, enroll in 138A.) Germany's history from Bismarck's wars of unification through the end of the Cold War. The radicalizing relationship between international conflict, social upheaval, and state transformation with a focus on the clashes of the Second Empire, the road to WW I, interwar instability, the rise of Nazism, WW II, the Holocaust, the division of communist E. and capitalist W. Germany, and the fall of the Iron Curtain.

3 units, Spr (Sheffer, E)

HISTORY 39. Modern Britain and the Empire
(Same as HISTORY 139. History majors and others taking 5 units, register in 139.) From American Independence to the latest war in Iraq. Topics include: the rise of the modern British state and economy; imperial expansion and contraction; the formation of class, gender, and national identities; mass culture and politics; the world wars; and contemporary racial politics. Focus is on questions of decline, the fortunes and contradictions of British liberalism in an era of imperialism, and the weight of the past in contemporary Britain. GER:EC-GlobalCom

3 units, Spr (Satia, P)

HISTORY 40. World History of Science, Technology and Medicine: From Prehistory to the Scientific Revolution
(Same as HISTORY 140. History majors and others taking 5 units, register for 140.) The earliest developments in science, the prehistoric roots of technology, the scientific revolution, and global voyaging. Theories of human origins and the oldest known tools and symbols. Achievements of the Mayans, Aztecs, and native N. Americans. Science and medicine in ancient Greece, Egypt, China, Africa, and India. Science in medieval and Renaissance Europe and the Islamic world including changing cosmologies and natural histories. Theories of scientific growth and decay; how science engages other factors such as material culture and religions. GER:DB-SocSci

3 units, not given this year

HISTORY 41A. The Emergence of Medicine: The Middle Ages and Renaissance
(Same as HISTORY 141A. History majors and others taking 5 units, register for 141A.) How did medicine emerge as a distinctive body of knowledge and a profession? The history of medicine from ca. 1000 to 1750. Topics: new ways of examining and treating the body; the religious and cultural significance of disease; the development of hospitals; and the rise of public health systems. Comparison of the status of medicine in Europe and the Islamic world. The work of key figures such as Vesalius and Harvey. GER:DB-SocSci

3 units, not given this year

HISTORY 42. Darwin in the History of Life
(Same as HISTORY 142. History majors and others taking 5 units, register for 142.) Origins and impact of evolutionary theory from the nineteenth century to the present. Early theories of fossils, the discovery of deep time and uniformitarian geology, debates over evolution vs. extinction, the origin of life, and human origins; the rise of anthropology and racial theory; the changing challenge of creationism, the abuse of evolution in eugenics and Nazi racial hygiene; and new discoveries in the realm of extreme life, evo-devo, neocatastrophism, and the new technological frontier of biomimicry. GER:DB-SocSci

3 units, not given this year

HISTORY 43S. Pirates, Merchants, & Local Cosmopolitans: Voyages through Indian Ocean History, 1100-1945
Explores the Indian Ocean world, a home and travel destination of people of diverse ethnic, religious, and cultural backgrounds. Examines the lives of pirates, merchants, slaves, and others by analyzing sources such as trial records, maps, travel narratives, music, life histories, and postcards. Considers the content of primary sources as well as the biases and distortions.

5 units, Win (Hassell, S), given once only

HISTORY 45B. Africa in the Twentieth Century
(Same as HISTORY 145B. History majors and others taking 5 units, register for 145B.) The challenges facing Africans from when the continent fell under colonial rule until independence. Case studies of colonialism and its impact on African men and women drawn from West, Central, and Southern Africa. Novels,

plays, polemics, and autobiographies written by Africans. GER:DB-SocSci, EC-GlobalCom

3 units, Spr (Thornberry, E)

HISTORY 45S. Colonial Anthropologists and the Production of Knowledge about Africa: Inadvertent Imperialists

The history of colonial knowledge production about Africa through the lens of ethnography and anthropology. Topics include: colonial anthropologists, African intermediaries, colonial policy integrating ethnographic research gender, religion, legal practices, ethnicity, tribe, local economic and social processes, and colonial exhibitions as understood by colonial administrators in the twentieth century. How historians can use anthropology to make claims about the past in Africa.

5 units, Spr (Pettigrew, E), given once only

HISTORY 47. History of South Africa

(Same as HISTORY 147. History majors and others taking 5 units, register for 147.) Introduction, focusing particularly on the modern era. Topics include: precolonial African societies; European colonization; the impact of the mineral revolution; the evolution of African and Afrikaner nationalism; the rise and fall of the apartheid state; the politics of post-apartheid transformation; and the AIDS crisis. GER:DB-SocSci

3 units, Aut (Campbell, J)

HISTORY 48Q. South Africa: Contested Transitions

(Stanford Introductory Seminar) Preference to sophomores. The inauguration of Nelson Mandela as president in May 1994 marked the end of an era and a way of life for S. Africa. The changes have been dramatic, yet the legacies of racism and inequality persist. Focus: overlapping and sharply contested transitions. Who advocates and opposes change? Why? What are their historical and social roots and strategies? How do people reconstruct their society? Historical and current sources, including films, novels, and the Internet. GER:DB-Hum, EC-GlobalCom

3 units, Win (Samoff, J)

HISTORY 50A. Colonial and Revolutionary America

(Same as HISTORY 150A. History majors and others taking 5 units, register for 150A.) Survey of the origins of American society and polity in the 17th and 18th centuries. Topics: the migration of Europeans and Africans and the impact on native populations; the emergence of racial slavery and of regional, provincial, Protestant cultures; and the political origins and constitutional consequences of the American Revolution. GER:DB-SocSci, EC-AmerCul

3 units, Aut (Winterer, C)

HISTORY 50B. 19th Century America

(Same as HISTORY 150B. History majors and others taking 5 units, register in 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture. GER:DB-SocSci, EC-AmerCul

3 units, Win (Campbell, J)

HISTORY 50C. The United States in the Twentieth Century

(Same as HISTORY 150C. History majors and others taking 5 units, register for 150C.) Major political, economic, social, and diplomatic developments in the U.S. Themes: the economic and social role of government (Progressive, New Deal, Great Society, and Reagan-Bush eras); ethnic and racial minorities in society (mass immigration at the turn of the century and since 1965, the civil rights era of the 50s and 60s); the changing status of women since WW II; shifting ideological bases, institutional structures, and electoral characteristics of the political system (New Deal and post-Vietnam); determinants of foreign policy in WW I and II, and the Cold War. GER:DB-SocSci, EC-AmerCul

3 units, Spr (McGarry, D)

HISTORY 51S. Popular Violence in Nineteenth Century American Culture and Society

Social and cultural beginnings of nineteenth century American popular violence; popular memory, representations, and explanations of violence. Topics include westward expansion, White-American Indian relations, extermination, lynching, Reconstruction, urban culture, U.S. labor movement, sport, manliness, sex, gender, popular culture, American imperialism, historical memory, American identity, and public history. Sources include film, novels, newspapers, photographs, congressional testimony, and historical monographs.

5 units, Win (Viles, N), given once only

HISTORY 53S. Rebellion and Revolution in American History: From the Stamp Act to the Civil War

American rebellions and revolutions as well as American responses to similar events abroad. These episodes serve as windows into American ideas about democracy, equality, and liberty between the American Revolution and the Civil War. Topics include the American Revolution, Shays' Rebellion, American responses to the French and Haitian revolutions, American slave rebellions, and the Civil War. Sources include speeches, sermons, political pamphlets, editorials, letters, and cartoons.

5 units, Spr (Spillman, S), given once only

HISTORY 54. 19th-Century U.S. Cultural and Intellectual History, 1790-1860

(Same as HISTORY 154. History majors and others taking 5 units, register for 154.) How Americans considered problems such as slavery, imperialism, and sectionalism. Topics include: the political legacies of revolution; biological ideas of race; the Second Great Awakening; science before Darwin; reform movements and utopianism; the rise of abolitionism and proslavery thought; phrenology and theories of human sexuality; and varieties of feminism. Sources include texts and images. GER:DB-Hum, EC-AmerCul

3 units, not given this year

HISTORY 57. The Constitution: A Short History

(Same as POLISCI 128S) A broad survey of the Constitution, from its Revolutionary origins to the contemporary disputes over interpretation. Topics include the invention of the written constitution and interpretative canons; the origins of judicial review; the Civil War and Reconstruction as constitutional crises; the era of substantive due process; the rights revolution; and the Constitution in wartime. GER:EC-AmerCul

5 units, not given this year

HISTORY 58N. Thomas Jefferson and His World

(Stanford Introductory Seminar) Thomas Jefferson was the most cosmopolitan American of his age, yet he was also the one member of his generation about whom Americans continue to have the most vexed feelings. This seminar explores the many facets of Jefferson's life and personality, considering such topics as his political ideas and actions, his ideas about religion, education, property, race, and slavery, and the problem of applying moral judgment to historical actors.

4 units, Win (Rakove, J)

HISTORY 58S. Indians, Degenerates, and Debtors: Perceptions of Failure in 19th Century America

Survey of American perceptions of economic and facial failure between 1800 and the first decades of the 20th century. Topics include failure as an idea, narratives of self-improvement, scientific racism, and federal policy. Focus on how failure was created and how it linked groups, such as immigrants and Indians, in ways that were both unexpected and significant.

5 units, Spr (Hoy, B), given once only

HISTORY 59. Introduction to Asian American History

The historical experience of people of Asian ancestry in the U.S. Immigration, labor, community formation, family, culture and identity, and contemporary social and political controversies. Readings: interpretative texts, primary material, and historical fiction. GER:DB-SocSci, EC-AmerCul

5 units, not given this year

HISTORY 60S. Beyond the Nation: International Social Movements in the U.S. from World War I to World War II

Anarchism, socialism, feminism, pacifism, pan-Africanism. These and other international social movements thrived in the U.S. between WW I and WW II, a period usually characterized as isolationist. How did these movements' members, including Emma Goldman, Jane Addams, W.E.B. DuBois, and John DosPassos, articulate their goals both to themselves and to a broader public that was often suspicious of internationalism? Sources include speeches and manifestos, national and international newspapers letters, novels, film, archival documents, and international decrees.

5 units, Aut (Marino, K), given once only

HISTORY 61S. California Politics since the 1960s

The rise of modern political conservatism and its interplay with liberalism and the liberal state. Metropolitan development, civil

rights, the welfare state, law and order, and immigration. Grassroots, spatial, cultural, institutional, and biographical approaches to political history. The methodological challenges of writing academic history about the recent past. Media sources, public ballot proposition campaign materials, political speeches and essays, oral histories, government documents,court cases, maps, photographs, film, television, and music.

5 units, Aut (Richter, K), given once only

HISTORY 62N. The Atomic Bomb in Policy and History

(Stanford Introductory Seminar) Preference to freshmen. Emphasis is on declassified files from WW II and recent interpretations. Why did the U.S. drop A-bombs on Japan? Were there viable alternatives, and, if so, why were they not pursued? What did the use of the A-bombs mean then and later? How have postwar interpreters explained, and justified or criticized, the A-bombings? Approaches from history, international relations, American studies, political science, and ethics address the underlying conceptions, the roles of evidence, the logic and models of explanation, ethical values, and cultural/social influences. GER:DB-SocSci

5 units, Spr (Bernstein, B)

HISTORY 62S. Food Ways: The Politics, Culture, and Ecology of Food in American History

What did people eat, why did they eat it, and what were the consequences? This question asked of many periods and places in American history. How historians use many types of evidence and analysis in writing history. Focus on primary sources and interpretations. Topics include the cultural, political, and environmental meanings and consequences of food.

5 units, Win (Robichaud, A), given once only

HISTORY 64C. From Freedom to Freedom Now!: African American History, 1865-1965

(Same as AFRICAAM 64C) (Same as HISTORY 164C. History majors and others taking 5 units, register for 164C.) Explores the working lives, social worlds, political ideologies and cultural expressions of African Americans from emancipation to the early civil rights era. Topics include: the transition from slavery to freedom, family life, work, culture, leisure patterns, resistance, migration and social activism. Draws largely on primary sources including autobiographies, memoirs, letters, personal journals, newspaper articles, pamphlets, speeches, literature, film and music. GER:DB-SocSci, EC-AmerCul

3 units, Spr (Hobbs, A)

HISTORY 70. Culture, Politics, and Society in Latin America

Introduction to the political and social history of Latin America. Emphasis is on interactions among institutional change, social structure, and political movements, emphasizing the environment and cultural values. GER:DB-SocSci, EC-GlobalCom

5 units, not given this year

HISTORY 70A. Colonial Latin America

(Same as HISTORY 170. History majors and others taking 5 units, register for 170.) 16th-19th centuries. Indigenous cultures. The arrival of Europeans and its impact on native and European societies. Culture, religion and institutions, and everyday life. The independence period and the formation of new nations. Readings include primary and secondary sources. GER:DB-SocSci, EC-GlobalCom

3 units, Win (Herzog, T)

HISTORY 82C. From Prophet to Empire: The Making of the Muslim Middle East, 600-1500

(Same as HISTORY 182C. Majors and other taking 5 units, register for 182C.) Traces the establishment of a Muslim religious and political presence in the Middle East from the formative years of conquest in Arabia and early experiments in state formation to the emergence of empires defining the early modern world. Explores the construction of a remarkable social, intellectual and artistic culture out of the various indigenous and imported elements then available.

3 units, Aut (Ferguson, H)

HISTORY 82N. Modern Islamic Movements

(Stanford Introductory Seminar) Muslim political mobilization in local and global settings. Topics include: Pan-Islam, the Muslim Brothers, Khomeinism, Hezbollah, al-Qaeda, the Taliban, and the geopolitics of social movements.

5 units, Aut (Crews, R)

HISTORY 91C. Early Imperial China

(Same as HISTORY 191C. History majors and others taking 5 units, register for 191C.) The first millennium of imperial China, what endured over the centuries, and the major changes that took place in the political, social, and intellectual realms. Topics include the evolving geographic and environmental background, cities, the countryside, kinship, relations with the outer world, religion, philosophy,and literature. Also examines the nature of empire as a distinctive political form. GER:DB-Hum

3 units, Spr (Lewis, M)

HISTORY 91D. China: The Northern and Southern Dynasties

(Same as HISTORY 191D. History majors and others taking 5 units, register for 191D.) Examines one of the most dynamic periods of Chinese history with the emergence of the institutional religions (Buddhism and Daoism), the development of the garden as an art form, the rise of landscape as a theme of verse and art, the invention of lyric poetry, and the real beginnings of the southward spread of Chinese civilization. GER:DB-Hum

3 units, not given this year

HISTORY 92A. The Historical Roots of Modern East Asia

(Same as HISTORY 392E) Focus is on China and Japan before and during their transition to modernity. The populous, urbanized, economically advanced, and culturally sophisticated Ming empire and Muromachi shogunate in the 16th century when Europeans first arrived. How the status quo had turned on its head by the early 20th century when European and American steamships dominated the Pacific, China was in social and political upheaval, and Japan had begun its march to empire. GER:DB-SocSci, EC-GlobalCom

4-5 units, not given this year

HISTORY 92S. What is China; Who are Chinese?: Cultural Identity in Ancient and Medieval China

What did it mean to be Chinese in ancient and medieval times; how did this identity differ from that of contemporary China; and how did other social in-groups overlap upon a Chinese individual? Primary source readings evidence a multiplicity of definitions: cultural, political, geographic, familial, and religious. These ancient sources challenge modern notions of China's perpetual unification, its ethnic homogeneity, its insular nature, and the distinction between native and conquest dynasties.

5 units, Aut (Felt, D), given once only

HISTORY 93. Late Imperial China

(Same as HISTORY 193. History majors and others taking 5 units, register for 193.) A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism. GER:DB-Hum

3 units, Aut (Sommer, M)

HISTORY 94B. Japan in the Age of the Samurai

(Same as HISTORY 194B. History majors and others taking 5 units, register for 194B.) From the Warring States Period to the Meiji Restoration. Topics include the three great unifiers, Tokugawa hegemony, the samurai class, Neoconfucian ideologies, suppression of Christianity, structures of social and economic control, frontiers, the other and otherness, castle-town culture, peasant rebellion, black marketing, print culture, the floating world, National Studies, food culture, samurai activism, black ships, unequal treaties, anti-foreign terrorism, restorationism, millenarianism, modernization as westernization, Japan as imagined community. GER:DB-Hum

3 units, Aut (Wigen, K)

HISTORY 94S. Rebels, Boxers and Bandits: Violent Resistance in Late Imperial China

In the mid-19th century a man claiming to be Jesus Christ's younger brother led a rebellion that killed 20 million. In 1900, the Boxers United in Righteousness staged a bloody uprising. Bandits, something in Western women's clothing, raided across the country. How did these rebels, Boxers and bandits see themselves? How were they represented by others? What were their relations to the state? Do they mean anything? Are they important?

5 units, not given this year

HISTORY 95. Modern Korean History

(Same as HISTORY 195. History majors and others taking 5 units, register for 195.) Themes include status, gender, and monarchy in

the Choson dynasty; intellectual life and social transformation in the 19th century; the rise of Korean nationalism; Japan's colonial rule and Korean identities; culture, economy, and society in colonial Korea; the Korean War, and the different state building processes in North and South after the Korean War. GER:DB-Hum, EC-GlobalCom

3 units, Aut (Moon, Y)

HISTORY 95C. Modern Japanese History

(Same as History 195C. History majors and others taking 5 units, register for 195C.) Japan's modern transformation from the late 19th century to the present. Topics include: the Meiji revolution; industrialization and social dislocation; the rise of democracy and empire; total war and US occupation; economic miracle and malaise; Japan as soft power; and politics of memory. Readings and films focus on the lived experience of ordinary men and women across social classes and regions. GER:DB-SocSci, EC-GlobalCom

3 units, Win (Uchida, J)

HISTORY 95N. Mapping the World: Cartography and the Modern Imagination

(Stanford Introductory Seminar) Preference to freshmen. Focus is on cutting-edge research. Topics: the challenge of grasping the globe as a whole; geography's roots in empire; maps as propaganda and as commodities; the cultural production of scale; and the cartography of imaginery worlds.Sources include resources in the Green Library Special Collections and in the Stanford Spatial History Lab. GER:DB-SocSci

5 units, Spr (Wigen, K)

HISTORY 96. The Idea of India

(Same as HISTORY 196. History majors and others taking 5 units, register for 196.) History and politics of the Indian subcontinent across two centuries of transformation. Topics: interactions among colonial power, nationalism, and modern institutions; S. Asia at the crossroads of world history in an age of empire, capitalism, and war; history and memory through political traditions, social movements, and religious experiences that shaped S. Asian modernity; from Edmund Burke to Gandhi; East India Company's statemaking to origins of nationality; Tagore to Iqbal; peasants and rebels to liberals and revolutionaries; decolonization and Partition. GER:DB-SocSci, EC-GlobalCom

3 units, Win (Kumar, A)

HISTORY 98. The History of Modern China

(Same as HISTORY 198. History majors and others taking 5 units, register for 198.) Major historical transformations including the decline of the last imperial dynasty, the formation of the first Chinese republic, WW II, the rise of Communism, China under Mao, post-Mao reforms, and the Beijing Olympics of 2008. GER:DB-SocSci

3 units, Spr (Miller, L)

HISTORY 102. The History of the International System

World politics and international relations from the dominance of empires and nation states at the turn of the century to the present. The influence of communism, fascism, and anti-imperialism, and the emergence of society as a factor in international relations. Questions of sovereignty versus the new world order. GER:DB-SocSci, EC-GlobalCom

5 units, Aut (Sheehan, J)

HISTORY 103D. Human Society and Environmental Change

(Same as EARTHSYS 112, EESS 112) Interdisciplinary approaches to understanding human-environment interactions with a focus on economics, policy, culture, history, and the role of the state. Prerequisite: ECON 1A

4 units, Aut (Naylor, R; Frank, Z; Pizarro Gariazzo, R)

HISTORY 103E. History of Nuclear Weapons

(Same as POLISCI 116) The development of nuclear weapons and policies. How existing nuclear powers have managed their relations with each other. How nuclear war has been avoided so far and whether it can be avoided in the future. GER:DB-SocSci

5 units, not given this year

HISTORY 104. Trials that Made History: Courtroom Martyrs and Villains from the Classical to Modern Period

Socrates, the Knights Templar, Galileo, Salem witchcraft, and the Scopes (monkey) trials. How trials reflect cultural conflicts and political climate. Tensions between individuals and the state and between science and religion that are evident in trials. The role of trials in public discourse. Trial as drama. Reading assignments are interdisciplinary and range from surviving trial transcripts to the work of literary scholars and filmmakers. GER:DB-Hum

5 units, not given this year

HISTORY 105. Gandhi, King, and Nonviolence

(Same as RELIGST 118) Lives, times, theory, and practice of Mohandas Gandhi and Martin Luther King, Jr.; their significance to issues of violence and nonviolence today. GER:DB-Hum

4 units, not given this year

HISTORY 106A. Global Human Geography: Asia and Africa

Global patterns of demography, economic and social development, geopolitics, and cultural differentiation, covering E. Asia, S. Asia, S.E. Asia, Central Asia, N. Africa, and sub-Saharan Africa. Use of maps to depict geographical patterns and processes. GER:DB-SocSci, EC-GlobalCom

5 units, Aut (Lewis, M)

HISTORY 106B. Global Human Geography: Europe and Americas

Patterns of demography, economic and social development, geopolitics, and cultural differentiation. Use of maps to depict geographical patterns and processes. GER:DB-SocSci, EC-GlobalCom

5 units, Win (Lewis, M)

HISTORY 106C. Global Historical Geography

The sweep of human history through the medium of maps. The rise, expansion, and fall of kingdoms, empires, and other states; the spread of major religions; the paths of explorers, conquerors, and diseases; and the development and intensification of trade networks. Overview of the prehistoric period and ancient times, but focus is on the modern world. GER:DB-SocSci

5 units, not given this year

HISTORY 107. Introduction to Feminist Studies

(Same as CSRE 108, FEMST 101) Introduction to interdisciplinary feminist scholarship, which seeks to understand the creation, perpetuation, and critiques of gender inequalities. Topics include the historical emergence of feminist politics and contemporary analysis of work and family, health and sexuality, creativity, and politics. Close attention to the intersections of race, gender, ethnicity, and sexuality and to international, as well as U.S., perspectives. Students learn to think critically about gender in the past, present, and future.

5 units, Aut (Freedman, E)

HISTORY 108. Mass Violence in Modern History

The evolution, varieties, and logic of mass violence in modern history. Social, political, ethno-national, revolutionary, and religious violence, and efforts to curtail them. The emergence of genocide as an international issue; colonial genocides in late 19th-century Africa; and the Armenian genocide in the Ottoman Empire; Nazi and Nazi inspired racial murder; Communist induced mass violence in the Soviet Union and Asia; ethnic cleansing in former Yugoslavia; the recent genocides in Rwanda and Sudan; and attempts to confront genocides and crimes against humanity in international courts and institutions. GER:DB-SocSci

5 units, Win (Weiner, A)

HISTORY 110B. Early Modern Europe

(Same as HISTORY 10B. History majors and others taking 5 units, register for 110B.) Survey of early modern European history from the Reformation through the Enlightenment. Topics include religious war, state building and revolt, exploration and colonialism, gender and society. GER:DB-SocSci, EC-GlobalCom

5 units, Aut (Stokes, L)

HISTORY 110C. Introduction to Modern Europe

(SAME as HISTORY 10C. History majors and others taking 5 units, register for 110C.) From the late 18th century to the present. How Europeans responded to rapid social changes caused by political upheaval, industrialization, and modernization. How the experience and legacy of imperialism and colonialism both influenced European society and put in motion a process of globalization that continues to shape international politics today. GER:DB-Hum

5 units, Win (Daughton, J)

HISTORY 110D. Europe in the High and Late Middle Ages, 1000-1500

Explores the history of Europe during the high and late medieval period, circa 1000-1500. This was a dynamic period of transformation for Europeans as they moved from an overwhelmingly agri-

cultural society, based upon strong local ties and limited exposure to the outside world to one that witnessed an era of religious crusades, the rise of urban communes, catastrophic epidemics, social unrest, a revival of Ancient learning, and the beginning of European expansion into the Americas and beyond.

5 units, Spr (Selwyn, J)

HISTORY 120B. The Russian Empire

From Peter the Great to the Bolsheviks. Russia as an empire; its varied regions, including the Caucasus, Central Asia, Ukraine, Poland, and the Baltics. Focus is on the politics and cultures of empire. Sources include novels, political tracts, paintings, music, and other primary sources. GER:DB-Hum

5 units, not given this year

HISTORY 120C. 20th-Century Russian and Soviet History

The Soviet polity from the 1917 Revolution to its collapse in 1991. Essentials of Marxist ideology; the Russian Empire in 1917. Causation in history; interpretations of the Revolution; state building in a socialist polity; social engineering through collectivization of agriculture, force-paced industrialization, and cultural revolution; terror as concept and practice; nationality policies in a multiethnic socialist empire; the routinization, decline, and collapse of the revolutionary ethos; and the legacy of the Soviet experiment in the new Russia. GER:DB-Hum

5 units, not given this year

HISTORY 125. 20th-Century Eastern Europe

Major historical trends in 20th-century E. European history. Empires and national movements. The creation of independent Eastern Europe after WW I; social movements and the emergence of dictatorships and fascism in the inter-war period. WW II, Stalinism, and destalinization in contemporary E. Europe. GER:DB-SocSci, EC-GlobalCom

5 units, Aut (Jolluck, K)

HISTORY 130A. The Rise of Scientific Medicine

Intellectual, social, and institutional dimensions, 19th and 20th centuries. How did medicine become scientific? What differences did science make to the practicing physician? Why did it displace other approaches to medicine? Topics: the development of experimental physiology, bacteriology, pharmacology, biomedical technology, nuclear medicine, biomedical imaging, computers in medicine, and prospects for bedside gene therapies; the effects of scientific developments on medical practice and therapy; the professionalization of medicine in comparative European and American contexts.

4-5 units, Spr (Horn, M)

HISTORY 131. Science, Technology and Art: The Worlds of Leonardo da Vinci

(Same as HISTORY 31) What did Leonardo actually know? How did he acquire that knowledge? Leonardo's interests and accomplishments in such fields as painting, architecture, engineering, physics, mathematics, geology, anatomy, and physiology, and more generally the nature of Renaissance science, art, and technology. The relationship between the society of 15th-century Italy and the work of the man from Vinci: why did this world produce a Leonardo? How to use him to understand creativity, innovation, and invention in the Renaissance and beyond. What was his legacy and how did he become a myth? For students interested in the history of science, medicine, and technology and for students interested in the history and art of Renaissance Italy.

3-5 units, Win (Findlen, P)

HISTORY 132. Ordinary Lives: A Social History of the Everyday in Early Modern Europe

What war meant for foot soldiers and the peasants across whose fields they marched. Ordinary people's lives in the eras of Machiavelli, Shakespeare, the Reformation, and the scientific revolution. Topics include: birth, marriage, and death; city life and peasant culture; lay encounters with religious and intellectual ideas; war and crime; and gender and sexuality. GER:DB-Hum

5 units, not given this year

HISTORY 132A. Enlightenment and the Arts

(Same as HISTORY 32A. History majors and others taking 5 units enroll in 132A.) Gateway course for the History, Literature, and the Arts track of the History major. Novels, poetry, music, paintings, and architecture, and what they reveal about the society that produced them. GER:DB-Hum

5 units, Spr (Lougee Chappell, C)

HISTORY 133A. Blood and Roses: The Age of the Tudors

English society and state from the Wars of the Roses to the death of Elizabeth. Political, social, and cultural upheavals of the Tudor period and the changes wrought by the Reformation. The establishment of the Tudor monarchy; destruction of the Catholic church; rise of Puritanism; and 16th-century social and economic changes. GER:DB-Hum

5 units, not given this year

HISTORY 133B. Revolutionary England: The Stuart Age

(Same as HISTORY 33B. History majors and others taking 5 units, register for 133B.) From the accession of King James I in 1603 to the death of Queen Anne in 1714: a brutal civil war, the execution of one anointed king, and the deposition of another. Topics include the causes and consequences of the English Revolution, the origins of Anglo-American democratic thought, the rise and decline of Puritanism, and the emergence of England as an economic and colonial power. (Como) GER:DB-Hum

5 units, Win (Como, D)

HISTORY 135. History of European Law, Medieval to Contemporary

(Same as HISTORY 335) From the fall of the Roman Empire to the establishment of the EU. How law changed over time. Sources and nature of law, organization of legal systems, and relationships between law and society, law and lawmaker, law and the legal professions. GER:DB-SocSci

4-5 units, Aut (Herzog, T)

HISTORY 135A. Globalization and the Making of Modern Europe

How modern Europe came to be connected to the wider world through repeated cycles of expansion, circulation, and exchange from the mid-19th century to the present. Wateshed moments and the roles of colonialism, migration, commerce, warfare, telecommunications, and popular culture in redefining the place of Europe in a changing global landscape.

5 units, Spr (Naranch, B)

HISTORY 137. The Holocaust

(Same as HISTORY 337, JEWISHST 183, JEWISHST 383) The emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s. WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry. GER:DB-Hum

4-5 units, Spr (Zipperstein, S)

HISTORY 137A. Europe, 1945-2002

Europe's transformation from the end of WW II to an expanded EU. Political, cultural, economic, and social history. Topics: postwar reconstruction, Cold War, consumer versus socialist culture, collapse of Communism, postcommunist integration. GER:DB-SocSci

5 units, not given this year

HISTORY 138A. Germany and the World Wars, 1870-1990

(Same as HISTORY 38A. Majors and others taking 5 units, enroll in 138A.) Germany's history from Bismarck's wars of unification through the end of the Cold War. The radicalizing relationship between international conflict, social upheaval, and state transformation with a focus on the clashes of the Second Empire, the road to WW I, interwar instability, the rise of Nazism, WW II, the Holocaust, the division of communist E. and capitalist W. Germany, and the fall of the Iron Curtain. GER:DB-SocSci

5 units, Spr (Sheffer, E)

HISTORY 139. Modern Britain and the Empire

(Same as HISTORY 39. History majors and others taking 5 units, register in 139.) From American Independence to the latest war in Iraq. Topics include: the rise of the modern British state and economy; imperial expansion and contraction; the formation of class, gender, and national identities; mass culture and politics; the world wars; and contemporary racial politics. Focus is on questions of decline, the fortunes and contradictions of British liberalism in an era of imperialism, and the weight of the past in contemporary Britain. GER:DB-Hum, EC-GlobalCom, EC-GlobalCom

5 units, Spr (Satia, P)

HISTORY 140. World History of Science: From Prehistory to the Scientific Revolution

(Same as HISTORY 40. History majors and others taking 5 units, register for 140.) The earliest developments in science, the prehis-

toric roots of technology, the scientific revolution, and global voyaging. Theories of human origins and the oldest known tools and symbols. Achievements of the Mayans, Aztecs, and native N. Americans. Science and medicine in ancient Greece, Egypt, China, Africa, and India. Science in medieval and Renaissance Europe and the Islamic world including changing cosmologies and natural histories. Theories of scientific growth and decay; how science engages other factors such as material culture and religions. GER:DB-SocSci

5 units, not given this year

HISTORY 140A. The Scientific Revolution

What do people know and how do they know it? What counts as scientific knowledge? In the 16th and 17th centuries, understanding the nature of knowledge engaged the attention of individuals and institutions including Copernicus, Galileo, Descartes, Newton, the early Royal Society, and less well-known contemporaries. New meanings of observing, collecting, experimenting, and philosophizing, and political, religious, and cultural ramifications in early modern Europe. GER:DB-Hum

5 units, not given this year

HISTORY 141A. The Emergence of Medicine: The Middle Age and the Renaissance

(Same as HISTORY 41A. History majors and others taking 5 units, register for 141A.) How did medicine emerge as a distinctive body of knowledge and a profession? The history of medicine from ca. 1000 to 1750. Topics: new ways of examining and treating the body; the religious and cultural significance of disease; the development of hospitals; and the rise of public health systems. Comparison of the status of medicine in Europe and the Islamic world. The work of key figures such as Vesalius and Harvey. GER:DB-SocSci

5 units, not given this year

HISTORY 142. Darwin in the History of Life

(Same as HISTORY 42. History majors and others taking 5 units, register for 142.) Origins and impact of evolutionary theory from the nineteenth century to the present. Early theories of fossils, the discovery of deep time and uniformitarian geology, debates over evolution vs. extinction, the origin of life, and human origins; the rise of anthropology and racial theory; the changing challenge of creationism, the abuse of evolution in eugenics and Nazi racial hygiene; and new discoveries in the realm of extreme life, evo-devo, neocatastrophism, and the new technological frontier of biomimicry. GER:DB-SocSci

5 units, not given this year

HISTORY 144. Gender in Science, Medicine and Engineering

(Same as HISTORY 344) Men's and women's roles in science, medicine, and engineering over the past 200 years with a focus on the present. What are the efforts underway globally to transform science, medicine, and engineering into fields where women can flourish? How have science and medicine studied and defined males and females? Can gender analysis spark creativity in human knowledge? GER:DB-SocSci, EC-Gender

4-5 units, not given this year

HISTORY 145A. Africa Until European Conquest

Episodes in African history from the earliest records up until European partition of the continent, focusing on how knowledge about the natural, social, and spiritual worlds was linked to the exercise of power. The effects of technological innovations on states and other forms of social complexity; use of religious beliefs and practices to legitimate or critique authority. The effects of slave trades and imperial conquest on these forms of authority. WIM GER:DB-Hum, EC-GlobalCom

5 units, not given this year

HISTORY 145B. Africa in the 20th Century

(Same as HISTORY 45B. History majors and others taking 5 units, register for 145B.) The challenges facing Africans from when the continent fell under colonial rule until independence. Case studies of colonialism and its impact on African men and women drawn from West, Central, and Southern Africa. Novels, plays, polemics, and autobiographies written by Africans. GER:DB-SocSci, EC-GlobalCom

5 units, Spr (Thornberry, E)

HISTORY 147. History of South Africa

(Same as HISTORY 47. History majors and others taking 5 units, register for 147.) Introduction, focusing particularly on the modern era. Topics include: precolonial African societies; European colonization; the impact of the mineral revolution; the evolution of African and Afrikaner nationalism; the rise and fall of the apartheid state; the politics of post-apartheid transformation; and the AIDS crisis. GER:DB-SocSci

5 units, Aut (Campbell, J)

HISTORY 150A. Colonial and Revolutionary America

(Same as AMSTUD 150A) (Same as HISTORY 50A. History majors and others taking 5 units, register for HISTORY 150A.) Survey of the origins of American society and polity in the 17th and 18th centuries. Topics: the migration of Europeans and Africans and the impact on native populations; the emergence of racial slavery and of regional, provincial, Protestant cultures; and the political origins and constitutional consequences of the American Revolution. GER:DB-SocSci, EC-AmerCul

5 units, Aut (Winterer, C)

HISTORY 150B. 19th-Century America

(Same as AMSTUD 150B) (Same as HISTORY 50B. History majors and others taking 5 units, register for 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture. GER:DB-SocSci, EC-AmerCul, WIM

5 units, Win (Campbell, J)

HISTORY 150C. The United States in the Twentieth Century

(Same as AMSTUD 150C) (Same as HISTORY 50C. History majors and others taking 5 units, register for 150C.) Major political, economic, social, and diplomatic developments in the U.S. Themes: the economic and social role of government (Progressive, New Deal, Great Society, and Reagan-Bush eras); ethnic and racial minorities in society (mass immigration at the turn of the century and since 1965, the civil rights era of the 50s and 60s); the changing status of women since WW II; shifting ideological bases, institutional structures, and electoral characteristics of the political system (New Deal and post-Vietnam); determinants of foreign policy in WW I and II, and the Cold War. GER:DB-SocSci, EC-AmerCul

5 units, Spr (McGarry, D)

HISTORY 154. 19th-Century U.S. Cultural and Intellectual History, 1790-1860

(Same as HISTORY 54. History majors and others taking 5 units, register for 154.) How Americans considered problems such as slavery, imperialism, and sectionalism. Topics include: the political legacies of revolution; biological ideas of race; the Second Great Awakening; science before Darwin; reform movements and utopianism; the rise of abolitionism and proslavery thought; phrenology and theories of human sexuality; and varieties of feminism. Sources include texts and images. GER:DB-Hum, EC-AmerCul

5 units, not given this year

HISTORY 158. The United States Since 1945

Focus is on foreign policy and politics with less attention to social and intellectual history. Topics include nuclear weapons in WW II, the Cold War, the Korean and Vietnam wars, Eisenhower revisionism, the Bay of Pigs and Cuban missile crisis, civil rights and the black freedom struggle, the women's movement, the Great Society and backlash, welfare policy, conservatism and liberalism, the 60s anti-war movement, Watergate and the growth of executive power, Iran-Contra and Reagan revisionism, Silicon Valley, the Gulf War, the Clinton impeachment controversy, 2004 election, and 9/11 and Iraq war. GER:DB-SocSci, EC-AmerCul

4-5 units, not given this year

HISTORY 161. WOMEN IN MODERN AMERICA

(Same as AMSTUD 161, CSRE 162) The transformation from the New Woman of the 1890s to the New Woman of the 1990s; attention to immigrant, black, and white women, both historical analyses and personal accounts. Topics include: workforce participation; family and reproductive labor; educational and professional opportunities; the impact of wars, economic depression, and popular culture; and recurrent feminist movements. GER:DB-SocSci, EC-Gender

4-5 units, Spr (Freedman, E)

HISTORY 163. A History of North American Wests
The history, peoples, and natural systems of a region that has never been contained within a single empire or nation state, but has been united by the movement of peoples, species, and things. Topics include smallpox, horses, gold, salmon, rivers, coal, and oil. GER:DB-SocSci

5 units, not given this year

HISTORY 164C. From Freedom to Freedom Now: African American History, 1865-1965
(Same as AMSTUD 164C) (Same as HISTORY 64C. History majors and others taking 5 units, register for 164C.) Explores the working lives, social worlds, political ideologies and cultural expressions of African Americans from emancipation to the early civil rights era. Topics include: the transition from slavery to freedom, family life, work, culture, leisure patterns, resistance, migration and social activism. Draws largely on primary sources including autobiographies, memoirs, letters, personal journals, newspaper articles, pamphlets, speeches, literature, film and music. GER:DB-SocSci, EC-AmerCul

5 units, Spr (Hobbs, A)

HISTORY 165. Mexican American History through Film
Focus is on the 20th century. Themes such as immigration, urbanization, ethnic identity, the role of women, and the struggle for civil rights. GER:DB-Hum, EC-AmerCul

4-5 units, not given this year

HISTORY 166. Introduction to African American History: The Modern African American Freedom Struggle
(Same as AMSTUD 166) Focus is on political thought and protest movements after 1930. Individuals who have shaped and been shaped by modern African American struggles for freedom and justice. Sources include audiovisual materials. Research projects required for fifth unit. GER:DB-SocSci, EC-AmerCul

4-5 units, Win (Carson, C)

HISTORY 166B. Immigration in 20th Century America: Ethnicity, Race, Nation
How immigration of people from around the world and migration within the U.S. shaped American nation building and ideas about national identity in the 20th century. How ideas about race, gender, ethnicity, and citizenship with respect to particular groups led to policies both of exclusion and integration. How American views of race and citizenship in the post-Reconstruction era led to the passage of the Chinese Exclusion Act in 1882 and subsequently to broader exclusions of immigrants from other parts of Asia and Southern and Eastern Europe and Mexico. How WW II and the Cold War challenged racial ideologies and led to policies of increasing liberalization culminating in the passage of the 1965 Immigration Act, which eliminated quotas based on national origins and opened the door for new waves of immigrants, especially from Asian and Latin America.

5 units, Win (McKibben, C)

HISTORY 168. American History in Film: Since World War ll
U.S. society, culture, and politics since WW II through feature films. Topics include: McCarthyism and the Cold War; ethnicity and racial identify; changing sex and gender relationships; the civil rights and anti-war movements; and mass media. Films include The Best Years of Our Lives, Salt of the Earth, On the Waterfront, Raisin in the Sun, Medium Cool, and Broadcast News. GER:DB-Hum

3-4 units, Sum (Carroll, P)

HISTORY 170. Colonial Latin America
(Same as HISTORY 70A. History majors and others taking 5 units, register for 170.) 16th-19th centuries. Indigenous cultures. The arrival of Europeans and its impact on native and European societies. Culture, religion and institutions, and everyday life. The independence period and the formation of new nations. Readings include primary and secondary sources. GER:DB-SocSci, EC-GlobalCom

5 units, Win (Herzog, T)

HISTORY 181B. Formation of the Contemporary Middle East
(Formerly 187B.) The history of the Middle East since WW I, focusing on the eastern Arab world, Egypt, the Fertile Crescent, and the Arabian Peninsula, with attention to Turkey, Iran, and Israel. GER:DB-SocSci, EC-GlobalCom

5 units, Spr (Beinin, J)

HISTORY 182C. From Prophet to Empire: The Making of the Muslim Middle East, 600-1500
(Same as HISTORY 82C. Majors and other taking 5 units, register for 182C.) Traces the establishment of a Muslim religious and political presence in the Middle East from the formative years of conquest in Arabia and early experiments in state formation to the emergence of empires defining the early modern world. Explores the construction of a remarkable social, intellectual and artistic culture out of the various indigenous and imported elements then available. GER:DB-SocSci

5 units, Aut (Ferguson, H)

HISTORY 183. Modern Iran
Topics include: the Safavid and Qajar empires, European imperialism in Iran, the Iranian revolutions, Khomeinism, the Islamic Republic, recent film and literature, and the politics of Ahmadinejad.

5 units, Win (Crews, R)

HISTORY 185B. Jews in the Modern World
(Same as JEWISHST 185B) Possible themes: the restructuring of Jewish existence during the Enlightenment and legal emancipation at the end of the 18th century in W. Europe, the transformation of Jewish life in E. Europe under the authoritarian Russian regime, colonialism in the Sephardic world, new ideologies (Reform Judaism and Jewish nationalisms), the persistence and renewal of antisemitism, the destruction of European Jewry under the Nazis, new Jewish centers in the U.S., and the State of Israel. GER:DB-Hum, EC-GlobalCom

5 units, Win (Zipperstein, S)

HISTORY 186D. Jews, Citizenship, and Europe's Others
(Same as JEWISHST 186D) The paths of assimilation of Jews in Europe, and their integration as citizens is examined alongside other cases of Europe's Others, those who introduced diversity and challenged modes of assimilation. Looks at the development of Jews as citizens and compares the debates on the Jewish Question to other debates in Europe on the integration of other Others, such as former colonial subjects, immigrants, Gypsies, ans Muslims in the nineteenth and twentieth centuries.

5 units, Aut (Roberts, S)

HISTORY 187D. Zionism and Its Critics
(Same as JEWISHST 187D) Zionism from its genesis in the 1880s up until the establishment of the state of Israel in May, 1948, exploring the historical, ideological and political dimensions of Zionism. Topics include: the emergence of Zionist ideology in connection to and as a response to challenges of modernity; emancipation; Haskalah (Jewish enlightenment); other national and ideological movements of the period; the ideological crystallization of the movement; and the immigration waves to Palestine.

4-5 units, Aut (Dubnov, A)

HISTORY 191C. Early Imperial China
(Same as HISTORY 91C. History majors and others taking 5 units, register for 191C.) The first millennium of imperial China, what endured over the centuries, and the major changes that took place in the political, social, and intellectual realms. Topics include the evolving geographic and environmental background, cities, the countryside, kinship, relations with the outer world, religion, philosophy,and literature. Also examines the nature of empire as a distinctive political form. GER:DB-Hum

5 units, Spr (Lewis, M)

HISTORY 191D. China: The Northern and Southern Dynasties
(Same as HISTORY 91D. History majors and others taking 5 units, register for 191D.) Examines one of the most dynamic periods of Chinese history with the emergence of the institutional religions (Buddhism and Daoism), the development of the garden as an art form, the rise of landscape as a theme of verse and art, the invention of lyric poetry, and the real beginnings of the southward spread of Chinese civilization. GER:DB-Hum

5 units, not given this year

HISTORY 192. China: The Early Empires
How China was transformed as a consequence of its political unification by the Qin dynasty. The geographical reorganization of China in the process of unification. The changing nature of rulership, cities, rural society, military organization, kinship structure, religion, literary practice, law, and relations to the outside world. The nature of empire as a political system. GER:DB-Hum

3-5 units, not given this year

HISTORY 193. Late Imperial China
(Same as HISTORY 93. History majors and others taking 5 units, register for 193.) A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism. GER:DB-Hum

5 units, Aut (Sommer, M)

HISTORY 194B. Japan in the Age of the Samurai
(Same as HISTORY 94B. History majors and others taking 5 units, register for 194B.) From the Warring States Period to the Meiji Restoration. Topics include the three great unifiers, Tokugawa hegemony, the samurai class, Neoconfucian ideologies, suppression of Christianity, structures of social and economic control, frontiers, the other and otherness, castle-town culture, peasant rebellion, black marketing, print culture, the floating world, National Studies, food culture, samurai activism, black ships, unequal treaties, anti-foreign terrorism, restorationism, millenarianism, modernization as westernization, Japan as imagined community. GER:DB-Hum

5 units, Aut (Wigen, K)

HISTORY 195. Modern Korean History
(Same as HISTORY 95. History majors and others taking 5 units, register for 195.) Themes include status, gender, and monarchy in the Choson dynasty; intellectual life and social transformation in the 19th century; the rise of Korean nationalism; Japan's colonial rule and Korean identities; culture, economy, and society in colonial Korea; the Korean War, and the different state buildling processes in North and South after the Korean War. GER:DB-Hum, EC-GlobalCom, EC-GlobalCom

5 units, Aut (Moon, Y)

HISTORY 195C. Modern Japanese History
(Same as HISTORY 95C. History majors and others taking 5 units, register for 195C.) Japan's modern transformation from the late 19th century to the present. Topics include: the Meiji revolution; industrialization and social dislocation; the rise of democracy and empire; total war and US occupation; economic miracle and malaise; Japan as soft power; and politics of memory. Readings and films focus on the lived experience of ordinary men and women across social classes and regions. GER:DB-SocSci, EC-GlobalCom

5 units, Win (Uchida, J)

HISTORY 196. The Idea of India
(Same as HISTORY 96. History majors and others taking 5 units, register for 196.) History and politics of the Indian subcontinent across two centuries of transformation. Topics: interactions among colonial power, nationalism, and modern institutions; S. Asia at the crossroads of world history in an age of empire, capitalism, and war; history and memory through political traditions, social movements, and religious experiences that shaped S. Asian modernity; from Edmund Burke to Gandhi; East India Company's statemaking to origins of nationality; Tagore to Iqbal; peasants and rebels to liberals and revolutionaries; decolonization and Partition. GER:DB-SocSci, EC-GlobalCom

5 units, Win (Kumar, A)

HISTORY 197. Southeast Asia: From Antiquity to the Modern Era
The history of S.E. Asia, comprising Indonesia, the Philippines, Malaysia, Singapore, Thailand, Vietnam, Burma, Cambodia, and Laos, from antiquity to the present. The spread of Indian cultural influences, the rise of indigenous states, and the emergence of globally linked trade networks. European colonization, economic transformation, the rise of nationalism, the development of the modern state, and the impact of globalization. GER:DB-Hum

5 units, Spr (Lewis, M)

HISTORY 198. The History of Modern China
(Same as HISTORY 98. History majors and others taking 5 units, register for 198.) Major historical transformations including the decline of the last imperial dynasty, the formation of the first Chinese republic, WW II, the rise of Communism, China under Mao, post-Mao reforms, and the Beijing Olympics of 2008. GER:DB-SocSci, DB-SocSci, EC-GlobalCom

5 units, Spr (Miller, L)

HISTORY 198B. The Construction of Modern China through Space and Time
An analysis of modern China through sequentially examining the diverse regions that constitute it. Beginning from the geographic structures that divided the regions, and those that drew them together it will then study each region under several major rubrics: (1) their economic, cultural, and demographic characteristics; (2) the time and manner in which they were incorporated into China (3) their long-term environmental development (water control, deforestation, desertification, etc.); and (4) how the above features shape many of the issues and tensions that define contemporary China.

3 units, Sum (Lewis, M)

HISTORY 201. Introduction to Public History in the U.S.,19th Century to the Present
(Same as HISTORY 301) Gateway course for the History and Public Service interdisciplinary track. Topics include the production, presentation, and practice of public history through narratives, exhibits, web sites, and events in museums, historical sites, parks, and public service settings in nonprofit organizations, government agencies, and educational institutions. GER:DB-SocSci

4-5 units, Aut (McKibben, C)

HISTORY 202. International History and International Relations Theory
(Same as HISTORY 306E, POLISCI 216E, POLISCI 316) The relationship between history and political science as disciplines. Sources include studies by historians and political scientists on topics such as the origins of WW I, the role of nuclear weapons in international politics, the end of the Cold War, nongovernmental organizations in international relations, and change and continuity in the international system. GER:DB-SocSci

5 units, not given this year

HISTORY 202C. Heretics to Headscarves
(Same as JEWISHST 182C, POLISCI 224H) Broad survey of religious discrimination and persecution in the Euro-American tradition, and the rise of tolerationist ideas and practices, from Augustine's rationale for punishing dissenters to the current European debates over the regulation of Islam. Topics include the Inquisition; struggles over toleration in Reformation Europe; the impact of Locke, Bayle, and Spinoza; Spanish practice in the Americas; and the American constitutional experiment in free exercise.

5 units, Aut (Rakove, J)

HISTORY 203E. Global Catholicism
(Same as HISTORY 303E) Explores the rise of Catholicism as a global phenomenon, and investigates its multiple transformations as it spread to the Americas, Asia, and Africa. Topics will include the Reformation, Tridentine reform and the Jesuits, the underground churches in England and the Dutch Republic, the missions to Asia, the Spanish conquest of Latin America, conversion and indigenous religions, missionary imperialism and new religious movements in the non-European world.

4-5 units, Spr (Sena, M)

HISTORY 204E. Origins of Totalitarianism
(Same as HISTORY 307E) Modern revolutionary and totalitarian politics. Sources include monographs on the medieval, Reformation, French Revolutionary, and Great War eras. Topics: the essence of modern ideology, the concept of the body national, state terror, charismatic leadership, gender assignments, private and public spheres, and identities. GER:DB-SocSci, EC-GlobalCom

4-5 units, Spr (Weiner, A)

HISTORY 204F. The Modern Tradition of Non-Violent Resistance
During the twentieth century, peasants and menial laborers who comprised the majority of humanity launched liberation movements to secure citizenship rights. Mohandas K. Gandhi, Martin Luther King, Jr., and Nelson Mandela are among the leaders whose ideas continue to influence contemporary movements for global peace with social justice in a sustainable environment.

5 units, Aut (Carson, C)

HISTORY 204G. War, Culture, and Society in the Modern Age
(Same as HISTORY 304G) How Western societies and cultures have responded to modern warfare. The relationship between its destructive capacity and effects on those who produce, are subject

to, and must come to terms with its aftermath. Literary representations of WW I; destructive psychological effects of modern warfare including those who take pleasure in killing; changes in relations between the genders; consequences of genocidal ideology and racial prejudice; the theory of just war and its practical implementation; and how wars are commemorated. GER:DB-SocSci

5 units, not given this year

HISTORY 206. History and Geography of Contemporary Global Issues

The historical background and geographical context of contemporary global issues and events. Texts are a world atlas and regular reading of The New York Times and The Economist. Topics vary according to what is happening in the world. Student presentations. GER:DB-SocSci

5 units, Aut (Lewis, M)

HISTORY 207. Biography and History

(Same as HISTORY 308) The relationship between biographical and historical writing, primarily in Europe and America. Problems of methodology, evidence, dispassion, and empathy. Texts: biographies, critical literature on biographical work, and novels (A. S. Byatt's Possession, Bernard Malamud's Dubin's Lives) that illuminate the intellectual underpinnings of biographical labor. GER:DB-Hum

4-5 units, not given this year

HISTORY 207C. The Global Early Modern

(Same as HISTORY 307C) In what sense can we speak of ""globalization"" before modernity? What are the characteristics and origins of the economic system we know as ""capitalism""? When and why did European economies begin to diverge from those of other Eurasian societies? With these big questions in mind, the primary focus will be on the history of Europe and European empires, but substantial readings deal with other parts of the world, particularly China and the Indian Ocean.

4-5 units, Spr (Como, D)

HISTORY 208. Private Lives, Public Stories: Autobiography in Women's History

Changing contexts of women's lives and how women's actions have shaped and responded to those contexts. GER:DB-Hum, EC-Gender

5 units, not given this year

HISTORY 208A. Science and Law in History

(Same as HISTORY 308A) How the intertwined modern fields of science and law, since the early modern period, together developed central notions of fact, evidence, experiment, demonstration, objectivity, and proof. GER:DB-SocSci

4-5 units, not given this year

HISTORY 208B. Women Activists' Response to War

(Same as HISTORY 308B) Theoretical issues, historical origins, changing forms of women's activism in response to war throughout the 20th century, and contemporary cases, such as the Russian Committee of Soldiers Mothers, Bosnian Mothers of Srebrenica, Serbian Women in Black, and the American Cindy Sheehan. Focus is on the U.S. and Eastern Europe, with attention to Israel, England, and Argentina. GER:DB-Hum, EC-Gender

4-5 units, not given this year

HISTORY 208S. Facing the Past: The Politics of Retrospective Justice

Forms of injustice in history including slavery, genocide, ethnic cleansing, mass rape, forced religious conversion, and torture of prisoners. Mechanisms developed over the last century to define, deter, and alleviate the effects of such offenses, including war crimes tribunals, truth commissions, national apologies, and monetary reparations. Case studies chart the international field of retrospective justice, exploring the legal, political, and moral implications of confronting traumatic pasts. GER:DB-SocSci

5 units, Aut (Campbell, J)

HISTORY 209B. Concepts of the Political

(Same as HISTORY 309B) What is the present? Can it stand on its own, without invoking history and without promising a future? How did the 20th century make sense of itself, as violent and ruptured from all preceding centuries as it was, yet so prolific and promising in its revolutionary achievements and futures? The century through four concepts: time, ambiguity, cruelty, and crisis. 20th-century politics through what happened to dialectic, humanism, history, and Europe.

4-5 units, Spr (Kumar, A)

HISTORY 209C. Liberalism and Violence

What place does violence have in modern political thought? Liberalism eschews violence, yet condones moral war. Marxism justifies revolutionary violence. Anticolonialism invokes insurgency. Gandhi seeks truth in nonviolent suffering. Can modern politics and life be grasped without reference to violence? How is violence related to law and justice? Is there a theology of violence? Liberalism and its critics: Agamben, Arendt, Benjamin, Derrida, Fanon, Foucault, Gandhi, Heidegger, Nietzche, Schmitt, and Sorel. Biopolitics, civil society, friend/enemy, sovereignty, terror, and strikes. GER:EC-EthicReas

5 units, Win (Kumar, A)

HISTORY 209D. Postcolonialism and Universalism

(Same as HISTORY 309A) Key texts and motifs from postcolonial theory: empire, class, exile, suffering, textuality, archive in juxtaposition to 20th-century philosophical questions about universal history and the relevance of humanist inquiry.

4-5 units, Spr (Kumar, A)

HISTORY 209S. Research Seminar for Majors

Required of History majors. How to conduct original, historical research and analysis, including methods such as using the libraries and archives at Stanford and elsewhere, and working collaboratively to frame topics, identify sources, and develop analyses. Autumn quarter focuses on European Lit and Arts; winter quarter on U.S. History and Colonialism; spring quarter on modern Europe, ancient China and early modern Europe.

5 units, Aut (Lougee Chappell, C), Win (Uchida, J), Spr (Lewis, M)

HISTORY 211. Body, Gender, and Society in Medieval Europe

(Same as HISTORY 311) Historical, literary, theological, and anthropological sources. Issues: transformations in representations of the body, gender, sexuality, and in women¿s place in society or social representation in W. Europe from the 3rd-14th centuries. Were these processes related to one another and to social changes? Analytically straddles the realm between bodification of spiritual powers and control or manipulation of the body in society, from the cult of relics to asceticism. GER:DB-Hum, EC-Gender

4-5 units, not given this year

HISTORY 212. Holy Wars: Medieval Perspectives

(Same as HISTORY 312) Cultural and societal factors at play in Christian holy war from late antiquity to the early modern era. Topics include: the Crusades and their meanings; armed struggle against heresy; and the wars of religion. Prerequisite: consent of instructor. GER:DB-Hum

4-5 units, not given this year

HISTORY 216A. Muslims and Infidels: Islam and the Crusades

(Same as HISTORY 316A) The impact of the Crusades on the Muslim world and consciousness from the Middle Ages and to the present. Primary and secondary sources. Themes include: jihad; cultural interaction between Muslims and Christians in the Holy Land; and military, political, and ideological developments in the 12th and 13th centuries. Modern interpretations and debates about jihadist theology and global jihad. GER:DB-Hum

4-5 units, not given this year

HISTORY 221A. Men, Women, and Power in Early Modern Russia, 1500-1800

Social values, gender relations, and social change in an era of rapid change; challenges to established norms by new constructions of deviance (witchcraft, religious reform, and revolt) and new standards of civility; encounters with non-Russians and the construction of national consciousness. Social values as political ethos: patrimonial autocracy and the reality of female rule in the late 17th and 18th century. GER:DB-Hum, DB-Hum, EC-Gender

5 units, not given this year

HISTORY 221B. The Woman Question in Modern Russia
Russian radicals believed that the status of women provided the measure of freedom in a society and argued for the extension of rights to women as a basic principle of social progress. The social status and cultural representations of Russian women from the mid-19th century to the present. The arguments and actions of those who fought for women's emancipation in the 19th century, theories and policies of the Bolsheviks, and the reality of women's lives under them. How the status of women today reflects on the measure of freedom in post-Communist Russia. GER:DB-SocSci, EC-Gender

5 units, not given this year

HISTORY 222. Honor, Law, and Modernity
How Europe evolved from medieval to modern; focus is on standards for conflict resolution emphasizing insults to honor. How attitudes towards the self and society, and the state's relationship to individuals, changed from the 16th to 18th centuries in Europe and Russia. Traditional concepts of honor and patterns of settling disputes contrasted to early modern concepts of honor, private life, civility, and crime and punishment. GER:DB-Hum

5 units, not given this year

HISTORY 223. Art and Ideas in Imperial Russia
(Same as HISTORY 323) Poetry, novels, symphonic music, theater, opera, painting, design, and architecture: what they reveal about the politics and culture of tsarist Russia. GER:DB-Hum

4-5 units, not given this year

HISTORY 224A. The Soviet Civilization
(Same as HISTORY 424A) Socialist visions and practices of the organization of society and messianic politics; the Soviet understanding of mass violence, political and ethnic; and living space. Primary and secondary sources. Research paper or historiographical essay. GER:DB-SocSci

4-5 units, Win (Weiner, A)

HISTORY 224B. Modern Afghanistan
(Same as HISTORY 324B) Politics, society, and culture in Afghanistan from the 19th century to the present. Topics include state building, tribal politics, Islamic law, geopolitics, the Taliban, and the post-Taliban disorder. GER:DB-SocSci

4-5 units, Aut (Crews, R)

HISTORY 227. East European Women and War in the 20th Century
(Same as HISTORY 327) Thematic chronological approach through conflicts in the region: the Balkan Wars, WW I, WW II, and the recent wars in the former Yugoslavia. The way women in E. Europe have been involved in and affected by these wars compared to women in W. Europe in the two world wars. Women's involvement in war as members of the military services, the backbone of underground movements, workers in war industries, mothers of soldiers, subjects and supporters of war aims and propaganda, activists in peace movements, and objects of wartime destruction, dislocation, and sexual violation. GER:DB-SocSci, EC-Gender

4-5 units, Aut (Jolluck, K)

HISTORY 228. Circles of Hell: Poland in World War II
(Same as HISTORY 328) The experience and representation of Poland's wartime history from the Nazi-Soviet Pact of 1939 to the aftermath of Yalta in 1945. Nazi and Soviet ideology and practice regarding the Poles and the ways Poles responded, resisted, and survived. The self-characterization of Poles as innocent victims, and their involvement or complicity in the Holocaust, thus engaging in a current debate in Polish society. GER:DB-SocSci

5 units, not given this year

HISTORY 229. Poles and Jews
(Same as HISTORY 329) Focus is on the period since WW I. The place of the Jews in interwar Poland, WW II, surviving Jews after the war, Polish memorialization of the Holocaust, the reality and mythology of Jews in the communist apparatus, the manipulation of anti-Semitism by the communist government, and post-communist movement toward reconciliation. Memory and national mythology emphasizing Polish wartime behavior and the relationship of Jews to communism. The sources and uses of stereotypes, and the state of Polish-Jewish relations today. GER:DB-Hum, DB-Hum, EC-GlobalCom

4-5 units, not given this year

HISTORY 230A. The Witness in Modern History: Memoir, Reportage, Image
The rise of the witness as icon and debates about its reliability as a historical source. The power of eyewitness accounts to convict accused criminals, inspire indignation about war and genocide, and attract attention to humanitarian crises. Their notorious unreliability due to exaggeration and misapprehension. Sources include reportage, photography, and documentary film. Case studies include criminal cases, war, poverty, and natural disasters. GER:DB-Hum

5 units, not given this year

HISTORY 230D. Europe in the World, 1789-Present
(Same as HISTORY 330D) (Same as HISTORY 230D) The European conquest of parts of Africa, Asia, and the S. Pacific by merchants, missionaries, armies, and administrators had significant, and often cataclysmic, effects on indigenous political alliances, cultural practices, and belief systems. But were the effects of expansion entirely one-sided? What impact did the experiences of colonialism have on European politics, culture, and Europe's relations with the rest of the world? How interaction between Europe and the rest of the world redefined the political, racial, sexual, and religious boundaries of both Europe and its colonies and gave rise to today's more globalized society.

4-5 units, Aut (Daughton, J)

HISTORY 230F. Self-Policing, Denunciation, and Surveillance in Modern Europe
(Same as HISTORY 330F) How individual actions impact state machineries of power. The motives, pressures, and consequences of everyday collaboration from the French Revolution to Nazi Germany and Soviet bloc police states; popular outrage over such practices in the aftermath of these regimes. The phenomenon of anticipatory compliance, as people tended to perceive less freedom of action than actually existed, and the reciprocal intensification of real and imagined restrictions. The malleability of personal values and interests as represented in diaries, memoirs, secondary sources, and film; variety of individual and national responses.

4-5 units, Win (Sheffer, E)

HISTORY 231A. Charles Darwin and the Global 19th Century
(Same as HISTORY 331A) Uses the writings, life, and legacy of Charles Darwin as a vehicle for exploring the nature of global change in the nineteenth century. Examines the relationship between modern science, imperialism, and world travel by tracking Darwin's experiences and those of his contemporaries, focusing both of the emergence of evolutionary theory as well as the popular reception and political controversies surrounding Darwin's work.

4-5 units, Aut (Naranch, B)

HISTORY 231G. European Reformations
(Same as HISTORY 331G, RELIGST 236, RELIGST 336) Readings in and discussion of theological and social aspects of sixteenth century reformations: Luther, Radical Reform, Calvin, and Council of Trent, missionary expansion, religious conflict, creative and artistic expressions. Texts include primary sources and secondary scholarly essays and monographs.

4-5 units, Win (Stokes, L; Pitkin, B)

HISTORY 232D. Rome: The City and the World, 1350-1750
(Same as HISTORY 332D) What lies beyond the ruins of an ancient city? The history of Rome from the Renaissance to the age of the grand tour. Topics include: the political, diplomatic, and religious history of the papacy; society and cultural life; the everyday world of Roman citizens; the relationship between the city and the surrounding countryside; the material transformation of Rome as a city; and its meaning for foreigners. GER:DB-Hum

4-5 units, not given this year

HISTORY 232G. When Worlds Collide: The Trial of Galileo
(Same as HISTORY 332G) In 1633, the Italian mathematician Galileo was tried and condemned for advocating that the sun, not the earth, was the center of the cosmos. The Catholic Church did not formally admit that Galileo was right until 1992. Examines the many factors that led to the trial of Galileo and looks at multiple perspectives on this signal event in the history of science and religion. Considers the nature and definition of intellectual heresy in the sixteenth and early seventeenth centuries, and examines the writings of Galileo's infamous predecessor Giordano Bruno (burned at the stake in 1600). Looks closely at documents surrounding the

trial and related literature on Renaissance and Reformation Italy in order to understand the perspectives of various participants in this famous event. Focal point of seminar involves the examination of the many different histories that can be produced from Galileo's trial. What, in the end, were the crimes of Galileo? GER:DB-Hum

4-5 units, not given this year

HISTORY 233. Reformation, Political Culture, and the Origins of the English Civil War

(Same as HISTORY 333) English political and religious culture from the end of the Wars of the Roses to the Civil War of the 1640s. Themes include the growth of the size and power of the state, Reformation, creation of a Protestant regime, transformation of the political culture of the ruling elite, emergence of Puritanism, and causes of the Civil War. GER:DB-Hum

4-5 units, Spr (Como, D)

HISTORY 233B. Early Modern Sexualities

(Same as HISTORY 333B) History of sexuality in early modern Europe. Normative sexuality, heterosexual transgressions, and minority sexualities. Theoretical approaches to and debates about the history of sexuality, in particular prior to the 19th century. Tools for critiquing the heteronormativity of early modern sources and for reading those sources for evidence of sexual diversity. Readings include monographs and primary sources. GER:DB-SocSci, EC-Gender

4-5 units, not given this year

HISTORY 233C. Two British Revolutions

(Same as HISTORY 333C) Current scholarship on Britain,1640-1700, focusing on political and religious history. Topics include: causes and consequences of the English civil war and revolution; rise and fall of revolutionary Puritanism; the Restoration; popular politics in the late 17th century; changing contours of religious life; the crisis leading to the Glorious Revolution; and the new order that emerged after the deposing of James II. GER:DB-Hum

4-5 units, not given this year

HISTORY 233D. Strangers, Barbarians, and Infidels: Crosscultural Encounters in the Premodern World

(Same as HISTORY 333D) Considers pivotal encounters between and among diverse cultures (Asian, African, America, and European) throughout the premodern period, with emphasis on the period 1100-1700. How scholars have understood and theorized crosscultural encounters; historical examples. Primary and secondary sources used to examine historical conditions that led to these meetings, their impact on the individuals and societies involved, and the larger lessons of the encounter of cultures for present times. Why did Christian Europe emerge as the predominant global power by the 16th century? How did/does the experience of travel shape the perceptions of others? What was the significance of religious, economic, and political motivations for crosscultural encounters? What were the technological, environmental, and cultural effects of such meetings for the societies involved?

4-5 units, Aut (Selwyn, J)

HISTORY 233F. Political Thought in Early Modern Britain

1500 to 1700. Theorists include Hobbes, Locke, Harrington, the Levellers, and lesser known writers and schools. Foundational ideas and problems underlying modern British and American political thought and life. GER:DB-Hum

5 units, not given this year

HISTORY 233G. Catholic Politics in Europe, 1789-1992

What led to the creation of a specifically Catholic mass politics? How did these parties and movements interact with the Vatican and the wider Church? What accounts for political Catholicism's involvement in clerical-fascist states and its important role in shaping the EU? Sources focus on monographs. Research paper using primary sources. GER:DB-SocSci

5 units, not given this year

HISTORY 233K. The Invention of the Modern Republic

(Same as HISTORY 333K) Examines the history of republican thinking in the Atlantic World from the Renaissance to the French Revolution.

4-5 units, not given this year

HISTORY 234. Enlightenment Seminar

(Same as HISTORY 334, HISTORY 432A, HUMNTIES 324) The Enlightenment as a philosophical, literary, and political movement. Themes include the nature and limits of philosophy, the grounds for critical intellectual engagement, the institution of society and the public, and freedom, equality and human progress. Authors include Voltaire, Montesquieu, Rousseau, Hume, Diderot, and Condorcet.

4-5 units, Win (Baker, K)

HISTORY 234F. Science, Technology, and Empire

(Same as HISTORY 334F) How modern Europe came to be connected to the wider world through repeated cycles of expansion, circulation, and exchange from the mid-nineteenth century to the present. Using weekly themes and in-depth discussions of ¿watershed¿ moments, the roles played by colonialism, migration, commerce, warfare, telecommunications, and popular culture in redefining the place of Europe in a changing global landscape will be explored.

4-5 units, Spr (Naranch, B)

HISTORY 236. The Ethics of Imperialism

Can a commitment to liberty, progress, and universal rights be reconciled with imperialism? The ethical underpinnings of empire; how modern Europeans provided ethical and political justifications for colonial expansion. How European ideals were used to defend and justify inequality, violence, and genocide. The ethics of American-driven globalization and humanitarianism. Texts include primary sources, philosophical treatises, and historical studies. GER:DB-Hum

5 units, not given this year

HISTORY 236A. Nations and Nationalism in East-Central Europe

(Same as HISTORY 336A) Explores one of the central problems in East-Central Europe in the past two centuries: the emergence of nationalist ideologies and modern nations. After introducing major theoretical treatments of nationalism through select canonical texts, will turn to case studies of several nations. Specific topics include the national revival movements, the rise of integral nationalism, minority problems and problems of multiethnic states, and the politics of population transfer and ethnic cleansing.

4-5 units, Win (Batinic, J)

HISTORY 236D. Cold War Europe

(Same as HISTORY 336D) Much more than a military and diplomatic confrontation, the Cold War was lived experience in Europe - shaping politics, society, culture and personal identity. Beginning at the end of World War II, traces the continent's division into eastern and western blocs, and ends with the fall of the Iron Curtain. Sources include memoirs, propaganda, novels, and film, as well as new scholarship on the Cold War.

4-5 units, Spr (Sheffer, E)

HISTORY 238K. Resistance and Collaboration in Hitler's Europe During World War II

(Same as HISTORY 328K) Nearly all European countries were subjected to military aggression by Nazi Germany and its allies. What prompted some Europeans to resist, while others accommodated the invaders? What did resistance and collaboration entail in Hitler's Europe? Examines how Europeans experienced and responded to Nazi occupation. Explores postwar memorializations of the war, investigates along the way relations among documents, historical scholarship, and public memory. Besides France, emphasis is on Southern and East-Central Europe.

4-5 units, Spr (Batinic, J)

HISTORY 239D. Capital and Empire

(Same as HISTORY 339D) Can empire be justified with balance sheets of imperial crimes and boons, a calculus of racism versus railroads? The political economy of empire through its intellectual history from Adam Smith to the present; the history of imperial corporations from the East India Company to Wal-mart; the role of consumerism; the formation of the global economy; and the relationship between empire and the theory and practice of development. GER:DB-SocSci

4-5 units, Win (Satia, P)

HISTORY 239F. Empire and Information

(Same as HISTORY 339F) How do states see? How do they know what they know about their subjects, citizens, economies, and geographies? How does that knowledge shape society, politics, identity, freedom, and modernity? Focus is on the British imperial state activities in S. Asia and Britain: surveillance technologies and information-gathering systems, including mapping, statistics, cultural schemata, and intelligence systems, to render geographies and

social bodies legible, visible, and governable. GER:DB-Hum, EC-GlobalCom

4-5 units, not given this year

HISTORY 239H. Colonialism and Empire in Modern Europe
To better understand the history of modern Europe within a global context, explores the following questions: What impact did more than a century of colonialism have on the social lives, cultural attitudes, political loyalties, and intellectual world views of European women and men during the nineteenth century? What accounts for the resiliency of empire during a period of rapid global change that witnessed the rise of modern democracy, economic liberalism, ethnic nationalism, and international socialism? GER:DB-SocSci

5 units, not given this year

HISTORY 242A. Technology and Society in the Modern World (1700 to Present)
(Same as HISTORY 342A) How do technology and society interact? What drives technological change? How does technology transfer across different cultures? Historical case studies of productive, military, domestic, information, and biomedical technologies from 1700 to the present. The evolution of artifacts and technological systems such as industrial machinery, weaponry, home appliances, computers, and contraceptives. How technology affects social change and, especially, how technological change is invariably shaped by historical and social circumstances. Students think historically about technology, and thus engage effectively with questions of technological change, or lack thereof.

4-5 units, Aut (Staff)

HISTORY 243C. 18th-Century Colonial Science and Medicine
(Same as HISTORY 343C) The exchange of knowledge, technologies, plants, peoples, disease, and medicines. Focus is on French, British, and Dutch interests in the West Indies; examples from elsewhere. Sources include primary and secondary texts on voyaging, colonialism, slavery, and environmental exchange. GER:DB-SocSci

4-5 units, not given this year

HISTORY 243J. Climate Change in the West: A History of the Future
(Same as EARTHSYS 143J) Global warming is changing the American West. But this region is no stranger to environmental change and human adaption to harsh environments. How can history create more clear thinking about the current crisis and choices for the future? The long history of climate change in the West, as well as current warming, through scientific research, historical sources, environmental histories, and visions for the future, including plans for mitigation and adaption, scientific predictions, and science fiction.

5 units, Spr (Christensen, J)

HISTORY 243S. Human Origins: History, Evidence, and Controversy
(Same as HISTORY 443A) Research seminar. Debates and controversies include: theories of human origins; interpretations of fossils, early art, and the oldest tools; the origin and fate of the Neanderthals; evolutionary themes in literature and film; visual rhetoric and cliché in anthropological dioramas and phyletic diagrams; the significance of hunting, gathering, and grandmothering; climatological theories and neocatastrophic geologies; molecular anthropology; the impact of racial theories on human origins discourse. Background in human evolution not required. GER:DB-SocSci

4-5 units, not given this year

HISTORY 244C. The History of the Body in Science, Medicine, and Culture
(Same as HISTORY 444C) The human body as a natural and cultural object, historicized. The crosscultural history of the body from the 18th century to the present. Topics include: sciences of sex and race; medical discovery of particular body parts; human experimentation, foot binding, veiling, and other bodily coverings; thinness and obesity; notions of the body politic. GER:DB-SocSci, EC-Gender

4-5 units, not given this year

HISTORY 245E. Health and Society in Africa
(Same as HISTORY 347E) The history of disease, therapeutic and diagnostic systems, and the definition of health in precolonial, colonial, and postcolonial Africa. The social and political histories of specific epidemics, including sleeping sickness, influenza, TB, mental illness, and AIDS. The colonial contexts of epidemics and the social consequences of disease. GER:DB-SocSci, EC-GlobalCom

4-5 units, not given this year

HISTORY 245G. Law and Colonialism in Africa
(Same as HISTORY 348D) Law in colonial Africa provides an opportunity to examine the meanings of social, cultural, and economic change in the anthropological, legal, and historical approaches. Court cases as a new frontier for the social history of Africa. Topics: meanings of conflicts over marriage, divorce, inheritance, property, and authority. GER:DB-SocSci

4-5 units, not given this year

HISTORY 246S. Research Seminar: African Nationalism and Beyond
(Same as HISTORY 446A) African intellectual, political, social and cultural institutions confronting issues of sovereignty, authority, heterarchy, and power during the 19th and 20th centuries. GER:DB-SocSci

4-5 units, not given this year

HISTORY 248S. African Societies and Colonial States
(Same as HISTORY 448A) The encounter between African societies and European colonialism in the colony or region of their choice. Approaches to the colonial state; tours of primary source collections in the Hoover Institution and Green Libraries. Students present original research findings and may continue research for a second quarter. GER:DB-SocSci

4-5 units, Win (Roberts, R)

HISTORY 249. History without Documents
(Same as HISTORY 349) Can history be written about places and times for which are no written sources, or for people in literate societies who left no written traces? Practical training in historical methods for non-documentary sources, including oral traditions and history, archaeology, ecological sources, historical linguistics, ethnography, rituals, myths, songs, and art. GER:DB-Hum

4-5 units, not given this year

HISTORY 250A. History of California Indians
(Same as CSRE 117S, NATIVEAM 117S) Demographic, political, and economic history of California Indians, 1700s-1950s. Processes and events leading to the destruction of California tribes, and their effects on the groups who survived. Geographic and cultural diversity. Spanish, Mexican, and Anglo-American periods. The mission system. GER:EC-AmerCul

5 units, Win (Shively, J)

HISTORY 251. Creating the American Republic
(Same as POLISCI 222P) Concepts and developments in the late 18th-century invention of American constitutionalism; the politics of constitution making and ratifying; emergence of theories of constitutional interpretation including originalism; early notions of judicial review. Primary and secondary sources.

5 units, not given this year

HISTORY 251C. The American Enlightenment
(Same as AMSTUD 251C) Eighteenth century America was like a laboratory for exciting new social, political, religious, scientific, and artistic theories that we collectively call ""the Enlightenment."" With readings in original texts and studies of material culture, examines ways in which eighteenth century Americans applied Enlightenment thinking to some of the most important problems and questions of their time. What was the best kind of government, and how could this be known? Was the new world of America fundamentally different or the same as Europe, and did animals, plants,and people improve or worsen there? What creatures (children, apes, women, slaves) were considered unreasonable in the Age of Reason, and why? What was the place of religion and passion in the Age of Reason? GER:DB-Hum

5 units, Win (Winterer, C)

HISTORY 251G. Topics in Constitutional History
(Same as AMSTUD 251, POLISCI 222S) Ideas of rights in American history emphasizing the problem of defining constitutional rights, the free exercise of religion, freedom of expression, and the contemporary debate over rights talk and the idiom of human rights. GER:DB-SocSci, EC-AmerCul

5 units, Win (Rakove, J)

HISTORY 254. Popular Culture and American Nature
Despite John Muir, Aldo Leopold, and Rachel Carson, it is arguable that the Disney studios have more to do with molding popular attitudes toward the natural world than politicians, ecologists, and activists. Disney as the central figure in the 20th-century American creation of nature. How Disney, the products of his studio, and other primary and secondary texts see environmentalism, science, popular culture, and their interrelationships. GER:DB-Hum

5 units, not given this year

HISTORY 255. Martin Luther King, Jr.: The Social Gospel and the Struggle for Justice
The religious and political thought of Martin Luther King, Jr., using the documentary resources of the King Institute at Stanford. His social gospel Christianity and prophetic message of radical social transformation. Readings include the forthcoming The Papers of Martin Luther King, Jr., Volume VI: Advocate of the Social Gospel. GER:DB-Hum

5 units, not given this year

HISTORY 255B. Introduction to African and African American Studies
(Same as AFRICAAM 105) Interdisciplinary. Central themes in African American culture and history related to race as a definitive American phenomenon. African survivals and interpretations of slavery in the New World, contrasting interpretations of the Black family, African American literature, and art. Possible readings: Frederick Douglass, Harriet Jacobs, Booker T. Washington, W.E.B. DuBois, Richard Wright, Maya Angelou, James Baldwin, Malcolm X, Alice Walker, and bell hooks. Focus may vary each year. GER:DB-Hum, EC-AmerCul

5 units, not given this year

HISTORY 256. U.S.-China Relations: From the Opium War to Tiananmen
(Same as HISTORY 356) The history of turbulent relations, military conflict, and cultural clashes between the U.S. and China, and the implications for the domestic lives of these increasingly interconnected countries. Diplomatic, political, social, cultural, and military themes from early contact to the recent past. WIM GER:DB-SocSci, EC-GlobalCom

4-5 units, not given this year

HISTORY 258. Topics in the History of Sexuality: Sexual Violence
(Same as AMSTUD 258, CSRE 192E, HISTORY 358) Recent historical interpretations of sexual violence, with particular attention to the intersections of gender and race in the construction of rape, from early settlement through the twentieth century. Topics include the legal prosecution of rape in Early America; the racialization of rape in the U.S.; lynching and anti-lynching in the U.S.; and feminist responses to sexual violence. GER:DB-SocSci, EC-Gender

4-5 units, Win (Freedman, E)

HISTORY 259A. Poverty and Homelessness in America
Service learning. Students participate in a two quarter internship at a local shelter for homeless individuals or families. Readings include historical, social science, and social commentary literature. Service Learning Course (certified by Haas Center). GER:DB-SocSci

4-5 units, not given this year

HISTORY 260. California's Minority-Majority Cities
(Same as HISTORY 360) Historical development and the social, cultural, and political issues that characterize large cities and suburbs where communities of color make up majority populations. Case studies include cities in Los Angeles, Santa Clara, and Monterey counties. Comparisons to minority-majority cities elsewhere in the U.S. Service Learning Course (certified by Haas Center). GER:DB-SocSci, EC-AmerCul

4-5 units, Spr (McKibben, C)

HISTORY 261. Race, Gender, and Class in Jim Crow America
How African American life and labor were redefined from 1890-1954. Topics include family life, work, leisure patterns, transnational relations, cultural expressions emphasizing literature and music, resistance and social activisim. Primary sources including visual materials, literature, and film; historical interpretations of the period. GER:DB-SocSci

5 units, not given this year

HISTORY 265. Writing Asian American History
(Same as HISTORY 365) Recent scholarship in Asian American history, with attention to methodologies and sources. Topics: racial ideologies, gender, transnationalism, culture, and Asian American art history. Primary research paper. GER:DB-SocSci, EC-AmerCul

5 units, not given this year

HISTORY 268E. American Foreign Policy and International History, 1941-2009
(Same as HISTORY 368E) Major events and interpretations from WW II to the war in Iraq. Issues of race, expansionism and power; nuclear weapons; and war. GER:DB-SocSci

4-5 units, not given this year

HISTORY 273. The European Expansion
(Same as HISTORY 373A) The relationship between European monarchies and their colonial domains from the 16th-18th centuries. Reasons for expansion, methods, and results. Case studies include the Spanish, Portuguese, Dutch, French, and English domains in Africa, Asia, and the Americas. Readings include primary and secondary sources.

4-5 units, not given this year

HISTORY 278A. Political Economy of Property Rights
(Same as POLISCI 242D) This course seeks to understand how property rights systems influence economic growth and the stewardship of resources. We are also interested in explaining the political process by which societies create property systems. In order to answer these questions we will read and discuss the work of political scientists, economists, and historians.

5 units, Win (Haber, S)

HISTORY 279. Latin American Development: Economy and Society, 1800-2000
(Same as HISTORY 379) The newly independent nations of Latin America began the 19th century with economies roughly equal to, or even ahead of, the U.S. and Canada. What explains the economic gap that developed since 1900? Why are some Latin American nations rich and others poor? Marxist, dependency, neoclassical, and institutionalist interpretive frameworks. The effects of globalization on Latin American economic growth, autonomy, and potential for social justice. GER:DB-SocSci, EC-GlobalCom

4-5 units, not given this year

HISTORY 281. Economic and Social History of the Modern Middle East
(Same as HISTORY 381) The integration of the Middle East into the world capitalist market on a subordinate basis and the impact on economic development, class formation, and politics. Alternative theoretical perspectives on the rise and expansion of the international capitalist market are combined with possible case studies of Egypt, Iraq, and Palestine. GER:DB-SocSci

4-5 units, not given this year

HISTORY 281A. Twentieth-Century Iraq: A Political and Social History
The colonial experience, creation of the modern Iraqi state, and transition to military dictatorship. Political movements, religious and tribal elements, and their relation to the state. Geopolitical context. GER:DB-SocSci

5 units, not given this year

HISTORY 281B. Modern Egypt
(Same as HISTORY 381B) From just before the Napoleonic expedition of 1798 to the present. Topics: European imperialism, the political economy of cotton, rise of nationalism, gender and the nation, minorities, the coup of 1952, positive neutralism and the Cold War, and the neo-liberal reconstruction of Egypt. GER:DB-SocSci

4-5 units, not given this year

HISTORY 282. The United States and the Middle East since 1945
(Same as HISTORY 382) Since the end of WW II, U.S. interests in the Middle East have traditionally been defined as access to oil at a reasonable price, trade and markets, containing the influence of the Soviet Union, and the security of Israel. Is this the full range of U.S. interests? How has the pursuit of these interests changed over time? What forces have shaped U.S. policy? What is the impact of U.S. policy on the region itself? GER:DB-SocSci, EC-GlobalCom

4-5 units, Win (Beinin, J)

HISTORY 283. The New Global Economy, Oil, and Islamic Movements in the Middle East
(Same as HISTORY 383) The integration of the Middle East into the world capitalist market on a subordinate basis and the impact on economic development, class formation, and politics. Alternative theoretical perspectives on the rise and expansion of the international capitalist market combined with case studies of Egypt, Iraq, and Palestine. GER:DB-SocSci
4-5 units, not given this year

HISTORY 284. The Ottoman Turks in Comparative Perspective: The Inner Life of a Eurasian Empire
(Same as HISTORY 384) The Ottoman Empire, one of the largest and most influential empires in world history, extended to three continents and survived for more than six centuries. But its history is often characterized as Oriental, despotic, and theocratic, reduced to a parade of capricious sultans, evil pashas, and hapless harem women. Comparative history used to challenge these views and to understand imperial longevity by tracing the ideological, fiscal, and military elements of state formation on both the European (Russia, Hungary, Spain) and Asian (Japan, China, Iran) continents. Situates the Ottomans' within their Eurasian heritage and explores the Empire's dynamic role in shaping early modern global systems. Chronological focus is neither on the origins of the empire nor on the Ottomans' final days, but rather on the 16th through 19th centuries when a notion of Ottoman-ness emerged in administrative practices, poetic and literary languages, and art.
4-5 units, Spr (Ferguson, H)

HISTORY 285F. Mediators of Tradition & Modernity: Comparative Jewish Women's History from 17th Century to Present
(Same as HISTORY 385F, JEWISHST 285F) Focuses on the single role of women as mediators between tradition and modernity in the Jewish home. While simultaneously the preservationists of certain traditions such as kashrut, Shabbat observance, or prayer, Jewish women also served as the medium of Jewish families' paths to assimilation. Looks at women in the West and East comparing their experiences in the face of modernity, caught between tradition and modernity, while simultaneously encouraging the assimilation and cultural improvement of their children.
5 units, Spr (Roberts, S)

HISTORY 286E. Jews in France from the Dreyfus Affair to World War II
(Same as HISTORY 386E, JEWISHST 286E, JEWISHST 386E) Examines the experience of Jews in France and their confrontations with antisemitism, discrimination, violence, assimilation, and integration from the Dreyfus Affair through Vichy and World War II. Popular and institutionalized antisemitism in France placed significant limits on the Jews' path to assimilation and shaped the ways in which they related to France and to Judaism.
4-5 units, Win (Roberts, S)

HISTORY 287D. Tel Aviv: Site, Symbol, City
(Same as HISTORY 387D, JEWISHST 287D, JEWISHST 387D) Tel Aviv, the first Israeli city, from a cultural history perspective combining high and low cultural texts. Topics include: the utopian origins behind the establishment of Tel Aviv in Zionist texts; artists, poets, and writers in Tel Aviv's early years; as the capital of Bauhaus architecture; the emergence of Israeli pop culture in Tel Aviv of the late 60s and 70s; as the site of the Israeli Zionist and post-Zionist intellectuals. Sources include art, cinema, and literature. GER:DB-Hum
4-5 units, Win (Dubnov, A)

HISTORY 287E. Understanding the Age of Extremes: Intellectual Responses to the Holocaust and Totalitarianism
(Same as HISTORY 387E, JEWISHST 287E, JEWISHST 387E) Intellectual responses of Jewish thinkers to the age of extremes. Readings include a wide assemblage of twentieth-century thinkers, such as Theodor Adorno, Leo Strauss, Hannah Arendt, Isaiah Berlin, and Herbert Marcuse. Analyses of enlightenment, nationalism, socialism and totalitarianism; their life stories, and their direct and indirect role in creating a transatlantic political discourse in postwar years. Contextualizes historically the fundamental features of Jewish intellectual activity after 1945.
4-5 units, Win (Dubnov, A)

HISTORY 287G. Jews in Colonial North Africa
(Same as HISTORY 387G, JEWISHST 287G, JEWISHST 387G) Under European imperialism, the relations between Jews ans Muslims in North Africa changed dramatically. Examines the complicated process of remaking Jewish identity under colonialism and the way in which citizenship, education, and assimilation separated Jews ans Muslims. Also looks at the spheres in which Jews and Muslims continued to coexist. Studies the impact of the rise of nationalism, anti-colonialism, Zionism, pan-Arabism, and antisemitism in the context of colonial North Africa.
4-5 units, Spr (Roberts, S)

HISTORY 287K. Gentlemen and Jews: History of the Jews of England
(Same as HISTORY 387K, JEWISHST 287K, JEWISHST 387K) Focuses on key chapters in the cultural and political histories of Britain and its Jews, between 1650 and 1950 and examines the advantages, as well as possible difficulties, that emerge when connecting Anglo-Jewish history to mainstream British history. What is unique about Jewish emancipation in England, and what are its connections to the formation of British national identity? Is there unique path in which Jewish Enlightenment developed in England? What was the contribution of Jews to British Imperialism? Is there a cultural affinity between English philosemitism and liberalism?
4-5 units, Spr (Dubnov, A)

HISTORY 287S. Research Seminar in Middle East History
(Same as HISTORY 481, JEWISHST 287S, JEWISHST 481) Student-selected research topics. GER:DB-SocSci
4-5 units, Spr (Beinin, J)

HISTORY 288. Palestine and the Arab-Israeli Conflict
(Same as HISTORY 388, IPS 388, JEWISHST 288, JEWISHST 388) 1882 to the present. Comparison of representative expressions of competing historical interpretations. U.S. policy towards the conflict since 1948. (Beinin) GER:DB-Hum
4-5 units, Win (Beinin, J)

HISTORY 291A. Archaeology and Modernity in Asia: The Excavation of Ancient Civilizations in Modern Times
(Same as HISTORY 391A) The interplay in Asia between antiquity and modernity, civilization and nation state, and national versus colonial science. The recent excavation of artifacts and places associated with Asian civilization such as the terracotta warriors in China and Angkor Wat in Cambodia. How Asian states have grappled with modernity and colonialism as they simultaneously dug up their ancient pasts. GER:DB-SocSci
4-5 units, not given this year

HISTORY 291B. The City in Imperial China
(Same as HISTORY 391B) The evolution of cities in the early imperial, medieval, and early modern periods. Topics include physical structure, social order, cultural forms, economic roles, relations to rural hinterlands, and the contrast between imperial capitals and other cities. Comparative cases from European history. Readings include primary and secondary sources, and visual materials.
3-5 units, not given this year

HISTORY 291D. Colonialism and Collaboration in East Asia
(Same as HISTORY 391D) The roles and problems of collaboration in the rise, sustenance, and fall of empires. Themes include conceptual definitions of collaboration and empire, collaboration of traditional elites, accommodation of religious communities, assimilation and collaboration, local intermediaries, and class and empire. Regional focus is East Asia; also cases from other colonial situations. GER:DB-SocSci
4-5 units, Aut (Moon, Y)

HISTORY 291E. Maps, Borders, and Conflict in East Asia
(Same as HISTORY 391E) The nature of borders and border conflicts in N.E. Asia from the 17th to the early 20th century. Focus is on contact zones between China, Russia, Korea, and Japan. The geopolitical imperatives that drove states to map their terrain in variable ways. Cultural, diplomatic, and imperial contexts. European pressures and contributions to E. Asian cartography; the uses of maps in surveillance, diplomacy, identity, and war. Student projects focus on a contested border zone. GER:DB-SocSci
4-5 units, not given this year

HISTORY 292. The Two Koreas
(Same as HISTORY 392) Examines major themes and scholarly works to understand the origins, outbreak, and consequences of the

Korean War. One focus will be the division of Korea into ROK and DPRK and their subsequent developments. Themes include World War II in East Asia; Korean communist movements during Japanese colonial rule; the Cold War in East Asia; the roles of the US, China, and USSR in the Korean War; the ideas of key North and South Korean leaders, and the consolidation of the two Koreas after the Korean War. GER:DB-SocSci

4-5 units, Win (Moon, Y)

HISTORY 292D. Japan in Asia, Asia in Japan

(Same as HISTORY 392D) How Japan and Asia mutually shaped each other in the late 19th and 20th centuries. Focus is on Japanese imperialism in Asia and its postwar legacies. Topics include: pan-Asianism and orientalism; colonial modernization in Korea and Taiwan; collaboration and resistance; popular imperialism in Manchuria; total war and empire; comfort women and the politics of apology; the issue of resident Koreans; and economic and cultural integration of postwar Asia. GER:DB-SocSci, DB-SocSci, EC-GlobalCom

4-5 units, Spr (Uchida, J)

HISTORY 292F. Traditional Korea: History and Culture

(Same as HISTORY 392F) Korea before 1800 and how iconic features of Korean tradition were created and reinvented. Themes include Korea's ancient kingdoms, the aristocracy and military in the Koryo dynasty, the print culture and Korean alphabet, ideologies and religions, the social status system and the life of women, the kingship and court culture of the Choson dynasty, and Korea's place in premodern East Asia. The modern and contemporary debates.

4-5 units, Spr (Moon, Y)

HISTORY 293B. Homosexuality in Historical and Comparative Perspective

(Same as HISTORY 393B) Comparative history of homoerotic desire, relations, and identity through scholarship on different historical periods and parts of the world: the classical Mediterranean, early modern European cities, late imperial and modern China, Tokugawa and modern Japan, and the U.S. GER:EC-Gender

4-5 units, not given this year

HISTORY 293D. Empire and Cosmopolitanism: Traveling Ideas in Global Political Thought

(Same as HISTORY 393D) GER:DB-SocSci

4-5 units, not given this year

HISTORY 295F. Race and Ethnicity in East Asia

(Same as HISTORY 395F) Historical, cultural, political and theoretical perspectives. Commonly misunderstood as an ethnically homogeneous country, the People's Republic of China is home to 55 officially recognized minority groups, many of whom inhabit the strategic border regions of the country. How similar assumptions of ethnic and racial homogeneity in Taiwan, Japan, and Korea are being reexamined by scholars in disciplines including anthropology, history, and political science. GER:DB-SocSci

4-5 units, not given this year

HISTORY 295J. Chinese Women's History

The lives of women in the last 1,000 years of Chinese history. Focus is on theoretical questions fundamental to women's studies. How has the category of woman been shaped by culture and history? How has gender performance interacted with bodily disciplines and constraints such as medical, reproductive, and cosmetic technologies? How relevant is the experience of Western women to women elsewhere? By what standards should liberation be defined? GER:DB-Hum, EC-Gender

5 units, not given this year

HISTORY 296. Communism and Revolution in China

From the formation of the Chinese Communist Party (CCP) in 1921 through the 1949 founding of the People's Republic of China (PRC). Topics include: early theories of socialism in China; the relationship between Chinese communism and the Communist International and Soviet Union; agrarian reformulation of communism by Mao; the communist-nationalist civil war; the Communist Revolution of 1949; and the consolidation of communist power in the PRC. GER:DB-Hum

5 units, not given this year

HISTORY 299A. Senior Research I

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

HISTORY 299B. Senior Research II

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

HISTORY 299C. Senior Research III

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

HISTORY 299H. Junior Honors Colloquium

Required of junior History majors planning to write a History honors thesis during senior year. Meets twice during quarter, including the first Friday class day of the quarter.

1 unit, Win (Sommer, M)

HISTORY 299M. Undergraduate Directed Research: Martin Luther King, Jr., Research and Education Institute

May be repeated for credit.

1-4 units, Aut (Carson, C), Win (Staff), Spr (Staff)

HISTORY 299S. Undergraduate Directed Research and Writing

May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HISTORY 299W. Undergraduate Directed Writing

May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HISTORY 299X. Design and Methodology for International Field Research

(Same as HISTORY 399A) Problems involved in research abroad: ethical issues; safety; security and conduct; human subjects protocol. Methodologies of research: interviewing, networking, case studies, participant observation, large surveys.

1 unit, Spr (Kollmann, N; Roberts, R)

GRADUATE COURSES IN HISTORY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

HISTORY 158B. History of Education in the United States

(Same as AMSTUD 201, EDUC 201) How education came to its current forms and functions, from the colonial experience to the present. Focus is on the 19th-century invention of the common school system, 20th-century emergence of progressive education reform, and the developments since WW II. The role of gender and race, the development of the high school and university, and school organization, curriculum, and teaching. (SSPEP)

3-5 units, Win (Gordon, L)

HISTORY 158C. History of Higher Education in the U.S.

(Same as AMSTUD 165, EDUC 165, EDUC 265) Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities. (SSPEP-APA)

3-5 units, Aut (Gordon, L)

HISTORY 237B. Teaching the Unteachable: Teaching and Representing the Holocaust

(Same as EDUC 253X) Theodore Adorno asked whether it was possible to write poetry after Auschwitz; whatever the answer, each year witnesses exponential growth in state-sponsored mandates to teach the Holocaust. How and to what end does catastrophe become curriculum? How to assess what students learn from these efforts. The Nazis' efforts to teach for hate, and contemporary parallels. Historical and educational sources, especially films and memoirs.

3-5 units, not given this year

HISTORY 255E. Education, Race, and Inequality in African American History, 1880-1990

(Same as CSRE 216X, EDUC 216X) Seminar. The relationship among race, power, inequality, and education from the 1880s to the 1990s. How schools have constructed race, the politics of school desegregation, and ties between education and the late 20th-century urban crisis.

3-5 units, Aut (Gordon, L)

HISTORY 258D. School: What Is It Good For?

(Same as EDUC 207X) Focus is on authors who establish claims that the purposes, functions, impacts, and social roles of schooling promote human capital, citizenship, social reproduction, values transmission, social mobility, class equality, racial equality, social stratification, disciplinary power, and the pursuit of individual interests. Historical and sociological approaches.

3-4 units, Win (Labaree, D)

HISTORY 258E. History of School Reform: Origins, Policies, Outcomes, and Explanations
(Same as EDUC 220D) Required for students in the POLS M.A. program; others welcome. Focus is on 20th-century U.S. Intended and unintended patterns in school change; the paradox of reform that schools are often reforming but never seem to change much; rhetorics of reform and factors that inhibit change. Case studies emphasize the American high school. (SSPEP/APA)
3-5 units, Aut (Labaree, D)

HISTORY 258F. Education Schools: Historical and Sociological Perspectives
(Same as EDUC 231X) The lowly status of the education school in the United States is the issue that defines the starting point of this course. Topics include an exploration the historical development of this institution, its major social function, and the interaction between the two. The course touches on a variety of scholarly domains, including the history of education, sociology of education, higher education, and educational policy.
3-4 units, alternate years, not given this year

HISTORY 301. Introduction to Public History in the U.S.,19th Century to the Present
(Same as HISTORY 201) Gateway course for the History and Public Service interdisciplinary track. Topics include the production, presentation, and practice of public history through narratives, exhibits, web sites, and events in museums, historical sites, parks, and public service settings in nonprofit organizations, government agencies, and educational institutions.
4-5 units, Aut (McKibben, C)

HISTORY 303E. Global Catholicism
(Same as HISTORY 203E) Explores the rise of Catholicism as a global phenomenon, and investigates its multiple transformations as it spread to the Americas, Asia, and Africa. Topics will include the Reformation, Tridentine reform and the Jesuits, the underground churches in England and the Dutch Republic, the missions to Asia, the Spanish conquest of Latin America, conversion and indigenous religions, missionary imperialism and new religious movements in the non-European world.
4-5 units, Spr (Sena, M)

HISTORY 304. Approaches to History
Required of first-year History Ph.D. students.
4-5 units, Aut (Baker, K)

HISTORY 304G. War, Culture, and Society in the Modern Age
(Same as HISTORY 204G) How Western societies and cultures have responded to modern warfare. The relationship between its destructive capacity and effects on those who produce, are subject to, and must come to terms with its aftermath. Literary representations of WW I; destructive psychological effects of modern warfare including those who take pleasure in killing; changes in relations between the genders; consequences of genocidal ideology and racial prejudice; the theory of just war and its practical implementation; and how wars are commemorated.
5 units, not given this year

HISTORY 305. Graduate Workshop in Teaching
Required of first-year History Ph.D. students. Perspectives on pedagogy for historians: course design, lecturing, leading discussion, evaluation of student learning, use of technology in teaching lectures and seminars. Addressing today's classroom: sexual harassment issues, integrating diversity, designing syllabi to include students with disabilities.
1 unit, Spr (Kollmann, N)

HISTORY 306D. World History: Graduate Colloquium
How do historians engage the global scale in the classroom as well as in research? The world history canon including Toynbee, McNeill, Braudel, Wolf, and Wallerstein; contrasting approaches, recent research, and resources for teaching. Recommended: concurrent enrollment in HISTORY 306E.
4 units, not given this year

HISTORY 306E. International History and International Relations Theory
(Same as HISTORY 202, POLISCI 216E, POLISCI 316) The relationship between history and political science as disciplines. Sources include studies by historians and political scientists on topics such as the origins of WW I, the role of nuclear weapons in international politics, the end of the Cold War, nongovernmental organizations in international relations, and change and continuity in the international system.
5 units, not given this year

HISTORY 306F. Identities and Identification in the Atlantic World
How identities and processes of identification changed in Europe, Africa, and the Americas during the early modern period and as a result of the engagement of the inhabitants of these three continents in the Atlantic world.
4-5 units, not given this year

HISTORY 306G. Colonial Law
Examines the relationship between law and colonialism in Latin America, Africa and Asia during both the early modern and the modern period. By reading some of the seminal works that have been published on this issue, we will seek to understand how law both facilitated and limited colonialism and how colonialism, in turn, had modified the legal systems that had existed previously. Attention will also be given to law an an acculturating agent and to the legal arena as a sphere for conflict resolution, negotiation,and identity formation.
4-5 units, Aut (Herzog, T)

HISTORY 306K. World History Pedagogy Workshop
Students draft a syllabus and create a curriculum module for use in a world history lecture course. Corequisite: HISTORY 306D, recommended.
1 unit, not given this year

HISTORY 307A. Legal History Workshop
(Same as LAW 372.) Faculty and students from the Law school and the History department discuss research in the field of legal history. Guest speakers. Secondary literature relevant to the speaker's research. Undergraduates require consent of instructors.
4-5 units, Win (Herzog, T; Kessler, A)

HISTORY 307C. The Global Early Modern
(Same as HISTORY 207C) In what sense can we speak of ""globalization"" before modernity? What are the characteristics and origins of the economic system we know as ""capitalism""? When and why did European economies begin to diverge from those of other Eurasian societies? With these big questions in mind, the primary focus will be on the history of Europe and European empires, but substantial readings deal with other parts of the world, particularly China and the Indian Ocean.
4-5 units, Spr (Como, D)

HISTORY 307E. Origins of Totalitarianism
(Same as HISTORY 204E) Modern revolutionary and totalitarian politics. Sources include monographs on the medieval, Reformation, French Revolutionary, and Great War eras. Topics: the essence of modern ideology, the concept of the body national, state terror, charismatic leadership, gender assignments, private and public spheres, and identities.
4-5 units, Spr (Weiner, A)

HISTORY 308. Biography and History
(Same as HISTORY 207) The relationship between biographical and historical writing, primarily in Europe and America. Problems of methodology, evidence, dispassion, and empathy. Texts: biographies, critical literature on biographical work, and novels (A. S. Byatt's Possession, Bernard Malamud's Dubin's Lives) that illuminate the intellectual underpinnings of biographical labor.
4-5 units, not given this year

HISTORY 308A. Science and Law in History
(Same as HISTORY 208A) How the intertwined modern fields of science and law, since the early modern period, together developed central notions of fact, evidence, experiment, demonstration, objectivity, and proof.
4-5 units, not given this year

HISTORY 308B. Women Activists' Response to War
(Same as HISTORY 208B) Theoretical issues, historical origins, changing forms of women's activism in response to war throughout the 20th century, and contemporary cases, such as the Russian Committee of Soldiers Mothers, Bosnian Mothers of Srebrenica, Serbian Women in Black, and the American Cindy Sheehan. Focus is on the U.S. and Eastern Europe, with attention to Israel, England, and Argentina.
4-5 units, not given this year

HISTORY 309A. Postcolonialism and Universalism
(Same as HISTORY 209D) Key texts and motifs from postcolonial theory: empire, class, exile, suffering, textuality, archive in juxtaposition to 20th-century philosophical questions about universal history and the relevance of humanist inquiry.
4-5 units, Spr (Kumar, A)

HISTORY 309B. Concepts of the Political
(Same as HISTORY 209B) What is the present? Can it stand on its own, without invoking history and without promising a future? How did the 20th century make sense of itself, as violent and ruptured from all preceding centuries as it was, yet so prolific and promising in its revolutionary achievements and futures? The century through four concepts: time, ambiguity, cruelty, and crisis. 20th-century politics through what happened to dialectic, humanism, history, and Europe.
4-5 units, Spr (Kumar, A)

HISTORY 309E. History Meets Geography
Focus is on developing competence in GIS computer applications and applying it to historical problems. Previous experience with GIS not required. Recommended: complete the GIS tutorial in Branner Library before the course starts.
4-5 units, not given this year

HISTORY 309F. Historical Geography Colloquium: Maps in the Early Modern World
The significance of cartographic enterprise across the early modern world. Political, economic, and epistemological imperatives that drove the proliferation of nautical charts, domain surveys, city plans, atlases, and globes; the types of work such artifacts performed for their patrons, viewers, and subjects. Contributions of indigenous knowledge to imperial maps; the career of the map in commerce, surveillance, diplomacy, conquest, and indoctrination. Sources include recent research from Asia, Europe, and the Americas.
4-5 units, Aut (Wigen, K)

HISTORY 311. Body, Gender, and Society in Medieval Europe
(Same as HISTORY 211) Historical, literary, theological, and anthropological sources. Issues: transformations in representations of the body, gender, sexuality, and in women¿s place in society or social representation in W. Europe from the 3rd-14th centuries. Were these processes related to one another and to social changes? Analytically straddles the realm between bodification of spiritual powers and control or manipulation of the body in society, from the cult of relics to asceticism.
4-5 units, not given this year

HISTORY 312. Holy Wars: Medieval Perspectives
(Same as HISTORY 212) Cultural and societal factors at play in Christian holy war from late antiquity to the early modern era. Topics include: the Crusades and their meanings; armed struggle against heresy; and the wars of religion. Prerequisite: consent of instructor.
4-5 units, not given this year

HISTORY 313. Core Colloquium in Medieval European History
4-5 units, not given this year

HISTORY 316A. Muslims and Infidels: Islam and the Crusades
(Same as HISTORY 216A) The impact of the Crusades on the Muslim world and consciousness from the Middle Ages and to the present. Primary and secondary sources. Themes include: jihad; cultural interaction between Muslims and Christians in the Holy Land; and military, political, and ideological developments in the 12th and 13th centuries. Modern interpretations and debates about jihadist theology and global jihad.
4-5 units, not given this year

HISTORY 317. Medieval Seminar: Classics and Key Works
(Same as HUMNTIES 322) Colloquium focused on key primary sources that allow entry into Medieval European culture. Readings include: Augustine, On Christian Doctrine; Gregory the Great, Moralia on the Book of Job; Beowulf; the Song of Roland; and Aquinas, Summa Theologica.
3-5 units, not given this year

HISTORY 319B. Secularity
Classic theories of secularity. Is a secular world possible? How does, historically seen, the notion of the secular emerge, impose itself, and get challenged? Readings include Max Weber, E. Durkheim, R.A. Markus, Carl Schmitt, and Hans Blumenberg, and studies bearing on the Middle Ages, English monastic secularization, the French Revolution, and 20th-century political religions.
4-5 units, not given this year

HISTORY 321A. Classics of Russian Historiography
Main trends of Russian intellectual history as seen through major historians' treatment of Muscovy: Romanticism, Slavophilism, Hegelianism, Populism, Social Democracy, New Idealism, and Marxism-Leninism.
4-5 units, not given this year

HISTORY 321B. Imperial Russian Historiography
4-5 units, not given this year

HISTORY 321C. Historiography of the Soviet Union
Major schools of interpretation of the Soviet phenomenon through works representative of a specific school, in chronological order, from the first major interpretation of the Soviet polity by Trotsky to postmodernist theories.
4-5 units, not given this year

HISTORY 322. Early Modern Russia in European Context
4-5 units, Win (Kollmann, N)

HISTORY 323. Art and Ideas in Imperial Russia
(Same as HISTORY 223) Poetry, novels, symphonic music, theater, opera, painting, design, and architecture: what they reveal about the politics and culture of tsarist Russia.
4-5 units, not given this year

HISTORY 323B. Research Methodologies in Early Modern Russian History
4-5 units, not given this year

HISTORY 324B. Modern Afghanistan
(Same as HISTORY 224B) Politics, society, and culture in Afghanistan from the 19th century to the present. Topics include state building, tribal politics, Islamic law, geopolitics, the Taliban, and the post-Taliban disorder.
4-5 units, Aut (Crews, R)

HISTORY 324F. The Caucasus and the Muslim World
The linkages connecting the societies of the Caucasus to Muslim communities in Iran, Russia, the Ottoman Empire and Turkey, S. Asia, and the Middle East.
4-5 units, not given this year

HISTORY 326C. Graduate Colloquium on Balkan History
Designed for History Ph.D. students to develop competence in the history and historiography of the modern Balkans, from the French Revolution to the present. Areas of study include the influence of empires on the region, the rise of nationalism and nation states, the dilemmas of independence, the emergence and decline of communism in the region, and the recurrence of war and ethnic conflict.
4-5 units, not given this year

HISTORY 327. East European Women and War in the 20th Century
(Same as HISTORY 227) Thematic chronological approach through conflicts in the region: the Balkan Wars, WW I, WW II, and the recent wars in the former Yugoslavia. The way women in E. Europe have been involved in and affected by these wars compared to women in W. Europe in the two world wars. Women's involvement in war as members of the military services, the backbone of underground movements, workers in war industries, mothers of soldiers, subjects and supporters of war aims and propaganda, activists in peace movements, and objects of wartime destruction, dislocation, and sexual violation.
4-5 units, Aut (Jolluck, K)

HISTORY 328. Circles of Hell: Poland in World War II
(Same as HISTORY 228) The experience and representation of Poland's wartime history from the Nazi-Soviet Pact of 1939 to the aftermath of Yalta in 1945. Nazi and Soviet ideology and practice regarding the Poles and the ways Poles responded, resisted, and survived. The self-characterization of Poles as innocent victims, and their involvement or complicity in the Holocaust, thus engaging in a current debate in Polish society.
5 units, not given this year

HISTORY 328K. Resistance and Collaboration in Hitler's Europe During World War II
(Same as HISTORY 238K) Nearly all European countries were subjected to military aggression by Nazi Germany and its allies.

What prompted some Europeans to resist, while others accommodated the invaders? What did resistance and collaboration entail in Hitler's Europe? Examines how Europeans experienced and responded to Nazi occupation. Explores postwar memorializations of the war, investigates along the way relations among documents, historical scholarship, and public memory. Besides France, emphasis is on Southern and East-Central Europe.

4-5 units, Spr (Batinic, J)

HISTORY 329. Poles and Jews

(Same as HISTORY 229) Focus is on the period since WW I. The place of the Jews in interwar Poland, WW II, surviving Jews after the war, Polish memorialization of the Holocaust, the reality and mythology of Jews in the communist apparatus, the manipulation of anti-Semitism by the communist government, and post-communist movement toward reconciliation. Memory and national mythology emphasizing Polish wartime behavior and the relationship of Jews to communism. The sources and uses of stereotypes, and the state of Polish-Jewish relations today.

4-5 units, not given this year

HISTORY 330. Core Colloquium on Early Modern Europe: Ancien Regime

Topics in the social, political, and religious history of Western Europe, 1550-1789, with an emphasis on France. May be repeated for credit.

4-5 units, not given this year

HISTORY 330A. Core Colloquium on Early Modern Europe

Historiographical survey from the Renaissance to the Enlightenment. Topics include the Reformations, European expansion, state and nation building, invention and scientific discovery, intellectual history, and gender. In-depth reviews determined by student interests.

4-5 units, Aut (Stokes, L)

HISTORY 330D. Europe in the World, 1789-Present

(Same as HISTORY 230D) The European conquest of parts of Africa, Asia, and the S. Pacific by merchants, missionaries, armies, and administrators had significant, and often cataclysmic, effects on indigenous political alliances, cultural practices, and belief systems. But were the effects of expansion entirely one-sided? What impact did the experiences of colonialism have on European politics, culture, and Europe's relations with the rest of the world? How interaction between Europe and the rest of the world redefined the political, racial, sexual, and religious boundaries of both Europe and its colonies and gave rise to today’s more globalized society.

4-5 units, Aut (Daughton, J)

HISTORY 330F. Self-Policing, Denunciation, and Surveillance in Modern Europe

(Same as HISTORY 230F) How individual actions impact state machineries of power. The motives, pressures, and consequences of everyday collaboration from the French Revolution to Nazi Germany and Soviet bloc police states; popular outrage over such practices in the aftermath of these regimes. The phenomenon of anticipatory compliance, as people tended to perceive less freedom of action than actually existed, and the reciprocal intensification of real and imagined restrictions. The malleability of personal values and interests as represented in diaries, memoirs, secondary sources, and film; variety of individual and national responses.

4-5 units, Win (Sheffer, E)

HISTORY 331A. Charles Darwin and the Global 19th Century

(Same as HISTORY 231A) Uses the writings, life, and legacy of Charles Darwin as a vehicle for exploring the nature of global change in the nineteenth century. Examines the relationship between modern science, imperialism, and world travel by tracking Darwin's experiences and those of his contemporaries, focusing both of the emergence of evolutionary theory as well as the popular reception and political controversies surrounding Darwin's work.

4-5 units, Aut (Naranch, B)

HISTORY 331B. Core Colloquium on Modern Europe: The 19th Century

The major historical events and historiographical debates of the long 19th century from the French Revolution to WW I.

4-5 units, not given this year

HISTORY 331D. Core Colloquium on Modern Europe: Intellectual History

4-5 units, not given this year

HISTORY 331G. European Reformations

(Same as HISTORY 231G, RELIGST 236, RELIGST 336) Readings in and discussion of theological and social aspects of sixteenth century reformations: Luther, Radical Reform, Calvin, and Council of Trent, missionary expansion, religious conflict, creative and artistic expressions. Texts include primary sources and secondary scholarly essays and monographs.

4-5 units, Win (Stokes, L; Pitkin, B)

HISTORY 332A. Power, Art, and Knowledge in Renaissance Italy

Defining features of the world of Leonardo, Machiavelli, and Michelangelo. Intersections of history, politics, art, and literature. The relationship between the Renaissance and the Reformation.

4-5 units, not given this year

HISTORY 332D. Rome: The City and the World, 1350-1750

(Same as HISTORY 232D) What lies beyond the ruins of an ancient city? The history of Rome from the Renaissance to the age of the grand tour. Topics include: the political, diplomatic, and religious history of the papacy; society and cultural life; the everyday world of Roman citizens; the relationship between the city and the surrounding countryside; the material transformation of Rome as a city; and its meaning for foreigners.

4-5 units, not given this year

HISTORY 332F. The Scientific Revolution

What do people know and how do they know it? What counts as scientific knowledge? In the 16th and 17th centuries, understanding the nature of knowledge engaged the attention of individuals and institutions including Copernicus, Galileo, Descartes, Newton, the early Royal Society, and less well-known contemporaries. New meanings of observing, collecting, experimenting, and philosophizing, and political, religious, and cultural ramifications in early modern Europe.

4-5 units, not given this year

HISTORY 332G. When Worlds Collide: The Trial of Galileo

(Same as HISTORY 232G) In 1633, the Italian mathematician Galileo was tried and condemned for advocating that the sun, not the earth, was the center of the cosmos. The Catholic Church did not formally admit that Galileo was right until 1992. Examines the many factors that led to the trial of Galileo and looks at multiple perspectives on this signal event in the history of science and religion. Considers the nature and definition of intellectual heresy in the sixteenth and early seventeenth centuries, and examines the writings of Galileo's infamous predecessor Giordano Bruno (burned at the stake in 1600). Looks closely at documents surrounding the trial and related literature on Renaissance and Reformation Italy in order to understand the perspectives of various participants in this famous event. Focal point of seminar involves the examination of the many different histories that can be produced from Galileo's trial. What, in the end, were the crimes of Galileo?

4-5 units, not given this year

HISTORY 333. Reformation, Political Culture, and the Origins of the English Civil War

(Same as HISTORY 233) English political and religious culture from the end of the Wars of the Roses to the Civil War of the 1640s. Themes include the growth of the size and power of the state, Reformation, creation of a Protestant regime, transformation of the political culture of the ruling elite, emergence of Puritanism, and causes of the Civil War.

4-5 units, Spr (Como, D)

HISTORY 333B. Early Modern Sexualities

(Same as HISTORY 233B) History of sexuality in early modern Europe. Normative sexuality, heterosexual transgressions, and minority sexualities. Theoretical approaches to and debates about the history of sexuality, in particular prior to the 19th century. Tools for critiquing the heteronormativity of early modern sources and for reading those sources for evidence of sexual diversity. Readings include monographs and primary sources.

4-5 units, not given this year

HISTORY 333C. Two British Revolutions

(Same as HISTORY 233C) Current scholarship on Britain,1640-1700, focusing on political and religious history. Topics include: causes and consequences of the English civil war and revolution;

rise and fall of revolutionary Puritanism; the Restoration; popular politics in the late 17th century; changing contours of religious life; the crisis leading to the Glorious Revolution; and the new order that emerged after the deposing of James II.

4-5 units, not given this year

HISTORY 333D. Strangers, Barbarians and Infidels: Cross-cultural Encounters in the Premodern World

(Same as HISTORY 233D) Considers pivotal encounters between and among diverse cultures (Asian, African, America, and European) throughout the premodern period, with emphasis on the period 1100-1700. How scholars have understood and theorized crosscultural encounters; historical examples. Primary and secondary sources used to examine historical conditions that led to these meetings, their impact on the individuals and societies involved, and the larger lessons of the encounter of cultures for present times. Why did Christian Europe emerge as the predominant global power by the 16th century? How did/does the experience of travel shape the perceptions of others? What was the significance of religious, economic, and political motivations for crosscultural encounters? What were the technological, environmental, and cultural effects of such meetings for the societies involved?

4-5 units, Aut (Selwyn, J)

HISTORY 333K. The Invention of the Modern Republic

(Same as HISTORY 233K) Examines the history of republican thinking in the Atlantic World from the Renaissance to the French Revolution.

4-5 units, not given this year

HISTORY 334. Enlightenment Seminar

(Same as HISTORY 234, HISTORY 432A, HUMNTIES 324) The Enlightenment as a philosophical, literary, and political movement. Themes include the nature and limits of philosophy, the grounds for critical intellectual engagement, the institution of society and the public, and freedom, equality and human progress. Authors include Voltaire, Montesquieu, Rousseau, Hume, Diderot, and Condorcet.

4-5 units, Win (Baker, K)

HISTORY 334F. Science, Technology, and Empire

(Same as HISTORY 234F) How modern Europe came to be connected to the wider world through repeated cycles of expansion, circulation, and exchange from the mid-nineteenth century to the present. Wateshed moments and the roles played by colonialism, migration, commerce, warfare, telecommunications, and popular culture in redefining the place of Europe in a changing global landscape.

4-5 units, Spr (Naranch, B)

HISTORY 335. History of European Law, Medieval to Contemporary

(Same as HISTORY 135) From the fall of the Roman Empire to the establishment of the EU. How law changed over time. Sources and nature of law, organization of legal systems, and relationships between law and society, law and lawmaker, law and the legal professions.

4-5 units, Aut (Herzog, T)

HISTORY 336. Modern France

(Daughton)

4-5 units, not given this year

HISTORY 336A. Nations and Nationalism in East-Central Europe

(Same as HISTORY 236A) One of the central problems in East-Central Europe in the past two centuries: the emergence of nationalist ideologies and modern nations. Major theoretical treatments of nationalism through canonical texts; case studies of several nations. Topics include the national revival movements, the rise of integral nationalism, minority problems and problems of multiethnic states, and the politics of population transfer and ethnic cleansing.

4-5 units, Win (Batinic, J)

HISTORY 336D. Cold War Europe

(Same as HISTORY 236D) Much more than a military and diplomatic confrontation, the Cold War was lived experience in Europe, shaping politics, society, culture, and personal identity. Beginning at the end of WW II, traces the continent's division into eastern and western blocs, and ends with the fall of the Iron Curtain. Sources include memoirs, propaganda, novels, and film, as well as new scholarship on the Cold War.

4-5 units, Spr (Sheffer, E)

HISTORY 336E. Violence in History and Theory

Methodological challenges associated with defining and analyzing violence in late-19th- and 20th-century contexts. How people witnessed, coped with, and survived violent episodes. Cases of state violence, ethnic and religious conflict, warfare, genocide, and decolonization. The notion of everyday suffering in the contemporary world. Sources include anthropology, sociology, and history.

4-5 units, not given this year

HISTORY 337. The Holocaust

(Same as HISTORY 137, JEWISHST 183, JEWISHST 383) The emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s. WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry.

4-5 units, Spr (Zipperstein, S)

HISTORY 337C. Street History: Learning the Past in School and Out

(Same as EDUC 356) Interdisciplinary. Since Herodotus, history and memory have competed to shape minds: history cultivates doubt and demands interpretation; memory seeks certainty and detests that which thwarts its aims. History and memory collide in modern society, often violently. How do young people become historical amidst these forces; how do school, family, nation, and mass media contribute to the process?

3-5 units, Win (Wineburg, S)

HISTORY 338A. Graduate Colloquium in Modern British History, Part I

Influential approaches to problems in British, European, and imperial history. The 19th-century British experience and its relationship to Europe and empire. National identity, the industrial revolution, class formation, gender, liberalism, and state building. Goal is to prepare specialists and non-specialists for oral exams.

4-5 units, Aut (Satia, P)

HISTORY 338B. Modern Britain, Part II

Themes include empire and racism, the crisis of liberalism, the rise of the welfare state, national identity, the experience of total war, the politics of decline, and modernity and British culture.

4-5 units, not given this year

HISTORY 339D. Capital and Empire

(Same as HISTORY 239D) Can empire be justified with balance sheets of imperial crimes and boons, a calculus of racism versus railroads? The political economy of empire through its intellectual history from Adam Smith to the present; the history of imperial corporations from the East India Company to Wal-mart; the role of consumerism; the formation of the global economy; and the relationship between empire and the theory and practice of development.

4-5 units, Win (Satia, P)

HISTORY 339F. Empire and Information

(Same as HISTORY 239F) How do states see? How do they know what they know about their subjects, citizens, economies, and geographies? How does that knowledge shape society, politics, identity, freedom, and modernity? Focus is on the British imperial state activities in S. Asia and Britain: surveillance technologies and information-gathering systems, including mapping, statistics, cultural schemata, and intelligence systems, to render geographies and social bodies legible, visible, and governable.

4-5 units, not given this year

HISTORY 339H. Modern European History in a Global Age
How scholars can write the history of modern Europe in a way that integrates global and transnational perspectives. Discussed the methodological challenges and merits of various approaches and reviews relevant theoretical and interdisciplinary models for how this can best be done. Topics include globalization, migration, internationalism, colonialism, post-colonialism, modern warfare, and the media.

4-5 units, not given this year

HISTORY 341A. The Emergence of Medicine: The Middle Ages and the Renaissance
How did medicine emerge as a distinctive body of knowledge and a profession? The history of medicine from ca. 1000 to 1750. Topics: new ways of examining and treating the body; the religious and cultural significance of disease; the development of hospitals; and the rise of public health systems. Comparison of the status of medicine in Europe and the Islamic world. The work of key figures such as Vesalius and Harvey. Students are required to attend the concurrent lectures of HISTORY 141A.

4-5 units, not given this year

HISTORY 342. Darwin in the History of Life
Origins and impact of evolutionary theory from the nineteenth century to the present. Early theories of fossils, the discovery of deep time and uniformitarian geology, debates over evolution vs. extinction, the origin of life, and human origins; the rise of anthropology and racial theory; the changing challenge of creationism, the abuse of evolution in eugenics and Nazi racial hygiene; and new discoveries in the realm of extreme life, evo-devo, neocatastrophism, and the new technological frontier of biomimicry. Attendance at the lectures of HISTORY 142 is required.

4-5 units, not given this year

HISTORY 342A. Technology and Society in the Modern World (1700 to Present)
(Same as HISTORY 242A) How do technology and society interact? What drives technological change? How does technology transfer across different cultures? Historical case studies of productive, military, domestic, information, and biomedical technologies from 1700 to the present. The evolution of artifacts and technological systems such as industrial machinery, weaponry, home appliances, computers, and contraceptives. How technology affects social change and, especially, how technological change is invariably shaped by historical and social circumstances. Students think historically about technology, and thus engage effectively with questions of technological change, or lack thereof.

4-5 units, Aut (Staff)

HISTORY 343C. 18th-Century Colonial Science and Medicine
(Same as HISTORY 243C) The exchange of knowledge, technologies, plants, peoples, disease, and medicines. Focus is on French, British, and Dutch interests in the West Indies; examples from elsewhere. Sources include primary and secondary texts on voyaging, colonialism, slavery, and environmental exchange.

4-5 units, not given this year

HISTORY 344. Gender in Science, Medicine and Engineering
(Same as HISTORY 144) Men's and women's roles in science, medicine, and engineering over the past 200 years with a focus on the present. What are the efforts underway globally to transform science, medicine, and engineering into fields where women can flourish? How have science and medicine studied and defined males and females? Can gender analysis spark creativity in human knowledge?

4-5 units, not given this year

HISTORY 345A. Africa in the Era of the Slave Trade
The slave trade, including the trans-Saharan, Indian Ocean, and trans-Atlantic trades, constituted nearly a millennium of interaction with the wider world and set in motion transformations in African societies, polities, and cultures. Topics include the debates about slavery in Africa, the impact of the slave trade on African societies, state formation, economic change, religious change, and household change in the period before the scramble for Africa in the late 19th century.

4-5 units, not given this year

HISTORY 345B. African Encounters with Colonialism

4-5 units, Aut (Roberts, R)

HISTORY 346. The Dynamics of Change in Africa
(Same as AFRICAST 301A) Crossdisciplinary colloquium; required for the M.A. degree in African Studies. Addresses critical issues in African Studies by exploring intersections of the organization of power, structure of the economy, and patterns of social stratification. Interpretive debates on Africa's engagement with the slave trade, impact of colonialism, decolonization, democratization and civil wars, health and society, and Africa's engagement with globalization. The process of knowledge production and its social location, and the current state of knowledge.

4-5 units, Aut (Roberts, R)

HISTORY 347E. Health and Society in Africa
(Same as HISTORY 245E) The history of disease, therapeutic and diagnostic systems, and the definition of health in precolonial, colonial, and postcolonial Africa. The social and political histories of specific epidemics, including sleeping sickness, influenza, TB, mental illness, and AIDS. The colonial contexts of epidemics and the social consequences of disease.

4-5 units, not given this year

HISTORY 348D. Law and Colonialism in Africa
(Same as HISTORY 245G) Law in colonial Africa provides an opportunity to examine the meanings of social, cultural, and economic change in the anthropological, legal, and historical approaches. Court cases as a new frontier for the social history of Africa. Topics: meanings of conflicts over marriage, divorce, inheritance, property, and authority.

4-5 units, not given this year

HISTORY 349. History without Documents
(Same as HISTORY 249) Can history be written about places and times for which are no written sources, or for people in literate societies who left no written traces? Practical training in historical methods for non-documentary sources, including oral traditions and history, archaeology, ecological sources, historical linguistics, ethnography, rituals, myths, songs, and art.

4-5 units, not given this year

HISTORY 351A. Core in American History, Part I

4-5 units, Aut (Rakove, J)

HISTORY 351B. Core in American History, Part II

4-5 units, not given this year

HISTORY 351C. Core in American History, Part III

4-5 units, Win (Campbell, J)

HISTORY 351D. Core in American History, Part IV

4-5 units, not given this year

HISTORY 351E. Core in American History, Part V
Required of all first-year United States History Ph.D. students.

4-5 units, Spr (Hobbs, A)

HISTORY 351F. Core in American History, Part VI
Required of all first-year Ph.D. students in U.S. History.

4-5 units, not given this year

HISTORY 352B. History of American Law
(Same as LAW 318.) Modern history of American law, legal thought, legal institutions and the legal profession. Topics include law and regulation of corporate organizations and labor relations in the age of enterprise, law of race relations in the South and North, development of classical legalism, critiques of classical legalism, modern administrative state, organized legal profession, New Deal legal thought and legislation, legal order of the 50s, expansion of enterprise liability, civil rights movements from 1940, rights revolution of the Warren Court and Great Society.

5 units, Spr (Friedman, L)

HISTORY 353D. Approaches to American Legal History
(Same as LAW 651.) Legal history may once have been primarily devoted to exploring legal doctrines and key judicial opinions, and thus to be of interest mainly to legal scholars and lawyers. Now, the best writing in legal history resembles historical writing more generally, and the study of legal ideas and practices is increasingly integrated with social, intellectual, cultural, and political history. Examines recent writings in American legal history, ranging broadly across time and space to ask how the field reflects developments in historical writing more generally, and how the use of legal materials affects our understanding of major aspects of American history.

4-5 units, not given this year

HISTORY 356. U.S.-China Relations: From the Opium War to Tiananmen
(Same as HISTORY 256) The history of turbulent relations, military conflict, and cultural clashes between the U.S. and China, and the implications for the domestic lives of these increasingly interconnected countries. Diplomatic, political, social, cultural, and military themes from early contact to the recent past. WIM
4-5 units, not given this year

HISTORY 358. Topics in the History of Sexuality: Sexual Violence
(Same as AMSTUD 258, CSRE 192E, HISTORY 258) Recent historical interpretations of sexual violence, with particular attention to the intersections of gender and race in the construction of rape, from early settlement through the twentieth century. Topics include the legal prosecution of rape in Early America; the racialization of rape in the U.S.; lynching and anti-lynching in the U.S.; and feminist responses to sexual violence.
4-5 units, Win (Freedman, E)

HISTORY 360. California's Minority-Majority Cities
(Same as HISTORY 260) Historical development and the social, cultural, and political issues that characterize large cities and suburbs where communities of color make up majority populations. Case studies include cities in Los Angeles, Santa Clara, and Monterey counties. Comparisons to minority-majority cities elsewhere in the U.S. Service Learning Course (certified by Haas Center).
4-5 units, Spr (McKibben, C)

HISTORY 365. Writing Asian American History
(Same as HISTORY 265) Recent scholarship in Asian American history, with attention to methodologies and sources. Topics: racial ideologies, gender, transnationalism, culture, and Asian American art history. Primary research paper.
5 units, not given this year

HISTORY 368E. American Foreign Policy and International History, 1941-2009
(Same as HISTORY 268E) Major events and interpretations from WW II to the war in Iraq. Issues of race, expansionism and power; nuclear weapons; and war.
4-5 units, not given this year

HISTORY 370. Graduate Colloquium on Colonial Latin American History
Sixteenth to nineteenth centuries. Indigenous cultures. The arrival of Europeans and its impact on native and European societies. Culture, religion and institutions, and everyday life. The independence period and the formation of new nations.
4-5 units, not given this year

HISTORY 371. Graduate Colloquium: Explorations in Latin American Social History
(Same as HISTORY 470) How to use primary sources such as government records, estate inventories, and parish records for social history.
4-5 units, Aut (Frank, Z)

HISTORY 373A. The European Expansion
(Same as HISTORY 273) The relationship between European monarchies and their colonial domains from the 16th-18th centuries. Reasons for expansion, methods, and results. Case studies include the Spanish, Portuguese, Dutch, French, and English domains in Africa, Asia, and the Americas. Readings include primary and secondary sources.
4-5 units, not given this year

HISTORY 378A. The Logic of Authoritarian Government, Ancient and Modern
(Same as POLISCI 346S) If authoritarianism is less economically efficient than democracy, and if authoritarianism is a less stable form of political organization than democracy, then why are there more authoritarian governments than democracies? To address this paradox, focus is on theoretical and empirical literature on authoritarian governments, and related literatures on the microeconomic analysis of property rights and credible commitments.
5 units, not given this year

HISTORY 378E. Political Economy of Development
(Same as POLISCI 440B) Required of Political Science Ph.D. students with comparative politics as a first or second concentration; others by consent of the instructor. The origins of political and economic institutions and their impact on long run outcomes for growth and democracy. Emphasis is on the analysis of causal models, hypothesis testing, and the quality of evidence.
5 units, Win (Haber, S)

HISTORY 379. Latin American Development: Economy and Society, 1800-2000
(Same as HISTORY 279) The newly independent nations of Latin America began the 19th century with economies roughly equal to, or even ahead of, the U.S. and Canada. What explains the economic gap that developed since 1900? Why are some Latin American nations rich and others poor? Marxist, dependency, neoclassical, and institutionalist interpretive frameworks. The effects of globalization on Latin American economic growth, autonomy, and potential for social justice.
4-5 units, not given this year

HISTORY 381. Economic and Social History of the Modern Middle East
(Same as HISTORY 281) The integration of the Middle East into the world capitalist market on a subordinate basis and the impact on economic development, class formation, and politics. Alternative theoretical perspectives on the rise and expansion of the international capitalist market are combined with possible case studies of Egypt, Iraq, and Palestine.
4-5 units, not given this year

HISTORY 381B. Modern Egypt
(Same as HISTORY 281B) From just before the Napoleonic expedition of 1798 to the present. Topics: European imperialism, the political economy of cotton, rise of nationalism, gender and the nation, minorities, the coup of 1952, positive neutralism and the Cold War, and the neo-liberal reconstruction of Egypt.
4-5 units, not given this year

HISTORY 382. The United States and the Middle East since 1945
(Same as HISTORY 282) Since the end of WW II, U.S. interests in the Middle East have traditionally been defined as access to oil at a reasonable price, trade and markets, containing the influence of the Soviet Union, and the security of Israel. Is this the full range of U.S. interests? How has the pursuit of these interests changed over time? What forces have shaped U.S. policy? What is the impact of U.S. policy on the region itself?
4-5 units, Win (Beinin, J)

HISTORY 383. The New Global Economy, Oil, and Islamic Movements in the Middle East
(Same as HISTORY 283) The integration of the Middle East into the world capitalist market on a subordinate basis and the impact on economic development, class formation, and politics. Alternative theoretical perspectives on the rise and expansion of the international capitalist market combined with case studies of Egypt, Iraq, and Palestine.
4-5 units, not given this year

HISTORY 384. The Ottoman Turks in Comparative Perspective: The Inner Life of a Eurasian Empire
(Same as HISTORY 284) The Ottoman Empire, one of the largest and most influential empires in world history, extended to three continents and survived for more than six centuries. But its history is often characterized as Oriental, despotic, and theocratic, reduced to a parade of capricious sultans, evil pashas, and hapless harem women. Comparative history used to challenge these views and to understand imperial longevity by tracing the ideological, fiscal, and military elements of state formation on both the European (Russia, Hungary, Spain) and Asian (Japan, China, Iran) continents. Situates the Ottomans' within their Eurasian heritage and explores the Empire's dynamic role in shaping early modern global systems. Chronological focus is neither on the origins of the empire nor on the Ottomans' final days, but rather on the 16th through 19th centuries when a notion of Ottoman-ness emerged in administrative practices, poetic and literary languages, and art.
4-5 units, Spr (Ferguson, H)

HISTORY 385A. Core in Jewish History, 17th-19th Centuries
4-5 units, not given this year

HISTORY 385B. Core in Jewish History, 20th Century
4-5 units, not given this year

HISTORY 385F. Mediators of Tradition & Modernity: Comparative Jewish Women's History from 17th Century to Present
(Same as HISTORY 285F, JEWISHST 285F) Focuses on the single role of women as mediators between tradition and modernity in the Jewish home. While simultaneously the preservationists of certain traditions such as kashrut, Shabbat observance, or prayer, Jewish women also served as the medium of Jewish families' paths to assimilation. Looks at women in the West and East comparing their experiences in the face of modernity, caught between tradition and modernity, while simultaneously encouraging the assimilation and cultural improvement of their children.
5 units, Spr (Roberts, S)

HISTORY 386E. Jews in France from the Dreyfus Affair to World War II
(Same as HISTORY 286E, JEWISHST 286E, JEWISHST 386E) Examines the experience of Jews in France and their confrontations with antisemitism, discrimination, violence, assimilation, and integration from the Dreyfus Affair through Vichy and World War II. Popular and institutionalized antisemitism in France placed significant limits on the Jews' path to assimilation and shaped the ways in which they related to France and to Judaism.
4-5 units, Win (Roberts, S)

HISTORY 387D. Tel Aviv: Site, Symbol, City
(Same as HISTORY 287D, JEWISHST 287D, JEWISHST 387D) Tel Aviv, the first Israeli city, from a cultural history perspective combining high and low cultural texts. Topics include: the utopian origins behind the establishment of Tel Aviv in Zionist texts; artists, poets, and writers in Tel Aviv's early years; as the capital of Bauhaus architecture; the emergence of Israeli pop culture in Tel Aviv of the late 60s and 70s; as the site of the Israeli Zionist and post-Zionist intellectuals. Sources include art, cinema, and literature.
4-5 units, Win (Dubnov, A)

HISTORY 387E. Understanding the Age of Extremes: Intellectual Responses to the Holocaust and Totalitarianism
(Same as HISTORY 287E, JEWISHST 287E, JEWISHST 387E) Intellectual responses of Jewish thinkers to the age of extremes. Readings include a wide assemblage of twentieth-century thinkers, such as Theodor Adorno, Leo Strauss, Hannah Arendt, Isaiah Berlin, and Herbert Marcuse. Analyses of enlightenment, nationalism, socialism and totalitarianism; their life stories, and their direct and indirect role in creating a transatlantic political discourse in postwar years. Contextualizes historically the fundamental features of Jewish intellectual activity after 1945.
4-5 units, Win (Dubnov, A)

HISTORY 387G. Jews in Colonial North Africa
(Same as HISTORY 287G, JEWISHST 287G, JEWISHST 387G) Under European imperialism, the relations between Jews ans Muslims in North Africa changed dramatically. Examines the complicated process of remaking Jewish identity under colonialism and the way in which citizenship, education, and assimilation separated Jews ans Muslims. Also looks at the spheres in which Jews and Muslims continued to coexist. Studies the impact of the rise of nationalism, anti-colonialism, Zionism, pan-Arabism, and antisemitism in the context of colonial North Africa.
4-5 units, Spr (Roberts, S)

HISTORY 387K. Gentlemen and Jews: History of the Jews of England
(Same as HISTORY 287K, JEWISHST 287K, JEWISHST 387K) Focuses on key chapters in the cultural and political histories of Britain and its Jews, between 1650 and 1950 and examines the advantages, as well as possible difficulties, that emerge when connecting Anglo-Jewish history to mainstream British history. What is unique about Jewish emancipation in England, and what are its connections to the formation of British national identity? Is there unique path in which Jewish Enlightenment developed in England? What was the contribution of Jews to British Imperialism? Is there a cultural affinity between English philosemitism and liberalism?
4-5 units, Spr (Dubnov, A)

HISTORY 388. Palestine and the Arab-Israeli Conflict
(Same as HISTORY 288, IPS 388, JEWISHST 288, JEWISHST 388) 1882 to the present. Comparison of representative expressions of competing historical interpretations. U.S. policy towards the conflict since 1948. (Beinin)
4-5 units, Win (Beinin, J)

HISTORY 390. Han Chinese and the Global White: The Production of Ethnoracial Majorities, East and West
4-5 units, not given this year

HISTORY 390A. Major Topics in Modern Chinese History: Qing/Republican Transition
Continuities and discontinuities in society, economy, politics, culture, and thought during the transition from the Qing dynasty to the republic. May be repeated for credit.
4-5 units, not given this year

HISTORY 391A. Archaeology and Modernity in Asia: The Excavation of Ancient Civilizations in Modern Times
(Same as HISTORY 291A) The interplay in Asia between antiquity and modernity, civilization and nation state, and national versus colonial science. The recent excavation of artifacts and places associated with Asian civilization such as the terracotta warriors in China and Angkor Wat in Cambodia. How Asian states have grappled with modernity and colonialism as they simultaneously dug up their ancient pasts.
4-5 units, not given this year

HISTORY 391B. The City in Imperial China
(Same as HISTORY 291B) The evolution of cities in the early imperial, medieval, and early modern periods. Topics include physical structure, social order, cultural forms, economic roles, relations to rural hinterlands, and the contrast between imperial capitals and other cities. Comparative cases from European history. Readings include primary and secondary sources, and visual materials.
3-5 units, not given this year

HISTORY 391C. Early Imperial China
The first millennium of imperial China, what endured over the centuries, and the major changes that took place in the political, social, and intellectual realms. Topics include the evolving geographic and environmental background, cities, the countryside, kinship, relations with the outer world, religion, philosophy,and literature. Also examines the nature of empire as a distinctive political form.
4-5 units, Spr (Lewis, M)

HISTORY 391D. Colonialism and Collaboration in East Asia
(Same as HISTORY 291D) The roles and problems of collaboration in the rise, sustenance, and fall of empires. Themes include conceptual definitions of collaboration and empire, collaboration of traditional elites, accommodation of religious communities, assimilation and collaboration, local intermediaries, and class and empire. Regional focus is East Asia; also cases from other colonial situations.
4-5 units, Aut (Moon, Y)

HISTORY 391E. Maps, Borders, and Conflict in East Asia
(Same as HISTORY 291E) The nature of borders and border conflicts in N.E. Asia from the 17th to the early 20th century. Focus is on contact zones between China, Russia, Korea, and Japan. The geopolitical imperatives that drove states to map their terrain in variable ways. Cultural, diplomatic, and imperial contexts. European pressures and contributions to E. Asian cartography; the uses of maps in surveillance, diplomacy, identity, and war. Student projects focus on a contested border zone.
4-5 units, not given this year

HISTORY 392. The Two Koreas
(Same as HISTORY 292) Major themes and scholarly works to understand the origins, outbreak, and consequences of the Korean War. The division of Korea into ROK and DPRK and their subsequent developments. Themes include: WW II in East Asia; Korean communist movements during Japanese colonial rule; the Cold War in East Asia; the roles of the U.S., China, and USSR in the Korean War; the ideas of key North and South Korean leaders, and the consolidation of the two Koreas after the Korean War.
4-5 units, Win (Moon, Y)

HISTORY 392B. Law and Society in Late Imperial China
Connections between legal and social history. Ideology and practice, center and periphery, and state-society tensions and interactions. Readings introduce the work of major historians on concepts and problems in Ming-Qing history.
4-5 units, Aut (Sommer, M)

HISTORY 392D. Japan in Asia, Asia in Japan
(Same as HISTORY 292D) How Japan and Asia mutually shaped each other in the late 19th and 20th centuries. Focus is on Japanese imperialism in Asia and its postwar legacies. Topics include: pan-Asianism and orientalism; colonial modernization in Korea and Taiwan; collaboration and resistance; popular imperialism in Manchuria; total war and empire; comfort women and the politics of apology; the issue of resident Koreans; and economic and cultural integration of postwar Asia.
4-5 units, Spr (Uchida, J)

HISTORY 392E. The Historical Roots of Modern East Asia
(Same as HISTORY 92A) Focus is on China and Japan before and during their transition to modernity. The populous, urbanized, economically advanced, and culturally sophisticated Ming empire and Muromachi shogunate in the 16th century when Europeans first arrived. How the status quo had turned on its head by the early 20th century when European and American steamships dominated the Pacific, China was in social and political upheaval, and Japan had begun its march to empire.
4-5 units, not given this year

HISTORY 392F. Traditional Korea: History and Culture
(Same as HISTORY 292F) Korea before 1800 and how iconic features of Korean tradition were created and reinvented. Themes include Korea's ancient kingdoms, the aristocracy and military in the Koryo dynasty, the print culture and Korean alphabet, ideologies and religions, the social status system and the life of women, the kingship and court culture of the Choson dynasty, and Korea's place in premodern East Asia. The modern and contemporary debates.
4-5 units, Spr (Moon, Y)

HISTORY 393. Frontier Expansion and Ethnic Statecraft in the Qing Empire
The legacy of the Qing dynasty in the territorial boundaries claimed by the People's Republic of China including the frontier zones that lie outside China proper. How the Qing acquired and ruled its frontier territories. Growth and migration of the Han Chinese population. How the dynasty's Manchu rulers managed ethnic difference. Consequences of Qing expansionism and ethnic statecraft for subject peoples and for the dynasty itself. At what point and by what processes did the Qing become China.
4-5 units, not given this year

HISTORY 393A. State, Society, and Economy in Qing Dynasty China
Historical scholarship on China during the Qing period, including the gentry, civil examinations, and the debate about social mobility; merchants, cities, and the debate about civil society/public sphere; taxation, local security, and famine relief; heterodoxy, collective violence, and rebellion; and rival approaches (neo-Malthusian, neo-conservative, and neo-Marxist) to understanding the high Qing economy.
4-5 units, not given this year

HISTORY 393B. Homosexuality in Historical and Comparative Perspective
(Same as HISTORY 293B) Comparative history of homoerotic desire, relations, and identity through scholarship on different historical periods and parts of the world: the classical Mediterranean, early modern European cities, late imperial and modern China, Tokugawa and modern Japan, and the U.S.
4-5 units, not given this year

HISTORY 393C. Late Imperial China
A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism.
4-5 units, Aut (Sommer, M)

HISTORY 393D. Empire and Cosmopolitanism: Traveling Ideas in Global Political Thought
(Same as HISTORY 293D)
4-5 units, not given this year

HISTORY 395B. Early Modern Japan
4-5 units, not given this year

HISTORY 395F. Race and Ethnicity in East Asia
(Same as HISTORY 295F) Historical, cultural, political and theoretical perspectives. Commonly misunderstood as an ethnically homogeneous country, the People's Republic of China is home to 55 officially recognized minority groups, many of whom inhabit the strategic border regions of the country. How similar assumptions of ethnic and racial homogeneity in Taiwan, Japan, and Korea are being reexamined by scholars in disciplines including anthropology, history, and political science.
4-5 units, not given this year

HISTORY 395J. Gender and Sexuality in Chinese History
4-5 units, not given this year

HISTORY 396D. Modern Japan
Introduces students to the major historical problems and historiographic trends in the study of modern Japan from the Meiji period to the present. Themes include approaches to late Meiji culture and politics, the formation of imperial subjects and citizens, agrarian society and politics, gender in modern Japan, empire and modernity, total war and transwar state and society, U.S. occupation, and postwar Japan.
4-5 units, Aut (Uchida, J)

HISTORY 399A. Design and Methodology for International Field Research
(Same as HISTORY 299X) Problems involved in research abroad: ethical issues; safety; security and conduct; human subjects protocol. Methodologies of research: interviewing, networking, case studies, participant observation, large surveys.
1 unit, Spr (Kollmann, N; Roberts, R)

HISTORY 399W. Graduate Directed Reading
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HISTORY 401A. Spatial History: Concepts, Methods, Problems
Technical training in GIS, with modules taught by Stanford Spatial History Lab staff; conceptual work in the use of these techniques in spatial historical analysis. Students develop their own spatial history projects and produce beta versions of dynamic visualizations.
4-5 units, Spr (Frank, Z)

HISTORY 401B. Spatial History, Part II
Prerequisite: 401A.
4-5 units, not given this year

HISTORY 406. Graduate Research Seminar on Colonial Law
Prerequisite: HISTORY 306G.
4-5 units, not given this year

HISTORY 414A. Medieval History
4-5 units, not given this year

HISTORY 414B. Medieval History
4-5 units, not given this year

HISTORY 421A. Early Modern Russia
4-5 units, not given this year

HISTORY 422A. Research Seminar on the History of the Russian Empire
4-5 units, not given this year

HISTORY 422B. Research Seminar in Imperial Russia
4-5 units, not given this year

HISTORY 424A. The Soviet Civilization
(Same as HISTORY 224A) Socialist visions and practices of the organization of society and messianic politics; the Soviet understanding of mass violence, political and ethnic; and living space. Primary and secondary sources. Research paper or historiographical essay.
4-5 units, Win (Weiner, A)

HISTORY 424B. The Soviet Civilization
Prerequisite: HISTORY 424A
4-5 units, Spr (Weiner, A)

HISTORY 424C. The End of Communism in Europe
Causes, course, and consequences.
4-5 units, not given this year

HISTORY 430A. Graduate Research Seminar: Early Modern Europe
Students will begin a research project on any aspect of early modern European history, 1400-1800, by taking HISTORY 430A in winter quarter as the first quarter of this two-quarter sequence. Enrollment by permission of instructor.
4-5 units, Win (Findlen, P)

HISTORY 430B. Graduate Research Seminar: Early Modern Europe
Prerequisite: HISTORY 430A. HISTORY 430B is the second quarter of a two-quarter sequence. Enrollment by permission of instructor.
4-5 units, not given this year

HISTORY 432A. Enlightenment Seminar
(Same as HISTORY 234, HISTORY 334, HUMNTIES 324) The Enlightenment as a philosophical, literary, and political movement. Themes include the nature and limits of philosophy, the grounds for critical intellectual engagement, the institution of society and the public, and freedom, equality and human progress. Authors include Voltaire, Montesquieu, Rousseau, Hume, Diderot, and Condorcet.
4-5 units, Win (Baker, K)

HISTORY 433A. European History
4-5 units, not given this year

HISTORY 438. European History Workshop
All European history graduate students in residence register for this weekly workshop, at which dissertation chapters and prospectuses, papers, and grant proposals by students and faculty are read and discussed.
1 unit, Spr (Robinson, P)

HISTORY 439A. Graduate Research Seminar: Modern Britain and the British Empire
4-5 units, not given this year

HISTORY 439B. Graduate Research Seminar: Modern Britain and the British Empire II
4-5 units, not given this year

HISTORY 443A. Human Origins: History, Evidence, and Controversy
(Same as HISTORY 243S) Research seminar. Debates and controversies include: theories of human origins; interpretations of fossils, early art, and the oldest tools; the origin and fate of the Neanderthals; evolutionary themes in literature and film; visual rhetoric and cliché in anthropological dioramas and phyletic diagrams; the significance of hunting, gathering, and grandmothering; climatological theories and neocatastrophic geologies; molecular anthropology; the impact of racial theories on human origins discourse. Background in human evolution not required.
4-5 units, not given this year

HISTORY 444C. The History of the Body in Science, Medicine, and Culture
(Same as HISTORY 244C) The human body as a natural and cultural object, historicized. The crosscultural history of the body from the 18th century to the present. Topics include: sciences of sex and race; medical discovery of particular body parts; human experimentation, foot binding, veiling, and other bodily coverings; thinness and obesity; notions of the body politic.
4-5 units, not given this year

HISTORY 445A. Research Seminar in African History
Primary sources such as government records and missionary archives. Students present work in progress. Prerequisite: consent of instructor.
4-5 units, not given this year

HISTORY 445B. Research Seminar in African History
Primary sources such as government records and missionary archives. Students present work in progress. Prerequisite: consent of instructor.
4-5 units, not given this year

HISTORY 446A. Research Seminar: African Nationalism and Beyond
(Same as HISTORY 246S) African intellectual, political, social and cultural institutions confronting issues of sovereignty, authority, heterarchy, and power during the 19th and 20th centuries.
4-5 units, not given this year

HISTORY 446B. Research Seminar: African Nationalism and Beyond
Prerequisite: 446A and consent of instructor.
4-5 units, not given this year

HISTORY 448A. African Societies and Colonial States
(Same as HISTORY 248S) The encounter between African societies and European colonialism in the colony or region of their choice. Approaches to the colonial state; tours of primary source collections in the Hoover Institution and Green Libraries. Students present original research findings and may continue research for a second quarter.
4-5 units, Win (Roberts, R)

HISTORY 448B. African Socieities and Colonial States
4-5 units, Spr (Roberts, R)

HISTORY 461A. Research Seminar on the Histories of Women, the Family, and Sexuality
Research design, research methods, and historical writing on topics in the histories of women, the family, or sexuality in the U.S. Prepares graduate students for dissertation work. Workshop model involves exchanging preliminary prospectus, outline, writing sample, and draft for peer responses. Article-length original paper based on primary sources, to be completed by the end of Spring Quarter.
4-5 units, Win (Freedman, E)

HISTORY 461B. Research Seminar on the Histories of Women, the Family, and Sexuality, Part II
Prerequisite: 461A.
4-5 units, Spr (Freedman, E)

HISTORY 470. Graduate Colloquium: Explorations in Latin American Social History
(Same as HISTORY 371) How to use primary sources such as government records, estate inventories, and parish records for social history.
4-5 units, Aut (Frank, Z)

HISTORY 470A. Graduate Research Seminar: Latin American Social History
Students will write a seminar paper. Prerequisite: HISTORY 371.
4-5 units, not given this year

HISTORY 481. Research Seminar in Middle East History
(Same as HISTORY 287S, JEWISHST 287S, JEWISHST 481) Student-selected research topics.
4-5 units, Spr (Beinin, J)

HISTORY 481A. Research Seminar in Middle East History
4-5 units, Sum (Staff)

HISTORY 486A. Graduate Research Seminar in Jewish History
(Same as JEWISHST 486A)
4-5 units, Spr (Staff)

HISTORY 486B. Graduate Research Seminar in Jewish History
4-5 units, not given this year

HISTORY 495A. Qing Legal Documents
How to use Qing legal documents for research. Winter: sample documents that introduce the main genres including: the Qing code and commentaries; magistrates' handbooks and published case collections; and case records from Chinese archives. Spring: class meets occasionally; students complete research papers. Prerequisite: advanced reading ability in Chinese.
4-5 units, Win (Sommer, M)

HISTORY 495B. Qing Legal Documents
How to use Qing legal documents for research. Winter: sample documents that introduce the main genres including: the Qing code and commentaries; magistrates' handbooks and published case collections; and case records from Chinese archives. Spring: class meets occasionally; students complete research papers. Prerequisite: advanced reading ability in Chinese.
4-5 units, Spr (Sommer, M)

HISTORY 497A. Maps and Gazetteers as Sources for East Asian History
For graduate students of early modern or modern East Asia. Includes weekend workshop on Chinese historical GIS with Harvard's Peter Bol. Students work with the Stanford Spatial History Lab to develop analytical techniques. Prerequisite: background in GIS.
4-5 units, not given this year

HISTORY 497B. Maps and Gazetters as Sources for East Asian History, Part 2
Prerequisite: HISTORY 497A.
4-5 units, not given this year

HISTORY 498C. Japanese Colonial Archives
First part of a two quarter sequence. Graduate seminar on conducting research in modern Japanese history. Focus is on Japanese imperialism and colonialism in Asia, especially Korea. Different types of archives, from national and research libraries to online databases, and methods of research including oral history. Primary sources include government publications, classified police records, and media sources.
4-5 units, not given this year

HISTORY 499X. Graduate Research
Units by arrangement. May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HISTORY 802. TGR Dissertation
Units by arrangement.
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HISTORY AND PHILOSOPHY OF SCIENCE (HPS) COURSES

UNDERGRADUATE COURSES IN HISTORY AND PHILOSOPHY OF SCIENCE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

HPS 60. Introduction to Philosophy of Science
(Same as PHIL 60) 20th-century views on the nature of scientific knowledge. Logical positivism and Popper; the problem of induction; Kuhn, Feyerbend, and radical philosophies of science; subsequent attempts to rebuild moderate empiricist and realist positions. GER:DB-Hum
5 units, Spr (Ryckman, T)

HPS 61. Science, Religion, and the Birth of Modern Philosophy
(Same as PHIL 61) Galileo's defense of the Copernican world-system that initiated the scientific revolution of the 17th century, led to conflict between science and religion, and influenced the development of modern philosophy. Readings focus on Galileo and Descartes. GER:DB-Hum
5 units, not given this year

HPS 154. The History of Scientific Methods, Pythagoras to Popper
(Same as PHIL 163H) History of scientific methods and associated science from ancient Greece to the 20th century. Case studies include Pythagoras, Plato, and Euclid; Aristotle; medieval science; scientific Renaissance of the 1540s; methodological clashes involving the Church, Galileo, Bacon, and Descartes; Newton; Faraday; Darwin; rise of statistical methods; beginnings of modern physics; Popper. The mutual influences of method and practice. What does and does not qualify as science. Recommended: background in history, philosophy, or a technical field such as mathematics, science, or engineering. GER:DB-Hum
4 units, Aut (McCaskey, J)

HPS 158. The Social History of Mental Illness
The variety of meanings of mental illness in the past, and the diagnostic, therapeutic, cultural, and policy challenges historically posed by mental illness. Focus is on the U.S. but not limited to it. How has mental illness been defined in history? How has the mind been medicalized and managed? Topics include the rise of institutions for the mentally ill, the growth of the psychiatric profession and the relationship between psychiatry, deviance and anti-psychiatry, and gender and psychiatric norms. GER:DB-SocSci
5 units, Win (Horn, M)

HPS 199. Directed Reading
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN HISTORY AND PHILOSOPHY OF SCIENCE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

HPS 299. Graduate Individual Work
May be repeated for credit. (Staff)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

HUMAN BIOLOGY (HUMBIO) COURSES

UNDERGRADUATE COURSES IN HUMAN BIOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

HUMBIO 2A. Genetics, Evolution, and Ecology
Introduction to the principles of classical and modern genetics, evolutionary theory, and population biology. Topics: micro- and macro-evolution, population and molecular genetics, population dynamics, and community ecology, emphasizing the genetics of the evolutionary process and applications to human populations. GER:DB-NatSci
5 units, Aut (Boggs, C; Durham, W; Francke, U)

HUMBIO 2B. Culture, Evolution, and Society
Introduction to the evolutionary study of human diversity. Hominid evolution, the origins of social complexity, social theory, and the emergence of the modern world system, emphasizing the concept of culture and its influence on human differences. GER:DB-SocSci
5 units, Aut (Klein, R; Wolf, A)

HUMBIO 3A. Cell and Developmental Biology
The principles of the biology of cells: principles of human developmental biology, biochemistry of energetics and metabolism, the nature of membranes and organelles, hormone action and signal transduction in normal and diseased states (diabetes, cancer, autoimmune diseases), drug discovery, immunology, and drug addiction. Prerequisite: college chemistry or completion of the HumBio chemistry lecture series during the fall quarter. GER:DB-NatSci
5 units, Win (Fuller, M; Kaiser, A; Nusse, R; Scott, M; Talbot, W)

HUMBIO 3B. Behavior, Health, and Development
Research and theory on human behavior, health, and life span development. How biological factors and cultural practices influence cognition, emotion, motivation, personality, and health in childhood, adolescence, and adulthood. GER:DB-SocSci
5 units, Win (Lyons, D; Fernald, A)

HUMBIO 3Y. Practicum in Child Development
Practical experience at Bing Nursery School for 3.5 hours per week. Pre- or corequisite: 3B. (AU)
1 unit, Win (Wise, B)

HUMBIO 4A. The Human Organism
Organ system physiology: the principles of neurobiology and endocrinology, and the functions of body organs. The mechanisms of control, regulation, and integration of organ systems function. GER:DB-NatSci
5 units, Spr (Fernald, R)

HUMBIO 4B. Environmental and Health Policy Analysis
Connections among the life sciences, social sciences, public health, and public policy. The economic, social, and institutional factors that underlie environmental degradation, the incidence of disease, and inequalities in health status and access to health care. Public policies to address these problems. Topics include pollution regulation, climate change policy, biodiversity protection, health care reform, health disparities, and women¿s health policy GER:DB-SocSci

5 units, Spr (Goulder, L; Baker, L)

HUMBIO 6. Human Origins
(Same as ANTHRO 6, ANTHRO 206) The human fossil record from the first non-human primates in the late Cretaceous or early Paleocene, 80-65 million years ago, to the anatomically modern people in the late Pleistocene, between 100,000 to 50,000 B.C.E. Emphasis is on broad evolutionary trends and the natural selective forces behind them. GER:DB-NatSci

5 units, not given this year

HUMBIO 21. Introduction to Brain and Behavior
(Same as BIO 20) Evolutionary principles to understand how the brain regulates behavior physiologically, and is also influenced by behavioral interactions. Topics include neuron structure and function, transmission of neural information, anatomy and physiology of sensory and motor systems, regulation of body states, the biological basis of learning and memory, and behavioral abnormalities. GER:DB-NatSci

3 units, Aut (Fernald, R), alternate years, not given next year

HUMBIO 27. Traditional Chinese Medicine
The philosophy and history behind traditional Chinese medicine. Concepts such as Qi, Yin/Yang, meridians, Chinese organs, and the 5 elements. How these concepts are applied through techniques such as acupuncture, herbal medicine, Qi gong, and massage. How traditional Chinese medicine is understood from a scientific standpoint. Political and socioeconomic implications. Observation of an acupuncturist. Readings on the integration of Eastern and Western medicine and on traditional Chinese medicine.

1 unit, Spr (Golianu, B)

HUMBIO 82A. Qualitative Research Methodology
Goal is to develop knowledge and skills for designing and conducting qualitative research studies including purposes, conceptual contexts, research questions, methods, validity issues, and interactions among these facets. Each student designs a qualitative research study.

3 units, Win (Wolf, J), Spr (Wolf, J)

HUMBIO 82B. Advanced Data Analysis in Qualitative Research
For students writing up their own qualitative research. Students prepare a complete draft presenting their own qualitative research study including results, with reports drafted section by section, week by week. Class provides feedback, guidance, support.

3 units, Aut (Wolf, J)

HUMBIO 82Q. The Omnivore's Dilemma, or Is It?
(Stanford Introductory Seminar) Preference to sophomores. The omnivore's dilemma: making the right food choices from the vast number possible. The health implications of our food choices. Why people make these choices; the positive and negative influences of the food industry; research in nutritional science; and public health policies and the resulting confusion about what people should eat. Readings include In Defense of Food by M. Pollan and primary reference materials. Introduction to the scientific literature in human nutrition.

3 units, Aut (Endemann, G)

HUMBIO 84Q. Social Justice, Responsibility, Health
(Stanford Introductory Seminar) Preference to sophomores. Reducing health disparities among segments of the US population is an over-arching goal of the Centers for Disease Control and Prevention (CDC). Evidence for and cause of existing health disparities; criteria for calling a health disparity unjust; and assignment of responsibility for maintaining or recovering good health. Service Learning Course (certified by Haas Center).

4 units, Aut (Heaney, C)

HUMBIO 86Q. Love as a Force for Social Change
(Stanford Introductory Seminar) Preference to sophomores. Biological, psychological, religious, social and cultural perspectives on the concept of love. How love is conceptualized across cultures; love as the basis of many religions; different kinds of love; the biology of love; love as sickness; love and sex; the languages of love including art, literature, music, and poetry. Emphasis is on writing. Oral presentation. A requirement of this class is participation in public blogs.

3 units, Win (Murray, A)

HUMBIO 90Q. Contemporary Issues in Human Experimentation
(Stanford Introductory Seminar) Preference to sophomores. The guiding principles currently used to protect human subjects in terms of informed consent and protection of privacy; ethical issues relating to compensatory mechanisms for inherent risks; historical perspective and the development of the current mechanisms to safeguard the privacy and integrity of the individual; examples of use/abuse of human experimentation during medieval, Nazi, and modern times. Guest speakers currently performing human experiments or involved in approving such experimentation.

3 units, Aut (Constantinou, C)

HUMBIO 91Q. Neuroethology: The Neural Control of Behavior
(Stanford Introductory Seminar) Preference to sophomores. Animal behavior offers insights about evolutionary adaptations. The origins of the study of animal behavior and its development to the present. Discussion of original research papers. The use and misuse of parallels between animal and human behavior. Possible field trip to observe animals in their natural habitat. GER:DB-NatSci

3 units, Aut (Fernald, R)

HUMBIO 96Q. Injustice, Advocacy and Courage: The Path of Everyday Heroes
(Stanford Introductory Seminar) This course will study the paradigms of people of courage, action and energy who have fought against injustice by advocating for causes against great odds and at personal risk. The focus will be on everyday people who have taken action, often at great personal risk, not for ambition, but because of their convictions and steadfast commitment to their beliefs.

3 units, Win (Abrams, W)

HUMBIO 97Q. Sport, Exercise, and Health: Exploring Sports Medicine
(Stanford Introductory Seminar) (Same as ORTHO 97Q) Preference to sophomores. Sports medicine is the practice of clinical medicine at the interface between health and performance, competition and well-being. While sports medicine had its origins in providing care to athletes, medical advances developed in care of athletes exerted a great effect on the nature and quality of care to the broader community. Topics include sports injuries, medical conditions associated with sport and exercise, ethics, coaching, women's issues, fitness and health, and sports science. Case studies.

3 units, Aut (Matheson, G), Win (Matheson, G), Spr (Matheson)

HUMBIO 99Q. Becoming a Doctor: Readings from Medical School, Medical Training, Medical Practice
(Stanford Introductory Seminar) Preference to sophomores. For students considering medicine as a career. Goal is to acquaint students with medical school, training in medicine and surgery, and the practice of medicine and surgery. Topics include: how to pick a medical school and a residency; how medicine affects family life, especially children; the differences between surgical and medical specialties; the advantages and disadvantages among academic/teaching, pure research, group practice, HMO, hospital staff, or private practice; malpractice concerns; and financial considerations.

3 units, Aut (Zaroff, L)

HUMBIO 111. Human Dimensions of Global Environmental Change: Resilence, Vulnerability, and Environmental Justice
(Same as ANTHRO 173) The complexity of social and political issues surrounding global environmental change. Emphasis is on synergies precipitated by human-induced climatic change. Case studies and scenarios to explore the vulnerability and resilience in households, communities, regions, and nationmstates most affected by extreme weather conditions. Their concerns, livelihood changes, and diverse responses of rural smallholders, indigenous communities, the state, and local and regional migrants. Central theme is environmental justice.

3 units, Spr (Curran, L)

HUMBIO 112. Conservation Biology
(Same as BIO 144) Principles and application of the science of preserving biological diversity. Topics: sources of endangerment of diversity; the Endangered Species Act; conservation concepts and techniques at the population, community, and landscape levels; reserve design and management; conflict mediation. 4 units if taken with a service learning component. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: BIO 101, or BIO 43 or HUMBIO 2A with consent of instructor. GER:DB-NatSci
3-4 units, Win (Boggs, C; Launer, A)

HUMBIO 113. The Biologies of Humans and Plants
The biological interdependence of humans and plants, particularly the ways in which people have imposed selection pressures and ecological change on one another. Topics include: evolution and basic plant structure; plant characteristics and genetic variants allowing domestication; effects of plant domestication on human biology; plants in traditional and contemporary diets; and human influences on plant biology through genetic manipulation and environmental change. Class meetings center on discussing journal articles.
3 units, Aut (Preston, K)

HUMBIO 114. Environmental Change and Emerging Infectious Diseases
(Same as ANTHRO 177, ANTHRO 277) The changing epidemiological environment. How human-induced environmental changes, such as global warming, deforestation and land-use conversion, urbanization, international commerce, and human migration, are altering the ecology of infectious disease transmission, and promoting their re-emergence as a global public health threat. Case studies of malaria, cholera, hantavirus, plague, and HIV. GER:DB-SocSci
3-5 units, Aut (Durham, W; Jones, J)

HUMBIO 115. Environmental Crises and State Collapse: Lessons from the Past
(Same as ANTHRO 115A) The effects and consequences of long-term human interaction with the environment. How and why past societies adapted, or failed to adapt, to changing environmental conditions and relevance to current environmental problems. Demographic, archaeological, and environmental data assessed using case studies from around the world since the late Pleistocene. Development of agriculture, societal collapse, sustainability, and policy response. Prerequisite: Human Biology core or equivalent or consent of instructor.
3 units, Aut (Truncer, J)

HUMBIO 116. Controlling Climate Change in the 21st Century
(Same as EARTHSYS 147, EARTHSYS 247) Global climate change science, impacts, and response strategies. Topics: scientific understanding of the climate system; modeling future climate change; global and regional climate impacts and vulnerability; mitigation and adaptation approaches; the international climate policy challenge; and decarbonization of energy and transportation systems. GER:DB-NatSci
3 units, not given this year

HUMBIO 117. Environment and Health: An Impact Assessment
(Same as ANTHRO 117A) The effects of environment upon human and animal health and vice versa, including impacts of climate change, local environment (urban/rural health issues), land-use change upon health issues such as asthma, cholera, and malaria. Emphasis is on interdisciplinary approaches including medicine, epidemiology, ecology, and environmental science. Health/environment topics from multiple levels, such as from the standpoint of the individual organism to the ecosystem. How such knowledge is applied to policy and public health. Students construct new conceptual models for health/environment case studies.
3 units, Spr (Salkeld, D)

HUMBIO 118. Theory of Ecological and Environmental Anthropology
(Same as ANTHRO 90C) Dynamics of culturally inherited human behavior and its relationship to social and physical environments. Topics include a history of ecological approaches in anthropology, subsistence ecology, sharing, risk management, territoriality, warfare, and resource conservation and management. Case studies from Australia, Melanesia, Africa, and S. America. GER:DB-SocSci
5 units, Win (Bird, D)

HUMBIO 119. Demography: Health, Development, Environment
(Same as BIO 102) Demographic methods and their application to understanding and projecting changes in human infant, child, and adult mortality and health, fertility, population, sex ratios, and demographic transitions. Progress in human development, capabilities, and freedoms. Relationships between population and environment. Prerequisites: numeracy and basic statistics; Biology or Human Biology core; or consent of instructor. GER:DB-SocSci
3 units, not given this year

HUMBIO 119C. Demography and Measurement of the Effects of Armed Conflict
This course presents the measurable demographic effects of conflicts, which go far beyond the counting of casualties of men involved in war-like events. The course provides the demographic and statistical tools that allow us to measure the indirect demographic effects (infant mortality, life expectancy, migration, marriage and fertility) of conflicts under the difficulties posed by those events, such as having lower data quality or no data at all, and the entanglements of causes of both conflict and demographic changes, such poverty.
4 units, Spr (Urdinola, B)

HUMBIO 120. Health Care in America: The Organizations and Institutions that Shape the Health Care System
Health policy and health care delivery. Options for health care reform. Prerequisite: Human Biology core or equivalent, or consent of instructor.
4 units, Aut (Barr, D)

HUMBIO 120A. Health Policy and Health Care System Design
The design of health care systems and their ability to improve the health of the population successfully. Concepts related to health care systems and components. Focus is on the health care systems of the U.S. and UK.
4 units, not given this year

HUMBIO 121. Critical Issues in Child Health
Integrated picture of the physical and psychosocial health factors that result in a healthy child building on principles taught in the Human Biology core. Students apply basic human physiology to the physiology of the child to develop perspective on global pediatric health challenges and how the cultural context influences and defines the child living within it.
4 units, Aut (Adam, M), Spr (Adam, M)

HUMBIO 121E. Ethnicity and Medicine
(Same as FAMMED 244) Weekly lecture series introduces information about ethnic and cultural factors that impact patient care. Culturally sensitive healthcare services and contemporary research issues involving minority and underserved populations. Topics include health care issues and indigenous medical practices of African Americans, Asians, Latinos, Native Americans, immigrants, and refugees in both urban and rural settings. 1 unit for attending weekly lectures only; 2 units for attending lectures followed by one-hour discussions facilitated by course director; 3 units (non-med students, grad or undergrad only) for preparing weekly response papers and a research paper, as well as attending lectures and discussions. Students taking the course for 3 units may earn a letter grade.
1-3 units, Spr (Garcia, R)

HUMBIO 122. Beyond Health Care: Seeking Health in Society
(Same as PEDS 222) Available evidence at the national and cross-country level linking social welfare interventions and health outcomes. If and how non-health programs and policies could have an impact on positive health outcomes. Evaluation of social programs and policies that buffer the negative health impact of economic instability and unemployment among adult workers and their children. Examination of safety nets, including public health insurance, income maintenance programs, and disability insurance. Prerequisites: HUMBIO 4B or equivalent, and background in research methods and statistics.
3 units, Aut (Rodriguez, E)

HUMBIO 122S. Social Class, Race, Ethnicity, Health
Socioeconomic, racial, and ethnic differences in health status. Access to care of racial and ethnic minorities and those from lower

social classes. Institutional factors such as government programs, and individual factors such as unconscious racial bias on the part of care providers or distrust of providers on the part of patients. The intersection of lower social class and ethnic minority status in health status and health care access. GER:DB-SocSci, EC-AmerCul

4 units, Win (Barr, D)

HUMBIO 124. Fat Nutrition and Current Health Concerns

Relationships between dietary fats and heart disease, cancer, obesity, diabetes, and fitness. Proposed benefits of omega-3 fats and antioxidants. Historical and economic influences on fat nutrition. Prerequisite: 3A; pre- or corequisite: 4A; preference to students who have completed 4A. Recommended: 130.

4 units, Spr (Endemann, G)

HUMBIO 125. Current Controversies in Women's Health

(Same as OBGYN 256) Interdisciplinary. Focus is on the U.S. Topics include: health research; bioethical, legal, and policy issues; scientific and cultural perspectives; social influences; environmental and lifestyle effects on health; and issues related to special populations. Guest lecturers; student debates. Prerequisite: Human Biology core or equivalent, or consent of instructor. GER:EC-Gender

2-3 units, Spr (Jacobson, M; Stefanick, M)

HUMBIO 126. Promoting Health Over the Life Course: Multidisciplinary Perspectives

Disease prevention and health promotion topics pertinent to different stages of the life span emphasizing healthy lifestyle and reducing risk factors in both individuals and communities. Focus is on scientific investigation, the application of behavioral science to risk reduction strategies, and the importance of health promotion as a social and economic imperative. Topics include: epidemiology of chronic diseases; social determinants of health, behavior change; obesity, nutrition, and stress; young adult, mid-life and aging health issues; health care delivery and public health system; workplace wellness programs; and environmental and international issues. Prerequisite: Human Biology core or equivalent, or consent of instructor.

3 units, Aut (Stefanick, M; Alles, W)

HUMBIO 127A. Community Health: Assessment and Planning I

Major determinants of health in a community. Working with community partners to identify health issues and plan programs and policies to prevent disease and promote health. Service learning component involving students in community health assessment techniques. Final grade given upon completion of HUMBIO 127B. Service Learning Course (certified by Haas Center). Prerequisite: 4B or equivalent, or consent of instructor.

4 units, Win (Heaney, C)

HUMBIO 127B. Community Health: Assessment and Planning II

Continuation of 127A. Service learning course with emphasis on conducting community health assessment and planning projects in collaboration with community-based organizations. Service Learning Course (certified by Haas Center). Prerequisite: 4B or equivalent, 127A, or consent of instructor.

4 units, Spr (Heaney, C)

HUMBIO 128. Community Health Psychology

(Same as PSYCH 101) Social ecological perspective on health emphasizing how individual health behavior is shaped by social forces. Topics include: biobehavioral factors in health; health behavior change; community health promotion; and psychological aspects of illness, patient care, and chronic disease management. Prerequisites: HUMBIO 3B or PSYCH 1, or equivalent.

4 units, Win (Heaney, C)

HUMBIO 129. Critical Issues in International Women's Health

Women's lives, from childhood through adolescence, reproductive years, and aging. Economic, social, and human rights factors, and the importance of women's capacities to have good health and manage their lives in the face of societal pressures and obstacles. Emphasis is on life or death issues of women's health that depend on their capacity to negotiate or feel empowered, including maternal mortality, violence, HIV/AIDS, reproductive health, and sex trafficking. Organizations addressing these issues. A requirement of this class is participation in public blogs. Prerequisites: Human Biology core or equivalent or consent of instructor. GER:EC-Gender

4 units, Aut (Murray, A), Win (Murray, A)

HUMBIO 129P. International Health Policy: Comparative Health Care Systems

Key dimensions and issues involved in affluent health care systems in countries such as the U.K., Canada, Germany, Sweden, Japan, and France, including pharmaceutical policy and lessons for U.S. Key problems that health care systems face, principal characteristics of several systems, forces of change, and structural differences. How a given country approaches health care reveals its values, sense of justice, views on rationing, interest groups, and political power structure.

3 units, Aut (Light, D)

HUMBIO 129S. Global Public Health

The class is an introduction to the fields of international public health and global medicine. It focuses on resource poor areas of the world and explores major global health problems and their relation to policy, economic development and human rights. The course is intended for students interested in global health, development studies, or international relations, and provides opportunities for in-depth discussion and interaction with experts in the field. .

4 units, Win (Wise, P)

HUMBIO 130. Human Nutrition

The study of food, and the nutrients and substances therein. Their action, interaction, and balance in relation to health and disease. Emphasis is on the biological, chemical, and physiological processes by which humans ingest, digest, absorb, transport, utilize, and excrete food. Dietary composition and individual choices are discussed in relationship to the food supply, and to population and cultural, race, ethnic, religious, and social economic diversity. The relationships between nutrition and disease; eating disorders; ethnic diets; vegetarianism; nutritional deficiencies; nutritional supplementation; phytochemicals; and food safety. Prerequisite: Human Biology core or consent of instructor.

4 units, Spr (Gardner, C)

HUMBIO 132. Functional Anatomy of Exercise

Interdisciplinary: physiology, pathology, and biomechanics. Anatomy of the body's major joints in the context of exercise and movement emphasizing adaptations that occur with intensity and nature of exercise, age, and disease. Students work in cooperative groups with students at the Gothenburg School of Sports Science in Sweden to produce original research on an aspect of biomechanics and sport. Sources include the Stanford Human Performance Laboratory. Enrollment limited to 40. Prerequisites: 139 or consent of instructor.

4 units, Spr (Garza, D)

HUMBIO 133. Human Physiology

(Same as BIO 112, BIO 212) The functioning of organ systems emphasizing mechanisms of control and regulation. Topics: structure and function of endocrine and central nervous systems, cardiovascular physiology, respiration, salt and water balance, exercise, and gastrointestinal physiology. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology or Human Biology core. GER:DB-NatSci

4 units, Win (Garza, D)

HUMBIO 135. Exercise Physiology

How body systems respond to the stress of acute exercise and adapt to chronic exercise training. How the cardiovascular system adapts to optimize oxygen delivery and utilization, how muscles generate force and hypertrophy in response to training, how metabolic/biochemical pathways are regulated to support the increased energy demand of exercise. Theories on the causes of fatigue and muscle soreness, and on what limits human performance. Applied topics such as the effects of aging, gender, and environmental conditions (high altitude, heat, cold) on exercise capacity will also be discussed. Prerequisite: Human Biology core, Biology core, or equivalent, or consent of instructor.

4 units, Aut (Friedlander, A)

HUMBIO 135S. Applied Topics in Exercise Physiology and Metabolism

Focus on scientific research related to exercise physiology, sports performance, impacts of aging and environmental physiology. Exercise physiology lab and field work experience. Student pres-

entations. Summary paper. A requirement of this class is participation in public blogs. Enrollment limited to 12. If class is full, contact instructor for application. Prerequisites: HB135 or consent of instructor.

3 units, Spr (Friedlander, A)

HUMBIO 139. Sports Medicine

Sports, exercise, health, and medicine throughout the human performance continuum. Exercise as therapy; injuries and illnesses that result from sports and exercise; and the use of technology in modern sports science. Sources include physiology, nutrition, and biomechanics. Medical problems exacerbated or caused by exercise and sport; maximizing performance in elite athletes; and population-based issues such as exercise and its relationship to health, drugs in sport, and aging. Prerequisite: Biology or Human Biology core, or consent of instructor. GER:DB-NatSci

4 units, Aut (Garza, D)

HUMBIO 140. Sex Differences in Human Physiology and Disease

(Same as OBGYN 240, MED 240) Chromosomal and hormonal influences on cells, tissues, and organs that underlie the development of reproductive organs and sexual dimorphism of the neuroendocrine system. Consequences of sex hormones and environmental factors that differ between men and women in systems including the musculoskeletal, neurological, cardiovascular, and immunological. Guest lecturers. Prerequisite: Human Biology core or equivalent, or consent of instructor. GER:EC-Gender

2-3 units, Win (Stefanick, M)

HUMBIO 142. Adolescent Development

Underlying changes and their consequences in everyday functioning. Physical, cognitive, social, and sexual development; how these changes influence the emerging sense of identity, autonomy, and intimacy. Contexts in which adolescents move such as family, friends and peers, school, and workplace. Focus is on normal development of boys and girls; attention to problem outcomes including eating disorders, depression, and teen pregnancy. Prerequisite: 3B or PSYCH 1, or consent of instructor.

4 units, Spr (Medoff, L)

HUMBIO 143. Adolescent Sexuality

Developmental perspective. Issues related to scientific, historical, and cultural perceptions; social influences on sexual development; sexual risk; and the limitations and future directions of research. Sexual identity and behavior, sexually transmitted diseases including HIV, pregnancy, abortion, gay and lesbian youth, sex education and condom availability in schools, mass media, exploitative sexual activity, and difficulties and limitations in studying adolescent sexuality. Legal and policy issues, gender differences, and international and historical trends. Prerequisite: Human Biology core or equivalent, or consent of instructor.

4 units, Win (Medoff, L)

HUMBIO 144. Boys' Psychosocial Development

(Same as EDUC 143) From early childhood through adolescence. Emphasis is on how boys' lives and experiences are embedded within their interpersonal relationships and social and cultural contexts. Interdisciplinary approach including perspectives from fields such as psychology, sociology, anthropology, family studies, and education. Prerequisite: Human Biology core, or Developmental Psychology , or consent of instructor. GER:EC-Gender

4 units, Spr (Chu, J)

HUMBIO 145L. The Biology and Evolution of Language

(Same as ANTHRO 171, ANTHRO 271) Language as an evolutionary adaptation of humans. Comparison of communicative behavior in humans and animals, and the inference of evolutionary stages. Structure, linguistic functions, and the evolution of the vocal tract, ear, and brain, with associated disorders (stuttering, dyslexia, autism, schizophrenia) and therapies. Controversies over language centers in the brain and the innateness of language acquisition. Vision, color terminology, and biological explanation in linguistic theory. GER:DB-NatSci

4-5 units, not given this year

HUMBIO 146. Culture and Madness: Anthropological Approaches to Psychiatric Illness

(Same as ANTHRO 181, ANTHRO 281) Interdisciplinary. Culture and social context on the identification, course, and outcome of psychiatric illness. What is known from psychiatry about the nature of illness as a biomedical process and from anthropology about the life course of illness within particular settings. Prerequisite: Human Biology core or equivalent or consent of instructor.

3-5 units, not given this year

HUMBIO 146D. Developmental Disabilities: From Biology to Policy

(Same as PEDS 246) Changes in science and societal attitudes have resulted in an increased prevalence of individuals with disabilities in our communities. This course focuses on Down syndrome, cerebral palsy, Fragile X, and autism. Topics include medical and social definitions of disability; the impact of attitudes, beliefs, and values; advances in biological sciences that may lead to novel therapies to improve functioning; and federal policies, laws, and regulations such as IDEA that increase opportunities for community participation. A field experience complements classroom discussion. Prerequisite: HUMBIO core or equivalent, or consent of instructor.

2-3 units, Win (Feldman, H)

HUMBIO 148. Kinship and Marriage

The courses compares selected societies in Africa, Asia, and South Asia with the aim of discovering the nature of human kinship systems. GER:DB-SocSci, EC-Gender

4 units, Win (Wolf, A)

HUMBIO 148W. Women, Fertility, and Work

(Same as ANTHRO 151, ANTHRO 251) How do choices relating to bearing, nursing, and raising children influence women's participation in the labor force? Cultural, demographic, and evolutionary explanations, using crosscultural case studies. Emphasis is on understanding fertility and work in light of the options available to women at particular times and places. GER:DB-SocSci, EC-Gender

5 units, not given this year

HUMBIO 149. Psychological and Educational Resilience Among Children and Youth

(Same as EDUC 256) Theoretical, methodological, and empirical issues pertaining to the psychological and educational resilience of children and adolescents. Overview of the resilience framework, including current terminology and conceptual and measurement issues. Adaptive systems that enable some children to achieve successful adaptation despite high levels of adversity exposure. How resilience can be studied across multiple levels of analysis, ranging from cell to society. Individual, family, school, and community risk and protective factors that influence children's development and adaptation. Intervention programs designed to foster resilient adaptation in disadvantaged children's populations.

4 units, Spr (Padilla, A)

HUMBIO 149L. Longevity

(Same as NENS 202, PSYCH 102) Interdisciplinary. Challenges to and solutions for the young from increased human life expectancy: health care, financial markets, families, work, and politics. Guest lectures from engineers, economists, geneticists, and physiologists. GER:DB-SocSci

4 units, given next year

HUMBIO 150A. Assisted Reproductive Technologies

(Same as DBIO 202, OBGYN 202) Primary and current literature in basic and clinical science aspects of assisted reproductive technologies (ART), and demonstrations of current ART techniques including in vitro fertilization and embryo culture, and micromanipulation procedures such as intracytoplasmic sperm injection and embryo biopsy and cryopreservation.Class only may be taken for 1 unit. 2 units includes papers and attendance at clinical demonstrations. 3 units includes a term paper. Recommended: DBIO 201, or consent of instructors.

1-3 units, Win (Porzig, E)

HUMBIO 151. Introduction to Epidemiology
Principles of epidemiology: the distribution and determinants of disease; the control of health problems; and the medical detective work required to understand disease outbreaks. Case studies from developed and developing countries to explore the use of epidemiological techniques in describing disease dynamics of human, emerging and zoonotic (animal to human) diseases such as SARS, plague, HIV, and influenza; the impacts of changes in policy, law, and behavior on disease control and eradication, such as hepatitis vaccination; and modern challenges in epidemiology such as global disease transmission, environmental change, and bioterrorism threats.

4 units, Aut (Salkeld, D)

HUMBIO 152. Viral Lifestyles
Contemporary topics related to microorganism. Relevance of microorganisms to disciplines beyond molecular biology and medicine. Public health implications of human/viral interactions, and the human behaviors that bring about such interactions. The ecological role played by viruses and their role in environmental health. Prerequisite: familiarity with biological systems, evolutionary biology, and microbiology.

3 units, Spr (Wolfe, N)

HUMBIO 153. Parasites and Pestilence: Infectious Public Health Challenges
Parasitic and other pestilence of public health importance. Pathogenesis, clinical syndromes, complex life cycles, and the interplay among environment, vectors, hosts, and reservoirs in historical context. Public health policy initiatives aimed at halting disease transmission. World Health Organization tropical disease targets including river blindness, sleeping sickness, leishmaniasis, schistosomiasis, mycobacterial disease (tuberculosis and leprosy), malaria, toxoplasmosis, dracunculiais, and intestinal helminthes. Guest lecturers with expertise in disease control. Prerequisite: Human Biology core or equivalent, or consent of instructor.

4 units, Win (Smith, D)

HUMBIO 154. Cancer Epidemiology
Epidemiological methods relevant to human research in cancer. The concepts of risk; case control, cohort, and cross-sectional studies; clinical trials; bias; confounding; interaction; screening; and causal inference. Social, political, economic, and ethical controversies surrounding cancer screening, prevention, and research. Prerequisite: Human Biology core or equivalent, or consent of instructor.

4 units, Win (Fisher, P)

HUMBIO 155B. The Vaccine Revolution
(Same as MI 115B) Advanced seminar. Human aspects of viral disease, focusing on recent discoveries in vaccine development and emerging infections. Journal club format: students choose articles from primary scientific literature, write formal summaries, and synthesize them into a literature review. Emphasis is on analysis, experimental design, and interpretation of data. Oral presentations. Enrollment limited to 10. Prerequisites: HUMBIO 155H, MI 155V.

6 units, not given this year

HUMBIO 156. Global HIV/AIDS
(Same as MED 256) Public health, policy, and research issues. Resources at Stanford and institutions such as government, NGOs, and pharmaceutical, advocacy, and international organizations. Sources include biomedical, social, and behavioral sciences. Student projects. Guest lectures. Prerequisite: Human Biology core or equivalent, or consent of instructor. GER:DB-NatSci, EC-GlobalCom

3 units, Aut (Katzenstein, D)

HUMBIO 156A. Human Developmental Biology and Medicine
(Same as DBIO 156) The biological, medical, and social aspects of normal and abnormal human development. Topics: in vitro fertilization and embryo transfer; gene and cell therapy; gametogenesis; pattern formation in the nervous system and limb development; gene and grand multiple pregnancies; prematurity, in utero effects of teratogens; sex determination and differentiation; growth control; gigantism and dwarfism; neural tube defects; cardiac morphogenesis; progress in the developmental biology of humans. Limited enrollment. Prerequisites: Human Biology or Biology core, or consent of instructor.

3-4 units, Spr (Porzig, E)

HUMBIO 157. The Biology of Stem Cells
(Same as DBIO 257) The role of stem cells in human development and potential for treating disease. Guest lectures by biologists, ethicists, and legal scholars. Prerequisites: 2A,B, or consent of instructor.

3 units, Spr (Nusse, R; Fuller, M)

HUMBIO 158. The Human Genome and Disease
(Same as BIO 109A, BIO 209A) The variability of the human genome and the role of genomic information in research, drug discovery, and human health. Concepts and interpretations of genomic markers in medical research and real life applications. Human genomes in diverse populations. Original contributions from thought leaders in academia and industry and interaction between students and guest lecturers. GER:DB-NatSci

3 units, Win (Heller, R)

HUMBIO 159. Genes and Environment in Disease Causation: Implications for Medicine and Public Health
(Same as HRP 238) The historical, contemporary, and future research and practice among genetics, epidemiology, clinical medicine, and public health as a source of insight for medicine and public health. Genetic and environmental contributions to multifactorial diseases; multidisciplinary approach to enhancing detection and diagnosis. The impact of the Human Genome Project on analysis of cardiovascular and neurological diseases, and cancer. Ethical and social issues in the use of genetic information. Prerequisite: basic course in genetics; for undergraduates, Human Biology core or equivalent or consent of instructor.

2-3 units, not given this year

HUMBIO 160. Human Behavioral Biology
(Same as BIO 150, BIO 250) Multidisciplinary. How to approach complex normal and abnormal behaviors through biology. How to integrate disciplines including sociobiology, ethology, neuroscience, and endocrinology to examine behaviors such as aggression, sexual behavior, language use, and mental illness. GER:DB-NatSci

5 units, alternate years, not given this year

HUMBIO 161. The Neurobiology of Sleep
(Same as BIO 149, BIO 249) (Graduate students register for 249.) Preference to seniors and graduate students. The neurochemistry and neurophysiology of changes in brain activity and conscious awareness associated with changes in the sleep/wake state. Behavioral and neurobiological phenomena including sleep regulation, sleep homeostasis, circadian rhythms, sleep disorders, sleep function, and the molecular biology of sleep. Enrollment limited to 16. GER:DB-NatSci

4 units, not given this year

HUMBIO 162. Clinical Neuroscience in Women's Health
Mental health from the perspectives of neuroscience, psychology, human physiology, and feminist studies. Major depression, bipolar, and obsessive compulsive disorders; how the female reproductive system affects the clinical presentation and course of these disorders. Eating disorders, substance abuse and dependence, and sexual trauma within a biopsychosocial model. Pharmacologic and therapeutic treatment of illnesses. Prerequisite: Human Biology core or equivalent, or consent of instructor. GER:EC-Gender

4 units, not given this year

HUMBIO 163. Neural Systems and Behavior
(Same as BIO 163, BIO 263) The field of neuroethology and its vertebrate and invertebrate model systems. Research-oriented. Readings include reviews and original papers. How animal brains compare; how neural circuits are adapted to species-typical behavior; and how the sensory worlds of different species represent the world. Lectures and required discussions. Satisfies Central Menu Area 3 for Bio majors. Prerequisites: BIO 42, HUMBIO 4A. GER:DB-NatSci

4 units, alternate years, not given this year

HUMBIO 165. Promoting Behavior Change
(Same as EARTHSYS 165) How to apply principles of behavioral change to a real world public health problem: climate change and environmental sustainability. Sources include theory, research, and practice from perspectives such as social and cognitive psychology, media and communication, education, behavioral medicine, social marketing, and consumer behavior. Student groups create an intervention to help elementary school students reduce their environmental footprint. Research performed in local high schools to develop optimally feasible, acceptable, and effective interventions.

Prerequisite: Human Biology core or equivalent, or consent of instructor.

4 units, Spr (Robinson, T)

HUMBIO 166. Food and Society: Exploring Eating Behaviors in Social, Environmental, and Policy Context

The array of forces that affect the foods human beings eat, and when, where, and how we eat them, including economics, business, agriculture, law, politics, trade, ideology, culture, biology, and psychology. The impact of current policies, and actions that might be taken to improve human nutrition and health. Macroscale influences on food, nutrition, and eating behavior.

4 units, Win (Robinson, T; Gardner, C)

HUMBIO 167. The Art of Vision

This course concerns eyes: how they are built, how they process visual information, and how they are affected by diseases that are major problems in our society. These issues are analyzed largely through fine art and famous artists to show the implications of normal and abnormal vision. Other examples include animal eyes, and the role of vision in music, literature, and sports. GER:DB-NatSci

3 units, Win (Marmor, M)

HUMBIO 170. Justice, Policy, and Science

The role of science in civil rights, justice, policy, criminal justice, evidence, education, and disabled rights.

5 units, Spr (Abrams, W)

HUMBIO 171. The Death Penalty: Human Biology, Law, and Policy

Combines academic study with student participation in forensic research and case investigation, including DNA evidence, psychological and physiological development, mental and physical disabilities, and witness interviews. The philosophy, structure, and application of capital punishment in the U.S. Goal is to examine and challenge the issues involved in the death penalty from the perspective of involvement in a real case. Course not taught from a preconceived belief or political or philosophical agenda except to involve students in an intellectual challenge of policy and philosophy. Prerequisite: Human Biology core or equivalent, or consent of instructor.

3 units, given next year

HUMBIO 172B. Children, Youth, and the Law

How the legal rights of children and adolescents in America are defined, protected, and enforced through the legal process within the context of their developmental needs and competing societal interests. Topics: origins and definitions of children's rights; adoption; custody; the juvenile justice system; education; informed consent; health care; protection from harm and child welfare; due process; and privacy and freedom of expression. Interactive, using hypotheticals for discussion and analysis. A and B alternate annually; students may take one or both. Prerequisite: Human Biology core or equivalent, or consent of instructor.

5 units, alternate years, not given this year

HUMBIO 173. Science, Business, Law: How Scientific Discovery and Innovation are Protected and Brought to Market

The interaction of science, business and law: how scientific ideas are protected by law; the rights of those who invent, develop, and finance scientific discovery; and how ideas are commercialized and brought to market. What kinds of research, discovery, and innovation are protected; who has rights that can be protected; what kinds of rights can be protected, and the kinds of protections that apply; how inventions are commercialized; and the success and failure of businesses based on scientific discovery. Prerequisite: Human Biology core or equivalent, or consent of instructor.

3 units, Aut (Abrams, W)

HUMBIO 174. Foundations of Bioethics

Classic articles, legal cases, and foundational concepts. Theoretical approaches derived from philosophy. The ethics of medicine and research on human subjects, assisted reproductive technologies, genetics, cloning, and stem cell research. Ethical issues at the end of life. Prerequisite: Human Biology core or equivalent, or consent of instructor. GER:EC-EthicReas

3 units, Win (Magnus, D)

HUMBIO 175. Health Care as Seen Through Medical History, Literature, and the Arts

The differences between disease as pathology and as the patient's experience. Topics include: patient-doctor relationships; medical technology; the changing focus on illness; gender issues; love, sex, and illness; mental illness; sick children; and death and dying. Limited enrollment. Prerequisite: Human Biology core or equivalent or consent of instructor.

3 units, Aut (Zaroff, L)

HUMBIO 175S. Novels and Theater of Illness

Illness and disease through novels and plays by authors including Shakespeare, Miller, Sophocles, Hemingway, and Camus. How sickness involves the patient, family, community, and state. Limited enrollment. Prerequisite: Human Biology core or equivalent or consent of instructor.

3 units, Spr (Zaroff, L)

HUMBIO 176. Impact of Infectious Diseases on Human History

Impact of infectious diseases on human society. Some topics include: the plague of Justinian; impact on exploration, trade, and conquest; how slavery, malaria, and yellow fever combined to alter the New World; microbes and war; diseases of poverty such as tuberculosis; cholera and public health; pandemic influenza; diseases of human progress. Students keep a diary of current examples of interaction between infectious diseases and societal issues; students participate in public blogs.

3 units, Spr (Tompkins, L; Falkow, S)

HUMBIO 178. Ethics and Politics of Public Service

(Same as ETHICSOC 133, PHIL 175A, PHIL 275A, POLISCI 133, PUBLPOL 103D) Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. GER:DB-SocSci

5 units, not given this year

HUMBIO 183. Astrobiology and Space Exploration

Evolution in the context of space and time, focusing on the emergence of life in a planetary context on Earth and possibly elsewhere. The evolution of intelligence and the search for it elsewhere. The biological, psychological, sociological, and philosophical issues of human space exploration. Integrates information from astronautics, astrophysics, biochemistry, chemistry, evolutionary biology, geology, paleontology, physiology, psychology, and sociology. Guest lectures by scientists and astronauts from NASA, Stanford, SETI, and other universities. Prerequisite: two college-level science courses such as Human Biology core, or consent of instructor. GER:DB-NatSci

3-4 units, Win (Rothschild, L)

HUMBIO 185. Vertebrate Biology

(Same as BIOE 161) Study of structure, function, evolution and behavior of vertebrate animals. Consideration of vertebrate origins and examination of classes of vertebrates. Physiology, morphology, behaviors and evolutionary relationships are treated in each vertebrate group, as these relate to overall evolutionary trends within vertebrates. Topics: swimming behaviors in sharks and bony fishes, olfaction and vision in fishes, sex determination in amphibians, reptiles, birds and mammals, navigation in sea turtles and birds, evolution and biomechanics of flight in pterosaurs birds and bats, vocalization in whales and birds, temperature adaptation in reptiles, birds and mammals.

3 units, Win (Porzig, E)

HUMBIO 187. Human Diversity: A Linguistic Perspective

(Same as ANTHRO 123A) The diversity and distribution of human language and its implications for the origin and evolution of the human species. The origin of existing languages and the people who speak them. Where did current world languages come from and how can this diversity be used to study human prehistory? Evidence from related fields such as archaeology and human genetics. Topics: the origin of the Indo-European languages, the peopling of the Americas, and evidence that all human languages share a common origin. GER:DB-SocSci, EC-GlobalCom

3 units, Spr (Ruhlen, M)

HUMBIO 193. Research in Human Biology

Independent research conducted under faculty supervision, in junior or senior year, normally but not necessarily in pursuit of an

honors project. May be taken for a maximum 3 quarters of credit. Prerequisite: Faculty approval; application available in student services office.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

HUMBIO 194. Honors

Completion of the honors project, normally taken in the student's final quarter. First component: the honors thesis, a final paper providing evidence of rigorous research, fully referenced, and written in an accepted scientific style. Second component: participation in the honors symposium, including a 10-minute oral presentation followed by a brief question and answer session. Prerequisites: 193 or 199, and acceptance into the honors program.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff)

HUMBIO 197. Human Biology Internship

Limited to and required of Human Biology majors. A supervised field, community, or lab experience of student's choosing, preapproved by Human Biology faculty and student advisers, and initiated at least three quarters prior to graduation. Participation in a poster session on the internship experience is required during the first quarter that the student is in residence at Stanford after completion of the internship. May be repeated for credit. Prerequisite: Human Biology core.

1-4 units, Aut (Staff), Win (Staff), Spr (Staff)

HUMBIO 198. Senior Tutorial in Human Biology

Reading for Human Biology majors in exceptional circumstances and under sponsorship of Human Biology associated faculty. Students must apply through Human Biology student services before registering. Reading list, paper, and evaluation required. May be repeated for credit.

1-5 units, Aut (Boggs, C), Win (Boggs, C), Spr (Staff)

HUMBIO 199. Directed Reading/Special Projects

Human Biology majors must obtain a sponsor from the Human Biology associated faculty or the Academic Council. Non-majors and students who have not declared must obtain a sponsor only from the Human Biology associated faculty. Students must complete application in student services office.

1-4 units, Aut (Staff), Win (Staff), Spr (Staff)

HUMBIO 200. Teaching of Human Biology

For upper division undergraduates and graduate students. Practical experience in teaching Human Biology or serving as an assistant in a lecture course. May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

HUMANITIES AND SCIENCES (HUMSCI) COURSES

UNDERGRADUATE COURSES IN HUMANITIES AND SCIENCES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

HUMSCI 190. Individually Designed Major Honor's Thesis

May be repeated for credit. (Staff)

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN HUMANITIES AND SCIENCES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

HUMSCI 201. Graduate Environment of Support

Psychosocial, financial, and career issues in adapting graduate students to Stanford; how these issues relate to diversity, resources, policies, and procedures. Discussions among faculty, advanced graduate students, campus resource people, and the dean's office. (Thomas)

1 unit, Aut (Thomas, A)

IBERIAN AND LATIN AMERICAN STUDIES (ILAC) COURSES

UNDERGRADUATE COURSES IN IBERIAN AND LATIN AMERICAN STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ILAC 112Q. Latin American Cities Through Literature and Film

A study of urban issues in Latin American cities, such as Buenos Aires, Montevideo, Lima, Medellin, Quito, Mexico City, Santiago, La Paz and Sao Paulo using literary works and films, using literary works and films. Books and films by Javier Vásconez, Mario Benedetti, Sebastián Cordero, Alicia Scherson, Antonio Serrano, Gisela Kozak, Francisco Lombardi, Veronica Chen, Fernando Vallejo, Barbet Schroeder, Walter Salles, and Roman Chalbaud, Santiago Roncagliolo among others.

3-5 units, not given this year

ILAC 114N. Lyric Poetry

(Stanford Introductory Seminar) Preference to freshmen. For students who have successfully completed two years of college Spanish. Elements and expressive devices of lyric poetry: multidimensional language, denotation, connotation, image, metaphor, symbol, allegory, paradox, irony, meaning, idea, rhythm, and meter. Poets of Spain and Latin America of the late 19th and early 20th century including G. A. Bécquer, Rosalía de Castro, Rubén Darío, Miguel de Unamuno, Antonio Machado, García Lorca, Pablo Neruda, and Gabriela Mistral. In English and Spanish.

3-5 units, Aut (Predmore, M)

ILAC 117N. Film, Nation, Latinidad

(Stanford Introductory Seminar) (Same as CHICANST 117N, CSRE 117N) Examination of films from Spain, Mexico, and Latina/o USA that expand, trouble, contest, parody, or otherwise interrogate notions of national identity. Filmmakers may include Lourdes Portillo, Alejandro González Iñárritu, John Sayles, Maria Novaro, Pedro Almodóvar, and Gregory Nava.

3-4 units, Spr (Yarbro-Bejarano, Y)

ILAC 119. Film Noir and the contemporary Iberian Novel

The influence of classic American film noir (Hitchcock, Lang, Huston, Welles etc.) on works by some of Iberia's most successful contemporary novelists including Antonio Muñoz Molina, Juan Marsé, Rosa Montero, José Cardoso Pires and Albert Sánchez Piñol. Supplementary works include reading from the Congreso de Novela y Cine Negro as well as works by Emmanuel Levinas, Dominique LaCapra, Carl Jung, Kenneth Burns and others. Readings in Spanish and English. Prerequisite: SPANLANG 3 or equivalent.

3-5 units, Win (Mack, T)

ILAC 120. Introduction to Literary and Scholarly Research

Strategies and tactics for research and writing in the humanities; focus is on the Spanish-speaking world. How to write a research proposal; how to conduct research online and in the library; annotated bibliographies; bibliographical essays; rhetorical strategies; and common logical fallacies. WIM

3-5 units, Spr (Kenna, C)

ILAC 126. Contemporary Literature and Cinema of the Spanish Civil War

An exploration of memory of the Spanish Civil War and its aftermath in contemporary Iberian literature and cinema. Focus is on the most important events of 20th-century Spain through analysis of novels, short stories, testimonial texts, documentaries, and feature films that attempt to recover the voices and memories of the victims: outcasts (guerrilla, refugees), women, and children.

3-5 units, Aut (Gonzalez Flores, F)

ILAC 130. Cultural Perspectives in Iberia

The historical dynamics, linguistic plurality, and social complexity of the Iberian world. Topics include: war and revolution; absolutism and liberalism; republicanism; the crisis at the end of the century: the year 98; the civil war; dictatorships, Franco, and Salazar; the revolution of cloves and the transition towards democracy; and

open society and El manifiesto por la lengua común. GER:DB-Hum

3-5 units, Spr (Predmore, M)

ILAC 131. Cultural Perspectives in the Luso-Hispanic Americas

Major theoretical debates about the construction of Latin American identities, from the 19th century to the present. Readings by writers, poets, philosophers, and historians, including Rodo, Retamar, O'Gorman, Vasconcelos, Henríquez-Ureña, Ramos, Paz, Carpentier, Lezama Lima, Borges, and Fuentes. GER:DB-Hum

3-5 units, Win (Hoyos, H)

ILAC 136. Modern Iberian Literatures

1800 to the present. Topics include: romanticism; realism and its variants; the turn of the century; modernism and the avant garde; the Civil War; and the second half of the 20th century. Authors may include Mariano José de Larra, Gustavo Adolfo Bécquer, Rosalía de Castro, Benito Pérez Galdós, Migues de Unamuno, Pío Baroja, Joan Maragall, Antonio Machado, Federico García Lorca, Salvador Espriu. GER:DB-Hum

3-5 units, Aut (Resina, J)

ILAC 137E. Viewing Modern Barcelona

An introduction to the salient aspects of Barcelona's history, its role in Spain's modernization and democratization as well as its tensions with the state. Emphasis on the modern period, from the tearing down of the ancient walls and the city's expansion in the mid-nineteenth century to the Olympic and post-Olympic definition of public space. Attention will be given to city planning, the architecture of Gaudí, the art work of Picasso and Dalí, popular music and literature about the city.

3-5 units, not given this year

ILAC 141. Culture, Politics and the Marvelous Real in Latin-American Narrative

The representation of cultural and political perspectives and changes from the twentieth to the present centuries through the artifact of short stories and a novel. Readings selections range from canonical to very recent authors from general demographic areas of Latin America. Selected works from Carpentier, Borges, Cortázar, Monterroso, Rulfo, Cabrera Infante, García Márquez, Castellanos, Benítez Rojo, Ferre, Rebeyro, Gorodischer, Valencia, Bolaño, Karla Suárez will be exmined.Youtube and other sources of interviews and criticism will complement classroom activities.

3-5 units, Aut (Kenna, C)

ILAC 142. Modernismo and the World Interior

At the turn of the 19th century, Rubén Darío gave the name reino interior to the private area of introspection and imagination favored by modernistas. A source and possibility for artistic production, this trope incarnates tensions between individual and social space, parochialism and cosmopolitanism. Sources include poetry, narrative, journals, and the visual arts. Authors may include: Delmira Agustini, Rubén Darío, Julián del Casal, Leopoldo Lugones, José Martí, Manuel Gutierrez Nájera, José Enrique Rodó, José Asunción Silva, Abraham Valdelomar. Spanish proficiency required.

3-5 units, Win (Briceno, X)

ILAC 157. Medieval and Early Modern Iberian Literatures

Topics may include: lyric and epic poetry; Jewish and Muslim literatures; the development of Castilian, Catalan, and Portuguese prose; the Valencian golden age; texts of the Renaissance and Baroque; the literature of imperial expansion into Africa, Asia, and the Americas. GER:DB-Hum

3-5 units, Aut (Barletta, V)

ILAC 158. New Latin American Short Stories and Films (1980-2009): A Survey

Focus is on Mexico, Cuba, Argentina, Colombia, and Brazil from the 80s to the present. Authors include: Bellatin, Portela, Vega Serova, Parra, Paz Soldán. Filmmakers include: Cuaron, Gruener, Furtado, Moya, Novaro.

3-5 units, not given this year

ILAC 159. Don Quijote

A close reading of the original Spanish text of Miguel de Cervantes's prose masterpiece. The rise of the novel, the problems of authorship and signification, modes of reading, the status of Muslim and Jewish converts in early modern Spain, the rise of capitalism, masochistic desire. In Spanish. WIM

3-5 units, Win (Barletta, V)

ILAC 161. Modern Latin American Literature

From independence to the present. Topics include romantic allegories of the nation; modernism and postmodernism; avant garde poetry; regionalism versus cosmopolitanism; indigenous and indigenist literature; magical realism and the literature of the boom; Afro-Hispanic literature; and testimonial narrative. Authors: Bolívar, Bello, Gómez de Avellaneda, Isaacs, Sarmiento, Machado de Assis, Darío, Martí, Mistral, Vallejo, Huidobro, Borges, Cortázar, Neruda, Guillén,Rulfo, Ramos, Arguedas, García Márquez, Lispector, Menchú, and Bolaño. GER:DB-Hum

3-5 units, Spr (Briceno, X)

ILAC 189A. Honors Research

Senior honors students enroll for 5 units in Winter while writing the honors thesis, and may enroll in 189B for 2 units in Spring while revising the thesis. Prerequisite: DLCL 189.

5 units, Win (Staff)

ILAC 189B. Honors Research

Open to juniors with consent of adviser while drafting honors proposal. Open to senior honors students while revising honors thesis. Prerequisites for seniors: 189A, DLCL 189.

2 units, Spr (Staff)

ILAC 193. The Cinema of Pedro Almodovar

The evolution of Spain's most recognizable director from marginal, transgressive amateur cinema to polished visual style. The deliberate blurring of frontiers between mass and high culture; his use of metafilmic allusions and attention to sexuality, extreme experiences, and marginal characters. From his early work to recent award-winning films. Prerequisite: spoken Spanish. GER:DB-Hum

3-5 units, Spr (Resina, J)

ILAC 193Q. Spaces and Voices of Brazil through Film

(Stanford Introductory Seminar) (Same as PORTLANG 193Q) How a country is perceived and defines itself is a result of complex forces, and involves the reproduction of social relations and complex social constructions both on the part of those who live there and those who see it from a distance. The perceptions of what Brazil is and what defines the country has changed, but has conserved some defining traits. Introduction to the history, culture, politics, and artistic production of Brazil through feature films, documentaries, and readings. Movies include Banana is my Business, Black Orpheus, Olga, They Don't Use Black-Tie, City of God, Central Station, Gaijin, and Four Days in September. In English. GER:DB-Hum, EC-GlobalCom

3-4 units, Aut (Wiedemann, L)

ILAC 194E. Black Brazil

Afro-Brazilian culture through a media including fictional texts (short stories, poems, and novels), sociohistorical and anthropological essays, music, films, and sports dealing with racial issues in Brazilian society through a historical overview and a contemporary perspective. Authors (Machado de Assis, Joaquim Nabuco, Jorge de Lima, Jorge Amado, Carolina de Jesus, Gilberto Freyre, Roberto DaMatta, Antonio Risério, Luis Felipe D'Alencastro); music (samba, choro, mpb); sports (soccer, capoeira); religion (Candomblé, Umbanda); films (Orfeu Negro, Barravento, O Pai O).

3-5 units, Spr (Librandi Rocha, M)

ILAC 197. Brazilian Culture in a Comparative Latin American Perspective

Brazilian modernization and cultural dynamism in the second half of the 20th century. Concrete poetry and its relation to the construction of Brasilia, the bossa nova movement, and tropicalism. Comparative studies in the global art context. Authors include: Haroldo de Campos, Augusto de Campos, Decio Pignatari, Eugen Gomringer, Severo Sarduy, Octavio Paz, Ramón Xirau, Max Bense, and Charles Bernstein. Texts in English, Spanish, and Portuguese.

3-5 units, not given this year

ILAC 199. Individual Work

Open only to students in the department, or by consent of instructor.

1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ILAC 204. Spanish Nationalist Discourses from Franco to Zapatero: What Does Plural Spain Mean?

Spanish nationalism and patriotic affirmation discourses in contemporary Spain. Since the end of Francoism, Spanish nationalism has existed in a de-articulated and diffuse way, rather as a reaction

against the challenge of stateless nationalisms than as a substantive doctrine. However, since the mid-80s there has been a recovery of Spanish nationalist discourse, often labeled constitutional patriotism, whose main point is the insistence on history as the founding basis for the legitimation of the present Spanish polity, as well as the vindication of the 1978 Constitution as the end-point of decentralization.

3-5 units, Win (Staff)

ILAC 211. The Poetry of Pablo Neruda

The major works of Neruda, particularly Residencia en la Tierra I and II, Tercera Residencia, and Canto General. Neruda within a tradition of European lyric poetry from William Blake to García Lorca and Alberti; how this tradition was transformed in Neruda's poetry by the historical conditions of Chilean and Latin American societies and the Spanish Civil War.

3-5 units, Win (Predmore, M)

ILAC 214. Crypto-Muslim Culture in Early Modern Spain

(Same as RELIGST 220B) What is known about the secret religious practice and culture of the Moriscos, Spain's large minority community of Muslim converts to Christianity (1500-1609)? What role did their handwritten literature (largely Islamic texts written in Castilian but copied out in Arabic script) play in the formation and maintenance of their culture? What can these Crypto-Muslim communities teach us regarding the place of Muslim culture in Western Europe today? The course will be taught in English; knowledge of Spanish and/or Arabic script is useful but not necessary.

3-5 units, Win (Barletta, V)

ILAC 228. Secularism: The Boundaries of Religion in Early and Post-Modernity

an examination of how two analytical categories, secularism and religion, have shaped each other over time. We will trace the contemporary legacy of early modern forms of scholarship, government, and community by considering the history and divergent uses of concepts such as tolerance, natural law, multiculturalism, and the freedom of religion Texts by Asad, Augustine, Erasmus, Fallers Sullivan, Las Casas, Locke, Said, Spinoza, C. Taylor, Vitoria, and others.

3-5 units, Aut (Staff)

ILAC 229. The work of Luis Martín Santos in Mid-Twentieth Century Spain

(Same as COMPLIT 218) First published in 1962, ""Tiempo de Silencio"" is the only book that the young psychiatrist Luis Martin Santos finished during his lifetime, and, although largely overlooked (even in Spain) until the present day, one of the great European novels of the 20th century. It brings to a complex convergence the evocation of Spain's decadent and run-down post-Civil War society with high-modernist literary procedures and (an implicit parody of) phenomenological analysis.

3-5 units, Win (Gumbrecht, H)

ILAC 232. Culture and Power

An examination of the relationship between culture and power, relying mostly on how that relationship is reflected in the various forms of cultural creation: paintings, sculptures, photographs, graffiti, stories, theories. Focusing on artists from Catalonia (Picasso, Dalí, Miró, Tàpies, Barceló) and Spain (Velazquez, Goya) and will move on to contemporary artists and thinkers from different cultures.

3-5 units, Aut (Castineira Fernandez, A)

ILAC 240E. Borges and Philosophy

The Argentine author's literary renditions of philosophical ideas. Topics may include: time, free will, infinitude, authorship and self, nominalism versus realism, empiricism versus idealism, skepticism, peripheral modernities, postmodernism, and Eastern thought. Short stories, poems, and essays from Labyrinths paired with selections from authors such as Augustine, Berkeley, James, and Lao Tzu. In English; Spanish originals available. Satisfies the capstone seminar requirement for the major in Philosophy and Literature. GER:DB-Hum

3-5 units, not given this year

ILAC 241. Fiction Workshop in Spanish

Creative writing workshop in Spanish. Latin American and Iberian short stories approached through the theory and craft of this genre. Assignments are creative in nature and focus on the formal elements of fiction (characterization, plot, point of view, imagery, dialogue, theme, and diction). Students will develop an original short story over the course of the quarter. No previous experience with creative writing is required. Authors: Borges, Cortázar, García Márquez, Bolaño, Piglia, Ayala, Clarín, and others. This course is offered every other year.

3-5 units, Win (Santana, C)

ILAC 244. Andalusian Iberias

The relationship among the Spanish, Arabic, Latin, and Hebrew literatures and cultures of the Iberian Peninsula. Introduction to these debates about the development of literary genre, the transmission of philosophical knowledge, and the history of religious polemic in late medieval and early modern Iberia. The conventions structuring the different ecumenical, linguistic, and political communities as well as the multiplicity of Andalusian Iberias produced by their interaction.

3-5 units, Spr (Staff)

ILAC 247E. Magical Realism and Globalization

Is magical realism a genre, a style, a politics, or a label for elaborate fiction from the Third World? Seminal works and their role in the 20th century. Topics include: postcolonial discourse, myth and truth, tradition versus modernity, and realism versus fantasy. Novels, plays, and short stories by García Márquez, Rushdie, and Morrison; films by Schlondorff and Begnigni; essays by Roh and Carpentier. GER:DB-Hum

3-5 units, not given this year

ILAC 250. Latin America at the End of the Cold War

Systematic study of the cultural transformations in Latin America before and after the fall of the Berlin Wall. Comparisons between works that respond to the defining moments of the conflict (Neruda, Cardinal) and texts that reflect on its later, residual stage. Fiction: Sin remedio by Antonio Caballero, Literatura nazi en América by Roberto Bolaño, and Pasado Perfecto by Leonardo Padura. Film: Hijos de la guerra fría by Gonzalo Justiniano. Theoretical readings by Jorge Castañeda, Michael Reid, and Jean Franco.

3-5 units, not given this year

ILAC 256. Drug Wars: Narco Representations in Media and Literature

Representations of Latin American (and Chicano) Narcos and Druglords in film, telenovelas, corridos, essays and novels and how these representations affect governmental policies. Films: Tropical Snow by Ciro Durán; The Camarena Story by Brian Gibson; Escobar, The King of Cokaine by Steven Dupler; True Story of Killing Pablo by David Keane; Kingpin by David Mills; El rey by José Antonio Dorado; Sumas y restas by Víctor Gaviria; María llena eres de gracia by Joshua Marston. Books: La reina del sur by Pérez-Reverte; Killing Pablo by Bowden; Drugs, Thugs, and Divas: Telenovelas and Narco-Dramas in Latin America by O. Hugo Benavides.

3-5 units, Spr (Ruffinelli, J)

ILAC 259. Military, Intelligentsia, Las Madres of Plaza de Mayo and Tlatelolco: Film and Politics 1968-2009

How contemporary Latin American cinema in documentaries and feature films has focused on several historical pockets of the continent: the Dirty War, the Falkland Islands war, the Tlatelolco massacre, the Vladivideos and corruption in Peru, and the Disappeared, as part of the historical reconstruction of the recent past. Films: La deuda interna, Rojo Amanecer, La historia oficial, Por esos ojos, La noche de los lápices, Mariposa Negra, Cautiva, Hijos/Figli.

3-5 units, not given this year

ILAC 260. The Mexican Revolution of 1910 in Cinema

Our visual knowledge of the Mexican Revolution of 1910 originates in the Casasola photo archive, but most notably in the films that portrayed important leaders of the revolution such as Pancho Villa, and Emiliano Zapata. This course will study the political and social changing images of those ""heroes"" or ""bandits"" in the light of historical ideologies.

3-5 units, Spr (Ruffinelli, J)

ILAC 265. Museums and Novels in Argentina

The changing relationship between history, memory, collection, production, and consumption in narrative works from 20th- and 21st-century Argentina. The role of the museum in the novel's imaginary, comparing and contrasting the experiences of reading and museum going. Focusing on the museum in relation to the

literary form permits reflection on tensions between the market, the canon, and the avant gardes as they appear in a changing cultural economy. Authors include: Fernández, Borges, Mujica Láinez, Piglia, Pauls, and Kohan.

3-5 units, Spr (Briceno, X)

ILAC 271. Brazilian Presence: Landscape, Life and Literature
Brazil's literary representation of the it's diverse regional cultures and ecology through the works of Euclides da Cunha describing the Amazon in the early 1900s; the travels of anthropologist Claude Lévi-Strauss and his contact with Caduveo, Nhambiquara, Bororo and Tupi indigenous tribes; Mario de Andrade's novel, Macunaima and its ironical representation of Brazilian identity and miscegenation; Guimarães Rosa's short stories that show the imagery of the sertão and its people (the sertanejo culture); Milton Hatoum's novel, The Brothers, and its impressive portray of Manaus city in the 20th Century as an unstable world seen through the lens of Lebanese immigrants. GER:EC-GlobalCom

3-5 units, not given this year

ILAC 272E. Clarice Lispector: the Style of Ecstasy
An exploration of the presence, both in the mystic and in the erotic sense, of the feeling of ecstasy in Clarice Lispector's texts (novels, short stories, chronicles). Ecstasy favors a non-conceptual approach to writing and reading and an effect of delight that can be only communicated by words that mimitizes music and visual arts. Theoreticians of ecstasy, eroticism and epiphany: G. Bataille, H. Cixous, Jean-Luc Nancy; Gumbrecht, Lyotard. Course taught English with readings in English and Portuguese.

3-5 units, not given this year

ILAC 273. Brazilian Resonances: Poems, Lyrics, Songs
Brazilian culture through poems, lyrics and sounds from the 19th to the 20th century. Songs and lyrics by: Caetano Veloso, Gilberto Gil, Tom Jobim, Carlinhos Brown, Paulinho da Viola, Marisa Monte, Cartola. Authors may include: Gonçalves Dias, Mario de Andrade, Oswald de Andrade, Manuel Bandeira, Cecília Meireles, Murilo Mendes, Drummond, João Cabral de Melo Neto, Hilda Hilst, Antonio Cicero. In Portuguese.

3-5 units, Aut (Librandi Rocha, M)

ILAC 278. Senior Seminar: Early 20th-Century Iberian Poets
Major works of Antonio Machado, Juan Ramón Jiménez, and Federico García Lorca, with emphasis on the historical context of the first three dacades of the 20th century and their contribuitions to the development of 20th-century Spanish lyric poetry. GER:DB-Hum

3-5 units, Spr (Predmore, M)

ILAC 278A. Senior Seminar: Amazonia/Manhattan and Visions of El Dorado
The confrontation between two worlds: the forest and the city in the Americas, with a focus on the Amazon jungle and New York City, and the myth of El Dorado. Readings of 19th- and 20th-century Latin American writers such as Dario, Martí, Sousândrade, and Carpentier including their intertexts with the Chronicles of Discovery and Conquest.

3-5 units, Win (Librandi Rocha, M)

ILAC 280. Latina/o Literature
(Same as CHICANST 200, CSRE 200) Examination of a diverse set of literary texts by Latinas/os, bringing history, politics, and cultural theory to bear in order to apprehend the significant intracultural differences amongst Latinas/os (most notably concerning im/migration). Gender and sexuality as critical lenses that reflect and refract themes such as identity, language politics, transnationalism, political turmoil, socioeconomic status, and the notion of home/land and its loss, reinvention, and/or reclamation

3-5 units, Aut (Yarbro-Bejarano, Y)

ILAC 332. Race and Slavery in Nineteenth Century Spanish Empire
An analysis of the literature written in Spain during the nineteenth and twentieth centuries dealing with the empire post 1808. Authors discussed include Blanco White, Baroja, Avellaneda, and Rusiñol, among others

3-5 units, not given this year

GRADUATE COURSES IN IBERIAN AND LATIN AMERICAN STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

ILAC 213. Spanish Cinema in the Second Half of the 20th Century
Spanish Cinema in the Second Half of the 20th Century-Cinema's shaping of the national imaginary and its articulation of collective memories suppressed during the Franco dictatorship. Directors include Buñuel, Saura, Almodóvar, Amenábar, and Medem.

3-5 units, Aut (Resina, J)

ILAC 218. Anticlericalism in the Iberian Novel of the 19th Century
The rapid social and cultural changes in which 19th-century novelists wrote; the anti-clerical stance as marker of society's attempts to modernize. Why were monks and priests reviled by many Spanish novelists? How and why did they rewrite Spanish history around these figures? What was the role of the church and religious men in modern society? Questions of individualism, property, and labor in novels by major Iberian prose realists. In Spanish.

3-5 units, not given this year

ILAC 222. The Problem of Two Spains: Literature and Society in 19th-Century Spain
Representative literary figures including Larra, Espronceda, Zorrilla, Rosalía de Castro, Bécquer, and Galdós. Modern lyric poetry and the modern realist novel against the background of Napoleonic invasions, the loss of overseas colonies, two Carlist civil wars, and frustrated attempts to establish the First Spanish Republic.

3-5 units, not given this year

ILAC 225E. Theater, Society, and Politics in 20th-Century Spain
Ramón del Valle-Inclán and Federico García Lorca. The avant garde nature of their major plays and their engagement with social and political issues of the times including feudalism, the emerging liberal state, women's protest, class struggle, and civil war. Symbolism, expressionism, and realism.

3-5 units, not given this year

ILAC 299. Individual Work
Open to department advanced undergraduates or graduate students by consent of professor. May be repeated for credit.

1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ILAC 300. Contemporary Geopolitical Thinking: A Critical Look from Catalonia, Spain, and Europe
Contemporary geopolitical thought developed by Western experts on both sides of the Atlantic, such as Francis Fukuyama, Samuel Huntington, Benjamin Barber, Edward Lutwak, Zbigniew Brzezinski, Robert Kagan, Ignacio Ramonet, Anthony Giddens, Zaki Laidi, Emilio Lamo de Espinosa, Pere Vilanova, Antoni Segura, and Manuel Castells have detected key aspects of the new international order and have compared and contrasted the American and European approaches to its governance. Themes: hard vs. soft power; unilateralism vs. multilateralism, security vs. liberty, loyalty and legitimacy vs. effectiveness.

3-5 units, Aut (Staff)

ILAC 323. Renaissance/Early Modern Seminar
(Same as HUMNTIES 323) Focus is on how authors and readers from this period theorize various historical processes: the rise of European imperialism; religious conflicts and revolutions; new understandings of the self and the world; and the rise of the novel. Authors: Boccaccio, Machiavelli, Núñez Muley, Martorell, Rabelais, Camões, Cervantes, Montaigne, and Shakespeare.

3-5 units, not given this year

ILAC 328. Alexander the Great in Medieval Iberian
Greek hegemon, Asian emperor, student of Aristotle, Qur'anic hero, and Mediterranean legend. In this seminar, students explore the various manifestations of Alexander the Great in Iberian literature during the medieval period. What is Alexander's place in the development of theories of empire? In the formation of (always fuzzy and shifting) distinctions between East and West (and life and death)? Readingsinclude: Quintus Curtius Rufus, Pseudo-Callisthenes, Libro de Alexandre, the Aljamiado Rrekontamiento del rrey Alixandere, Secretum secretorum, and selected Qur'anic suras.
3-5 units, Spr (Barletta, V)

ILAC 330. Josep Pla: From Journalism to Literature
In the 20s and 30s journalism gave the tone to a normalized Catalan culture, whose distinctive traits were a cosmopolitan outlook and a high degree of professionalism. It is in this context that the works of journalist Josep Pla grow from an underbrush of quality journalism that, long neglected, throws light on the social and political situation of the time and constitutes an unsurpassed civilizational referent for today's culture wars. Journalists studied include Josep Pla, Eugeni d'Ors, Eugeni Xammar, and Gaziel. Readings in Catalan; available in Spanish.
3-5 units, not given this year

ILAC 331. Combat and Cultural Memory
Why do peoples go to war? What shapes the warrior's imaginary? What is the nature of collective violence? Western representations of violence, the myths of war and it cultural transmission, the war community, and the relation between violence and narration. Major theoretical texts on war and violence by Arendt, Schmitt, Weil, Baudrillard and others read in conjunction with literary texts by authors such as Jünger, Malraux, Rodoreda, Sales, Benet, and Cercas, and contrasted with representations in art, photography, and film.
3-5 units, Win (Resina, J)

ILAC 336. Early 20th-Century Peninsular Spanish Poetry
Poetry in restoration Spain, 1871-1930, against the background of the democratic tradition of Spanish liberalism. Emphasis is on stylistic analysis and concepts such as the generation of 1898, modernism, Krausism, pure poetry, and symbolic systems.
3-5 units, not given this year

ILAC 340. The Crowded Solitude of Juan Rulfo: his Writing, his Photography, his Children, his Legacy
A study of Mexican writer Juan Rulfo's literary work and photography as well as the film adaptations of his work, his portrayal in documentaries authored by his son Juan Carlos Rulfo and his literary legacy among young writers who have continue his work, like Élmer Mendoza´s Cóbraselo Caro and Susana Pagano´s Y si yo fuera Susana San Juan?
3-5 units, not given this year

ILAC 343. García Márquez
Extensive and detailed reading of the major works and a selection of the most significant critical texts about the author. Secondary readings by Vargas Llosa, Ludmer, Moretti, and Bloom. Topics include: macondismo, magical realism, canonicity, representations of violence, and autobiography.
3-5 units, Spr (Hoyos, H)

ILAC 344. Theorizing the Novel after 1989
Issues of literary historiography, canon formation, and cultural relevance through a detailed study of selected works, criticism, and theory from the last two decades. Topics may include: postnationalism, cultural synchronization, fiction as commodity, revisions of dictatorship, new media ecologies, anxiety of influence, meaning-making communities, and relations to visual culture. Readings by Latin American authors: Bolaño, Vallejo, Eltit, Bellatin and Fuguet. Critical texts by Richard, Sarlo, Rancière, and Casanova.
3-5 units, not given this year

ILAC 357. Juan Carlos Onetti: the Creation of Urban Narratives
Along with Arlt and Mallea, Juan Carlos Onetti initiates the urban novel in South America. Analysis of this turning point in the history of literature, and its relationship to urbanization and industrialization in Argentina and Uruguay.
3-5 units, Win (Ruffinelli, J)

ILAC 365. Anthropological Fictions in Latin America
The relationship between fiction and ethnography; literary theory and anthropology, discussing the notion of anthropological fiction. Authors: Viveiros de Castro, Roy Wagner, Alfred Gell, W.Iser, J.Clifford, Borges, Lispector, with a focus on Guimarães Rosa and Alejo Carpentier. In Portuguese, Spanish, and English.
3-5 units, Aut (Librandi Rocha, M)

ILAC 370E. Machado de Assis: Mimesis, Memory and money Machinations
Machado de Assis's paradoxes: the greatest author of the 19th Century and his oblique and peripheral perspective. The ruins and rebuilds of memory: Memórias Póstumas de Brás Cubas and Memorial de Aires; Jealously view and its mimesis in Dom Casmurro; his short stories and Rio de Janeiro's 19th century's sociability. The economy in his chronicles. Recent critical readings and editions. Course taught English with readings in English and Portuguese.
3-5 units, not given this year

ILAC 380E. Critical Concepts in Chicana/o Literature
(Same as CHICANST 201C, CSRE 201C) Interrogation of the critical discourses that have configured and reconfigured the canon of Chicana/o literature over the last thirty years. Close textual readings of primary texts, mainly narrative, within the development of Chicana/o literary and cultural criticism. Construction of narrative genealogies and foundational texts. Impact of the publication of late-nineteenth or pre-movement novels and Chicana feminist/lesbian/queer critiques. Consideration of alternative paradigms such as positioning Chicana/o literature within a U.S. Latina/o literary imaginary, and the shift of critical discourse in the field of visual art from a paradigm of resistance and affirmation to one of post-Chicano.
3-5 units, Aut (Yarbro-Bejarano, Y)

ILAC 389E. Race, Sex, Gender in Cultural Representations
(Same as CHICANST 199A, CSRE 199A) Critical theory and cultural representations in media that address issues surrounding the representation of race, gender, sexuality, and politics. How is desire racialized? How is racial difference produced through sex as a material practice and what is the function of sex in racial self formation ? How are questions of pleasure, desire, and the structures of power reconciled? How do these texts reinforce or contest stereotypes and the ideal bodies of national identity? Is it desirable to envision a bridging of queer communities of color, or a transnational or global network?
3-5 units, Spr (Yarbro-Bejarano, Y)

ILAC 399. Individual Work
For Spanish and Portuguese department graduate students only. Prerequisite: consent of instructor.
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ILAC 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

IMMUNOLOGY (IMMUNOL) COURSES

UNDERGRADUATE COURSES IN IMMUNOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

IMMUNOL 185. Brain and the Immune System
(Same as IMMUNOL 285) For advanced undergraduates, coterminal students, and graduate students. Molecular and cellular interactions between the nervous and immune systems. Focus is on the role of immune molecules in neural development, the bi-directional mechanisms by which the brain and immune system communicate with each other, and the role of the immune system in the diseased and infected brain. Topics include: molecular basis of fever, stress and inflammation, gender differences in autoimmune diseases, inflammation in neurodegenerative diseases, central nervous system infections, and the immune system in psychiatric disorders. Expert guest lectures, weekly discussion sections, and student presentations. Prerequisite: Biological Sciences or Human Biology core.

3 units, Win (Steinman, L; Brownell, S; Price, J)

IMMUNOL 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN IMMUNOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

IMMUNOL 201. Advanced Immunology I
(Same as MI 211) For graduate and medical students and advanced undergraduates. Molecules and cells of the innate and adaptive immune systems; genetics, structure, and function of immune molecules; lymphocyte differentiation and activation; regulation of immune responses; autoimmunity and other problems in immune system dysfunction. Prerequisites: undergraduate course in Immunology and familiarity with experimental approaches in biochemistry, molecular biology, and cell biology.

3 units, Win (Chien, Y)

IMMUNOL 202. Advanced Immunology II
(Same as MCP 202) Readings of immunological literature. Classic problems and emerging areas based on primary literature. Student and faculty presentations. Prerequisite: IMMUNOL 201/MI 211.

3 units, Spr (Garcia, K)

IMMUNOL 203. Advanced Immunology III
Key experiments and papers in immunology. Student presentations and faculty participation; faculty describe their experimental process and scientific papers. Prerequisite: IMMUNOL 201/MI 211 or IMMUNOL 202/MCP 202.

3 units, Sum (Utz, P)

IMMUNOL 204. Innate Immunology
(Same as MI 104, MI 204) Innate immune mechanisms as the only defenses used by the majority of multicellular organisms. Topics include Toll signaling, NK cells, complement, antimicrobial peptides, phagocytes, neuroimmunity, community responses to infection, and the role of native flora in immunity. How microbes induce and defeat innate immune reactions, including examples from vertebrates, invertebrates, and plants.

3 units, Spr (Schneider, D)

IMMUNOL 205. Immunology in Health and Disease
Concepts and application of adaptive and innate immunology and the role of the immune system in human diseases. Case presentations of diseases including autoimmune diseases, infectious disease and vaccination, hematopoietic and solid organ transplantation, genetic and acquired immunodeficiencies, hypersensitivity reactions, and allergic diseases. Problem sets based on lectures and current clinical literature. Laboratory in acute and chronic inflammation.

2-4 units, Win (Lewis, D)

IMMUNOL 209. Translational Immunology
(Open to medical students in the Immunology concentration, graduate students, undergraduates by consent of instructor) Journal style format focusing on current basic immunology research and how it is translated into immunotherapies and clinical trials. Topics include hematopoiesis, transplantation, tolerance, immune monitoring, vaccination, autoimmunity and antibodies, rheumatoid arthritis, chronic pulmonary disease, and asthma. May be repeated for credit.

1 unit, Aut (Miklos, D), Win (Miklos, D), Spr (Miklos, D)

IMMUNOL 210. Immunology Research Seminars for Medical Students
Required for medical students selecting the Immunology Concentration. Attendance at a minimum of ten seminars related to immunology outside of required medical school classes. A one-page essay on each seminar, what was presented and how it relates to a clinical immunologic problem, is required.

2 units, Aut (Miklos, D), Win (Miklos, D), Spr (Miklos, D)

IMMUNOL 211. Clinical Research Design and Development Using Immunomodulatory Agents
For advanced undergraduates, coterminal students, medical students, and graduate students. Immunomodulatory agents have improved outcomes in human disease such as autoimmunity, cancer, allergies, asthma, and transplantation. The agents that immunomodulate have been developed from discovery of targets in basic immunology. Objectives: 1) how to design phase I (safety and proof of concept studies) based on animal models of new targets for immunomodulatory agents, including concepts such as endpoints, translational biomarker studies, immunological monitoring, power size calculations, and basic statistics applied to clinical trial design; 2) to understand regulatory (FDA) pathways and institutional policies to obtain approval of clinical studies; 3) to become familiar with patent law for applying for composition of matter and methods of use for discovery of targets for immunomodulatory agents. Prerequisite: Biology or Human Biology core for undergraduates.

2 units, Aut (Nadeau, K)

IMMUNOL 212. Granulocyte Biology in Human Disease
For advanced undergraduates, coterminal students, medical students, and graduate students. Objectives: 1) to learn the basic functions and activation pathways of major granulocytes in humans (neutrophils, eosinophils, basophils and mast cells; 2) to understand the pathology in humans diseases primarily associated with disorders in neutrophils, eosinophils, basophils, or mast cells; 3) to compare and contrast each granulocyte type and its response to therapies used in clinical medicine. Expert guest lectures, weekly discussion sections, and an emphasis on science communication and science writing. Prerequisite: Biology or Human Biology core for undergraduates.

2 units, Win (Nadeau, K)

IMMUNOL 215. Principles of Biological Technologies
(Same as MI 215) The principles underlying commonly utilized technical procedures in biological research. Lectures and primary literature critiques on gel electrophoresis, protein purification and stabilization, immunofluorescence microscopy, FACS. Prerequisites: biochemistry. Required of first-year graduate students in Microbiology and Immunology, and the Immunology program.

3 units, Spr (Kirkegaard, K)

IMMUNOL 231. Medicine for Innovators and Entrepreneurs
(Same as PEDS 231) Interdisciplinary, project-based course in which bioscience, bioinformatics, biodesign, bioengineering students learn concepts and principles to understand human disease and work together to propose solutions to medical problems. Diabetes mellitus is used as a paradigm for understanding human disease. Guest medical school and outside faculty. Field trips to Stanford clinics and biotechnology companies. Prequisite: college level biology.

3-4 units, not given this year

IMMUNOL 275. Tumor Immunology
(Same as CBIO 275) Focuses on the ability of innate and adaptive immune responses to recognize and control tumor growth. Topics include: tumor antigens, tumor immunosurveillance and immunoediting, tumor immunotherapy, cancer vaccines and dendritic cell therapy. Tracks the historical developments of our understanding of modulating tumor immune response and discusses their relative

significance in the light of current research findings. Prerequisite: for undergraduates, human biology or biology core.

3 units, not given this year

IMMUNOL 280. Early Clinical Experience in Immunology
Clinical observation experience for medical students in the Immunology Scholarly Concentration. At the end of the observation period, which may span over one to two quarters, the student submits a case observation paper to his/her faculty sponsor. Prerequisite: IMMUNOL 205.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

IMMUNOL 285. Brain and the Immune System
(Same as IMMUNOL 185) For advanced undergraduates, coterminal students, and graduate students. Molecular and cellular interactions between the nervous and immune systems. Focus is on the role of immune molecules in neural development, the bidirectional mechanisms by which the brain and immune system communicate with each other, and the role of the immune system in the diseased and infected brain. Topics include: molecular basis of fever, stress and inflammation, gender differences in autoimmune diseases, inflammation in neurodegenerative diseases, central nervous system infections, and the immune system in psychiatric disorders. Expert guest lectures, weekly discussion sections, and student presentations. Prerequisite: Biological Sciences or Human Biology core.

3 units, Win (Steinman, L; Brownell, S; Price, J)

IMMUNOL 290. Teaching in Immunology
Practical experience in teaching by serving as a teaching assistant in an immunology course. Unit values are allotted individually to reflect the level of teaching responsibility assigned to the student. May be repeated for credit.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

IMMUNOL 299. Directed Reading in Immunology
Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

IMMUNOL 305. Immunology Journal Club
Required of first- to fourth-year graduate students. Graduate students present and discuss recent papers in the literature. May be repeated for credit.

1 unit, Aut (Steinman, L; Martinez, O), Win (Steinman, L; Martinez, O), Spr (Steinman, L; Martinez, O)

IMMUNOL 311. Seminar in Immunology
Enrollment limited to Ph.D., M.D./Ph.D., and medical students whose scholarly concentrations are in Immunology. Current research topics.

1 unit, Aut (Steinman, L; Fathman, C), Win (Steinman, L; Fathman, C), Spr (Steinman, L; Fathman, C)

IMMUNOL 311A. Discussions in Immunology
Students discuss papers of speakers in 311, and meet with the speakers. Corequisite: 311.

1 unit, Aut (Steinman, L; Fathman, C), Win (Steinman, L; Fathman, C), Spr (Steinman, L; Fathman, C)

IMMUNOL 399. Graduate Research
For Ph.D., M.D./Ph.D. students, and medical students whose scholarly concentrations are in Immunology.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

IMMUNOL 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

IMMUNOL 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

INSTITUTE FOR INTERNATIONAL STUDIES (FREEMAN SPOGLI) (IIS) COURSES

UNDERGRADUATE COURSES IN INSTITUTE FOR INTERNATIONAL STUDIES (FREEMAN SPOGLI)

Primarily for undergraduates; graduate students may enroll with consent of adviser.

IIS 195. Interschool Honors Program in Environmental Science, Technology, and Policy
Students from the schools of Humanities and Sciences, Engineering, and Earth Sciences analyze important problems in a year-long small group seminar. Combines research methods, oral presentations, preparation of an honors thesis by each student, and where relevant, field study. May be repeated for credit.

1-9 units, Aut (Staff), Win (Staff), Spr (Staff)

IIS 199. Interschool Honors Program in International Security Studies
Students from different schools meet in a year-long seminar to discuss, analyze, and conduct research on international security. Combines research methods, policy evaluation, oral presentation, and preparation of an honors thesis by each student. May be repeated for credit.

1-5 units, Aut (Stedman, S; Fingar, T), Win (Stedman, S; Fingar, T), Spr (Stedman, S; Fingar, T)

INTERDISCIPLINARY STUDIES IN HUMANITIES (HUMNTIES) COURSES

UNDERGRADUATE COURSES IN INTERDISCIPLINARY STUDIES IN HUMANITIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

GRADUATE COURSES IN INTERDISCIPLINARY STUDIES IN HUMANITIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

HUMNTIES 322. Medieval Seminar: Classics and Key Works
(Same as HISTORY 317) Colloquium focused on key primary sources that allow entry into Medieval European culture. Readings include: Augustine, On Christian Doctrine; Gregory the Great, Moralia on the Book of Job; Beowulf; the Song of Roland; and Aquinas, Summa Theologica.

3-5 units, not given this year

HUMNTIES 323. Renaissance/Early Modern Seminar
(Same as ILAC 323) Focus is on how authors and readers from this period theorize various historical processes: the rise of European imperialism; religious conflicts and revolutions; new understandings of the self and the world; and the rise of the novel. Authors: Boccaccio, Machiavelli, Núñez Muley, Martorell, Rabelais, Camões, Cervantes, Montaigne, and Shakespeare.

3-5 units, not given this year

HUMNTIES 324. Enlightenment Seminar
(Same as HISTORY 234, HISTORY 334, HISTORY 432A) The Enlightenment as a philosophical, literary, and political movement. Themes include the nature and limits of philosophy, the grounds for critical intellectual engagement, the institution of society and the public, and freedom, equality and human progress. Authors

include Voltaire, Montesquieu, Rousseau, Hume, Diderot, and Condorcet.

4-5 units, Win (Baker, K)

INTERNATIONAL POLICY STUDIES (IPS) COURSES

GRADUATE COURSES IN INTERNATIONAL POLICY STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

IPS 201. Managing Global Complexity
(Same as POLISCI 312S) The value of major theories and concepts in international relations for understanding and addressing global policy issues. Country case study with policy challenges such as development, democracy promotion, proliferation, and terrorism; the challenge of creating coherent policies that do not run at cross purposes. Case study of a policy challenge that cuts across academic disciplines and policy specializations to provide the opportunity to bring together skills and policy perspectives.

3 units, Spr (Krasner, S; Stoner-Weiss, K)

IPS 202. Topics in International Macroeconomics
Topics: standard theories of open economy macroeconomics, exchange rate regimes, causes and consequences of current account imbalances, the economics of monetary unification and the European Monetary Union, recent financial and currency crises, the International Monetary Fund and the reform of the international financial architecture.

5 units, Aut (Aturupane, C)

IPS 203. Issues in International Economics
Topics in international trade and international trade policy: trade, growth and poverty, regionalism versus multilateralism, the political economy of trade policy, trade and labor, trade and the environment, and trade policies for developing economies. Prerequisite: ECON 165, ECON 166.

5 units, Win (Aturupane, C)

IPS 204A. Microeconomics
(Same as PUBLPOL 301A) Microeconomic concepts relevant to decision making. Topics include: competitive market clearing, price discrimination; general equilibrium; risk aversion and sharing, capital market theory, Nash equilibrium; welfare analysis; public choice; externalities and public goods; hidden information and market signaling; moral hazard and incentives; auction theory; game theory; oligopoly; reputation and credibility. Prerequisites: ECON 50 and MATH 51 or equiv.

4 units, Aut (Bulow, J)

IPS 204B. Cost-Benefit Analysis and Evaluation
(Same as PUBLPOL 301B) Relationship between microeconomic analysis and public policy making. Economic rationales for policy interventions. Economic models of politics and application to policy making. Relationship of income distribution to policy choice. Welfare evaluation of public and private decisions. Education policy, social security, and health care. Prerequisite: PUBLPOL 301A or ECON 51.

4 units, Spr (Lim, C)

IPS 205A. Foundations Of Statistical Inference
(Same as PUBLPOL 303A) (Same as LAW 362.) Statistical background and introduction to regression. Topics include hypothesis testing, linear regression, nearest-neighbors regression, and other statistical concepts. Hands-on empirical analysis using popular statistical packages. Goal is to analyze empirical studies, conduct empirical research, and to crossexamine or work with statistical experts.

4 units, Aut (Strnad, J)

IPS 205B. Econometrics
(Same as PUBLPOL 303B) (Same as LAW 366.) Descriptive statistics. Regression analysis. Hypothesis testing. Analysis of variance. Heteroskedasticity, serial correlation, errors in variables, simultaneous equations. The construction and use of models for analyzing economic and social phenomena. Bayesian analysis. Univariate and bivariate analysis. Simple regression model. Multiple regression model. Inference and heteroskedasticity. Linear probability model. Instrumental variables. Maximum likelihood methods. Measurement of social and political attitudes and ideologies. Statistical analysis of large data sets.

4 units, Win (Strnad, J)

IPS 206A. Politics and Collective Action
(Same as POLISCI 331S, PUBLPOL 304A) Classic theories for why collective action problems occur and how they can be solved. Politics of aggregating individual decisions into collective action, including voting, social protest, and competing goals and tactics of officials, bureaucrats, interest groups, and other stakeholders. Economic, distributive, and moral frameworks for evaluating collective action processes and outcomes. Applications to real-world policy problems involving collective action.

4 units, Spr (Hanson, W)

IPS 207. Governance, Corruption, and Development
The role of governance in the growth and development experience across countries emphasizing the economies of corruption. The concept and measurement of governance. Theory and evidence on the impact of corruption on growth and development outcomes, including investment, international trade and financial flows, human capital accumulation, poverty and income inequality. The cultural, economic, and political determinants of corruption and policy implications for improving governance. Prerequisite: ECON 50.

3-5 units, Spr (Aturupane, C)

IPS 207A. Judgment and Decision Making
(Same as PUBLPOL 305A) (Same as LAW 333.) Theories and research on heuristics and biases in human inference, judgment, and decision making. Experimental and theoretical work in prospect theory emphasizing loss and risk aversion. Challenges that psychology offers to the rationalist expected utility model; attempts to meet this challenge through integration with modern behavioral economics. Decision making biases and phenomena of special relevance to public policy such as group polarization, group think, and collective action.

4 units, Win (Brest, P)

IPS 207B. Public Policy and Social Psychology: Implications and Applications
(Same as PSYCH 216, PUBLPOL 305B) Theories, insights, and concerns of social psychology relevant to how people perceive issues, events, and each other, and links between beliefs and individual and collective behavior. Topics include: situationist and subjectivist traditions of applied and theoretical social psychology; social comparison, dissonance, and attribution theories; social identity, stereotyping, racism, and sources of intergroup conflict and misunderstanding; challenges to universality assumptions regarding human motivation, emotion, and perception of self and others; the problem of producing individual and collective changes in norms and behavior.

4 units, Spr (Ross, L)

IPS 208. Justice
(Same as ETHICSOC 171, PHIL 171, PHIL 271, POLISCI 3P, POLISCI 136S) Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include protecting religious liberty, financing schools and elections, regulating markets, assuring access to health care, and providing affirmative action and group rights. Issues of global justice including human rights and global inequality.

4-5 units, Aut (Cohen, J)

IPS 209. Practicum
(Same as PUBLPOL 309) Applied policy exercises in various fields. Multidisciplinary student teams apply skills to a contemporary problem in a major policy exercise with a public sector client such as a government agency. Problem analysis, interaction with the client and experts, and presentations. Emphasis is on effective written and oral communication to lay audiences of recommendations based on policy analysis.

1-10 units, Aut (Nation, J; Hensler, D), Win (Nation, J)

IPS 210. The Politics of International Humanitarian Action
The relationship between humanitarianism and politics in international responses to civil conflicts and forced displacement. Focus is on policy dilemmas and choices, and the consequences of action

or inaction. Case studies include northern Iraq (Kurdistan), Bosnia, Rwanda, Kosovo, and Darfur.

3-5 units, Aut (Morris, E)

IPS 211. The Transition from War to Peace: Peacebuilding Strategies

How to find sustainable solutions to intractable internal conflicts that lead to peace settlements. How institutions such as the UN, regional organizations, and international financial agencies attempt to support a peace process. Case studies include Bosnia, East Timor, Kosovo, Burundi, Liberia, and Afghanistan.

3-5 units, Spr (Staff)

IPS 213. International Mediation and Civil Wars

3-5 units, Win (Morris, E)

IPS 219. Intelligence and National Security

How intelligence supports U.S. national security and foreign policies. How it has been used by U.S. presidents to become what it is today; organizational strengths and weaknesses; how it is monitored and held accountable to the goals of a democratic society; and successes and failures. Current intelligence analyses and national intelligence estimates are produced in support of simulated policy deliberations.

3-4 units, Aut (Fingar, T)

IPS 221. International Organizations and Institutions

How do international organizations and institutions (IOs and IIs) influence state practices, if at all? Do states have a firm grasp in controlling international organizations or have these IOs spun out of control? IOs and IIs raise exciting questions for both scholars and practitioners alike. This course will briefly review the central theoretical perspectives on IOs and also the history of the major international organizations. Emphasis will be placed on specific conceptual or policy-motivated puzzles posed by international organizations, generally focusing on one IO or II (including the UN, WTO, IMF, World Bank, ECJ and others) per puzzle.

3-5 units, Win (Gould, E)

IPS 221A. Globalization and Its Discontents: An Introduction to International Political Economy

What is globalization? Its impacts on different countries and population including those that multilateral organizations such as the World Bank, International Monetary Fund, and World Trade Organization have on the economic policies of member states and the functioning of the global economy. Topics include: political economy of trade; exchange rate policy; the liberalization of trade and finance; the global move to openness; development, debt and aid; and the role of international organizations.

3-5 units, Spr (Gould, E)

IPS 221B. Citizenship and Immigration

How people define and delineate nations. How states define their citizens. Different models of citizenship. Historical and political review of immigration in the U. S., W. Europe, Asia, and Australia. Political and economic effects of immigration. The economic impact of immigration, refugees and asylum seekers, public opinion, nationalist parties, and immigrant rights.

5 units, not given this year

IPS 222. Economic Development

General theories of economic development with focus on development policies. Topics include: agriculture, industrialization, role of financial development, income distribution, human resource development, international relations, and economic aid.

5 units, not given this year

IPS 230. Democracy, Development, and the Rule of Law

(Same as INTNLREL 114D, POLISCI 114D, POLISCI 314D) Links among the establishment of democracy, economic growth, and the rule of law. How democratic, economically developed states arise. How the rule of law can be established where it has been historically absent. Variations in how such systems function and the consequences of institutional forms and choices. How democratic systems have arisen in different parts of the world. Available policy instruments used in international democracy, rule of law, and development promotion efforts.

5 units, Aut (Diamond, L; Stoner-Weiss, K)

IPS 233. Public Policy and South Asian Development

Trends in socioeconomic conditions in South Asia from independence to present and the policies that influenced them. Topics: theoretical framework of the relationship between forms of governance and development; governance choices in South Asia, particularly democracy and federalism; and influence of political governance, national identity, and socioeconomic institutions on development. Review of case studies, including the Kerala development experience, India's IT industry, Bangladesh's microfinance initiative, and Sri Lanka's education system.

3-5 units, not given this year

IPS 241. International Security in a Changing World

(Same as POLISCI 114S) The major international and regional security problems in the modern world. Interdisciplinary faculty lecture on the political and technical issues involved in nuclear proliferation, terrorism and homeland security, civil wars and insurgencies, and future great power rivalries.

5 units, Win (Sagan, S; Cuellar, M)

IPS 243. Refugees, Security, and Cooperation

3-5 units, Win (Staff)

IPS 244. U.S. Policy toward Northeast Asia

Case study approach to the study of contemporary U.S. policy towards Japan, Korea, and China. Historical evolution of U.S. foreign policy and the impact of issues such as democratization, human rights, trade, security relations, military modernization, and rising nationalism on U.S. policy. Case studies include U.S.-Japan trade tensions, anti-Americanism in Korea, and cross-straits relations between China and Taiwan.

5 units, not given this year

IPS 250. International Conflict: Management and Resolution

(Same as POLISCI 210R, POLISCI 310R, PSYCH 383) (Same as LAW 656) Interdisciplinary. Theoretical insights and practical experience in resolving inter-group and international conflicts. Sources include social psychology, political science, game theory, and international law. Personal, strategic, and structural barriers to solutions. How to develop a vision of a mutually bearable shared future, trust in the enemy, and acceptance of loss that a negotiated settlement may produce. Spoilers who seek to sabotage agreements. Advantages and disadvantages of unilateral versus reciprocal measures. Themes from the Stanford Center of International Conflict and Negotiation (SCICN). Prerequisite for undergraduates: consent of instructor.

3 units, Win (Ross, L; Holloway, D; Weiner, A)

IPS 262. Contemporary Issues in Nuclear Energy Policy

Current nuclear energy trends related to economic growth and carbon-free energy production to reduce global warming. Topics include: trends, promise, and perils; environment; proliferation; and international security. Policy considerations for nuclear safety and safeguards, environmentally responsible management from raw uranium to spent fuel, international security and nonproliferation, economic competition with other energy sources, domestic and foreign politics, and international law and treaties. International guest expert lecturers.

5 units, not given this year

IPS 263. Energy and Climate Cooperation in the Western Hemisphere

(Same as EARTHSYS 132, EARTHSYS 232, INTNLREL 146A) Current political dynamics in major western hemisphere fossil fuel producers in N. America, the Andean region, the Southern Cone of S. America, and Trinidad and Tobago. The potential for developing sustainable alternative energy resources in the western hemisphere for export particularly biofuels, and its impact on agricultural policy, environmental protection, and food prices. The feasibility of creating regional energy security rings such as the proposed N. American Energy Security and Prosperity Partnership.

4 units, not given this year

IPS 264. Behind the Headlines: An Introduction to Contemporary South Asia

Introduction to South Asia. Historical forces that shaped the region: diverse religions and ethnicities, geography, and colonialism. Recent history and current state of the region: rise of the Taliban and Al Quaeda in Afghanistan; Pakistan's government, military, and mullahs; U.S. intervention in Afghanistan, its relationship with Pakistan, and its policy shift toward India; regional problems and opportunities amongst neighboring countries; and the economic and political rise of India.

3-5 units, Aut (Manuel, A)

IPS 271. Selena Diana Jenkins International Human Rights Colloquium
(Same as INTNLREL 110, POLISCI 204, POLISCI 304) This one-unit seminar will comprise 10 international and domestic human rights scholars, judges and activists who have made significant contributions to international justice, women and children¿s rights, environmental rights and indigenous rights. It is open to all Stanford undergraduate and graduate students. Students in the seminar will be encouraged to present their ongoing research and to develop new research projects (individually and collaboratively). Students wishing to do significant research and reading in the context of the seminar may, in consultation with one of the instructors, sign up for independent study. Law students are first required to be enrolled in an International Human Rights in the law school in order to participate.
1 unit, Win (Stacy, H)

IPS 280. Transitional Justice, International Criminal Tribunals, and the International Criminal Court
Historical backdrop of the Nuremberg and Tokyo Tribunals. The creation and operation of the Yugoslav and Rwanda Tribunals (ICTY and ICTR). The development of hybrid tribunals in East Timor, Sierra Leone, and Cambodia, including evaluation of their success in addressing perceived shortcomings of the ICTY and ICTR. Examination of the role of the International Criminal Court and the extent to which it will succeed in supplanting all other ad hoc international justice mechanisms and fulfill its goals. Analysis focuses on the politics of creating such courts, their interaction with the states in which the conflicts took place, the process of establishing prosecutorial priorities, the body of law they have produced, and their effectiveness in addressing the needs of victims in post-conflict societies.
3-5 units, Spr (Staff)

IPS 298. Practical Training
Students obtain internship in a relevant research or industrial activity to enhance their professional experience consistent with their degree program and area of concentration. Prior to enrolling students must get internship approved by associate director. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. Meets the requirements for Curricular Practical Training for students on F-1 visas. Student is responsible for arranging own internship. May be repeated for credit.
1-5 units, Sum (Staff)

IPS 299. Directed Reading
IPS students only. May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

IPS 300. Issues in International Policy Studies
Presentations of techniques and applications of international policy analysis by students, faculty, and guests, including policy analysis practitioners.
1 unit, Aut (Stoner-Weiss, K)

IPS 314S. Decision Making in U.S. Foreign Policy
(Same as POLISCI 314S) Priority to IPS students. Formal and informal processes involved in U.S. foreign policy decision making. The formation, conduct, and implementation of policy, emphasizing the role of the President and executive branch agencies. Theoretical and analytical perspectives; case studies.
5 units, Spr (Blacker, C)

IPS 388. Palestine and the Arab-Israeli Conflict
(Same as HISTORY 288, HISTORY 388, JEWISHST 288, JEWISHST 388) 1882 to the present. Comparison of representative expressions of competing historical interpretations. U.S. policy towards the conflict since 1948. (Beinin)
4-5 units, Win (Beinin, J)

IPS 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

INTERNATIONAL RELATIONS (INTNLREL) COURSES

For information on undergraduate programs in International Relations, see page 000 of this bulletin.

UNDERGRADUATE COURSES IN INTERNATIONAL RELATIONS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

INTNLREL 110. Selena Diana Jenkins International Human Rights Colloquium
(Same as IPS 271, POLISCI 204, POLISCI 304) 10 international and domestic human rights scholars, judges, and activists who have made significant contributions to international justice, women's and children's rights, environmental rights, and indigenous rights. Students encouraged to present their ongoing research and develop new research projects (individually and collaboratively). Students wishing to do significant research and reading in the context of the seminar may, in consultation with one of the instructors, sign up for independent study. Law students are first required to be enrolled in an International Human Rights in the law school in order to participate.
1 unit, Win (Stacy, H)

INTNLREL 114D. Democracy, Development, and the Rule of Law
(Same as IPS 230, POLISCI 114D, POLISCI 314D) Links among the establishment of democracy, economic growth, and the rule of law. How democratic, economically developed states arise. How the rule of law can be established where it has been historically absent. Variations in how such systems function and the consequences of institutional forms and choices. How democratic systems have arisen in different parts of the world. Available policy instruments used in international democracy, rule of law, and development promotion efforts. GER:DB-SocSci
5 units, Aut (Diamond, L; Stoner-Weiss, K)

INTNLREL 115. Development Issues in South Asia
Development problems and solutions from theoretical and practical perspectives, including village economies and global networks, during the present period of S. Asian growth.
5 units, Spr (Dossani, R)

INTNLREL 122A. The Political Economy of the European Union
EU institutions, the legislative process, policies, relations with the U.S., and enlargement and the future of the EU. History and theories of EU integration. Democratic accountability of the institutions, and the emerging party system. Principal policies in agriculture, regional development, the internal market, single currency, and competition. Emphasis is on policies that affect the relations with the U.S. including trade and security. Results of the EU's constitutional convention.
5 units, Win (Crombez, C)

INTNLREL 130. Science, Technology, and Development
Global and sociological perspectives on science and technology expansion, comparing nations and regions. Social features such as gender equity; and social impact economic development strategies such as tech incubators, the triple helix model, and UN initiatives. Democratization, human rights, welfare of local populations, and national security. Policy issues, the digital divide, development debates, commodification of the public good, and notions of social change.
5 units, Aut (Drori, G)

INTNLREL 136R. Introduction to Global Justice
(Same as ETHICSOC 136R, PHIL 76, POLISCI 136R, POLISCI 336) Recent work in political theory on global justice. Topics include global poverty, human rights, fair trade, immigration, climate change. Do developed countries have a duty to aid developing countries? Do rich countries have the right to close their borders to economic immigrants? When is humanitarian intervention justified? Readings include Charles Beitz, Thomas Pogge, John Rawls.

5 units, Spr (Oberman, K)

INTNLREL 140A. International Law and International Relations
What is the character of international legal rules? Do they matter in international politics, and if so, to what degree? The foundational theories, principles, and sources of public international law. Prominent theories of international relations and how they address the role of law in international politics. Practical problems such as human rights, humanitarian intervention, and enforcement of criminal law. International law as a dynamic set of rules, at times influenced by power, at other times constraining it, but always essential to studying international relations. WIM

5 units, Aut (Lutomski, P)

INTNLREL 140C. The U.S., UN Peacekeeping, and Humanitarian War
The involvement of U.S. and the UN in major wars and international interventions since the 1991 Gulf War. The UN Charter's provisions on the use of force, the origins and evolution of peacekeeping, the reasons for the breakthrough to peacemaking and peace enforcement in the 90s, and the ongoing debates over the legality and wisdom of humanitarian intervention. Case studies include Croatia and Bosnia, Somalia, Rwanda, Kosovo, East Timor, and Afghanistan.

5 units, Spr (Patenaude, B)

INTNLREL 141A. Camera as Witness: International Human Rights Documentaries
Rarely screened documentary films, focusing on global problems, human rights issues, and aesthetic challenges in making documentaries on international topics. Meetings with filmmakers. GER:DB-Hum

5 units, Aut (Bojic, J)

INTNLREL 147. The Political Economy of the Southern Cone of South America
Argentina, Brazil, Paraguay, Uruguay, Bolivia, and Chile. Post-WW II political economy developments and political relations. Impacts of military rule from the 60s into the 80s. Regional and international political developments that led to MERCOSUR in 1991, and subsequent expansion.

5 units, Aut (O'Keefe, T)

INTNLREL 148. Economic Integration of the Americas
Current attempts at economic integration throughout the Western Hemisphere, including the Andean Community, the Caribbean Common Market (CARICOM), the Latin American Integration Association (ALADI), MERCOSUR, the North American Free Trade Area (NAFTA), and the Central American Integration System (SICA). Emphasis is on practical applications of integration efforts and nuts-and-bolts issues of how integration efforts function.

5 units, Win (O'Keefe, T)

INTNLREL 149. The Economics and Political Economy of the Multilateral Trade System
The historical development of the multilateral trade system, the current agenda of the World Trade Organization, and prospects for trade liberalization. Emphasis is on the economic rationale for multilateral trade rules, the political problems facing countries in supporting further liberalization, and the challenges to the legitimacy of WTO procedures and practices. Issues include the greater participation of developing countries, the impact of new members, and the relationship between the WTO and other multilateral bodies. Guest speakers; student research paper presentations.

5 units, Win (Josling, T)

INTNLREL 165A. Globalization, Governance, and Human Rights
Economic, political, and cultural aspects of globalization drawing on theories from sociology, political science, cultural anthropology, and law. The tensions within globalization and their paradoxical effects on human rights. Globalization is associated with a downward spiral of human rights. Yet, paradoxically, more countries now subscribe to human rights treaties than ever before. Global governance mechanisms aimed at improving human rights, including governmental treaties, international NGOs advocacy work, and corporate codes of conduct and their effects on human rights. The effects of the UN International Labour Organization on labor related human rights, such as child labor and discrimination,. Integrating social sciences theories with empirical research.

5 units, Spr (Abu Sharkh, M)

INTNLREL 166. Russia and Islam
Seminar. Focus is on 1985 to the present. The policies of Gorbachev toward the Muslim populace of the Soviet Union; how post-communist Russia under Yeltsin and Putin has dealt with its Muslim minorities; and the relationship of Russia to the newly independent states of Central Asia and the South Caucasus after the breakup of the USSR in 1991. The two major wars which Russia has fought with the secessionist Russian autonomous republic of Chechnya. GER:EC-GlobalCom

5 units, not given this year

INTNLREL 170. Energy and Climate
Interdisciplinary introduction to the technology, economics, and international politics of energy and climate. Energy technologies and their impact on geopolitics, the environment, and mitigating the effects of climate change. What is the role of energy in national security? What does climate change mean for the energy mix? How do developing countries view energy and climate change? What is the proper balance between regulation and free market operation in energy markets?

INTNLREL 199. Honors Research: Democracy, Development, and the Rule of Law in Developing Countries
(Same as POLISCI 299Q) Restricted to students in the CDDRL option of the International Relations honors program. Goal is to prepare students to do research and/or fieldwork to complete their thesis research. Main currents in democracy and development literature concerning how economic growth and democratization are related; how the rule of law supports these processes in countries undergoing change. Student presentations of thesis questions; student groups develop research problems and designs. May be repeated for credit.

3-5 units, Spr (Stoner-Weiss, K)

INTNLREL 200A. International Relations Honors Field Research
For juniors planning to write an honors thesis during senior year. Initial steps to prepare for independent research. Professional tools for conceptualizing a research agenda and developing a research strategy. Preparation for field research through skills such as data management and statistics, references and library searches, and fellowship and grant writing. Creating a work schedule for the summer break and first steps in writing. Prerequisite: acceptance to IR honors program.

3 units, Spr (Drori, G)

INTNLREL 200B. International Relations Honors Seminar
Second of two-part sequence. For seniors working on their honors theses. Professional tools, analysis of research findings, and initial steps in writing of thesis. How to write a literature review, formulate a chapter structure, and set a timeline and work schedule for the senior year. Skills such as data analysis and presentation, and writing strategies. Prerequisites: acceptance to IR honors program, and 199 or 200A.

3 units, Aut (Drori, G)

INTNLREL 206. Palestinian Nationalism, Past and Present
The Palestinian national movement and its role in the Arab-Israeli conflict. The roots of the movement in the Ottoman Empire, its growth through the British Mandate, the 1948 and1967 wars, the

Intifada, and the Israeli-Palestinian peace process. Emphasis is on components which contributed to or delayed the growth of a distinct Palestinian identity, including Zionism.

5 units, not given this year

INTNLREL 207. Tribe, State, and Society in the Modern Middle East

The staying power of tribal identities and values in the Middle East. Examples include the Iraqi Sunni tribal insurgency against the U.S. The role of tribes in the formation of Middle Eastern states and how tribal values continue to impact social, political, and economic issues today.

INTRODUCTION TO THE HUMANITIES (IHUM) COURSES

UNDERGRADUATE COURSES IN INTRODUCTION TO THE HUMANITIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

IHUM 2. Epic Journeys, Modern Quests

First of a two quarter sequence. Through the metaphor of the journey, epic poems externalize the human quest for identity and self-definition: as the epic hero crosses the physical world and descends into the underworld, to visit the dead and seek counsel from them, he gradually comes closer to himself. The different goals of such journeys and the evolution of the epic hero as he struggles to reach his destination, with attention to how exile and alienation, the encounter with ancestors, the female voice, and divine guidance define the trajectories traced by the various epics in question.The diminished importance of the dead and the increased emphasis on the power of the living in various literary genres. How concepts of humanity and society are defined by the sense of rupture with the past, including a heightened importance given to innovation, the present, the living, and the everyday that contrasts with the formative power of the afterlife, tradition, and the dead. GER:IHUM-2

4 units, Win (Harrison, R)

IHUM 3. Epic Journeys, Modern Quests

Second of a two quarter sequence. IHUM 13. Beyond Survival

How do men and women survive, physically, intellectually, creatively, spiritually in the world? Focus is on texts that imaginatively model strategies to overcome physical deprivation (such as enslavement, prison camp confinement, and sexual violence) and social oppression (such as religious persecution and gender discrimination). How does a legacy of psychic and social trauma manifest itself in the contemporary moment? How do people reach beyond survival and rise above the historical circumstances into which they are born? Sources include works from the 17th century to the present that look back to critical moments in the past. The texts confront events of political and psychological rupture: slavery, the Holocaust, Latin American dictators. History and memory, ritual and reality collide as characters confront the past and negotiate its meanings and its presence. Innovative strategies of survival represented in these works appear in forms such as physical resistance. GER:IHUM-1

4 units, Aut (Elam, H; Elam, M)

IHUM 25A. Art and Ideas

First in a two quarter sequence. A broad sampling of cultural practices, primarily dance and theater, that use the human body as an art medium. From the critical perspectives of dance and drama history and theory, course examines both established and emerging works. The focus is on developing perceptual and interpretive skills for understanding how the performing arts have functioned historically and critically as key indices to and challenging templates of cultural understanding. How can the body be read as an art medium? What kinds of knowledge can a highly disciplined moving body reveal? What does it mean to re-present life through performance historically? How does a live performance work to construct the spectator who views it? How do people come to know themselves through watching and participating in performance? From romantic ballet and realist drama to the present, including examples such as the Harlem Renaissance. GER:IHUM-2

IHUM 34A. A Life of Contemplation or Action? Debates in Western Literature and Philosophy
First in a two quarter sequence. Which is preferable: a life of thought or a life of action? Are the two necessarily in conflict, or is it possible to reconcile them? Focus is on literary treatments of the ongoing debate over the active life versus the contemplative life as it is carried out in texts from the classical to the modern eras. While the debate itself is perennial, it takes on different forms and implications as it moves across changing literary, historical, and philosophical contexts. 34A considers the debate as it is defined by classical authors, early Christian thinkers, and medieval mystical and literary texts, and is redefined in the Renaissance by humanist and posthumanist treatments of it. 34B considers the role of contemplation in an increasingly market-driven and secular world. GER:IHUM-2

IHUM 40A. World Archaeology and Global Heritage
First in a two quarter sequence. In a world marked by rapid globalization and forward-looking technology, heritage presents a particular paradox. Increasingly, heritage sites are flashpoints in cultural and religious conflicts around the globe. Simultaneously heritage is viewed as a unifying force in nation building and in forging international alliances. Clearly, history matters but how do certain histories come to matter in particular ways, and to whom? How is research on the past shaped through present-day concerns about identity, community, nation, alongside transnational flows of people, money, and goods? The main topics are the impact of the past on the present, and the impact of the present on the past. How the past plays a role in contemporary society, and at contemporary archaeological research, management and conservation. Close study of important archaeological sites. GER:IHUM-2
4 units, Win (Hodder, I)

IHUM 40B. World Archaeology and Global Heritage

4 units, Spr (Voss, B; Kojan, D)

IHUM 48. The Art of Living
Everyone is forced to make a fundamental choice: by deciding what is most valuable, people decide how they are going to live their lives. They may opt for a life of reason and knowledge; one of faith and discipline; one of nature and freedom; one of community and altruism; or one of originality and style. People may choose to live lives as though they were works of art. In every case, hard work is required: lives are not just given, but need to be made. To live well is, in fact, to practice an art of living. Where, however, do such ideals come from? How do people adopt and defend them? What is required to put them into practice? What do people do when they come into conflict with one another? And what role do great works of art play in all this? The various ways in which it is possible to live well and beautifully, what it takes to implement them, and what happens when they come under pressure from inside and out. GER:IHUM-1
4 units, Aut (Anderson, L; Landy, J; Taylor, K)

IHUM 57. Humans and Machines
How is a living, thinking human being like, or not like, a machine? This might seem like a new question for the Information Age, yet it has been a preoccupation of our civilization for centuries. From the culmination of the Scientific Revolution in the 17th century, philosophers, physiologists, engineers, authors, political actors, and artists of every kind have taken humanity's measure by comparing humans with machines. This course follows that tradition by asking a number of questions about what it means to think of the human mind, body, and society as types of machines. How has the machine served as a metaphor for the cosmos and culture? How do people interact with machines, and how have machines influenced literature, performance, and the arts? What separates people from machines, and are they really all that? The shifting boundary lines between the mechanical and the human by considering how humanity has created or imagined machines. GER:IHUM-1
4 units, Aut (Lowood, H; Bukatman, S)

IHUM 64. Journeys
The journey is the most fundamental narrative: from the moment of birth, everyone is embarked on a constant passage through space and time toward an end. Death itself is in dispute: is it final, or only the beginning of another journey? The mysteries of destination infuse lives, giving rise to the most basic questions of purpose and meaning and faith, one's proper relation to others and the physical world. The works examined in this course were written across a span of some 2,300 years, from very different cultural and historical situations and in very different forms and genres. But each of them presents some essential aspect of that journey and of the multiplicity of passages within that one great journey: moral, spiritual, and emotional passages that challenge and transform people even as they advance toward what the poet Thomas Gray called the inevitable hour. GER:IHUM-1
4 units, Aut (Wolff, T; Yearley, L)

IHUM 69A. Human History: A Global Approach
First of a two quarter sequence. 75,000 years ago there were barely 20,000 people on earth and each of them consumed about 4,000 calories of energy each day, half of it for food and half for every-

thing else combined. Today, by contrast, there are 6,000,000,000 people on earth and in the U.S. each, on average, burn through 230,000 calories per day, for everything from driving Hummers to eating much more than needed. People take for granted things that would have seemed like magic a hundred years ago; they have penetrated every niche on the planet and have even moved beyond planet. Yet at the same time, other species are going extinct at the rate of one every 20 minutes and human beings have poisoned the atmosphere and seas. People are the greatest success story or the greatest disaster of the last million years. Humans may be on the verge of an astonishing transformation, transcending biology and making death obsolete; or they may be on the verge of destroying themselves.

4 units, Win (Morris, I)

IHUM 69B. Human History: A Global Approach

Second of a two quarter sequence. 75,000 years ago there were barely 20,000 people on earth and each of them consumed about 4,000 calories of energy each day, half of it for food and half for everything else combined. Today, by contrast, there are 6,000,000,000 people on earth and in the U.S. each, on average, burn through 230,000 calories per day, for everything from driving Hummers to eating much more than needed. People take for granted things that would have seemed like magic a hundred years ago; they have penetrated every niche on the planet and have even moved beyond planet. Humans may be on the verge of an astonishing transformation, transcending biology and making death obsolete; or they may be on the verge of destroying themselves.

4 units, Spr (Morris, I)

IHUM 70. Word and Image

Is a picture really worth a thousand words? This familiar phrase, which began to appear frequently in the U.S. press around 1920, is particularly worth pondering in our image-saturated era, when an image shown for a few seconds can sell a product, seal an election, result in death threats, or shift public opinion. What roles do pictures and words play in our perception and understanding of the world, in how people learn, enjoy, remember, and experience emotions? What is the relationship of an image or a word to that which it represents? These and similar questions are raised today in many different places: in journalism as much as in cognitive science, in science as much as in literature, on the Internet and in the criminal justice system. How images argue, prove, convince, and how they argue, prove, and convince differently from the written or spoken word, are central questions asked in this course.

4 units, Aut (Bobonich, C)

IHUM 71. Sustainability and Collapse

Contemporary environmental crises such as climate illustrate how all human societies depend in intricate ways on their interactions with natural resources, habitats, and other species. Some human societies survive for thousands of years, whereas others collapse after a few decades or centuries. Exploring such cases of survival and collapse requires drawing on the resources of the sciences as well as the humanities, since they usually involve complex interactions of natural resources and limits with social organization and cultural ideas and values. Course explores these interactions and the complex issues 21st-century societies face. Where current concepts of environmental sustainability, crisis, and disaster come from, how they are used in particular social, cultural, and political contexts, how they affect human behavior, and in what ways they shape social choices and policies in dealing with the many problems that confront the global community.

4 units, Aut (Heise, U)

IHUM 72. The Poet Re-making the World

Can poetry change the world? How poetry has proved itself to be a resilient aesthetic form at the intersection of the personal and the political. Course follows the poem as it is written by men and women facing wars, imprisonment, journeys, social upheavals, and the fragmentation of their worlds. Through reading works from different historical, cultural, and poetic traditions, course explore the question of whether something as individual as subjective artistic experience can help people cope with social and political events that threaten suffering and destruction. The adventures of the individual poet: a young man caught in the trenches of the WW I; a Japanese haiku master and inspired wanderer of the 17th century; an American beat, Jack Kerouac; a poet from St. Louis who went to England and changed the course of 20th-century poetry; an English woman trapped in the conventions of her time; a contemporary US soldier in Iraq.

4 units, Aut (Horky, P)

IHUM 73A. Ultimate Meanings: Decoding Religious Stories from around the World

First of a two quarter sequence. Is there more to life than survival, or does it have some higher purpose? Why is there suffering, death, and evil in the world, and is there some way to overcome them? Religious communities often answer such questions through the art of story-telling, through history, myth, biography and other forms of distilling human experience into narrative. These stories have shaped the world, helping people to cope with difficult aspects of experience, influencing the way people love, suffer, and die, inspiring the imagination, and helping to ignite conflict and violence. Some of the great stories of the world's religions: the sacred narratives of Buddhism, Judaism, Christianity, and Islam, to learn something about the religious cultures that produced them, and how they have shaped human experience.

4 units, Win (Staff)

IHUM 73B. Ultimate Meanings: Decoding Religious Stories from around the World

Second of a two quarter sequence. Is there more to life than survival, or does it have some higher purpose? Why is there suffering, death, and evil in the world, and is there some way to overcome them? Religious communities often answer such questions through the art of story-telling, through history, myth, biography and other forms of distilling human experience into narrative. These stories have shaped the world, helping people to cope with difficult aspects of experience, influencing the way people love, suffer, and die, inspiring the imagination, and helping to ignite conflict and violence. Some of the great stories of the world's religions: the sacred narratives of Buddhism, Judaism, Christianity, and Islam, to learn something about the religious cultures that produced them, and how they have shaped human experience.

4 units, Spr (Staff)

ITALIAN GENERAL (ITALGEN) COURSES

UNDERGRADUATE COURSES IN ITALIAN GENERAL

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ITALGEN 149. New Frontiers in Italian Cinema

A new generation of Italian filmmakers who examine the contradictory encounters between Italians and the migrant others in contemporary Italy. Critical texts from film studies, gender studies, ethnic and cultural studies, psychoanalysis, and history. I English; films, in Italian with English subtitles, by Amelio, Ozpetek, Munzi, Garrone, Melliti, Tornatore, and Giordana. GER:DB-Hum

3-5 units, not given this year

ITALGEN 155. The Mafia in Society, Film, and Literature

We will compare both Italian and American fantasies of the Mafia to its historical origins and impact on Italian culture. Central topics: do the media inevitably idealize corruption or can they criticize it? how do Mafia stories reflect tensions between North and South in Italy, and between Italians and Italian-Americans? how do we triangulate the myths of the Mafia, popular culture, and the anti-institutional bias of much modern Italian fiction? In English. GER:DB-Hum

3-5 units, Aut (Wittman, L)

ITALGEN 172. Dream Visions: The Roman de la Rose

(Same as FRENGEN 172, FRENGEN 272, ITALGEN 272) What truths are in dreams? How does the quest for a symbolic object embody a moral struggle? What motivates a personal search for divine love? Study of arguably the most influential work of the European Middle Ages, the Roman de la Rose of Guillaume de Lorris and Jean de Meun. Focus on the work as erotic, allegorical

quest for the mystical Rose, and scholastic encyclopedia through close analysis, secondary readings, and study of manuscript illumination. Use of medieval and modern French edition.

3-5 units, Spr (Galvez, M)

ITALGEN 181. Philosophy and Literature
(Same as CLASSGEN 81, COMPLIT 181, ENGLISH 81, FRENGEN 181, GERGEN 181) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum

4-5 units, Win (Anderson, L; Landy, J)

GRADUATE COURSES IN ITALIAN GENERAL

Primarily for graduate students; undergraduates may enroll with consent of instructor.

ITALGEN 230. Italian Renaissance Epic: Ariosto
For graduate students and advanced undergraduates. Ariosto's epic poem Orlando furioso in the context of the social and political world of Renaissance Italy. Topics include: its relationship to precursor texts and traditions (classical, Arthurian, Carolingian); Ferrarese court culture and the politics of dynastic epic; its relationship to early modern ideologies of gender. Taught in English but requires advanced reading knowledge of Italian.

4-5 units, Spr (Springer, C)

ITALGEN 235E. Inferno
The first canticle of Dante's masterpiece.

3-5 units, Win (Harrison, R)

ITALGEN 242. Women Mystics from the Middle Ages to the Present
(Same as FRENGEN 242) The predominantly female mystical experience or direct-embodied encounter with a spiritual reality that is difficult, perhaps impossible, to reduce to words, or to explain rationally. Sources include European texts from the Middle Ages to the present by women and men who attempt to convey the experience metaphorically, to interpret it theologically and philosophically, and to transmit it actively to others.

3-5 units, not given this year

ITALGEN 261. Rebels, Outlaws, and Iconoclasts: Italian Cinema from 1943 to 1975
Introduction to major Italian directors from neorealism through the turbulent decades of the 60s and 70s in Italy. Emphasis on figures such as outcasts or social deviants. Analysis of revolutionary cinematic style in the works of Visconti, De Santis, Rossellini, Antonioni, Bertolucci, Bellocchio, and Pasolini. Critical texts from film and cultural studies. English; films in Italian with English subtitles; readings in English. Mandatory evening film screenings.

3-5 units, Aut (Carey, S)

ITALGEN 264E. Petrarch and Petrarchism
(Same as COMPLIT 216) The works of Petrarch (1304-1374), acknowledged as the founder of Renaissance humanism, and a bibliophile, collector of manuscripts, and devotee of erudition. How he dedicated his life to harmonizing the Christian faith with classical learning. Sources include his Latin moral works, epistles, epics, and treatises on illustrious men, and the Triumphs and Canzoniere .

5 units, not given this year

ITALGEN 272. Dream Visions: The Roman de la Rose
(Same as FRENGEN 172, FRENGEN 272, ITALGEN 172) What truths are in dreams? How does the quest for a symbolic object embody a moral struggle? What motivates a personal search for divine love? Study of arguably the most influential work of the European Middle Ages, the Roman de la Rose of Guillaume de Lorris and Jean de Meun. Focus on the work as erotic, allegorical quest for the mystical Rose, and scholastic encyclopedia through close analysis, secondary readings, and study of manuscript illumination. Use of medieval and modern French edition.

3-5 units, Spr (Galvez, M)

ITALGEN 281. Novels into Film
20th-century Italian novels and their film adaptations. Texts include The Leopard (Tomasi di Lampedusa/De Sica), The Garden of the Finzi-Continis (Bassani, De Sica), The Conformist (Moravia/Bertolucci), Christ Stopped at Eboli (Levi/Rosi), Padre/Padrone (Ledda/Taviani).

4 units, Win (Springer, C)

ITALGEN 284. Philosophy and Poetry in 20th-Century French and Italian Theory
(Same as FRENGEN 284) To what extent is poetry the other of modern philosophy? How does modern aesthetic theory understand the distinction and blur the boundaries between philosophical and poetic thinking? Authors include Croce, Gentile, Sartre, Bataille, Agamben, Ricoeur, Cacciari, Derrida, and Vattimo.

3-5 units, Aut (Wittman, L)

ITALGEN 289. French and Italian Women Writers
(Same as FRENGEN 289) How does women's writing evolve from the very early 20th century, when women's liberation movements first began and WW I brought major social changes, to the flowering of feminine writing in the 70s and beyond? What is the relationship between women writers and filmmakers, and feminism? Is it legitimate to consider women writers in a separate category? To what extent does a reevaluation of women writers mean reconsidering modern literary history? Authors and filmmakers include Aleramo, Yourcenar, de Beauvoir, Banti, Duras, Cavani.

3-5 units, not given this year

ITALGEN 301E. New Methods and Sources in French and Italian Studies
(Same as FRENGEN 301E) Based on student interest. Changes in research methods: the use of digitized texts, resources, and databases available through Stanford Libraries¿ gateways. Emphasis is on strategies for exploration of broad and specialized topics through new and traditional methods. Using a flexible schedule based on enrollment and the level of students¿ knowledge, may be offered in forms including a shortened version on the basics, independent study, or a syllabus split over two quarters. Unit levels adjusted accordingly.

1-4 units, alternate years, not given this year

ITALGEN 369. Introduction to Graduate Studies: Criticism as Profession
(Same as COMPLIT 369, FRENGEN 369, GERLIT 369) Major texts of modern literary criticism in the context of professional scholarship today. Readings of critics such as Lukács, Auerbach, Frye, Ong, Benjamin, Adorno, Szondi, de Man, Abrams, Bourdieu, Vendler, and Said. Contemporary professional issues including scholarly associations, journals, national and comparative literatures, university structures, and career paths.

5 units, Aut (Berman, R)

ITALGEN 395. Philosophical Reading Group
(Same as COMPLIT 359A, FRENGEN 395) Discussion of one contemporary or historical text from the Western philosophical tradition per quarter in a group of faculty and graduate students. For admission of new participants, a conversation with H. U. Gumbrecht is required. May be repeated for credit.

1 unit, Aut (Gumbrecht, H), Win (Gumbrecht, H)

ITALIAN LANGUAGE (ITALLANG) COURSES

UNDERGRADUATE COURSES IN ITALIAN LANGUAGE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ITALLANG 1. First-Year Italian, First Quarter
All-in-Italian communicative and interactive approach. Emphasis is on the development of a ppropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and

oral presentations, and plenty of conversational practice. Language lab, multimedia, and online activities. quirement.

5 units, Aut (Staff), Win (Tempesta, G), Spr (McCarty, A)

ITALLANG 1A. Accelerated First-Year Italian, Part 1
Accelerated sequence that completes first-year Italian in two rather than three quarters. For students with previous knowledge of Italian or with a strong background in another Romance language. 2A fulfills the University language requirement. Prerequisite: advanced-level proficiency in another Romance language.

5 units, Aut (McCarty, A), Win (McCarty, A)

ITALLANG 2. First-Year Italian, Second Quarter
Continuation of 1. Prerequisite: 2 or equivalent.

5 units, Aut (McCarty, A), Win (Alberti, G), Spr (Tempesta, G)

ITALLANG 2A. Accelerated First-Year Italian, Part 2
Continuation of 1A. Prerequisite: 1A or equivalent.Fulfills the University language requirement.

5 units, Win (Baldocchi, M), Spr (McCarty, A)

ITALLANG 3. First-Year Italian, Third Quarter
Continuation of 2. Prerequisite: 2 or equivalent. Fulfills the University language requirement.

5 units, Aut (Tempesta, G), Win (McCarty, A), Spr (Alberti, G)

ITALLANG 5A. Intensive First-Year Italian, Part A
Same as ITALLANG 1.

5 units, Sum (Ferrando, S)

ITALLANG 5B. Intensive First-Year Italian, Part B
Same as ITALLANG 2. Prerequisite: 1 or 5A.

5 units, Sum (Coggeshall, E)

ITALLANG 5C. Intensive First-Year Italian, Part C
Same as ITALLANG 3. Prerequisite: 2 or 5B. Fulfills the University language requirement.

5 units, Sum (Tennen, D)

ITALLANG 15S. Intermediate Italian Oral Conversation
May be repeated once for credit.

3 units, Sum (Gelmetti, S; Tempesta, G)

ITALLANG 20. Intermediate Oral Communication: Italy Today
Second-year conversational and presentational skills developed through exposure to based on movie clips, slide shows, and other authentic multimedia materials. Guest lectures on Italian culture including opera, pop music, wine, and food culture. Preview of the Florentine experience with Florence returnees sharing their experiences in Italy. Prerequisite: completion of first-year Italian or equivalent.

3 units, Aut (Tempesta, G), Win (Tempesta, G), Spr (Tempesta, G), Sum (Staff)

ITALLANG 21. Second Year Italian, First Quarter
Sequence integrating culture and language in the development of socioculturally appropriate discourse. Authentic materials include news and film clips, video and audio files, and short stories. Reading, writing, listening, and speaking competence based on cross-cultural understanding. Prerequisite: first-year Italian or equivalent.

4 units, Aut (Baldocchi, M)

ITALLANG 21A. Accelerated Second-Year Italian, Part 1
For students going to Florence. Completes second-year sequence in two rather than three quarters. Prerequisite: first-year Italian or equivalent.

4-5 units, Aut (McCarty, A), Win (McCarty, A), Spr (Baldocchi, M)

ITALLANG 22. Second-Year Italian, Second Quarter
Continuation of 21. Prerequisite: 21 or equivalent.

4-5 units, Win (Pansa, K)

ITALLANG 22A. Accelerated Second-Year Italian, Part 2
Continuation of 21A or 21F (for Florence returnees). Satisfies the foreign language requirement for International Relations majors. Prerequisite: 21A or 21F.

4-5 units, Aut (Baldocchi, M), Win (McCarty, A), Spr (McCarty, A)

ITALLANG 23. Second-Year Italian, Third Quarter
Continuation of 22. Prerequisite: 22 or equivalent. Satisfies the foreign language requirement for International Relations majors.

4-5 units, Spr (Ferrando, S)

ITALLANG 99. Language Specials
Prerequisite: consent of instructor.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ITALLANG 101. Advanced Oral Communication: Italian Opera
For Florence returnees or those who have completed second-year Italian. Use of opera excerpts by Leoncavallo, Puccini, Rossini, and Verdi to improve communication skills and review language functions. Emphasis is on presentation, conversation, and debate. Prerequisites: second-year Italian or equivalent.dinator.

3 units, Aut (Cellinese, A)

ITALLANG 102. Advanced Oral Communication: Modern Cinema
For Florence returnees or those who have completed second-year Italian. Use of movie sequences by Italian film directors such as Benigni, Moretti, Salvatores, Soldini, and Tornatore to improve communication skills and review language functions. Emphasis is on presentation, conversation, and debate. Prerequisite: second-year Italianor equivalent.

3 units, not given this year

ITALLANG 103. Advanced Oral Communication: Italian Classic Cinema
For Florence returnees or those who have completed second-year Italian. Use of classical movie sequences by Italian film directors such as Antonioni, De Sica, Fellini, Rossellini, and Visconti to improve communication skills and review language functions. Emphasis is on presentation, conversation, and debate. Prerequisites: second-year Italian or equivalent.

3 units, Spr (Cellinese, A)

Goal is advanced proficiency in written Italian. Textual and grammatical analysis of literary and non-literary texts, oral reports, translations, and writing assignments. Prerequisite: second-year Italian or equivalent.

3-4 units, Win (Baldocchi, M)

ITALLANG 115. Academic and Creative Writing
Continuation of 114. Academic prose: formal structures and academic terminology. Creative prose: short stories, expressive language, and when and how to break the rules for effect. Prerequisite: second-year Italian or equivalent. WIM

3-4 units, Spr (Baldocchi, M)

ITALLANG 126. Italy and Italians Today
May be repeated for credit.

2 units, Aut (Staff), Spr (Coggeshall, E)

GRADUATE COURSES IN ITALIAN LANGUAGE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

ITALLANG 50. Reading Italian
For seniors or graduate students seeking to meet the University reading requirement for advanced degrees. Reading sstrategies for comprehension of secondary literature for acaemic research. Fulfills the University foreign language requirement for advanced degrees if student earns a grade of 'B.' Prerequisite: one year of Italian or reading proficiency in another Romance language.

3 units, not given this year

ITALLANG 205A. Intensive First-Year Italian
For Stanford graduate students restricted to 9 units. Accelerated. Covers 1-3 quarters of Italian. Emphasis is on the development of authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials.

3-5 units, Sum (Staff)

ITALLANG 205B. Intensive First-Year Italian
For Stanford graduate students restricted to 9 units. Accelerated. Covers 1-3 quarters of Italian. Emphasis is on the development of

authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials
3-5 units, Sum (Staff)

ITALLANG 205C. Intensive First-Year Italian
For Stanford graduate students restricted to 9 units. Accelerated. Covers 1-3 quarters of Italian. Emphasis is on the development of authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials.
3-5 units, Sum (Staff)

ITALLANG 394. Graduate Studies in Italian Conversation
Prerequisite: consent of instructor. (Staff)
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

ITALLANG 395. Graduate Studies in Italian
Prerequisite: consent of instructor. (Staff)
2-5 units, Aut (Staff), Win (Staff), Spr (Staff)

OVERSEAS STUDIES COURSES IN ITALIAN LANGUAGE

Courses approved for the French or Italian major and taught overseas can be found in the "Overseas Studies" section of this bulletin, or in the Overseas Studies office, 126 Sweet Hall.

FLORENCE ITALIAN LANGUAGE COURSES

OSPFLOR 21F. Accelerated Second-Year Italian, Part A
5 units, Aut (Quercioli, F), Win (Quercioli, F), Spr (Quercioli, F)

OSPFLOR 22F. Accelerated Second-Year Italian Part B,
5 units, Aut (Quercioli, F), Win (Quercioli, F), Spr (Staff, 1)

ITALIAN LITERATURE (ITALLIT) COURSES

UNDERGRADUATE COURSES IN ITALIAN LITERATURE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ITALLIT 127. Inventing Italian Literature: Dante, Boccaccio, Petrarca
The origins of Italian literature. Poetry such as 13th-century love lyrics, Dante's Vita Nuova, and Petrarca's Canzoniere; prose such as stories from Boccaccio's Decameron. Prerequisite: ITALLANG 22A or equivalent. GER:DB-Hum, WIM
4 units, Aut (Springer, C)

ITALLIT 128. The Italian Renaissance and the Path to Modernity
The literature, art, and history of the Renaissance and beyond. Readings from the 15th through 18th centuries include Moderata Fonte, Machiavelli, Ariosto, Tasso, Galileo, and Goldoni. Prerequisite: ITALLANG 22A or equivalent. GER:DB-Hum, WIM
4 units, Win (Springer, C)

ITALLIT 129. Modern Italian History and Literature
The history of the Italian nation and national literary identity in the 19th and 20th centuries. The relationship between literary texts and their historical context from the Risorgimento to the Resistance. Focus is on the romantic lyric, futurism, fascism, and the changing status of women. Authors include Foscolo, Leopardi, D'Annunzio, Aleramo, Marinetti, Pirandello, Ungaretti, and Montale. Prerequisite: ITALLANG 22A or equivalent. GER:DB-Hum, WIM
4 units, Spr (Carey, S)

ITALLIT 142. Literature and the City
How has the relationship between man and the city changed since the advent of industrialization? How did men and women in the 20th century relate to the Modern City? The recent rise of ecocriticism suggests a growing interest in the urban environment and its relationship to literature. From Futurism to Neorealism, from Magic Realism to Postmodernism, sources range from fiction to poetry to the graphic novel and span over the course of the 20th century to century to the present day (D'Annunzio, Marinetti, Merini, Buzzati, Calvino).
3-5 units, Spr (Ferrando, S)

ITALLIT 189A. Honors Research
Senior honors students enroll for 5 units in Winter while writing the honors thesis, and may enroll in 189B for 2 units in Spring while revising the thesis. Prerequisite: DLCL 189.
5 units, Win (Staff)

ITALLIT 189B. Honors Research
Open to juniors with consent of adviser while drafting honors proposal. Open to senior honors students while revising honors thesis. Prerequisites for seniors: 189A, DLCL 189.
2 units, Spr (Staff)

ITALLIT 199. Individual Work
1-12 units, Aut (Staff), Win (Staff), Spr (Staff)

GRADUATE COURSES IN ITALIAN LITERATURE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

ITALLIT 266. Pasolini: Cinema and Subversion
The connections made by controversial writer and director Pier Paolo Pasolini between poetry, politics, film, and sexuality. Pasolini's much-contested public role, which caused him to be persecuted by political and artistic opponents, and theories concerning his mysterious murder in 1975. Comparing him to contemporaries, such as Fellini and Antonioni. Why did Pasolini become an icon of rebellion, and what connects his communist commitment, his archaic Catholicism, and his homosexuality?
3-5 units, Win (Wittman, L)

ITALLIT 282. Solid or Liquid Modernity
This course takes as its starting point Zygmund Bauman's distinction between a solid and a liquid modernity. Examples from Italian literature include Pirandello, Calvino, Tabucchi, Tommaso Pincio, and Paolo Zanotti.
3-5 units, Spr (Ceserani, R)

ITALLIT 292. Machiavelli
The course will examine the political thought, literary style, and historical importance of Niccolò Machiavelli. Readings will include selections from Machiavelli's Discorsi, The Prince, and his play La Mandragola.
2 units, Aut (Staff)

ITALLIT 299. Individual Work
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ITALLIT 399. Individual Work
For graduate students working on a special project or predissertation research. May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ITALLIT 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

JAPANESE GENERAL (JAPANGEN) COURSES

UNDERGRADUATE COURSES IN JAPANESE GENERAL

Primarily for undergraduates; graduate students may enroll with consent of adviser.

JAPANGEN 51. Japanese Business Culture
(Same as JAPANGEN 251) Japanese group dynamics in industrial and corporate structures, negotiating styles, decision making, and crisis management. Strategies for managing intercultural differences.
3-5 units, Win (Dasher, R)

JAPANGEN 60. Asian Art and Culture
(Same as ARTHIST 2) The religious and philosophical ideas and social attitudes of India, China, and Japan and how they are expressed in architecture, painting, woodblock prints, sculpture, and

in such forms as garden design and urban planning. GER:DB-Hum, EC-GlobalCom

5 units, alternate years, not given this year

JAPANGEN 84. Aristocrats, Warriors, Sex Workers, and Barbarians: Lived Life in Early Modern Japanese Painting

Changes marking the transition from medieval to early modern Japanese society that generated a revolution in visual culture, as exemplified in subjects deemed fit for representation; how commoners joined elites in pictorializing their world, catalyzed by interactions with the Dutch. GER:DB-Hum

4 units, not given this year

JAPANGEN 92. Traditional East Asian Culture: Japan

Required for Chinese and Japanese majors. Introduction to Japanese culture in historical context. Previous topics include:shifting paradigms of gender relations and performance, ancient mythology, court poetry and romance, medieval war tales, and the theaters of Noh, Bunraku, and Kabuki. GER:DB-Hum, EC-GlobalCom

5 units, Win (Takeuchi, M)

JAPANGEN 121. Translating Japan, Translating the West

(Same as JAPANGEN 221) Translation lies at the heart of all intercultural exchange. This course introduces students to the specific ways in which translation has shaped the image of Japan in the West, the image of the West in Japan, and Japan's self-image in the modern period. What texts and concepts were translated by each side, how, and to what effect? No prior knowledge of Japanese language necessary. GER:DB-Hum

3-5 units, Aut (Levy, I)

JAPANGEN 137. Classical Japanese Literature in Translation

(Same as JAPANGEN 237) Prose, poetry, and drama from the 10th-19th centuries. Historical, intellectual, and cultural context. Works vary each year. May be repeated for credit with consent of instructor. GER:DB-Hum, DB-Hum

4 units, Win (Carter, S)

JAPANGEN 138. Survey of Modern Japanese Literature in Translation

(Same as JAPANGEN 238) Required for Japanese majors. Japanese literature since 1868. Authors include Futabatei Shimei, Higuchi Ichiyo, Natsume Soseki, and Yoshimoto Banana. GER:DB-Hum, EC-GlobalCom

3-4 units, Win (Reichert, J)

JAPANGEN 141. Japanese Performance Traditions

(Same as JAPANGEN 241) Major paradigms of gender in Japanese performance traditions from ancient to modern times, covering Noh, Kabuki, Bunraku, and Takarazuka.

3-4 units, Spr (Levy, I)

JAPANGEN 148. Modern Japanese Narratives: Literature and Film

(Same as JAPANGEN 248) Central issues in modern Japanese visual and written narrative. Focus is on competing views of modernity, war, and crises of individual and collective identity and responsibility. Directors and authors include Kurosawa, Mizoguchi, Ozu, Ogai, Akutagawa, Tanizaki, Abe, and Oe. GER:DB-Hum, EC-GlobalCom

3-5 units, not given this year

JAPANGEN 149. Screening Japan: Issues in Crosscultural Interpretation

(Same as JAPANGEN 249) Is the cinematic language of moving images universal? How have cultural differences, political interests, and genre expectations affected the ways in which Japanese cinema makes meaning across national borders? Sources include the works of major Japanese directors and seminal works of Japanese film criticism, theory, and scholarship in English. No Japanese language skills required. GER:DB-Hum

3-4 units, not given this year

JAPANGEN 160. Early Modern Japan: The Floating World of Chikamatsu

(Same as JAPANGEN 260) Early modern Japan as dramatized in the puppet theater of Chikamatsu Monzaemon (1653-1725), Japan's leading dramatist, who depicted militarization, commercialization, and urbanization in the Tokugawa period (1603-1868). Emperors, shogun, daimyo, samurai, merchants, monks, geisha, and masterless ronin in his bunraku plays as denizens of a floating world. Themes of loyalty, love, heroism, suicide, and renunciation in the early modern world. In English.

4 units, not given this year

JAPANGEN 185. Arts of War and Peace: Late Medieval and Early Modern Japan, 1500-1868

(Same as ARTHIST 187, ARTHIST 387) Narratives of conflict, pacification, orthodoxy, nostalgia, and novelty through visual culture during the change of episteme from late medieval to early modern, 16th through early 19th centuries. The rhetorical messages of castles, teahouses, gardens, ceramics, paintings, and prints; the influence of Dutch and Chinese visuality; transformation in the roles of art and artist; tensions between the old and the new leading to the modernization of Japan. GER:DB-Hum, EC-GlobalCom

4 units, Aut (Takeuchi, M)

JAPANGEN 186. Theme and Style in Japanese Art

(Same as ARTHIST 186, ARTHIST 386, JAPANGEN 286) Monuments in traditional Japanese architecture, sculpture, garden design, painting, prints, and pots, through the 19th century. Chronological framework emphasizes the role of these objects play in visualizing the ideals of the society they represent. GER:DB-Hum

4 units, not given this year

JAPANGEN 187. Romance, Desire, and Sexuality in Modern Japanese Literature

(Same as JAPANGEN 287) Constructions of romance, desire, and sexuality such as sexual connoisseurship, love suicide, and nanshoku in Edo Japan. How these paradigms are reconfigured by modern writers. Readings: Saikaku, Chikamatsu, Ichiyo, Soseki, Tanizaki, and Mishima. GER:DB-Hum, EC-GlobalCom

4 units, not given this year

JAPANGEN 198. Senior Colloquium in Japanese Studies

(Same as KORGEN 198) Research, write, and present capstone essay or honors thesis.

1 unit, Win (Takeuchi, M)

GRADUATE COURSES IN JAPANESE GENERAL

Primarily for graduate students; undergraduates may enroll with consent of instructor.

JAPANGEN 200. Directed Reading in Asian Languages

For Japanese literature. Prerequisite: consent of instructor. (Staff)

1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

JAPANGEN 201. Teaching Japanese Humanities

Prepares graduate students to teach humanities at the undergraduate level. Topics include syllabus development and course design, techniques for generating discussion, effective grading practices, and issues particular to the subject matter.

1 unit, Aut (Reichert, J)

JAPANGEN 220. The Situation of the Artist in Traditional Japan

(Same as ARTHIST 485) Topics may include: workshop production such as that of the Kano and Tosa families; the meaning of the signature on objects including ceramics and tea wares; the folk arts movement; craft guilds; ghost painters in China; individualism versus product standardization; and the role of lineage. How works of art were commissioned; institutions supporting artists; how makers purveyed their goods; how artists were recognized by society; the relationship between patrons' desires and artists' modes of production.

5 units, not given this year

JAPANGEN 221. Translating Japan, Translating the West

(Same as JAPANGEN 121) Translation lies at the heart of all intercultural exchange. This course introduces students to the specific ways in which translation has shaped the image of Japan in the West, the image of the West in Japan, and Japan's self-image in the modern period. What texts and concepts were translated by

the modern period. What texts and concepts were translated by each side, how, and to what effect? No prior knowledge of Japanese language necessary.

3-5 units, Aut (Levy, I)

JAPANGEN 237. Classical Japanese Literature in Translation
(Same as JAPANGEN 137) Prose, poetry, and drama from the 10th-19th centuries. Historical, intellectual, and cultural context. Works vary each year. May be repeated for credit with consent of instructor.

4 units, Win (Carter, S)

JAPANGEN 238. Survey of Modern Japanese Literature in Translation
(Same as JAPANGEN 138) Required for Japanese majors. Japanese literature since 1868. Authors include Futabatei Shimei, Higuchi Ichiyo, Natsume Soseki, and Yoshimoto Banana.

3-4 units, Win (Reichert, J)

JAPANGEN 241. Japanese Performance Traditions
(Same as JAPANGEN 141) Major paradigms of gender in Japanese performance traditions from ancient to modern times, covering Noh, Kabuki, Bunraku, and Takarazuka.

3-4 units, Spr (Levy, I)

JAPANGEN 248. Modern Japanese Narratives: Literature and Film
(Same as JAPANGEN 148) Central issues in modern Japanese visual and written narrative. Focus is on competing views of modernity, war, and crises of individual and collective identity and responsibility. Directors and authors include Kurosawa, Mizoguchi, Ozu, Ogai, Akutagawa, Tanizaki, Abe, and Oe.

3-5 units, not given this year

JAPANLNG 1. First-Year Modern Japanese, First Quarter
Foundation in grammar, reading, conversation and basic composition to articulate experiences and ideas. 150 Kanji characters introduced.

5 units, Aut (Busbin, K)

JAPANLNG 2. First-Year Modern Japanese, Second Quarter
Continuation of 1. Foundation in grammar, reading, conversation and basic composition to articulate experiences and ideas. 150 Kanji characters introduced. Prerequisiste 1.

5 units, Win (Busbin, K)

JAPANLNG 3. First-Year Modern Japanese, Third Quarter
Continuation of 2. Foundation in grammar, reading, conversation and basic composition to articulate experiences and ideas. 150 Kanji characters introduced. Prerequisiste 2.

5 units, Spr (Busbin, K)

JAPANLNG 4A. First -Year Japanese Language Essentials, First Quarter
(Formerly JAPANLNG 7A.) For students who want to build communication skills in limited time. Online listening exercises, audiovisual materials, kanji tutorials. See http://japanese.stanford.edu/?page_id=73.

3 units, Aut (Fu, M)

JAPANLNG 4B. First-Year Japanese Language Essentials, Second Quarter
(Formerly JAPANLNG 8A.) Continuation of 4A. For students who want to build communication skills in limited time. Online listening exercises, audiovisual materials, kanji tutorials. See http://japanese.stanford.edu/?page_id=73.

3 units, Win (Fu, M)

JAPANLNG 4C. First-Year Japanese Language Essentials, Third Quarter
(Formerly JAPANLNG 9A.) Continuation of 4B. For students who want to build communication skills in limited time. Online listening exercises, audiovisual materials, kanji tutorials. See http://japanese.stanford.edu/?page_id=73.

3 units, Spr (Fu, M)

JAPANLNG 5. Intensive First-Year Japanese Language
Equivalent to 7, 8, and 9 combined. See http://www.stanford.edu/group/japanese/summer. Same as JAPANLNG 305

12-15 units, Sum (Miyachi, M)

JAPANLNG 7. First-Year Japanese Language, Culture, and Communication, First Quarter
(Formerly JAPANLNG 7B.) First-year sequence enables students to converse, write, and read essays on topics such as personal history, experiences, familiar people. 300 kanji characters. See http://japanese.stanford.edu/?page_id=5

5 units, Aut (Lipton, H)

JAPANLNG 8. First-Year Japanese Language, Culture, and Communication, Second Quarter
(Formerly JAPANLNG 8B.) Continuation of 7. .) First-year sequence enables students to converse, write, and read essays on topics such as personal his-tory, experiences, familiar people. 300 kanji characters. http://japanese.stanford.edu/?page_id=5
5 units, Win (Lipton, H)

JAPANLNG 9. First-Year Japanese Language, Culture, and Communication, Third Quarter
(Formerly JAPANLNG 9B.) Continuation of 8. .) First-year sequence enables students to converse, write, and read essays on topics such as personal his-tory, experiences, familiar people. 300 kanji charactersSee http://japanese.stanford.edu/?page_id=5
5 units, Spr (Lipton, H)

JAPANLNG 11A. Intermediate Japanese Conversation, First Quarter
(Formerly JAPANLNG 27.) Develops oral proficiency through simple sentence patterns, audio tapes, and oral presentations. For the practical use of Japanese. Prerequisite: 3, 9, or consent of instructor.
2 units, Aut (Busbin, K)

JAPANLNG 11B. Intermediate Japanese Conversation, Second Quarter
(Formerly JAPANLNG 28.) Continuation of 11A. Develops oral proficiency through simple sentence patterns, audio tapes, and oral presentations. For the practical use of Japanese. Prerequisite 11A or consent of the instructor.
2 units, Win (Busbin, K)

JAPANLNG 11C. Intermediate Japanese Conversation, Third Quarter
(Formerly JAPANLNG 29.) Continuation of 11B. Develops oral proficiency through simple sentence patterns, audio tapes, and oral presentations. For the practical use of Japanese. Prerequisite 11B or consent of instructor.
2 units, Spr (Busbin, K)

JAPANLNG 14A. Second-Year Japanese Language Essentials, First Quarter
(Formerly JAPANLNG 17A.) Continuation of 4C. For students who want to build communication skills in limited time. Prerequisite: 4C or equivalent. http://japanese.stanford.edu/?page_id=89.
3 units, Aut (Yasumoto Magnani, E)

JAPANLNG 14B. Second-Year Japanese Language Essentials, Second Quarter
(Formerly JAPANLNG 18A.) Continuation of 14A. http://www.stanford.edu/group/japanese/3unit.htm. Prerequisite: 14A or equivalent.
3 units, Win (Yasumoto Magnani, E)

JAPANLNG 14C. Second-Year Japanese Language Essentials, Third Quarter
(Formerly JAPANLNG 19A.) Continuation of 14C. See http://www.stanford.edu/group/japanese/3unit.htm.. Prerequisite: 14C or equivalent.
3 units, Spr (Yasumoto Magnani, E)

JAPANLNG 17. Second-Year Japanese Language, Culture, and Communication, First Quarter
(Formerly JAPANLNG 17B.) Our goal is to express further develop and enhance spoken and written Japanese in order to handle advanced concepts such as the comparison and contrasts of the two cultures, descriptions of incidents, and social issues. 800 kanji, 1,400 new words, and higher-level grammatical constructions. 5 units, Aut (Lowdermilk, M)

JAPANLNG 18. Second-Year Japanese Language, Culture, and Communication, Second Quarter
(Formerly JAPANLNG 18B.) Prerequisite: 17 or equivalent. See https://www.stanford.edu/dept/lc/language/courses/japanese/japanese.html.
5 units, Win (Lowdermilk, M)

JAPANLNG 19. Second-Year Japanese Language, Culture, and Communication, Third Quarter
(Formerly JAPANLNG 19B.) Prerequisite 18 or equivalent. https://www.stanford.edu/dept/lc/language/courses/japanese/japanese.html.
5 units, Spr (Lowdermilk, M)

JAPANLNG 20. Intensive Second-Year Japanese
Equivalent to 17,18,19 combined. Prerequisite 9 or equivalent. See http://www.stanford.edu/group/japanese/summer.
12-15 units, Sum (Lipton, H)

JAPANLNG 31A. Intermediate to Advanced Japanese Conversation, First Quarter
(Formerly JAPANLNG 51.) Oral proficiency through role play, oral presentations, and discussion. Recommended for those who have participated in Kyoto SCTI program May be able to take concurrently with 17, 18, and 19. Prerequisite: 9K, or consent of instructor.
2 units, Aut (Lowdermilk, M)

JAPANLNG 31B. Intermediate to Advanced Japanese Conversation, Second Quarter
(Formerly JAPANLNG 52.) Continuation of 31A. Prerequisite: 31A or consent of instructor.
2 units, Win (Lowdermilk, M)

JAPANLNG 31C. Intermediate to Advanced Japanese Conversation, Thrid Quarter
(Formerly JAPANLNG 53.) Continuation of 31B. Prerequisite: 31B or consent of instructor.
2 units, Spr (Lowdermilk, M)

JAPANLNG 99. Language Specials
Prerequisite: consent of instructor. (Staff)
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

JAPANLNG 111. Business Japanese, First Quarter
Topics include cultural attitudes and approaches, work ethic, the stock market, import-export trade. Business letters, job interviews, and resume writing. May be repeated for credit. In Japanese. Prerequisite: 23, 29, or 19B, or consent of instructor.
3 units, not given this year

(Formerly JAPANLNG 121.) Focus is on improving speaking skills to narrate and describe things in detail. Audiovisual material and oral presentations. Prerequisite: 19K, 31C, or consent of instructor.
2 units, Aut (Lipton, H)

JAPANLNG 111B. Advanced Japanese Conversation, Second Quarter
(Formerly JAPANLNG 122.) Continuation of 111A. Prerequisite: 111A or consent of instructor.
2 units, Win (Lipton, H)

JAPANLNG 111C. Advanced Japanese Conversation, Third Quarter
(Formerly JAPANLNG 123.) Continuation of 111B. Prerequisite: 111B, or consent of instructor
2 units, Spr (Lipton, H)

JAPANLNG 115. Japanese for Bilingual Students
For students with advanced-level comprehension and speaking skills who in need of supplemental study. Emphasis is on reading, writing Chinese (kanji) characters, and formal Japanese.
3 units, not given this year

JAPANLNG 116. Japanese for Bilingual Students
For students with advanced-level comprehension and speaking skills who in need of supplemental study. Emphasis is on reading, writing Chinese (kanji) characters, and formal Japanese.
3 units, not given this year

JAPANLNG 117. Third-Year Japanese Language, Culture, and Communication, First Quarter
(Formerly JAPANLNG 127B.) Goal is to express thoughts and opinions in paragraph length in spoken and written forms. Materials include current Japanese media and literature for native speakers of Japanese. Cultural and social topics related to Japan and its people. See https://www.stanford.edu/dept/lc/language/courses/japanese/japanese.html.
5 units, Aut (Nakamura, K)

JAPANLNG 118. Third-Year Japanese Language, Culture, and Communication, Second Quarter
(Formerly JAPANLNG 128B.). Continuation of 117. Prerequisite 117. See https://www.stanford.edu/dept/lc/language/courses/ japanese/japanese.html.
5 units, Win (Nakamura, K)

JAPANLNG 119. Third-Year Japanese Language, Culture, and Communication, Third Quarter
(Formerly JAPANLNG 129B.) continuation of 118 http://www.stanford.edu/group/japanese/3rdjlcc. Prerequisite: 118.
5 units, Spr (Nakamura, K)

GRADUATE COURSES IN JAPANESE LANGUAGE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

JAPANLNG 32G. Accelerated Beginning Business Japanese II
For GSB students only. Limited enrollment.
4 units, not given this year

JAPANLNG 33G. Accelerated Beginning Business Japanese III
For GSB students only. Limited enrollment.
4 units, not given this year

JAPANLNG 200. Directed Reading
Prerequisite: 213 and consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

JAPANLNG 211. Advanced Japanese, First Quarter
Structure of Japanese, writings in different genres and styles, using such knowledge in writing, and expressing opinions on a variety of topics. Original writings, including fiction, essays, newspaper, and journal articles. Recommended taken in sequence. Prerequisite: 119 or equivalent.
3-5 units, Aut (Nakamura, K)

JAPANLNG 212. Advanced Japanese, Second Quarter
Continuation of 211 Prerequisite: 211 or equivalent.
3-5 units, Win (Nakamura, K)

JAPANLNG 213. Advanced Japanese, Third Quarter
Prerequisite: 212 or equivalent.
3-5 units, Spr (Nakamura, K)

JAPANLNG 305. Intensive First-Year Japanese for Graduate Students
Equivalent to 3 quarters of JAPANLNG 395 combined. Grads only. See http://www.stanford.edu/group/japanese/summer.
6-15 units, Sum (Staff)

JAPANLNG 320. Intensive Second-Year Japanese for Graduate Students
Equivalent to 3 quarters of JAPANLNG 395 combined. Grads only. See http://www.stanford.edu/group/japanese/summer.
6-15 units, Sum (Staff)

JAPANLNG 394. Graduate Studies in Japanese Conversation
Prerequisite: consent of instructor. (Staff)
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

JAPANLNG 395. Graduate Studies in Japanese
Prerequisite: consent of instructor. (Staff)
2-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

OVERSEAS STUDIES COURSES IN JAPANESE LANGUAGE

Courses approved for the French or Italian major and taught overseas can be found in the "Overseas Studies" section of this bulletin, or in the Overseas Studies office, 126 Sweet Hall.

KYOTO JAPANESE LANGUAGE COURSES

OSPKYOTO 9K. First-Year Japanese Language, Culture, and Communication B
5 units, Spr (Staff, 1)

OSPKYOTO 17K. Second-Year Japanese Language, Culture, and Communication B
5 units, Spr (Staff)

OSPKYOTO 19K. Second-Year Japanese Language, Culture, and Communication B
5 units, Spr (Staff, 1)

OSPKYOTO 119K. Third-Year Japanese Language, Culture, and Communication
5 units, Spr (Staff, 1)

JAPANESE LITERATURE (JAPANLIT) COURSES

UNDERGRADUATE COURSES IN JAPANESE LITERATURE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

JAPANLIT 146. Introduction to Premodern Japanese
(Same as JAPANLIT 246) Readings from Heian, Kamakura, Muromachi, and early Edo periods with focus on grammar and reading comprehension. Prerequisite: JAPANLNG 129B or 103, or equivalent.
3-5 units, given next year

JAPANLIT 157. Points in Japanese Grammar
(Same as JAPANLIT 257) Meaning and grammatical differences of similar expressions, and distinctions that may not be salient in English. Prerequisite: JAPANLNG 18B or 22, or equivalent. GER:DB-SocSci
4 units, Aut (Matsumoto, Y)

JAPANLIT 170. The Tale of Genji and Its Historical Reception
(Same as JAPANLIT 270) Approaches to the tale including 12th-century allegorical and modern feminist readings. Influence upon other works including poetry, Noh plays, short stories, modern novels, and comic book (manga) retellings. Prerequisite for graduate students: JAPANLNG 129B or 103, or equivalent. GER:DB-Hum
4 units, not given this year

JAPANLIT 189A. Honors Research
2-5 units, Aut (Staff), Spr (Staff)

JAPANLIT 189B. Honors Research
Open to senior honors students to write thesis.
5 units, Win (Staff)

JAPANLIT 199. Individual Reading in Japanese
Asian Languages majors only. May be repeated for credit. Prerequisites: JAPANLNG 129B or 103, and consent of instructor.
1-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN JAPANESE LITERATURE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

JAPANLIT 200. Directed Reading in Japanese
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

JAPANLIT 201. Proseminar: Introduction to Graduate Study in Japanese
Bibliographical and research methods; major trends in literary and cultural theory and critical practice. May be repeated once for credit. Prerequisite: JAPANLNG 103 or 129B, or consent of instructor.
2-5 units, not given this year

JAPANLIT 202. Bibliographic and Research Methods in Japanese
The use of library and online resources for the study of Japanese literature, language, and culture. Prerequisite: JAPANLNG 103 or 129B, or consent of instructor.
1-3 units, not given this year

JAPANLIT 235. Academic Readings in Japanese I
Strategies for reading academic writings in Japanese. Readings of scholarly papers and advanced materials in Japanese in students' research areas in the humanities and social sciences. Prerequisites: JAPANLNG 103, 129B, or equivalent; and consent of instructor.
2-4 units, Win (Matsumoto, Y)

JAPANLIT 246. Introduction to Premodern Japanese
(Same as JAPANLIT 146) Readings from Heian, Kamakura, Muromachi, and early Edo periods with focus on grammar and reading comprehension. Prerequisite: JAPANLNG 129B or 103, or equivalent.
3-5 units, given next year

JAPANLIT 247. Readings in Premodern Japanese
Edo and Meiji periods with focus on grammar and reading comprehension. May be repeated for credit. Prerequisite: 246 or equivalent.
2-5 units, given next year

JAPANLIT 257. Points in Japanese Grammar
(Same as JAPANLIT 157) Meaning and grammatical differences of similar expressions, and distinctions that may not be salient in English. Prerequisite: JAPANLNG 18B or 22, or equivalent.
4 units, Aut (Matsumoto, Y)

JAPANLIT 260. Japanese Poetry and Poetics
Heian through Meiji periods with emphasis on relationships between the social and aesthetic. Works vary each year. Prerequisites: 246, 247, or equivalent.
2-4 units, Aut (Carter, S)

JAPANLIT 266. Introduction to Sino-Japanese
Readings in Sino-Japanese (kambun) texts of the Heian, Kamakura, and Muromachi periods, with focus on grammar and reading comprehension. Prerequisite: 246 or equivalent.
3-5 units, Spr (Carter, S)

JAPANLIT 270. The Tale of Genji and Its Historical Reception
(Same as JAPANLIT 170) Approaches to the tale including 12th-century allegorical and modern feminist readings. Influence upon other works including poetry, Noh plays, short stories, modern novels, and comic book (manga) retellings. Prerequisite for graduate students: JAPANLNG 129B or 103, or equivalent.
4 units, not given this year

JAPANLIT 279. Research in Japanese Linguistics
Introduction to graduate research in Japanese linguistics. Fields of research, methods and bibliographical background. Conduct a pilot research project in a chosen area. May be repeated for credit. Prerequisite: JAPANLNG 119 or consent of instructor.
2-4 units, Spr (Matsumoto, Y)

JAPANLIT 281. Japanese Pragmatics
Sociocultural and discourse factors reflected in the choice of linguistic forms, and their theoretical implications. Prerequisites: one year of Japanese and a course in linguistics, or two years of Japanese, or consent of instructor.
4 units, not given this year

JAPANLIT 287. Pictures of the Floating World: Images from Japanese Popular Culture
(Same as ARTHIST 287) Printed objects produced during the Edo period (1600-1868), including the Ukiyo-e (pictures of the floating world) and lesser-studied genres such as printed books (ehon) and popular broadsheets (kawaraban). How a society constructs itself through images. The borders of the acceptable and censorship; theatricality, spectacle, and slippage; the construction of play, set in conflict against the dominant neo-Confucian ideology of fixed social roles. Prerequisites: 2, 186, 187, 188.
5 units, Spr (Takeuchi, M)

JAPANLIT 296. Readings in Modern Japanese Literature-20th Century Comic Fiction
(Same as JAPANLIT 396) Works and topics vary each year. May be repeated for credit. Prerequisite: fourth-year Japanese or consent of instructor.
2-4 units, Win (Levy, I)

JAPANLIT 298. The Theory and Practice of Japanese Literary Translation
Theory and cultural status of translation in modern Japanese and English. Comparative analysis of practical translation strategies. Final project is a literary translation of publishable quality. Prerequisite: fourth-year Japanese or consent of instructor.
2-5 units, Spr (Levy, I)

JAPANLIT 299. Master's Thesis or Translation
A total of 5 units, taken in one or more quarters. (Staff)
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

JAPANLIT 350. Japanese Historical Fiction
Authors include Mori Ogai, Akutagawa Ryunosuke, Tanizaki Jun'ichiro, Enchi Fumiko, Shiba Ryotaro, Fujisawa Shuhei, and Hiraiwa Yumie. Genre theory, and historical and cultural context. Works vary each year. May be repeated for credit.
3-5 units, not given this year

JAPANLIT 377. Seminar: Structure of Japanese
Linguistic constructions in Japanese. Topics vary annually. Prerequisites: courses in Japanese linguistics, consent of instructor.
2-4 units, Win (Matsumoto, Y)

JAPANLIT 381. Topics in Pragmatics and Discourse Analysis
Naturally occurring discourse (conversational, narrative, or written) and theoretical implications. Discourse of different age groups, expressions of identity and persona, and individual styles. May be repeated for credit.
2-4 units, not given this year

JAPANLIT 395. Early Modern Japanese Literature
May be repeated for credit. Prerequisite: 247.
2-4 units, not given this year

JAPANLIT 396. Readings in Modern Japanese Literature-20th Century Comic Fiction
(Same as JAPANLIT 296) Works and topics vary each year. May be repeated for credit. Prerequisite: fourth-year Japanese or consent of instructor.
2-4 units, Win (Levy, I)

JAPANLIT 396. Modern Japanese Literature
May be repeated for credit. Prerequisite: JAPANLNG 213.
3-5 units, Aut (Reichert, J)

JAPANLIT 399. Dissertation Research
For doctoral students in Japanese working on dissertations.
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

JAPANLIT 400. Advanced Language Training
For students at the Yokohama Center. For more information, see the Inter-University Center for Japanese Studies in Yokohama at http://stanford.edu/dept/IUC/.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

JAPANLIT 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

JAPANLIT 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

JEWISH STUDIES (JEWISHST) COURSES

UNDERGRADUATE COURSES IN JEWISH STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

JEWISHST 15N. Travels through the Afterlife
(Stanford Introductory Seminar) (Same as RELIGST 15N) Since the beginning of civilization, humans have refused to believe that physical death is the end of life and have sought in various ways to travel into the afterlife. One cannot know what lies beyond death, but there are other kinds of insights to be learned from these otherworldly journeys. The origins and history of the afterlife, going back in time to ancient Egypt, Mesopotamia, Israel, Greece, and medieval Europe to survey these cultures' view of death and what lies beyond it. What has happened to belief in the afterlife in modern American culture. Goal is to confront one of the most difficult aspects of life, the fear of death and oblivion, and to explore the power of thought and imagination to move beyond the confines of mortality. GER:DB-Hum
4 units, Aut (Weitzman, S)

JEWISHST 16SI. Religion and Spirituality: LGBTQ Perspectives
(Same as RELIGST 16SI) Many lesbian, gay, bisexual, transgender, and queer (LGBTQ) people today are finding that mainstream religious institutions do not meet their unique spiritual needs, and they are looking elsewhere to create meaningful spiritual lives. How LGBTQ people are creating and practicing religion and spirituality in the U.S. The diversity of American LGBTQ religious and spiritual traditions, both within and beyond the boundaries of traditional religions. Religious and spiritual practices created by and for LGBTQ people and communities, rather than the responses of religious institutions towards the reality of LGBTQ people in their midst. Students attend an LGBTQ worship service in a tradition of their choice. Goal is a better understanding of, and appreciation for, the diversity of religious and spiritual traditions within LGBTQ communities.
1 unit, Aut (Fonrobert, C)

JEWISHST 50A. Reading Hebrew, First Quarter
(Same as AMELANG 50A) Introduction to Hebrew literature through short stories and poetry by notable Israeli writers. In Hebrew. Prerequisite: one year of Hebrew or equivalent.
2-4 units, not given this year

JEWISHST 95. How to Read the Bible
(Same as RELIGST 95) What does the Bible mean? How the Bible has been read over the ages. Focus is on the book of Genesis, but the real subject is the history of biblical interpretation: how Genesis has been understood by theologians, writers, artists, scholars and others. Goal is to engage the Bible itself and to gain a better appreciation of the act of reading, why people read differently, and the consequences of that difference for religious history. GER:DB-Hum
4 units, Aut (Weitzman, S), Sum (Weitzman, S)

JEWISHST 101A. Beginning Hebrew, First Quarter
(Same as AMELANG 128A)
5 units, Aut (Shemtov, V; Greif, E)

JEWISHST 101B. Beginning Hebrew, Second Quarter
(Same as AMELANG 128B)
5 units, Win (Greif, E)

JEWISHST 101C. Beginning Hebrew, Third Quarter
(Same as AMELANG 128C)
5 units, Spr (Porat, G; Greif, E)

JEWISHST 102. Land and Literature
(Same as AMELANG 127) Israel has captured the imagination of writers throughout the generations. It has been portrayed as promised land, holy land, homeland, empty land, occupied land, and land of dreams. Ideological views and political events have shaped writers' conception of Israel. Readings include poems, prose, and theoretical texts about place and literature. No knowledge of Hebrew required. GER:DB-Hum, EC-GlobalCom
4 units, Spr (Staff)

JEWISHST 102A. Intermediate Hebrew, First Quarter
(Same as AMELANG 129A)
4 units, Aut (Porat, G)

JEWISHST 102B. Intermediate Hebrew, Second Quarter
(Same as AMELANG 129B)
4 units, Win (Porat, G)

JEWISHST 102C. Intermediate Hebrew, Third Quarter
(Same as AMELANG 129C)
4 units, Spr (Shemtov, V)

JEWISHST 103A. Advanced Hebrew, First Quarter
(Same as AMELANG 130A)
1-4 units, Aut (Porat, G)

JEWISHST 104A. Beginning Yiddish, First Quarter
(Same as AMELANG 140A) Reading, writing, and speaking.
4 units, Aut (Levitow, J)

JEWISHST 104B. Beginning Yiddish, Second Quarter
(Same as AMELANG 140B) Reading, writing, and speaking.
4 units, Win (Levitow, J)

JEWISHST 104C. Beginning Yiddish, Third Quarter
(Same as AMELANG 140C) Reading, writing, and speaking.
4 units, Spr (Levitow, J)

JEWISHST 107A. Biblical Hebrew, First Quarter
(Same as AMELANG 170A) The basic lexicon and grammar of Hebrew of the Tanakh or Old Testament.
2-4 units, Aut (Porat, G), Win (Staff)

JEWISHST 107B. Biblical Hebrew, Second Quarter
(Same as AMELANG 170B) Continuation of 170A
2-4 units, Spr (Staff)

JEWISHST 107C. Biblical Hebrew, Third Quarter
(Same as AMELANG 170C) Continuation of 170B.
2-4 units, Spr (Porat, G)

JEWISHST 120. Genesis and Gender: Male and Female in Judaism, Christianity, and Islam
(Same as RELIGST 130) What does it mean to be a man or a woman? And what role have classical and religious traditions played in shaping understandings of gender differences? Investigation of the construction of gender identities, roles, and differences in Greek and Roman sources and three monotheistic faiths. Interpretation and retellings of the story of Adam and Eve in the Bible and the Qu¿ran, commentaries, lives and practices of religious communities, religious iconography down to the present. GER:DB-Hum, EC-Gender
4 units, Aut (Fonrobert, C; Pitkin, B)

JEWISHST 140. Introduction to Hebrew Literature
(Same as COMPLIT 140) The influence of biblical poetry, piyut, and medieval Hebrew poetry on the development of Modern Hebrew poetry. With focus on voice, space, lyrical Subjectivity, Intertextuality, and Poetic Forms. Guest Speakers include Tamar Zwei, Susan Einbinder, Berry Saharoff, and Raymond Scheindlin.
3-5 units, Win (Staff)

JEWISHST 150A. Creative Resistance and the Holocaust
(Same as ENGLISH 140A) Creative resistance, a little-known phenomenon and a new term, emerges during times of devastation. Under the Nazis, it took form in graffiti, diaries, chronicles, poems, paintings, photos, and music. How did a human spirit of creativity arise from such duress, and to what end? Why would acts of imagination, incapable of stopping destruction, count as resistance? Guests include a string quartet playing music by a prisoner; and a guest speaker who was a survivor of seven camps. Works include Goya's counter-Napoleon etchings, poems from WW I and Iraq, and contemporary examples. GER:DB-Hum
5 units, Win (Felstiner, J; Felstiner, M)

JEWISHST 153C. Feminism and American Literature
(Same as AMSTUD 183C, ENGLISH 183C) How writers have endeavored to enlarge the canvas on which women can paint their lives. Fiction, journalism, and poetry engaging how women come to understand who they might become; women's role in the home and outside the home; motherhood, marriage, work. Writing by Euro American, African American, Asian American, and Latino writers. Focus on feminists' use of humor to undercut demeaning assumptions, stereotypes, and texts. Readings include feminist parodies of advice manuals, cookbooks, literary criticism and fairy tales.
GER:DB-Hum, EC-Gender
5 units, Spr (Fishkin, S)

JEWISHST 182C. Heretics to Headscarves
(Same as HISTORY 202C, POLISCI 224H) Religious discrimination and persecution in the Euro-American tradition, and the rise of tolerationist ideas and practices, from Augustine's rationale for punishing dissenters to the current European debates over the regulation of Islam. Topics include the Inquisition; struggles over toleration in Reformation Europe; the impact of Locke, Bayle, and Spinoza; Spanish practice in the Americas; and the American constitutional experiment in free exercise.
5 units, Aut (Rakove, J)

JEWISHST 183. The Holocaust
(Same as HISTORY 137, HISTORY 337, JEWISHST 383) The emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s. WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry. GER:DB-Hum
4-5 units, Spr (Zipperstein, S)

JEWISHST 185B. Jews in the Modern World
(Same as HISTORY 185B) Possible themes: the restructuring of Jewish existence during the Enlightenment and legal emancipation

at the end of the 18th century in W. Europe, the transformation of Jewish life in E. Europe under the authoritarian Russian regime, colonialism in the Sephardic world, new ideologies (Reform Judaism and Jewish nationalisms), the persistence and renewal of antisemitism, the destruction of European Jewry under the Nazis, new Jewish centers in the U.S., and the State of Israel. GER:DB-Hum, EC-GlobalCom

5 units, Win (Zipperstein, S)

JEWISHST 186D. Jews, Citizenship, and Europe's Others

(Same as HISTORY 186D) The paths of assimilation of Jews in Europe, and their integration as citizens is examined alongside other cases of Europe's Others, those who introduced diversity and challenged modes of assimilation. Looks at the development of Jews as citizens and compares the debates on the Jewish Question to other debates in Europe on the integration of other Others, such as former colonial subjects, immigrants, Gypsies, ans Muslims in the nineteenth and twentieth centuries.

5 units, Aut (Roberts, S)

JEWISHST 187D. Zionism and Its Critics

(Same as HISTORY 187D) Zionism from its genesis in the 1880s up until the establishment of the state of Israel in May, 1948, exploring the historical, ideological and political dimensions of Zionism. Topics include: the emergence of Zionist ideology in connection to and as a response to challenges of modernity; emancipation; Haskalah (Jewish enlightenment); other national and ideological movements of the period; the ideological crystallization of the movement; and the immigration waves to Palestine.

4-5 units, Aut (Dubnov, A)

JEWISHST 199B. Directed Reading in Yiddish, Second Quarter

For intermediate or advanced students. May be repeated for credit.

1-5 units, Win (Staff)

JEWISHST 221C. Aramaic Jewish Texts

(Same as JEWISHST 321C, RELIGST 221C, RELIGST 321C) Reading of Aramaic Jewish texts with focus on grammar and syntax. Foundations of classical Aramaic, the two major dialects of rabbinic Aramaic, the Palestinian (Galilean) and the Babylonian. Readings from Midrash, Piyyut, Talmud, and Geonic materials and attempt to follow the development of the language though time. Prerequisite: substantial knowledge of Hebrew. GER:DB-Hum

2-5 units, Aut (Balberg, M; Fonrobert, C)

JEWISHST 225. Research Methods and Resources in Jewish Studies

(Same as JEWISHST 325, RELIGST 265, RELIGST 365) Enhance students' research skills in the interdisciplinary field of Jewish Studies, emphasizing electronic reference sources, but also archival resources and print publications. Coverage includes: reference sources in Jewish Studies, history and bibliography of the Hebrew book, Hebrew Bible, Talmud, religious studies (post-Talmudic), Jewish philosophy, Jewish history (by period; by region), Jewish languages, Hebrew literature, Yiddish literature, Zionism and Israel, Sephardic Jewry, women, Holocaust, miscellaneous topics (art, music, folklore and ethnography, sociology, genealogy, geography, pseudonyms, honorifics, abbreviations). Class sessions include special workshops on Hebrew/Yiddish/Ladino romanization, transliteration, transcription.

1-3 units, Win (Baker, Z)

JEWISHST 226B. Judaism and Christianity in the Mediterranean World: Contact, Comptetition, and Conflict

(Same as CLASSGEN 126, CLASSGEN 226, JEWISHST 326B, RELIGST 226B, RELIGST 326B) Jewish beginnings of Christianity in the first century C.E.; process of differentiation between various Jewish and Christian groups; effect of Roman-Jewish wars on Jewish and Christian identity formation; Jewish Christians, Christian Jews, and other heretics; rise of the discourse of orthodoxy and heresy; the emergence of the Adversus Judaeos tradition; theology as a realm of mutual attraction and conflict. Readings include Epistles of Paul in the New Testament, Christian authors from Justin through Augustine, excerpts from Rabbinic texts (Mishnah, Midrash and Talmud), along with current literature on religion, ethnicity, and identity in the Roman world. GER:DB-Hum

5 units, Aut (Fonrobert, C)

JEWISHST 226C. Mystics and Merrymakers: Innovations in Modern Judaism

(Same as JEWISHST 326C, RELIGST 226C, RELIGST 326C) How does a tradition many thousands of years old make a space for itself in the dynamic landscape of contemporary America? Judaism has continually adapted to its surroundings, and in the twentieth century new movements have reconstructed, revisioned, and renewed Jewish practice. A space within has been claimed by a series of previously disenfranchised Jews including women, queer Jews, and Jews of color. Examine some of the most innovative of these changes from Jewish feminism to the Chabad Hasidic revival. GER:DB-Hum

3 units, Win (Rosenberg, J; Fonrobert, C)

JEWISHST 228. King Solomon and the Search for Wisdom

(Same as JEWISHST 328, RELIGST 282, RELIGST 382) What is wisdom according to the Bible? The course addresses this question by surveying various biblical and post-biblical texts associated with King Solomon. Other topics include the on-going debate over the historical existence of a Solomonic kingdom, the origins and history of the Jerusalem Temple, and Solomon's role in Jewish, Christian and Islamic tradition.

4 units, Win (Weitzman, S)

JEWISHST 250G. Century's End: Race, Gender, and Ethnicity at the Turn of the Century

(Same as AMSTUD 260G, ENGLISH 260G) How race, gender and ethnicity were constructed and construed in American culture from 1890 to 1914. Readings include stories, poetry, drama, and journalism by Euro-American, African-American, Asian-American, Jewish-American and Native American writers that illuminate how race, gender and ethnicity inflected such issues as the performance of identity, the purpose of education, the uses of dialect, and the dynamics of violence during this period. GER:EC-AmerCul

5 units, Win (Fishkin, S)

JEWISHST 285F. Mediators of Tradition & Modernity: Comparative Jewish Women's History from 17th Century to Present

(Same as HISTORY 285F, HISTORY 385F) Focuses on the single role of women as mediators between tradition and modernity in the Jewish home. While simultaneously the preservationists of certain traditions such as kashrut, Shabbat observance, or prayer, Jewish women also served as the medium of Jewish families' paths to assimilation. Looks at women in the West and East comparing their experiences in the face of modernity, caught between tradition and modernity, while simultaneously encouraging the assimilation and cultural improvement of their children.

5 units, Spr (Roberts, S)

JEWISHST 286E. Jews in France from the Dreyfus Affair to World War II

(Same as HISTORY 286E, HISTORY 386E, JEWISHST 386E) Examines the experience of Jews in France and their confrontations with antisemitism, discrimination, violence, assimilation, and integration from the Dreyfus Affair through Vichy and World War II. Popular and institutionalized antisemitism in France placed significant limits on the Jews' path to assimilation and shaped the ways in which they related to France and to Judaism.

4-5 units, Win (Roberts, S)

JEWISHST 287D. Tel Aviv: Site, Symbol, City

(Same as HISTORY 287D, HISTORY 387D, JEWISHST 387D) Tel Aviv, the first Israeli city, from a cultural history perspective combining high and low cultural texts. Topics include: the utopian origins behind the establishment of Tel Aviv in Zionist texts; artists, poets, and writers in Tel Aviv's early years; as the capital of Bauhaus architecture; the emergence of Israeli pop culture in Tel Aviv of the late 60s and 70s; as the site of the Israeli Zionist and post-Zionist intellectuals. Sources include art, cinema, and literature. GER:DB-Hum

4-5 units, Win (Dubnov, A)

JEWISHST 287E. Understanding the Age of Extremes: Intellectual Responses to the Holocaust and Totalitarianism

(Same as HISTORY 287E, HISTORY 387E, JEWISHST 387E) Intellectual responses of Jewish thinkers to the age of extremes. Readings include a wide assemblage of twentieth-century thinkers, such as Theodor Adorno, Leo Strauss, Hannah Arendt, Isaiah Berlin, and Herbert Marcuse. Analyses of enlightenment, nationalism,

socialism and totalitarianism; their life stories, and their direct and indirect role in creating a transatlantic political discourse in post-war years. Contextualizes historically the fundamental features of Jewish intellectual activity after 1945.

4-5 units, Win (Dubnov, A)

JEWISHST 287G. Jews in Colonial North Africa

(Same as HISTORY 287G, HISTORY 387G, JEWISHST 387G) Under European imperialism, the relations between Jews ans Muslims in North Africa changed dramatically. Examines the complicated process of remaking Jewish identity under colonialism and the way in which citizenship, education, and assimilation separated Jews ans Muslims. Also looks at the spheres in which Jews and Muslims continued to coexist. Studies the impact of the rise of nationalism, anti-colonialism, Zionism, pan-Arabism, and antisemitism in the context of colonial North Africa.

4-5 units, Spr (Roberts, S)

JEWISHST 287K. Gentlemen and Jews: History of the Jews of England

(Same as HISTORY 287K, HISTORY 387K, JEWISHST 387K) Focuses on key chapters in the cultural and political histories of Britain and its Jews, between 1650 and 1950 and examines the advantages, as well as possible difficulties, that emerge when connecting Anglo-Jewish history to mainstream British history. What is unique about Jewish emancipation in England, and what are its connections to the formation of British national identity? Is there unique path in which Jewish Enlightenment developed in England? What was the contribution of Jews to British Imperialism? Is there a cultural affinity between English philosemitism and liberalism?

4-5 units, Spr (Dubnov, A)

JEWISHST 287S. Research Seminar in Middle East History

(Same as HISTORY 287S, HISTORY 481, JEWISHST 481) Student-selected research topics. GER:DB-SocSci

4-5 units, Spr (Beinin, J)

JEWISHST 288. Palestine and the Arab-Israeli Conflict

(Same as HISTORY 288, HISTORY 388, IPS 388, JEWISHST 388) 1882 to the present. Comparison of representative expressions of competing historical interpretations. U.S. policy towards the conflict since 1948. (Beinin) GER:DB-Hum

4-5 units, Win (Beinin, J)

GRADUATE COURSES IN JEWISH STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

JEWISHST 299A. Directed Reading in Yiddish, First Quarter

Directed Reading in Yiddish, First Quarter

1-5 units, Aut (Staff)

JEWISHST 321C. Aramaic Jewish texts

(Same as JEWISHST 221C, RELIGST 221C, RELIGST 321C) Reading of Aramaic Jewish texts with special focus on grammar and syntax. Foundations of classical Aramaic, the two major dialects of rabbinic Aramaic, the Palestinian (Galilean) and the Babylonian. Readings from Midrash, Piyyut, Talmud and Geonic materials and attempt to follow the development of the language though time. The course is intended for students with substantial knowledge of Hebrew.

2-5 units, Aut (Balberg, M; Fonrobert, C)

JEWISHST 325. Research Methods and Resources in Jewish Studies

(Same as JEWISHST 225, RELIGST 265, RELIGST 365) Enhance students' research skills in the interdisciplinary field of Jewish Studies, emphasizing electronic reference sources, but also archival resources and print publications. Coverage includes: Basic reference sources in Jewish Studies, History and bibliography of the Hebrew book, Hebrew Bible, Talmud, Religious studies (post-Talmudic), Jewish philosophy, Jewish history (by period; by region), Jewish languages, Hebrew literature, Yiddish literature, Zionism and Israel, Sephardic Jewry, women, Holocaust, miscellaneous topics (art, music, folklore and ethnography, sociology, genealogy, geography, pseudonyms, honorifics, abbreviations). Class sessions will also include special workshops on Hebrew / Yiddish / Ladino romanization (transliteration/transcription).

1-3 units, Win (Baker, Z)

JEWISHST 326B. Judaism and Christianity in the Mediterranean World: Contact, Comptetition, and Conflict

(Same as CLASSGEN 126, CLASSGEN 226, JEWISHST 226B, RELIGST 226B, RELIGST 326B) Jewish beginnings of Christianity in the first century C.E.; process of differentiation between various Jewish and Christian groups; effect of Roman-Jewish wars on Jewish and Christian identity formation; Jewish Christians, Christian Jews, and other heretics; rise of the discourse of orthodoxy and heresy; the emergence of the Adversus Judaeos tradition; theology as a realm of mutual attraction and conflict. Readings include Epistles of Paul in the New Testament, Christian authors from Justin through Augustine, excerpts from Rabbinic Texts (Mishnah, Midrash and Talmud), along with current literature on religion, ethnicity, and identity in the Roman world.

5 units, Aut (Fonrobert, C)

JEWISHST 326C. Mystics and Merrymakers: Innovations in Modern Judaism

(Same as JEWISHST 226C, RELIGST 226C, RELIGST 326C) How does a tradition many thousands of years old make a space for itself in the dynamic landscape of contemporary America? Judaism has continually adapted to its surroundings, and in the twentieth century new movements have reconstructed, revisioned, and renewed Jewish practice. A space within has been claimed by a series of previously disenfranchised Jews including women, queer Jews, and Jews of color. Examine some of the most innovative of these changes from Jewish feminism to the Chabad Hasidic revival.

3 units, Win (Rosenberg, J; Fonrobert, C)

JEWISHST 328. King Solomon and the Search for Wisdom

(Same as JEWISHST 228, RELIGST 282, RELIGST 382) What is wisdom according to the Bible? The course addresses this question by surveying various biblical and post-biblical texts associated with King Solomon. Other topics include the on-going debate over the historical existence of a Solomonic kingdom, the origins and history of the Jerusalem Temple, and Solomon's role in Jewish, Christian and Islamic tradition.

4 units, Win (Weitzman, S)

JEWISHST 383. The Holocaust

(Same as HISTORY 137, HISTORY 337, JEWISHST 183) The emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s. WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry.

4-5 units, Spr (Zipperstein, S)

JEWISHST 386E. Jews in France from the Dreyfus Affair to World War II

(Same as HISTORY 286E, HISTORY 386E, JEWISHST 286E) Examines the experience of Jews in France and their confrontations with antisemitism, discrimination, violence, assimilation, and integration from the Dreyfus Affair through Vichy and World War II. Popular and institutionalized antisemitism in France placed significant limits on the Jews' path to assimilation and shaped the ways in which they related to France and to Judaism.

4-5 units, Win (Roberts, S)

JEWISHST 387D. Tel Aviv: Site, Symbol, City

(Same as HISTORY 287D, HISTORY 387D, JEWISHST 287D) Tel Aviv, the first Israeli city, from a cultural history perspective combining high and low cultural texts. Topics include: the utopian origins behind the establishment of Tel Aviv in Zionist texts; artists, poets, and writers in Tel Aviv's early years; as the capital of Bauhaus architecture; the emergence of Israeli pop culture in Tel Aviv of the late 60s and 70s; as the site of the Israeli Zionist and post-Zionist intellectuals. Sources include art, cinema, and literature.

4-5 units, Win (Dubnov, A)

JEWISHST 387E. Understanding the Age of Extremes: Intellectual Responses to the Holocaust and Totalitarianism

(Same as HISTORY 287E, HISTORY 387E, JEWISHST 287E) Intellectual responses of Jewish thinkers to the age of extremes. Readings include a wide assemblage of twentieth-century thinkers, such as Theodor Adorno, Leo Strauss, Hannah Arendt, Isaiah Berlin, and Herbert Marcuse. Analyses of enlightenment, nationalism, socialism and totalitarianism; their life stories, and their direct and indirect role in creating a transatlantic political discourse in post-

war years. Contextualizes historically the fundamental features of Jewish intellectual activity after 1945.
4-5 units, Win (Dubnov, A)

JEWISHST 387G. Jews in Colonial North Africa
(Same as HISTORY 287G, HISTORY 387G, JEWISHST 287G) Under European imperialism, the relations between Jews ans Muslims in North Africa changed dramatically. Examines the complicated process of remaking Jewish identity under colonialism and the way in which citizenship, education, and assimilation separated Jews ans Muslims. Also looks at the spheres in which Jews and Muslims continued to coexist. Studies the impact of the rise of nationalism, anti-colonialism, Zionism, pan-Arabism, and antisemitism in the context of colonial North Africa.
4-5 units, Spr (Roberts, S)

JEWISHST 387K. Gentlemen and Jews: History of the Jews of England
(Same as HISTORY 287K, HISTORY 387K, JEWISHST 287K) Focuses on key chapters in the cultural and political histories of Britain and its Jews, between 1650 and 1950 and examines the advantages, as well as possible difficulties, that emerge when connecting Anglo-Jewish history to mainstream British history. What is unique about Jewish emancipation in England, and what are its connections to the formation of British national identity? 4-5 units, Spr (Dubnov, A)

JEWISHST 388. Palestine and the Arab-Israeli Conflict
(Same as HISTORY 288, HISTORY 388, IPS 388, JEWISHST 288) 1882 to the present. Comparison of representative expressions of competing historical interpretations. U.S. policy towards the conflict since 1948. (Beinin)
4-5 units, Win (Beinin, J)

JEWISHST 481. Research Seminar in Middle East History
(Same as HISTORY 287S, HISTORY 481, JEWISHST 287S) Student-selected research topics.
4-5 units, Spr (Beinin, J)

JEWISHST 486A. Graduate Research Seminar in Jewish History
(Same as HISTORY 486A)
4-5 units, Spr (Staff)

KOREAN GENERAL (KORGEN) COURSES

UNDERGRADUATE COURSES IN KOREAN GENERAL

Primarily for undergraduates; graduate students may enroll with consent of adviser.

KORGEN 170. Art and Archaeology of Korea
(Same as ARCHLGY 201, KORGEN 270) Introduction to art and archaeology of Korean peninsula and adjacent continental northeast Asia from Bronze Age to early twentieth century. Topics include archaeology of the proto-Three Kingdoms period, state formation and Sinicization, introduction of Buddhism and its development to the Unified Silla period, the sophisticated tastes of the Koryo aristocrats, and the literati culture of Choson.
3-5 units, Win (Staff)

KORGEN 198. Senior Colloquium in Japanese Studies
(Same as JAPANGEN 198) Research, write, and present capstone essay or honors thesis.
1 unit, Win (Takeuchi, M)

GRADUATE COURSES IN KOREAN GENERAL

Primarily for graduate students; undergraduates may enroll with consent of instructor.

KORGEN 270. Art and Archaeology of Korea
(Same as ARCHLGY 201, KORGEN 170) Introduction to art and archaeology of Korean peninsula and adjacent continental northeast Asia from Bronze Age to early twentieth century. Topics include archaeology of the proto-Three Kingdoms period, state formation and Sinicization, introduction of Buddhism and its development to the Unified Silla period, the sophisticated tastes of the Koryo aristocrats, and the literati culture of Choson.
3-5 units, Win (Staff)

KOREAN LANGUAGE (KORLANG) COURSES

UNDERGRADUATE COURSES IN KOREAN LANGUAGE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

KORLANG 1. First-Year Korean, First Quarter
Communication skills, vocabulary, and grammar patterns. Culturally appropriate conduct relevant to contexts such as greetings, gestures, and body language.
4-5 units, Aut (Kim, H)

KORLANG 1H. Beginning Korean for Heritage Learners, First Quarter
For Korean background students. Focus is on reading, writing, and spelling rather than speaking and listening. Meetings and individual study. Sources include textbook, workbook, and digitized listening materials. Prerequisite: consent of instructor.
3 units, Aut (Kim, H)

KORLANG 2. First-Year Korean, Second Quarter
Communication skills, vocabulary, and grammar patterns. Culturally appropriate conduct relevant to contexts such as greetings, gestures, and body language.
4-5 units, Win (Kim, H)

KORLANG 3. First-Year Korean, Third Quarter
Continuation of 2. Prerequisite 2. Fulfills the University language requirement.
4-5 units, Spr (Kim, H)

KORLANG 3H. Beginning Korean for Heritage Learners, Third Quarter
For Korean background students. Focus is on reading, writing, and spelling rather than speaking and listening. Meetings and individual study. Sources include textbook, workbook, and digitized listening materials. Prerequisite: consent of instructor.
3 units, Spr (Staff)

KORLANG 21. Second-Year Korean, First Quarter
More complex sentences and grammatical patterns. Conversation in daily situations such as making a polite request or suggestion, reading simple texts, and Korean culture. Prerequisite: 3 or consent of instructor.
3-5 units, Aut (Staff)

KORLANG 22. Second-Year Korean, Second Quarter
Continuation of 21. Prerequisite 21.
3-5 units, Win (Staff)

KORLANG 23. Second-Year Korean, Third Quarter
Continuation of 22. Prerequisite: 22 or consent of instructor.
3-5 units, Spr (Staff)

KORLANG 101. Third-Year Korean, First Quarter
Materials about Korean culture and society. Proficiency in interpersonal, interpretive, and presentational communication. Vocabulary, reading, and aural/oral skills. Prerequisite: 23 or consent of instructor.
2-4 units, Aut (Kim, H)

KORLANG 102. Third-Year Korean, Second Quarter
Continuation of 101. Prerequisite: 101 or consent of instructor.
2-4 units, Win (Staff)

KORLANG 103. Third-Year Korean, Third Quarter
Continuation of 102. Prerequisite: 102 or consent of instructor.
2-4 units, Spr (Staff)

KORLANG 110. Korean Pronunciation and Intonation
Goal is intelligibility and fluency. Lab assignments. Prerequisite: 3 or consent of instructor.
1-2 units, not given this year

KORLANG 111. Medical Korean, First Quarter
Medical vocabulary; cultural attitude. Video clips, technical journal and prescription reading, and class simulations. Prerequisite: 23 or consent of instructor.
2-3 units, not given this year

KORLANG 112. Medical Korean, Second Quarter
Medical vocabulary; cultural attitude. Video clips, technical journal and prescription reading, and class simulations. Prerequisite: 23 or consent of instructor.
2 units, not given this year

KORLANG 120A. Korean Culture
Examination of Korean culture and society to develop fluency and vocabulary through newspapers and short essays. May be repeated for credit. Prerequisites: 103 and consent of instructor.
1-3 units, not given this year

KORLANG 120B. Korean Culture
Examination of Korean culture and society to develop fluency and vocabulary through newspapers and short essays. May be repeated for credit. Prerequisites: 103 and consent of instructor.
1-2 units, not given this year

KORLANG 120C. Korean Culture
Examination of Korean culture and society to develop fluency and vocabulary through newspapers and short essays. May be repeated for credit. Prerequisites: 103 and consent of instructor.
1-2 units, not given this year

KORLANG 120K. Korean Language and Culture through Drama and Film
Korean culture and society through contemporary Korean drama and films. Advanced vocabulary , grammar, and idiomatic expressions. Prerequisite: 103 or consent of instructor.
2-3 units, Aut (Kim, H)

KORLANG 130. Reading Korean
Contemporary literature and academic texts. Prerequisite: 103 or consent of instructor.
2-3 units, Win (Kim, H)

KORLANG 141. Business Korean
Business-related vocabulary and cultural etiquette. Business letters, mock interviews, and resumes. May be repeated for credit. Prerequisite: 103 or consent of instructor.
2-3 units, Spr (Kim, H)

GRADUATE COURSES IN KOREAN LANGUAGE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

KORLANG 200. Directed Reading in Korean
Prerequisite: consent of instructor. (Staff)
1-5 units, Aut (Staff), Win (Staff), Spr (Staff, 1), Sum (Staff)

KORLANG 395. Graduate Studies in Korean
Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

LATIN AMERICAN STUDIES (LATINAM) COURSES

UNDERGRADUATE COURSES IN LATIN AMERICAN STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

LATINAM 197. Directed Individual Research
For students engaged in interdisciplinary work that cannot be arranged by department. May be repeated for credit. Prerequisite: consent of instructor.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff)

LATINAM 198. Honors Thesis
Restricted to those writing an honors thesis in Latin American Studies.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff)

LATINAM 200. Seminar on Contemporary Issues in Latin American Studies
Guest scholars present analyses of major Latin American themes.
1 unit, Aut (Dirzo, R), Win (Dirzo, R), Spr (Dirzo, R)

LATINAM 202. Human Ecology of the Amazon
(Same as ANTHRO 161B, ANTHRO 261B, LATINAM 302) The ecosystems of the Amazon and their human inhabitants. The biotic and abiotic factors shaping human adaptation to the region. Ethnographic literature used to explore subsistence patterns and the resource use of native Amazonians. Current changes in these economies and lifeways due to acculturation and market forces, and the implications for conservation.
5 units, not given this year

GRADUATE COURSES IN LATIN AMERICAN STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

LATINAM 302. Human Ecology of the Amazon
(Same as ANTHRO 161B, ANTHRO 261B, LATINAM 202) The ecosystems of the Amazon and their human inhabitants. The biotic and abiotic factors shaping human adaptation to the region. Ethnographic literature used to explore subsistence patterns and the resource use of native Amazonians. Current changes in these economies and lifeways due to acculturation and market forces, and the implications for conservation.
5 units, not given this year

LATINAM 398. Master's Thesis
Restricted to students writing a master's thesis in Latin American Studies. May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff)

LATINAM 801. TGR Project
0 units

LAW, NONPROFESSIONAL (LAWGEN) COURSES

UNDERGRADUATE COURSES IN LAW, NONPROFESSIONAL

Primarily for undergraduates; graduate students may enroll with consent of adviser.

LAWGEN 106. Introduction to American Law
(Same as AMSTUD 179, POLISCI 122, PUBLPOL 302A) For undergraduates. The structure of the American legal system including the courts; American legal culture; the legal profession and its social role; the scope and reach of the legal system; the background and impact of legal regulation; criminal justice; civil rights and civil liberties; and the relationship between the American legal system and American society in general. GER:DB-SocSci
3-5 units, Aut (Friedman, L)

GRADUATE COURSES IN LAW, NONPROFESSIONAL

Primarily for graduate students; undergraduates may enroll with consent of instructor.

LAWGEN 206Q. Thinking Like a Lawyer
(Same as GSBGEN 382). Open to all non-law graduate students at the University, this course provides students an analytical framework for understanding the core concepts of the law and familiarizes students with how lawyers analyze and structure their work. The course is taught by Dean Larry Kramer, Vice Dean Mark Kelman and Law School faculty in their areas of expertise, with one to two classes devoted to each topic. It introduces students to some of the foundational principles of law and reviews topics such as contracts, litigation, intellectual property, securities and employment law.
3-4 units, Win (Kelman, M; Kramer, L)

LAWGEN 209Q. Community Police Academy
The Department of Public Safety conducts this 9-week Winter Quarter course. It is a blend of classroom instruction and hands-on activities that will give the participants the opportunity to stand in an officer's shoes. The class is open to all Stanford students, staff, and residents. The goal with the Community Police Academy is to build trust and develop a partnership between the police department and the Stanford community. This class is designed to expand the participant's knowledge of the duties, responsibilities, decisions, and constraints that face law enforcement officers. While this course is open to all students throughout the University, the units will not accrue to Law Degree Candidates for credit toward a degree in Law (JD, JSM, JSD, or LLM).
1 unit, Win (Staff)

LINGUISTICS (LINGUIST) COURSES

UNDERGRADUATE COURSES IN LINGUISTICS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

LINGUIST 1. Introduction to Linguistics
The cognitive organization of linguistic structure and the social nature of language use. Why language learning is difficult. Why computers have trouble understanding human languages. How languages differ from one another. How and why speakers of the same language speak differently. How language is used strategically. GER:DB-SocSci
4 units, Aut (Potts, K), Spr (Pereltsvaig, A)

LINGUIST 5N. What's Your Accent? Investigations in Acoustic Phonetics
(Stanford Introductory Seminar) Preference to freshmen. Phonetic variation across accents of English; experimental design; practical experience examining accents of seminar participants; acoustic analysis of speech using Praat. GER:DB-SocSci
3 units, Win (Sumner, M)

LINGUIST 65. African American Vernacular English
(Same as LINGUIST 265) The English vernacular spoken by African Americans in big city settings, and its relation to Creole English dialects spoken on the S. Carolina Sea Islands (Gullah), in the Caribbean, and in W. Africa. The history of expressive uses of African American English (in soundin' and rappin'), and its educational implications. Service Learning Course (certified by Haas Center). GER:DB-SocSci, EC-AmerCul
3-5 units, Win (Rickford, J)

LINGUIST 66. Vernacular English and Reading
(Same as LINGUIST 266) Literature on the relation between use of vernacular English varieties, such as African American vernacular English, Chicano English, and the development of literacy especially in standard English. Focus is on improving the reading skills of African American and Latino students in local schools through the Reading Road program developed at the University of Pennsylvania. Students must commit to tutoring one or more elementary students weekly, using the program. Recommended: LINGUIST 65/265.
4-5 units, not given this year

LINGUIST 83N. Translation
(Stanford Introductory Seminar) Preference to sophomores. What is a translation? The increased need for translations in the modern world due to factors such as tourism and terrorism, localization and globalization, diplomacy and treaties, law and religion, and literature and science. How to meet this need; different kinds of translation for different purposes; what makes one translation better than another; why some texts are more difficult to translate than others. Can some of this work be done by machines? Are there things that cannot be said in some languages? GER:DB-SocSci
3 units, Aut (Kay, M)

LINGUIST 90. Teaching Spoken English
Practical approach to teaching English to non-native speakers. Teaching principles and the features of English which present difficulties. Preparation of lessons, practice teaching in class, and tutoring of non-native speaker.
3-4 units, Spr (Romeo, K)

LINGUIST 105. Phonetics
(Same as LINGUIST 205A) The study of speech sounds: how to produce them, how to perceive them, and their acoustic properties. The influence of production and perception systems on sound change and phonological patterns. Acoustic analysis and experimental techniques. Lab exercises. Prerequisite: 110 or equivalent, or consent of instructor. GER:DB-SocSci
4 units, not given this year

LINGUIST 106. Introduction to Speech Perception
Basics of acoustic phonetics and audition. What do listeners perceive when they perceive speech. Examine current research including: the categorical perception of speech, cross-language speech perception, infant speech perception. Theoretical questions of interest to speech perception researchers and experimental methods used in the field.
4 units, Spr (Sumner, M)

LINGUIST 110. Introduction to Phonetics and Phonology
Differences in the sounds of the world's languages and how these sounds are made by the human vocal tract. Theories that account for cross-linguistic similarities in the face of differences. GER:DB-SocSci
4 units, Win (Sumner, M)

LINGUIST 112. Seminar in Phonology
(Same as LINGUIST 212A) Topics vary each year. Previous topics include variation in the phonology of words according to their contexts within larger expressions and the place of these phenomena in a theory of grammar. May be repeated for credit.
2-4 units, not given this year

LINGUIST 116. Morphology
A survey of words including their structures, pronunciations, meanings, and syntactic possibilities in a wide sampling of languages to provide a laboratory for investigating the nature of morphology.
4 units, not given this year

LINGUIST 120. Introduction to Syntax
Grammatical constructions, primarily English, and their consequences for a general theory of language. Practical experience in forming and testing linguistic hypotheses, reading, and constructing rules. GER:DB-SocSci
4 units, Aut (Staff)

LINGUIST 124. Introduction to Lexical Function Grammar
(Same as LINGUIST 224) Presentation of a formal model of grammar designed to allow precise, computationally tractable descriptions of cross-linguistic variation in syntactic structure. Concentration on the formal properties of the model, its flexibility in teasing out language specific and possibly universal characteristics of natural languages and the place of syntax as a component within a larger linguistic architecture. Prerequisite: 120 or consent of instructor
2-4 units, Spr (Staff)

LINGUIST 130A. Introduction to Linguistic Meaning
Linguistic meaning and its role in communication. Topics include ambiguity, vagueness, presupposition, intonational meaning, and Grice's theory of conversational implicature. Applications to issues in politics, the law, philosophy, advertising, and natural language processing. Those who have not taken logic, such as PHIL 150 or 151, should also enroll in 130C. Pre- or corequisite: 120, or consent of instructor. GER:DB-SocSci
4 units, Win (Potts, C)

LINGUIST 130B. Introduction to Lexical Semantics
Issues in the study of word meaning. Focus is on the core semantic properties and internal organization of the four major word categories in natural languages: nouns, verbs, adjectives, and prepositions. GER:DB-SocSci
4 units, not given this year

LINGUIST 130C. Logic Laboratory
Typically taken in conjunction with 130A/230A.
1 unit, Win (Staff)

LINGUIST 133. Introduction to Formal Pragmatics
(Same as LINGUIST 233) (Graduate students register for 233.) Mechanism underlying language use and felicity intuitions. Formal

models of discourse that incorporate many aspects of pragmatics such as presuppositions, speech acts, implicatures, relevance, optimality, and utility. Discussion of common ground, illocutionary acts, Gricean maxims and Neo-Gricean analysis, game and decision theory.

3-4 units, not given this year

LINGUIST 140. Language Acquisition I

(Same as LINGUIST 240) Processes of language acquisition in early childhood; stages in development; theoretical issues and research questions. Practical experience in data collection. GER:DB-SocSci

4 units, Aut (Clark, E)

LINGUIST 141. Language and Gesture

History of work on gesture, gestural systems associated with particular languages/cultures, and with specific activities - music, sports, traffic management, stock exchanges, etc. Examine gesture developmentally and how gesture is represented in painting and animation.

3 units, Win (Clark, E)

LINGUIST 142. Heritage Languages

The linguistic and cultural properties of Heritage languages, which are partially acquired and supplanted by a dominant language in childhood. Topics: Syntactic, phonological and morphological properties of heritage languages, implications from experimental HL research for language universals, cultural vs. linguistic knowledge, the role of schooling in HL competence, influence of the dominant language on the HL, and pedagogical issues for HL learners in the classroom. GER:DB-SocSci

3-4 units, Spr (Staff)

LINGUIST 143. Sign Languages

The linguistic structure of sign languages. How sign languages from around the world differ, and what properties they share. Accents and dialects in sign languages. How sign languages are similar to and different from spoken languages. How and why sign languages have emerged.

4 units, Spr (Potts, K)

LINGUIST 144. Introduction to Cognitive and Information Sciences

(Same as PHIL 190, PSYCH 132, SYMSYS 100) The history, foundations, and accomplishments of the cognitive sciences, including presentations by leading Stanford researchers in artificial intelligence, linguistics, philosophy, and psychology. Overview of the issues addressed in the Symbolic Systems major. GER:DB-SocSci

4 units, Spr (McClelland, J; van Benthem, J)

LINGUIST 150. Language in Society

How language and society affect each other. Class, age, ethnic, and gender differences in speech. Prestige and stigma associated with different ways of speaking and the politics of language. The strategic use of language. Stylistic practice; how speakers use language to construct styles and adapt their language to different audiences and social contexts. GER:DB-SocSci, WIM

4 units, Win (Eckert, P)

LINGUIST 152. Sociolinguistics and Pidgin Creole Studies

(Same as LINGUIST 252) Introduction to pidgins and creoles, organized around the main stages in the pidgin-creole life cycle: pidginization, creolization, and decreolization. Focus is on transformations in the English language as it was transported from Britain to Africa, Asia, the Caribbean, and the Pacific. Resultant pidginized and creolized varieties such as Nigerian Pidgin English, Chinese Pidgin English, New Guinea Tok Pisin, Suriname Sranan, and the creole continua of Guyana, Jamaica, and Hawaii. Also French, Dutch, Portugese, Chinook, Motu, and Sango.

2-4 units, not given this year

LINGUIST 153. Language, Power, and Politics

The integral role language plays in politics; how power operates in linguistic practices and political interaction. Critical examination of how language is used to articulate, maintain and subvert relations of power in society, emphasizing language in the media, the political rhetoric associated with war, and the construction of truth in politics. The role of ethnographic analysis in aiding sociolinguistic understandings of how social actors use, interpret, and reinterpet political language.

3-4 units, not given this year

LINGUIST 154. Sociolinguistics of Language Contact

(Same as LINGUIST 254) The role of contact between speakers of different languages in processes of language borrowing, convergence, and shift. Attending both to linguistic aspects and social contexts, examine: second-language acquitision, bilingualism, code-switching, lexical and grammatical borrowing, first language attrition, language death, and the creation of new contact varieties such as jargons, mixed languages, pidgins, and creoles. Prerequisite: background in linguistics, at least one course in linguistics.

2-4 units, not given this year

LINGUIST 155. Hip Hop, Youth Identities, and the Politics of Language

(Same as AFRICAAM 121X, AMSTUD 121X, ANTHRO 121A, CSRE 121X, EDUC 121X) Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture.

3-4 units, Spr (Alim, H)

LINGUIST 156. Language and Gender

The role of language in the construction of gender, the maintenance of the gender order, and social change. Field projects explore hypotheses about the interaction of language and gender. No knowledge of linguistics required. GER:DB-SocSci, EC-Gender

4 units, Spr (Eckert, P)

LINGUIST 160. Introduction to Language Change

Principles of historical linguistics:, the nature of language change. Kinds and causes of change, variation and diffusion of changes through populations, differentiation of dialects and languages, determination and classification of historical relationships among languages, rates of change, the reconstruction of ancestral languages and intermediate changes, parallels with cultural and genetic evolutionary theory, and implications of variation and change for the description and explanation of language in general. Prerequisite: introductory course in linguistics or evolutionary theory. GER:DB-SocSci

4-5 units, Spr (Staff)

LINGUIST 161. The Classification of Languages: Genealogical and Typological Perspectives

Techniques for grouping languages. Genealogical classification organizes languages according to their family histories, revealing the linguistic DNA which identifies related languages in terms of shared historical origins. Typology demonstrates how the languages of the world are similar to and different from each other according to certain diagnostic structural properties. Prerequisite: one course in linguistics.

4 units, Spr (Staff)

LINGUIST 167. Languages of the World

The diversity of human languages, their sound systems, vocabularies, and grammars. Tracing historical relationships between languages and language families. Parallels with genetic evolutionary theory. Language policy, endangered languages and heritage languages. Classification of sign languages. GER:DB-SocSci

3-4 units, Aut (Pereltsvaig, A)

LINGUIST 170. The Arabic Language and Culture

(Same as AMELANG 36, LINGUIST 270) Arabic language from historical, social, strategic, and linguistic perspectives. History of the Arabic language and the stability of classical Arabic over the last 15 centuries. Why the functionality of classical Arabic has not changed as Latin, Old English, and Middle English have. Social aspects of the Arabic language, Ferguson's notion of diglossia. The main varieties of Arabic, differences among them, and when and where they are spoken. Role of Arabic and culture in current world politics, culture, and economy. Linguistic properties of Arabic such as root-based morphology, lexical ambiguity, and syntactic structure relating it to current linguistic theories.

3 units, not given this year

LINGUIST 173. The Structure of Russian

(Same as LINGUIST 273) A synchronic overview of contemporary standard Russian, including its sound system, word formation and grammatical structure. Emphasis is on problems presented by

Russian for current linguistic theory. The acquisition of Russian as a first language.

2-4 units, not given this year

LINGUIST 174. Linguistic Field Methods
(Same as ANTHRO 30, LINGUIST 274A) Practical training in the collection and analysis of linguistic data from native speakers of a language largely unknown to the investigator. Documentation of endangered languages. Research goals, field trip preparation, ethics (including human subjects, cooperation with local investigators, and governmental permits), working in the community, technical equipment, and analytical strategies. Emphasis is on the use of recording devices and computers in collection and analysis. Prerequisite: introductory course in linguistics.

3-5 units, not given this year

LINGUIST 180. From Languages to Information
(Same as CS 124, LINGUIST 280) Automated processing of less structured information: human language text and speech, web pages, social networks, genome sequences, with goal of automatically extracting meaning and structure. Methods include: string algorithms, automata and transducers, hidden Markov models, graph algorithms, XML processing. Applications such as information retrieval, text classification, social network models, machine translation, genomic sequence alignment, word meaning extraction, and speech recognition. Prerequisite: CS103, CS107, CS109.

3-4 units, Win (Jurafsky, D)

LINGUIST 181. Grammar Engineering
(Same as LINGUIST 281) Hands-on techniques for implementation of linguistic grammars, drawing on grammatical theory and engineering skills. The implementation of constraints in morphology, syntax, and semantics, working within a unification-based lexicalist framework. Focus is on developing small grammars for English and at least one other language. Prerequisite: basic syntactic theory or 120. No programming skills required.

1-4 units, not given this year

LINGUIST 182. Computational Theories of Syntax
(Same as LINGUIST 282) Salient features of modern syntactic theories, including HPSG, LFG, and TAG, motivated by computational concerns. Impact of work within these frameworks on the design of algorithms in computational linguistics, and its influence in both linguistics and computer science. Topics include: notions of unification; unification algorithms and their relation to linguistic theory; agenda-driven chart processing for analysis and synthesis; the interface with morphology, the lexicon, and semantics; and applications, notably machine translation.

3-4 units, not given this year

LINGUIST 185. Writing Systems in a Digital World
(Same as LINGUIST 284A) Writing systems and their behaviors. Classification of scripts as alphabetic, syllabic, and ideographic; what features typically belong to each group. What can be considered an ideal script. Topics include: why Japanese writing is considered a complex system; the influence of Indian writing on other syllabic scripts; how writing systems extend their reach to new languages; linguistic insights by studying this process; the Unicode standard; and font technology. Recommended: basic phonetics.

2-3 units, not given this year

LINGUIST 188. Natural Language Understanding
(Same as CS 224U, LINGUIST 288) Machine understanding of human language. Computational semantics (determination of word sense and synonymy, event structure and thematic roles, time, aspect, causation, compositional semantics, scopal operators), and computational pragmatics and discourse (coherence, coreference resolution, information packaging, dialogue structure). Theoretical issues, online resources, and relevance to applications including question answering and summarization. Prerequisites: one of LINGUIST 180 / CS 124 / CS 224N,S: and logic such as LINGUIST 130A or B, CS 157, or PHIL150).

3-4 units, not given this year

LINGUIST 191. Linguistics and the Teaching of English as a Second/Foreign Language
(Same as LINGUIST 291) Methodology and techniques for teaching languages, using concepts from linguistics and second language acquisition theory and research. Focus is on teaching English, but most principles and techniques applicable to any language. Optional 1-unit seminar in computer-assisted language learning. GER:DB-SocSci

4-5 units, Win (Hubbard, P; Rylance, C)

LINGUIST 197. Undergraduate Research Seminar
Research goals and methods in linguistics and related disciplines. Students work on a small project to define a focus for their linguistic studies and prepare for honors research. Presentations; final paper.

2 units, Win (Potts, K)

LINGUIST 198. Honors Research

1-15 units, Win (Staff), Spr (Staff)

LINGUIST 199. Independent Study

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN LINGUISTICS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

LINGUIST 200. Foundations of Linguistic Theory
Theories that have shaped contemporary linguistics; recurrent themes and descriptive practice.

4 units, Win (Anttila, A)

LINGUIST 201. Advanced Introduction to Linguistics
Primarily for graduate students. The leading ideas of linguistic description and argumentation. Fundamental representational notions in phonology, syntax, and semantics, and the place of these notions in wider linguistic analysis.

4 units, not given this year

LINGUIST 205A. Phonetics
(Same as LINGUIST 105) The study of speech sounds: how to produce them, how to perceive them, and their acoustic properties. The influence of production and perception systems on sound change and phonological patterns. Acoustic analysis and experimental techniques. Lab exercises. Prerequisite: 110 or equivalent, or consent of instructor.

4 units, not given this year

LINGUIST 205B. Advanced Phonetics
Prerequisite: LINGUIST 205A.

2-4 units, not given this year

LINGUIST 207. Seminar in Phonetics
Topics vary. Current topic is phonetic variation in speech perception. Previous topics include ow variation is accommodated in current models of speech perception, and how perceptual models need to be altered to accommodate phonetic variation encountered by listeners. May be repeated for credit.

2-4 units, Aut (Sumner, M)

LINGUIST 210A. Phonology
Introduction to phonological theory and analysis based on cross-linguistic evidence. Topics: phonological representations including features, syllables, metrical structure; phonological processes including assimilation and dissimilation; and phonological typology and universals; optimality theory.

4 units, Aut (Anttila, A)

LINGUIST 210B. Advanced Phonology
The phonological organization of the lexicon. Topics include lexical phonology, phonological subregularities, gradient phonotactics, and lexical frequency effects.

4 units, Win (Kiparsky, P)

LINGUIST 211. Metrics
Principles of versification from a linguistic point of view. Traditional and optimality-theoretic approaches. The canonical system of English metrics, and its varieties and offshoots. The typology of metrical systems and its linguistic basis. The ideology of normative prosodic discourse in relation to changing poetic practice.

1-4 units, not given this year

LINGUIST 212A. Seminar in Phonology
(Same as LINGUIST 112) Topics vary each year. Previous topics include variation in the phonology of words according to their

contexts within larger expressions and the place of these phenomena in a theory of grammar. May be repeated for credit.
2-4 units, not given this year

LINGUIST 212B. Seminar in Phonology
May be repeated for credit.
1-4 units, not given this year

LINGUIST 213. Corpus Phonology
An introduction to constructing and using phonologically annotated corpora to test phonological hypotheses. Hands-on experience in corpus manipulation and phonological modeling.
2-4 units, Spr (Staff)

LINGUIST 214. Phonology Workshop
May be repeated for credit.
1-2 units, not given this year

LINGUIST 216. Morphology
How morphology fits into the lexicon and how the lexicon fits into grammar. Inflection and word-formation: blocking, productivity, analogy. Morphological categories. The interaction of morphology with phonology within the lexicon: level-ordering, prosodic morphology. Review of English morphology and analysis of representative material from languages with richer morphologies.
2-4 units, not given this year

LINGUIST 217. Morphosyntax
The role of morphology in grammar: how word structure serves syntax in the expression of meaning. Lexical semantics, Theta-roles, argument structure, and grammatical relations. Licensing: case, agreement, word order, and their interaction.
2-4 units, Aut (Kiparsky, P)

LINGUIST 218. Seminar on Morphological Theories
Word formation and the lexicon: empirical generalizations and theoretical approaches. Lexicalist and Distributed Morphology. How words are built and interpreted: constituency and headedness, morpheme order and scope, the mirror principle, bracketing paradoxes, the hierarchy of functional categories. Paradigms, blocking, gaps, periphrasis, syncretism. Locality, head movement vs. selection, constraints on allomorphy, incorporation, polysynthesis, cliticization and prosodic re-ordering phenomena.
2-4 units, Win (Kiparsky, P)

LINGUIST 219. Frequency and the Grammar of Alternations
Variationist, and psycholinguistic studies of how syntactic alternations (for example, the English dative, genitive, and passive) develop in time and space.
1-4 units, Aut (Bresnan, J)

LINGUIST 221A. Foundations of English Grammar
A systematic introduction to the formal analysis of English grammar using the framework of head-driven phrase structure grammar (HPSG). Topics: feature structure modeling, lexical and phrasal organization in terms of type hierarchies and constraint inheritance, clausal types, patterns of complementation, the auxiliary system, extraction dependencies, wh-constructions, and the syntax-semantics interface.
1-4 units, not given this year

LINGUIST 221B. Studies in Universal Grammar
Focus is on grammatical analysis of individual languages. Builds directly on the theoretical foundations presented in 221A. Topics vary each year.
1-4 units, not given this year

LINGUIST 222A. Foundations of Syntactic Theory I
The roles of the verb and the lexicon in the determination of sentence syntax and their treatment in modern grammatical theories. Empirical underpinnings of core phenomena, including the argument/adjunct distinction, argument structure and argument realization, control and raising, operations on argument structure and grammatical function changing rules. Motivations for a lexicalist approach rooted in principles of lexical expression and subcategorization satisfaction. Prerequisite: 120 or permission of instructor.
2-4 units, Aut (Levin, B)

LINGUIST 222B. Foundations of Syntactic Theory II
The nature of unbounded dependency constructions and their treatment in modern grammatical theories. Filler-gap dependencies, island constraints, and the relation between grammar and processing. Prerequisite: 222A.
2-4 units, Win (Sag, I)

LINGUIST 223. Introduction to Minimalist Syntax
Introduces the basics of Minimalist architecture and structure-building operations, with attention to the communication of syntax with the phonological and semantic interfaces. Topics include phrase structure, locality and phases, phrasal and head movement, functional categories, and features. A previous graduate-level syntax course, or permission of the instructor required.
2-4 units, Spr (Staff)

LINGUIST 224. Introduction to Lexical Function Grammar
(Same as LINGUIST 124) Presentation of a formal model of grammar designed to allow precise, computationally tractable descriptions of cross-linguistic variation in syntactic structure. Concentration on the formal properties of the model, its flexibility in teasing out language specific and possibly universal characteristics of natural languages and the place of syntax as a component within a larger linguistic architecture. Prerequisite: 120 or consent of instructor
2-4 units, Spr (Staff)

LINGUIST 224B. Advanced Topics in Lexical Functional Grammar
May be repeated for credit.
1-4 units, not given this year

LINGUIST 225A. Seminar in Syntax
1-2 units, not given this year

LINGUIST 227C. Projects in Syntax
Group research projects using quantitative syntactic data from texts, recordings, experiments, or historical records. Skills in extracting, graphically exploring, and analyzing naturalistic syntactic data, and in presenting results. May be repeated for credit. Prerequisite: 229A, B, or D, or equivalent.
2-4 units, not given this year

LINGUIST 229A. Laboratory Syntax I
Critiques of the empirical foundations of syntax. The roles of introspective, usage-based, experimental, and typological evidence. Modern methods of data collection and analysis used in syntax. Hands-on, practical work with data sets. May be repeated for credit.
1-4 units, Win (Bresnan, J)

LINGUIST 229B. Laboratory Syntax II
Hands-on use of methods for handling syntactic data, including corpus work on ecologically natural data and controlled experimental paradigms. Explanatory models of syntactic processing and their relation to theories of grammar. May be repeated for credit.
1-4 units, not given this year

LINGUIST 229C. Laboratory Syntax III
Hands-on use of methods for handling syntactic data, including corpus work on ecologically natural data and controlled experimental paradigms. Explanatory models of syntactic processing and their relation to theories of grammar. May be repeated for credit.
1-4 units, not given this year

LINGUIST 229D. Empirical Syntax Research Seminar
Recent work in syntax that employs data-rich methods like corpora and laboratory studies, emphasizing research by seminar participants. May be repeated for credit.
1-2 units, not given this year

LINGUIST 230A. Introduction to Semantics and Pragmatics
Conventional meaning and pragmatic enrichment, with special emphasis on the foundations of semantics and pragmatics, the central problems of the theory, the role of logic and model theory in semantic analysis, and interconnections with other aspects of language and communication.
2-4 units, Aut (Potts, C)

LINGUIST 230B. Semantics and Pragmatics
Expands on 230A. Standard approaches to formal semantics (Montague grammar, DRT, and basic dynamic semantics). Analyses of semantic phenomena in these frameworks. Prerequisites: 230A; or combination of 130A and PHIL 150 and 160.
2-4 units, not given this year

LINGUIST 232A. Lexical Semantics
Introduction to issues in word meaning, focused primarily around verbs. Overview of the core semantic properties of verbs and the organization of the verb lexicon. Approaches to lexical semantic representation, including semantic role lists, proto-roles, and causal and aspectual theories of event conceptualization.
2-4 units, Spr (Levin, B)

LINGUIST 232B. Seminar in Lexical Semantics
Topics have included: lexical categories; motion verbs; psych-verbs. May be repeated for credit with different content.
1-4 units, not given this year

LINGUIST 233. Introduction to Formal Pragmatics
(Same as LINGUIST 133) (Graduate students register for 233.) Mechanism underlying language use and felicity intuitions. Formal models of discourse that incorporate many aspects of pragmatics such as presuppositions, speech acts, implicatures, relevance, optimality, and utility. Discussion of common ground, illocutionary acts, Gricean maxims and Neo-Gricean analysis, game and decision theory.
3-4 units, not given this year

LINGUIST 234. Discourse Analysis
The organization of language above the sentence level, and the manifestation of language in context. Practical experience in working with discourse data.
4 units, Spr (Staff)

LINGUIST 235. Semantic Fieldwork
Techniques for evidence from less well-studied languages within formal semantic theory. Semantic phenomena, and techniques for investigating them, including scope, quantifiers, pronouns, focus, tense, aspect, mood, evidentiality, and information structure. Practical work on a language.
2-4 units, not given this year

LINGUIST 236. Seminar in Semantics: Lexical and Constructional Pragmatics
Case studies in how reliable pragmatic meanings arise from the interactions between conventionalized content, speaker intentions, hearer expectations, and general pragmatic pressures. Emphasis on corpus and psycholinguistic methods. Potential topics: exclamatives, affective demonstratives, discourse particles, appositives, scalar terms, negation; progression of topics to be decided largely by the participants. May be repeated for credit.
1-4 units, not given this year

LINGUIST 237. Seminar in Semantics: Semantics of Questions and Commands
Semantics of interrogatives and imperatives; propositional semantics of declaratives. Research emphasizing the meaning of questions. May be repeated for credit.
1-4 units, not given this year

LINGUIST 239. Semantics Research Seminar
Presentation of ongoing research in semantics. May be repeated for credit.
1-2 units, Aut (Levin, B), Win (Levin, B), Spr (Staff)

LINGUIST 240. Language Acquisition I
(Same as LINGUIST 140) Processes of language acquisition in early childhood; stages in development; theoretical issues and research questions. Practical experience in data collection.
4 units, Aut (Clark, E)

LINGUIST 241. Language Acquisition II
Constructions and the lexicon. May be repeated for credit.
1-4 units, Spr (Clark, E)

LINGUIST 242. Methods for Research in Language Acquisition
Research methods in developmental psycholinguistics
4 units, not given this year

LINGUIST 245. Experimental Design for Linguistics
Hypothesis formation, confound avoidance, power, general methods, and analysis of results. Students complete a pilot experiment; write-up; peer review; presentation.
4 units, not given this year

LINGUIST 250. Sociolinguistic Theory and Analysis
Methods of modeling the patterned variation of language in society. Emphasis is on variation, its relation to social structure and practice, and its role in linguistic change. Intersection between quantitative and qualitative analysis, combining insights of sociology and linguistic anthropology with quantitative linguistic data. Prerequisite: graduate standing in Linguistics or consent of instructor.
4 units, Aut (Rickford, J)

LINGUIST 251. Sociolinguistic Field Methods
Strengths and weaknesses of the principal methods of data collection in sociolinguistics.
4 units, Spr (Rickford, J)

LINGUIST 252. Sociolinguistics and Pidgin Creole Studies
(Same as LINGUIST 152) Introduction to pidgins and creoles, organized around the main stages in the pidgin-creole life cycle: pidginization, creolization, and decreolization. Focus is on transformations in the English language as it was transported from Britain to Africa, Asia, the Caribbean, and the Pacific. Resultant pidginized and creolized varieties such as Nigerian Pidgin English, Chinese Pidgin English, New Guinea Tok Pisin, Suriname Sranan, and the creole continua of Guyana, Jamaica, and Hawaii. Also French, Dutch, Portugese, Chinook, Motu, and Sango.
2-4 units, not given this year

LINGUIST 253. Race, Ethnicity, and Language
(Same as ANTHRO 320A, EDUC 389X) Seminar. The linguistic construction of race and ethnicity across a wide variety of contexts and communities. The course takes a comparative perspective and highlights how different racial/ethnic formations participate in similar, yet different, ways of doing race though language, interaction and culture. Readings draw heavily from perspectives in linguistic anthropology and sociolinguistics.
3-4 units, Win (Alim, H)

LINGUIST 254. Sociolinguistics of Language Contact
(Same as LINGUIST 154) The role of contact between speakers of different languages in processes of language borrowing, convergence, and shift. Attending both to linguistic aspects and social contexts, examine: second-language acquitision, bilingualism, code-switching, lexical and grammatical borrowing, first language attrition, language death, and the creation of new contact varieties such as jargons, mixed languages, pidgins, and creoles. Prerequisite: background in linguistics, at least one course in linguistics.
2-4 units, not given this year

LINGUIST 255. Seminar in Sociolinguistics: Contact Linguistics
Classical and recent works in contact linguistics including Weinreich, Tudgill, Winford. May be repeated for credit.
3-5 units, not given this year

LINGUIST 257. Seminar in Sociolinguistics: Community Studies of Variation
May be repeated for credit.
1-4 units, not given this year

LINGUIST 258. Analysis of Variation
The quantitative study of linguistic variability in time, space, and society emphasizing social constraints in variation. Hands-on work with variable data. Prerequisites: 105/205 and 250, or consent of instructor.
1-4 units, not given this year

LINGUIST 259. Topics in Sociolinguistics
Topics vary by quarter. Current topic is phonetic symbolism. Repeatable for credit
2-4 units, Aut (Eckert, P)

LINGUIST 260A. Historical Morphology and Phonology
Sound change and analogical change in the perspective of linguistic theory. Internal and comparative reconstruction.
4 units, not given this year

LINGUIST 260B. Historical Morphosyntax
Morphological and syntactic variation and change. Reanalysis, grammaticalization. The use of corpora and quantitative evidence.
2-4 units, not given this year

LINGUIST 262. Constructionalization
Discussion of recent proposals about how to enhance work on grammaticalization and lexicalization by adopting a construction grammar perspective.
2-4 units, Spr (Traugott, E)

LINGUIST 265. African American Vernacular English
(Same as LINGUIST 65) The English vernacular spoken by African Americans in big city settings, and its relation to Creole English dialects spoken on the S. Carolina Sea Islands (Gullah), in the

Caribbean, and in W. Africa. The history of expressive uses of African American English (in soundin' and rappin'), and its educational implications. Service Learning Course (certified by Haas Center).

3-5 units, Win (Rickford, J)

LINGUIST 266. Vernacular English and Reading
(Same as LINGUIST 66) Literature on the relation between use of vernacular English varieties, such as African American vernacular English, Chicano English, and the development of literacy especially in standard English. Focus is on improving the reading skills of African American and Latino students in local schools through the Reading Road program developed at the University of Pennsylvania. Students must commit to tutoring one or more elementary students weekly, using the program. Recommended: LINGUIST 65/265.

4-5 units, not given this year

LINGUIST 270. The Arabic Language and Culture
(Same as AMELANG 36, LINGUIST 170) Arabic language from historical, social, strategic, and linguistic perspectives. History of the Arabic language and the stability of classical Arabic over the last 15 centuries. Why the functionality of classical Arabic has not changed as Latin, Old English, and Middle English have. Social aspects of the Arabic language, Ferguson's notion of diglossia. The main varieties of Arabic, differences among them, and when and where they are spoken. Role of Arabic and culture in current world politics, culture, and economy. Linguistic properties of Arabic such as root-based morphology, lexical ambiguity, and syntactic structure relating it to current linguistic theories.

3 units, not given this year

LINGUIST 272. Structure of Finnish
Central topics in Finnish phonology/morphology and syntax/semantics and how they bear on current theoretical debates. Topics: stress; vowel harmony; clause structure; case; aspect; word order.

2-4 units, not given this year

LINGUIST 273. The Structure of Russian
(Same as LINGUIST 173) A synchronic overview of contemporary standard Russian, including its sound system, word formation and grammatical structure. Emphasis is on problems presented by Russian for current linguistic theory. The acquisition of Russian as a first language.

2-4 units, not given this year

LINGUIST 274A. Linguistic Field Methods
(Same as ANTHRO 30, LINGUIST 174) Practical training in the collection and analysis of linguistic data from native speakers of a language largely unknown to the investigator. Documentation of endangered languages. Research goals, field trip preparation, ethics (including human subjects, cooperation with local investigators, and governmental permits), working in the community, technical equipment, and analytical strategies. Emphasis is on the use of recording devices and computers in collection and analysis. Prerequisite: introductory course in linguistics.

3-5 units, not given this year

LINGUIST 274B. Field Methods II
Continuation of 274A, with a focus on phonetic topics in a targeted language. Prerequisite: 274A or consent of instructor.

2-4 units, not given this year

LINGUIST 277. Laboratory Methods in Psycholinguistics
Issues that commonly arise in the design and implementation of linguistic experiments and in the statistical analysis of empirical results. Topics in experimental design include selection of stimuli, blocking, and power analysis and sample size calculation. How to fit and interpret statistical models using the multilevel regression and Bayesian inference, as implemented in software packages R and Bugs. Topics include interpretation of model coefficients for fixed and random effects, collinearity, model criticism, as well as comparison and reporting of models. Theoretical issues worked out at lab sessions using examples from experiments and corpus studies, including those provided by students.

2-4 units, not given this year

LINGUIST 278. Programming for Linguists
Computer programming techniques for collecting and analyzing data in linguistic research. Introduction to the UNIX, regular expressions, and Python scripting. Hands-on experience gathering, formatting, and manipulating corpus, field, and experimental data, combining data from multiple sources, and working with existing tools. Knowledge of computer programming not required.

1-4 units, not given this year

LINGUIST 280. From Languages to Information
(Same as CS 124, LINGUIST 180) Automated processing of less structured information: human language text and speech, web pages, social networks, genome sequences, with goal of automatically extracting meaning and structure. Methods include: string algorithms, automata and transducers, hidden Markov models, graph algorithms, XML processing. Applications such as information retrieval, text classification, social network models, machine translation, genomic sequence alignment, word meaning extraction, and speech recognition. Prerequisite: CS103, CS107, CS109.

3-4 units, Win (Jurafsky, D)

LINGUIST 281. Grammar Engineering
(Same as LINGUIST 181) Hands-on techniques for implementation of linguistic grammars, drawing on grammatical theory and engineering skills. The implementation of constraints in morphology, syntax, and semantics, working within a unification-based lexicalist framework. Focus is on developing small grammars for English and at least one other language. Prerequisite: basic syntactic theory or 120. No programming skills required.

1-4 units, not given this year

LINGUIST 282. Computational Theories of Syntax
(Same as LINGUIST 182) Salient features of modern syntactic theories, including HPSG, LFG, and TAG, motivated by computational concerns. Impact of work within these frameworks on the design of algorithms in computational linguistics, and its influence in both linguistics and computer science. Topics include: notions of unification; unification algorithms and their relation to linguistic theory; agenda-driven chart processing for analysis and synthesis; the interface with morphology, the lexicon, and semantics; and applications, notably machine translation.

3-4 units, not given this year

LINGUIST 284. Natural Language Processing
(Same as CS 224N) Methods for processing human language information and the underlying computational properties of natural languages. Syntactic and semantic processing from linguistic and algorithmic perspectives. Focus is on modern quantitative techniques in NLP: using large corpora, statistical models for acquisition, translation, and interpretation; and representative systems. Prerequisites: CS124 or CS121/221.

3-4 units, Win (MacCartney, W)

LINGUIST 284A. Writing Systems in a Digital World
(Same as LINGUIST 185) Writing systems and their behaviors. Classification of scripts as alphabetic, syllabic, and ideographic; what features typically belong to each group. What can be considered an ideal script. Topics include: why Japanese writing is considered a complex system; the influence of Indian writing on other syllabic scripts; how writing systems extend their reach to new languages; linguistic insights by studying this process; the Unicode standard; and font technology. Recommended: basic phonetics.

2-3 units, not given this year

LINGUIST 285. Speech Recognition and Synthesis
(Same as CS 224S) Automatic speech recognition, speech synthesis, and dialogue systems. Focus is on key algorithms including noisy channel model, hidden Markov models (HMMs), Viterbi decoding, N-gram language modeling, unit selection synthesis, and roles of linguistic knowledge. Prerequisite: programming experience. Recommended: CS 221 or 229.

2-4 units, not given this year

LINGUIST 286. Information Retrieval and Web Search
(Same as CS 276) Text information retrieval systems; efficient text indexing; Boolean, vector space, and probabilistic retrieval models; ranking and rank aggregation; evaluating IR systems. Text clustering and classification: classification algorithms, latent semantic indexing, taxonomy induction; Web search engines including crawling and indexing, link-based algorithms, and web metadata. Prerequisites: CS 107, CS 109, CS 161.

3 units, Spr (Nayak, P; Raghavan, P)

LINGUIST 287. Extracting Social Meaning and Sentiment
(Same as CS 424P) Methods for extracting social meaning (speaker perspectives, emotions and attitudes) from text and speech. Topics include sentiment analysis and summarization, detection of deception, sarcasm, emotion, and personality. Analysis of mean-

sis of meaning-bearing characteristics of the speaker and topic, including text, discourse, prosodic and other cues. Prerequisite: CS 124 or 221 or 229 or permission of instructors.

3 units, Aut (Jurafsky, D; Potts, C)

LINGUIST 288. Natural Language Understanding
(Same as CS 224U, LINGUIST 188) Machine understanding of human language. Computational semantics (determination of word sense and synonymy, event structure and thematic roles, time, aspect, causation, compositional semantics, scopal operators), and computational pragmatics and discourse (coherence, coreference resolution, information packaging, dialogue structure). Theoretical issues, online resources, and relevance to applications including question answering and summarization. Prerequisites: one of LINGUIST 180 / CS 124 / CS 224N,S: and logic such as LINGUIST 130A or B, CS 157, or PHIL150).

3-4 units, not given this year

LINGUIST 289. Topics in Computational Linguistics: History of Computational Linguistics
Intellectual history of computational linguistics and natural language processing, together with related aspects of dialogue and speech processing, using primary sources. Reading of seminal early papers, interviews with historical figures, with the goal of understanding the origins and intellectual development of the field. Prerequisites: at least one of LING 180, 281, 283, 284, 286, or 288.

3-4 units, Win (Jurafsky, D; Kay, M)

LINGUIST 291. Linguistics and the Teaching of English as a Second/Foreign Language
(Same as LINGUIST 191) Methodology and techniques for teaching languages, using concepts from linguistics and second language acquisition theory and research. Focus is on teaching English, but most principles and techniques applicable to any language. Optional 1-unit seminar in computer-assisted language learning.

4-5 units, Win (Hubbard, P; Rylance, C)

LINGUIST 293. Research Seminar in Applied Linguistics
(Same as EDUC 435X) For graduate students in the schools of Education and Humanities and Sciences who are engaged in research pertaining to applied linguistic topics in original research. Topics: language policies and planning, language and gender, writing and critical thinking, foreign language education, and social applications of linguistic science. (SSPEP)

1-4 units, not given this year

LINGUIST 294. Linguistic Research Discussion Group
Restricted to first-year Linguistics Ph.D. students.

1 unit, Aut (Levin, B)

LINGUIST 390. M.A. Project

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

LINGUIST 394. TA Training Workshop
For second-year graduate students in Linguistics

1 unit, Aut (Levin, B)

LINGUIST 395. Research Workshop
Restricted to students in the doctoral program. Student presentations of research toward qualifying papers.

1-2 units, Spr (Staff), Sum (Staff)

LINGUIST 395C. Research Workshop III
Restricted to students in the doctoral program. Student presentations of research toward qualifying papers.

1-2 units, Sum (Staff)

LINGUIST 396. Research Projects in Linguistics
Mentored research project for first-year graduate students in linguistics.

2-3 units, Aut (Staff), Win (Staff)

LINGUIST 397. Directed Reading

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

LINGUIST 398. Directed Research

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

LINGUIST 399. Dissertation Research

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MANAGEMENT SCIENCE AND ENGINEERING (MS&E) COURSES

UNDERGRADUATE COURSES IN MANAGEMENT SCIENCE AND ENGINEERING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

MS&E 22Q. The Flaw of Averages
(Stanford Introductory Seminar) Uncertain assumptions in business and public policy are often replaced with single ¿best guess¿ or average numbers. This leads to a fallacy as fundamental as the belief that the earth is flat, which I call the Flaw of Averages. It states, in effect, that: plans based on average assumptions are wrong on average. This class will discuss mitigations of the flaw of averages using simulation and other methods from probability management.

3 units, Aut (Savage, S)

MS&E 41. Financial Literacy
Practical knowledge about personal finance and money management including budgeting, pay checks, credit cards, banking, insurance, taxes, and saving. Class especially appropriate for those soon to be self-supporting. Limited enrollment.

1 unit, Win (Morrison, M), Spr (Morrison, M)

MS&E 52. Introduction to Decision Making
Experienced management consultants share lessons and war stories. Case studies, disguised examples from real engagements, and movie clips illustrate theories and concepts of decision analysis. Student teams critique decisions made in actual organizations. Topics include what makes a good decision, how decisions can be made better, framing and structuring techniques, modeling and analysis tools, biases and probability assessment, evaluation and appraisal methods, decision psychology, creativity and organizational leadership, and effective presentation styles. Not intended for MS&E majors.

3 units, Sum (Holtzman, S; Robinson, B)

MS&E 92Q. International Environmental Policy
(Stanford Introductory Seminar) Preference to sophomores. Science, economics, and politics of international environmental policy. Current negotiations on global climate change, including actors and potential solutions. Sources include briefing materials used in international negotiations and the U.S. Congress.

4 units, Win (Weyant, J)

MS&E 93Q. Nuclear Weapons, Energy, Proliferation, and Terrorism
(Stanford Introductory Seminar) Preference to sophomores. What are nuclear weapons; what do they do? How are they different from other weapons? What drives proliferation of nuclear weapons? Why do countries want them? Can they be eliminated? What about Iran and North Korea? What role does nuclear energy play? Can it help combat global climate change? What are the risks of nuclear terrorism? Recommended: a course in international relations, engineering, or physical science. GER:DB-EngrAppSci

3 units, Spr (Hecker, S)

MS&E 101. Undergraduate Directed Study
Subject of mutual interest to student and faculty member. Prerequisite: faculty sponsor.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MS&E 107. Interactive Management Science
(Same as MS&E 207) Analytical techniques such as linear and integer programming, Monte Carlo simulation, forecasting, decision analysis, and Markov chains in the environment of the spreadsheet. Probability management. Materials include spreadsheet add-ins for implementing these and other techniques. Emphasis is on building intuition through interactive modeling, and extending the applicability of this type of analysis through integration with existing business data structures. GER:DB-EngrAppSci

3 units, Aut (Savage, S)

MS&E 108. Senior Project
Restricted to MS&E majors in their senior year. Students carry out a major project in groups of four, applying techniques and concepts learned in the major. Project work includes problem identification and definition, data collection and synthesis, modeling, development of feasible solutions, and presentation of results. Service Learning Course (certified by Haas Center).

5 units, Win (Barley, S; Katila, R; Shachter, R; Hinds, P)

MS&E 111. Introduction to Optimization
(Same as ENGR 62) Formulation and analysis of linear optimization problems. Solution using Excel solver. Polyhedral geometry and duality theory. Applications to contingent claims analysis, production scheduling, pattern recognition, two-player zero-sum games, and network flows. Prerequisite: MATH 51. GER:DB-EngrAppSci

4 units, Aut (Van Roy, B), Spr (Goel, A)

MS&E 112. Mathematical Programming and Combinatorial Optimization
(Same as MS&E 212) Combinatorial and mathematical programming (integer and non-linear) techniques for optimization. Topics: linear program duality and LP solvers; integer programming; combinatorial optimization problems on networks including minimum spanning trees, shortest paths, and network flows; matching and assignment problems; dynamic programming; linear approximations to convex programs; NP-completeness. Hands-on exercises. Prerequisites: CS 106A or X; ENGR 62 or MATH 103. GER:DB-EngrAppSci

3 units, Win (Saberi, A)

MS&E 120. Probabilistic Analysis
Concepts and tools for the analysis of problems under uncertainty, focusing on model building and communication: structuring, processing, and presentation of probabilistic information. Examples from legal, social, medical, and physical problems. Spreadsheets illustrate and solve problems as a complement to analytical closed-form solutions. Topics: axioms of probability, probability trees, random variables, distributions, conditioning, expectation, change of variables, and limit theorems. Prerequisite: MATH 51. Recommended: knowledge of spreadsheets. GER:DB-EngrAppSci

5 units, Aut (Shachter, R)

MS&E 121. Introduction to Stochastic Modeling
Stochastic processes and models in operations research. Discrete and continuous time parameter Markov chains. Queuing theory, inventory theory, simulation. Prerequisite: 120 or Statistics 116. GER:DB-EngrAppSci

4 units, Spr (Glynn, P)

MS&E 130. Information Networks and Services
Architecture of the Internet and performance engineering of computer systems and networks. Switching, routing and shortest path algorithms. Congestion management and queueing networks. Peer-to-peer networking. Wireless and mobile networking. Information service engineering and management. Search engines and recommendation systems. Reputation systems and social networking technologies. Security and trust. Information markets. Select special topics and case studies. Prequisites: 111, 120, and CS 106A. GER:DB-EngrAppSci

3 units, Spr (Bambos, N)

MS&E 134. Organization Change and Information Systems
(Same as MS&E 234) Leading organizational change and Information Systems. Case method discussions and lectures. Themes include: real-time enterprise; reengineering; organization transformation, cross-functional teams, IT development, and leading IT. Course includes a group project that is defined and approved during the first two weeks of class. Limited enrollment. Prerequisites: CS 106A, 180, or equivalents.

4 units, Win (Tabrizi, B)

MS&E 140. Accounting for Managers and Entrepreneurs
(Same as MS&E 240) Non-majors and minors who have taken or are taking elementary accounting should not enroll. Introduction to accounting concepts and the operating characteristics of accounting systems. The principles of financial and cost accounting, design of accounting systems, techniques of analysis, and cost control. Interpretation and use of accounting information for decision making. Designed for the user of accounting information and not as an introduction to a professional accounting career.

3-4 units, Aut (Stanton, F), Spr (Stanton, F), Sum (Stanton, F)

MS&E 142. Investment Science
(Undergraduates register for 142.) Theory and application of modern quantitative investment analysis from an engineering perspective. How investment concepts are used to evaluate and manage opportunities, portfolios, and investment products including stocks, bonds, mortgages, and annuities. Topics: deterministic cash flows (term structure of interest rates, bond portfolio immunization, project optimization); mean-variance theory (Markowitz model, capital asset pricing); and arbitrage pricing theory. Group project. Limited enrollment. Prerequisites: 120, ENGR 60, MATH 51, or equivalents. Recommended: 140, ENGR 62, knowledge of spreadsheets.

3 units, Aut (Primbs, J)

MS&E 152. Introduction to Decision Analysis
(Same as MS&E 152W) How to make good decisions in a complex, dynamic, and uncertain world. People often make decisions that on close examination they regard as wrong. Decision analysis uses a structured conversation based on actional thought to obtain clarity of action in a wide variety of domains. Topics: distinctions, possibilities and probabilities, relevance, value of information and experimentation, relevance and decision diagrams, risk attitude. Students seeking to fulfill the Writing in the Major requirement should register for MS&E 152W. GER:DB-EngrAppSci

3-4 units, Spr (Shachter, R)

MS&E 152W. Introduction to Decision Analysis
(Same as MS&E 152) How to make good decisions in a complex, dynamic, and uncertain world. People often make decisions that on close examination they regard as wrong. Decision analysis uses a structured conversation based on actional thought to obtain clarity of action in a wide variety of domains. Topics: distinctions, possibilities and probabilities, relevance, value of information and experimentation, relevance and decision diagrams, risk attitude. Students seeking to fulfill the Writing in the Major requirement should register for MS&E 152W. GER:DB-EngrAppSci, WIM

3-4 units, Spr (Shachter, R)

MS&E 175. Innovation, Creativity, and Change
Problem solving in organizations; creativity and innovation skills; thinking tools; creative organizations, teams, individuals, and communities. (Katila)

3-4 units, given next year

MS&E 178. The Spirit of Entrepreneurship
Students meet before and after MS&E 472 to prepare for and debrief after the sessions.

3 units, Aut (Blank, S), Win (Seelig, T)

MS&E 180. Organizations: Theory and Management
For undergraduates only; preference to MS&E majors. Classical and contemporary organization theory; the behavior of individuals, groups, and organizations. Limited enrollment. Students must attend first session.

4 units, Aut (Eisenhardt, K), Spr (Hinds, P)

MS&E 181. Issues in Technology and Work for a Postindustrial Economy
How changes in technology and organization are altering work and lives. Approaches to studying and designing work. How understanding work and work practices can assist engineers in designing better technologies and organizations. Topics include job design, distributed and virtual organizations, the blurring of boundaries between work and family life, computer supported cooperative work, trends in skill requirements and occupational structures, monitoring and surveillance in the workplace, downsizing and its effects on work systems, project work and project-based lifestyles, the growth of contingent employment, telecommuting, electronic commerce, and the changing nature of labor relations. Limited enrollment. Preference to MS&E and STS majors.

3 units, Spr (Barley, S)

MS&E 185. Global Work
Issues, challenges, and opportunities facing workers, teams, and organizations working across national boundaries. Topics include geographic distance, time zones, language and cultural differences, technologies to support distant collaboration, team dynamics, and corporate strategy. Limited enrollment.

4 units, Spr (Hinds, P)

MS&E 189. Social Networks: Theory, Methods, and Applications
The theoretical, substantive, and methodological foundations of social networks. The social network paradigm seeks to explain how social relations facilitate and constrain an actor's opportunities, behaviors, and cognitions. Topics include: network concepts and principles; network data collection, measurement, and analysis; and applications in management, engineering, and related disciplines.
3-4 units, Aut (Lifschitz, A)

MS&E 190. Methods and Models for Policy and Strategy Analysis
Guest lectures by departmental practitioners. Emphasis is on links among theory, application, and observation. Environmental, national security, and health policy; marketing, new technology, and new business strategy analyses. Comparisons between domains and methods.
3 units, Spr (Brandeau, M)

MS&E 193. Technology and National Security
(Same as MS&E 193W, MS&E 293) The interaction of technology and national security policy from the perspective of history to implications for the new security imperative, homeland defense. Key technologies in nuclear and biological weapons, military platforms, and intelligence gathering. Policy issues from the point of view of U.S. and other nations. The impact of terrorist threat. Guest lecturers include key participants in the development of technology and/or policy. Students seeking to fulfill the WIM requirement should register for 193W.
3 units, Aut (Hecker, S; Perry, W)

MS&E 193W. Technology and National Security
(Same as MS&E 193, MS&E 293) The interaction of technology and national security policy from the perspective of history to implications for the new security imperative, homeland defense. Key technologies in nuclear and biological weapons, military platforms, and intelligence gathering. Policy issues from the point of view of U.S. and other nations. The impact of terrorist threat. Guest lecturers include key participants in the development of technology and/or policy. Students seeking to fulfill the WIM requirement should register for 193W. WIM
3 units, Aut (Hecker, S; Perry, W)

MS&E 197. Ethics and Public Policy
(Same as PUBLPOL 103B, STS 110) Ethical issues in science- and technology-related public policy conflicts. Focus is on complex, value-laden policy disputes. Topics: the nature of ethics and morality; rationales for liberty, justice, and human rights; and the use and abuse of these concepts in policy disputes. Case studies from biomedicine, environmental affairs, technical professions, communications, and international relations. GER:DB-Hum, EC-EthicReas, WIM
5 units, Win (McGinn, R)

MS&E 198. Applied Modeling of Energy and Environmental Markets
Economic principles in models of energy and environmental markets. Spreadsheet examples for developing insights and communicating with decision makers. Market-clearing conditions, controlling emissions through fees, diffusion of new technologies, resource depletion, cartel behavior, and model evaluation. Prerequisites: ECON 50 and spreadsheets, or consent of instructor.
1 unit, not given this year

GRADUATE COURSES IN MANAGEMENT SCIENCE AND ENGINEERING

Primarily for graduate students; undergraduates may enroll with consent of instructor.

MS&E 201. Dynamic Systems
Goal is to think dynamically in decision making, and recognize and analyze dynamic phenomena in diverse situations. Concepts: formulation and analysis; state-space formulation; solutions of linear dynamic systems, equilibria, dynamic diagrams; eigenvalues and eigenvectors of linear systems, the concept of feedback; nonlinear dynamics, phase plane analysis, linearized analysis, Liapunov functions, catastrophe theory. Examples: grabber-holder dynamics, technology innovation dynamics, creation of new game dynamics in business competition, ecosystem dynamics, social dynamics, and stochastic exchange dynamics. Prerequisite: MATH 103 or equivalent.
3-4 units, Spr (Tse, E)

MS&E 206. Art of Mathematical Modeling
Practicum. Students build mathematical models of real-life, ill-framed problems. Emphasis is on framing the issues, articulating modeling components logically (drawing from student's mathematical background), and analyzing the resulting model. Hands-on modeling. Project work in small groups. Prerequisites: basic analysis, calculus and algebra, and probability theory. Recommended: decision analysis, optimization and dynamic systems.
3-4 units, Spr (Kieffel, H)

MS&E 207. Interactive Management Science
(Same as MS&E 107) Analytical techniques such as linear and integer programming, Monte Carlo simulation, forecasting, decision analysis, and Markov chains in the environment of the spreadsheet. Probability management. Materials include spreadsheet add-ins for implementing these and other techniques. Emphasis is on building intuition through interactive modeling, and extending the applicability of this type of analysis through integration with existing business data structures.
3 units, Aut (Savage, S)

MS&E 208A. Practical Training
MS&E students obtain employment in a relevant industrial or research activity to enhance professional experience, consistent with the degree program they are pursuing. Students submit a one-page statement showing relevance to degree program along with offer letter before the start of the quarter, and a 2-3 page final report documenting the work done and relevance to degree program at the conclusion of the quarter. Master's students are limited to one quarter of practical training. B.S. and Ph.D. students may take each of A, B, and C once.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MS&E 208B. Practical Training
MS&E students obtain employment in a relevant industrial or research activity to enhance professional experience, consistent with the degree program they are pursuing. Students submit a one-page statement showing relevance to degree program along with offer letter before the start of the quarter, and a 2-3 page final report documenting the work done and relevance to degree program at the conclusion of the quarter. Master's students are limited to one quarter of practical training. B.S. and Ph.D. students may take each of A, B, and C once.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MS&E 208C. Practical Training
MS&E students obtain employment in a relevant industrial or research activity to enhance professional experience, consistent with the degree program they are pursuing. Students submit a one-page statement showing relevance to degree program along with offer letter before the start of the quarter, and a 2-3 page final report documenting the work done and relevance to degree program at the conclusion of the quarter. Master's students are limited to one quarter of practical training. B.S. and Ph.D. students may take each of A, B, and C once.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MS&E 211. Linear and Nonlinear Optimization
Optimization theory and modeling. The role of prices, duality, optimality conditions, and algorithms in finding and recognizing solutions. Perspectives: problem formulation, analytical theory, computational methods, and recent applications in engineering, finance, and economics. Theories: finite dimensional derivatives, convexity, optimality, duality, and sensitivity. Methods: simplex and interior-point, gradient, Newton, and barrier. Prerequisite: MATH 51.
3-4 units, Aut (Tolman, C)

MS&E 212. Mathematical Programming and Combinatorial Optimization
(Same as MS&E 112) Combinatorial and mathematical programming (integer and non-linear) techniques for optimization. Topics: linear program duality and LP solvers; integer programming; combinatorial optimization problems on networks including minimum spanning trees, shortest paths, and network flows; matching and assignment problems; dynamic programming; linear approximations to convex programs; NP-completeness. Hands-on exercises. Prerequisites: CS 106A or X; ENGR 62 or MATH 103.
3 units, Win (Saberi, A)

MS&E 220. Probabilistic Analysis
Concepts and tools for the analysis of problems under uncertainty, focusing on model building and communication: the structuring, processing, and presentation of probabilistic information. Examples from legal, social, medical, and physical problems. Spreadsheets illustrate and solve problems as a complement to analytical closed-form solutions. Topics: axioms of probability, probability trees, random variables, distributions, conditioning, expectation, change of variables, and limit theorems. Prerequisite: MATH 51. Recommended: knowledge of spreadsheets.
3-4 units, Aut (Chiu, S)

MS&E 221. Stochastic Modeling
Focus is on time-dependent random phenomena. Topics: discrete and continuous time Markov chains, renewal processes, queueing theory, and applications. Emphasis is on building a framework to formulate and analyze probabilistic systems. Prerequisite: 220 or consent of instructor.
3 units, Win (Johari, R)

MS&E 223. Simulation
Discrete-event systems, generation of uniform and non-uniform random numbers, Monte Carlo methods, programming techniques for simulation, statistical analysis of simulation output, efficiency-improvement techniques, decision making using simulation, applications to systems in computer science, engineering, finance, and operations research. Prerequisites: working knowledge of a programming language such as C, C++, Java, or FORTRAN; probability; and statistical methods.
3 units, Spr (Haas, P)

MS&E 234. Organization Change and Information Systems
(Same as MS&E 134) Leading organizational change and information systems. Case method discussions and lectures. Themes include: real-time enterprise; reengineering; organization transformation, cross-functional teams, IT development, and leading IT. Course includes a group project that is defined and approved during the first two weeks of class. Limited enrollment. Prerequisites: CS 106A, 180, or equivalents.
4 units, Win (Tabrizi, B)

MS&E 236. Game Theory with Engineering Applications
Strategic interactions among multiple decision makers emphasizing applications to engineering systems. Topics: efficiency and fairness; collective decision making and cooperative games; static and dynamic noncooperative games; and complete and incomplete information models. Competition: Bertrand, Cournot, and Stackelberg models. Mechanism design: auctions, contracts. Examples from engineering problems. Prerequisites: MATH 51 and exposure to probability such as 120 or EE 178. Recommended: 211, concurrent enrollment in 241 or ECON 202.
3 units, alternate years, not given this year

MS&E 236H. Game Theory with Engineering Applications
Advanced and mathematically more rigorous version of MS&E 236. Strategic interactions among multiple decision makers emphasizing applications to engineering systems. Topics: efficiency and fairness; collective decision making and cooperative games; static and dynamic noncooperative games; and complete and incomplete information models. Competition: efficient markets; Bertrand, Cournot, and Stackelberg models. Mechanism design: auctions, contracts. Examples from engineering problems. Prerequisites: mathematical maturity; MATH 51; probability at the level of 220, STATS 116, or equivalent. Recommended: 211, concurrent enrollment in 241 or ECON 202.
3 units, Win (Johari, R), alternate years, not given next year

MS&E 237. The Social Data Revolution: Data Mining and Electronic Business
Hands-on exploration of current and emergent data sources and their impact on individuals, business and society: recommendation engines, reputation systems, social network analysis, and engagement metrics. Guest speakers, homework assignments and group projects (e.g., Twitter and Facebook apps) combine data strategy, machine learning, modern and traditional marketing, behavioral economics, and incentive design. Cases include Amazon.com, BestBuy, MySpace, Lufthansa, and startups. Prerequisites: intellectual curiosity, entrepreneurial spirit, some programming experience (details at weigend.com/teaching), and willingness to implement in the real world.
3 units, Spr (Weigend, A)

MS&E 239. Computational Advertising
Computational, economic, and optimization issues in online advertising, in contexts including web search, social networks, web surfing, and online multimedia. Overview of scientific and engineering issues arising in building online advertising platforms for Internet advertising formats, as well as ad pricing, ad auctions, and ad optimization. Research frontiers of this young discipline. Limited enrollment. Prerequisites: elementary probability and linear algebra.
3 units, Aut (Broder, A; Josifovski, V)

MS&E 240. Accounting for Managers and Entrepreneurs
(Same as MS&E 140) Non-majors and minors who have taken or are taking elementary accounting should not enroll. Introduction to accounting concepts and the operating characteristics of accounting systems. The principles of financial and cost accounting, design of accounting systems, techniques of analysis, and cost control. Interpretation and use of accounting information for decision making. Designed for the user of accounting information and not as an introduction to a professional accounting career.
3-4 units, Aut (Stanton, F), Spr (Stanton, F), Sum (Stanton, F)

MS&E 241. Economic Analysis
Principal methods of economic analysis of the production activities of firms, including production technologies, cost and profit, and perfect and imperfect competition; individual choice, including preferences and demand; and the market-based system, including price formation, efficiency, and welfare. Practical applications of the methods presented. See 341 for continuation of 241. Recommended: 211, ECON 50.
3-4 units, Win (Weber, T)

MS&E 242. Investment Science
Theory and application of modern quantitative investment analysis from an engineering perspective. How investment concepts are used to evaluate and manage opportunities, portfolios, and investment products including stocks, bonds, mortgages, and annuities. Topics: deterministic cash flows (term structure of interest rates, bond portfolio immunization, project optimization); mean-variance theory (Markowitz model, capital asset pricing); and arbitrage pricing theory. Group project. Prerequisites: 120, ENGR 60, MATH 51, or equivalents. Recommended: 140, ENGR 62, knowledge of spreadsheets. Limited enrollment.
3 units, Aut (Primbs, J)

MS&E 242H. Investment Science Honors
Concepts of modern quantitative finance and investments. Basic concepts under certainty including arbitrage, term structure of interest rates, and bond portfolio immunization. A situation of uncertainty in one period. Topics: arbitrage; theorems of asset pricing; pricing measures; derivative securities; applications and estimating of financial risk measures; mean-variance portfolio analysis; and equilibrium and the capital asset pricing model. Group projects involving financial market data. Enrollment limited. Prerequisites: basic probability, statistics, and economics such as MS&E 120, 121, MATH 51, ENGR 60, or equivalents. No prior knowledge of finance required.
3 units, Aut (Giesecke, K)

MS&E 242S. Investment Science
Emphasis is on a cash flow approach. Topics include deterministic cash flow analysis (time value of money, present value, internal rate of return, taxes, inflation), fixed income securities, duration and bond portfolio immunization, term structure of interest rates (spot rates, discount factors, forward rates), Fisher-Weill duration and immunization, capital budgeting, dynamic optimization prob-

lems, investments under uncertainty, mean-variance portfolio theory, capital asset pricing, and basic options theory. Goal is to create a link between engineering analysis and business decision making.

3 units, Sum (Feinstein, C)

MS&E 243. Energy and Environmental Policy Analysis

(Same as ENVRES 243) Concepts, methods, and applications. Energy/environmental policy issues such as automobile fuel economy regulation, global climate change, research and development policy, and environmental benefit assessment. Group project. Prerequisite: MS&E 241 or ECON 50, 51.

3 units, Spr (Sweeney, J)

MS&E 245G. Finance for Non-MBAs

(Same as ECON 135) For graduate students and advanced undergraduates. The foundations of finance; applications in corporate finance and investment management. Financial decisions made by corporate managers and investors with focus on process valuation. Topics include criteria for investment decisions, valuation of financial assets and liabilities, relationships between risk and return, market efficiency, and the valuation of derivative securities. Corporate financial instruments including debt, equity, and convertible securities. Equivalent to core MBA finance course, FINANCE 220. Prerequisites: ECON 51, or ENGR 60, or equivalent; ability to use spreadsheets, and basic probability and statistics concepts including random variables, expected value, variance, covariance, and simple estimation and regression.

3-5 units, Win (Admati, A)

MS&E 247G. International Financial Management

(Same as FINANCE 323) With a daily volume of more than $1.8 trillion, the foreign exchange market is by far the largest financial market in the world and also one of the most important ones as it is impossible to avoid exchange rate risk in the global economy. Various aspects of the foreign exchange market. The role of governments and central banks. The markets for spot exchange, currency forwards, options, swaps, international bonds, and international equities. For each of these markets, the valuation of instruments traded in these markets and, through cases, the application of these instruments to managing exposure to exchange rates, financing in international capital markets, and international capital budgeting.

4 units

MS&E 247S. International Investments

International financial markets, their comparative behavior and interrelations. Focus is on assets traded in liquid markets: currencies, equities, bonds, swaps, and derivatives. Topics: institutional arrangements, taxation and regulation, international arbitrage and parity conditions, valuation of target firms for cross-border acquisitions, direct foreign investment, international diversification and portfolio management, derivative instruments and dynamic investment strategies, international performance analysis, international capital flows and financial crises, and topics of current relevance and importance.

3 units, Sum (Fu, Y)

MS&E 248. Economics of Natural Resources

Intertemporal economic analysis of natural resource use, particularly energy, and including air, water, and other depletable mineral and biological resources. Emphasis is on an integrating theory for depletable and renewable resources. Stock-flow relationships; optimal choices over time; short- and long-run equilibrium conditions; depletion/extinction conditions; market failure mechanisms (common-property, public goods, discount rate distortions, rule-of-capture); policy options. Prerequisite: 241 or ECON 51.

3-4 units, Aut (Sweeney, J)

MS&E 249. Economic Growth and Development

What generates economic growth. Emphasis is on theory accompanied by intuition, illustrated with country cases. Topics: the equation of motion of an economy; optimal growth theory; calculus of variations and optimal control approaches; deriving the Euler and Pontriaguine equations from economic reasoning. Applications: former planned economies in Russia and E. Europe; the present global crisis: causes and consequences; a comparative study of India and China. The links between economic growth and civilization; the causes of the rise and decline of civilizations; lessons for the future.

3 units, Sum (De La Grandville, O)

MS&E 250A. Engineering Risk Analysis

The techniques of analysis of engineering systems for risk management decisions involving trade-offs (technical, human, environmental aspects). Elements of decision analysis; probabilistic risk analysis (fault trees, event trees, systems dynamics); economic analysis of failure consequences (human safety and long-term economic discounting); and case studies such as space systems, nuclear power plants, and medical systems. Public and private sectors. Prerequisites: ENGR 60 or equivalent, probability, and decision analysis.

3 units, Win (Pate-Cornell, E)

MS&E 250B. Project Course in Engineering Risk Analysis

Students, individually or in groups, choose, define, formulate, and resolve a real risk management problem, preferably from a local firm or institution. Oral presentation and report required. Scope of the project is adapted to the number of students involved. Three phases: risk assessment, communication, and management. Emphasis is on the use of probability for the treatment of uncertainties and sensitivity to problem boundaries. Limited enrollment. Prerequisites: MS&E 250A and consent of instructor.

3 units, Spr (Pate-Cornell, E)

MS&E 251. Stochastic Decision Models

Efficient formulation and computational solution of sequential decision problems under uncertainty. Markov decision chains and stochastic programming. Maximum expected present value and rate of return. Optimality of simple policies: myopic, linear, index, acceptance limit, and (s,S). Optimal stationary and periodic infinite-horizon policies. Applications to investment, options, overbooking, inventory, production, purchasing, selling, quality, repair, sequencing, queues, capacity, transportation. MATLAB is used. Prerequisites: probability, linear programming.

3 units, not given this year

MS&E 252. Decision Analysis I: Foundations of Decision Analysis

Coherent approach to decision making, using the metaphor of developing a structured conversation having desirable properties, and producing actional thought that leads to clarity of action. Socratic instruction; computational problem sessions. Emphasis is on creation of distinctions, representation of uncertainty by probability, development of alternatives, specification of preference, and the role of these elements in creating a normative approach to decisions. Information gathering opportunities in terms of a value measure. Relevance and decision diagrams to represent inference and decision. Principles are applied to decisions in business, technology, law, and medicine. See 352 for continuation.

3-4 units, Aut (Howard, R)

MS&E 254. The Ethical Analyst

The ethical responsibility for consequences of professional analysts who use technical knowledge in support of any individual, organization, or government. The means to form ethical judgments; questioning the desirability of physical coercion and deception as a means to reach any end. Human action and relations in society in the light of previous thought, and research on the desired form of social interactions. Attitudes toward ethical dilemmas through an explicit personal code.

1-3 units, Spr (Howard, R)

MS&E 255. Decision Systems I

(Formerly MS&E 451.) Professional tools and techniques for designing decision systems that help when facing decisions such as buying a car, bidding on the Internet, hiring NFL players, making charitable donations, or choosing medical treatment. Demonstrations; small project. Topics: automatic decision diagram formulation, decision-class analysis, and dynamic sensitivity analysis. No programming required. Recommended: 252 or equivalent.

2-3 units, Win (Holtzman, S)

MS&E 256. Technology Assessment and Regulation of Medical Devices
(Formerly 475.) Regulatory approval and reimbursement for new medical technologies as a key component of product commercialization. The regulatory and payer environment in the U.S. and abroad, and common methods of health technology assessment. Framework to identify factors relevant to adoption of new medical devices, and the management of those factors in the design and development phases. Case studies; guest speakers from government (FDA) and industry.
1-3 units, Spr (Pietzsch, J)

MS&E 260. Introduction to Operations Management
Operations management focuses on the effective planning, scheduling, and control of manufacturing and service entities. This course introduces students to a broad range of key issues in operations management. Topics include determination of optimal facility location, production planning, optimal timing and sizing of capacity expansion, and inventory control. Prerequisites: basic probability and optimization.
3-4 units, Aut (Erhun Oguz, F), Sum (Mora Carrasco, H; McCoy, J)

MS&E 261. Inventory Control and Production Systems
Topics in the planning and control of manufacturing systems. The functions of inventory, determination of order quantities and safety stocks, alternative inventory replenishment systems, item forecasting, production-inventory systems, materials requirements planning (MRP), just-in-time systems, master and operations scheduling, supply chain management, and service operations. Limited enrollment. Prerequisite: 120, or STATS 116, or equivalent.
3 units, Win (Hausman, W)

MS&E 262. Supply Chain Management
Definition of a supply chain; coordination difficulties; pitfalls and opportunities in supply chain management; inventory/service tradeoffs; performance measurement and incentives. Global supply chain management; mass customization; supplier management. Design and redesign of products and processes for supply chain management; tools for analysis; industrial applications; current industry initiatives. Enrollment limited to 50. Prerequisite: 260 or 261.
3 units, Spr (Hausman, W)

MS&E 264. Sustainable Product Development and Manufacturing
Strategies and techniques for development of sustainable products and manufacturing processes. Topics: strategic decisions in new product development when environmental and resource externalities are accounted for; effect of regulatory requirements on ability of a firm to achieve its business objectives; contributions of sustainable products/processes to the firm's competitive advantage and operational efficiency and to enabling entrepreneurial opportunities; industrial ecology and life cycle analysis techniques in integrating traditional product development requirements with those of the environment and society. Maybe repeatable for credit once.
3 units, Aut (Rafinejad, D)

MS&E 265. Supply Chain Logistics
Student teams redesign the manufacturing and distribution system of a medium-sized manufacturer. Focus is on the transportation system, inventory policies for a regional warehouse, design of a national distribution system, improvements of work flow, and layout of the manufacturing plant. The redesign is at a detailed operational level consistent with a strategy of integrating the functions of manufacturing and distribution. Analytical and game software is used. Knowledge of inventory theory, linear/integer programming, economic analysis, and applied probability is required. Emphasis is on group learning. Limited enrollment. Prerequisites: senior or graduate standing, 160, ENGR 60 and 62, or consent of instructor.
4 units, alternate years, not given this year

MS&E 266. Management of New Product Development
Techniques of managing or leading the process of new product development that have been found effective. Emphasis is placed on how much control is desirable and how that control can be exercised in a setting where creativity has traditionally played a larger role than discipline. Topics: design for manufacturability, assessing the market, imposing discipline on the new product development process, selecting the appropriate portfolio of new product development projects, disruptive technology, product development at internet speed, uncertainty in product development, role of experimentation in new product development, creating an effective development organization, and developing products to hit cost targets.
3 units, Win (Carlson, R)

MS&E 268. Operations Strategy
The development and implementation of the operations functional strategy. The integration of operations strategy with business and corporate strategies of a manufacturing-based firm. Topics: types and characteristics of manufacturing technologies, quality management, capacity planning and facilities choice, organization and control of operations, and operations' role in corporate strategy. Prerequisites: 260 or 261, or equivalent experience.
3 units, Spr (Carlson, R)

MS&E 270. Strategy in Technology-Based Companies
For graduate students only. Introduction to the basic concepts of strategy, with emphasis on high technology firms. Topics: competitive positioning, resource-based perspectives, co-opetition and standards setting, and complexity/evolutionary perspectives. Limited enrollment.
3-4 units, Aut (Eisenhardt, K), Win (Katila, R)

MS&E 271. Global Entrepreneurial Marketing
Skills needed to market new technology-based products to customers around the world. Case method discussions. Cases include startups and global high tech firms. Course themes: marketing toolkit, targeting markets and customers, product marketing and management, partners and distribution, sales and negotiation, and outbound marketing. Team-based take-home final exam. Limited enrollment.
3-4 units, Win (Kosnik, T; Novitsky, D; Ramfelt, L; Smith, L), Spr (Kosnik, T; Novitsky, D; Ramfelt, L; Smith, L)

MS&E 273. Technology Venture Formation
Open to graduate students interested in high-technology entrepreneurship. Key components of starting a venture-scale high-tech business: opportunity assessment, market sizing, go to market and distribution strategy, R&D and ops plans, venture capital, legal considerations, and team building. Teaching team includes serial entrepreneurs and venture capitalists. Student teams write and present a business plan to top tier venture capitalists. Enrollment limited. Recommended: MS&E 270, 271, or equivalents.
3-4 units, Aut (Lyons, M; MacLean, A)

MS&E 274. Dynamic Entrepreneurial Strategy
Primarily for graduate students. How entrepreneurial strategy focuses on creating structural change or responding to change induced externally. Grabber-holder dynamics as an analytical framework for developing entrepreneurial strategy to increase success in creating and shaping the diffusion of new technology or product innovation dynamics. Topics: First mover versus follower advantage in an emerging market; latecomer advantage and strategy in a mature market; strategy to break through stagnation; and strategy to turn danger into opportunity. Modeling, case studies, and term project.
3 units, Win (Tse, E)

MS&E 276. Entrepreneurial Management and Finance
For graduate students only with a preference for engineering and science majors. Emphasis on managing high-growth ventures, especially those based on technology products and services. Students develop a set of skills and approaches to becoming effective entrepreneurial managers. Topics include turning opportunities into reality, raising capital and financial management, venture operations and organizational administration, handling growth and adversity. Limited enrollment. Prerequisites: MS&E 140 and ENGR 60, or equivalents.
3 units, Spr (Byers, T; Lin, P)

MS&E 277. Creativity and Innovation
Factors that promote and inhibit creativity of individuals, teams, and organizations. Creativity tools, assessment metrics, and exercises; workshops, field trips, and case studies. Each student completes an individual creativity portfolio and participates in a long-term team project. Enrollment limited to 32. See http://creativity.stanford.edu.
4 units, Spr (Seelig, T)

MS&E 280. Organizational Behavior: Evidence in Action
Organization theory; concepts and functions of management; behavior of the individual, work group, and organization. Emphasis is on cases and related discussion. Enrollment limited; priority to MS&E students.

3-4 units, Win (Siino, R)

MS&E 282. Innovation and Implementation in Complex Organizations
The difficulty of moving new ideas through large organizations. Executives from large companies describe cases; student teams analyze the cases and provide recommendations. Final project. Enrollment limited to 12. Prerequisites: master¿s standing and consent of instructors.

3 units, not given this year

MS&E 287. Treating Business Practices as Prototypes
Multidisciplinary. Students work in teams to apply the design process to practices such as talent management, organizational design, or communication with external stakeholders in organizations that may include a software firm, a professional services firm, and an airline, and treat the targeted practices as prototypes. Experience in collaboration and design. Limited enrollment.

3-4 units, not given this year

MS&E 288. Creating Infectious Action
Offered by the d.school. Teams of master's students from disciplines including engineering, design, business, behavioral sciences, and education attempt to spread positive behavior through projects that include spreading the adoption of the Firefox web browser, applying methods from hip hop to fuel the spread of fads, and spreading financially responsible individual behavior. Industry experts and academics provide guidance.

3-4 units, not given this year

MS&E 289. Designing for Sustainable Abundance
Hands-on, team-based, multidisciplinary class, tackles design challenges such as how to expand the use of bicycles for short trips, attempting to develop solutions that positively impact environmental and economic sustainability as well as physical and emotional health and wellbeing. Close interaction with the teaching team, support from project sponsors, and the varied perspectives of guest speakers, including Steve Bishop of IDEO, Adam Lowry of Method and Andrew Ruben of Walmart.

3-4 units, Spr (Dunn, D; Waisberg, N)

MS&E 292. Health Policy Modeling
Primarily for master's students; also open to undergraduates and doctoral students. The application of mathematical, statistical, economic, and systems models to problems in health policy. Areas include: disease screening, prevention, and treatment; assessment of new technologies; bioterrorism response; and drug control policies.

3 units, Win (Brandeau, M)

MS&E 293. Technology and National Security
(Same as MS&E 193, MS&E 193W) The interaction of technology and national security policy from the perspective of history to implications for the new security imperative, homeland defense. Key technologies in nuclear and biological weapons, military platforms, and intelligence gathering. Policy issues from the point of view of U.S. and other nations. The impact of terrorist threat. Guest lecturers include key participants in the development of technology and/or policy. Students seeking to fulfill the WIM requirement should register for 193W.

3 units, Aut (Hecker, S; Perry, W)

MS&E 294. Climate Policy Analysis
Design and application of formal analytical methods in climate policy development. Issues include instrument design, technology development, resource management, multiparty negotiation, and dealing with complexity and uncertainty. Links among art, theory, and practice. Emphasis is on integrated use of modeling tools from diverse methodologies and requirements for policy making application. Recommended: background in economics, optimization, and decision analysis.

3 units, alternate years, not given this year

MS&E 295. Energy Policy Analysis
Design and application of formal analytical methods for policy and technology assessments of energy efficiency and renewable energy options. Emphasis is on integrated use of modeling tools from diverse methodologies and requirements for policy and corporate strategy development. Recommended: background in economics, optimization, and decision analysis.

3 units, Win (Weyant, J), alternate years, not given next year

MS&E 296. Sustainable Mobility: Improving Energy Efficiency and Reducing CO2 Emissions from Transport
Issues of sustainable mobility, vehicles, fuels, air pollution, and CO2 emissions from transport. Primarily focused on the U.S. passenger transport system; some attention to freight transport, and to Europe and key developing countries. Tools of analysis primarily spreadsheets, but applications using econometrics encouraged for the class project. Problem sets; project.

3 units, Spr (Schipper, L)

MS&E 299. Voluntary Social Systems
Ethical theory, feasibility, and desirability of a social order in which coercion by individuals and government is minimized and people pursue ends on a voluntary basis. Topics: efficacy and ethics; use rights for property; contracts and torts; spontaneous order and free markets; crime and punishment based on restitution; guardian-ward theory for dealing with incompetents; the effects of state action-hypothesis of reverse results; applications to help the needy, armed intervention, victimless crimes, and environmental protection; transition strategies to a voluntary society.

1-3 units, Win (Howard, R)

MS&E 300. Ph.D. Qualifying Tutorial or Paper
Restricted to Ph.D. students assigned tutorials as part of the MS&E Ph.D. qualifying process. Enrollment optional.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MS&E 301. Dissertation Research
Prerequisite: doctoral candidacy.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MS&E 310. Linear Programming
Formulation of standard linear programming models. Theory of polyhedral convex sets, linear inequalities, alternative theorems, and duality. Variants of the simplex method and the state of art interior-point algorithms. Sensitivity analyses, economic interpretations, and primal-dual methods. Relaxations of harder optimization problems and recent convex conic linear programs. Applications include game equilibrium facility location. Prerequisite: MATH 113 or consent of instructor.

3 units, Win (Ye, Y)

MS&E 311. Optimization
Applications, theories, and algorithms for finite-dimensional linear and nonlinear optimization problems with continuous variables. Elements of convex analysis, first- and second-order optimality conditions, sensitivity and duality. Algorithms for unconstrained optimization, and linearly and nonlinearly constrained problems. Modern applications in communication, game theory, auction, and economics. Prerequisites: MATH 113, 115, or equivalent.

3 units, Win (Ye, Y)

MS&E 312. Advanced Methods in Numerical Optimization
(Same as CME 334) Topics include interior-point methods, relaxation methods for nonlinear discrete optimization, sequential quadratic programming methods, optimal control and decomposition methods. Topic chosen in first class; different topics for individuals or groups possible. Individual or team projects. May be repeated for credit.

3 units, Aut (Murray, W)

MS&E 313. Vector Space Optimization
Optimization theory from the unified framework of vector space theory: treating together problems of mathematical programming, calculus of variations, optimal control, estimation, and other optimization problems. Emphasis is on geometric interpretation. Duality theory. Topics: vector spaces including function spaces; Hilbert space and the projection theorem; dual spaces and the separating hyperplane theorem; linear operators and adjoints; optimization of functionals, including theory of necessary conditions in general spaces, and convex optimization theory; constrained optimization including Fenchel duality theory. Prerequisite: MATH 115.

3 units, Aut (Luenberger, D), alternate years, not given next year

MS&E 314. Linear and Conic Optimization with Applications
(Same as CME 336) Linear, semidefinite, conic, and convex nonlinear optimization problems as generalizations of classical linear programming. Algorithms include the interior-point, barrier function, and cutting plane methods. Related convex analysis, includ-

ing the separating hyperplane theorem, Farkas lemma, dual cones, optimality conditions, and conic inequalities. Complexity and/or computation efficiency analysis. Applications to combinatorial optimization, sensor network localization, support vector machine, and graph realization. Prerequisite: MS&E 211 or equivalent.

3 units, alternate years, not given this year

MS&E 315. Numerical Optimization

(Same as CME 304) Solution of nonlinear equations; unconstrained optimization; linear programming; quadratic programming; global optimization; general linearly and nonlinearly constrained optimization. Theory and algorithms to solve these problems. Prerequisite: background in analysis and numerical linear algebra.

3 units, Win (Murray, W)

MS&E 316. Discrete Mathematics and Algorithms

(Same as CME 305) Topics: enumeration such as Cayley's theorem and Prufer codes, SDR, flows and cuts (deterministic and randomized algorithms), probabilistic methods and random graphs, asymptotics (NP-hardness and approximation algorithms). Topics illustrated with EE, CS, and bioinformatics applications. Prerequisites: MATH 51 or 103 or equivalents.

3 units, Win (Saberi, A)

MS&E 318. Large-Scale Numerical Optimization

(Same as CME 338) The main algorithms and software for constrained optimization emphasizing the sparse-matrix methods needed for their implementation. Iterative methods for linear equations and least squares. The simplex method. Basic factorization and updates. Interior methods. The reduced-gradient method, augmented Lagrangian methods, and SQP methods. Prerequisites: Basic numerical linear algebra, including LU, QR, and SVD factorizations, and an interest in MATLAB, sparse-matrix methods, and gradient-based algorithms for constrained optimization. Recommended: MS&E 310, 311, 312, 314, or 315; CME 108, 200, 302, 304, 334, or 335.

3 units, Spr (Saunders, M)

MS&E 319. Approximation Algorithms

Combinatorial and mathematical programming techniques to derive approximation algorithms for NP-hard optimization problems. Possible topics include: greedy algorithms for vertex/set cover; rounding LP relaxations of integer programs; primal-dual algorithms; semidefinite relaxations. May be repeated for credit. Prerequisites: 112 or CS 161.

3 units, Spr (Saberi, A), alternate years, not given next year

MS&E 321. Stochastic Systems

Topics in stochastic processes, emphasizing applications. Markov chains in discrete and continuous time; Markov processes in general state space; Lyapunov functions; regenerative process theory; renewal theory; martingales, Brownian motion, and diffusion processes. Application to queueing theory, storage theory, reliability, and finance. Prerequisites: 221 or STATS 217; MATH 113, 115. (Glynn)

3 units, Spr (Glynn, P)

MS&E 322. Stochastic Calculus and Control

Ito integral, existence and uniqueness of solutions of stochastic differential equations (SDEs), diffusion approximations, numerical solutions of SDEs, controlled diffusions and the Hamilton-Jacobi-Bellman equation, and statistical inference of SDEs. Applications to finance and queueing theory. Prerequisites: 221 or STATS 217: MATH 113, 115.

3 units, not given this year

MS&E 323. Stochastic Simulation

Emphasis is on the theoretical foundations of simulation methodology. Generation of uniform and non-uniform random variables. Discrete-event simulation and generalized semi-Markov processes. Output analysis (autoregressive, regenerative, spectral, and stationary times series methods). Variance reduction techniques (antithetic variables, common random numbers, control variables, discrete-time, conversion, importance sampling). Stochastic optimization (likelihood ratio method, perturbation analysis, stochastic approximation). Simulation in a parallel environment. Prerequisite: MS&E 221 or equivalent.

3 units, not given this year

MS&E 325. Topics in Stochastic Optimization

Algorithms for optimization problems with inputs from a known probability distribution or a known class of probability distributions. Topics: Markov decision processes; optimization with sparse priors; multi-armed bandit problems and the Gittins' index; regret bounds for multi-armed bandit problems; stochastic knapsack and the adaptivity gap; budgeted learning; adversarial queueing theory; stochastic scheduling and routing; stochastic inventory problems; multi-stage and multi-objective stochastic optimization. Prerequisites: MS&E 221 or equivalent; and MS&E 212 or CS 261 or equivalent.

3 units, alternate years, not given this year

MS&E 332. Security and Risk in Computer Networks

Risk management of large scale computing and networking systems with respect to security, data integrity, performance collapse, and service disruption. Qualitative and analytical basis for assessment, modeling, control, and mitigation of network risks. Stochastic risk models. Contact process. Random fields on networks. Virus and worm propagation dynamics and containment. Denial of service attacks. Intruder detection technologies. Distributed network attacks and countermeasures. Disaster recovery networks. Network protection services and resource placement. Autonomic self-defending networks. Economics of risk management. Emphasis is on analytics and quantitative methods.

3 units, not given this year

MS&E 334. Computation of Equilibria

Topics: Sperner's lemma, fixed point theorems, and existence of Nash and Market equilibria. Alternate convex and linear completarity program formulations. Combinatorial algorithms. Complexity classes related to fixed points theorems and reductions to equilibrium problems. Similar solutions in cooperative game theory and fair division.

3 units, not given this year

MS&E 335. Queueing and Scheduling in Processing Networks

Advanced stochastic modeling and control of systems involving queueing and scheduling operations. Stability analysis of queueing systems. Key results on single queues and queueing networks. Controlled queueing systems. Dynamic routing and scheduling in processing networks. Applications to modeling, analysis and performance engineering of computing systems, communication networks, flexible manufacturing, and service systems. Prerequisite: 221 or equivalent.

3 units, Aut (Bambos, N)

MS&E 336. Topics in Game Theory with Engineering Applications

Seminar. Recent research applying economic methods to engineering problems. Recent topics include: incentives in networked systems; mechanism design in engineered systems; and dynamics and learning in games. Prerequisites: mathematics at the level of MATH 115; game theory at the level of 246 or ECON 203; probability at the level of 220; optimization at the level of 211. May be repeated for credit.

3 units, Spr (Johari, R)

MS&E 337. Information Networks

(Same as CME 337) Network structure of the Internet and the web. Modeling, scale-free graphs, small-world phenomenon. Algorithmic implications in searching and inter-domain routing; the effect of structure on performance. Game theoretic issues, routing games, and network creation games. Security issues, vulnerability, and robustness. Prerequisite: basic probability and graph theory.

3 units, alternate years, not given this year

MS&E 339. Approximate Dynamic Programming

Approximation algorithms for large-scale dynamic programming. Real-time dynamic programming and reinforcement learning algorithms. Generalizations of value iteration, policy iteration, and linear programming approaches. Recent research topics. Prerequisite: 251, 351, CS 221, CS 228, or CS 229.

3 units, not given this year

MS&E 341. Advanced Economic Analysis

Builds on 241 concepts. Market structure and industrial organization (oligopoly, strategic behavior of firms, game theoretic models); economics of uncertainty; general equilibrium theory and economic efficiency (formulation, Walras' Law, existence, uniqueness, duality between efficiency and general equilibrium; trade); intertemporal equilibrium and asset markets; public goods, externalities. Background for advanced economics. Prerequisite: 241.

3 units, alternate years, not given this year

MS&E 342. Advanced Investment Science
Topics: forwards and futures contracts, continuous and discrete time models of stock price behavior, geometric Brownian motion, Ito's lemma, basic options theory, Black-Scholes equation, advanced options techniques, models and applications of stochastic interest rate processes, and optimal portfolio growth. Computational issues and general theory. Teams work on independent projects. Prerequisite: 242.

3 units, Win (Luenberger, D)

MS&E 343. Optimal Control Theory with Applications in Economics
Classical and nonclassical optimal control applications in economics. Necessary and sufficient optimality conditions: maximum principle and HJB equation. Applications: single-person decision problems such as dynamic pricing, investment, marketing, and harvesting of renewable resources; multi-agent games such as dynamic oligopolies with open and closed-loop equilibria, capital accumulation, and dynamic pricing; and design of economic mechanisms such as screening contracts, regulation, and auctions. Prerequisites: course in dynamic systems and multivariable calculus.

3 units, Win (Weber, T), alternate years, not given next year

MS&E 344. Applied Information Economics
The strategic acquisition, pricing, transfer, and use of information. Theoretical findings applied to real-world settings. Topics: optimal risk bearing, adverse selection, signaling, screening, nonlinear and state-contingent pricing, design of contests, incentives and organizations, strategic information transmission, long-run relationships, negative information value, research and invention, leakage and espionage, imperfect competition, information sharing, search and advertising, learning, and real-option exercise games. Prerequisites: 211, 220, 241. Recommended: 341.

3 units, not given this year

MS&E 345. Advanced Topics in Financial Engineering
Derivative pricing theory from an engineering perspective. Underlying principles that apply to all derivative securities; general frameworks to model and price derivative securities on equities, interest rates, and credit. Topics in hedging and risk management. Prerequisites: derivative pricing and stochastic differential equations; and 220, 221, 242, 342, or consent of instructor. Recommended: Matlab. (Primbs)

3 units, Aut (Primbs, J)

MS&E 347. Credit Risk: Modeling and Management
Credit risk modeling, valuation, and hedging emphasizing underlying economic, probabilistic, and statistical concepts. Point processes and their compensators. Structural, incomplete information and reduced form approaches. Single name products: corporate bonds, equity, equity options, credit and equity default swaps, forwards and swaptions. Multiname modeling: index and tranche swaps and options, collateralized debt obligations. Implementation, calibration and testing of models. Industry and market practice. Data and implementation driven group projects that focus on problems in the financial industry. Prerequisites: stochastic processes at the level of MSE 321, 322 or equivalent, and financial engineering at the level of MSE 342, MATH 180, MATH 240, FINANCE 622 or equivalent

3 units, Spr (Giesecke, K)

MS&E 348. Optimization of Uncertainty and Applications in Finance
How to make optimal decisions in the presence of uncertainty, solution techniques for large-scale systems resulting from decision problems under uncertainty, and applications in finance. Decision trees, utility, two-stage and multi-stage decision problems, approaches to stochastic programming, model formulation; large-scale systems, Benders and Dantzig-Wolfe decomposition, Monte Carlo sampling and variance reduction techniques, risk management, portfolio optimization, asset-liability management, mortgage finance. Projects involving the practical application of optimization under uncertainty to financial planning.

3 units, Win (Infanger, G)

MS&E 349. Capital Deployment
Methods for efficiently allocating capital among alternatives, constructing business plans, determining the value of risky projects, and creating alternatives that enhance value. Prerequisites: 242, 342.

3 units, alternate years, not given this year

MS&E 351. Dynamic Programming and Stochastic Control
Markov population decision chains in discrete and continuous time. Risk posture. Present value and Cesaro overtaking optimality. Optimal stopping. Successive approximation, policy improvement, and linear programming methods. Team decisions and stochastic programs; quadratic costs and certainty equivalents. Maximum principle. Controlled diffusions. Examples from inventory, overbooking, options, investment, queues, reliability, quality, capacity, transportation. MATLAB. Prerequisites: MATH 113, 115; Markov chains; linear programming.

3 units, Spr (Van Roy, B)

MS&E 352. Decision Analysis II: Professional Decision Analysis
How to organize the decision conversation, the role of the decision analysis cycle and the model sequence, assessing the quality of decisions, framing decisions, the decision hierarchy, strategy tables for alternative development, creating spare and effective decision diagrams, biases in assessment, knowledge maps, uncertainty about probability. Sensitivity analysis, approximations, value of revelation, joint information, options, flexibility, bidding, assessing and using corporate risk attitude, risk sharing and scaling, and decisions involving health and safety. See 353 for continuation. Prerequisite: 252.

3-4 units, Win (Howard, R)

MS&E 353. Decision Analysis III: Frontiers of Decision Analysis
The concept of decision composite; probabilistic insurance and other challenges to the normative approach; the relationship of decision analysis to classical inference and data analysis procedures; the likelihood and exchangeability principles; inference, decision, and experimentation using conjugate distributions; developing a risk attitude based on general properties; alternative decision aiding practices such as analytic hierarchy and fuzzy approaches. Student presentations on current research. Goal is to prepare doctoral students for research. Prerequisite: 352.

3 units, Spr (Howard, R)

MS&E 355. Influence Diagrams and Probabilistics Networks
Network representations for reasoning under uncertainty: influence diagrams, belief networks, and Markov networks. Structuring and assessment of decision problems under uncertainty. Learning from evidence. Conditional independence and requisite information. Node reductions. Belief propagation and revision. Simulation. Linear-quadratic-Gaussian decision models and Kalman filters. Dynamic processes. Bayesian meta-analysis. Prerequisites: 220, 252, or equivalents, or consent of instructor.

3 units, alternate years, not given this year

MS&E 361. Supply Chain Optimization
Characterization and computation of optimal and nearly optimal multiperiod supply chain policies with known or uncertain demands using dynamic, lattice, network, and convex and concave programming. Cooperation: sharing benefits of alliances. Competition. Leontief-substitution and network-flow models. Lattice programming: comparison of optima; existence and comparison of equilibria of non-cooperative games. Stochastic comparison. Invariant properties of optimal flows: graphical optimization of supply chains. Optimality of myopic policies. Prerequisites: MATH 115, optimization theory, probability.

3 units, not given this year

MS&E 362. Advanced Models in Production and Operations
The design and operation of production-inventory systems. Topics include production scheduling, capacity planning, sequencing, assembly-line balancing, dynamic scheduling, and multigoal optimizations. Readings primarily from journal articles. Prerequisite: 260.

3 units, Aut (Carlson, R), alternate years, not given next year

MS&E 364. Multi-echelon Inventory Models
Theoretical treatment of control problems arising in inventory management, production, and distribution systems. Inventory control for single and multi-location systems. Emphasis is on operat-

ing characteristics, performance measures, and optimal operating and control policies. Dynamic programming and applications in inventory control. Prerequisite: STATS 217 or equivalent, linear programming.

3 units, Spr (Hausman, W), alternate years, not given next year

MS&E 365. Advanced Models in Operations Management
Primarily for doctoral students. Content varies. Topics based on recent literature and working papers. May be repeated for credit. Prerequisite: MS&E 246.

3 units, not given this year

MS&E 371. Innovation and Strategic Change
Doctoral research seminar, limited to Ph.D. students. Current research on innovation strategy. Topics: scientific discovery, innovation search, organizational learning, evolutionary approaches, and incremental and radical change. Topics change yearly. Recommended: course in statistics or research methods.

2-3 units, alternate years, not given this year

MS&E 372. Entrepreneurship Doctoral Research Seminar
Classic and current research on entrepreneurship. Limited enrollment, restricted to PhD students. Prerequisites: SOC 363 or equivalent, and permission of instructor.

3 units, Win (Eesley, C), alternate years, not given next year

MS&E 374. Dynamic Corporate Strategy
Restricted to Ph.D. students. Research on the creation and shaping of disruptive industry dynamics and how companies can formulate and implement strategies to excel in such changing environments. Dynamic system model approach; case studies. Prerequisites: 201 or equivalent, 274.

3 units, Win (Tse, E), alternate years, not given next year

MS&E 376. Strategy Doctoral Research Seminar
Classic and current research on business and corporate strategy. Limited enrollment, restricted to PhD students. Prerequisites: SOC 363 or equivalent, and permission of instructor.

3 units, Aut (Eisenhardt, K)

MS&E 380. Doctoral Research Seminar in Organizations
Limited to Ph.D. students. Topics from current published literature and working papers. Content varies. Prerequisite: consent of instructor.

3 units, not given this year

MS&E 381A. Doctoral Research Seminar in Work, Technology, and Organization: Theoretical Underpinnings
Enrollment limited to Ph.D. students. Topics from current published literature and working papers. Content varies. Prerequisite: consent of instructor.

2-3 units, not given this year

MS&E 381B. Doctoral Research Seminar in Work, Technology, and Organization: The Study of Work
Enrollment limited to Ph.D. students. Topics from current published literature and working papers. Prerequisite: consent of instructor.

2-3 units, not given this year

MS&E 381C. Doctoral Research Seminar in Work, Technology, and Organization: The Study of Technology
Enrollment limited to Ph.D. students. Topics from current literature and working papers. Prerequisite: consent of instructor.

2-3 units, not given this year

MS&E 383. Doctoral Seminar on Ethnographic Research
For graduate students; upper-level undergraduates with consent of instructor. Ethnosemantic interviewing and participant observation. Techniques for taking, managing, and analyzing field notes and other qualitative data. 15 hours per week outside class collecting and analyzing own data. Methods texts and ethnographies offer examples of how to analyze and communicate ethnographic data. Prerequisite: consent of instructor. (Barley)

3 units, Win (Barley, S)

MS&E 384. Groups and Teams
Research on groups and teams in organizations from the perspective of organizational behavior and social psychology. Topics include group effectiveness, norms, group composition, diversity, conflict, group dynamics, temporal issues in groups, geographically distributed teams, and intergroup relations.

3 units, not given this year

MS&E 389. Seminar on Organizational Theory
(Same as EDUC 375A, SOC 363A) The social science literature on organizations assessed through consideration of the major theoretical traditions and lines of research predominant in the field.

5 units, Aut (Powell, W)

MS&E 390. Doctoral Research Seminar in Health Systems Modeling
Restricted to Ph.D. students, or by consent of instructor. Doctoral research seminar covering current topics in health policy, health systems modeling, and health innovation. May be repeated for credit.

1-3 units, Aut (Brandeau, M), Win (Brandeau, M), Spr (Brandeau, M)

MS&E 406. Mathematical Modeling Seminar
Mathematical modeling issues in participants' current research. Topics such as modularity, variable endogenization, parameter estimation, and orders of effect. Students share their models for discussion. Limited enrollment. Recommended: 206.

1 unit, alternate years, not given this year

MS&E 408. Directed Reading and Research
Directed study and research on a subject of mutual interest to student and faculty member. Prerequisite: faculty sponsor. (Staff)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MS&E 409. Operations Research Colloquium
Speakers drawn from a wide variety of backgrounds across topics broadly related to operations research. Graduate Students Only.

1 unit, Aut (Johari, R), Win (Johari, R), Spr (Johari, R)

MS&E 444. Investment Practice
Theory of real options, soft derivatives, and related ideas. Problems from financial engineering and risk management. Examples from industry. Small group projects formulate and design solutions to actual industry problems. Enrollment limited to 30.

3-4 units, Spr (Giesecke, K)

MS&E 445. Projects in Wealth Management
Recent theory and standard practice in portfolio design for institutions, individuals, and funds. Student projects and case studies derived from the financial industry.

3-4 units, Spr (Woehrmann, P)

MS&E 446. Policy and Economics Research Roundtable (PERR)
Research in progress or contemplated in policy and economics areas. Emphasis depends on research interests of participants, but is likely to include energy, environment, transportation, or technology policy and analysis. May be repeated for credit.

1 unit, Aut (Sweeney, J), Win (Sweeney, J), Spr (Sweeney, J)

MS&E 450. Lessons in Decision Making
Entrepreneurs, senior management consultants, and executives from Fortune 500 companies share real-world stories and insights from their experience in decision making.

1 unit, Spr (Howard, R)

MS&E 452. Decision Analysis Projects: Helping Real Leaders Make Real Decisions
A virtual consulting firm directed by professional decision analysts who offer advice and guidance as student teams help local organizations make a current business strategy or public policy decision. Projects for businesses, governments, or other institutions typically include start-up venture funding, R&D portfolio planning, new product or market entry, acquisition or partnering, cost reduction, program design, or regulatory policy decisions. Emphasis is on developing clarity of action and delivering insights to clients. Satisfies MS&E project course requirement. Prerequiste: 252. Recommended: 352.

3 units, Spr (Robinson, B)

MS&E 453. Decision Analysis Applications: Business Strategy and Public Policy
How decision analysis is used to make decisions in organizations. Who applies these methods to what decisions, and when, where, and why. Case studies: entrepreneurial ventures, consulting projects, litigation, chip manufacturing, consumer electronics, Corvette design, blockbuster movies, R&D priorities, real estate portfolios, HIV/HCV drug trial design, cancer diagnostics, Mars contamination, oil E&P, economics and energy pricing, nuclear waste, climate change, marine resources, bioterrorism preparedness, nu-

clear weapons control, effective interactions, and ethics. Corequisite: MS&E 252 recommended.
2-3 units, Aut (Robinson, B)

MS&E 454. Decision Analysis Seminar
Current research and related topics presented by doctoral students and invited speakers. May be repeated for credit. Prerequisite: 252.
1 unit, Aut (Howard, R), Win (Howard, R), Spr (Howard, R)

MS&E 464. Global Project Coordination
Students engage in projects that are global in nature, and related to the planning, design, and operations of supply chains, marketing, manufacturing, and product development. Project teams from Stanford and an overseas university work on common projects using telephones, faxes, email, Internet, video conferences, and face-to-face meetings. As part of the project, students travel to Hong Kong. Applications due in November. See http://www.stanford.edu/class/msande464/.
3-4 units, Win (Chiu, S)

MS&E 472. Entrepreneurial Thought Leaders' Seminar
Entrepreneurial leaders share lessons from real-world experiences across entrepreneurial settings. ETL speakers include entrepreneurs, leaders from global technology companies, venture capitalists, and best-selling authors. Half-hour talks followed by half hour of class interaction. Required web discussion. May be repeated for credit.
1 unit, Aut (Byers, T; Seelig, T; Kosnik, T), Win (Byers, T; Seelig, T; Kosnik, T), Spr (Byers, T; Seelig, T; Kosnik, T)

MS&E 485A. Introduction to Crosscultural Design
Preparation for 485B. Workshop and initial project work in teams.
1-2 units, not given this year

MS&E 485B. Crosscultural Design
The design of products and services for a global world. How to design products or services to be used across cultures; how to design for a culture other than one's own; and how the process of design is approached in different cultures. Prerequisite: 485A.
3-4 units, not given this year

MS&E 491. Clean Energy Developement
Project course for advanced undergraduates and graduate students. Low-depleting and low-polluting energy, such as solar, wind and biomass. Clean energy and entrepreneurship. Student teams conceive, prepare, and present a business plan for a real or realistic clean energy development (an individual project or an entire company). Presentations, discussions, and guest lectures.
3 units, Spr (Borison, A; Hamm, G)

MS&E 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MASTER OF LIBERAL ARTS (MLA) COURSES

MLA 9. European Thought and Culture in the 19th Century
Major European thinkers and writers and their intellectual significance from the Enlightenment to modernism. Works by Voltaire, Austen, Wordsworth, Marx, Nietzsche, and Freud.
4 units, not given this year

MLA 100E. MLA Natural Science Elective
1-2 units, Aut (Paulson, L), Win (Paulson, L), Spr (Paulson, L), Sum (Paulson, L)

MLA 101A. Foundations I
Required of and limited to first-year MLA students. First of three quarter foundation course. Introduction to the main political, philosophical, literary, and artistic trends that inform the liberal arts vision of the world and that underlie the MLA curriculum.
4 units, Aut (Steidle, E)

MLA 101B. Foundations II: the Middle Ages and Renaissance.
Required of and limited to first-year MLA students. Second of three quarter foundation course. Introduction to the main political, philosophical, literary, and artistic trends that inform the liberal arts vision of the world and that underlie the MLA curriculum.
4 units, Win (Steidle, E)

MLA 101C. Foundations III: the Enlightenment through Modernism
Required of and limited to first-year MLA students. First of three quarter foundation course. Introduction to the main political, philosophical, literary, and artistic trends that inform the liberal arts vision of the world and that underlie the MLA curriculum.
4 units, Spr (Junkerman, C)

MLA 102. An Introduction to Interdisciplinary Graduate Study
Limited to and required of second-year MLA students. Historical, literary, artistic, medical, and theological issues are covered. Focus is on skills and information needed to pursue MLA graduate work at Stanford: writing a critical, argumentative graduate paper; conducting library research; expectations of seminar participation. Readings include Homer, Thucydides, Camus, Mann, Kushner, and sacred, scientific, and historical writings.
4 units, Aut (Paulson, L)

MLA 262. The Economics of Life and Death
4 units, Sum (Bhattacharya, J)

MLA 278. James Joyce's Ulysses
4 units, Win (Staff)

MLA 279. When Worlds Collide: The Trial of Galileo
4 units, Win (Staff)

MLA 280. British and American Fiction in the 19th and early 20th Century
4 units, Win (Staff)

MLA 300. Oxford Summer Programme
2-4 units, Sum (Paulson, L)

MLA 398. MLA Thesis in Progress
Group meetings provide peer critiques, motivations, and advice under the direction of the Associate Dean.
0 units, Aut (Paulson, L), Win (Paulson, L), Spr (Paulson, L), Sum (Paulson, L)

MLA 399. MLA Thesis Final Quarter
Students write a 75-100 page thesis that evolves out of work they pursued during their MLA studies.
6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Paulson, L)

MATERIALS SCIENCE AND ENGINEERING (MATSCI) COURSES

UNDERGRADUATE COURSES IN MATERIALS SCIENCE AND ENGINEERING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

MATSCI 81N. Bioengineering Materials to Heal the Body
(Stanford Introductory Seminar) Preference to freshmen. How scientists and engineers are designing new materials for surgeon to use in replacing body parts such as heart tissue or the spinal cord. How cells, in the body and transplanted stem cells, communicate with implanted materials. Real-world examples of materials developed for tissue engineering and regenerative medicine therapies. Students identify a clinically important disease or injury that requires a better material, research approaches to the problem, and debate possible engineering solutions. GER:DB-EngrAppSci
3 units, Win (Heilshorn, S)

MATSCI 100. Undergraduate Independent Study
Independent study in materials science under supervision of a faculty member.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MATSCI 150. Undergraduate Research
Participation in a research project.
3-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MATSCI 151. Microstructure and Mechanical Properties
(Same as MATSCI 251) Primarily for students without a materials background. Mechanical properties and their dependence on microstructure in a range of engineering materials. Elementary de-

formation and fracture concepts, strengthening and toughening strategies in metals and ceramics. Topics: dislocation theory, mechanisms of hardening and toughening, fracture, fatigue, and high-temperature creep. Prerequisite: ENGR 50 or equivalent. GER:DB-EngrAppSci

3-4 units, Aut (Staff)

MATSCI 152. Electronic Materials Engineering

Materials science and engineering for electronic device applications. Kinetic molecular theory and thermally activated processes; band structure and electrical conductivity of metals and semiconductors; intrinsic and extrinsic semiconductors; diffusion; elementary p-n junction theory; operating principles of metal-oxide-semiconductor field effect transistors. Semiconductor processing including crystal growth, oxidation kinetics, ion implantation, thin film deposition, etching, and photolithography. Prerequisite: ENGR 50 or equivalent. GER:DB-EngrAppSci

4 units, Spr (Dionne, J)

MATSCI 153. Nanostructure and Characterization

The structure of materials at the nanoscale is in most cases the same crystalline form as the natural phase. Structures of materials such as semiconductors, ceramics, metals, and nanotubes; classification of these materials according to the principles of crystallography. Primary methods of structural characterization, X-ray diffraction, and electron microscopy; their applications to study such nanostructures. GER:DB-EngrAppSci

4 units, Win (Sinclair, R; Earhart, C)

MATSCI 154. Solid State Thermodynamics

The principles of thermodynamics and relationships between thermodynamic variables. Equilibrium in thermodynamic systems. Thermodynamics of multicomponent systems. GER:DB-EngrAppSci

4 units, Aut (Barnett, D)

MATSCI 155. Nanomaterials Synthesis

The science of synthesis of nanometer scale materials. Examples including solution phase synthesis of nanoparticles, the vapor-liquid-solid approach to growing nanowires, formation of mesoporous materials from block-copolymer solutions, and formation of photonic crystals. Relationship of the synthesis phenomena to the materials science driving forces and kinetic mechanisms. Materials science concepts including capillarity, Gibbs free energy, phase diagrams, and driving forces. GER:DB-EngrAppSci

4 units, Spr (Clemens, B)

MATSCI 156. Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution

(Same as MATSCI 256) Operating principles and applications of emerging technological solutions to the energy demands of the world. The scale of global energy usage and requirements for possible solutions. Basic physics and chemistry of solar cells, fuel cells, and batteries. Performance issues, including economics, from the ideal device to the installed system. The promise of materials research for providing next generation solutions. GER:DB-EngrAppSci

3-4 units, Aut (Clemens, B)

MATSCI 157. Quantum Mechanics of Nanoscale Materials

Introduction to quantum mechanics and its application to the properties of materials. The Schrödinger equation, uncertainty principle, bound states and periodic potentials, angular momentum, quantum statistics, and perturbation theory. Applications to electronic band structure in semiconductors, metals, and nanostructures; vibrational properties of solids; light/matter interaction and lasers; bonding; magnetic materials; nanotechnology. Prerequisites: working knowledge of calculus and high school physics. GER:DB-EngrAppSci

4 units, Win (Lindenberg, A)

MATSCI 159Q. Japanese Companies and Japanese Society

(Stanford Introductory Seminar) (Same as ENGR 159Q) Preference to sophomores. The structure of a Japanese company from the point of view of Japanese society. Visiting researchers from Japanese companies give presentations on their research enterprise. The Japanese research ethic. The home campus equivalent of a Kyoto SCTI course. GER:DB-SocSci

3 units, Spr (Sinclair, R)

MATSCI 160. Nanomaterials Laboratory

Preference to sophomores and juniors. Hands-on approach to synthesis and characterization of nanoscale materials. How to make, pattern, and analyze the latest nanotech materials, including nanoparticles, nanowires, and self-assembled monolayers. Techniques such as soft lithography, self-assembly, and surface functionalization. The VLS mechanism of nanowire growth, nanoparticle size control, self-assembly mechanisms, and surface energy considerations. Laboratory projects. Enrollment limited to 24. GER:DB-EngrAppSci

4 units, Spr (Melosh, N)

MATSCI 161. Nanocharacterization Laboratory

(Same as MATSCI 171) The development of standard lab procedures for materials scientists emphasizing microscopy, metallography, and technical writing. Techniques: optical, scanning-electron, atomic-force microscopy; and metallographic specimen preparation. The relationships among microscopic observation, material properties, and processing. Prerequisite: ENGR 50 or equivalent. GER:DB-EngrAppSci, WIM

3-4 units, Spr (McGehee, M)

MATSCI 162. X-Ray Diffraction Laboratory

(Same as MATSCI 172) Experimental x-ray diffraction techniques for microstructural analysis of materials, emphasizing powder and single-crystal techniques. Diffraction from epitaxial and polycrystalline thin films, multilayers, and amorphorous materials using medium and high resolution configurations. Determination of phase purity, crystallinity, relaxation, stress, and texture in the materials. Advanced experimental x-ray diffraction techniques: reciprocal lattice mapping, reflectivity, and grazing incidence diffraction. Enrollment limited to 20. GER:DB-EngrAppSci

3-4 units, Win (Vailionis, A)

MATSCI 163. Mechanical Behavior Laboratory

(Same as MATSCI 173) Experimental techniques for the study of the mechanical behavior of engineering materials in bulk and thin film form, including tension testing, nanoindentation, and wafer curvature stress analysis. Metallic and polymeric systems. Prerequisite: ENGR 50. GER:DB-EngrAppSci

3-4 units, Aut (Earhart, C)

MATSCI 164. Electronic and Photonic Materials and Devices Laboratory

Lab course. Current electronic and photonic materials and devices. Device physics and micro-fabrication techniques. Students design, fabricate, and perform physical characterization on the devices they have fabricated. Established techniques and materials such as photolithography, metal evaporation, and Si technology; and novel ones such as soft lithography and organic semiconductors. Prerequisite: 152 or 199 or consent of instructor. GER:DB-EngrAppSci, WIM

4 units, Aut (Salleo, A)

MATSCI 190. Organic and Biological Materials

(Same as MATSCI 210) Unique physical and chemical properties of organic materials and their uses.The relationship between structure and physical properties, and techniques to determine chemical structure and molecular ordering. Examples include liquid crystals, dendrimers, carbon nanotubes, hydrogels, and biopolymers such as lipids, protein, and DNA. Prerequisite: Thermodynamics and ENGR 50 or equivalent. GER:DB-EngrAppSci

3-4 units, Spr (Heilshorn, S)

MATSCI 192. Materials Chemistry

(Same as MATSCI 202) Chemical principles of materials: atomic and molecular bonding; acid and base chemistry; redox and electrochemistry; colloidal and surface chemistry; materials synthesis; and nanoscale chemistry. GER:DB-EngrAppSci

3-4 units, Aut (Dionne, J)

MATSCI 193. Atomic Arrangements in Solids

(Same as MATSCI 203) Atomic arrangements in perfect and imperfect solids, especially important metals, ceramics, and semiconductors. Elements of formal crystallography, including development of point groups and space groups. GER:DB-EngrAppSci

3-4 units, Aut (Reed, E)

MATSCI 194. Thermodynamics and Phase Equilibria

(Same as MATSCI 204) The principles of heterogeneous equilibria and their application to phase diagrams. Thermodynamics of solutions; chemical reactions; non-stoichiometry in compounds; first order phase transitions and metastability; thermodynamics of surfaces, elastic solids, dielectrics, and magnetic solids. GER:DB-EngrAppSci

3-4 units, Win (Salleo, A)

MATSCI 195. Waves and Diffraction in Solids
(Same as MATSCI 205) The elementary principals of x-ray, vibrational, and electron waves in solids. Basic wave behavior including Fourier analysis, interference, diffraction, and polarization. Examples of wave systems, including electromagnetic waves from Maxwell's equations. Diffracted intensity in reciprocal space and experimental techniques such as electron and x-ray diffraction. Lattice vibrations in solids, including vibrational modes, dispersion relationship, density of states, and thermal properties. Free electron model. Basic quantum mechanics and statistical mechanics including Fermi-Dirac and Bose-Einstein statistics. Prerequisite: 193/203 or consent of instructor. GER:DB-EngrAppSci

3-4 units, Win (Clemens, B)

MATSCI 196. Imperfections in Solids
(Same as MATSCI 206) Atomic and molecular scale defects and their importance to the physical and mechanical properties of bulk and nanoscale materials. Point defects and dislocations in crystals. Imperfections in amorphous solids. Structure and properties of interfaces. Prerequisite: 193/203. GER:DB-EngrAppSci

3-4 units, Win (Dauskardt, R; Oliver, M)

MATSCI 197. Rate Processes in Materials
(Same as MATSCI 207) Diffusion and phase transformations in solids. Diffusion topics: Fick's laws, atomic theory of diffusion, and diffusion in alloys. Phase transformation topics: nucleation, growth, diffusional transformations, spinodal decomposition, and interface phenomena. Material builds on the mathematical, thermodynamic, and statistical mechanical foundations in the prerequisites. Prerequisites: 194/204. GER:DB-EngrAppSci

3-4 units, Spr (McIntyre, P)

MATSCI 198. Mechanical Properties of Materials
(Same as MATSCI 208) Introduction to the mechanical behavior of solids, emphasizing the relationships between microstructure and mechanical properties. Elastic, anelastic, and plastic properties of materials. The relations between stress, strain, strain rate, and temperature for plastically deformable solids. Application of dislocation theory to strengthening mechanisms in crystalline solids. The phenomena of creep, fracture, and fatigue and their controlling mechanisms. Prerequisites: 193/203. GER:DB-EngrAppSci

3-4 units, Spr (Dauskardt, R)

MATSCI 199. Electronic and Optical Properties of Solids
(Same as MATSCI 209) The concepts of electronic energy bands and transports applied to metals, semiconductors, and insulators. The behavior of electronic and optical devices including p-n junctions, MOS-capacitors, MOSFETs, optical waveguides, quantum-well lasers, light amplifiers, and metallo-dielectric light guides. Emphasis is on relationships between structure and physical properties. Elementary quantum and statistical mechanics concepts are used. Prerequisite: 195/205 or equivalent. GER:DB-EngrAppSci

3-4 units, Spr (Brongersma, M)

GRADUATE COURSES IN MATERIALS SCIENCE AND ENGINEERING

Primarily for graduate students; undergraduates may enroll with consent of instructor.

MATSCI 171. Nanocharacterization Laboratory
(Same as MATSCI 161) The development of standard lab procedures for materials scientists emphasizing microscopy, metallography, and technical writing. Techniques: optical, scanning-electron, atomic-force microscopy; and metallographic specimen preparation. The relationships among microscopic observation, material properties, and processing. Prerequisite: ENGR 50 or equivalent.

3-4 units, Spr (McGehee, M)

MATSCI 172. X-Ray Diffraction Laboratory
(Same as MATSCI 162) Experimental x-ray diffraction techniques for microstructural analysis of materials, emphasizing powder and single-crystal techniques. Diffraction from epitaxial and polycrystalline thin films, multilayers, and amorphorous materials using medium and high resolution configurations. Determination of phase purity, crystallinity, relaxation, stress, and texture in the materials. Advanced experimental x-ray diffraction techniques: reciprocal lattice mapping, reflectivity, and grazing incidence diffraction. Enrollment limited to 20.

3-4 units, Win (Vailionis, A)

MATSCI 173. Mechanical Behavior Laboratory
(Same as MATSCI 163) Experimental techniques for the study of the mechanical behavior of engineering materials in bulk and thin film form, including tension testing, nanoindentation, and wafer curvature stress analysis. Metallic and polymeric systems. Prerequisite: ENGR 50.

3-4 units, Aut (Earhart, C)

MATSCI 200. Master's Research
Participation in a research project.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MATSCI 202. Materials Chemistry
(Same as MATSCI 192) Chemical principles of materials: atomic and molecular bonding; acid and base chemistry; redox and electrochemistry; colloidal and surface chemistry; materials synthesis; and nanoscale chemistry.

3-4 units, Aut (Dionne, J)

MATSCI 203. Atomic Arrangements in Solids
(Same as MATSCI 193) Atomic arrangements in perfect and imperfect solids, especially important metals, ceramics, and semiconductors. Elements of formal crystallography, including development of point groups and space groups.

3-4 units, Aut (Reed, E)

MATSCI 204. Thermodynamics and Phase Equilibria
(Same as MATSCI 194) The principles of heterogeneous equilibria and their application to phase diagrams. Thermodynamics of solutions; chemical reactions; non-stoichiometry in compounds; first order phase transitions and metastability; thermodynamics of surfaces, elastic solids, dielectrics, and magnetic solids.

3-4 units, Win (Salleo, A)

MATSCI 205. Waves and Diffraction in Solids
(Same as MATSCI 195) The elementary principals of x-ray, vibrational, and electron waves in solids. Basic wave behavior including Fourier analysis, interference, diffraction, and polarization. Examples of wave systems, including electromagnetic waves from Maxwell's equations. Diffracted intensity in reciprocal space and experimental techniques such as electron and x-ray diffraction. Lattice vibrations in solids, including vibrational modes, dispersion relationship, density of states, and thermal properties. Free electron model. Basic quantum mechanics and statistical mechanics including Fermi-Dirac and Bose-Einstein statistics. Prerequisite: 193/203 or consent of instructor.

3-4 units, Win (Clemens, B)

MATSCI 206. Imperfections in Solids
(Same as MATSCI 196) Atomic and molecular scale defects and their importance to the physical and mechanical properties of bulk and nanoscale materials. Point defects and dislocations in crystals. Imperfections in amorphous solids. Structure and properties of interfaces. Prerequisite: 193/203.

3-4 units, Win (Dauskardt, R; Oliver, M)

MATSCI 207. Rate Processes in Materials
(Same as MATSCI 197) Diffusion and phase transformations in solids. Diffusion topics: Fick's laws, atomic theory of diffusion, and diffusion in alloys. Phase transformation topics: nucleation, growth, diffusional transformations, spinodal decomposition, and interface phenomena. Material builds on the mathematical, thermodynamic, and statistical mechanical foundations in the prerequisites. Prerequisites: 194/204.

3-4 units, Spr (McIntyre, P)

MATSCI 208. Mechanical Properties of Materials
(Same as MATSCI 198) Introduction to the mechanical behavior of solids, emphasizing the relationships between microstructure and mechanical properties. Elastic, anelastic, and plastic properties of materials. The relations between stress, strain, strain rate, and temperature for plastically deformable solids. Application of dislocation theory to strengthening mechanisms in crystalline solids. The phenomena of creep, fracture, and fatigue and their controlling mechanisms. Prerequisites: 193/203.

3-4 units, Spr (Dauskardt, R)

MATSCI 209. Electronic and Optical Properties of Solids
(Same as MATSCI 199) The concepts of electronic energy bands and transports applied to metals, semiconductors, and insulators. The behavior of electronic and optical devices including p-n junctions, MOS-capacitors, MOSFETs, optical waveguides, quantum-well lasers, light amplifiers, and metallo-dielectric light guides. Emphasis is on relationships between structure and physical prop-

erties. Elementary quantum and statistical mechanics concepts are used. Prerequisite: 195/205 or equivalent.

3-4 units, Spr (Brongersma, M)

MATSCI 210. Organic and Biological Materials

(Same as MATSCI 190) Unique physical and chemical properties of organic materials and their uses.The relationship between structure and physical properties, and techniques to determine chemical structure and molecular ordering. Examples include liquid crystals, dendrimers, carbon nanotubes, hydrogels, and biopolymers such as lipids, protein, and DNA. Prerequisite: Thermodynamics and ENGR 50 or equivalent.

3-4 units, Spr (Heilshorn, S)

MATSCI 230. Materials Science Colloquium

May be repeated for credit.

1 unit, Aut (Cui, Y; Lindenberg, A), Win (Melosh, N; Dionne, J), Spr (Heilshorn, S; Reed, E)

MATSCI 251. Microstructure and Mechanical Properties

(Same as MATSCI 151) Primarily for students without a materials background. Mechanical properties and their dependence on microstructure in a range of engineering materials. Elementary deformation and fracture concepts, strengthening and toughening strategies in metals and ceramics. Topics: dislocation theory, mechanisms of hardening and toughening, fracture, fatigue, and high-temperature creep. Prerequisite: ENGR 50 or equivalent.

3-4 units, Aut (Staff)

MATSCI 256. Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution

(Same as MATSCI 156) Operating principles and applications of emerging technological solutions to the energy demands of the world. The scale of global energy usage and requirements for possible solutions. Basic physics and chemistry of solar cells, fuel cells, and batteries. Performance issues, including economics, from the ideal device to the installed system. The promise of materials research for providing next generation solutions.

3-4 units, Aut (Clemens, B)

MATSCI 299. Practical Training

Educational opportunities in high-technology research and development labs in industry. Qualified graduate students engage in internship work and integrate that work into their academic program. Following the internship, students complete a research report outlining their work activity, problems investigated, key results, and any follow-on projects they expect to perform. Student is responsible for arranging own employment. See department student services manager before enrolling.

3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MATSCI 300. Ph.D. Research

Participation in a research project.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MATSCI 302. Solar Cells

Theory of conventional p-n junction and excitonic solar cells. Design, fabrication, and characterization of crystalline silicon, amorphous silicon, CdTe, CIGS, and tandem and organic solar cells. Emerging solar cell concepts such as intermediate band gap and bioinspired solar cells. Emphasis is on the materials science aspects of solar cells research. Module design and economic hurdles that must be overcome for solar cell technology to generate a significant fraction of the world¿s electricity. Group project to explore one solar cell approach in depth. SCPD offering.

3 units, not given this year

MATSCI 303. Principles, Materials and Devices of Batteries

Thermodynamics and electrochemistry for batteries. Emphasis on lithium ion batteries, but also different types including lead acid, nickel metal hydride, metal air, sodium sulfur and redox flow. Battery electrode materials, electrolytes, separators, additives and electrode-electrolyte interface. Electrochemical techniques; advanced battery materials with nanotechnology; battery device structure. Prerequisites: undergraduate chemistry.

3 units, Aut (Cui, Y)

MATSCI 311. Lasers in Materials Processing

Principles of laser operation. Optically and electrically pumped lasers. Materials for solid-state lasers. Fundamentals of laser/materials interactions. Applications in thin film technology and microfabrication; laser annealing of defects and crystallization of amorphous films. Laser-induced shock waves. Extreme non-equilibrium laser processing; ultra-fast (femtosecond) lasers and their novel uses; micro- and nanofabrication of fluidic and photonic devices; intracellular nano-surgery.

3 units, Spr (Salleo, A)

MATSCI 312. New Methods in Thin Film Synthesis

Materials base for engineering new classes of coatings and devices. Techniques to grow thin films at atomic scale and to fabricate multilayers/superlattices at nanoscale. Vacuum growth techniques including evaporation, molecular beam epitaxy (MBE), sputtering, ion beam assisted deposition, laser ablation, chemical vapor deposition (CVD), and electroplating. Future direction of material synthesis such as nanocluster deposition and nanoparticles self-assembly. Relationships between deposition parameters and film properties. Applications of thin film synthesis in microelectronics, nanotechnology, and biology. SCPD offering.

3 units, not given this year

MATSCI 316. Nanoscale Science, Engineering, and Technology

Sample application areas: renewable energy including nanoscaled photovoltaic cells, hydrogen storage, fuel cells, and nanoelectronics. Nanofabrication techniques including: self-assembly of amphiphilic molecules, block copolymers, organic-inorganic mesostructures, colloidal crystals, organic monolayers, proteins, DNA and abalone shells; biologically inspired growth of materials; photolithography, electron beam lithography, and scanning probe lithography; and synthesis of carbon nanotubes, nanowire, and nanocrystals. Other nanotechnology topics may be explored through a group project. SCPD offering.

3 units, Spr (Cui, Y)

MATSCI 320. Nanocharacterization of Materials

Current methods of directly examining the microstructure of materials. Topics: optical microscopy, scanning electron and focused ion beam microscopy, field ion microscopy, transmission electron microscopy, scanning probe microscopy, and microanalytical surface science methods. Emphasis is on the electron-optical techniques. Recommended: 193/203.

3 units, alternate years, not given this year

MATSCI 321. Transmission Electron Microscopy

Image formation and interpretation. The contrast phenomena associated with perfect and imperfect crystals from a physical point of view and from a formal treatment of electron diffraction theory. The importance of electron diffraction to systematic analysis and recent imaging developments. Recommended: 193/203, 195/205, or equivalent.

3 units, Win (Sinclair, R; Pelton, A)

MATSCI 322. Transmission Electron Microscopy Laboratory

Experimental application of electron microscopy to typical materials science studies. Topics include microscope operation and alignment, diffraction modes and analysis, bright-field/dark-field analysis of defects, high resolution imaging, and analytical techniques for compositional analysis (EDAX). Enrollment limited to 12. Prerequisites: 321, consent of instructor.

3 units, Spr (Marshall, A)

MATSCI 323. Thin Film and Interface Microanalysis

The science and technology of microanalytical techniques, including Auger electron spectroscopy (AES), Rutherford backscattering spectroscopy (RBS), secondary ion mass spectroscopy (SIMS), ion scattering spectroscopy (ISS), and x-ray photoelectron spectroscopy (XPS or ESCA). Generic processes such as sputtering and high-vacuum generation. Prerequisite: some prior exposure to atomic and electronic structure of solids. SCPD offering.

3 units, not given this year

MATSCI 325. X-Ray Diffraction

Diffraction theory and its relationship to structural determination in solids. Focus is on applications of x-rays; concepts can be applied to neutron and electron diffraction. Topics: Fourier analysis, kinematic theory, Patterson functions, diffraction from layered and amorphous materials, single crystal diffraction, dynamic theory, defect determination, surface diffraction, techniques for data analysis, and determination of particle size and strain. Prerequisites: 193/203, 195/205.

3 units, not given this year

MATSCI 326. X-Ray Science and Techniques

X-ray interaction with matter; diffraction from ordered and disordered materials; x-ray absorption, photoemission, and coherent scattering; x-ray microsocopy. Sources including synchrontrons,

high harmonic generation, x-ray lasers. Time-resolved techniques and detector technology.

3 units, not given this year

MATSCI 331. Atom-based computational methods for materials

Introduction to atom-based computational methods for materials with emphasis on quantum methods. Topics include density functional theory, tight-binding and empirical approaches. Computation of optical, electronic, phonon properties. Bulk materials, interfaces, nanostructures. Molecular dynamics. Prerequisites - undergraduate quantum mechanics.

3 units, Win (Reed, E)

MATSCI 343. Organic Semiconductors for Electronics and Photonics

The science of organic semiconductors and their use in electronic and photonic devices. Topics: methods for fabricating thin films and devices; relationship between chemical structure and molecular packing on properties such as band gap, charge carrier mobility and luminescence efficiency; doping; field-effect transistors; light-emitting diodes; lasers; biosensors; photodetectors and photovoltaic cells. SCPD offering.

3 units, alternate years, not given this year

MATSCI 346. Nanophotonics

(Same as EE 336) Recent developments in micro- and nanophotonic materials and devices. Basic concepts of photonic crystals. Integrated photonic circuits. Photonic crystal fibers. Superprism effects. Optical properties of metallic nanostructures. Subwavelength phenomena and plasmonic excitations. Meta-materials. Prerequisite: electromagnetic theory at the level of 242.

3 units, Win (Fan, S; Brongersma, M)

MATSCI 347. Introduction to Magnetism and Magnetic Nanostructures

Atomic origins of magnetic moments, magnetic exchange and ferromagnetism, types of magnetic order, magnetic anisotropy, domains, domain walls, hysteresis loops, hard and soft magnetic materials, demagnetization factors, and applications of magnetic materials, especially magnetic nanostructures and nanotechnology. Tools include finite-element and micromagnetic modeling. Design topics include electromagnet and permanent magnet, electronic article surveillance, magnetic inductors, bio-magnetic sensors, and magnetic drug delivery. Design projects, team work, and computer-aided design. Prerequisites: PHYSICS 29 and 43, or college-level electricity and magnetism.

3 units, Spr (Wang, S; White, R)

MATSCI 351. Failure Analysis for Emerging Technologies

Introduction to root cause failure analysis investigation of emerging technologies such as high tech electronic and medical devices. Real case studies illustration of design errors, manufacturing defects, misuse and environmental degradation that resulted in fracture, fatigue, cracking or corrosion. Understanding material degradation modes and mechanisms. Examples on analytical characterization techniques such as scanning electron microscopy (SEM), X-ray photoelectron spectroscopy (XPS), Fourier transform infrared spectroscoopy (FTIR), time of flight secondary ion mass spectroscopy (TOF-SIMS), mechanical testing, finite element analysis (FEA) and electrochemical tesing.

3 units, Aut (Guyer, E; James, B)

MATSCI 353. Mechanical Properties of Thin Films

The mechanical properties of thin films on substrates. The mechanics of thin films and of the atomic processes which cause stresses to develop during thin film growth. Experimental techniques for studying stresses in and mechanical properties of thin films. Elastic, plastic, and diffusional deformation of thin films on substrates as a function of temperature and microstructure. Effects of deformation and fracture on the processing of thin film materials. Prerequisite: 198/208.

3 units, not given this year

MATSCI 358. Fracture and Fatigue of Materials and Thin Film Structures

Linear-elastic and elastic-plastic fracture mechanics from a materials science perspective, emphasizing microstructure and the micromechanisms of fracture. Plane strain fracture toughness and resistance curve behavior. Mechanisms of failure associated with cohesion and adhesion in bulk materials, composites, and thin film structures. Fracture mechanics approaches to toughening and subcritical crack-growth processes, with examples and applications involving cyclic fatigue and environmentally assisted subcritical crack growth. Prerequisite: 151/251, 198/208, or equivalent. SCPD offering.

3 units, Win (Dauskardt, R)

MATSCI 359. Crystalline Anisotropy

(Same as ME 336) Matrix and tensor analysis with applications to the effects of crystal symmetry on elastic deformation, thermal expansion, diffusion, piezoelectricity, magnetism, thermodynamics, and optical properties of solids, on the level of J. F. Nye's Physical Properties of Crystals. Homework sets use Mathematica.

3 units, Win (Barnett, D)

MATSCI 380. Nano-Biotechnology

Literature based. Principles that make nanoscale materials unique, applications to biology, and how biological systems can create nanomaterials. Molecular sensing, drug delivery, bio-inspired synthesis, self-assembling systems, and nanomaterial based therapies. Interactions at the nanoscale. Applications and opportunities for new technology.

3 units, Aut (Melosh, N)

MATSCI 381. Biomaterials in Regenerative Medicine

(Same as BIOE 361) Materials design and engineering for regenerative medicine. How materials interact with cells through their micro- and nanostructure, mechanical properties, degradation characteristics, surface chemistry, and biochemistry. Examples include novel materials for drug and gene delivery, materials for stem cell proliferation and differentiation, and tissue engineering scaffolds. Prerequisites: undergraduate chemistry, and cell/molecular biology or biochemistry.

3 units, alternate years, not given this year

MATSCI 382. Bio-chips, Imaging and Nanomedicine

(Same as EE 225) The course covers state-of-the-art and emerging bio-sensors, bio-chips, imaging modalities, and nano-therapies which will be studied in the context of human physiology including the nervous system, circulatory system and immune system. Medical diagnostics will be divided into bio-chips (in-vitro diagnostics) and medical and molecular imaging (in-vivo imaging). In-depth discussion on cancer and cardiovascular diseases and the role of diagnostics and nano-therapies.

3 units, Win (Wang, S)

MATSCI 399. Graduate Independent Study

Under supervision of a faculty member.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MATSCI 400. Participation in Materials Science Teaching

May be repeated for credit.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

MATSCI 801. TGR Project for MS Students

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MATSCI 802. TGR Dissertation for Ph.D Students

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MATHEMATICAL AND COMPUTATIONAL SCIENCE (MCS) COURSES

For information on undergraduate programs in Mathematical and Computational Science, see page 000 of this bulletin.

UNDERGRADUATE COURSES IN MATHEMATICAL AND COMPUTATIONAL SCIENCE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

MCS 100. Mathematics of Sports

(Same as STATS 50) The use of mathematics, statistics, and probability in the analysis of sports performance, sports records, and strategy. Topics include mathematical analysis of the physics of sports and the determinations of optimal strategies. New diagnostic

statistics and strategies for each sport. Corequisite: STATS 116. GER:DB-Math

3 units, not given this year

MATHEMATICS (MATH) COURSES

UNDERGRADUATE COURSES IN MATHEMATICS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

MATH 19. Calculus

Introduction to differential calculus of functions of one variable. Topics: review of elementary functions including exponentials and logarithms, limits, rates of change, the derivative, and applications. Math 19, 20, and 21 cover the same material as Math 41 and 42, but in three quarters rather than two. Prerequisites: precalculus, including trigonometry, advanced algebra, and analysis of elementary functions. GER:DB-Math

3 units, Aut (Bahuaud, E), Win (Staff), Sum (Staff)

MATH 20. Calculus

Continuation of 19. Applications of differential calculus; introduction to integral calculus of functions of one variable, including: the definite integral, methods of symbolic and numerical integration, applications of the definite integral. Prerequisites: 19 or equivalent. GER:DB-Math

3 units, Win (Bahuaud, E), Spr (Zuniga, J)

MATH 21. Calculus

Continuation of 20. Applications of integral calculus, introduction to differential equations, infinite series. Prerequisite: 20 or equivalent. GER:DB-Math

4 units, Spr (Bahuaud, E)

MATH 41. Calculus (accelerated)

Introduction to differential and integral calculus of functions of one variable. Topics: limits, rates of change, the derivative and applications, introduction to the definite integral and integration. Math 41 and 42 cover the same material as Math 19-20-21, but in two quarters rather than three. Prerequisites: trigonometry, advanced algebra, and analysis of elementary functions, including exponentials and logarithms. GER:DB-Math

5 units, Aut (Lucianovic, M)

MATH 41A. Calculus ACE

Students attend MATH 41 lectures with different recitation sessions, four hours instead of two, emphasizing engineering applications. Prerequisite: application; see http://soe.stanford.edu/edp/programs/ace.html. GER:DB-Math

6 units, Aut (Zuniga, J; Nance, T; Tzeng, Y)

MATH 42. Calculus (Accelerated)

Continuation of 41. Methods of symbolic and numerical integration, applications of the definite integral, introduction to differential equations, infinite series. Prerequisite: 41 or equivalent. GER:DB-Math

5 units, Aut (Licata, A; Stiennon, N), Win (Lucianovic, M)

MATH 42A. Calculus ACE

Students attend MATH 41 lectures with different recitation sessions, four hours instead of two, emphasizing engineering applications. Prerequisite: application; see http://soe.stanford.edu/edp/programs/ace.html. GER:DB-Math

6 units, Aut (Licata, A), Win (Lucianovic, M)

MATH 50V. Multivariable Differential Calculus

Differential calculus for functions of two or more variables. Topics: vectors and vector-valued functions in 2-space and 3-space, tangent and normal vectors, curvature, functions of two or more variables, partial derivatives and differentiability, directional derivatives and gradients, maxima and minima, and optimization using Lagrange multipliers. Prerequisites: two quarters of single variable calculus, or consent of instructor. GER:DB-Math

4 units, Sum (Sanders, M)

MATH 51. Linear Algebra and Differential Calculus of Several Variables

Geometry and algebra of vectors, systems of linear equations, matrices and linear transformations, diagonalization and eigenvectors, vector valued functions and functions of several variables, parametric curves, partial derivatives and gradients, the derivative as a matrix, chain rule in several variables, constrained and unconstrained optimization. Prerequisite: 21, or 42, or a score of 4 on the BC Advanced Placement exam or 5 on the AB Advanced Placement exam, or consent of instructor. GER:DB-Math

5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Toussaint, A)

MATH 51A. Linear Algebra and Differential Calculus of Several Variables, ACE

Students attend MATH 51 lectures with different recitation sessions: four hours per week instead of two, emphasizing engineering applications. Prerequisite: application; see http://soe.stanford.edu/edp/programs/ace.html. GER:DB-Math

6 units, Aut (Staff), Win (Staff), Spr (Staff)

MATH 51H. Honors Multivariable Mathematics

For prospective Mathematics majors in the honors program and students from other areas of science or engineering who have a strong mathematics background. Three quarter sequence covers the material of 51, 52, 53, and additional advanced calculus and ordinary and partial differential equations. Unified treatment of multivariable calculus, linear algebra, and differential equations with a different order of topics and emphasis from standard courses. Students should know one-variable calculus and have an interest in a theoretical approach to the subject. Prerequisite: score of 5 on BC Advanced Placement exam, or consent of instructor. GER:DB-Math

5 units, Aut (Simon, L)

MATH 51M. Introduction to MATLAB for Multivariable Mathematics

Corequisite: MATH 51.

1 unit, Aut (Staff)

MATH 52. Integral Calculus of Several Variables

Iterated integrals, line and surface integrals, vector analysis with applications to vector potentials and conservative vector fields, physical interpretations. Divergence theorem and the theorems of Green, Gauss, and Stokes. Prerequisite: 51 and 42 or equivalents. GER:DB-Math

5 units, Aut (Wieczorek, W), Win (Staff), Spr (Brumfiel, G)

MATH 52H. Honors Multivariable Mathematics

Continuation of 51H. Prerequisite: 51H. GER:DB-Math

5 units, Win (Eliashberg, Y)

MATH 52V. Multivariable Integral Calculus

Integral calculus for functions of two or more variables. Topics: double and triple integrals, change of variables and the Jacobian, vector fields, line integrals, independence of path and the fundamental theorem of line integrals, Green's theorem, divergence theorem, Stokes's theorem. Prerequisites: one quarter of multivariable differential calculus (comparable to 50V or 51), or consent of instructor. GER:DB-Math

5 units, Sum (Sanders, M)

MATH 53. Ordinary Differential Equations with Linear Algebra

Ordinary differential equations and initial value problems, systems of linear differential equations with constant coefficients, applications of second-order equations to oscillations, matrix exponentials, Laplace transforms, stability of non-linear systems and phase plane analysis, numerical methods. Prerequisite: 51 and 42 or equivalents. GER:DB-Math

5 units, Aut (Fish, J), Win (Brendle, S), Spr (Dembo, A), Sum (Lisi, S)

MATH 53H. Honors Multivariable Mathematics

Continuation of 52H. Prerequisite: 52H. GER:DB-Math

5 units, Spr (Eliashberg, Y)

MATH 70SI. The Game of Go: Strategy, Theory, and History

Strategy and mathematical theories of the game of Go, with guest appearance by a professional Go player.

1 unit, Spr (Bump, D)

MATH 87Q. Mathematics of Knots, Braids, Links, and Tangles
(Stanford Introductory Seminar) Preference to sophomores. Types of knots and how knots can be distinguished from one another by means of numerical or polynomial invariants. The geometry and algebra of braids, including their relationships to knots. Topology of surfaces. Brief summary of applications to biology, chemistry, and physics.
3 units, Win (Wieczorek, W)

MATH 100. Mathematics for Elementary School Teachers
Mathematics and pedagogical strategies. Core mathematical content in grades K-6, classroom presentation, how to handle student errors, and mathematical issues that come up during instruction.
4 units, not given this year

MATH 104. Applied Matrix Theory
Linear algebra for applications in science and engineering: orthogonality, projections, the four fundamental subspaces of a matrix, spectral theory for symmetric matrices, the singular value decomposition, the QR decomposition, least-squares, the condition number of a matrix, algorithms for solving linear systems. Prerequisites: MATH 51 and MATH 52 or 53. GER:DB-Math
3 units, Aut (Bernstein, J), Win (Candes, E), Sum (Koytcheff, R)

MATH 106. Functions of a Complex Variable
Complex numbers, analytic functions, Cauchy-Riemann equations, complex integration, Cauchy integral formula, residues, elementary conformal mappings. Prerequisite: 52. GER:DB-Math
3 units, Aut (Staff), Spr (Liu, T), Sum (Brumfiel, G)

MATH 108. Introduction to Combinatorics and Its Applications
Topics: graphs, trees (Cayley's Theorem, application to phylogony), eigenvalues, basic enumeration (permutations, Stirling and Bell numbers), recurrences, generating functions, basic asymptotics. Prerequisites: 51 or 103 or equivalent. GER:DB-Math
3 units, Aut (Thorne, F)

MATH 109. Applied Group Theory
Applications of the theory of groups. Topics: elements of group theory, groups of symmetries, matrix groups, group actions, and applications to combinatorics and computing. Applications: rotational symmetry groups, the study of the Platonic solids, crystallographic groups and their applications in chemistry and physics. GER:DB-Math
3 units, Win (Ionel, E)

MATH 110. Applied Number Theory and Field Theory
Number theory and its applications to modern cryptography. Topics: congruences, finite fields, primality testing and factorization, public key cryptography, error correcting codes, and elliptic curves, emphasizing algorithms. GER:DB-Math
3 units, Spr (Li, J)

MATH 111. Computational Commutative Algebra
Introduction to the theory of commutative rings, ideals, and modules. Systems of polynomial equations in several variables from the algorithmic viewpoint. Groebner bases, Buchberger's algorithm, elimination theory. Applications to algebraic geometry and to geometric problems. GER:DB-Math
3 units, not given this year

MATH 113. Linear Algebra and Matrix Theory
Algebraic properties of matrices and their interpretation in geometric terms. The relationship between the algebraic and geometric points of view and matters fundamental to the study and solution of linear equations. Topics: linear equations, vector spaces, linear dependence, bases and coordinate systems; linear transformations and matrices; similarity; eigenvectors and eigenvalues; diagonalization. GER:DB-Math
3 units, Win (Galatius, S), Spr (Licata, J)

MATH 113V. Linear Algebra
Topics: matrices, linear equations, vector spaces, linear dependence, bases and coordinates, linear transformations, similarity, eigenvectors and eigenvalues, and diagonalization. Prerequisites: two quarters of single variable calculus, or consent of instructor. GER:DB-Math
3 units, Sum (Sanders, M)

MATH 115. Functions of a Real Variable
The development of real analysis in Euclidean space: sequences and series, limits, continuous functions, derivatives, integrals. Basic point set topology. Honors math majors and students who intend to do graduate work in mathematics should take 171. Prerequisite: 51. GER:DB-Math
3 units, Aut (Staff), Win (Staff), Spr (Liu, T), Sum (Brumfiel, G)

MATH 116. Complex Analysis
Analytic functions, Cauchy integral formula, power series and Laurent series, calculus of residues and applications, conformal mapping, analytic continuation, introduction to Riemann surfaces, Fourier series and integrals. Prerequisites: 52, and 115 or 171. GER:DB-Math
3 units, Win (Ryzhik, L)

MATH 120. Modern Algebra
Groups acting on sets, examples of finite groups, Sylow theorems, solvable and simple groups. Fields, rings, and ideals; polynomial rings over a field; PID and non-PID. Unique factorization domains. GER:DB-Math, WIM
3 units, Aut (Vakil, R), Spr (Venkatesh, A)

MATH 121. Modern Algebra II
Continuation of 120. Field of fractions, field theory and Galois theory. Modules over a PID, quotient modules, non-free modules. Canonical forms, generalized eigenspaces, quotients and duality for vector spaces. Prerequisite: MATH 120. GER:DB-Math
3 units, Win (Carlsson, G)

MATH 122. GROUP REPRESENTATIONS
Group representations and group rings, tensor algebra, character theory. Bilinear and quadratic forms, semisimplicity. Induced representations. Classification of representations, applications. Prerequisites: MATH 120, and either MATH 121 or consent of instructor.
3 units, Spr (Bump, D)

MATH 131P. Partial Differential Equations I
An introduction to PDE; particularly suitable for non-Math majors. Topics include physical examples of PDE's, method of characteristics, D'Alembert's formula, maximum principles, heat kernel, Duhamel's principle, separation of variables, Fourier series, Harmonic functions, Bessel functions, spherical harmonics. Students who have taken MATH 171 should consider taking MATH 173 rather than 131p. Prerequisite: 53. GER:DB-Math
3 units, Aut (Hohloch, S), Win (Garapon, P)

MATH 132. Partial Differential Equations II
Laplace's equation and properties of harmonic functions. Green's functions. Distributions and Fourier transforms. Eigenvalue problems and generalized Fourier series. Numerical solutions. Prerequisite: 131P. GER:DB-Math
3 units, Spr (Garapon, P)

MATH 136. Stochastic Processes
(Same as STATS 219) Introduction to measure theory, Lp spaces and Hilbert spaces. Random variables, expectation, conditional expectation, conditional distribution. Uniform integrability, almost sure and Lp convergence. Stochastic processes: definition, stationarity, sample path continuity. Examples: random walk, Markov chains, Gaussian processes, Poisson processes, Martingales. Construction and basic properties of Brownian motion. Prerequisite: STATS 116 or MATH 151 or equivalent. Recommended: MATH 115 or equivalent. GER:DB-Math
3 units, Aut (Zuniga, J)

MATH 137. Mathematical Methods of Classical Mechanics
Newtonian mechanics. Lagrangian formalism. E. Noether's theorem. Oscillations. Rigid bodies. Introduction to symplectic geometry. Hamiltonian formalism. Legendre transform. Variational principles. Geometric optics. Introduction to the theory of integrable systems. Prerequisites: 51, 52, 53, or 51H, 52H, 53H. GER:DB-Math
3 units, not given this year

MATH 138. Celestial Mechanics
Mathematically rigorous introduction to the classical N-body problem: the motion of N particles evolving according to Newton's law. Topics include: the Kepler problem and its symmetries; other central force problems; conservation theorems; variational methods; Hamilton-Jacobi theory; the role of equilibrium points and stability; and symplectic methods. Prerequisites: 53, and 115 or 171. GER:DB-Math
3 units, not given this year

MATH 143. Differential Geometry
Geometry of curves and surfaces in three-space and higher dimensional manifolds. Parallel transport, curvature, and geodesics. Surfaces with constant curvature. Minimal surfaces. GER:DB-Math
3 units, Win (Schoen, R)

MATH 145. Algebraic Geometry
Real algebraic curves, Hilbert's nullstellensatz, complex affine and projective curves, Bezout's theorem, the degree/genus formula, Riemann surfaces, Riemann-Roch theorem. Prerequisites: 106 or 116, and 109 or 120. Recommended: familiarity with surfaces equivalent to 143, 146, 147, or 148. GER:DB-Math
3 units, not given this year

MATH 146. Analysis on Manifolds
Differentiable manifolds, tangent space, submanifolds, implicit function theorem, differential forms, vector and tensor fields. Frobenius' theorem, DeRham theory. Prerequisite: 52 or 52H. GER:DB-Math
3 units, Aut (Ionel, E), alternate years, not given next year

MATH 147. Differential Topology
Smooth manifolds, transversality, Sards' theorem, embeddings, degree of a map, Borsuk-Ulam theorem, Hopf degree theorem, Jordan curve theorem. Prerequisite: 115 or 171. GER:DB-Math
3 units, alternate years, not given this year

MATH 148. Algebraic Topology
Fundamental group, covering spaces, Euler characteristic, homology, classification of surfaces, knots. Prerequisite: 109 or 120. GER:DB-Math
3 units, Spr (Staff), alternate years, not given next year

MATH 151. Introduction to Probability Theory
Counting; axioms of probability; conditioning and independence; expectation and variance; discrete and continuous random variables and distributions; joint distributions and dependence; central limit theorem and laws of large numbers. Prerequisite: 52 or consent of instructor. GER:DB-Math
3 units, Win (Kargin, V)

MATH 152. Elementary Theory of Numbers
Euclid's algorithm, fundamental theorems on divisibility; prime numbers; congruence of numbers; theorems of Fermat, Euler, Wilson; congruences of first and higher degrees; quadratic residues; introduction to the theory of binary quadratic forms; quadratic reciprocity; partitions. GER:DB-Math
3 units, Aut (Soundararajan, K)

MATH 154. Algebraic Number Theory
Properties of number fields and Dedekind domains, quadratic and cyclotomic fields, applications to some classical Diophantine equations; introduction to elliptic curves. Prerequisites: 120 and 121, especially modules over principal ideal domains and Galois theory of finite fields. GER:DB-Math
3 units, Spr (Conrad, B), alternate years, not given next year

MATH 155. Analytic Number Theory
Topics in analytic number theory such as the distribution of prime numbers, the prime number theorem, twin primes and Goldbach's conjecture, the theory of quadratic forms, Dirichlet's class number formula, Dirichlet's theorem on primes in arithmetic progressions, and the fifteen theorem. Prerequisite: 152, or familiarity with the Euclidean algorithm, congruences, residue classes and reduced residue classes, primitive roots, and quadratic reciprocity. GER:DB-Math
3 units, alternate years, not given this year

MATH 159. Discrete Probabilistic Methods
Modern discrete probabilistic methods suitable for analyzing discrete structures of the type arising in number theory, graph theory, combinatorics, computer science, information theory and molecular sequence analysis. Prerequisite: STATS 116/MATH 151 or equivalent.
3 units, Win (Kargin, V)

MATH 161. Set Theory
Informal and axiomatic set theory: sets, relations, functions, and set-theoretical operations. The Zermelo-Fraenkel axiom system and the special role of the axiom of choice and its various equivalents. Well-orderings and ordinal numbers; transfinite induction and transfinite recursion. Equinumerosity and cardinal numbers; Cantor's Alephs and cardinal arithmetic. Open problems in set theory. GER:DB-Math
3 units, Win (White, B)

MATH 162. Philosophy of Mathematics
(Same as PHIL 162, PHIL 262) (Graduate students register for PHIL 262.) 20th-century approaches to the foundations and philosophy of mathematics. The background in mathematics, set theory, and logic. Schools and programs of logicism, predicativism, platonism, formalism, and constructivism. Readings from leading thinkers. Prerequisite: PHIL151 or consent of instructor. GER:DB-Math
4 units, not given this year

MATH 171. Fundamental Concepts of Analysis
Recommended for Mathematics majors and required of honors Mathematics majors. Similar to 115 but altered content and more theoretical orientation. Properties of Riemann integrals, continuous functions and convergence in metric spaces; compact metric spaces, basic point set topology. Prerequisites: 51 and 52, or 51H and 52H. WIM GER:DB-Math, WIM
3 units, Aut (Bump, D), Spr (Vasy, A)

MATH 172. Lebesgue Integration and Fourier Analysis
Similar to 205A, but for undergraduate Math majors and graduate students in other disciplines. Topics include Lebesgue measure on Euclidean space, Lebesgue integration, L^p spaces, the Fourier transform, the Hardy-Littlewood maximal function and Lebesgue differentiation. Prerequisite: 171 or consent of instructor. GER:DB-Math
3 units, Spr (Soundararajan, K)

MATH 173. Theory of Partial Differential Equations
A rigorous introduction to PDE accessible to advanced undergraduates. Elliptic, parabolic, and hyperbolic equations in many space dimensions including basic properties of solutions such as maximum principles, causality, and conservation laws. Methods include the Fourier transform as well as more classical methods. The Lebesgue integral will be used throughout, but a summary of its properties will be provided to make the course accessible to students who have not had 172 or 205A. Prerequisite: 171 or equivalent.
3 units, Win (Schoen, R)

MATH 174. Calculus of Variations
Historical development of the theory, its connections to physics and mechanics, its independent mathematical interest, and its contacts with daily life experience. Applications to minimal surfaces and to capillary surface interfaces. Prerequisite: MATH 171 or equivalent.
3 units, not given this year

MATH 174A. Topics in Analysis and Differential Equations with Applications
For students planning graduate work in mathematics or physics, and for honors math majors and other students at ease with rigorous proofs and qualitative discussion. Topics may include: geometric theory of ODEs with applications to dynamics; mathematical foundations of classical mechanics including variational principles, Lagrangian and Hamiltonian formalisms, theory of integrable systems; theorems of existence and uniqueness; Sturm-Liouville theory. Prerequisite: 53H or 171, or consent of instructor. GER:DB-Math
3 units, not given this year

MATH 174B. Honors Analysis
Continuation of 174A. Topics may include: introduction to PDEs including transport equations, Laplace, wave, and heat equations; techniques of solution including separation of variables and Green¿s functions; Fourier series and integrals; introduction to the theory of distributions; mathematical foundations of quantum mechanics. Prerequisite: 174A. GER:DB-Math
3 units, not given this year

MATH 175. Elementary Functional Analysis
Linear operators on Hilbert space. Spectral theory of compact operators; applications to integral equations. Elements of Banach space theory. Prerequisite: 115 or 171. GER:DB-Math
3 units, Spr (Simon, L)

MATH 180. Introduction to Financial Mathematics
Financial derivatives: contracts and options. Hedging and risk management. Arbitrage, interest rate, and discounted value. Geometric random walk and Brownian motion as models of risky assets. Initial boundary value problems for the heat and related partial differential equations. Self-financing replicating portfolio. Black-Scholes pricing of European options. Dividends. Implied volatility. Optimal stopping and American options. Prerequisite: 53. Corequisites: 131, 151 or STATS 116. GER:DB-Math
3 units, Aut (Staff)

MATH 193. Polya Problem Solving Seminar
Topics in mathematics and problem solving strategies with an eye towards the Putnam Competition. Topics may include parity, the pigeonhole principle, number theory, recurrence, generating functions, and probability. Students present solutions to the class. Open to anyone with an interest in mathematics.
1 unit, Aut (Soundararajan, K)

MATH 196. Undergraduate Colloquium
Weekly lectures by different experts on topics in pure and applied mathematics that go beyond the standard curriculum. May be repeated for credit for up to 3 units. Does not count toward the math major or minor.
1 unit, Aut (Conrad, B), Win (Conrad, B), Spr (Conrad, B)

MATH 197. Senior Honors Thesis
1-6 units, Aut (Staff), Win (Staff), Spr (Staff)

MATH 198. Category Theory and Functional Programming
An introduction to category theory and its applications in computer science: in particular to Haskell, a programming language with many language elements inspired by category theory. Students should have some familiarity with linear algebra, discrete mathematics and functional programming. Recommended corequisite: CS 242.
1 unit, not given this year

MATH 199. Independent Work
Undergraduates pursue a reading program; topics limited to those not in regular department course offerings. Credit can fulfill the elective requirement for math majors. Approval of Undergraduate Affairs Committee is required to use credit for honors majors area requirement.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

GRADUATE COURSES IN MATHEMATICS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

MATH 205A. Real Analysis
Basic measure theory and the theory of Lebesgue integration. Prerequisite: 171 or equivalent.
3 units, Aut (White, B)

MATH 205B. Real Analysis
Point set topology, basic functional analysis, Fourier series, and Fourier transform. Prerequisites: 171 and 205A or equivalent.
3 units, Win (Vasy, A)

MATH 210A. Modern Algebra
Basic commutative ring and module theory, tensor algebra, homological constructions, linear and multilinear algebra, introduction to representation theory. Prerequisite: 121 or equivalent.
3 units, Aut (Vakil, R)

MATH 210B. Modern Algebra
Continuation of 210A. Topics in group theory, Galois theory, commutative algebra, introductions to algebraic number theory and algebraic geometry.
3 units, Win (Brumfiel, G)

MATH 210C. Modern Algebra
Continuation of 210B. Semisimple rings and modules, representation theory, Lie algebras, Lie groups and their representations.
3 units, Spr (Venkatesh, A)

MATH 215A. Complex Analysis, Geometry, and Topology
Analytic functions, complex integration, Cauchy's theorem, residue theorem, argument principle, conformal mappings, Riemann mapping theorem, Picard's theorem, elliptic functions, analytic continuation and Riemann surfaces.
3 units, Aut (Li, J)

MATH 215B. Complex Analysis, Geometry, and Topology
Topics: fundamental group and covering spaces, homology, cohomology, products, basic homotopy theory, and applications. Prerequisites: 113, 120, and 171, or equivalent; 215A is not a prerequisite for 215B.
3 units, Win (Staff)

MATH 215C. Complex Analysis, Geometry, and Topology
Differentiable manifolds, transversality, degree of a mapping, vector fields, intersection theory, and Poincare duality. Differential forms and the DeRham theorem. Prerequisite: 215B or equivalent.
3 units, Spr (Mirzakhani, M)

MATH 216A. Introduction to Algebraic Geometry
Algebraic curves, algebraic varieties, sheaves, cohomology, Riemann-Roch theorem. Classification of algebraic surfaces, moduli spaces, deformation theory and obstruction theory, the notion of schemes. May be repeated for credit. Prerequisites: 210ABC or equivalent.
3 units, not given this year

MATH 216B. Introduction to Algebraic Geometry
Continuation of 216A. May be repeated for credit.
3 units, not given this year

MATH 216C. Introduction to Algebraic Geometry
Continuation of 216B. May be repeated for credit.
3 units, not given this year

MATH 217A. Differential Geometry
Smooth manifolds and submanifolds, tensors and forms, Lie and exterior derivative, DeRham cohomology, distributions and the Frobenius theorem, vector bundles, connection theory, parallel transport and curvature, affine connections, geodesics and the exponential map, connections on the principal frame bundle. Prerequisite: 215C or equivalent.
3 units, Spr (Brendle, S)

MATH 217B. Differential Geometry
Riemannian manifolds, Levi-Civita connection, Riemann curvature tensor, Riemannian exponential map and geodesic normal coordinates, Jacobi fields, completeness, spaces of constant curvature, bi-invariant metrics on compact Lie groups, symmetric and locally symmetric spaces, equations for Riemannian submanifolds and Riemannian submersions. Prerequisite: 217A.
3 units, Aut (Schoen, R)

MATH 220. Partial Differential Equations of Applied Mathematics
(Same as CME 303) First-order partial differential equations; method of characteristics; weak solutions; elliptic, parabolic, and hyperbolic equations; Fourier transform; Fourier series; and eigenvalue problems. Prerequisite: foundation in multivariable calculus and ordinary differential equations.
3 units, Aut (Ryzhik, L)

MATH 221. Mathematical Methods of Imaging
Mathematical methods of imaging: array imaging using Kirchhoff migration and beamforming, resolution theory for broad and narrow band array imaging in homogeneous media, topics in high-frequency, variable background imaging with velocity estimation, interferometric imaging methods, the role of noise and inhomogeneities, and variational problems that arise in optimizing the performance of imaging algorithms and the deblurring of images. Prerequisite: 220.
3 units, not given this year

MATH 222. Computational Methods for Fronts, Interfaces, and Waves
High-order methods for multidimensional systems of conservation laws and Hamilton-Jacobi equations (central schemes, discontinuous Galerkin methods, relaxation methods). Level set methods and fast marching methods. Computation of multi-valued solutions. Multi-scale analysis, including wavelet-based methods. Boundary schemes (perfectly matched layers). Examples from (but not limited to) geometrical optics, transport equations, reaction-diffusion equations, imaging, and signal processing.
3 units, not given this year

MATH 224. Topics in Mathematical Biology
Mathematical models for biological processes based on ordinary and partial differential equations. Topics: population and infectious diseases dynamics, biological oscillators, reaction diffusion models, biological waves, and pattern formation. Prerequisites: 53 and 131, or equivalents.
3 units, not given this year

MATH 226. Numerical Solution of Partial Differential Equations
(Same as CME 306) Hyperbolic partial differential equations: stability, convergence and qualitative properties; nonlinear hyperbolic equations and systems; combined solution methods from elliptic, parabolic, and hyperbolic problems. Examples include: Burger's equation, Euler equations for compressible flow, Navier-Stokes equations for incompressible flow. Prerequisites: MATH 220A or CME 302.
3 units, Spr (Garapon, P)

MATH 227. Partial Differential Equations and Diffusion Processes
Parabolic and elliptic partial differential equations and their relation to diffusion processes. First order equations and optimal control. Emphasis is on applications to mathematical finance. Prerequisites: MATH 131 and MATH 136/STATS 219, or equivalents.
3 units, Win (Ryzhik, L)

MATH 228. Stochastic Methods in Engineering
(Same as CME 308) Review of basic probability; Monte Carlo simulation; state space models and time series; parameter estimation, prediction, and filtering; Markov chains and processes; stochastic control; and stochastic differential equations. Examples from various engineering disciplines. Prerequisites: exposure to probability; background in real variables and analysis.
3 units, Spr (Papanicolaou, G)

MATH 230A. Theory of Probability
(Same as STATS 310A) Mathematical tools: asymptotics, metric spaces; measure and integration; Lp spaces; some Hilbert spaces theory. Probability: independence, Borel-Cantelli lemmas, almost sure and Lp convergence, weak and strong laws of large numbers. Weak convergence and characteristic functions; central limit theorems; local limit theorems; Poisson convergence. Prerequisites: 116, MATH 171.
2-4 units, Aut (Montanari, A)

MATH 230B. Theory of Probability
(Same as STATS 310B) Stopping times, 0-1 laws, Kolmogorov consistency theorem. Uniform integrability. Radon-Nikodym theorem, branching processes, conditional expectation, discrete time martingales. Exchangeability. Large deviations. Laws of the iterated logarithm. Birkhoff's and Kingman's ergodic theorems. Recurrence, entropy. Prerequisite: 310A or MATH 230A.
2-4 units, Win (Diaconis, P)

MATH 230C. Theory of Probability
(Same as STATS 310C) Continuous time stochastic processes: martingales, Brownian motion, stationary independent increments, Markov jump processes and Gaussian processes. Invariance principle, random walks, LIL and functional CLT. Markov and strong Markov property. Infinitely divisible laws. Some ergodic theory. Prerequisite: 310B or MATH 230B.
2-4 units, Spr (Dembo, A)

MATH 231A. An Introduction to Random Matrix Theory
(Same as STATS 351A) Patterns in the eigenvalue distribution of typical large matrices, which also show up in physics (energy distribution in scattering experiments), combinatorics (length of longest increasing subsequence), first passage percolation and number theory (zeros of the zeta function). Classical compact ensembles (random orthogonal matrices). The tools of determinental point processes.
3 units, not given this year

MATH 231B. The Spectrum of Large Random Matrices
Asymptotics of eigenvalues of large random matrices, focusing on Wigner matrices and the Gaussian unitary ensemble: the combinatorics of non-crossing partitions and word graphs, concentration inequalities, Cauchy-Stieltjes transform, Hermite polynomials, Fredholm determinants, Laplace asymptotic method, special functions (Airy, Painleve), and stochastic calculus. Prerequisities: STATS 310A or MATH 205A.
3 units, not given this year

MATH 231C. Free Probability
Background from operator theory, addition and multiplication theorems for operators, spectral properties of infinite-dimensional operators, the free additive and multiplicative convolutions of probability measures and their classical counterparts, asymptotic freeness of large random matrices, and free entropy and free dimension. Prerequisite: STATS 310B or equivalent.
3 units, not given this year

MATH 232. Topics in Probability: Malliavin Calculus, Fractional Brownian Motion and Applications
Malliavin calculus: derivative and divergence operators, Skorohod integral. Fractional Brownian motion: relavance for financial mathematics, Ito and Tanaka formula, driving force for the heat equation. Ito formula for irregular Gaussian processes and other applications of Malliavin calculus. May be repeated for credit. Prerequisites: MATH 236, STATS 310C or equivalent.
3 units, not given this year

MATH 233. Probabilistic Methods in Analysis
Proofs and constructions in analysis obtained from basic results in Probability Theory and a 'probabilistic way of thinking.' Topics: Rademacher functions, Gaussian processes, entropy.
3 units, not given this year

MATH 234. Large Deviations
(Same as STATS 374) Combinatorial estimates and the method of types. Large deviation probabilities for partial sums and for empirical distributions, Cramer's and Sanov's theorems and their Markov extensions. Applications in statistics, information theory, and statistical mechanics. Prerequisite: MATH 230A or STATS 310.
3 units, not given this year

MATH 236. Introduction to Stochastic Differential Equations
Brownian motion, stochastic integrals, and diffusions as solutions of stochastic differential equations. Functionals of diffusions and their connection with partial differential equations. Random walk approximation of diffusions. Prerequisite: 136 or equivalent and differential equations.
3 units, Win (Papanicolaou, G)

MATH 237. Default and Systemic Risk
Introduction to mathematical models of complex static and dynamic stochastic systems that undergo sudden regime change in response to small changes in parameters. Examples from materials science (phase transitions), power grid models, financial and banking systems. Special emphasis on mean field models and their large deviations, including computational issues of uncertainty quantification.
3 units, Spr (Papanicolaou, G)

MATH 238. Mathematical Finance
(Same as STATS 250) Stochastic models of financial markets. Forward and futures contracts. European options and equivalent martingale measures. Hedging strategies and management of risk. Term structure models and interest rate derivatives. Optimal stopping and American options. Corequisites: MATH 236 and 227 or equivalent.
3 units, Win (Papanicolaou, G)

MATH 239. Computation and Simulation in Finance
Monte Carlo, finite difference, tree, and transform methods for the numerical solution of partial differential equations in finance. Emphasis is on derivative security pricing. Prerequisite: 238 or equivalent.
3 units, Spr (Staff)

MATH 240. Topics in Financial Mathematics: Fixed Income Models
Introduction to continuous time models for arbitrage-free pricing of interest rate derivatives. Bonds, yields, and the construction of yield curves. Caps, floors, swaps, swaptions, and bond options. Short rate models. Yield curve models. Forward measures. Forward and futures. LIBOR and swap market models. Prerequisite: MATH 238.
3 units, not given this year

MATH 243. Functions of Several Complex Variables
3 units, Win (Eliashberg, Y)

MATH 244. Riemann Surfaces
Compact Riemann surfaces and algebraic curves; cohomology of sheaves; Serre duality; Riemann-Roch theorem and application; Jacobians; Abel's theorem. May be repeated for credit.
3 units, not given this year

MATH 245A. Topics in Algebraic Geometry: Moduli Theory
Topics in the study of moduli spaces: Grothendieck's Quot scheme, Hilbert scheme, boundedness, semistable reduction, fine and coarse moduli space, geometric invariant theory, deformation theory, and universal families. Examples of moduli spaces including moduli of curves, moduli of vector bundles and moduli of maps. May be repeated for credit.
3 units, Aut (Li, J)

MATH 245B. Topics in Algebraic Geometry: Intersection Theory
Topics such as intersection theory on surfaces, toric varieties, and homogeneous spaces; numerical criteria for positivity; Chow groups and rings. May be repeated for credit.
3 units, Win (Vakil, R)

MATH 245C. Topics in Algebraic Geometry: Alterations
3 units, Spr (Conrad, B)

MATH 247. Topics in Group Theory
Topics include the Burnside basis theorem, classification of p-groups, regular and powerful groups, Sylow theorems, the Frattini argument, nilpotent groups, solvable groups, theorems of P. Hall, group cohomology, and the Schur-Zassenhaus theorem. The classical groups and introduction to the classification of finite simple groups and its applications. May be repeated for credit.
3 units, not given this year

MATH 248. Topics in arithmetic geometry: modular curves
The theory of modular curves from an arithmetic and moduli-theoretic perspective, linking the complex-analytic theory with algebro-geometric considerations, including q-expansions and the arithmetic of modular forms. Prerequisites: familiarity with classical modular forms, basic commutative algebra, and schemes at the level of Math 216a, b. May be repeated for credit.
3 units, Win (Conrad, B)

MATH 248A. Algebraic Number Theory
Structure theory and Galois theory of local and global fields, finiteness theorems for class numbers and units, adelic techniques. Prerequisites: MATH 210A,B.
3 units, not given this year

MATH 249A. Transcendental Number Theory
3 units, Aut (Soundararajan, K)

MATH 249B. Topics in Number Theory: Geometry of Numbers
3 units, Win (Venkatesh, A)

MATH 249C. Topics in Number Theory: Additive Combinatorics
3 units, Spr (Thorne, F)

MATH 250. Topics in Algebra
3 units, not given this year

MATH 252. Algebraic Groups
Smooth affine groups over general fields, quotients, tori, solvable groups, reductive groups, root systems, Existence and Isomorphism theorem, structure theory. If time permits, classification theory over interesting fields. Prerequisites: 210A, 210B, and familiarity with algebraic varieties over general fields.
3 units, Win (Conrad, B)

MATH 254. Geometric Methods in the Theory of Ordinary Differential Equations
Topics may include: structural stability and perturbation theory of dynamical systems; hyperbolic theory; first order PDE; normal forms, bifurcation theory; Hamiltonian systems, their geometry and applications. May be repeated for credit.
3 units, not given this year

MATH 256A. Partial Differential Equations
The theory of linear and nonlinear partial differential equations, beginning with linear theory involving use of Fourier transform and Sobolev spaces. Topics: Schauder and L2 estimates for elliptic and parabolic equations; De Giorgi-Nash-Moser theory for elliptic equations; nonlinear equations such as the minimal surface equation, geometric flow problems, and nonlinear hyperbolic equations.
3 units, Spr (Simon, L)

MATH 256B. Partial Differential Equations
Continuation of 256A.
3 units, Win (Vasy, A)

MATH 257A. Symplectic Geometry and Topology
Linear symplectic geometry and linear Hamiltonian systems. Symplectic manifolds and their Lagrangian submanifolds, local properties. Symplectic geometry and mechanics. Contact geometry and contact manifolds. Relations between symplectic and contact manifolds. Hamiltonian systems with symmetries. Momentum map and its properties. May be repeated for credit.
3 units, Aut (Ionel, E)

MATH 257B. Symplectic Geometry and Topology
Continuation of 257A. May be repeated for credit.
3 units, Win (Ionel, E)

MATH 258. Topics in Geometric Analysis
May be repeated for credit.
3 units, Aut (Schoen, R)

MATH 261A. Functional Analysis
Geometry of linear topological spaces. Linear operators and functionals. Spectral theory. Calculus for vector-valued functions. Operational calculus. Banach algebras. Special topics in functional analysis. May be repeated for credit.
3 units, not given this year

MATH 263A. Lie Groups and Lie Algebras
Definitions, examples, properties. Semi-simple Lie algebras, their structure and classification. Cartan decomposition: real Lie algebras. Representation theory: Cartan-Stiefel diagram, weights. Weyl character formula. Orthogonal and symplectic representations. May be repeated for credit. Prerequisite: 210 or equivalent.
3 units, Win (Bump, D)

MATH 263B. Lie Groups and Lie Algebras
Continuation of 263A. May be repeated for credit.
3 units, Spr (Bump, D)

MATH 264. Infinite Dimensional Lie Algebra
3 units, not given this year

MATH 266. Computational Signal Processing and Wavelets
Theoretical and computational aspects of signal processing. Topics: time-frequency transforms; wavelet bases and wavelet packets; linear and nonlinear multiresolution approximations; estimation and restoration of signals; signal compression. May be repeated for credit.
3 units, not given this year

MATH 269. Topics in symplectic geometry
May be repeated for credit.
3 units, Win (Eliashberg, Y)

MATH 270. Geometry and Topology of Complex Manifolds
Complex manifolds, Kahler manifolds, curvature, Hodge theory, Lefschetz theorem, Kahler-Einstein equation, Hermitian-Einstein equations, deformation of complex structures. May be repeated for credit.
3 units, not given this year

MATH 271. The H-Principle
The language of jets. Thom transversality theorem. Holonomic approximation theorem. Applications: immersion theory and its generaliazations. Differential relations and Gromov's h-principle for open manifolds. Applications to symplectic geometry. Microflexibility. Mappings with simple singularities and their applications. Method of convex integration. Nash-Kuiper C^1-isometric embedding theorem.
3 units, not given this year

MATH 272. Topics in Partial Differential Equations
3 units, not given this year

MATH 282A. Low Dimensional Topology
The theory of surfaces and 3-manifolds. Curves on surfaces, the classification of diffeomorphisms of surfaces, and Teichmuller space. The mapping class group and the braid group. Knot theory, including knot invariants. Decomposition of 3-manifolds: triangulations, Heegaard splittings, Dehn surgery. Loop theorem, sphere theorem, incompressible surfaces. Geometric structures, particularly hyperbolic structures on surfaces and 3-manifolds.
3 units, Aut (Mirzakhani, M)

MATH 282B. Homotopy Theory
Homotopy groups, fibrations, spectral sequences, simplicial methods, Dold-Thom theorem, models for loop spaces, homotopy limits and colimits, stable homotopy theory.
3 units, Win (Galatius, S)

MATH 282C. Fiber Bundles and Cobordism
Possible topics: principal bundles, vector bundles, classifying spaces. Connections on bundles, curvature. Topology of gauge groups and gauge equivalence classes of connections. Characteristic classes and K-theory, including Bott periodicity, algebraic K-theory, and indices of elliptic operators. Spectral sequences of Atiyah-Hirzebruch, Serre, and Adams. Cobordism theory, Pontryagin-Thom theorem, calculation of unoriented and complex cobordism. May be repeated for credit.
3 units, Spr (Carlsson, G)

MATH 283A. Topics in Topology
3 units, Win (Carlsson, G)

MATH 284A. Geometry and Topology in Dimension 3
The Poincare conjecture and the uniformization of 3-manifolds. May be repeated for credit.
3 units, not given this year

MATH 284B. Geometry and Topology in Dimension 3
The Poincare conjecture and the uniformization of 3-manifolds. May be repeated for credit.
3 units, not given this year

MATH 286. Topics in Differential Geometry
May be repeated for credit.
3 units, Spr (Bernstein, J)

MATH 290B. Model Theory B
(Same as PHIL 350B) Decidable theories. Model-theoretic background. Arithmetic of addition, real closed and algebraically closed fields, weak second order arithmetic, theories of terms, theories of arrays, temporal logic. Combining decision procedures. May be repeated for credit. Prerequisite: 151,152 or equivalents.
1-3 units, not given this year

MATH 292A. Set Theory
(Same as PHIL 352A) The basics of axiomatic set theory; the systems of Zermelo-Fraenkel and Bernays-Gödel. Topics: cardinal and ordinal numbers, the cumulative hierarchy and the role of the axiom of choice. Models of set theory, including the constructible sets and models constructed by the method of forcing. Consistency and independence results for the axiom of choice, the continuum hypothesis, and other unsettled mathematical and set-theoretical problems. Prerequisites: PHIL151 and MATH 161, or equivalents.
3 units, Win (Mints, G)

MATH 293A. Proof Theory
(Same as PHIL 353A) Gentzen's natural deduction and sequential calculi for first-order propositional and predicate logics. Normalization and cut-elimination procedures. Relationships with computational lambda calculi and automated deduction. Prerequisites: 151, 152, and 161, or equivalents.
3 units, not given this year

MATH 295. Computation and Algorithms in Mathematics
Use of computer and algorithmic techniques in various areas of mathematics. Computational experiments. Topics may include polynomial manipulation, Groebner bases, computational geometry, and randomness. May be repeated for credit.
3 units, not given this year

MATH 301. Advanced Topics in Convex Optimization
Modern developments in convex optimization: semidefinite programming; novel and efficient first-order algorithms for smooth and nonsmooth convex optimization. Emphasis on numerical methods suitable for large scale problems arising in science and engineering. Prerequisites: convex optimization (EE 364), linear algebra (MATH 104), numerical linear algebra (CME 302); background in probability, statistics, real analysis and numerical optimization.
3 units, Win (Candes, E)

MATH 355. Graduate Teaching Seminar
Required of and limited to first-year Mathematics graduate students.
1 unit, Spr (White, B; Lucianovic, M)

MATH 360. Advanced Reading and Research
1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MATH 361. Research Seminar Participation
Participation in a faculty-led seminar which has no specific course number. (Staff)
1-3 units, Aut (Staff), Win (White, B), Spr (Kerckhoff, S), Sum (Staff)

MATH 381. Seminar in Analysis
1-3 units, by arrangement

MATH 384. Seminar in Geometry
1 unit, by arrangement

MATH 385. Seminar in Topology
1-3 units, by arrangement

MATH 388. Seminar in Probability and Stochastic Processes
1-3 units, by arrangement

MATH 389. Seminar in Mathematical Biology
1-3 units, by arrangement

MATH 391. Research Seminar in Logic and the Foundations of Mathematics
(Same as PHIL 391) Contemporary work. May be repeated a total of three times for credit.
1-3 units, Aut (Mints, G; Feferman, S), Win (Mints, G; Feferman, S), Spr (Staff)

MATH 395. Classics in Geometry and Topology
Original papers in geometry and in algebraic and geometric topology. May be repeated for credit.
3 units, Spr (Staff)

MATH 396. Graduate Progress
Results and current research of graduate and postdoctoral students. May be repeated for credit.
1 unit, not given this year

MATH 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MECHANICAL ENGINEERING (ME) COURSES

UNDERGRADUATE COURSES IN MECHANICAL ENGINEERING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ME 10AX. Design Thinking and the Art of Innovation
Techniques that designers use to create innovative solutions to difficult problems that cross domains. Project-based. Approaches to problem identification and problem solving. Tools such as need finding, structured brainstorming, synthesis, rapid prototyping, and visual communication. Field trips to a local design firm, a robotics lab, and a prototyping lab. The pleasures of creative design and hands-on development of tangible solutions. Design has a unique

approach to looking at both the problem domain and the solution domain in issues where technology, social issues, human behavior, and business needs overlap.

2 units, Aut (Burnett, W)

ME 11AX. Graphic Design: The Art of Product Branding

Onsite course. Comprehensive approach to corporate product branding. Working with a current 1185 design client, students experience the development of a product brand from naming and developing positioning to the creation of a logo, web site, and collateral. Final presentations of overall brands to corporate executives. Field trips to the client site, and workshops with naming, positioning, and design professionals.

2 units, Aut (Burke, P)

ME 12N. The Jet Engine

(Stanford Introductory Seminar) Preference to freshmen. How a jet engine works; the technologies and analytical techniques required to understand them. Dynamics, thermodynamics, turbomachinery, combustion, advanced materials, cooling technologies, and control systems. Visits to research laboratories, examination of a partially disassembled engine, and probable operation of a small jet engine. Prerequisites: high school physics. GER:DB-EngrAppSci

3 units, Aut (Eaton, J)

ME 14N. How Stuff Is Made

(Stanford Introductory Seminar) The design and engineering of products and processes. Machined, fabric, food, and electrical goods. Tradeoffs in choice of serial, continuous, and batch fabrication. Final project: students research and create a web site about the engineering aspects of a product and its processes. Field trips to manufacturing facilities.

3 units, Aut (Pruitt, B)

ME 18Q. Teamology: Creative Teams and Individual Development

(Stanford Introductory Seminar) Preference to sophomores. Roles on a problem solving team that best suit individual creative characteristics. Two teams are formed for teaching experientially how to develop less conscious abilities from teammates creative in those roles. Reinforcement teams have members with similar personalities; problem solving teams are composed of people with maximally different personalities.

3 units, Aut (Wilde, D)

ME 21N. Renaissance Machine Design

(Stanford Introductory Seminar) Preference to freshmen. Technological innovations of the 1400s that accompanied the proliferation of monumental art and architecture by Brunelleschi, da Vinci, and others who designed machines and invented novel construction, fresco, and bronze-casting techniques. The social and political climate, from the perspective of a machine designer, that made possible and demanded engineering expertise from prominent artists. Hands-on projectsto provide a physical understanding of Renaissance-era engineering challenges and introduce the pleasure of creative engineering design. Technical background not required. GER:DB-EngrAppSci

3 units, Spr (Cutkosky, M)

ME 25N. Global Warming and Climate Change: Fact or Fiction

(Stanford Introductory Seminar) Preference to freshmen. Scientific arguments concerning debates between the view that anthropogenic activities are not causing global warming versus the view that these activities are responsible for a global warming that results in significant climate change. Consequences of increased demand for energy. Prerequisites: high school physics, chemistry, and biology.

3 units, Win (Bowman, C)

ME 26N. Think Like a Designer

(Stanford Introductory Seminar) Introduces students to techniques designers use to create highly innovative solutions across domains. The project-based class will emphasize approaches to problem identification and problem solving. Topics include need-finding, structured brainstorming, synthesis, rapid prototyping, and visual communication; field trips to a local design firm, a robotics lab, and a machining lab. A secondary goal of the seminar is to introduce students to the pleasures of creative design and hands-on development of tangible solutions.

3 units, Aut (Banerjee, S)

ME 28SI. Professional Design Practices

Lab. Professional skills are developed through web-based portfolio and resume building. Additionally, visits to local design consulting firms and in house design groups will help solidify students understanding of the designer in the professional workplace.

1 unit, Aut (Burnett, W)

ME 29SI. Cars: A Crash Course

Focus is on the basic mechanics and significance of cars. Topics include a basic, real-world understanding of automobile workings, histories, industries, cultural impact, and related media. Field trips to Tesla Motors and Go-Kart Racer will be organized, and there will be guest appearances by local automotive historians and enthusiasts. Students will get hands on experience with maintaining real cars, see high performance engines run, and have the opportunity to learn how to drive a manual transmission.

1 unit, Aut (Gerdes, C)

ME 70. Introductory Fluids Engineering

Elements of fluid mechanics as applied to engineering problems. Equations of motion for incompressible ideal flow. Hydrostatics. Control volume laws for mass, momentum, and energy. Bernoulli equation. Dimensional analysis and similarity. Flow in ducts. Boundary layer flows. Lift and drag. Lab experiment demonstrations. Prerequisites: ENGR 14 and 30. GER:DB-EngrAppSci

4 units, Win (Santiago, J), Spr (Cappelli, M)

ME 80. Mechanics of Materials

Mechanics of materials and deformation of structural members. Topics include stress and deformation analysis under axial loading, torsion and bending, column buckling and pressure vessels. Introduction to stress transformation and multiaxial loading. Prerequisite: ENGR 14. GER:DB-EngrAppSci

4 units, Aut (Levenston, M), Spr (Cai, W)

ME 101. Visual Thinking

Lecture/lab. Visual thinking and language skills are developed and exercised in the context of solving design problems. Exercises for the mind's eye. Rapid visualization and prototyping with emphasis on fluent and flexible idea production. The relationship between visual thinking and the creative process. Enrollment limited to 60. GER:DB-EngrAppSci

3 units, Aut (Northway, D; Gleason, P), Win (Meissner, S; Kessin, J), Spr (Northway, D)

ME 103D. Engineering Drawing and Design

Designed to accompany 203. The fundamentals of engineering drawing including orthographic projection, dimensioning, sectioning, exploded and auxiliary views, and assembly drawings. Homework drawings are of parts fabricated by the student in the lab. Assignments in 203 supported by material in 103D and sequenced on the assumption that the student is enrolled in both courses simultaneously.

1 unit, Aut (Milroy, J), Win (Milroy, J)

ME 104. The Designer's Voice

How to develop a point of view about a design career in order to articulate a design vision, inspire a design studio, or infect a business with a culture of design thinking. Focus is on the integration of work and worldview, professional values, design language, and the development of the designer¿s voice. Role play, guest speakers, individual mentoring and coaching, student journals. Restricted to undergraduate Product Design seniors.

1 unit, Aut (Evans, D; Burnett, W)

ME 104B. Designing the Authentic Life

A design thinking approach to help students develop a point of view about their career. Introduction to design thinking, the integration of work and worldview, and practices that support vocation formation. Seminar-style discussions, role playing, writing assignments, guest speakers, and individual mentoring and coaching. Participants required to keep a journal. Enrollment limited to 45 juniors and seniors from any major. See http://www.designingtheauthenticlife.org

2 units, Aut (Burnett, W; Evans, D), Win (Burnett, W; Evans, D), Spr (Burnett, W; Evans, D)

ME 110. Design Sketching

Freehand sketching, rendering, and design development. Students develop a design sketching portfolio for review by program faculty. May be repeated for credit.

1 unit, Aut (Li, W; Scott, W), Win (Li, W; Scott, W), Spr (Li, W; Scott, W)

ME 112. Mechanical Systems Design
Lecture/lab. Characteristics of machine elements including gears, bearings, and shafts. Design for fatigue life. Electric motor fundamentals. Transmission design for maximizing output power or efficiency. Mechanism types, linkage analysis and kinematic synthesis. Team-based design projects emphasizing the balance of physical with virtual prototyping based on engineering analysis. Lab for dissection of mechanical systems and project design reviews. Prerequisites: 80, 101. Recommended: 203, ENGR 15. GER:DB-EngrAppSci
4 units, Win (Cutkosky, M)

ME 113. Mechanical Engineering Design
Capstone course. Mechanical engineering design is experienced by students as they work on team projects obtained from industry or other organizations. Prerequisites: 80,101,112, 203. Enrollment priority to ME majors. GER:DB-EngrAppSci
4 units, Spr (Nelson, D)

ME 115A. Introduction to Human ValueS in Design
Lecture/lab. . Introduces the central philosophy of the product design program, emphasizing the relation between technical and human values, the innovation process, and design methodology. Lab exercises include development of simple product concepts visualized in rapidly executed three-dimensional mockups. Prerequisite: 101.
3 units, Aut (Kelley, D)

ME 115B. Product Design Methods
Problem-finding, problem-solving, intermediate creativity methods and effective techniques for researching and presenting product concepts. Individual- and team-based design projects emphasizing advanced visual thinking and prototyping skills. Prerequisite: ME115A GER:DB-EngrAppSci
3 units, Win (Edson, J)

ME 115C. Design and Business Factors
Design and Business Factors: Introduces business concepts critical to determining the success of new products and services. Students will learn to estimate the cost of R&D for new product development. Using financial analysis, ROI, and tollgates to reduce development risk will be explored using case studies and simulations. Students will develop a bill of materials and a profit and loss statement for a sample product concept, prototype a design consultancy, and create a business proposal for a proposed new product company.
3 units, Spr (Burnett, W; Siddiqui, O)

ME 116. Advanced Product Design: Formgiving
Small- and medium-scale design projects are carried to a high degree of aesthetic refinement. Emphasis is on form development, design process, and model making. Prerequisites: ME 115B, ARTSTUDI 160. GER:DB-EngrAppSci
4 units, Aut (Lukic, B)

ME 120. History and Philosophy of Design
Major schools of 19th- and 20th-century design (arts and crafts movement, bauhaus, industrial design, and postmodernism) are analyzed in terms of their continuing cultural relevance. The relation of design to art, technology, and politics; readings from principal theorists, practitioners, and critics; recent controversies in industrial and graphic design, architecture, and urbanism. Enrollment limited to 40.
3 units, Spr (Katz, B)

ME 131A. Heat Transfer
The principles of heat transfer by conduction, convection, and radiation with examples from the engineering of practical devices and systems. Topics include transient and steady conduction, conduction by extended surfaces, boundary layer theory for forced and natural convection, boiling, heat exchangers, and graybody radiative exchange. Prerequisites: 70, ENGR 30. Recommended: intermediate calculus, ordinary differential equations. GER:DB-EngrAppSci
3-4 units, Aut (Goodson, K)

ME 131B. Fluid Mechanics: Compressible Flow and Turbomachinery
Engineering applications involving compressible flow: aircraft and rocket propulsion, power generation; application of mass, momentum, energy and entropy balance to compressible flows; variable area isentropic flow, normal shock waves, adiabatic flow with friction, flow with heat addition. Operation of flow systems: the propulsion system. Turbomachinery: pumps, compressors, turbines. Angular momentum analysis of turbomachine performance, centrifugal and axial flow machines, effect of blade geometry, dimensionless performance of turbomachines; hydraulic turbines; steam turbines; wind turbines. Compressible flow turbomachinery: the aircraft engine. Prerequisites: 70, ENGR 30. GER:DB-EngrAppSci
4 units, Win (Lele, S)

ME 140. Advanced Thermal Systems
Capstone course. Thermal analysis and engineering emphasizing integrating heat transfer, fluid mechanics, and thermodynamics into a unified approach to treating complex systems. Mixtures, humidity, chemical and phase equilibrium, and availability. Labs apply principles through hands-on experience with a turbojet engine, PEM fuel cell, and hybrid solid/oxygen rocket motor. Use of MATLAB as a computational tool. Prerequisites: ENGR 30, ME 70, and 131A,B. GER:DB-EngrAppSci
5 units, Spr (Mitchell, R)

ME 150. Internal Combustion Engines
Internal combustion engines including conventional and turbocharged spark ignition, and diesel engines. Lectures: basic engine cycles, engine components, methods of analysis of engine performance, pollutant emissions, and methods of engine testing. Lab involves hands-on experience with engines and test hardware. Limited enrollment. Prerequisites: 140. GER:DB-EngrAppSci
3 units, Aut (Edwards, C)

ME 161. Dynamic Systems, Vibrations and Control
(Same as ME 261) (Graduate students only enroll in 261.) Modeling, analysis, and measurement of mechanical and electromechanical systems. Numerical and closed form solutions of ordinary differential equations governing the behavior of single and multiple degree of freedom systems. Stability, resonance, amplification and attenuation, and control system design. Prerequisite: background in dynamics and calculus such as ENGR 15 and MATH 43. Recommended: CME 102, and familiarity with differential equations, linear algebra, and basic electronics. GER:DB-EngrAppSci
3-4 units, Aut (Mitiguy, P)

ME 190. Ethical Issues in Mechanical Engineering
Moral rights and responsibilities of engineers in relation to society, employers, colleagues, and clients; cost-benefit-risk analysis, safety, and informed consent; whistle blowing; engineers as expert witnesses, consultants, and managers; ethical issues in engineering design, manufacturing, and operations, and engineering work in foreign countries; and ethical implications of the social and environmental contexts of contemporary engineering. Case studies and field research. Enrollment limited to 25 Mechanical Engineering majors.
4 units, not given this year

ME 191. Engineering Problems and Experimental Investigation
Directed study and research for undergraduates on a subject of mutual interest to student and staff member. Student must find faculty sponsor and have approval of adviser.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ME 191H. Honors Research
Student must find faculty honors adviser and apply for admission to the honors program. (Staff)
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ME 196. Design and Manufacturing Forum
(Same as ME 396) Invited speakers address issues of interest to design and manufacturing engineering and business students. Sponsored by the Product Realization Network at Stanford.
1 unit, Win (Reis, R), Spr (Reis, R)

GRADUATE COURSES IN MECHANICAL ENGINEERING

Primarily for graduate students; undergraduates may enroll with consent of instructor.

ME 201. Dim Sum of Mechanical Engineering
Introduction to research in mechanical engineering for M.S. students and upper-division undergraduates. Weekly presentations by current ME Ph.D. and second-year fellowship students to show research opportunities across the department. Strategies for getting involved in a research project. (Sheppard)
1 unit, Aut (Kuhl, E; Gardella, I)

ME 203. Design and Manufacturing
Integrated experience involving need finding, product definition, conceptual design, detail design, prototype manufacture, public presentation of outcomes, archiving and intrepreting the product realization process and its results. Presents an overview of manufacturing processes crucial to the practice of design. Corequisite: 103D or CAD experience. Corequisite for WIM for Mechanical Engineering and Product Design undergraduate majors: ENGR102M. Recommended: 101.
4 units, Aut (Beach, D), Win (Beach, D)

ME 203X. Prototyping and Process Capture
Concepts and methods for low resolution prototyping as an integral activity in engineering design process. Presentations by faculty and design exercises by students. Assignments are blog posts. Designed to work in phase with ME203 and offers greater depth in protoyping strategy, technique, and resultant insights. Enrollment limited to 6. Corequisite: ME 203.
1 unit, not given this year

ME 204. Bicycle Design and Frame-Building
Lecture/lab. The engineering and artistic execution of designing and building a bicycle frame. Fundamentals of bicycle dynamics, handling, and sizing. Manufacturing processes. Films, guest lecturers, field trips. Each student designs and fabricates a custom bicycle frame. Limited enrollment. Prerequisite: 203 or equivalent.
3 units, Spr (Connolly, R)

ME 206A. Entrepreneurial Design for Extreme Affordability
Project course jointly offered by School of Engineering and Graduate School of Business. Students apply engineering and business skills to design product prototypes, distribution systems, and business plans for entrepreneurial ventures in developing countries for a specified challenge faced by the world's poor. Topics include user empathy, appropriate technology design, rapid prototype engineering and testing, social technology entrepreneurship, business modeling, and project management. Weekly design reviews; final course presentation. Industry and adviser interaction. Limited enrollment via application; see http://www.stanford.edu/class/me206.
4 units, Win (Patell, J; Beach, D)

ME 206B. Entrepreneurial Design for Extreme Affordability
Part two of two-quarter project course jointly offered by School of Engineering and Graduate School of Business. Second quarter emphasizes prototyping and implementation of specific projects identified in first quarter. Students work in cross-disciplinary project teams. Industry and adviser interaction, weekly design reviews; final course presentation. Prerequisite: 206A. (Jointly offered as GSB OIT333B)
4 units, Spr (Beach, D; Patell, J)

ME 208. Patent Law and Strategy for Innovators and Entrepreneurs
How to build a patent portfolio and avoid patent infringement. How to conduct a patent search. How to file a provisional patent application.
2-3 units, Aut (Schox, J)

ME 210. Introduction to Mechatronics
Technologies involved in mechatronics (intelligent electromechanical systems), and techniques to apply this technology to mecatronic system design. Topics include: electronics (A/D, D/A converters, op-amps, filters, power devices); software program design, event-driven programming; hardware and DC stepper motors, solenoids, and robust sensing. Large, open-ended team project. Limited enrollment. Prerequisites: ENGR 40, CS 106, or equivalents.
4 units, Win (Ohline, R; Kenny, T)

ME 212. Calibrating the Instrument
For first-year graduate students in the Joint Program in Design. Means for calibrating the designer's mind/body instrument through tools including improvisation, brainstorming, creative imaging, educational kinesiology, and Brain Gym. Current design issues; guest speakers; shared stories; and goal setting.
1 unit, Aut (Edmark, J)

ME 214. Good Products, Bad Products
(Same as ME 314) The characteristics of industrial products that cause them to be successes or failures: the straightforward (performance, economy, reliability), the complicated (human and cultural fit, compatibility with the environment, craftsmanship, positive emotional response of the user), the esoteric (elegance, sophistication, symbolism). Engineers and business people must better understand these factors to produce more successful products. Projects, papers, guest speakers, field trips. GER:DB-EngrAppSci
3-4 units, Win (Beach, D)

ME 216A. Advanced Product Design: Needfinding
Human needs that lead to the conceptualization of future products, environments, systems, and services. Field work in public and private settings; appraisal of personal values; readings on social ethnographic issues; and needfinding for a corporate client. Emphasis is on developing the flexible thinking skills that enable the designer to navigate the future. Prerequisites for undergraduates: 116 and 203, or consent of the instructor. Prerequisites for graduate students: 203 and 313, or consent of the instructor.
3-4 units, Win (Patnaik, D)

ME 216B. Advanced Product Design: Implementation
Summary project using knowledge, methodology, and skills obtained in Product Design major. Students implement an original design concept and present it to a professional jury. Prerequisite: 216A.
3-4 units, Spr (Staff)

ME 218A. Smart Product Design Fundamentals
Lecture/lab. Team design project series on programmable electromechanical systems design. Topics: transistors as switches, digital and analog circuits, operational amplifiers, comparators, software design, programming in C. Lab fee. Limited enrollment.
4-5 units, Aut (Carryer, J)

ME 218B. Smart Product Design Applications
Lecture/lab. Second in team design project series on programmable electromechanical systems design. Topics: user I/O, timer systems, interrupts, signal conditioning, software design for embedded systems, sensors, actuators, noise, and power supplies. Lab fee. Limited enrollment. Prerequisite: 218A or passing the smart product design fundamentals proficiency examination.
4-5 units, Win (Carryer, J)

ME 218C. Smart Product Design Practice
Lecture/lab. Advanced level in series on programmable electromechanical systems design. Topics: inter-processor communication, system design with multiple microprocessors, architecture and assembly language programming for the PIC microcontroller, controlling the embedded software tool chain, A/D and D/A techniques, electronic manufacturing technology. Team project. Lab fee. Limited enrollment. Prerequisite: 218B.
4-5 units, Spr (Carryer, J)

ME 218D. Smart Product Design: Projects
Lecture/lab. Industrially sponsored project is the culmination of the Smart Product Design sequence. Student teams take on an industrial project requiring application and extension of knowledge gained in the prior three quarters, including prototyping of a final solution with hardware, software, and professional documentation and presentation. Lectures on electronic and software design, and electronic manufacturing techniques. Topics: chip level design of microprocessor systems, real time operating systems, alternate microprocessor architectures, and PCB layout and fabrication.
4 units, Aut (Carryer, J)

ME 219. The Magic of Materials and Manufacturing
Lecture/lab. Methods for market-quantity manufacturing of parts and products from a product designer's point of view. Materials including metals, plastics, ceramics, fibers, and foams, and processes that manipulate, exploit, transform, and modify these materials. Visual descriptions of processes, product examples, relevant material details, cost information, and manufacturability rules-of-

thumb. Imagining and creating new products. Manufacturing site visits; laboratory projects. Enrollment limited to 20.

3 units, Spr (Beach, D; Johnson, K)

ME 220. Introduction to Sensors

Sensors are widely used in scientific research and as an integral part of commercial products and automated systems. The basic principles for sensing displacement, force, pressure, acceleration, temperature, optical radiation, nuclear radiation, and other physical parameters. Performance, cost, and operating requirements of available sensors. Elementary electronic circuits which are typically used with sensors. Lecture demonstration of a representative sensor from each category elucidates operating principles and typical performance. Lab experiments with off-the-shelf devices.

3-4 units, Spr (Kenny, T)

ME 221. Green Design Strategies and Metrics

Foundation in sustainable product design principles, reinforced by conceptual design projects. Discuss what aspects of sustainability matter most for different products. Application of dozens of strategies to improve product sustainability. Frameworks, measurements, and decision-making tools to navigate the complexities of designing greener products. Life-cycle analysis, materials, energy use, biomimicry, product-service systems, persuasive design, design for end-of-life, and systems thinking.

2 units, Win (Faludi, J)

ME 222. Design for Sustainability

Lecture/lab. Role of design in building a sustainable world. How to include sustainability in the design process considering environmental, cultural, and social impacts. Focus is on a proactive design approach, and the tools and techniques needed to translate theory into artifact.

2-3 units, Spr (Staff)

ME 227. Vehicle Dynamics and Control

The application of dynamics, kinematics, and control theory to the analysis and design of ground vehicle behavior. Simplified models of ride, handling, and braking, their role in developing intuition, and limitations in engineering design. Suspension design fundamentals. Performance and safety enhancement through automatic control systems. In-car laboratory assignments for model validation and kinesthetic understanding of dynamics. Limited enrollment. Prerequisites: ENGR 105, consent of instructor.

3 units, Spr (Gerdes, C)

ME 233. Making it Big: Crossing the Entrepreneur's Gap

Students take novel designs into entrepreneurial production and prepare for market production. Education, resources, and community to help cross the gap, found ideas and make them real in volume. Topics include entrepreneurial production methods and initiation, vendor selection and engagement, cost, design transfer, quality and testing, and manufacturing planning and execution. Leadership roles in entrepreneurial and large production-oriented companies. Case studies, project reviews, final presentation, industry interaction.

3 units, Aut (Theeuwes, M)

ME 238. Patent Prosecution

(Same as LAW 321.) Stages of the patent application process: identifying, capturing, and evaluating inventions; performing a patentability investigation, analyzing the documents, and the scope of the patent protection; composing claims that broadly cover the invention; creating a specification that supports the claims; filing a patent application with the U.S. Patent and Trademark Office; and analyzing an office action and preparing an appropriate response. Current rules and case law. Strategic decisions within each stage, such as: how does a patent application advance the patent portfolio; and in what countries should a patent application be filed?

2 units, Spr (Schox, J)

ME 239. Mechanics of the Cell

Kinematical description of basic structural elements used to model parts of the cell: rods, ropes, membranes, and shells. Formulation of constitutive equations: nonlinear elasticity and entropic contributions. Elasticity of polymeric networks. Applications to model basic filaments of the cytoskeleton: actin, microtubules, intermediate filaments, and complete networks. Applications to biological membranes.

3 units, Win (Kuhl, E)

ME 257. Turbine and Internal Combustion Engines

(Same as ME 357) Principles of design analysis for aircraft gas turbines and automotive piston engines. Analysis for aircraft engines performed for Airbus A380 type aircraft. Design parameters determined considering aircraft aerodynamics, gas turbine thermodynamics, compressible flow physics, and material limitations. Additional topics include characteristics of main engine components, off-design analysis, and component matching. Performance of automotive piston engines including novel engine concepts in terms of engine thermodynamics, intake and exhaust flows, and in-cylinder flow.

3 units, not given this year

ME 260. Fuel Cell Science and Technology

Emphasis on proton exchange membrane (PEM) and solid oxide fuel cells (SOFC), and principles of electrochemical energy conversion. Topics in materials science, thermodynamics, and fluid mechanics. Prerequisites: MATH 43, PHYSICS 55, and ENGR 30 or ME 140, or equivalents.

3 units, Spr (Fasching, R)

ME 261. Dynamic Systems, Vibrations and Control

(Same as ME 161) (Graduate students only enroll in 261.) Modeling, analysis, and measurement of mechanical and electromechanical systems. Numerical and closed form solutions of ordinary differential equations governing the behavior of single and multiple degree of freedom systems. Stability, resonance, amplification and attenuation, and control system design. Prerequisite: background in dynamics and calculus such as ENGR 15 and MATH 43. Recommended: CME 102, and familiarity with differential equations, linear algebra, and basic electronics.

3-4 units, Aut (Mitiguy, P)

ME 265. Technology Licencing and Commercialization

How to profit from technology; processes and strategies to commercialize functional or artistic inventions and creations (not limited to mechanical engineering). Business and legal aspects of determining what can be owned and licensed, how to determine commercial value, and what agreements are necessary. Contract and intellectual property law; focus is on provisions of license agreements and their negotiation.

3 units, Spr (Hustein, J)

ME 280. Skeletal Development and Evolution

(Same as BIOE 280, BIOE 280) The mechanobiology of skeletal growth, adaptation, regeneration, and aging is considered from developmental and evolutionary perspectives. Emphasis is on the interactions between mechanical and chemical factors in the regulation of connective tissue biology. Prerequisites: BIO 42, and ME 80 or BIOE 42.

3 units, not given this year

ME 281. Biomechanics of Movement

(Same as BIOE 281) Experimental techniques to study human and animal movement including motion capture systems, EMG, force plates, medical imaging, and animation. The mechanical properties of muscle and tendon, and quantitative analysis of musculoskeletal geometry. Projects and demonstrations emphasize applications of mechanics in sports, orthopedics, and rehabilitation. GER:DB-EngrAppSci

3 units, not given this year

ME 284A. Cardiovascular Bioengineering

(Same as BIOE 284A) Bioengineering principles applied to the cardiovascular system. Anatomy of human cardiovascular system, comparative anatomy, and allometric scaling principles. Cardiovascular molecular and cell biology. Overview of continuum mechanics. Form and function of blood, blood vessels, and the heart from an engineering perspective. Normal, diseased, and engineered replacement tissues.

3 units, Aut (Taylor, C)

ME 284B. Cardiovascular Bioengineering

(Same as BIOE 284B) Continuation of ME/BIOE 284A. Integrative cardiovascular physiology, blood fluid mechanics, and transport in the microcirculation. Sensing, feedback, and control of the circulation. Overview of congenital and adult cardiovascular disease, diagnostic methods, and treatment strategies. Engineering principles to evaluate the performance of cardiovascular devices and the efficacy of treatment strategies.

3 units, Win (Taylor, C)

ME 294. Medical Device Design
In collaboration with the School of Medicine. Introduction to medical device design for undergraduate and graduate engineering students. Design and prototyping. Labs; medical device environments may include hands-on device testing; and field trips to operating rooms and local device companies. Limited enrollment. Prerequisite: 203.

3 units, Aut (Milroy, J; Srivastava, S)

ME 297. Forecasting for Innovators:Technology, Tools & Social Change
Technologies from the steam engine to the microprocessor have been mixed gifts, at once benefitting humankind and creating many of the problems facing humanity today. This class will explore how innovators can use forecasting methods to identify new challenges, develop responsive innovations and anticipate unintended consequences. Students will produce a long-range forecast project, applying a variety of methodologies including research, expert interviews and graphical exploration.

3 units, Win (Saffo, P; Benjamin, C)

ME 298. Silversmithing and Design
Skills involved in working with precious metals at a small scale. Investment casting and fabrication techniques such as reticulation, granulations, filigree, and mokume gane.

3-4 units, Win (Shaughnessy, S; Knox Sather, A)

ME 299A. Practical Training
For master's students. Educational opportunities in high technology research and development labs in industry. Students engage in internship work and integrate that work into their academic program. Following internship work, students complete a research report outlining work activity, problems investigated, key results, and follow-up projects they expect to perform. Meets the requirements for curricular practical training for students on F-1 visas. Student is responsible for arranging own internship/employment and faculty sponsorship. Register under faculty sponsor's section number. All paperwork must be completed by student and faculty sponsor, as the Student Services Office does not sponsor CPT. Students are allowed only one quarter of CPT per degree program.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ME 299B. Practical Training
For Ph.D. students. Educational opportunities in high technology research and development labs in industry. Students engage in internship work and integrate that work into their academic program. Following internship work, students complete a research report outlining work activity, problems investigated, key results, and follow-up projects they expect to perform. Meets the requirements for curricular practical training for students on F-1 visas. Student is responsible for arranging own internship/employment and faculty sponsorship. Register under faculty sponsor's section number. All paperwork must be completed by student and faculty sponsor, as the student services office does not sponsor CPT. Students are allowed only one quarter of CPT per degree program.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ME 300A. Linear Algebra with Application to Enginering Computations
(Same as CME 200) Computer based solution of systems of algebraic equations obtained from engineering problems and eigensystem analysis, Gaussian elimination, effect of round-off error, operation counts, banded matrices arising from discretization of differential equations, ill-conditioned matrices, matrix theory, least square solution of unsolvable systems, solution of non-linear algebraic equations, eigenvalues and eigenvectors, similar matrices, unitary and Hermitian matrices, positive definiteness, Cayley-Hamilton theory and function of a matrix and iterative methods. Prerequisite: familiarity with computer programming, and MATH103, 130, or equivalent.

3 units, Aut (Gerritsen, M)

ME 300B. Partial Differential Equations in Engineering
(Same as CME 204) Geometric interpretation of partial differential equation (PDE) characteristics; solution of first order PDEs and classification of second-order PDEs; self-similarity; separation of variables as applied to parabolic, hyperbolic, and elliptic PDEs; special functions; eigenfunction expansions; the method of characteristics. If time permits, Fourier integrals and transforms, Laplace transforms. Prerequisite: CME 200/ME 300A, equivalent, or consent of instructor.

3 units, Win (Shaqfeh, E)

ME 300C. Introduction to Numerical Methods for Engineering
(Same as AA 214A, CME 206) Numerical methods from a user's point of view. Lagrange interpolation, splines. Integration: trapezoid, Romberg, Gauss, adaptive quadrature; numerical solution of ordinary differential equations: explicit and implicit methods, multistep methods, Runge-Kutta and predictor-corrector methods, boundary value problems, eigenvalue problems; systems of differential equations, stiffness. Emphasis is on analysis of numerical methods for accuracy, stability, and convergence. Introduction to numerical solutions of partial differential equations; Von Neumann stability analysis; alternating direction implicit methods and nonlinear equations. Prerequisites: CME 200/ME 300A, CME 204/ME 300B.

3 units, Spr (Iaccarino, G)

ME 301. Design and Launch your Product or Service
Apply principles of design thinking to the real-life challenge of imagining, prototyping, testing and iterating, building, marketing, and selling your product or service. Work will be in teams (you apply as an intact team) or alone. You must submit a proposal and team for approval. Proposal can be a physical good or service of any kind. Projects are treated as real start-ups, so the work will be intense. Proposal submitted by Feb 15, 2010 acceptance by March 1.

4 units, Spr (Klebahn, P; Dearing, M)

ME 302. The Future of the Automobile
(Same as CS 523) Guest speakers from academia and industry present their research results, share their visions, explain challenges, and offer solutions regarding individual transportation. Students are requested to draft brief write-ups on selected topics that will be discussed in class to develop an understanding of the interactions of technology, business, and society with a specific automotive focus. No specific technical background is required as it is encouraged that everyone brings in specific expertise regarding the automobile as a student, researcher, and/or consumer.

1 unit, Aut (Beiker, S; Gerdes, C), Win (Beiker, S; Gerdes, C; Thrun, S), Spr (Beiker, S; Gerdes, C; Thrun, S)

ME 304. The Designer's Voice
How to develop a point of view about adesign career to enable students to articulate their design vision, inspire a design studio, or infect a business with a culture of design thinking. Focus on the integration of work and worldview, professional values, design language, and the development of the designer’s voice. Seminar-style discussions, role playing, writing assignments, guest speakers, and individual mentoring and coaching. Participants are required to keep a journal.

1 unit, Win (Evans, D; Burnett, W)

ME 308. Spatial Motion
The geometry of motion in Euclidean space. Fundamentals of theory of screws with applications to robotic mechanisms, constraint analysis, and vehicle dynamics. Methods for representing the positions of spatial systems of rigid bodies with their interrelationships; the formulation of Newton-Euler kinetics applied to serial chain systems such as industrial robotics.

3 units, alternate years, not given this year

ME 309. Finite Element Analysis in Mechanical Design
Basic concepts of finite elements, with applications to problems confronted by mechanical designers. Linear static, modal, and thermal formulations; nonlinear and dynamic formulations. Students implement simple element formulations. Application of a commercial finite element code in analyzing design problems. Issues: solution methods, modeling techniques, features of various commercial codes, basic problem definition. Individual projects focus on the interplay of analysis and testing in product design/development. Prerequisite: MATH 103, or equivalent. Rec-

ommended: 80, or equivalent in structural and/or solid mechanics; some exposure to principles of heat transfer.

3 units, Spr (Sheppard, S)

ME 310A. Project-Based Engineering Design, Innovation, and Development

Three quarter sequence; for engineering graduate students intending to lead projects related to sustainability, automotive, biomedical devices, communication, and user interaction. Student teams collaborate with academic partners in Europe, Asia, and Latin America on product innovation challenges presented by global corporations to design requirements and construct functional prototypes for consumer testing and technical evaluation. Design loft format such as found in Silicon Valley consultancies. Typically requires international travel. Prerequisites: undergraduate engineering design project; consent of instructor.

4 units, Aut (Leifer, L)

ME 310B. Project-Based Engineering Design, Innovation, and Development

(Same as ENGR 310B) Three quarter sequence; for engineering graduate students intending to lead projects related to sustainability, automotive, biomedical devices, communication, and user interaction. Student teams collaborate with academic partners in Europe, Asia, and Latin America on product innovation challenges presented by global corporations to design requirements and construct functional prototypes for consumer testing and technical evaluation. Design loft format such as found in Silicon Valley consultancies. Typically requires international travel. Prerequisites: undergraduate engineering design project; consent of instructor.

4 units, not given this year

ME 310C. Project-Based Engineering Design, Innovation, and Development

Three quarter sequence; for engineering graduate students intending to lead projects related to sustainability, automotive, biomedical devices, communication, and user interaction. Student teams collaborate with academic partners in Europe, Asia, and Latin America on product innovation challenges presented by global corporations to design requirements and construct functional prototypes for consumer testing and technical evaluation. Design loft format such as found in Silicon Valley consultancies. Typically requires international travel. Prerequisites: undergraduate engineering design project; consent of instructor.

4 units, Spr (Leifer, L; Cockayne, W)

ME 311. Design Strategy and Leadership

The business of design, design as strategy, and design research. Students lead brainstorming, needfinding, and design strategy workshops with peers and industry leaders. Prerequisites: ME 312, ME 313.

3 units, Spr (Canada, A)

ME 312. Advanced Product Design: Formgiving

Lecture/lab. Small- and medium-scale design projects carried to a high degree of aesthetic refinement. Emphasis is on form development, design process, and model making. Prerequisites: 203, 313. Corequisite: ARTSTUDI 160.

3-4 units, Win (Burnett, W)

ME 313. Human Values and Innovation in Design

Introduction to the philosophy, spirit, and tradition of the product design program. Hands-on design projects used as vehicles for design thinking, visualization, and methodology. The relationships among technical, human, aesthetic, and business concerns. Drawing, prototyping, and design skills. Focus is on tenets of design philosophy: point of view, user-centered design, design methodology, and iterative design.

3 units, Aut (Banerjee, S)

ME 314. Good Products, Bad Products

(Same as ME 214) The characteristics of industrial products that cause them to be successes or failures: the straightforward (performance, economy, reliability), the complicated (human and cultural fit, compatibility with the environment, craftsmanship, positive emotional response of the user), the esoteric (elegance, sophistication, symbolism). Engineers and business people must better understand these factors to produce more successful products. Projects, papers, guest speakers, field trips.

3-4 units, Win (Beach, D)

ME 315. The Designer in Society

For graduate students. Career objectives and psychological orientation compared with existing social values and conditions. Emphasis is on assisting individuals in assessing their roles in society. Readings on political, social, and humanistic thought are related to technology and design. Experiential, in-class exercises, and term project. Enrollment limited to 24.

3 units, Spr (Roth, B; Klebahn, P)

ME 316A. Product Design Master's Project

For graduate Product Design or Design (Art) majors only. Students create and present two master's theses under the supervision of engineering and art faculty. Theses involve the synthesis of aesthetics and technological concerns in the service of human need and possibility. Product Design students register for 4 units; Art students for 2 units. Prerequisites: ME 216B, ME 365 Corequisite: ARTSTUDI 360.

2-4 units, Aut (Burnett, W; Kelley, D)

ME 316B. Product Design Master's Project

Continuation of 316A.

2-4 units, Win (Burnett, W; Kelley, D)

ME 316C. Product Design Master's Project

Continuation of 316B.

2-4 units, Spr (Burnett, W; Kelley, D)

ME 317A. Structured Methods in Product & Process Development: Product Definition

Systematic methodologies to define, develop, and produce world-class products. Student team projects to identify opportunities for improvement and develop a comprehensive product definition. Topics include value engineering, quality function deployment, design for assembly and producibility, design for variety and supply chain, design for life-cycle quality, and concurrent engineering. Students must take 317B to complete the project and obtain a letter grade. On-campus enrollment limited to 20; SCPD class size limited to 50, and each site must have at least 3 students to form a project team.

4 units, Win (Beiter, K)

ME 317B. Structured Methods in Product and Process Development: Quality by Design

Building on 317A, focus is on the implementation of competitive product design. Student groups apply structured methods to optimize the design of an improved product, and plan for its manufacture, testing, and service. The project deliverable is a comprehensive product and process specification. Topics: concept generation and selection (Pugh's Method), FMEA applied to the manufacturing process, design for robustness, Taguchi Method, SPC and six sigma process, tolerance analysis, flexible manufacturing, product testing, rapid prototyping. Enrollment limited to 40, not including SCPD students. Minimum enrollment of two per SCPD viewing site; single student site by prior consent of instructor. On-campus class limited to 20. For SCPD students, limit is 50 and each site must have a minimum of three students to form a project team and define a project on their own. Prerequisite: 317A.

4 units, Spr (Beiter, K)

ME 318. Computer-Aided Product Creation

Design course focusing on an integrated suite of computer tools: rapid prototyping, solid modeling, computer-aided machining, and computer numerical control manufacturing. Students choose, design, and manufacture individual products, emphasizing individual design process and computer design tools. Field trips demonstrate Stanford Product Realization Lab's relationship to the outside world. Structured lab experiences build a basic CAD/CAM/CNC proficiency. Limited enrollment. Prerequisite: consent of instructor.

4 units, Aut (Milroy, J), Win (Milroy, J), Spr (Milroy, J)

ME 322. Kinematic Synthesis of Mechanisms

The rational design of linkages. Techniques to determine linkage proportions to fulfill design requirements using analytical, graphical, and computer based methods.

3 units, not given this year

ME 323. Modeling and Identification of Mechanical Systems for Control

Lecture/Lab. The art and science behind developing mathematical models for control system design. Theoretical and practical system modeling and parameter identification. Frequency domain identification, parametric modeling, and black-box identification. Analyti-

cal work and laboratory experience with identification, controller implementation, and the implications of unmodeled dynamics and non-linearities. Prerequisites: linear algebra and system simulation with MATLAB/SIMULINK; ENGR 105.

3 units, not given this year

ME 324. Precision Engineering

Advances in engineering are often enabled by more accurate control of manufacturing and measuring tolerances. Concepts and technology enable precision such that the ratio of overall dimensions to uncertainty of measurement is large relative to normal engineering practice. Typical application areas: non-spherical optics, computer information storage devices, and manufacturing metrology systems. Application experience through design and manufacture of a precision engineering project, emphasizing the principles of precision engineering. Structured labs; field trips. Prerequisite: consent of instructors.

4 units, Spr (Beach, D; DeBra, D)

ME 325. Introduction to High Performance Computing

An introduction to the use of advanced computing resources with real-world examples of large-scale, multidisciplinary, simulation-based science as related to academic and applied research.

1 unit, Sum (Staff)

ME 326. Telerobotics and Human-Robot Interactions

Focus is on dynamics and controls. Evaluation and implementation of required control systems. Topics include master-slave systems, kinematic and dynamic similarity; control architecture, force feedback, haptics, sensory substitutions; stability, passivity, sensor resolution, servo rates; time delays, prediction, wave variables. Hardware-based projects encouraged, which may complement ongoing research or inspire new developments. Limited enrollment. Prerequisites: ENGR 205, 320 or CS 223A, or consent of instructor. (Niemeyer)

3 units, not given this year

ME 330. Advanced Kinematics

Kinematics from mathematical viewpoints. Introduction to algebraic geometry of point, line, and plane elements. Emphasis is on basic theories which have potential application to mechanical linkages, computational geometry, and robotics.

3 units, not given this year

ME 331A. Classical Dynamics

(Same as AA 242A) Accelerating and rotating reference frames. Kinematics of rigid body motion; Euler angles, direction cosines. D'Alembert's principle, equations of motion. Inertia properties of rigid bodies. Dynamics of coupled rigid bodies. Lagrange's equations and their use. Dynamic behavior, stability, and small departures from equilibrium. Prerequisite: ENGR 15 or equivalent.

3 units, Aut (Close, S)

ME 331B. Advanced Dynamics and Simulation

Advanced methods and computational tools for the efficient formulation of equations of motion for multibody systems. D'Alembert principle. Power, work, and energy. Kane's method. Lagrange's method. Computed torque control. Systems with constraints. Quaternions Numerical solutions of nonlinear algebraic and differential equations governing the behavior of multiple degree of freedom systems.

3 units, Spr (Mitiguy, P)

ME 333. Mechanics

Goal is a common basis for advanced mechanics courses. Formulation of the governing equations from a Lagrangian perspective. Examples include systems of particles and linear elastic solids. Waves in discrete and continuous media. Linear elasticity formulation in the static and dynamic cases, and elementary measures of stress and strain. Tensor and variational calculus.

3 units, Aut (Lew, A)

ME 335A. Finite Element Analysis

Fundamental concepts and techniques of primal finite element methods. Method of weighted residuals, Galerkin's method and variational equations. Linear eliptic boundary value problems in one, two and three space dimensions; applications in structural, solid and fluid mechanics and heat transfer. Properties of standard element families and numerically integrated elements. Implementation of the finite element method using Matlab, assembly of equations, and element routines. Legrange multiplier and penalty methods for treatment of constraints. The mathematical theory of finite elements.

3 units, Aut (Pinsky, P)

ME 335B. Finite Element Analysis

Finite element methods for linear dynamic analysis. Eigenvalue, parabolic, and hyperbolic problems. Mathematical properties of semi-discrete (t-continuous) Galerkin approximations. Modal decomposition and direct spectral truncation techniques. Stability, consistency, convergence, and accuracy of ordinary differential equation solvers. Asymptotic stability, over-shoot, and conservation laws for discrete algorithms. Mass reduction. Applications in heat conduction, structural vibrations, and elastic wave propagation. Computer implementation of finite element methods in linear dynamics. Implicit, explicit, and implicit-explicit algorithms and code architectures.

3 units, Win (Pinsky, P)

ME 335C. Finite Element Analysis

Variational formulation of nonlinear elliptic, parabolic and hyperbolic problems. Newton's method for solving nonlinear algebraic systems; load-stepping, convergence, divergence and bifurcation. Enhancement of Newton's method including line-search, quasi-Newton and arc-length methods. Finite element approximation and consistent linearization; definition of the tangent operator and residual vector. Data structures for nonlinear finite element analysis. Examples drawn from nonlinear (rigid) heat conduction, nonlinear elasticity and contact mechanics.

3 units, alternate years, not given this year

ME 336. Crystalline Anisotropy

(Same as MATSCI 359) Matrix and tensor analysis with applications to the effects of crystal symmetry on elastic deformation, thermal expansion, diffusion, piezoelectricity, magnetism, thermodynamics, and optical properties of solids, on the level of J. F. Nye's Physical Properties of Crystals. Homework sets use Mathematica.

3 units, Win (Barnett, D)

ME 337. Mechanics of Growth

Introdution to continuum theory and numerical solutions or biomechanical problems. Kinematics of finite growth. Balance equations in open system thermodynamics. Constitutive equations for biological tissues. Enhanced finite element models in biomechanics. Analytical solutions for simple model problems. Numerical solutions for more advanced problems such as: bone remodeling; wound healing; muscle regeneration; tumor growth; atherosclerosis; in-stent restenosis; and tissue engineering.

3 units, Aut (Kuhl, E)

ME 338A. Continuum Mechanics

Nonlinear continuum mechanics for solids and fluids. Kinematics of finite deformations. Measures of strain and stress. Finite rotations. Linearized kinematics and infinitesimal measures of deformations. Rates. Conservation laws for mass, momenta, and energy. Boundary value problem in continuum mechanics. Prerequisites: 333 and 300, or equivalent background with consent of instructor.

3 units, Win (Lew, A)

ME 338B. Continuum Mechanics

Constitutive theory; equilibrium constitutive relations; material frame indifference and material symmetry; finite elasticity; formulation of the boundary value problem; linearization and well-posedness; symmetries and configurational forces; numerical considerations.

3 units, alternate years, not given this year

ME 340A. Theory and Applications of Elasticity

Elasticity theory and application to material structures at microscale. Theories: stress, strain, and energy; equilibrium and compatibility conditions; boundary value problem. Solution methods: stress function, Green's function, Fourier transformation. Nu-

merical exercises using Matlab. Applications to defects in solids, thin films, and biomembranes.

3 units, not given this year

ME 340B. Elasticity in Microscopic Structures

This course provides analytic tools, notably the Green's function method, to solve elasticity problems (stress, strain, energy) of microscopic structures under deformation. Students shall be able to apply the theory of elasticity to study the interaction of defects in solids, such as inclusions, inhomogeneities, cracks, dislocations and interfaces.

3 units, Aut (Cai, W)

ME 341. Biomechanics of Hearing and Balance

Theory and practice of building mathematical models to understand physical phenomena; integration of imaging, physiology, and biomechanics. Journal club style discussions of research literature, examples from hearing science, speech production, and the vestibular system. Dualisms in modeling include: general principles versus detailed models; analytic versus computational models; forward versus inverse approaches; and the interplay between theory and experiments.

3 units, alternate years, not given this year

ME 342A. MEMS Laboratory

Practice and theory of MEMS device design and fabrication, orientation to fabrication facilities, and introduction to techniques for design and evaluation of MEMS devices in the context of designed projects. Emphasis on MEMS design (need finding, brainstorming, evaluation, and design methodology), characterization, and fabrication, including photolithography, etching, oxidation, diffusion, and ion implanation. Limited enrollment. Prerequisite: engineering or science background and consent of instructor.

3-4 units, not given this year

ME 342D. MEMS Laboratory Assignments

Prerequisite: consent of instructor.

1-3 units, Sum (Staff)

ME 343. An Introduction to Waves in Elastic Solids

One-dimensional motion of an elastic continuum, the linearized theory of elasticity and elastodynamic theory, elastic waves in an unbounded medium, plane harmonic waves in elastic half-spaces including reflection and refraction, slowness, energy velocity and anisotropic effects. Text is first five chapters of Achenbach's Wave Propagation in Elastic Solids. (Barnett)

3 units, not given this year

ME 345. Fatigue Design and Analysis

The mechanism and occurrences of fatigue in service. Methods for predicting fatigue life and for protecting against premature fatigue failure. Use of elastic stress and inelastic strain analyses to predict crack initiation life. Use of linear elastic fracture mechanics to predict crack propagation life. Effects of stress concentrations, manufacturing processes, load sequence, irregular loading, multiaxial loading. Subject is treated from the viewpoints of the engineer seeking up-to-date methods of life prediction and the researcher interested in improving understanding of fatigue behavior. Prerequisite: undergraduate mechanics of materials.

3 units, Win (Nelson, D)

ME 346A. Introduction to Statistical Mechanics

The main purpose of this course is to provide students with enough statistical mechanics background to the Molecular Simulations classes (ME 346B,C), including the fundamental concepts such as ensemble, entropy, and free energy, etc. The main theme of this course is how the laws at the macroscale (thermodynamics) can be obtained by analyzing the spontaneous fluctuations at the microscale (dynamics of molecules). Topics include thermodynamics, probability theory, information entropy, statistical ensembles, phase transition and phase equilibrium. Recommended: PHYSICS 110 or equivalent.

3 units, Win (Cai, W)

ME 346B. Introduction to Molecular Simulations

Algorithms of molecular simulations and underlying theories. Molecular dynamics, time integrators, modeling thermodynamic ensembles (NPT, NVT), free energy, constraints. Monte Carlo simulations, parallel tempering. Stochastic equations, Langevin and Brownian dynamics. Applications in solids, liquids, and biomolecules (proteins). Programming in Matlab and C++. Prerequisites: ME 346A or equivalent, Matlab, and C++.

3 units, Spr (Darve, E)

ME 346C. Advanced Techniques for Molecular Simulations

Advanced methods for computer simulation of proteins. Symplectic time integrators, multiple-time stepping, energy conservation. Long-range force calculation, particle mesh Ewald, fast multipole method, multigrid. Free energy methods, umbrella sampling, acceptance ratio, thermodynamic integration, non equilibrium methods, adaptive biasing force. Prerequisites: ME 346A,B or equivalent, Matlab, and C++.

3 units, alternate years, not given this year

ME 347. Mathematical Theory of Dislocations

The mathematical theory of straight and curvilinear dislocations in linear elastic solids. Stress fields, energies, and Peach-Koehler forces associated with these line imperfections. Anisotropic effects, Green's function methods, and the geometrical techniques of Brown and Indenborn-Orlov for computing dislocation fields and for studying dislocation interactions. Continuously distributed dislocations and cracks and inclusions.

3 units, Spr (Barnett, D)

ME 348. Experimental Stress Analysis

Theory and applications of photoelasticity, strain gages, and holographic interferometry. Comparison of test results with theoretical predictions of stress and strain. Discussion of other methods of stress and strain determination (optical fiber strain sensors, acoustoelasticity, thermoelasticity, brittle coating, Moire interferometry, residual stress determination). Six labs plus mini-project. Limited enrollment. Lab fee.

3 units, Spr (Nelson, D)

ME 349. Variational Methods in Elasticity and Plate Theory

An introduction to variational calculus methods and their applications to the theories of elasticity and plates.

3 units, not given this year

ME 351A. Fluid Mechanics

Exact and approximate analysis of fluid flow covering kinematics, global and differential equations of mass, momentum, and energy conservation. Forces and stresses in fluids. Euler¿s equations and the Bernoulli theorem applied to inviscid flows. Vorticity dynamics. Topics in irrotational flow: stream function and velocity potential for exact and approximate solutions; superposition of solutions; complex potential function; circulation and lift. Some boundary layer concepts.

3 units, Aut (Iaccarino, G)

ME 351B. Fluid Mechanics

Laminar viscous fluid flow. Governing equations, boundary conditions, and constitutive laws. Exact solutions for parallel flows. Creeping flow limit, lubrication theory, and boundary layer theory including free-shear layers and approximate methods of solution; boundary layer separation. Introduction to stability theory and transition to turbulence, and turbulent boundary layers. Prerequisite: 351A.

3 units, Win (Eaton, J)

ME 352A. Radiative Heat Transfer

The fundamentals of thermal radiation heat transfer; blackbody radiation laws; radiative properties of non-black surfaces; analysis of radiative exchange between surfaces and in enclosures; combined radiation, conduction, and convection; radiative transfer in absorbing, emitting, and scattering media. Advanced material for students with interests in heat transfer, as applied in high-temperature energy conversion systems. Take 352B,C for depth in heat transfer. Prerequisites: graduate standing and undergraduate course in heat transfer. Recommended: computer skills.

3 units, Aut (Mitchell, R)

ME 352B. Fundamentals of Heat Conduction

Physical description of heat conduction in solids, liquids, and gases. The heat diffusion equation and its solution using analytical and numerical techniques. Data and microscopic models for the thermal conductivity of solids, liquids, and gases, and for the thermal resistance at solid-solid and solid-liquid boundaries. Introduction to the kinetic theory of heat transport, focusing on applications for composite materials, semiconductor devices, micromachined sensors and actuators, and rarefied gases. Prerequisite: consent of instructor.

3 units, Win (Goodson, K)

ME 352C. Convective Heat Transfer

Prediction of heat and mass transfer rates based on analytical and numerical solutions of the governing partial differential equations.

Heat transfer in fully developed pipe and channel flow, pipe entrance flow, laminar boundary layers, and turbulent boundary layers. Superposition methods for handling non-uniform wall boundary conditions. Approximate models for turbulent flows. Comparison of exact and approximate analyses to modern experimental results. General introduction to heat transfer in complex flows. Prerequisite: 351B or equivalent.

3 units, Spr (Eaton, J)

ME 354. Experimental Methods in Fluid Mechanics

Experimental methods associated with the interfacing of laboratory instruments, experimental control, sampling strategies, data analysis, and introductory image processing. Instrumentation including point-wise anemometers and particle image tracking systems. Lab. Prerequisites: previous experience with computer programming and consent of instructor. Limited enrollment.

4 units, Aut (Santiago, J)

ME 355. Compressible Flow

Topics include quasi-one-dimensional isentropic flow in variable area ducts, normal shock waves, oblique shock and expansion waves, flow in ducts with friction and heat transfer, unsteady one-dimensional flow, and steady two-dimensional supersonic flow.

3 units, Spr (Bowman, C)

ME 357. Turbine and Internal Combustion Engines

(Same as ME 257) Principles of design analysis for aircraft gas turbines and automotive piston engines. Analysis for aircraft engines performed for Airbus A380 type aircraft. Design parameters determined considering aircraft aerodynamics, gas turbine thermodynamics, compressible flow physics, and material limitations. Additional topics include characteristics of main engine components, off-design analysis, and component matching. Performance of automotive piston engines including novel engine concepts in terms of engine thermodynamics, intake and exhaust flows, and in-cylinder flow.

3 units, not given this year

ME 358. Heat Transfer in Microdevices

Application-driven introduction to the thermal design of electronic circuits, sensors, and actuators that have dimensions comparable to or smaller than one micrometer. The impact of thin-layer boundaries on thermal conduction and radiation. Convection in microchannels and microscopic heat pipes. Thermal property measurements for microdevices. Emphasis is on Si and GaAs semiconductor devices and layers of unusual, technically-promising materials such as chemical-vapor-deposited (CVD) diamond. Final project based on student research interests. Prerequisite: consent of instructor.

3 units, Spr (Asheghi, M)

ME 359A. Advanced Design and Engineering of Space Systems I

The application of advanced theory and concepts to the development of spacecraft and missile subsystems; taught by experts in their fields. Practical aspects of design and integration. Mission analysis, systems design and verification, radiation and space environments, orbital mechanics, space propulsion, electrical power and avionics subsystems, payload communications, and attitude control. Subsystem-oriented design problems focused around a mission to be completed in groups. Tours of Lockheed Martin facilities. Limited enrollment. Prerequisites: undergraduate degree in related engineering field or consent of instructor.

4 units, not given this year

ME 359B. Advanced Design and Engineering of Space Systems II

Continuation of 359A. Topics include aerospace materials, mechanical environments, structural analysis and design, finite element analysis, mechanisms, thermal control, probability and statistics. Tours of Lockheed Martin facilities. Limited enrollment. Prerequisites: undergraduate degree in related field, or consent of instructor.

4 units, not given this year

ME 361. Turbulence

The nature of turbulent flows, statistical and spectral description of turbulence, coherent structures, spatial and temporal scales of turbulent flows. Averaging, two-point correlations and governing equations. Reynolds averaged equations and stresses. Free shear flows, turbulent jet, turbulent kinetic energy and kinetic energy dissipation, and kinetic energy budget. Kolmogorov's hypothesis and energy spectrum. Wall bounded flows, viscous scales, and law of the wall. Turbulence closure modeling for Reynolds averaged Navier Stokes equations. Direct and large eddy simulation of turbulent flows. Subgrid scale modeling.

3 units, Spr (Moin, P)

ME 362A. Physical Gas Dynamics

Concepts and techniques for description of high-temperature and chemically reacting gases from a molecular point of view. Introductory kinetic theory, chemical thermodynamics, and statistical mechanics as applied to properties of gases and gas mixtures. Transport and thermodynamic properties, law of mass action, and equilibrium chemical composition. Maxwellian and Boltzmann distributions of velocity and molecular energy. Examples and applications from areas of current interest such as combustion and materials processing.

3 units, Aut (Cappelli, M)

ME 362B. Nonequilibrium Processes in High-Temperature Gases

Chemical kinetics and energy transfer in high-temperature gases. Collision theory, transition state theory, and unimolecular reaction theory. Prerequisie: 362A or consent of instructor.

3 units, Win (Hanson, R)

ME 363. Partially Ionized Plasmas and Gas Discharges

Introduction to partially ionized gases and the nature of gas discharges. Topics: the fundamentals of plasma physics emphasizing collisional and radiative processes, electron and ion transport, ohmic dissipation, oscillations and waves, interaction of electromagnetic waves with plasmas. Applications: plasma diagnostics, plasma propulsion and materials processing. Prerequisite: 362A or consent of instructor.

3 units, not given this year

ME 364. Optical Diagnostics and Spectroscopy

The spectroscopy of gases and laser-based diagnostic techniques for measurements of species concentrations, temperature, density, and other flow field properties. Topics: electronic, vibrational, and rotational transitions; spectral lineshapes and broadening mechanisms; absorption, fluorescence, Rayleigh and Raman scattering methods; collisional quenching. Prerequisite: 362A or equivalent.

3 units, not given this year

ME 365. The Structure of Design Research

Restricted to second-year Joint Program in Design graduate students; prerequisite for ME 316A,B,C. How to shape individual research plans, identify tools for design research, and develop a vocabulary for research through design. Students present proposals for master's theses. Case studies.

1-3 units, Spr (Banerjee, S)

ME 366. Creative Gym: A Design Thinking Skills Studio

Build your creative confidence and sharpen your design thinking skills. Train your intuition and expand the design context from which you operate every day. This experimental studio will introduce the d.school to fast-paced experimental exercises that lay the mental and physical foundation for a potent bias toward action, and a deeper knowledge of the personal skills that expert design thinkers utilize in all phases of their process. Exercises will be offered by a number of the d.school's most creatively confident design thinkers.

1 unit, Win (Burgess-Auburn, C; Hawthorne, G)

ME 367. Optical Diagnostics and Spectroscopy Laboratory

Principles, procedures, and instrumentation associated with optical measurements in gases and plasmas. Absorption, fluorescence and emission, and light-scattering methods. Measurements of temperature, species concentration, and molecular properties. Lab. Enrollment limited to 16. Prerequisite: 362A or 364.

4 units, Spr (Hanson, R)

ME 368A. Biodesign Innovation: Needs Finding and Concept Creation

(Same as BIOE 374A, MED 272A) (Same as OIT 384.) First of a two quarter series. How to develop comprehensive solutions (most commonly medical devices) to significant medical problems. Needs-finding methods, brainstorming, and concept creation. Strategies for understanding and interpreting clinical needs, researching literature, and searching patents. Clinical and scientific literature review, techniques of intellectual property analysis and feasibility, basic prototyping and market assessment. Students work in small entrepreneurial multidisciplinary teams to create,

analyze, and screen medical technology ideas, and select projects for future development. Final presentations to a panel of prominent inventors and investors in medical Expert guest lecturers, faculty-led practical demonstrations and coaching sessions, and interactive team meetings under the mentorship of Biodesign. Projects from previous years include: prevention of hip fractures in the elderly; methods to accelerate healing after surgery; less invasive techniques for bariatric surgery; point of care diagnostics to improve emergency room efficiency; novel devices to bring specialty-type of care to primary care community doctors. More than 40,00 patients have been treated to date with technologies developed as part of this program and more than ten venture-backed companies were started by alums of the program. May be taken alone (2 units) or in combination with the project component (4 units). Prerequisite: application; see http://www.stanford.edu/group/biodesign/courseapplication.html; deadline is November 20, 2010.

2-4 units, Win (Yock, P; Zenios, S; Milroy, J; Brinton, T)

ME 368B. Biodesign Innovation: Concept Development and Implementation

(Same as BIOE 374B, MED 272B) (Same as OIT 385.) Second of a two quarter series. How to take a medical device invention forward from early concept to technology translation and development. Topics include prototyping; patent strategies; advanced planning for reimbursement and FDA approval; choosing translation route (licensing versus start-up); ethical issues including conflict of interest; fundraising approaches and cash requirements; essentials of writing a business or research plan; strategies for assembling a development team. May be taken alone (2 units) or in combination with the project component (4 units). Prerequisite: MED 272A, ME368A, or BIOE 374A.

2-4 units, Spr (Brinton, T; Milroy, J; Yock, P; Zenios, S)

ME 370A. Energy Systems I: Thermodynamics

Thermodynamic analysis of energy systems emphasizing systematic methodology for and application of basic principles to generate quantitative understanding. Availability, mixtures, reacting systems, phase equilibrium, chemical availability, and modern computational methods for analysis. Prerequisites: undergraduate engineering thermodynamics and computer skills such as Matlab.

3 units, Aut (Bowman, C)

ME 370B. Energy Systems II: Modeling and Advanced Concepts

Development of quantitative device models for complex energy systems, including fuel cells, reformers, combustion engines, and electrolyzers, using thermodynamic and transport analysis. Student groups work on energy systems to develop conceptual understanding, and high-level, quantitative and refined models. Advanced topics in thermodynamics and special topics associated with devices under study. Prerequisite: 370A.

4 units, Win (Edwards, C)

ME 370C. Energy Systems III: Projects

Refinement and calibration of energy system models generated in ME 370B carrying the models to maturity and completion. Integration of device models into a larger model of energy systems. Prerequisites: 370A,B, consent of instructor.

3-5 units, Spr (Edwards, C)

ME 371. Combustion Fundamentals

Heat of reaction, adiabatic flame temperature, and chemical composition of products of combustion; kinetics of combustion and pollutant formation reactions; conservation equations for multicomponent reacting flows; propagation of laminar premixed flames and detonations. Prerequisite: 362A or 370A, or consent of instructor.

3 units, Win (Zheng, X)

ME 372. Combustion Applications

The role of chemical and physical processes in combustion; ignition, flammability, and quenching of combustible gas mixtures; premixed turbulent flames; laminar and turbulent diffusion flames; combustion of fuel droplets and sprays. Prerequisite: 371.

3 units, Spr (Zheng, X)

ME 377. Design Thinking Bootcamp: Experiences in Innovation and Design

Lecture/lab. Immersive experiences in innovation and design thinking, blurring the boundaries among technology, business, and human values. Tenets of design thinking including being human-centered, prototype-driven, and mindful of process. Topics include design processes, innovation methodologies, need finding, human factors, visualization, rapid prototyping, team dynamics, storytelling, and project leadership. Hands-on projects, in-class exercises, and guest lectures. Students and faculty from areas including business, earth sciences, education, engineering, humanities and sciences, law, and medicine. Preparation for advanced d.school courses. Limited enrollment. Application required. See http://dschool.stanford.edu/projects/classes/me377.html.

3-4 units, Aut (Staff, 1)

ME 378. Tell, Make, Engage: Action Stories for Entrepreneuring

Guest discussion leaders with entrepreneuring experience give the course an evolving framework of evaluative methods, formed and reformed by collaborative development within the class. Stories attached to an idea or a discovery, are considered through practice exercises, artifacts, design challenges, short papers, and presentations.

1-3 units, not given this year

ME 381. Orthopaedic Bioengineering

(Same as BIOE 381) Engineering approaches applied to the musculoskeletal system in the context of surgical and medical care. Fundamental anatomy and physiology. Material and structural characteristics of hard and soft connective tissues and organ systems, and the role of mechanics in normal development and pathogenesis. Engineering methods used in the evaluation and planning of orthopaedic procedures, surgery, and devices.

3 units, Spr (Levenston, M)

ME 382A. Biomedical Engineering in Research and Development

Project based class studying real world biomedical problems ranging from translational biomedical research to medical device design. Topics include preventative strategies and biomedical challenges of an aging population. Identifying underlying scientific principles (computational and/or experimental) for solving biomedical problems is a key element. Students will form project teams and develop interdisciplinary communication skills; form testable hypotheses with biological, anatomical and physiological considerations; test standards for medical devices and learn about regulatory issues and intellectual property.

4 units, Spr (Andriacchi, T)

ME 382B. Medical Device Design

Continuation of industry sponsored projects from 382A. With the assistance of faculty and expert consultants, students finalize product designs or complete detailed design evaluations of new medical products. Bioethics issues and strtegies for funding new medical ventures.

4 units, alternate years, not given this year

ME 385. Tissue Engineering Lab

Hands-on experience in the fabrication of living engineered tissues. Techniques include sterile technique, culture of mammalian cells, creation of cell-seeded scaffolds, and the effects of mechanical loading on the metabolism of living engineered tissues. Theory, background, and practical demonstration for each technique. Lab.

1-2 units, not given this year

ME 386. Neuromuscular Biomechanics

(Same as BIOE 386) The interplay between mechanics and neural control of movement. State of the art assessment through a review of classic and recent journal articles. Emphasis is on the application of dynamics and control to the design of assistive technology for persons with movement disorders.

3 units, not given this year

ME 387. Soft Tissue Mechanics

Structure/function relationships and mechanical properties of soft tissues, including nonlinear elasticity, viscoelasticity, and poroelasticity.

3 units, Win (Levenston, M)

ME 388. Transport Modeling for Biological Systems

Introduction to electric fields, fluid flows, transport phenomena and their application to biological systems. Maxwell's equations, electrostatics, electro-chemical-mechanical driving forces in physiological systems. Ionic diffusion in electrolytes and membrane transport. Fluid and solid continua theory for porous, hydrated biological tissues. Applications include ionic and molecular transport in tissues and cells, electrophoresis, electromechanical

and physicochemical interactions in cells and the extracellular matrix of connective tissue.

3 units, Spr (Levenston, M; Pinsky, P)

ME 389. Biomechanical Research Symposium

Guest speakers present contemporary research on experimental and theoretical aspects of biomechanical engineering and bioengineering. May be repeated for credit.

1 unit, Aut (Carter, D), Spr (Carter, D)

ME 390. Thermosciences Research Project Seminar

Review of work in a particular research program and presentations of other related work.

1 unit, not given this year

ME 391. Engineering Problems

Directed study for graduate engineering students on subjects of mutual interest to student and staff member. May be used to prepare for experimental research during a later quarter under 392. Faculty sponsor required.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ME 392. Experimental Investigation of Engineering Problems

Graduate engineering students undertake experimental investigation under guidance of staff member. Previous work under 391 may be required to provide background for experimental program. Faculty sponsor required.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ME 393. Topics in Biologically Inspired or Human Interactive Robotics

Application of observations from human and animal physiology to robotic systems. Force control of motion including manipulation, haptics, and locomotion. Weekly literature review forum led by student. May be repeated for credit. (Cutkosky, Waldron, Niemeyer)

1 unit, Aut (Cutkosky, M)

ME 395. Seminar in Solid Mechanics

Required of Ph.D. candidates in solid mechanics. Guest speakers present research topics related to mechanics theory, computational methods, and applications in science and engineering. May be repeated for credit. See http://mc.stanford.edu.

1 unit, Aut (Pinsky, P), Win (Pinsky, P), Spr (Pinsky, P)

ME 396. Design and Manufacturing Forum

(Same as ME 196) Invited speakers address issues of interest to design and manufacturing engineering and business students. Sponsored by the Product Realization Network at Stanford.

1 unit, Win (Reis, R), Spr (Reis, R)

ME 397. Design Theory and Methodology Seminar

What do designers do when they do design? How can their performance be improved? Topics change each quarter. May be repeated for credit.

1-3 units, Aut (Leifer, L), Win (Leifer, L), Spr (Leifer, L)

ME 399. Fuel Cell Seminar

Interdisciplinary research in engineering, chemistry, and physics. Talks on fundamentals of fuel cells by speakers from Stanford, other academic and research institutions, and industry. The potential to provide high efficiency and zero emissions energy conversion for transportation and electrical power generation.

1 unit, not given this year

ME 400. Thesis (Engineer Degree)

Investigation of some engineering problems. Required of Engineer degree candidates

2-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ME 405. Asymptotic Methods and Applications

Asymptotic versus convergent expansions, approximation of integrals, method of matched asymptotics, WKB method and turning points, method of multiple scales. Applications: viscous and potential flow, wave propagation, combustion, and electrostatics. Prerequisites: ME 300B, graduate-level fluid mechanics.

3 units, not given this year

ME 406. Turbulence Physics and Modeling Using Numerical Simulation Data

Prerequisite: consent of instructor.

2 units, Sum (Moin, P)

ME 408. Spectral Methods in Computational Physics

Data analysis, spectra and correlations, sampling theorem, nonperiodic data, and windowing; spectral methods for numerical solution of partial differential equations; accuracy and computational cost; fast Fourier transform, Galerkin, collocation, and Tau methods; spectral and pseudospectral methods based on Fourier series and eigenfunctions of singular Sturm-Liouville problems; Chebyshev, Legendre, and Laguerre representations; convergence of eigenfunction expansions; discontinuities and Gibbs phenomenon; aliasing errors and control; efficient implementation of spectral methods; spectral methods for complicated domains; time differencing and numerical stability.

3 units, Win (Moin, P)

ME 410A. Foresight and Innovation

Learn what makes technical innovations succeed long-term. This course provides an intensive and hands-on overview to multiple foresight methods and anticipatory design techniques that teach you how to find and plan for future opportunities. Students build a portfolio of innovation ideas and prototypes. Prerequisite: consent of instructor.

3-5 units, Aut (Leifer, L; Cockayne, W)

ME 410B. Foresight and Innovation

The art, science, and practice of design innovation. Tools such as critical foresight and anticipatory research that assist organizations in improving the quality and speed of research and design innovation programs. The path from idea to market. How to communicate a developing idea through scenarios, business pitches, and product prototypes.

1-5 units, Win (Leifer, L; Cockayne, W)

ME 410C. Foresight and Innovation

The art, science, and practice of design innovation. Tools such as critical foresight and anticipatory research that assist organizations in improving the quality and speed of research and design innovation programs. The path from idea to market. How to communicate a developing idea through scenarios, business pitches, and product prototypes.

1-5 units, Spr (Leifer, L; Cockayne, W)

ME 411. Advanced Topics in Computational Solid Mechanics

Discussion of the use of computational simulation methods for analyzing and optimizing production processes and for developing new products, based on real industrial applications in the metal forming industry. Brief review of linear and nonlinear continuum mechanics and the use of finite element methods to model solid mechanics problems, constitutive relations for metals, coupled thermo-elasto-plastic (viscoplastic) problems, modeling metal productions processes: bulk metal forming processes using rigid/viscoplastic material models, application examples: hot rolling of plates and the Mannesmann piercing processes and modeling the service behavior of steel pipes. Prerequisites: ME 338A, ME 335A,B,C, or consent of instructor.

3 units, not given this year

ME 412. Engineering Functional Analysis and Finite Elements

(Same as CME 356) Concepts in functional analysis to understand models and methods used in simulation and design. Topology, measure, and integration theory to introduce Sobolev spaces. Convergence analysis of finite elements for the generalized Poisson problem. Extensions to convection-diffusion-reaction equations and elasticity. Upwinding. Mixed methods and LBB conditions. Analysis of nonlinear and evolution problems. Prerequisites: 335A,B, CME 200, CME 204, or consent of instructor. Recommended: 333, MATH 171.

3 units, not given this year

ME 413. Quantum Confinement Structures: Physics and Fabrication

Quantum mechanics principles and the thermodynamics of confinement structures. Focus is on potential applications such as solar cells and catalysis. Student presentations. Lab demonstrations. Prerequisite: background in quantum mechanics and statistical thermodynamics.

3 units, not given this year

ME 414. Solid State Physics Issues for Mechanical Engineering Experiments

Concepts and issues in the area of solid state physics which underlie standard mechanical properties. Quantum mechanics and statistical thermodynamics, and the first 50% of a standard overview of solid state physics. The goal is to provide the background necessary to participate in interdisciplinary research.

3 units, not given this year

ME 417. Total Product Integration Engineering
For students aspiring to be product development executives and leaders in research and education. Advanced methods and tools beyond the material covered in 217: quality design across global supply chain, robust product architecture for market variety and technology advances, product development risk management. Small teams or individuals conduct a practical project that produces a case study or enhancement to produce development methods and tools. Enrollment limited to 12. Prerequisites: 317A,B.
4 units, Aut (Beiter, K)

ME 420. Applied Electrochemistry at Micro- and Nanoscale
Applied electrochemistry with focus on micro- and nanoscale applications. Concepts of physical chemistry upon which the fundamentals of electrochemistry are built. Theory of electrochemical methods for material analyses and material modifications with emphasis on the scaling behaviors. Electrochemical energy generation/storage devices with focus on batteries. Journals articles are reviewed within the framework of the course with focus on current problems and needs in and energy conversion and storage.
3 units, Sum (Fasching, R)

ME 421. Thought Leaders Seminar for European Entrepreneurship and Innovation
Lessons from real-world experiences and challenges in European startups, corporations, universities, non-profit research institutes and venture finance organizations. Speakers include entrepreneurs, leaders from global technology companies, university researchers, venture capitalists, legal experts, senior policy makers and other guests from selected European countries and regions. Geographic scope encompasses Ireland to Russia, and Scandinavia to the Mediterranean region. Enrollment open to undergraduates and graduates in any school or department at Stanford.
1 unit, Win (Leifer, L; Pate-Cornell, E; Lee, B)

ME 440. Electronic States and Transitions In Quantum Confined Structures
Summary of selected quantum mechanical concepts with focus on phenomena related to charge separation and transfer. The physics and thermodynamics of excitons described and related to experimental observations. The energy state of electrons as function of confinement size and strength. Presentations include on electron tunneling, measuring the density of electronic states, dielectric behavior of materials, Bose Einstein condensation of quasi particles, and excitons in quantum wells and dots.
3 units, Spr (Prinz, F)

ME 450. Advances in Biotechnology
Guest academic and industrial speakers. Latest developments in fields such as bioenergy, green process technology, production of industrial chemicals from renewable resources, protein pharmaceutical production, industrial enzyme production, stem cell applications, medical diagnostics, and medical imaging. Biotechnology ethics, business and patenting issues, and entrepreneurship in biotechnology.
3 units, not given next year

ME 451A. Advanced Fluid Mechanics Multiphase Flows
Single particle and multi-particle fluid flow phenomena, mass, momentum and heat transfer, characteristic time and length scales, non-dimensional groups; collection of dispersed-phase elements: instantaneous and averaged descriptions for multiphase flow, Eulerian-Eulerian and Lagrangian-Eulerian statistical representations, mixture theories; models for drag, heat and mass transfer; dilute to dense two-phase flow, granular flows; computer simulation approaches for multiphase flows, emerging research topics. Prerequisites: graduate level fluid mechanics and engineering mathematics, and undergraduate engineering mechanics and thermodynamics.
3 units, alternate years, not given this year

ME 451B. Advanced Fluid Mechanics
Waves in fluids: surface waves, internal waves, inertial and acoustic waves, dispersion and group velocity, wave trains, transport due to waves, propagation in slowly varying medium, wave steepening, solitons and solitary waves, shock waves. Instability of fluid motion: dynamical systems, bifurcations, Kelvin-Helmholtz instability, Rayleigh-Benard convection, energy method, global stability, linear stability of parallel flows, necessary and sufficient conditions for stability, viscosity as a destabilizing factor, convective and absolute instability. Focus is on flow instabilities. Prerequisites: graduate courses in compressible and viscous flow.
3 units, alternate years, not given this year

ME 451C. Advanced Fluid Mechanics
Compressible flow: governing equations, Crocco-Vazsonyi¿s equations, creation and destruction of vorticity by compressibility effects, shock waves. Modal decomposition of compressible flow, linear and nonlinear modal interactions, interaction of turbulence with shock waves. Energetics of compressible turbulence, effects of compressibility on free-shear flows, turbulent boundary layers, Van Direst transformation, recovery temperature, and shock/boundary layer interaction. Strong Reynolds analogy, modeling compressible turbulent flows. Prerequisites: 355, 361A, or equivalents.
3 units, Aut (Lele, S)

ME 451D. Microhydrodynamics
(Same as CHEMENG 310) Transport phenomena on small-length scales appropriate to applications in microfluidics, complex fluids, and biology. The basic equations of mass, momentum, and energy, derived for incompressible fluids and simplified to the slow-flow limit. Topics: solution techniques utilizing expansions of harmonic and Green's functions; singularity solutions; flows involving rigid particles and fluid droplets; applications to suspensions; lubrication theory for flows in confined geometries; slender body theory; and capillarity and wetting. Prerequisites: 120A,B, 300, or equivalents.
3 units, Aut (Shaqfeh, E)

ME 453A. Finite Element-Based Modeling and Simulation of Linear Fluid/Structure Interaction Problems
Basic physics behind many fluid/structure interaction phenomena. Finite element-based computational approaches for linear modeling and simulation in the frequency domain. Vibrations of elastic structures. Linearized equations of small movements of inviscid fluids. Sloshing modes. Hydroelastic vibrations. Acoustic cavity modes. Structural-acoustic vibrations. Applications to liquid containers and underwater signatures. Prerequisite: graduate course in the finite element method or consent of instructor.
3 units, not given this year

ME 453B. Computational Fluid Dynamics Based Modeling of Nonlinear Fluid/Structure Interaction Problems
Basic physics behind many high-speed flow/structure interaction phenomena. Modern computational approaches for nonlinear modeling and simulation in the time domain. Dynamic equilibrium of restrained and unrestrained elastic structures. Corotational formulation for large structural displacements and rotations. Arbitrary Lagrangian-Eulerian description of inviscid and viscous flows. Time-accurate CFD on moving and deforming grids. Discrete geometric conservation laws. Discretization of transmission conditions on non-matching discrete fluid/structure interfaces. Coupled fluid/mesh-motion/structure time integration schemes. Application to divergence, flutter, and buffeting. Prerequisites: graduate course in the finite element method, and in computational fluid dynamics.
3 units, not given this year

ME 455. Complex Fluids and Non-Newtonian Flows
Definition of a complex liquid and microrheology. Division of complex fluids into suspensions, solutions, and melts. Suspensions as colloidal and non-colloidal. Extra stress and relation to the stresslet. Suspension rheology including Brownian and non-Brownian fibers. Microhydrodynamics and the Fokker-Planck equation. Linear viscoelasticity and the weak flow limit. Polymer solutions including single mode (dumbbell) and multimode models. Nonlinear viscoelasticity. Intermolecular effects in nondilute solutions and melts and the concept of reptation. Prerequisites: low Reynolds number hydrodynamics or consent of instructor.
3 units, Spr (Shaqfeh, E)

ME 457. Fluid Flow in Microdevices
Physico-chemical hydrodynamics. Creeping flow, electric double layers, and electrochemical transport such as Nernst-Planck equation; hydrodynamics of solutions of charged and uncharged particles. Device applications include microsystems that perform capillary electrophoresis, drug dispension, and hybridization assays. Emphasis is on bioanalytical applications where electrophoresis, electro-osmosis, and diffusion are important. Prerequisite: consent of instructor.

3 units, Spr (Santiago, J)

ME 458. Advanced Topics in Electrokinetics
Electrokinetic theory and electrokinetic separation assays. Electroneutrality approximation and weak electrolyte electrophoresis theory. Capillary zone electrophoresis, field amplified sample stacking, isoelectric focusing, and isotachophoresis. Introduction to general electrohydrodynamics (EHD) theory including the leaky dielectric concept, the Ohmic model formulation, and electrokinetic flow instabilities. Prerequisite: ME 457.

3-5 units, Spr (Santiago, J)

ME 461. Advanced Topics in Turbulence
Turbulence phenomenology; statistical description and the equations governing the mean flow; fluctuations and their energetics; turbulence closure problem, two-equation turbulence models, and second moment closures; non-local effect of pressure; rapid distortion analysis and effect of shear and compression on turbulence; effect of body forces on turbulent flows; buoyancy-generated turbulence; suppression of turbulence by stratification; turbulent flows of variable density; effect of rotation on homogeneous turbulence; turbulent flows with strong vortices. Prerequisites: 351B and 361A, or consent of instructor.

3 units, not given this year

ME 463. Advanced Topics in Plasma Science and Engineering
Research areas such as plasma diagnostics, plasma transport, waves and instabilities, and engineering applications.

3 units, not given this year

ME 468. Experimental Research in Advanced User Interfaces
(Same as COMM 168, COMM 268, COMM 368) Project-based course involves small (3-4) person teams going through all parts of the experimental process: question generation, experiment design, running, and data analysis. Each team creates an original, publishable project that represents a contribution to the research and practicum literatures. All experiments involve interaction between people and technology, including cars, mobile phones, websites, etc. Prerequisite: consent of instructor.

1-5 units, Aut (Nass, C), Win (Nass, C), Spr (Nass, C)

ME 469. Computational Methods in Fluid Mechanics
The last two decades have seen the widespread use of Computational Fluid Dynamics (CFD) for analysis and design of thermal-fluids systems in a wide variety of engineering fields. Numerical methods used in CFD have reached a high degree of sophistication and accuracy. The objective of this course is to introduce ¿classical¿ approaches and algorithms used for the numerical simulations of incompressible flows. In addition, some of the more recent developments are described, in particular as they pertain to unstructured meshes and parallel computers. An in-depth analysis of the procedures required to certify numerical codes and results will conclude the course.

3 units, Win (Iaccarino, G)

ME 469B. Computational Methods in Fluid Mechanics
Advanced CFD codes. Geometry modeling, CAD-CFD conversion. Structured and unstructured mesh generation. Solution methods for steady and unsteady incompressible Navier-Stokes equations. Turbulence modeling. Conjugate (solid/fluid) heat transfer problems. Development of customized physical models. Batch execution for parametric studies. Final project involving solution of a problem of student¿s choosing. Prerequisite: ME 300C/CME 206.

3 units, not given this year

ME 470. Uncertainty Quantification
Uncertainty analysis in computational science. Probabilistic data representation, propagation techniques and validation under uncertainty. Mathematical and statistical foundations of random variables and processes for uncertainty modeling. Focus is on state-of-the-art propagation schemes, sampling techniques, and stochastic Galerkin methods. The concept of model validation under uncertainty and the determination of confidence bounds estimates. Prerequisite: basic probability and statistics at the level of CME 106 or equivalent.

3 units, Spr (Staff, 1)

ME 471. Turbulent Combustion
Basis of turbulent combustion models. Assumption of scale separation between turbulence and combustion, resulting in Reynolds number independence of combustion models. Level-set approach for premixed combustion. Different regimes of premixed turbulent combustion with either kinematic or diffusive flow/chemistry interaction leading to different scaling laws and unified expression for turbulent velocity in both regimes. Models for non-premixed turbulent combustion based on mixture fraction concept. Analytical predictions for flame length of turbulent jets and NOx formation. Partially premixed combustion. Analytical scaling for lift-off heights of lifted diffusion.

3 units, not given this year

ME 484. Computational Methods in Cardiovascular Bioengineering
(Same as BIOE 484) Lumped parameter, one-dimensional nonlinear and linear wave propagation, and three-dimensional modeling techniques applied to simulate blood flow in the cardiovascular system and evaluate the performance of cardiovascular devices. Construction of anatomic models and extraction of physiologic quantities from medical imaging data. Problems in blood flow within the context of disease research, device design, and surgical planning.

3 units, not given this year

ME 485. Modeling and Simulation of Human Movement
(Same as BIOE 485) Direct experience with the computational tools used to create simulations of human movement. Lecture/labs on animation of movement; kinematic models of joints; forward dynamic simulation; computational models of muscles, tendons, and ligaments; creation of models from medical images; control of dynamic simulations; collision detection and contact models. Prerequisite: 281, 331A,B, or equivalent.

3 units, not given this year

ME 491. Ph.D. Teaching Experience
Required of Ph.D. students. May be repeated for credit.

3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ME 495. Mechanical Engineering Lecture Series
This seminar will feature a series of early career mechanical engineers working on leading edge problems in controls, dynamics, fluid mechanics, biomechanics, combustion, and related disciplines. The visitors will come from top universities both within the US and internationally, and will be discussing both their past research and plans for building a research program in the future.

1 unit, Spr (Goodson, K)

ME 500. Thesis (Ph.D.)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ME 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ME 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MEDICINE (MED) COURSES

UNDERGRADUATE COURSES IN MEDICINE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

MED 1A. Leadership in Multicultural Health
Year-long course. Models of instruction for undergraduates serving as Stanford Medical Youth Science Summer Residential Program (SMYSP) staff. Observation, participation, and evaluation of leadership development and multicultural health theories and practices; school and community engagement and advocacy. 1 unit: class attendance and oral presentation; 2 units: class attendance and project portfolio; 3 units: class attendance, poster and oral presentation; 4 units: class attendance and reflective term paper. Applications for this year-long course must be submitted during Autumn Quarter. Contact Judith Ned: jned@stanford.edu, 650-

498-4514. Current or past SMYSP Summer Residential Program staff.

1-4 units, Win (Winkleby, M; Ned, J)

MED 1B. Leadership in Multicultural Health

Models of instruction for undergraduates serving as Stanford Medical Youth Science Summer Residential Program (SMYSP) staff. Application of leadership development skills, multicultural health theories and practices, and school and community engagement and advocacy to creating and implementing activities for low-income high school students participating in the Summer Residential Program. 1 unit: class attendance and oral presentation; 2 units: class attendance and project portfolio; 3 units: class attendance, poster, and oral presentation; 4 units: class attendance and reflective term paper. Service Learning Course (certified by Haas Center). Prerequisite: MED 1A.

1-4 units, Spr (Winkleby, M; Ned, J)

MED 1C. Leadership in Multicultural Health

Students submit a written reflective term paper based on their experience as staff for the SMYSP Summer Residential Program. Service Learning Course (certified by Haas Center). Prerequisite: MED 1A,B.

1 unit, Aut (Winkleby, M; Ned, J)

MED 24SI. Alternative Spring Break: A Veteran's Affair, Issues and Policies Affecting American Veterans

One of every three homeless persons has served our country in uniform; half of all veterans are mentally ill. A combination of academic and service learning, this course addresses the public health and socioeconomic status of veterans and evaluates how current governmant actions are shaping veterans' rights. Weekly forums with clinicians, policy makers, and economists complement direct discussions with veterans and current Iraqi service men and women. Optional field trips to homeless shelters in the San Francisco area. Prerequisite: acceptance into the Alternative Spring Break Program.

1-2 units, Win (Frayne, S)

MED 70Q. Cancer and the Immune System

(Stanford Introductory Seminar) Preference to sophomores. Myths and facts surrounding the idea that the immune system is capable of recognizing malignant cells. The biological basis and function of effector arms of the immune system; how these mechanisms may be used to investigate the biological basis and potential therapy of cancer. How the immune system functions.

3 units, Win (Negrin, R)

MED 83Q. Ethical, Legal, and Social Dimensions of Stem Cell Research

(Stanford Introductory Seminar) Preference to sophomores. Ethical, legal, social, and economic dimensions of stem cell research such as the discovery of human embryonic stem cells and the international landscape of public policy. How stem cells work, their role in the upkeep of the human body, and current and future uses in medicine. Issues at the intersection of science and society such as human-animal hybrids, notions of justice in intellectual property law, distribution of health care, and the major ethical frameworks defining the debate.

3 units, Spr (Scott, C)

MED 86Q. Seeing the Heart

Introduction to biomedical technology, science, clinical medicine, and public policy through cardiovascular imaging. Invasive and noninvasive techniques to detect early stage heart disease and to see inside the heart and blood vessels. Topics include: common forms of heart disease, how they develop, and why they affect so many people; imaging technologies such as ultrasound, CT, MRI, PET, and optical; a cost-effective public screening program. Field trips to Stanford Medical Center imaging centers.

2 units, Spr (Staff)

MED 88Q. Dilemmas in Current Medical Practice

(Stanford Introductory Seminar) Preference to sophomores. Social, political, scientific, and economic forces influencing medical practice. Spiraling costs, impaired access to health care, and disillusionment toward the health care system. Attempts by government and medical insurers to control costs through managed care and health maintenance organizations. Medical education and how it has affected the practice of medicine. Alternative health care, preventive medicine, and the doctor-patient relationship. The paradox of health in America: why do so many people who are healthy feel unhealthy? Mandatory observation of instructors in their medical practices.

3 units, Aut (Croke, J; Jones, H)

MED 108Q. Human Rights and Health

(Stanford Introductory Seminar) Preference to sophomores. History of human-rights law. International conventions and treaties on human rights as background for social and political changes that could improve the health of groups and individuals. Topics such as: regional conflict and health, the health status of refugees and internally displaced persons; child labor; trafficking in women and children; HIV/AIDS; torture; poverty, the environment and health; access to clean water; domestic violence and sexual assault; and international availability of drugs. Possible optional opportunities to observe at community sites where human rights and health are issues. Guest speakers from national and international NGOs including Doctors Without Borders; McMaster University Institute for Peace Studies; UC Berkeley Human Rights Center; Kiva. PowerPoint presentation on topic of choice required.

3 units, Win (Laws, A)

MED 143. Patient Health Education in Community Clinics

(Same as MED 243) Open to undergraduate, graduate, and medical students. Principles of health education, theories of behavior change, methods for risk reduction. Presentations of health education modules, focusing on topics prevalent among underserved populations. Students apply theoretical frameworks to health education activities in the Cardinal Free Clinics.

2 units, Aut (Kao, P; Ho, E)

MED 147. Methods in Community Assessment, Evaluation, and Research

(Same as MED 247) Development of pragmatic skills for design, implementation, and analysis of structured interviews, focus groups, survey questionnaires, and field observations. Topics include: principles of community-based participatory research, including importance of dissemination; strengths and limitations of different study designs; validity and reliability; construction of interview and focus group questions; techniques for moderating focus groups; content analysis of qualitative data; survey questionnaire design; and interpretation of commonly-used statistical analyses.

3 units, Spr (Kiernan, M; Stefanick, M)

MED 149. Medical Interpreting: Skills and Etiquette

(Same as MED 249) Open to medical students, graduate students, and undergraduates. The skills and etiquette of medical interpreting from a crosscultural perspective. Overview of the U.S. healthcare system and guest lectures on humanistic medicine. Requires two volunteer shifts at the Arbor Free Clinic. Completion qualifies students to become volunteer interpreters at the Stanford University Medical Center and the Arbor Free Clinic. Service Learning Course (certified by Haas Center). Prerequisite: fluency in a language other than English.

2 units, Win (Osterberg, L; Chen, Y; Pompei, P)

MED 160. Physician Shadowing: Stanford Immersion in Medicine Series (SIMS)

Undergraduates are paired with a physician mentor at Stanford Hospital and Clinics, Lucile Packard Children's Hospital, or the Veteran's Administration Hospital. May be repeated for credit. Prerequisite: Application and acceptance to the SIMS program.

1 unit, Aut (Gesundheit, N; Lewis, P; Williams, R), Win (Gesundheit, N; Lewis, P; Williams, R), Spr (Gesundheit, N; Lewis, P; Williams, R)

MED 199. Undergraduate Research

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN MEDICINE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

MED 201. Introduction to Internal Medicine

Introduction to the different roles internists play in health care. Weekly lectures augmented with opportunities for monitorship, shadowing, and clinical skills-building. Lecture topics include primary care, subspecialties, and non-clinical careers.

1 unit, Aut (Verghese, A; Chin, J; Ulloa, E)

MED 202. Alternative Spring Break: Rural and Native American Health Disparities
Open to MD, graduate, and undergraduate students. Classroom preparation followed by a one week spring break service learning experience on a reservation in South Dakota. Introduces students to the challenges and promise of Native American and rural health care, and the role of communities as leaders and problem solvers. Includes lectures, discussion and readings pertaining to Native American culture, current research in Native American health, and the methods and practice of community based participatory research. Culminates in formulation of a plan for communicating with and engaging community partners in South Dakota: Indian Health Services, Habitat for Humanity, Porcupine Clinic, Teach for America, and Sinte Gleska University.

3 units, Win (Subrahmanian, K; Morrison, S; Garcia, G)

MED 207. History of Medicine
Weekly lectures that trace the development of Western medical tradition from Babylonian, Egyptian, and Greek ancient cultures to the present.

1 unit, Win (Camargo, C)

MED 217. Technological Frontiers in Digestive Diseases
Focused on introducing engineering, bioengineering, and physical sciences students to technologies used in the clinical setting. Topics include: endoscopes to detect and remove cancer; minimally invasive surgery to treat obesity; measurements of propulsion through the intestine; and technologies to detect and stop internal bleeding. Observations in the clinical setting; visits to laboratories engaged in the development of new technologies.

2 units, Spr (Friedland, S)

MED 223. Cardiovascular and Pulmonary Sciences Seminar
Weekly modified journal club primarily for CVP Scholarly Concentration students, fellows, postdocs, and faculty. Open to other graduate students. (Advanced undergraduate students with permission of instructor). Each meeting begins with an overview of a particular area by a faculty member, followed by presentation of a seminal paper in that area by a postdoctoral fellow or a medical student. Discussion follows the presentation, after which the faculty moderator meets separately with the medical students for further questions and discussion.

2 units, Aut (Cooke, J; Rabinovitch, M; Rockson, S; Tsao, P), Win (Cooke, J; Rabinovitch, M; Rockson, S; Tsao, P), Spr (Cooke, J; Rabinovitch, M; Rockson, S; Tsao, P)

MED 227. Bedside Ultrasound
For pre-clinical or clinical medical students, and others with permission. Introduces students to diagnostic ultrasound at the bedside. The normal anatomy of the heart, abdomen, and pelvis pertinent to ultrasound is taught. Some pathology involving these areas is also introduced. As the students' proficiency increases, those electing to can visit the Pacific Free Clinic to be introduced to scanning patients. 1 unit for class attendance only; 2 units for class attendance and participation in the Pacific Free Clinic.

1-2 units, Aut (Liang, D; Thompson, N), Win (Liang, D; Thompson, N), Spr (Liang, D; Thompson, N)

MED 228. Physicians and Social Responsibility
Social and political context of the roles of physicians and health professionals in social change; policy, advocacy, and shaping public attitudes. How physicians have influenced governmental policy on nuclear arms proliferation; environmental health concerns; physicians in government; activism through research; the effects of poverty on health; homelessness; and gun violence. Guest speakers from national and international NGOs.

1 unit, Aut (Laws, A; Ali, S)

MED 230. Rethinking Global Health
(Same as HRP 240) Issues and players that shape global health today. How to develop a road map for thoughtful, responsible action. Topics include: the role of the physician and health care worker; health as a human right; successful interventions; children's and women's health; issues in immunization; economic development; and NGOs. Online interviews with influential global health leaders.

2-3 units, Spr (Goldhaber-Fiebert, J)

MED 240. Sex Differences in Human Physiology and Disease
(Same as OBGYN 240, HUMBIO 140) Chromosomal and hormonal influences on cells, tissues, and organs that underlie the development of reproductive organs and sexual dimorphism of the neuroendocrine system. Consequences of sex hormones and environmental factors that differ between men and women in systems including the musculoskeletal, neurological, cardiovascular, and immunological. Guest lecturers. Prerequisite: Human Biology core or equivalent, or consent of instructor.

2-3 units, Win (Stefanick, M)

MED 241. Context and Practice of Health Care in Free Clinics
Preparation for working in free clinics, awareness of health care context and health disparities among underinsured patients, and introduction to key skills for patient care. Topics include: patient history, screening tests, health insurance, cultural sensitivity, role of interpreters, and tuberculosis testing. Meets at either Arbor or Pacific free clinic to increase familiarity with free clinic operations and environment. Integrates with concurrent Practice of Medicine course.

1 unit, not given this year

MED 242. Physicians and Human Rights
Weekly lectures on how human rights violations affect health. Topics include: regional conflict and health, the health status of refugees and internally displaced persons; child labor; trafficking in women and children; HIV/AIDS; torture; poverty, the environment and health; access to clean water; domestic violence and sexual assault; and international availability of drugs. Guest speakers from national and international NGOs including Doctors Without Borders; McMaster University Institute for Peace Studies; UC Berkeley Human Rights Center; Kiva.

1 unit, Win (Laws, A; Chien, A)

MED 243. Patient Health Education in Community Clinics
(Same as MED 143) Open to undergraduate, graduate, and medical students. Principles of health education, theories of behavior change, methods for risk reduction. Presentations of health education modules, focusing on topics prevalent among underserved populations. Students apply theoretical frameworks to health education activities in the Cardinal Free Clinics.

2 units, Aut (Kao, P; Ho, E)

MED 246. The Medical Interview for Spanish Speakers
Student led forum for practicing and learning medical Spanish related specifically to the medical interview. Prepares clinical students to interact more effectively with Spanish speaking patients in clinics. Classes are topical; each class includes a demonstration, medical vocabulary practice, and conversational practice on the topic of the day.

1 unit, Aut (Garcia, G; Anavitarte, A; Pauerstein, P), Win (Anavitarte, A; Garcia, G; Pauerstein, P), Spr (Liu, A; Rosenberg, J; Garcia, G)

MED 247. Methods in Community Assessment, Evaluation, and Research
(Same as MED 147) Development of pragmatic skills for design, implementation, and analysis of structured interviews, focus groups, survey questionnaires, and field observations. Topics include: principles of community-based participatory research, including importance of dissemination; strengths and limitations of different study designs; validity and reliability; construction of interview and focus group questions; techniques for moderating focus groups; content analysis of qualitative data; survey questionnaire design; and interpretation of commonly-used statistical analyses.

3 units, Spr (Kiernan, M; Stefanick, M)

MED 248. Student Rounds
Teams of preclinical students meet weekly with a clinical student to hear the history and physical of a recent case the clinical student encountered on the wards. Following the presentation, the preclinical students work together under the guidance of the clinical student to develop a problem list and plan, which are then compared with the problem list, plan, and orders made by the actual admitting team. In the course of presenting the cases, the clinical student describes personal experiences and practical components of ward work and daily clinical routine.

1 unit, Aut (Kenny, K), Win (Kenny, K), Spr (Kenny, K), Sum (Kenny, K)

MED 249. Medical Interpreting: Skills and Etiquette
(Same as MED 149) Open to medical students, graduate students, and undergraduates. The skills and etiquette of medical interpreting from a crosscultural perspective. Overview of the U.S. healthcare system and guest lectures on humanistic medicine. Re-

quires two volunteer shifts at the Arbor Free Clinic. Completion qualifies students to become volunteer interpreters at the Stanford University Medical Center and the Arbor Free Clinic. Service Learning Course (certified by Haas Center). Prerequisite: fluency in a language other than English.

2 units, Win (Osterberg, L; Chen, Y; Pompei, P)

MED 250A. Medical Ethics I

Required for Scholarly Concentration in Biomedical Ethics and Medical Humanities. The field of bioethics, including theoretical approaches to bioethical problems. Contemporary controversies and clinical cases. Values that arise in different situations and clinical encounters. Issues include: genetics and stem cell research, rationing, ethical issues in care at the end of life, organ transplantation issues.

2 units, Win (Magnus, D)

MED 250B. Medical Ethics II

The integration of ethical theory with applications of theory or conceptual issues in medicine, health care, and the life and social sciences. Topic varies by year. Possible topics include: ethical issues in stem cell research; death and dying; genetics and ethics; concepts of health and disease; the ethics of international research; and ethical implications of new reproductive technology.

2 units, Spr (Magnus, D)

MED 255. The Responsible Conduct of Research

Forum. How to identify and approach ethical dilemmas that commonly arise in biomedical research. Issues in the practice of research such as in publication and interpretation of data, and issues raised by academic/industry ties. Contemporary debates at the interface of biomedical science and society regarding research on stem cells, bioweapons, genetic testing, human subjects, and vertebrate animals. Completion fulfills NIH/ADAMHA requirement for instruction in the ethical conduct of research. Prerequisite: research experience recommended.

1 unit, Aut (Karkazis, K), Win (Karkazis, K), Spr (Karkazis, K)

MED 255C. The Responsible Conduct of Research for Clinical Researchers

Engages clinical researchers in discussions about ethical issues commonly encountered during their clinical research careers and addresses contemporary debates at the interface of biomedical science and society. Graduate students required to take RCR who are or will be conducting clinical research are encouraged to enroll in this version of the course. Prequisite: research experience recommended.

1 unit, Aut (Karkazis, K), Spr (Karkazis, K)

MED 256. Global HIV/AIDS

(Same as HUMBIO 156) Public health, policy, and research issues. Resources at Stanford and institutions such as government, NGOs, and pharmaceutical, advocacy, and international organizations. Sources include biomedical, social, and behavioral sciences. Student projects. Guest lectures. Prerequisite: Human Biology core or equivalent, or consent of instructor.

3 units, Aut (Katzenstein, D)

MED 257A. Patient Advocacy in Community Clinics

Early clinical experience for pre-medical and medical students. Structured training and shadowing in preparation for a clinical role working with patients in community health clinics; the context of the work, populations served, and social role of physicians. Regular shifts at one of the course-affiliated clinic sites throughout the academic year. 1-2 units for students attending class meetings and performing clinic shifts. 3-4 units for a year-long, clinic-based project. Service Learning Course (certified by Haas Center). Prerequisite: application.

1-4 units, Aut (Garcia, G; Banchoff, A)

MED 257B. Patient Advocacy in Community Clinics

Early clinical experience for pre-medical and medical students. Structured training and shadowing in preparation for a clinical role working with patients in community health clinics; the context of the work, populations served, and social role of physicians. Regular shifts at one of the course-affiliated clinic sites throughout the academic year. 1-2 units for students attending class meetings and performing clinic shifts. 3-4 units for a year-long, clinic-based project. Service Learning Course (certified by Haas Center). Prerequisite: MED 257A

1-4 units, Win (Garcia, G; Banchoff, A)

MED 257C. Patient Advocacy in Community Clinics

Early clinical experience for pre-medical and medical students. Structured training and shadowing in preparation for a clinical role working with patients in community health clinics; the context of the work, populations served, and social role of physicians. Regular shifts at one of the course-affiliated clinic sites throughout the academic year. 1-2 units for students attending class meetings and performing clinic shifts. 3-4 units for a year-long, clinic-based project. Service Learning Course (certified by Haas Center). Prerequisite: 257A,B

1-4 units, Spr (Garcia, G; Banchoff, A)

MED 258A. Advanced Patient Advocacy in Community Clinics

A three quarter course for students who have completed at least one full year in the Patient Advocacy Program (MED 257A,B,C); designed to augment the individual- and systems-level advocacy skills developed in the MED 257 series, with a focus on policy and media advocacy. The course also provides a forum for continued growth in the clinic-based patient advocate role. Throughout the year, tasks required of Clinic Coordinators and Health Education Coordinators are incorporated into the course responsibilities. Equal dedication to advocacy skills development and program leadership role fulfillment is expected. Guest speakers, discussions on current events related to community health, case studies of clinical experiences, and coordinator check-ins. Service Learning Course (certified by Haas Center). Prerequisite: MED 257A,B,C.

1-3 units, Aut (Garcia, G; Banchoff, A)

MED 258B. Advanced Patient Advocacy in Community Clinics

A three quarter course for students who have completed at least one full year in the Patient Advocacy Program (MED 257A,B,C); designed to augment the individual- and systems-level advocacy skills developed in the MED 257 series, with a focus on policy and media advocacy. The course also provides a forum for continued growth in the clinic-based patient advocate role. Throughout the year, tasks required of Clinic Coordinators and Health Education Coordinators are incorporated into the course responsibilities. Equal dedication to advocacy skills development and program leadership role fulfillment is expected. Guest speakers, discussions on current events related to community health, case studies of clinical experiences, and coordinator check-ins. Service Learning Course (certified by Haas Center). Prerequisite: MED 257A,B,C and MED 258A.

1-3 units, Win (Garcia, G; Banchoff, A)

MED 258C. Advanced Patient Advocacy in Community Clinics

A three quarter course for students who have completed at least one full year in the Patient Advocacy Program (MED 257A,B,C); designed to augment the individual- and systems-level advocacy skills developed in the MED 257 series, with a focus on policy and media advocacy. The course also provides a forum for continued growth in the clinic-based patient advocate role. Throughout the year, tasks required of Clinic Coordinators and Health Education Coordinators are incorporated into the course responsibilities. Equal dedication to advocacy skills development and program leadership role fulfillment is expected. Guest speakers, discussions on current events related to community health, case studies of clinical experiences, and coordinator check-ins. Service Learning Course (certified by Haas Center). Prerequisite: MED 257A,B,C and MED 258A and MED 258B.

1-3 units, Spr (Garcia, G; Banchoff, A)

MED 259. Oaxacan Health on Both Sides of the Border

Required for students participating in the Community Health in Oaxaca summer program. Introduction to the health literacy and health-seeking behaviors of Oaxacan and other Mexican migrants; the health challenges these groups face. Through discussion and reflection, students prepare for clinical work and community engagement in Oaxaca, while also gaining knowledge and insight to make connections between their experiences in Mexico and their health-related work with Mexican immigrants in the Bay Area. Service Learning Course (certified by Haas Center). Prerequisite: application and acceptance into the Community Health in Oaxaca Summer Program (http://och.stanford.edu/oaxaca.html).

2 units, Spr (Garcia, G; Banchoff, A)

MED 262. Economics of Health Improvement in Developing Countries

(Same as ECON 127) Application of economic paradigms and empirical methods to health improvement in developing countries.

Emphasis is on unifying analytic frameworks and evaluation of empirical evidence. How economic views differ from public health, medicine, and epidemiology; analytic paradigms for health and population change; the demand for health; the role of health in international development. Prerequisites: ECON 50 and 102B, and consent of instructor.

5 units, Win (Miller, N)

MED 263. Advanced Decision Science Methods and Modeling in Health

(Same as HRP 263) Advanced methods currently used in published model-based cost-effectiveness analyses in medicine and public health, both theory and technical applications. Topics include: Markov and microsimulation models, model calibration and evaluation, and probabilistic sensitivity analyses. Prerequisites: a course in probability, a course in statistics or biostatistics, a course on cost-effectiveness such as HRP 392, a course in economics, and familiarity with decision modeling software such as TreeAge.

3 units, Spr (Goldhaber-Fiebert, J)

MED 271. Global Biodesign: Medical Technology in an International Context

(Same as BIOE 371) Seminar examines the development and commercialization of medical technologies in the global setting focusing primarily on Europe, India and China. Faculty and guest speakers from industry and government discuss the status of the industry, as well as opportunities in and challenges to medical technology innovation unique to each geography. Topics related to development of technologies for bottom of the pyramid markets are also addressed. Students enrolling for 2 units are required to write/deliver a final paper.

1-2 units, Spr (Doshi, R; Yock, P; Shen, C)

MED 272A. Biodesign Innovation: Needs Finding and Concept Creation

(Same as BIOE 374A, ME 368A) (Same as OIT 384.) First of a two quarter series. How to develop comprehensive solutions (most commonly medical devices) to significant medical problems. Needs-finding methods, brainstorming, and concept creation. Strategies for understanding and interpreting clinical needs, researching literature, and searching patents. Clinical and scientific literature review, techniques of intellectual property analysis and feasibility, basic prototyping and market assessment. Students work in small entrepreneurial multidisciplinary teams to create, analyze, and screen medical technology ideas, and select projects for future development. Final presentations to a panel of prominent inventors and investors in medical Expert guest lecturers, faculty-led practical demonstrations and coaching sessions, and interactive team meetings under the mentorship of Biodesign. Projects from previous years include: prevention of hip fractures in the elderly; methods to accelerate healing after surgery; less invasive techniques for bariatric surgery; point of care diagnostics to improve emergency room efficiency; novel devices to bring specialty-type of care to primary care community doctors. More than 40,00 patients have been treated to date with technologies developed as part of this program and more than ten venture-backed companies were started by alums of the program. May be taken alone (2 units) or in combination with the project component (4 units). Prerequisite: application; see http://www.stanford.edu/group/biodesign/courseapplication.html; deadline is November 20, 2010.

2-4 units, Win (Yock, P; Zenios, S; Milroy, J; Brinton, T)

MED 272B. Biodesign Innovation: Concept Development and Implementation

(Same as BIOE 374B, ME 368B) Two quarter sequence. How to take a medical device invention forward from early concept to technology translation and development. Topics include prototyping; patent strategies; advanced planning for reimbursement and FDA approval; choosing translation route (licensing versus start-up); ethical issues including conflict of interest; fundraising approaches and cash requirements; essentials of writing a business or research plan; strategies for assembling a development team. May be taken alone (2 units) or in combination with the project component (4 units). Prerequisite: MED 272A, ME368A, or BIOE 374A.

2-4 units, Spr (Brinton, T; Milroy, J; Yock, P; Zenios, S)

MED 275. Introduction Biopharmaceutical Innovation

Open to all students. Biotechnology and the pharmaceutical industry. Topics include the biopharmaceutical industry, historical trends and experiences; research and development; intellectual property; drug approval: regulatory issues and agencies; business development; marketing; manufacturing; capital structure and financing; careers in biopharmaceutical industry. 2-unit option, lectures and weekly assignments, MED or S/NC grading only. 3-unit option, including a group project and final presentation, may be taken for a letter grade. May be repeated for credit.

2-3 units, Win (Gardner, P; Rumma, R; Patro, A)

MED 276. Careers in Medical Technology

Career tracks in biomedical technology for medical, life science, engineering, business, and law students of all levels. Industry professionals describe career tracks, current roles, and industry perspectives. 2-unit option, lectures and weekly assignments, MED or S/NC grading only. 3-unit option, including a group project and final presentation, may be taken for a letter grade. May be repeated for credit.

2-3 units, Spr (Gardner, P; Rumma, R; Patro, A)

MED 282. Early Clinical Experience at the Arbor Free Clinic

Students provide health care in a student-run clinic for the homeless and uninsured. Student volunteers are guided in the practice of medical interviews, history-taking and physical examinations as appropriate. Clinical students and attending physicians provide support and guidance as the team arrives at a diagnosis and management plan. Two units of credit is intended for Steering Committee members or for students who work at the clinic every other Sunday.

1-2 units, Aut (Osterberg, L), Win (Staff), Spr (Staff), Sum (Staff)

MED 283. Early Clinical Experience at Pacific Free Clinic

Hands-on experience at a student-run free clinic targeting immigrants in the San Jose area. Opportunity to work with an interpreter and learn about unique health care issues faced by immigrants. Students are expected to conduct history and physicals, present to the attending physician, help arrive at a diagnosis and plan and participate in basic procedures. 1 unit for limited commitment; 2 units for volunteers in training and students who volunteer a minimum of once a month; 3 units for Steering Committee members and students who volunteer a minimum of twice a month.

1-3 units, Aut (Kao, P), Win (Kao, P), Spr (Kao, P)

MED 289. Introduction to Bioengineering Research

(Same as BIOE 390) Preference to medical and bioengineering graduate students. Bioengineering is an interdisciplinary field that leverages the disciplines of biology, medicine, and engineering to understand living systems, and engineer biological systems and improve engineering designs and human and environmental health. Topics include: imaging; molecular, cell, and tissue engineering; biomechanics; biomedical computation; biochemical engineering; biosensors; and medical devices. Limited enrollment.

1 unit, Aut (Wang, P; Gold, G)

MED 295. Advanced Cardiac Life Support

For clinical M.D. students only. Prepares students to manage the victim of a cardiac arrest. Knowledge and skills necessary for resuscitation of critically-ill patients. Clinical scenarios and small group discussions address cardiovascular pharmacology, arrhythmia recognition and therapy, acute coronary syndrome including myocardial infarction, ventricular dysrhythmias and defibrillation, and acute ischemic stroke. Requires pre-course preparation and an intensive two-day session on a Friday and Saturday. Students should get the approval of their clerkship coordinator before registering for the course. Recommended: MED 300A, PED 300A, or SURG 300A.

2 units, Aut (Staff), Win (Giacomini, J), Spr (Staff)

MED 299. Directed Reading in Medicine

Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MED 370. Medical Scholars Research

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MED 399. Graduate Research

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MEDICINE INTERDISCIPLINARY (INDE) COURSES

GRADUATE COURSES IN MEDICINE INTERDISCIPLINARY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

INDE 200. The Future of Academic Medicine
Required for first-year MSTP students; limited to MSTP. Presentations of research directions and opportunities by chairs of basic science, clinical departments, and PhD programs. Prerequisite: instructor consent.

1 unit, Aut (Kim, S; Utz, P), Win (Kim, S; Utz, P)

INDE 201. Practice of Medicine I
Six quarter series extending throughout the first two years of the MD program, interweaving core skills training in medical interviewing and the physical examination with other major threads addressing the context of medical practice: information literacy, nutrition principles, clinical epidemiology and biostatistics, evidence-based practice, psychiatry, biomedical ethics, health policy, population health. Core clinical skills are acquired through hands-on practice, and evaluated through an extensive program of simulated medical encounters, in which students interview, examine, and manage patients in a mock clinic. The information literacy thread introduces students to informatics and knowledge management, biomedical informatics, and evidence-based medicine searching. Nutrition principles are acquired through interactive, web-based instruction, and reinforced through problem-based learning cases, which run in parallel to the basic science components over the first year. In epdemiology

11 units, Aut (Basaviah, P)

INDE 202. Practice of Medicine II
Medical interview and physical examination skills, information literacy, nutrition principles, evidence-based practice, health policy, and population health are covered. At the end of this quarter, students participate in a performance-based assessment of their medical interview and physical examination skills. See INDE 201 for a complete description of the Practice of Medicine course series.

8 units, Win (Basaviah, P)

INDE 203. Practice of Medicine III
Medical interview and physical examination skills, biomedical literature retrieval and appraisal, nutrition principles, evidence-based practice, biomedical ethics, and population health are covered. Students begin clinical problem-solving sessions to learn the approach to common and important clinical problems. Cases integrate other course themes of population health, evidence-based practice, clinical ethics, nutrition, health policy, and behavioral medicine. Students begin transition from comprehensive to problem-focused patient encounters. Students also gain exposure to geriatrics, initial exposure to pediatrics, and practice mental health interview skills. At the end of this quarter, students participate in a performance-based assessment of their medical interview and physical examination skills. See INDE 201 for a complete description of the Practice of Medicine course series.

8 units, Spr (Basaviah, P)

INDE 204. Practice of Medicine IV
POM is a six-quarter preclinical course providing clinical preparation for first- and second-year medical students. Participation in this course gives students a foundation in health policy, medical ethics, clinical epidemiology and biostatistics, behavioral medicine, nutrition and quantitative medicine. Additionally, students learn the basics of the medical interview, physical examination, clinical reasoning, and procedural skills. This longitudinal preparation is designed to prepare students for clerkships. In second-year POM, there are two major educational categories: clinical reasoning and clinical exam skills. These two components are taught within five curricular components that include clinical reasoning teaching rounds and small group, clinical practicum, clinical procedures / Introduction to the Management of the Ill Patient simulation (IMIP), advanced clinical skills, and psychiatry. Within Clinical Reasoning Sessions, students work in a problem-based learning format, analyz

10 units, Aut (Basaviah, P)

INDE 205. Practice of Medicine V
POM is a six-quarter preclinical course providing clinical preparation for first- and second-year medical students. Participation in this course gives students a foundation in health policy, medical ethics, clinical epidemiology and biostatistics, behavioral medicine, nutrition and quantitative medicine. Additionally, students learn the basics of the medical interview, physical examination, clinical reasoning, and procedural skills. This longitudinal preparation is designed to prepare students for clerkships. In second-year POM, there are two major educational categories: clinical reasoning and clinical exam skills. These two components are taught within five curricular components that include clinical reasoning teaching rounds and small group, clinical practicum, clinical procedures / Introduction to the Management of the Ill Patient simulation (IMIP), advanced clinical skills, and psychiatry.

8 units, Win (Basaviah, P)

INDE 206. Practice of Medicine VI
Prep for the Clerkships is a month-long curriculum focused on preparing students with skills, knowledge, and approaches directly applicable to their upcoming clinical rotations. The experience provides hands-on workshops, simulated sessions, patient encounters, small group sessions, and a few large group sessions comprising a capstone for the two- year longitudinal curriculum in POM. In general, the individual sessions are tied to clinically relevant themes, including: procedural skills(cadaver lab, EMED, IMIP); clinical skills (Mini-CPX, bedside rounds, advanced presentations, SOAP notes, patient safety); clinical specialty sessions (dermatology, palliative medicine, ophthalmology); clinical essentials (EKG, general radiology, interventional radiology, fluid and electrolytes, order writing); and professionalism.

9 units, Spr (Basaviah, P)

INDE 207A. Medical Mandarin I: Beginning
Develops essential medical vocabularies and conversational communication skills. Teaches the pinyin pronunciation system, which provides an accessible method of learning basic phrases. The foundations of taking a comprehensive patient history in Mandarin and doing medical interviews at individual hospital divisions, including making introductions, soliciting symptoms, explaining health concepts (e.g. diseases and prescriptions). Main goals are to improve rapport with Chinese patients through Mandarin fluency in the medical setting and to promote understanding of Chinese culture in the context of health care. Students participating in classroom and online instruction only register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

2-3 units, Aut (Wang, X; So, S)

INDE 207B. Medical Mandarin II: Intermediate
For students who already have a basic command of spoken Chinese. Conversational communication skills practiced in a more advanced setting, including more sophisticated assessment of patient history and cultural components that influence diseases found in Chinese-speaking patients. Builds working vocabulary for organ system disease processes to conduct a full physical exam, and to describe treatment modalities for Chinese-speaking patients (diagnostic and therapeutic). Students participating in classroom and online instruction only register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well. Prerequisite: one semester of college-level Chinese or instructor assessment of fluency.

2-3 units, Aut (Wang, X; So, S)

INDE 207C. Medical Mandarin III: Advanced
Access advanced professional medical vocabulary, conduct medical research, and engage in discussions in Chinese. Aims at a proficiency level of medical interpreting or doing other independent work in Chinese. Students are also assisted in doing a project or projects related to a specific field of medicine. Includes clinic visits and field activities. Prerequisite: completion of Medical Mandarin II, or advanced Chinese proficiency.

2 units, Aut (Wang, X; So, S)

INDE 208A. Medical Mandarin I: Beginning
Continuation of 207A. See description for 207A. Students participating in classroom and online instruction only register for 2 units.

Students registering for 3 units participate in clinic visits and field activities as well.

2-3 units, Win (So, S; Wang, X)

INDE 208B. Medical Mandarin II: Intermediate

Continuation of 207B. See description for 207B. Students participating in classroom and online instruction only register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

2-3 units, Win (Staff)

INDE 208C. Medical Mandarin III: Advanced

Access advanced professional medical vocabulary, conduct medical research, and engage in discussions in Chinese. Aims at a proficiency level of medical interpreting or doing other independent work in Chinese. Students are also assisted in doing a project or projects related to a specific field of medicine. Includes clinic visits and field activities. Prerequisite: completion of 207C, or advanced Chinese proficiency.

2 units, Win (Wang, X; So, S)

INDE 209A. Medical Mandarin III: Beginning

Continuation of 207A/208A. See description for 207A. Students participating in classroom and online instruction only register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

2-3 units, Spr (So, S; Wang, X)

INDE 209B. Medical Mandarin III: Intermediate

Continuation of 207B/208B. See description for 207B. Students participating in classroom and online instruction only register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

2-3 units, Spr (So, S; Wang, X)

INDE 209C. Medical Mandarin III: Advanced

Access advanced professional medical vocabulary, conduct medical research, and engage in discussions in Chinese. Aims at a proficiency level of medical interpreting or doing other independent work in Chinese. Students are also assisted in doing a project or projects related to a specific field of medicine. Includes clinic visits and field activities. Prerequisite: completion of 208C or advanced Chinese proficiency.

2 units, Spr (Wang, X; So, S)

INDE 211. Creative Writing

For medical students - all levels of writing skill. Examines uses of creative writing, including understanding the experience of medical training. May be repeated for credit.

1 unit, Win (Shafer, A)

INDE 212. The Human Condition: Medicine, Arts, and Humanities

The interdisciplinary field of medical humanities: the use of the arts and humanities to examine medicine in personal, social, and cultural contexts. Topics include the doctor/patient relationship, the patient perspective, the meaning of doctoring, and the meaning of illness. Sources include visual and performing arts, film, and literary genres such as poetry, fiction, and scholarly writing. Designed for medical students in the Biomedical Ethics and Medical Humanities Scholarly Concentration, but all students are welcome.

2 units, Spr (Zaroff, L; Shafer, A)

INDE 214. Stanford Medical Student Journal

Provides an opportunity for editors of all levels to cultivate their skills and assist in preparing pieces submitted by colleagues for publication in the Stanford Medical Student Clinical Journal (SMSCJ). Students enrolled in the course work closely with student authors as well as other editors. Editors examine multiple categories of writing, including opinion pieces, poetry, memoirs, book reviews, case reports and investigative reports. The SMSCJ is published two to three times per year and highlights the diverse talents of Stanford medical students in both scientific writing and the humanities.

1 unit, Aut (Shafer, A; Connolly, A), Win (Shafer, A; Connolly, A), Spr (Shafer, A; Connolly, A)

INDE 215. Queer Health and Medicine

Explores specific, pertinent, and timely issues impacting the health of the lesbian, gay, bisexual, and transgender community; examines the role of the primary care physician in addressing the health care needs of this community. Guest lecturers provide a gender-sensitive approach to the medical care of the LGBT patient, breaking down homophobic barriers and reaffirming patient diversity. Students write response papers to weekly lectures.

1 unit, Spr (Hendrickson, M)

INDE 216. Cells to Tissues

Focuses on the cell biology and structural organization of human tissues as self-renewing systems. Topics include identification and differentiation of stem cells, regulation of the cell cycle and apoptosis in normal and cancerous cells, cell adhesion and polarity in epithelial tissues, intracellular transport, and cell migration. Histology laboratory sessions examine normal and abnormal samples of blood, epithelia, skin, connective tissue, muscle, bone and cartilage. Patient presentations and small group discussions of current medical literature illustrate how cell biology influences medical practice.

3 units, Aut (Theriot, J; Connolly, A)

INDE 220. Human Health and Disease I

Establishes the foundation for the Human Health and Disease block which spans Q3 (Spring quarter Year One) through Q5 (Winter quarter Year Two). The Human Health and Disease block presents organ system-based histology, pathology, physiology, pharmacology, and infectious disease in a sequence of interdisciplinary courses. Each organ-specific integrated course includes a review of the anatomy and related histology, normal function of that organ system, how the organ system is affected by and responds to disease including infection, and how diseases of that organ system are treated (therapeutics).

3 units, Win (Siegel, R; Whitlock, J; Regula, D)

INDE 221. Human Health and Disease II

Structure, function, disease, and therapeutics of the respiratory system and the cardiovascular system. See INDE 220 for a description of the Human Health and Disease block .

12 units, Spr (Regula, D; Kobilka, B; Kao, P; Connolly, A; Whitlock, J)

INDE 222. Human Health and Disease III

Structure, function, disease, and therapeutics of the renal/genitourinary system, the gastrointestinal system, the endocrine system, male and female reproductive systems, and women's health. See INDE 220 for a description of the Human Health and Disease block .

15 units, Aut (Regula, D; Bhalla, V; Lowe, A; Gesundheit, N; Hillard, P; Connolly, A; Siegel, R; Pao, A)

INDE 223. Human Health and Disease IV

Structure, function, disease, and therapeutics of the central nervous system, hematologic system and multi-systemic diseases. See INDE 220 for a description of the Human Health and Disease block.

11 units, Win (Regula, D; Connolly, A; Siegel, R; Glader, B; Ferrell, J; Schwartz, N)

INDE 225. Popular and Clinical Nutrition: Food Facts, Fads, and Pharmacology

Designed for medical students and other health care professionals. Lunchtime lectures review the epidemiological and clinical research related to eating patterns and misconceptions of the public, the mechanisms of pharmacological effects of food, and related topics common to patient nutritional concerns. Topics include fad diets, the impact of dietary addiction, longevity associated with caloric restriction, toxins in foods and the action of phytonutirents. Epidemiological, clinical, and biochemical studies are reviewed in the discussion of these and other topics.

1 unit, Win (Staff)

INDE 226. History of Medicine Online

Via Internet. Topics include: ancient medicine, Egypt and Babylonia, ancient Greece and Rome, Europe in the Middle Ages and the Renaissance, 18th-century schools of thought, and technological medicine. Sources include Kleinman's core clinical functions, and text, pictures, hypertext links, and sound clips. For assistance accessing the course, email: cwpsupport@lists.stanford.edu. Enroll in Axess, then ask cwpsupport to be added to the course site as a student

1 unit, Aut (Shafer, A), Win (Shafer, A), Spr (Shafer, A)

INDE 227. Careers in Medicine: Pathways in the Medical Sciences

Open to medical students, graduate and undergraduate students. Interactive, seminar-style sessions expose students to diverse career opportunities and the challenges of developing work-life bal-

ance in medicine. Recognized experts in clinical medicine and biomedical research who have been innovators in their careers discuss their work, decision-points in their career pathways, and lifestyle aspects of their choices.

1 unit, Spr (Gesundheit, N)

INDE 228. Career Transition Planning: Taking Action Today for a Successful Tomorrow

Open to School of Medicine MD and graduate students; post-docs and clinical fellows may audit by consent of instructor. How to prioritize career goals and develop an effective job search campaign. Topics: translating scientific and clinical training into a variety of workplace environmennts, professional network development, professional interest assessment, recruiters' perspectives, credentials development, and creating a marketing plan. Guest speakers from myriad career fields. May be repeated for credit.

1 unit, Spr (Eberle, S; Puglisi, J)

INDE 229. Managing Difficult Conversations

(Same as GSBGEN 568) Dealing effectively with difficult interpersonal situations in medical contexts. Focus is on improving students' judgment as to how to prepare for and confront difficult discussions in medical situations. Relevant principles of professionalism, leadership, and psychology underlie the course pedagogy. Case-based; student-to-student and student-to-instructor role-playing in actual medical situations. Patient and physician-expert participation as class guests. Enrollment limited to 20 medical students (2nd year and beyond) and 15 2nd year MBA students.

1 unit, Aut (Grousbeck, I; Prober, C)

INDE 230. Scientific Management Series

Designed for postdocs and advanced graduate students. Reviews management skills necessary for successfully assuming leadership roles in scientific research. Addresses some of the most difficult aspects of developing, directing, and managing people and projects and running a research group, especially issues that new faculty have traditionally learned by trial and error over a number of years. Topics include: the faculty job search process and strategies, key elements in starting a lab, basic principles regarding legal dimensions of scientific activity (intellectual property, royalities, links with industry), writing and securing grants.

1 unit, Win (Sanford, R; Pringle, J)

INDE 231. Future Faculty Seminar

(Same as CTL 231) For graduate students from all disciplines who are considering faculty careers. Postdoctoral fellows, TGR students, and research/clinical trainees may audit by consent of instructor. Explores the broad spectrum of duties and opportunities presented through faculty positions beyond the research-related aspects. Develops awareness of resources and skills that lead to faculty success; answers field-specific and related faculty job questions through discussions with representatives of a variety of academic institutions and fellow course participants. Topics include: finding and obtaining faculty positions, negotiating and navigating the first year, and working toward tenure. May be repeated for credit.

1 unit, Aut (Eberle, S; Puglisi, J; Wright-Dunbar, R)

INDE 232. Introduction to Academic Medicine for Physician-Scientists

Open only to accepted MSTP students. Presentations by Stanford faculty on professional development topics, including: choosing a dissertation advisor, giving oral presentations, writing a grant proposal, attending scientific meetings, developing a research career. Substantial writing component.

3 units, Sum (Kim, S; Utz, P;)

INDE 233. Medical Education Seminar Series

For pre-clinical and clinical medical students. A series of sessions rotating among the following formats: Medical Education Journal Club; sessions designed for faculty to discuss planned projects and practice upcoming presentations; mini-lectures on education methods; reflections on teaching experiences; and discussions of controversies and challenges in medical education. Repeatable for credit.

1 unit, Aut (Braddock, C; Irvine, C; Violanti, M), Win (Braddock, C; Violanti, M; Irvine, C), Spr (Braddock, C; Violanti, M; Irvine, C)

INDE 255A. Health Policy, Finance and Economics I

Open to medical students and resident physicians. Introduction to basic concepts and current issues in health policy, health finance, and health economics. Goals are to promote understanding of the forces that shape healthcare; to integrate medical students with graduate medical education (residents); to motivate participants to pursue further scholarly activity in these subjects through coursework, graduate programs or research . Team taught by world-renowned experts in their respective fields. Prerequisite: instructor consent.

1 unit, not given this year

INDE 255B. Health Policy, Finance and Economics II

Continuation of INDE 255A. Open to medical students and resident physicians. Introduction to basic concepts and current issues in health policy, health finance, and health economics. Goals are to promote understanding of the forces that shape healthcare; to integrate medical students with graduate medical education (residents); to motivate participants to pursue further scholarly activity in these subjects through coursework, graduate programs or research . Team taught by world-renowned experts in their respective fields. For medical students 255A is not prerequisite to 255B. Prerequisite: instructor consent.

1 unit, not given this year

INDE 297. Reflections, Research, and Advances in Patient Care

For clinical MD students. Two-year curriculum designed to provide structured time for students to step back from clerkships, in order to promote reflection on and reinforcement for their learning in the clniical environment. Goals are: to discuss and reflect upon critical experiences in clerkships; to provide continuity of instruction in translational science topics across the curriculum; to reinforce and extend the study of behavioral, cultural, ethical, social and socioeconomic topics introduced in the Practice of Medicine course sequence; to expose students to recent advances in medical discoveries, emphasizing their application to clinical practice (translational medicine); and to develop research and critical thinking skills, acquiring new information in areas related to the Scholarly Concentrations. Components of this curriculum include Doctoring with CARE small groups, the Translating Discoveries lecture/seminar series, and Scholarly Concentration breakout groups.

4 units, Aut (Prober, C; Shafer, A), Win (Prober, C; Shafer, A), Spr (Prober, C; Shafer, A), Sum (Prober, C; Shafer, A)

INDE 298. Women's Health Independent Project

Required for Women's Health Scholarly Concentration. Students pursue individual projects under the supervision of a faculty member. Prerequisite: consent of instructor.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MEDIEVAL STUDIES (MEDVLST) COURSES

GRADUATE COURSES IN MEDIEVAL STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

MEDVLST 299. Materials and Methods: Medieval and Early Modern Books and Manuscripts

Hands-on seminar dealing with bibliography, codicology, paleography, and other skills associated with advanced research in the humanities using book and manuscript sources. Topics include: paper, ink, marginalia, binding, printing, type, illustration, collation, and formatting; and English, French, German, Italian, and Latin paleography. Guest experts from faculty and library staff.

1-2 units, not given this year

MICROBIOLOGY AND IMMUNOLOGY (MI) COURSES

UNDERGRADUATE COURSES IN MICROBIOLOGY AND IMMUNOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

MI 104. Innate Immunology
(Same as IMMUNOL 204, MI 204) Innate immune mechanisms as the only defenses used by the majority of multicellular organisms. Topics include Toll signaling, NK cells, complement, antimicrobial peptides, phagocytes, neuroimmunity, community responses to infection, and the role of native flora in immunity. How microbes induce and defeat innate immune reactions, including examples from vertebrates, invertebrates, and plants.
3 units, Spr (Schneider, D)

MI 115B. The Vaccine Revolution
(Same as HUMBIO 155B) Advanced seminar. Human aspects of viral disease, focusing on recent discoveries in vaccine development and emerging infections. Journal club format: students choose articles from primary scientific literature, write formal summaries, and synthesize them into a literature review. Emphasis is on analysis, experimental design, and interpretation of data. Oral presentations. Enrollment limited to 10. Prerequisites: HUMBIO 155H, MI 155V.
6 units, not given this year

MI 116. The Human Virosphere
(Same as MI 216) Focus on interaction of humans and viruses from a number of perspectives: historical, cultural, political, and demographic. Organismal, molecular biological, biochemical, human and viral interactions; clinical aspects of viral disease, epidemiology and risk factors, public and international health, aspects of virology including emerging viruses and biological weapons. Case studies involving particular viruses: human herpes viruses, retroviruses, oncogenic viruses; vaccination and disease eradication, evolution of viruses as tools for research and therapy. Emphasis on general principles of biology and matters of decision making policy. Prerequisite: Biology core, Human Biology core, or consent of instructor.
5 units, Win (Siegel, R)

MI 155H. Humans and Viruses I
Introduction to human virology integrating epidemiology, molecular biology, clinical sciences, social sciences, history, and the arts. Emphasis is on host pathogen interactions and policy issues. Topics: polio and vaccination, smallpox and eradication, yellow fever and history, influenza and genomic diversity, rubella and childhood infections, adenovirus and viral morphology, ebola and emerging infection, lassa fever and immune response.
6 units, not given this year

MI 155V. Humans and Viruses II
Introduction to human virology integrating epidemiology, molecular biology, clinical sciences, social sciences, history, and the arts. Emphasis on host pathogen interactions and policy issues. Topics: measles and viral epidemiology, rotavirus and world health, rabies and infections of the brain, HPV and cancer -causing viruses, herpes simplex and viral latency, CMV and viral teratogenesis, retrovirology and endogenous viral sequences, HIV and viral treatement, viral hepatitis and chronic infections, prions and diseases of life style. Prerequisite: MI155H.
6 units, not given this year

MI 185. Topics in Microbiology
(Same as MI 285) For advanced undergraduates and graduate students. Topics include diversity, molecular regulation, growth, bioenergetics, and unique matabolic processes. Presentation of student papers on current topic selected with student input. Satisfies Central Menu Area 3 for Bio majors. Prerequisites: CHEM 31X, Biology core.
3 units, Win (Matin, A)

MI 198. Directed Reading in Microbiology and Immunology
Fields of study are decided in consultation with sponsoring professor. Prerequisite: consent of instructor.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MI 199. Undergraduate Research
Investigations sponsored by individual faculty members. Possible fields: microbial molecular biology and physiology, microbial pathogenicity, immunology, virology, and molecular parasitology. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN MICROBIOLOGY AND IMMUNOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

MI 204. Innate Immunology
(Same as IMMUNOL 204, MI 104) Innate immune mechanisms as the only defenses used by the majority of multicellular organisms. Topics include Toll signaling, NK cells, complement, antimicrobial peptides, phagocytes, neuroimmunity, community responses to infection, and the role of native flora in immunity. How microbes induce and defeat innate immune reactions, including examples from vertebrates, invertebrates, and plants.
3 units, Spr (Schneider, D)

MI 209. Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites: Part I
For graduate students and advanced undergraduates; required of first-year graduate students in Microbiology and Immunology. Emphasis is on mechanisms to establish infection in the host and responses of the host to infection. Current literature. Prerequisite: background in biochemistry and molecular biology.
4 units, not given this year

MI 210. Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites
For graduate and medical students, and advanced undergraduates; required of first-year graduate students in Microbiology and Immunology. The molecular mechanisms by which microorganisms invade animal and human hosts, express their genomes, interact with macromolecular pathways in the infected host, and induce disease. Current literature.
4 units, Win (Sarnow, P)

MI 211. Advanced Immunology I
(Same as IMMUNOL 201) For graduate and medical students and advanced undergraduates. Molecules and cells of the innate and adaptive immune systems; genetics, structure, and function of immune molecules; lymphocyte differentiation and activation; regulation of immune responses; autoimmunity and other problems in immune system dysfunction. Prerequisites: undergraduate course in Immunology and familiarity with experimental approaches in biochemistry, molecular biology, and cell biology.
3 units, Win (Chien, Y)

MI 215. Principles of Biological Technologies
(Same as IMMUNOL 215) The principles underlying commonly utilized technical procedures in biological research. Lectures and primary literature critiques on gel electrophoresis, protein purification and stabilization, immunofluorescence microscopy, FACS. Prerequisites: biochemistry. Required of first-year graduate students in Microbiology and Immunology, and the Immunology program.
3 units, Spr (Kirkegaard, K)

MI 216. The Human Virosphere
(Same as MI 116) Focus on interaction of humans and viruses from a number of perspectives: historical, cultural, political, and demographic. Organismal, molecular biological, biochemical, human and viral interactions; clinical aspects of viral disease, epidemiology and risk factors, public and international health, aspects of virology including emerging viruses and biological weapons. Case studies involving particular viruses: human herpes viruses, retroviruses, oncogenic viruses; vaccination and disease eradication, evolution of viruses as tools for research and therapy. Emphasis on general principles of biology and matters of decision making policy. Prerequisite: Biology core, Human Biology core, or consent of instructor.
5 units, Win (Siegel, R)

MI 233. The Biology of Small Modulatory RNAs
(Same as GENE 233, PATH 233) Open to graduate and medical students. How recent discoveries of miRNA, RNA interference, and short interfering RNAs reveal potentially widespread gene regulatory mechanisms mediated by small modulatory RNAs during animal and plant development. Required paper proposing novel research.
2 units, Aut (Chen, C; Fire, A)

MI 234. Fundamentals of RNA Biology
(Same as GENE 234, PATH 234) For graduate or medical students and (if space allows) to active participants from other segments of the Stanford Community (e.g., TGR students); undergraduates by instructor consent. Fundamental issues of RNA biology, with the goal of setting a foundation for students to explore the expanding world of RNA-based regulation. Each week a topic is covered by a faculty lecture and journal club presentations by students.
2 units, alternate years, not given this year

MI 250. Frontiers in Microbiology and Immunology
Required of first- and second-year students in Microbiology and Immunology. How to evaluate biological research. Held in conjunction with the Microbiology and Immunology Friday noon seminar series. Before the seminar, students and faculty discuss one or more papers from the speaker's primary research literature on a related topic. After the seminar, students meet informally with the speaker to discuss their research.
1 unit, Aut (Schneider, D), Win (Schneider, D), Spr (Schneider)

MI 285. Topics in Microbiology
(Same as MI 185) For advanced undergraduates and graduate students. Topics include diversity, molecular regulation, growth, bioenergetics, and unique matabolic processes. Presentation of student papers on current topic selected with student input. Satisfies Central Menu Area 3 for Bio majors. Prerequisites: CHEM 31X, Biology core.
3 units, Win (Matin, A)

MI 299. Directed Reading in Microbiology and Immunology
Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MI 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MI 399. Graduate Research
Students who have completed the necessary foundation courses undertake investigations in general bacteriology, bacterial physiology and ecology, bacterial genetics, microbial pathogenicity, immunology, parasitology, or virology sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MI 801. TGR Master's Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MI 802. TGR PhD Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MODERN THOUGHT AND LITERATURE (MTL) COURSES

GRADUATE COURSES IN MODERN THOUGHT AND LITERATURE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

MTL 299. Edgework: New Directions in the Study of Culture
Workshop. Required of first-year students in the doctoral program. Methodologies of different disciplines, the possibility and difficulty of interdisciplinary work within these disciplines, and their connection with the individual projects of students in Modern Thought and Literature. May be repeated for credit.
1-3 units, Spr (Staff)

MTL 334A. Concepts of Modernity 1: Philosophical Foundations
(Same as LAW 501) The philosophical foundations of the modern period through the prism of law and legal rationality. Focus is on concepts of the nation state, justice, legal interpretation, individual agency and moral choice, equality, punishment, legislation, and international society. Readings include: Rousseau, Locke; Hegel; Montesquieu, Kant, Bentham, Marx, Weber; and may also include critiques of those works offered by writers including: Arendt, Habermas, Foucault; Rose; Said; Spivak; Butler; MacKinnon.
5 units, Aut (Stacy, H)

MTL 334B. Concepts of Modernity 2: Aesthetics and the Public Sphere
(Same as ENGLISH 334B) A selection of 20th-century theory focusing on the relation of aesthetics and the public sphere. Themes include the conceptualization of the public sphere, the debates over the relation of art and politics, aesthetics as form of public rhetoric, the social mission of literature and other arts. Readings from Habermas, Adorno, Horkheimer, Arendt, Lukacs, Bloch, Brecht, Jameson, Negt and Kluge, Kristeva, Spivak, Appiah, Coetzee.
5 units, Win (Majumdar, S)

MTL 390. Qualifying Paper
Preparation and writing of the qualifying paper for the Ph.D. in Modern Thought and Literature. (Staff)
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MTL 395. Ad Hoc Graduate Seminar
Graduate students (three or more) who wish to study a subject or an area not covered by regular courses and seminars may plan an informal seminar and approach a member of the faculty to supervise it. May be repeated for
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MTL 398. Research
Students pursue a special subject of investigation under supervision of a member of the committee or another faculty member. May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MTL 399. Reading for Orals
Reading in preparation for the University Oral Examination. May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MTL 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MOLECULAR AND CELLULAR PHYSIOLOGY (MCP) COURSES

UNDERGRADUATE COURSES IN MOLECULAR AND CELLULAR PHYSIOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

MCP 126. NEURONS AND DISEASE
Diseases of the nervous system. First lecture of each week focuses on the clinical, epidemiological and behavioral aspects of a selected disease or syndrome. Second lecture exposes the cell biological, electrophysiological, biochemical and/or molecular biological processes that underlie each disease presented. Instructors maintain some flexibility in the diseases chosen for elucidation, but students can expect those covered to range from the relatively straightforward, for example Multiple Sclerosis (MS) or Amyotrophic Lateral Sclerosis (ALS), to the more complex, for example, Schizophrenia or Obsessive Compulsive Disorder (OCD). 3 units for lecture and discussion only; 4 units includes a paper. Prerequisite: Biology or Human Biology core.
3-4 units, Win (Staff)

MCP 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN MOLECULAR AND CELLULAR PHYSIOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

MCP 200. Cardiovascular Physiology
Offered jointly with the Department of Medicine. Lectures, small group instruction, clinical presentations, and lab demonstrations of normal and disordered human cardiovascular physiology. Prerequisite: understanding of general biochemistry.
5 units, Spr (Staff)

MCP 202. Advanced Immunology II
(Same as IMMUNOL 202) Readings of immunological literature. Classic problems and emerging areas based on primary literature. Student and faculty presentations. Prerequisite: IMMUNOL 201/MI 211.
3 units, Spr (Garcia, K)

MCP 216. Genetic Analysis of Behavior
(Same as NBIO 216) Advanced seminar. Findings and implications of behavioral genetics as applied to invertebrate and vertebrate model systems. Topics include biological clocks, and sensation and central pattern generators. Relevant genetic techniques and historical perspective. Student presentation.
4 units, Win (Staff)

MCP 221. Advanced Cell Biology
(Same as BIO 214, BIOC 224) For Ph.D. students. Current research on cell structure, function, and dynamics. Topics include complex cell phenomena such as cell division, apoptosis, compartmentalization, transport and trafficking, motility and adhesion, differentiation, and multicellularity. Current papers from the primary literature. Prerequisite for advanced undergraduates: BIO 129A,B, and consent of instructor.
2-5 units, Win (Kopito, R; Theriot, J; Pfeffer, S; Straight, A; Nachury, M)

MCP 222. Imaging: Biological Light Microscopy
(Same as BIO 152) Survey of instruments which use light and other radiation for analysis of cells in biological and medical research. Topics: basic light microscopy through confocal fluorescence and video/digital image processing. Lectures on physical principles; involves partial assembly and extensive use of lab instruments. Lab. Prerequisites: some college physics, Biology core.
3 units, Spr (Staff)

MCP 232. Advanced Imaging Lab in Biophysics
(Same as APPPHYS 232, BIO 132, BIO 232, BIOPHYS 232) Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor.
4 units, Spr (Block, S; Smith, S; Stearns, T)

MCP 256. How Cells Work: Energetics, Compartments, and Coupling in Cell Biology
Open to graduate and medical students, and advanced undergraduates. Dynamic aspects of cell behavior and function, including cellular energetics, homeostasis, heterogeneity of membranes, structure and function of organelles, solute and water transport, signaling and motility. Emphasis is on the principles of how coupling of molecular processes gives rise to essential functions at the cellular level. Mathematical models of cell function. Student presentations.
4 units, Aut (Maduke, M; Goodman, M)

MCP 258. Information and Signaling Mechanisms in Neurons and Circuits
(Same as NBIO 258) How synapses, cells, and neural circuits process information relevant to a behaving organism. How phenomena of information processing emerge at several levels of complexity in the nervous system, including sensory transduction in molecular cascades, information transmission through axons and synapses, plasticity and feedback in recurrent circuits, and encoding of sensory stimuli in neural circuits.
4 units, not given this year

MCP 299. Directed Reading in Molecular and Cellular Physiology
Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MCP 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MCP 399. Graduate Research
Students undertake investigations sponsored by individual faculty members. Research fields include endocrinology, neuroendocrinology, and topics in molecular and cellular physiology. Prerequisite: consent of instructor. (Staff)
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MCP 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MCP 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC (MUSIC) COURSES

UNDERGRADUATE COURSES IN MUSIC

Primarily for undergraduates; graduate students may enroll with consent of adviser.

MUSIC 1A. Music, Mind, and Human Behavior
An introductory exploration of the question of why music is a pervasive and fundamental aspect of human existence. The class will introduce aspects of music perception and cognition as well as anthropological and cultural considerations. GER:DB-Hum
3 units, not given this year

MUSIC 4SI. Interactive Introduction to North American Taiko
Taught by Stanford Taiko members. Techniques and history. No experience necessary. May be repeated for credit.
1 unit, Win (Sano, S)

MUSIC 5G. Introduction to Guzheng
Introduction to Chinese music through learning how to play guzheng, a 21-stringed traditional Chinese instrument. The cultural, social, and historical significance of guzheng. 15 guzheng techniques, how to read Chinese music and guzheng notation, and two simple classic guzheng pieces. May be repeated for credit a total of 14 times. (AU)
1 unit, Aut (You, H), Win (You, H), Spr (You, H)

MUSIC 7B. Musical Cultures of the World
Musical cultures from Africa, Asia, Europe, and the Americas. Course objectives: cultivate an appreciation for the diversity of human musical expression; discover how music is used to shape social interactions and systems of meaning; develop active listening skills that can be used when encountering any music; gain a preliminary understanding of ethnomusicological concepts and vocabulary. No musical experience necessary. Lectures, discussion, listening, guest performances, musical participation, and a concert analysis. GER:DB-Hum
3 units, Spr (Schultz, A)

MUSIC 8A. Rock, Sex, and Rebellion
Development of critical listening skills and musical parameters through genres in the history of rock music. Focus is on competing aesthetic tendencies and subcultural forces that shaped the music. Rock's significance in American culture, and the minority communities that have enriched rock's legacy as an expressively diverse form. Lectures, readings, listening, and video screenings. GER:DB-Hum, EC-AmerCul
3 units, Win (Applebaum, M)

MUSIC 10AX. Sound Art
The course will explore the use of sound as a medium for artistic expression, from recording and manipulating environmental sounds to studio-created and processed sounds and musical in-

strument recordings. We will study the physics of sound, how sound is perceived, how to record and manipulate sound, and how to combine all of this knowledge into the creation of sound art. Instruction will include using portable sound recorders, using the recording studio, and how to think about sound as a medium of expression. A final project will combine these elements in the creation of a presentation of the works we produce in the class.

2 units, Aut (Kadis, J; Leitman, S)

MUSIC 12A. Introductory Piano Class

(A=level 1; B=level 2; C=level 3)

1 unit, Aut (Zerlang, T), Win (Zerlang, T), Spr (Zerlang, T), Sum (Zerlang, T)

MUSIC 12B. Introductory Piano Class

(A=level 1; B=level 2; C=level 3)

1 unit, Aut (Zerlang, T), Win (Zerlang, T), Spr (Zerlang, T), Sum (Zerlang, T)

MUSIC 12C. Introductory Piano Class

(A=level 1; B=level 2; C=level 3.) May be repeated for credit a total of 14 times.

1 unit, Aut (Zerlang, T), Win (Zerlang, T), Spr (Zerlang, T), Sum (Zerlang, T)

MUSIC 13Q. Classical Music and Politics: Western Music in Modern China

(Stanford Introductory Seminar) Preference to sophomores. Social history, cultural studies, China studies, international relations, and music. From the Italian Jesuit, Matteo Ricci who presented a clavichord to the Chinese emperor to the emergence of a modern generation of Chinese musicians. GER:DB-Hum, EC-GlobalCom

3 units, Spr (Cai, J)

MUSIC 17N. The Operas of Mozart

(Stanford Introductory Seminar) Preference to freshmen. Four of Mozart's mature operas, the earliest works in the operatic repertoire never to go out of fashion. What accounts for this extraordinary staying power? Focus on the history of their composition, performance, and reception, and their changing significance from Mozart's time to the present. GER:DB-Hum

3 units, Win (Berger, K)

MUSIC 17Q. Perspectives in North American Taiko

(Stanford Introductory Seminar) Preference to sophomores. Taiko, or Japanese drum, is a newcomer to the American music scene. Emergence of the first N. American taiko groups coincided with increased Japanese American activism, and to some it is symbolic of Japanese American identity. N. American taiko is associated with Japanese American Buddhism. Musical, cultural, historical, and political perspectives of taiko. Hands-on drumming. Japanese music and Japanese American history, and relations among performance, cultural expression, community, and identity. GER:DB-Hum, EC-AmerCul

4 units, Spr (Sano, S; Uyechi, L)

MUSIC 18A. Jazz History: Ragtime to Bebop, 1900-1940

From the beginning of jazz to the war years. GER:DB-Hum, EC-AmerCul

3 units, Win (Berry, F)

MUSIC 18B. Jazz History: Bebop to Present, 1940-Present

Modern jazz styles from Bebop to the current scene. Emphasis is on the significant artists of each style. GER:DB-Hum, EC-AmerCul

3 units, Spr (Berry, F)

MUSIC 19. Introduction to Music Theory

For non-music majors and Music majors or minors unable to pass the proficiency test for entry to MUSIC 21. The fundamentals of music theory and notation, basic sight reading, sight singing, ear training, keyboard harmony; melodic, rhythmic, and harmonic dictation. Skill oriented, using piano and voice as basic tools to develop listening and reading skills. GER:DB-Hum

3 units, Aut (Berger, T), Spr (Berger, T)

MUSIC 20A. Jazz Theory

Introduces the language and sounds of jazz through listening, analysis, and compositional exercises. Students apply the fundamentals of music theory to the study of jazz. Prerequisite: 19 or consent of instructor. GER:DB-Hum

3 units, Aut (Nadel, J)

MUSIC 20B. Advanced Jazz Theory

Approaches to improvisation through listening and transcribing, and developing familiarity with important contributors to this music. Topics: scale theory, altered dominants, and substitute harmony. Prerequisite: 20A or consent of instructor. GER:DB-Hum

3 units, Win (Nadel, J)

MUSIC 20C. Jazz Arranging and Composition

Jazz arranging and composition for small ensembles. Foundation for writing for big band. Prerequisite: 20A or consent of instructor.

3 units, alternate years, not given this year

MUSIC 21. Elements of Music I

Preference to majors. Introduction to tonal theory. Practice and analysis. Diatonic harmony focusing on melodic and harmonic organization, functional relationships, voice-leading, and tonal structures. Ear-training and keyboard-harmony skills; analytical methods and listening strategies.Enrollment limited to 40. Prerequisites: (1) Piano Proficiency Exam (must be passed within the first two weeks of the term) or MUSIC 12A (may be taken concurrently); (2) Passing grade on a basic musical skills proficiency examination on the first day of class or MUSIC 19. GER:DB-Hum

4 units, Aut (Aquilanti, G), Win (Berger, T)

MUSIC 22. Elements of Music II

Preference to majors. Introduction to chromatic harmony focusing on secondary functions, modulations, harmonic sequences, mode mixture, and the Neapolitan, and augmented sixth chords. Analysis of musical forms and harmonizations complemented by harmonic and melodic dictation, sight singing, and other practical skills. Prerequisites: (1) MUSIC 21; (2) Piano Proficiency Exam or MUSIC 12B (may be taken concurrently). GER:DB-Hum

4 units, Win (Aquilanti, G), Spr (Berger, T)

MUSIC 23. Elements of Music III

Preference to majors. Continuation of chromatic harmony, complex forms, and introduction to early 20th-century techniques. Satisfactory passage of ear-training proficiency exam, part of the course's final, is a requirement for course completion and for continuation in the major sequence. Prerequisites: (1) MUSIC 22; (2) Piano Proficiency Exam or MUSIC 12C (may be taken concurrently). GER:DB-Hum

4 units, Aut (Berger, T), Spr (Ulman, E)

MUSIC 32N. Sculpting with Sounds, Images, and Words

(Stanford Introductory Seminar) Preference to freshmen. Contemporary culture abounds in multimedia forms, in which sounds, images and words are interwoven in unique ways. What are their individual and combined powers? How would you harness them? Participants face these questions in creative projects as well as through in-class viewing, analysis and debates, readings, guest lectures and student presentations. The seminar is taught at the Center for Computer Research in Music and Acoustics where students have access to new media technologies. GER:DB-Hum, DB-Hum

3 units, Win (Kapuscinski, J)

MUSIC 35N. A Union of Diversities: Charles Ives and American Musical Traditions

(Stanford Introductory Seminar) (Same as AMSTUD 35N) Preference to freshmen. The life and work of Charles Ives, and the polarized reception his compositions received. Music includes Ives' Victorian songs and his symphonic works; his philosophical and political writings, historic recordings, oral and photographic histories, and live performances. Hands-on work with original manuscripts and editions. Recommended: ability to read music. GER:DB-Hum

3 units, Spr (Barth, G)

MUSIC 38N. Singing Early Music

(Stanford Introductory Seminar) Preference to freshmen. 15th- and 16th-century musical repertories and their contexts; performance practice. GER:DB-Hum

3 units, Aut (Rodin, J)

MUSIC 40. Music History to 1600

Pre- or corequisite: 21. GER:DB-Hum

4 units, Aut (Rodin, J)

MUSIC 41. Music History 1600-1830

Pre- or corequisite: 22. GER:DB-Hum

4 units, Win (Hadlock, H)

MUSIC 42. Music History Since 1830
Pre- or corequisite: 23. GER:DB-Hum
4 units, Spr (Kronengold, C)

MUSIC 65A. Voice Class I
Group (7 students to a section) beginning voice for the non-major (A = level 1; B = level 2). May be repeated for credit.
1 unit, Aut (Giovannetti, C), Win (Giovannetti, C), Spr (Giovannetti, C), Sum (Linduska, M)

MUSIC 65B. Voice Class II
Group (7 students to a section) beginning voice for the non-major (A = level 1; B = level 2). May be repeated for credit.
1 unit, Aut (Giovannetti, C), Win (Giovannetti, C), Spr (Giovannetti, C), Sum (Linduska, M)

MUSIC 72A. Intermediate Piano Class
For intermediate students. May be repeated for credit a total of 14 times. Prerequisites: 12C or equivalent, audition.
1 unit, Aut (Zerlang, T), Win (Zerlang, T), Spr (Zerlang, T), Sum (Zerlang, T)

MUSIC 72B. Organ Class
For beginning organ students who have keyboard skills. May be repeated for credit a total of 14 times.
1 unit, Aut (Morgan, R), Win (Morgan, R), Spr (Morgan, R)

MUSIC 72C. Harpsichord Class
For beginning harpsichord students who have keyboard skills. May be repeated for credit a total of 14 times.
1 unit, Aut (Thornburgh, E), Win (Thornburgh, E), Spr (Thornburgh, E)

MUSIC 72D. Jazz Piano Class
By invitation only; priority to majors and jazz-ensemble participants. May be repeated for credit a total of 14 times.
1 unit, Aut (Low, M), Win (Low, M), Spr (Low, M)

MUSIC 73. Intermediate Voice Class
For intermediate students. Admission by audition. May be repeated for credit a total of 14 times.
1 unit, Aut (Giovannetti, C), Win (Giovannetti, C), Spr (Giovannetti, C)

MUSIC 74C. Classical Guitar Class
May be repeated for credit a total of 14 times.
1 unit, Aut (Ferguson, C), Win (Ferguson, C), Spr (Ferguson, C)

MUSIC 74D. Harp Class
May be repeated for credit a total of 14 times.
1 unit, Aut (Chauvel, M), Win (Chauvel, M), Spr (Chauvel, M)

MUSIC 75B. Renaissance Wind Instruments Class
May be repeated for credit.
1 unit, Aut (Myers, H), Win (Myers, H), Spr (Myers, H)

MUSIC 76. Brass Instruments Class
May be repeated for credit a total of 14 times.
1 unit, Aut (Kenley, M), Win (Kenley, M), Spr (Kenley, M)

MUSIC 77. Percussion Class
May be repeated for credit a total of 14 times.
1 unit, Aut (Veregge, M), Win (Veregge, M), Spr (Veregge, M)

MUSIC 121. Analysis of Tonal Music
Complete movements, or entire shorter works of the 18th and 19th centuries, are analyzed in a variety of theoretical approaches. Prerequisites: 23 or consent of instructor; and pass the ear-training and piano-proficiency examinations. GER:DB-Hum
4 units, Win (Barth, G)

MUSIC 122A. Renaissance and Baroque Counterpoint
Analysis and composition of contrapuntal styles from the Renaissance and Baroque periods. Use of keyboard, ear training, and sight singing underlies all written work. Prerequisites: 23 and successful completion of the ear-training and piano-proficiency examinations. GER:DB-Hum
4 units, not given this year

MUSIC 122B. Harmonic Materials of 19th Century
Analysis of 19th-century music, with compositional exercises based on 19th-century models. Prerequisites: 23 or consent of instructor; and pass the ear-training and piano-proficiency examinations. GER:DB-Hum
4 units, Aut (Ulman, E)

MUSIC 122C. Introduction to 20th-Century Composition
Contemporary works, with emphasis on music since 1945. Projects in free composition based on 20th-century models. Prerequisites: 23 or consent of instructor; and pass the ear-training and piano-proficiency examinations. GER:DB-Hum
4 units, Win (Ferneyhough, B)

MUSIC 123. Undergraduate Seminar in Composition
Current trends in composition. May be repeated for credit a total of 7 times. Prerequisites: Music major; 23 or consent of instructor. GER:DB-Hum
3 units, Aut (Kapuscinski, J), Spr (Ulman, E)

MUSIC 125. Individual Undergraduate Projects in Composition
May be repeated for credit a total of 14 times. Prerequisites: music major, and one quarter of 123.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

MUSIC 126. Introduction to Thoroughbass
The development of continuo techniques and skills for figured-bass realization. Performance and analysis of selected repertoire, using thoroughbass principles and exercises based on historical theoretical treatises. Prerequisite: 21.
1-3 units, Win (Berger, T)

MUSIC 127. Instrumentation and Orchestration
Individual instruments, instrumental groups within the orchestra, and combinations of groups. Arrangements from piano to orchestral music. Score analysis with respect to orchestration. Practical exercises using chamber ensembles and school orchestra. Prerequisite: 23. GER:DB-Hum
3 units, alternate years, not given this year

MUSIC 128. Stanford Laptop Orchestra: Composition, Coding, and Performance
(Same as CS 170) Classroom instantiation of the Stanford Laptop Orchestra (SLOrk) which includes public performances. An ensemble of more than 20 humans, laptops, controllers, and special speaker arrays designed to provide each computer-mediated instrument with its sonic identity and presence. Topics and activities include issues of composing for laptop orchestras, instrument design, sound synthesis, programming, and live performance. May be repeated four times for credit.
1-5 units, Spr (Wang, G)

MUSIC 130A. Introduction to Conducting
Baton techniques and rehearsal procedures. The development of coordination of the members of the body involved in conducting; fluency in beat patterns and meters; dynamics, tempi, cueing, and use of the left hand in conducting. Prerequisites: 121 and diagnostic musicianship exam given first day of class; preference to students who have completed 122B.
3 units, Aut (Aquilanti, G)

MUSIC 130B. Elementary Orchestral Conducting
Prerequisites: 127 or previous orchestral performance experience, 130A.
3 units, Win (Cai, J), alternate years, not given next year

MUSIC 130C. Elementary Choral Conducting
Techniques specific to the conducting of choral ensembles: warm-ups, breathing, balance, blend, choral tone, isolation principles, recitative conducting, preparation, and conducting of choral/orchestral works. Prerequisite: 130A.
3 units, alternate years, not given this year

MUSIC 140. Studies in Medieval Music
(Same as MUSIC 240) Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4-unit level only.) GER:DB-Hum
3-4 units, Aut (Mahrt, W)

MUSIC 141. Studies in Renaissance Music
(Same as MUSIC 241) Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4-unit level only.) GER:DB-Hum
3-4 units, Win (Rodin, J)

MUSIC 142. Studies in Baroque Music
(Same as MUSIC 242) Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.) GER:DB-Hum
3-4 units, Spr (Hadlock, H)

MUSIC 143. Studies in Classic Music
(Same as MUSIC 243) Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.) GER:DB-Hum
3-4 units, not given this year

MUSIC 144. Studies in Romantic Music
(Same as MUSIC 244) Prerequisites: MUSIC 23, MUSIC 42 (WIM at 4-unit level only.) GER:DB-Hum
3-4 units, not given this year

MUSIC 145. Studies in Modern Music
(Same as MUSIC 245) Prerequisites: MUSIC 23, MUSIC 42. (WIM at 4-unit level only.) GER:DB-Hum
3-4 units, not given this year

MUSIC 146. Music and Urban Film
(Same as MUSIC 246) How music and sound work in urban cinema. What happens when music's capacity to transform everyday reality combines with the realism of urban films? Provides an introduction to traditional theories of film music and film sound; considers how new technologies and practices have changed the roles of music in film. Readings discuss film music, realistic cinema, urban musical practices and urban culture. Viewing includes action/adventure, Hindi film, documentary, film noir, hip hop film, the musical, and borderline cases by Jean-Luc Godard, Spike Lee, Wong Kar-Wai and Tsai Ming-Liang. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4 unit level only.) GER:DB-Hum, EC-GlobalCom
3-4 units, Spr (Kronengold, C)

MUSIC 147. The Soul Tradition in African American Music
(Same as MUSIC 247) The African American tradition of soul music from its origins in blues, gospel, and jazz to its influence on today's r&b, hip hop, and dance music. Style such as rhythm and blues, Motown, Southern soul, funk, Philadelphia soul, disco, Chicago house, Detroit techno, trip hop, and neo-soul. Soul's cultural influence and global reach; its interaction with politics, gender, place, technology, and the economy. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.) GER:DB-Hum, EC-AmerCul
3-4 units, Win (Kronengold, C)

MUSIC 148. Musical Shakespeare: Theater, Song, Opera, and Film
(Same as MUSIC 248) The role of music in productions, adaptations, and interpretations of Shakespeare's plays as theater, opera, and film from the Elizabethan era through the present. Emphasis is on the role of songs, stage music, and music in operatic and film adaptations. Incidental music, orchestral tone poems, and art-song settings of lyrics from the plays. Plays include Romeo and Juliet, Othello, Macbeth, Hamlet, The Tempest, Midsummer Night's Dream, and Twelfth Night. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4- or 5-unit level only.) GER:DB-Hum
3-5 units, not given this year

MUSIC 149. Reactions to the Record: Early Recordings, Lost Styles, and Music's Future
(Same as MUSIC 249) Seminar. The transformation of musical style, audience expectations, the composer-performer relationship, and the musical score from the late 1800s to the present. Sources include: recordings from Stanford's Archive of Recorded Sound; recordings of (Brahms, Debussy, Rachmaninoff, Saint-Saëns, Prokofiev, Bartók; concert programs; interviews; and reviews. Readings include Hamilton's After the Golden Age and Philip's Performing Music in the Age of Recording. Emphasis is on voice, strings, piano, chamber music, and orchestra. Guest residencies in conjunction with January 2009 symposium; see http://music.stanford.edu/Events/StanfordMusicSymposium/. May be repeated for credit. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4-unit level only.) GER:DB-Hum
3-4 units, not given this year

MUSIC 150. Musical Acoustics
The physics of vibrating systems, waves, and wave motion. Time- and frequency-domain analysis of sound. Room acoustics, reverberation, and spatialization. The acoustics of musical instruments: voice, strings, and winds. Emphasis is on the practical aspects of acoustics in making music. Hands-on and computer-based lab. See http://ccrma.stanford.edu/courses/150/. Prerequisites: music performance/composition experience, basic algebra, calculus, and physics. GER:DB-EngrAppSci
3 units, Spr (Rossing, T)

MUSIC 150G. Wagnerian Echos: A Cultural History from Modernism to Popular Culture
(Same as GERGEN 161) The afterlives of mythological themes from the operas and music dramas of Richard Wagner (The Flying Dutchman, Tannhäuser, Lohengrin, Ring Cycle, Parsifal) in literature, modernist aesthetics, fascist politics, film, philosophy, and contemporary media. GER:DB-Hum
3-5 units, Spr (Daub, A; Grey, T)

MUSIC 154. Composition and Performance of Instrumental Music with Electronics
Aesthetic and analytical issues from the pioneers of Musique Concrete to the electro of the 2000's. Electroacoustic scholarship over the past 60 years discussing problems and development of the genre. Emphasis on listening, writing, tools development, space, serendipity, concert ritual, interdisciplinarity, relationship with other styles of music, gesture, and sound/image. Considered composers include: Schaeffer, Henry, Varese, Xenakis, Stockahausen, Messiaen, Boulez, Ferrari, Risset, Berio, Chowning, Parmegiani, Bayle, Chion, Dhomont. Focus on one or a few works leading to a public performance at the end of the quarter. Prerequisite: experience in analysis of contemporary music and in electronic music. May be repeated for credit once.
1-5 units, Spr (Ruviaro, B)

MUSIC 155. Intermedia Workshop
(Same as ARTSTUDI 139) Students develop and produce intermedia works. Musical and visual approaches to the conceptualisation and shaping of time-based art. Exploration of sound and image relationship. Study of a wide spectrum of audiovisual practices including experimental animation, video art, dance, performance, non-narrative forms, interactive art and installation art. Focus on works that use music/sound and image as equal partners. Limited enrollment. Prerequisites: consent of instructors, and one of FILMPROD 114, ARTSTUDI 131, 138, 167, 177, 179, or MUSIC 123, or equivalent.
3-4 units, Spr (Kapuscinski, J; DeMarinis, P)

MUSIC 156. "sic": Improvisation Collective
Small ensemble devoted to learning trans-idiomatic improvisation techniques and composing indeterminate pieces in a workshop setting. One major concert. Prerequisite: access to an instrument. Improvisational experience and conventional instrumental virtuosity not required. May be repeated for credit for a total of 3 times.
1 unit, Win (Applebaum, M)

MUSIC 157. Introduction to Mariachi Ensemble
Introduction to the practice of mariachi music, tradition, and history. Focus is on learning traditional sones, rancheras, huapangos, and boleros. Requirements: ability to play and access to instruments (violin, trumpet, guitar, vihuela, and guitarron). May be repeated for credit.
1 unit, Aut (Clark, J), Win (Clark, J), Spr (Clark, J)

MUSIC 158. Soundwire Ensemble
Stanford's Internet2-based Soundwire Ensemble rehearses with the East Coast Tintinnabulate Ensemble directed by Pauline Oliveros, Rensselaer Polytechnic Institute. Concerts, composition, and improvisation projects using resources available when connecting with remote musicians. State-of-the-art audio and video technology developed by ensemble participants. May be repeated for credit.
2-3 units, not given this year

MUSIC 159. Early Music Singers
Small choir specializing in Medieval, Renaissance, and early Baroque vocal music. One major concert per quarter. May be repeated for credit for a total of 14 times.
1 unit, Aut (Mahrt, W), Win (Mahrt, W), Spr (Mahrt, W)

MUSIC 160. Stanford Symphony Orchestra
70- to 100-member ensemble performing major orchestral works; minimum one concert per quarter. May be repeated for credit a total of 14 times.
1 unit, Aut (Staff), Win (Cai, J), Spr (Cai, J)

MUSIC 160A. Stanford Philharmonia Orchestra
Prerequisite: audition, one year of 160, or consent of instructor. May be repeated for credit.
1 unit, Aut (Staff), Win (Cai, J), Spr (Cai, J)

MUSIC 160B. Stanford New Ensemble
Performing compositions of the 20th century, recent works of this century, and new works by Stanford faculty and student composers. Musicians collaborate with composers and artists visiting and performing at Stanford. One concert per quarter. May be repeated for credit.
1 unit, Aut (Staff), Win (Cai, J), Spr (Cai, J)

MUSIC 160S. Summer Orchestra
50- to 100-member ensemble performing major orchestral works. Program: Zoltan Kodaly, Dances of Galanta; Joaquin Rodrigo, Fantasia para un Gentilhombre; featuring Charles Ferguson in guitar; Ludwig van Beethoven, Symphony no.3 in E-flat major Op. 55 ""Heroic""; Auditions of ten minutes each on June 21, 22, 23 and 24 from 4:00 to 8:00PM. Please, visit http://sso.stanford.edu/audtions/ for sign-up. See http://music.stanford.edu/Ensembles/SummerSSO.html for additional information. Questions: Contact Martín Fraile, music director and conductor at: mailto:mfraile@stanford.edu. May be repeated for credit.

1 unit, Sum (Fraile, M)

MUSIC 161A. Stanford Wind Ensemble
40- to 50-member ensemble performing transcriptions of symphonic music, brass band music, and repertoire composed specifically for symphonic band. One concert per quarter. May be repeated for credit a total of 14 times.

1 unit, Aut (Aquilanti, G), Win (Aquilanti, G), Spr (Aquilanti, G)

MUSIC 161B. Jazz Orchestra
Big band format. Repertoire drawn primarily from the contemporary jazz-ensemble literature. One formal concert per quarter. May be repeated for credit a total of 14 times.

1 unit, Aut (Berry, F), Win (Berry, F), Spr (Berry, F)

MUSIC 161C. Red Vest Band
A small ensemble of the Leland Stanford Junior University Marching Band open to members of the LSJUMB by audition and consent of instructor. Members perform at all men's and women's home basketball games and travel to some away and post-season games. Twice-weekly rehearsals focus on introduction of new student arrangements and the LSJUMB's repertoire of rock, funk, and traditional styles. May be repeated for credit a total of 7 times.

1 unit, Win (Aquilanti, G)

MUSIC 161D. Stanford Brass Ensemble
Performance of works for full brass choir and for smaller ensembles of brass instruments. Once weekly rehearsals. May be repeated for credit. Prerequisite: audition and consent of instructor.

1 unit, Aut (Kenley, M), Win (Kenley, M), Spr (Kenley, M)

MUSIC 162. Symphonic Chorus
100- to 150-voice ensemble, performing major choral masterworks with orchestra. One concert per quarter. May be repeated for credit a total of 14 times.

1 unit, Aut (Sano, S), Win (Sano, S), Spr (Sano, S)

MUSIC 163. Memorial Church Choir
Official choir of Memorial Church, furnishing music for Sunday services and special occasions in the church calendar. May be repeated for credit a total of 14 times.

1 unit, Aut (Morgan, R), Win (Morgan, R), Spr (Morgan, R)

MUSIC 165. Chamber Chorale
Select 24-voice chamber ensemble, specializing in virtuoso choral repertoire from all periods of Western art music. May be repeated for credit a total of 14 times.

1 unit, Aut (Sano, S), Win (Sano, S), Spr (Sano, S)

MUSIC 167. University Singers
Mixed-repertory chorus, performing choral repertoire from all periods of Western art music and other world cultures. May be repeated for credit a total of 14 times.

1 unit, Aut (Morgan, R), Win (Morgan, R), Spr (Morgan, R)

MUSIC 167S. Summer Chorus
80-100 voice ensemble, performing major choral masterworks.

1 unit, Sum (Hunn, A)

MUSIC 169. Stanford Taiko
Select North American taiko ensemble, performing traditional and contemporary repertoire for Japanese drums. Multiple performances in Winter and Spring quarters, also touring; instrument construction and maintenance. Admission by audition in Autumn Quarter only. May be repeated for credit a total of 14 times.

1 unit, Aut (Sano, S; Uyechi, L), Win (Sano, S; Uyechi, L), Spr (Sano, S; Uyechi, L)

MUSIC 170. Collaborative Piano
Performance class in a workshop setting. Techniques of collaboration with vocalists and instrumentalists in repertoire ranging from songs and arias to sonatas and concertos. Prerequisite: private-lesson proficiency level in piano, or consent of instructor.

1 unit, Aut (Dahl, L)

MUSIC 171. Chamber Music
Audition required. Weekly one-hour coachings from Music department faculty. Classical string quartets and piano/string groups are supervised by the St. Lawrence String Quartet and require attendance at a weekly Wednesday 4:15 p.m. master class. May be repeated for credit.

1 unit, Aut (Staff), Win (Staff), Spr (Staff)

MUSIC 172A. Piano
Private lessons and group master class weekly. May be repeated for credit a total of 14 times.

1-3 units, Aut (Barth, G), Win (Barth, G), Spr (Barth, G)

MUSIC 172B. Organ
May be repeated for credit a total of 14 times.

1-3 units, Aut (Morgan, R), Win (Morgan, R), Spr (Morgan, R)

MUSIC 172C. Harpsichord
May be repeated for credit a total of 14 times.

1-3 units, Aut (Thornburgh, E), Win (Thornburgh, E), Spr (Thornburgh, E)

MUSIC 172D. Jazz Piano
By invitation only; priority to majors and jazz-ensemble participants. May be repeated for credit a total of 14 times.

1-3 units, Aut (Low, M), Win (Low, M), Spr (Low, M)

MUSIC 172E. Fortepiano
May be repeated for credit a total of 14 times.

1-3 units, Aut (Barth, G), Win (Barth, G), Spr (Barth, G)

MUSIC 172F. Carillon
May be repeated for credit a total of 14 times.

1-3 units, Aut (Zerlang, T), Win (Zerlang, T), Spr (Zerlang, T)

MUSIC 173. Voice
May be repeated for credit a total of 14 times.

1-3 units, Aut (Giovannetti, C), Win (Giovannetti, C), Spr (Giovannetti, C)

MUSIC 174A. Violin
May be repeated for credit a total of 14 times.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

MUSIC 174B. Viola
May be repeated for credit a total of 14 times.

1-3 units, Aut (Robertson, L), Win (Robertson, L), Spr (Robertson, L)

MUSIC 174C. Violoncello
May be repeated for credit a total of 14 times.

1-3 units, Aut (Harrison, S), Win (Harrison, S), Spr (Harrison, S)

MUSIC 174D. Contrabass
May be repeated for credit a total of 14 times.

1-3 units, Aut (Moyer, B), Win (Moyer, B), Spr (Moyer, B)

MUSIC 174E. Viola Da Gamba
May be repeated for credit a total of 14 times.

1-3 units, Aut (Dornenburg, J), Win (Dornenburg, J), Spr (Dornenburg, J)

MUSIC 174F. Classical Guitar
May be repeated for credit a total of 14 times.

1-3 units, Aut (Ferguson, C), Win (Ferguson, C), Spr (Ferguson, C)

MUSIC 174G. Harp
May be repeated for credit a total of 14 times.

1-3 units, Aut (Chauvel, M), Win (Chauvel, M), Spr (Chauvel, M)

MUSIC 174H. Baroque Violin
May be repeated for credit a total of 14 times.

1-3 units, Aut (Martin, A), Win (Martin, A), Spr (Martin, A)

MUSIC 174I. Jazz Bass

1-3 units, Aut (McCain, J), Win (McCain, J), Spr (McCain, J)

MUSIC 174J. Jazz Guitar
Individual lessons in jazz guitar.

1-3 units, Aut (Vandivier, R), Win (Vandivier, R), Spr (Vandivier, R)

MUSIC 175A. Flute
May be repeated for credit a total of 14 times.
1-3 units, Aut (Hawley, A), Win (Hawley, A), Spr (Hawley, A)

MUSIC 175B. Oboe
May be repeated for credit a total of 14 times.
1-3 units, Aut (Hubbard, R), Win (Matheson, J), Spr (Matheson, J)

MUSIC 175C. Clarinet
May be repeated for credit a total of 14 times.
1-3 units, Aut (Brandenburg, M), Win (Brandenburg, M), Spr (Brandenburg, M)

MUSIC 175D. Bassoon
May be repeated for credit a total of 14 times.
1-3 units, Aut (Olivier, R), Win (Olivier, R), Spr (Olivier, R)

MUSIC 175E. Recorder/Renaissance Wind Instruments
May be repeated for credit a total of 14 times.
1-3 units, Aut (Myers, H), Win (Myers, H), Spr (Myers, H)

MUSIC 175F. Saxophone
May be repeated for credit a total of 14 times.
1-3 units, Aut (McCarthy, C), Win (McCarthy, C), Spr (McCarthy, C)

MUSIC 175G. Baroque Flute
May be repeated for credit a total of 14 times.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

MUSIC 176A. French Horn
May be repeated for credit a total of 14 times.
1-3 units, Aut (Ragent, L), Win (Ragent, L), Spr (Ragent, L)

MUSIC 176B. Trumpet
May be repeated for credit a total of 14 times.
1-3 units, Aut (Johnson-Hamilton, J), Win (Johnson-Hamilton, J), Spr (Johnson-Hamilton, J)

MUSIC 176C. Trombone
May be repeated for credit a total of 14 times.
1-3 units, Aut (Kenley, M), Win (Kenley, M), Spr (Kenley, M)

MUSIC 176D. Tuba
May be repeated for credit a total of 14 times.
1-3 units, Aut (Clements, A), Win (Clements, A), Spr (Clements, A)

MUSIC 177. Percussion
May be repeated for credit a total of 14 times.
1-3 units, Aut (Veregge, M), Win (Veregge, M), Spr (Veregge, M)

MUSIC 182. Diction for Singers
The international phonetic alphabet and its application to German, French, and Italian vocal literature. Open also to pianists interested in vocal coaching and choral conducting.
1 unit, Win (Dahl, L)

MUSIC 183A. German Art Song Interpretation
Including composers from Beethoven and Schubert to Wolf and Strauss. for advanced singers and pianists as partners. Performance class in a workshop setting. Prerequisite: consent of instructor. Recommended: 170 for pianists or 182 for singers. May be repeated for credit a total of 2 times.
1 unit, not given this year

MUSIC 183B. French Art Song Interpretation
Composers include Fauré, Debussy, Ravel, and Poulenc. For advanced singers and pianists as partners. Performance class in a workshop setting. May be repeated for credit a total of 2 times. Prerequisite: consent of instructor. Recommended: 170 for pianists or 182 for singers.
1 unit, Spr (Dahl, L)

MUSIC 184. Vocal Repertory Workshop
A practical workshop in vocal repertoire. Each quarter's offering emphasizes a specific genre or period, therefore the course can be repeated with consent of instructor. In addition to broadening the student's knowledge of vocal repertoire, the following skills are developed: text preparation, foreign language translation and diction; historically informed performance practice; editorial practice through comparison or preparation; rehearsal for performance and/or recording. Prerequisite: vocal or instrumental instruction, as the class is open to singers or collaborative artists.
1-3 units, Aut (Catsalis, M), Win (Catsalis, M), Spr (Catsalis)

MUSIC 192A. Foundations of Sound-Recording Technology
For upper division undergraduates and graduate students; preference given to Music majors with MST specialization. Topics: elementary electronics; the physics of sound transduction and microphone operation, selection, and placement; mixing consoles; connectors and device interconnection; grounding and shielding; principles of analog magnetic recording; operation maintenance of recording equipment; and principles of recording engineering. Enrollment limited. Prerequisites: algebra, physics basics, and consent of instructor. GER:DB-EngrAppSci
3 units, Aut (Kadis, J)

MUSIC 192B. Advanced Sound Recording Technology
Topics: noise reduction techniques; dynamics and time-delay audio effects; the principles of digital audio; disk- and tape-based digital recorders; digital audio workstations and editing; advanced multitrack techniques; SMPTE and MIDI time code and device synchronization; MIDI sequencing and synchronization. See http://ccrma.stanford.edu/courses/. Prerequisite: 192A. GER:DB-EngrAppSci, DB-Hum
3 units, Win (Kadis, J)

MUSIC 192C. Session Recording
Independent engineering of recording sessions. May be repeated for credit a total of 14 times. Prerequisites: 192A,B.
1-2 units, Aut (Kadis, J), Win (Kadis, J), Spr (Kadis, J)

MUSIC 197. Undergraduate Teaching Apprenticeship
Work in an apprentice-like relationship with faculty teaching a student-initiated course. Prerequisite: consent of instructor. (Staff)
1-2 units, Aut (Staff), Win (Sano, S), Spr (Sano, S)

MUSIC 198. Concentrations Project
For concentration program participants only. Must be taken in senior year.
4 units, Aut (Staff), Win (Staff), Spr (Staff)

MUSIC 199. Independent Study
For advanced undergraduates and graduate students who wish to do work outside the regular curriculum. Before registering, student must present specific project and enlist a faculty sponsor. May be repeated for credit a total of 14 times.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC 201. CCRMA Colloquium
Weekly review of work being done in the field, research taking palce at CCRMA, and tools to make the most of the CCRMA technical facilities.
1 unit, Aut (Leitman, S; Wilkerson, C)

MUSIC 222. Sound in Space
Historical background, techniques and theory on the use of space in music composition and diffusion. Listening and analysis of relevant pieces. Experimental work in spatialization techniques leading to short studies to be diffused in concert at the end of the quarter.
1-4 units, Spr (Lopez-Lezcano, F)

MUSIC 251. Psychophysics and Music Cognition
Lecture, lab and experiment-based course in perception, psychoacoustics, cognition, and neuroscience of music. (WIM at 4 or 5 units only.) GER:DB-Hum, WIM
1-5 units, Win (Berger, J)

MUSIC 252. Music Notation Software: An Introduction
Learn to use music notation programs Finale®, Sibelius® and open-source alternatives.
1-2 units, Aut (Selfridge-Field, E)

GRADUATE COURSES IN MUSIC

Primarily for graduate students; undergraduates may enroll with consent of instructor.

MUSIC 200. Graduate Proseminar
Required of first-year graduate students in music. Introduction to research in music, bibliographical materials, major issues in the field, philosophy, and methods in music history. Guest lecturers and individual research topics.
3-4 units, Aut (Berger, K; McBride, J)

MUSIC 220A. Fundamentals of Computer-Generated Sound
Techniques for digital sound synthesis, effects, and reverberation. Topics: summary of digital synthesis techniques (additive, subtractive, nonlinear, wavetable, spectral-modeling, and physical-modeling); digital effects algorithms (phasing, flanging, chorus,

pitch-shifting, and vocoding); and techniques for digital reverberation. Majors (undergraduate or graduate) must take for 4 units. See http://ccrma.stanford.edu/.

2-4 units, Aut (Chafe, C)

MUSIC 220B. Compositional Algorithms, Psychoacoustics, and Computational Music

The use of high-level programming language as a compositional aid in creating musical structures. Advanced study of sound synthesis techniques. Simulation of a reverberant space and control of the position of sound within the space. See http://ccrma.stanford.edu/. Prerequisite: 220A.

2-4 units, Win (Wang, G)

MUSIC 220C. Research Seminar in Computer-Generated Music

Individual projects in composition, psychoacoustics, or signal processing. See http://ccrma.stanford.edu. May be repeated for credit. Prerequisite: 220B.

2-4 units, Spr (Chafe, C)

MUSIC 220D. Research in Computer-Generated Music

Independent research projects in composition, psychoacoustics, or signal processing. See http://ccrma.stanford.edu/. May be repeated for credit. Prerequisite: 220C.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC 221. Topics in the History of Theory

The intersection of music theory and compositional practice in different eras of Western music history. Primary sources in music theory and issues such as notation, rhythm, mode, dissonance treatment, counterpoint, tonality, form, rhetoric, affect and imitation, expression, linear analysis, 12-tone and set theory, in light of relevant repertoire and modern scholarship. May be repeated for credit a total of 5 times.

3-5 units, Win (Staff), alternate years, not given next year

MUSIC 223. Composition for Electronic Musicians

Composition for any combination of acoustic and electroacoustic instrumentation, computer-generated sound, invented instruments, sound-sculptures, and multi-disciplinary elements including theater and visual media. Project-based laboratory to advance original student works, supported by lectures on the fundamentals of composition. Concert performance of final works. Taught at CCRMA with a focus on engendering deliberate conversation on the enrichment of a cultural context for new media. Open to undergraduates and graduates.

1-4 units, not given this year

MUSIC 230. Advanced Orchestral Conducting

May be repeated for credit a total of 8 times. Prerequisite: 130B.

2-4 units, Aut (Staff), Win (Cai, J), Spr (Cai, J)

MUSIC 231. Advanced Choral Conducting

May be repeated for credit a total of 8 times. Prerequisite: 130C.

2-4 units, Aut (Sano, S), Win (Sano, S), Spr (Sano, S)

MUSIC 240. Studies in Medieval Music

(Same as MUSIC 140) Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4-unit level only.)

3-4 units, Aut (Mahrt, W)

MUSIC 241. Studies in Renaissance Music

(Same as MUSIC 141) Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4-unit level only.)

3-4 units, Win (Rodin, J)

MUSIC 242. Studies in Baroque Music

(Same as MUSIC 142) Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.)

3-4 units, Spr (Hadlock, H)

MUSIC 243. Studies in Classic Music

(Same as MUSIC 143) Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.)

3-4 units, not given this year

MUSIC 244. Studies in Romantic Music

(Same as MUSIC 144) Prerequisites: MUSIC 23, MUSIC 42 (WIM at 4-unit level only.)

3-4 units, not given this year

MUSIC 245. Studies in Modern Music

(Same as MUSIC 145) Prerequisites: MUSIC 23, MUSIC 42. (WIM at 4-unit level only.)

3-4 units, not given this year

MUSIC 246. Music and Urban Film

(Same as MUSIC 146) How music and sound work in urban cinema. What happens when music's capacity to transform everyday reality combines with the realism of urban films? Provides an introduction to traditional theories of film music and film sound; considers how new technologies and practices have changed the roles of music in film. Readings discuss film music, realistic cinema, urban musical practices and urban culture. Viewing includes action/adventure, Hindi film, documentary, film noir, hip hop film, the musical, and borderline cases by Jean-Luc Godard, Spike Lee, Wong Kar-Wai and Tsai Ming-Liang. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4 unit level only.)

3-4 units, Spr (Kronengold, C)

MUSIC 247. The Soul Tradition in African American Music

(Same as MUSIC 147) The African American tradition of soul music from its origins in blues, gospel, and jazz to its influence on today's r&b, hip hop, and dance music. Style such as rhythm and blues, Motown, Southern soul, funk, Philadelphia soul, disco, Chicago house, Detroit techno, trip hop, and neo-soul. Soul's cultural influence and global reach; its interaction with politics, gender, place, technology, and the economy. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.)

3-4 units, Win (Kronengold, C)

MUSIC 248. Musical Shakespeare: Theater, Song, Opera, and Film

(Same as MUSIC 148) The role of music in productions, adaptations, and interpretations of Shakespeare's plays as theater, opera, and film from the Elizabethan era through the present. Emphasis is on the role of songs, stage music, and music in operatic and film adaptations. Incidental music, orchestral tone poems, and art-song settings of lyrics from the plays. Plays include Romeo and Juliet, Othello, Macbeth, Hamlet, The Tempest, Midsummer Night's Dream, and Twelfth Night. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4- or 5-unit level only.)

3-5 units, not given this year

MUSIC 249. Reactions to the Record: Early Recordings, Lost Styles, and Music's Future

(Same as MUSIC 149) Seminar. The transformation of musical style, audience expectations, the composer-performer relationship, and the musical score from the late 1800s to the present. Sources include: recordings from Stanford's Archive of Recorded Sound; recordings of (Brahms, Debussy, Rachmaninoff, Saint-Saëns, Prokofiev, Bartók; concert programs; interviews; and reviews. Readings include Hamilton's After the Golden Age and Philip's Performing Music in the Age of Recording. Emphasis is on voice, strings, piano, chamber music, and orchestra. Guest residencies in conjunction with January 2009 symposium; see http://music.stanford.edu/Events/StanfordMusicSymposium/. May be repeated for credit. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4-unit level only.)

3-4 units, not given this year

MUSIC 250A. HCI Theory and Practice

HCI issues as they relate to music applications in composition and performance. Project-oriented, examining issues from the technical and theoretical perspectives of computer science, haptics, and music theory. See http://ccrma.stanford.edu/.

3-4 units, Aut (Ju, W; Berdahl, E)

MUSIC 250B. HCI Performance Systems

Continuation of 250A, concentrating on interactive computer-music performance systems. See http://ccrma.stanford.edu/courses/250b/. Prerequisite: 250A.

1-4 units, Win (Leitman, S; Wilkerson, C)

MUSIC 253. Music Notation and Representation Software

Focus on symbolic data for music applications including advanced notation systems, optical music recognition, musical data conversion, and internal structure of MIDI files.

2-4 units, Win (Selfridge-Field, E)

MUSIC 254. Symbolic Music Analysis and Retrieval
Leveraging off three synchronized sets of symbolic data resources for notation and analysis, the lab portion introduces students to the open-source Humdrum Toolkit for music representation and analysis. Issues of data content and quality as well as methods of information retrieval, visualization, and summarization are considered in class. Grading based primarily on student projects. Prerequisite: 253 or consent of instructor.
2-4 units, Spr (Selfridge-Field, E)

MUSIC 256A. Music, Computing, and Design I: Software Paradigms for Computer Music
(Same as CS 476A) Software design and implementation for computer audio. Strategies, best practices, and tradeoffs in building audio software systems of various sizes (S, M, L, XL), with a focus on interactive (real-time) systems. Lectures examine high-level designs as well as dissect code in a hands-on manner. Course work includes small programming assignments and a final software project. This course is the prerequisite for MUSIC 256B. Prerequisite: experience in C/C++ and/or Java.
1-4 units, Aut (Wang, G)

MUSIC 256B. Mobile Music
(Same as CS 476B) Aesthetic, design, and implementation of mobile music, centered around the modern super smartphones such as the iPhone). Similarities and intrinsic differences between mobile and traditional computing and design for music. Topics include mobile software design, social and cloud computing, mobile interface design, and programming phones, in the service of music. Prerequisite: MUSIC 256A.
1-4 units, Win (Wang, G)

MUSIC 260. Music of South Asia
Focuses on the history, theory, and practice of South Asian music with particular emphasis on the classical traditions of North and South India. Also addresses regional folk, popular, and devotional musical styles of India, Pakistan, and Afghanistan. Topics include: raga, tala, vocal and instrumental genres, improvisation, aesthetics, music transmission, musical nationalism, social organization of musicians, music and ritual, music and gender, and technology. Lecture with discussion, some singing (no experience necessary), guest performances, reading, listening, and analysis.
3-4 units, Spr (Schultz, A)

MUSIC 269. Research in Performance Practices
Directed reading and research. May be repeated for credit a total of 5 times.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC 272A. Advanced Piano
Private lessons and group masterclass weekly. May be repeated for credit a total of 14 times.
1-3 units, Aut (Barth, G), Win (Barth, G), Spr (Barth, G)

MUSIC 272B. Advanced Organ
May be repeated for credit a total of 14 times.
1-3 units, Aut (Morgan, R), Win (Morgan, R), Spr (Morgan, R)

MUSIC 272C. Advanced Harpsichord
May be repeated for credit a total of 14 times.
1-3 units, Aut (Thornburgh, E), Win (Thornburgh, E), Spr (Thornburgh, E)

MUSIC 272D. Advanced Jazz Piano
By invitation only; priority to majors and jazz-ensemble participants. May be repeated for credit a total of 14 times.
1-3 units, Aut (Low, M), Win (Low, M), Spr (Low, M)

MUSIC 272E. Advanced Fortepiano
May be repeated for credit a total of 14 times.
1-3 units, Aut (Barth, G), Win (Barth, G), Spr (Barth, G)

MUSIC 272F. Advanced Carillon
May be repeated for credit a total of 14 times.
1-3 units, Aut (Zerlang, T), Win (Zerlang, T), Spr (Zerlang, T)

MUSIC 273. Advanced Voice
May be repeated for credit.
1-3 units, Aut (Giovannetti, C), Win (Giovannetti, C), Spr (Giovannetti, C)

MUSIC 274A. Advanced Violin
May be repeated for credit a total of 14 times.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

MUSIC 274B. Advanced Viola
May be repeated for credit a total of 14 times.
1-3 units, Aut (Robertson, L), Win (Robertson, L), Spr (Robertson, L)

MUSIC 274C. Advanced Violoncello
May be repeated for credit a total of 14 times.
1-3 units, Aut (Harrison, S), Win (Harrison, S), Spr (Harrison, S)

MUSIC 274D. Advanced Contrabass
May be repeated for credit a total of 14 times.
1-3 units, Aut (Moyer, B), Win (Moyer, B), Spr (Moyer, B)

MUSIC 274E. Advanced Viola da Gamba
May be repeated for credit a total of 14 times.
1-3 units, Aut (Dornenburg, J), Win (Dornenburg, J), Spr (Dornenburg, J)

MUSIC 274F. Advanced Classical Guitar
May be repeated for credit a total of 14 times.
1-3 units, Aut (Ferguson, C), Win (Ferguson, C), Spr (Ferguson, C)

MUSIC 274G. Advanced Harp
May be repeated for credit a total of 14 times.
1-3 units, Aut (Chauvel, M), Win (Chauvel, M), Spr (Chauvel, M)

MUSIC 274H. Advanced Baroque Violin
May be repeated for credit a total of 14 times.
1-3 units, Aut (Martin, A), Win (Martin, A), Spr (Martin, A)

MUSIC 274I. Advanced Jazz Bass
1-3 units, Aut (McCain, J), Win (McCain, J), Spr (McCain, J)

MUSIC 274J. Advanced Jazz Guitar
Individual lessons in jazz guitar
1-3 units, Aut (Vandivier, R), Win (Vandivier, R), Spr (Vandivier, R)

MUSIC 275A. Advanced Flute
May be repeated for credit a total of 14 times.
1-3 units, Aut (Hawley, A), Win (Hawley, A), Spr (Hawley, A)

MUSIC 275B. Advanced Oboe
May be repeated for credit a total of 14 times.
1-3 units, Aut (Hubbard, R), Win (Matheson, J), Spr (Matheson, J)

MUSIC 275C. Advanced Clarinet
May be repeated for credit a total of 14 times.
1-3 units, Aut (Brandenburg, M), Win (Brandenburg, M), Spr (Brandenburg, M)

MUSIC 275D. Advanced Bassoon
May be repeated for credit a total of 14 times.
1-3 units, Aut (Olivier, R), Win (Olivier, R), Spr (Olivier, R)

MUSIC 275E. Advanced Recorder/Renaissance Wind Instruments
May be repeated for credit a total of 14 times.
1-3 units, Aut (Myers, H), Win (Myers, H), Spr (Myers, H)

MUSIC 275F. Advanced Saxophone
May be repeated for credit a total of 14 times.
1-3 units, Aut (McCarthy, C), Win (McCarthy, C), Spr (McCarthy, C)

MUSIC 275G. Advanced Baroque Flute
May be repeated for credit a total of 14 times.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

MUSIC 276A. Advanced French Horn
May be repeated for credit a total of 14 times.
1-3 units, Aut (Ragent, L), Win (Ragent, L), Spr (Ragent, L)

MUSIC 276B. Advanced Trumpet
May be repeated for credit a total of 14 times.
1-3 units, Aut (Johnson-Hamilton, J), Win (Johnson-Hamilton, J), Spr (Johnson-Hamilton, J)

MUSIC 276C. Advanced Trombone
May be repeated for credit a total of 14 times.
1-3 units, Aut (Kenley, M), Win (Kenley, M), Spr (Kenley, M)

MUSIC 276D. Advanced Tuba
May be repeated for credit a total of 14 times.
1-3 units, Aut (Clements, A), Win (Clements, A), Spr (Clements, A)

MUSIC 277. Advanced Percussion
May be repeated for credit a total of 14 times.
1-3 units, Aut (Veregge, M), Win (Veregge, M), Spr (Veregge, M)

MUSIC 280. TA Training Course
Required for doctoral students serving as teaching assistants. Orientation to resources at Stanford, guest presentations on the principles of common teaching activities, supervised teaching experience. Students who entered in the Autumn should take 280 in the Spring prior to the Autumn they begin teaching.
1 unit, Spr (Saiki, J; Ricciardi, E)

MUSIC 300A. Medieval Notation
Western notation of the Middle Ages and Renaissance: principles, purposes, and transcription.
4 units, Aut (Mahrt, W)

MUSIC 300B. Renaissance Notation
Western notation of the Middle Ages and Renaissance: principles, purposes, and transcription.
4 units, alternate years, not given this year

MUSIC 301A. Analysis of Music: Modal
4 units, Win (Mahrt, W)

MUSIC 301B. Analysis of Music: Tonal
4 units, Aut (Grey, T)

MUSIC 301C. Analysis of Music: Post-Tonal
Current analytical trends, issues, and methods.
4 units, Spr (Ferneyhough, B)

MUSIC 302. Research in Musicology
Directed reading and research. May be repeated for credit a total of 14 times.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC 310. Research Seminar in Musicology
For graduate students. Topics vary each quarter. May be repeated for credit a total of 8 times.
3-5 units, Aut (Kronengold, C), Win (Schultz, A), Spr (Rodin, J)

MUSIC 312A. Aesthetics and Criticism of Music, Ancients and Moderns: Plato to Nietzsche
For graduate students. Primary texts focusing on the nature, purposes, and uses of music and other arts.
4 units, Win (Berger, K)

MUSIC 312B. Aesthetics and Criticism of Music, Contemporaries: Heidegger to Today
For graduate students. Primary texts focusing on the nature, purposes, and uses of music and other arts.
4 units, Spr (Berger, K)

MUSIC 318. Advanced Acoustics
Current topics. May be repeated for credit.
1-5 units, not given this year

MUSIC 319. Research Seminar on Computational Models of Sound Perception
All aspects of auditory perception, often with emphasis on computational models. Topics: music perception, signal processing, auditory models, pitch perception, speech, binaural hearing, auditory scene analysis, basic psychoacoustics, and neurophysiology. See http://ccrma.stanford.edu/courses/. May be repeated for credit a total of 14 times.
1-3 units, Aut (Slaney, M), Win (Slaney, M), Spr (Slaney, M)

MUSIC 320. Introduction to Digital Audio Signal Processing
Digital signal processing for music and audio research. Topics: complex numbers, sinusoids, spectrum representation, sampling and aliasing, digital filters, frequency response, z transforms, transfer-function analysis, and associated Matlab software. See http://ccrma.stanford.edu/courses/320/.
3-4 units, Aut (Abel, J; Berners, D)

MUSIC 321. Readings in Music Theory
Directed reading and research. May be repeated for credit a total of 5 times.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC 323. Doctoral Seminar in Composition
Illustrated discussions of compositional issues and techniques. Presentation of relevant topics, including students' own compositional practice. May be repeated for credit a total of 14 times.
3-4 units, Aut (Ferneyhough, B), Win (Berger, J), Spr (Kapuscinski, J)

MUSIC 325. Individual Graduate Projects in Composition
May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC 341. Ph.D Dissertation
May be repeated for credit a total of 5 times.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC 390. Practicum Internship
On-the-job training under the guidance of experienced, on-site supervisors. Meets the requirements for curricular practical training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit. Prerequisite: qualified offer of employment and consent of adviser.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC 399. D.M.A. Final Project
May be repeated for credit a total of 5 times.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

MUSIC 420A. Signal Processing Models in Musical Acoustics
Computational methods in musical sound synthesis and digital audio effects based on acoustic physical models. Topics: acoustic simulation with delay lines, digital filters, and nonlinear elements; comb filters; allpass filters; artificial reverberation; delay-line interpolation and sampling-rate conversion; phasing, flanging, and chorus effects; efficient computational models of strings, woodwinds, brasses, and other musical instruments. See http://ccrma.stanford.edu/courses/420/. Prerequisites: 320 or equivalent; PHYSICS 21 or equivalent course applying Newton's laws of motion; and CS 106B or equivalent programming in C and C++.
3-4 units, Win (Smith, J)

MUSIC 420B. Software for Sound Synthesis and Audio Effects
Preferred software embodiments for digital sound synthesis and audio effects. Topics: the Faust language for audio signal processing, effects programming, plugin generation for various platforms, software components for stringed and wind musical instruments, delay effects, variable filters, and nonlinear effects such as compression and distortion. The principal activity is a software project due at the end of the quarter. Prerequisite: MUSIC 420A or equivalent experience with audio signal processing in C++. Recommended corequisite: MUSIC 424.
1-10 units, Spr (Smith, J)

MUSIC 421. Audio Applications of the Fast Fourier Transform (FFT)
Spectrum analysis and signal processing using the FFT with emphasis on audio applications. Topics: Fourier theorems; FFT windows; spectrum analysis; spectrograms; sinusoidal modeling; spectral modeling synthesis; FFT convolution; FIR filter design and system identification; overlap-add and filter-bank-summation methods for short-time Fourier analysis, modification, and resynthesis. See http://ccrma.stanford.edu/courses/421/. Prerequisites: 420 or consent of instructor.
3-4 units, Spr (Smith, J)

MUSIC 422. Perceptual Audio Coding
History and basic principles: development of psychoacoustics-based data-compression techniques; perceptual-audio-coder applications (radio, television, film, multimedia/internet audio, DVD, EMD). In-class demonstrations: state-of-the-art audio coder implementations (such as AC-3, MPEG) at varying data rates; programming simple coders. Topics: audio signals representation; quantization; time to frequency mapping; introduction to psychoacoustics; bit allocation and basic building blocks of an audio codec; perceptual audio codecs evaluation; overview of MPEG-1, 2, 4 audio coding and other coding standards (such asAC-3). Prerequisites: knowledge of digital audio principles, familiarity with C programming. Recommended: 320, EE 261. See http://ccrma.stanford.edu/.
3 units, Win (Bosi-Goldberg, M)

MUSIC 423. Signal Processing Research
Graduate research seminar. Problems in music and/or audio signal processing. Presentation of research-in-progress by graduate students, visiting scholars, and CCRMA faculty. See http://ccrma.stanford.edu/courses/423/. May be repeated for credit a total of 11 times.
1-4 units, Aut (Abel, J; Berners, D)

MUSIC 424. Signal Processing Techniques for Digital Audio Effects
Techniques for dynamic range compression, reverberation, equalization and filtering, panning and spatialization, digital emulation of analog processors, and implementation of time-varying effects. Single-band and multiband compressors, limiters, noise gates, de-essers, convolutional reverberators, parametric and linear-phase equalizers, wah-wah and envelope-following filters, and the Leslie. Students develop effects algorithms of their own design in labs. Prerequisites: digital signal processing, sampling theorem, digital filtering, and the Fourier transform at the level of 320 or EE 261; Matlab and modest C programming experience. Recommended: 420 or EE 264; audio effects in mixing and mastering at the level of 192.
3-4 units, Spr (Berners, D; Abel, J)

NATIVE AMERICAN STUDIES (NATIVEAM) COURSES

UNDERGRADUATE COURSES IN NATIVE AMERICAN STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

NATIVEAM 25SI. Our Country, Our Way of Life: Indigenous Peoples and Environmental Justice
The struggles of indigenous peoples from Gwich'in to Alaska to the Ngai Tahu of Aotearoa (New Zealand) to protect their lands, resources, and ways of life from the desecreations and exploitations of colonialism and neocolonialism. Topics: self-determination, sovereignty, environmental justice, natural resource management, sacred geography protection, water rights, cultural survival, and intellectual property rights.
2 units, Win (Wilcox, M)

NATIVEAM 109A. Federal Indian Law
(Same as CSRE 109A) Cases, legislation, comparative justice models, and historical and cultural material. The interlocking relationships of tribal, federal, and state governments. Emphasis is on economic development, religious freedom, and environmental justice issues in Indian country.
5 units, Aut (Biestman, K)

NATIVEAM 117S. History of California Indians
(Same as CSRE 117S, HISTORY 250A) Demographic, political, and economic history of California Indians, 1700s-1950s. Processes and events leading to the destruction of California tribes, and their effects on the groups who survived. Geographic and cultural diversity. Spanish, Mexican, and Anglo-American periods. The mission system. GER:EC-AmerCul
5 units, Win (Shively, J)

NATIVEAM 120. Native American Writers, 1880-1920
(Same as CSRE 120) Hoxie's historical work provides a framework for analyzing what effects policies had on American Indian people. His work does not provide an American Indian perspective; he stated at the onset, that this was not an objective in this study. His main objective was to present a study that shows Indians' relations with whites as a clash of two complex cultures from a white point of view. Three American Indians writing during this time period provide the needed Indian perspective lacking in Hoxie's work.
5 units, Aut (Shaw, D)

NATIVEAM 143A. American Indian Mythology, Legend, and Lore
(Same as ENGLISH 43A, ENGLISH 143A) (English majors and others taking 5 units, register for 143A.)Readings from American Indian literatures, old and new. Stories, songs, and rituals from the 19th century, including the Navajo Night Chant. Tricksters and trickster stories; war, healing, and hunting songs; Aztec songs from the 16th century. Readings from modern poets and novelists including N. Scott Momaday, Louise Erdrich, and Leslie Marmon Silko, and the classic autobiography, Black Elk Speaks. GER:DB-Hum
3-5 units, Aut (Fields, K)

NATIVEAM 200R. Directed Research
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

NATIVEAM 200W. Directed Reading
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

NEUROBIOLOGY (NBIO) COURSES

UNDERGRADUATE COURSES IN NEUROBIOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

NBIO 101. Social and Ethical Issues in the Neurosciences
(Same as NBIO 201) Influences on public debate and policy of scientific advances in the study of the brain and behavior: theories of brain function; philosophical and scientific approaches; advances in the neurosciences, possible uses in medical therapy, and interventions involving genetic screening, genetic selection, enhancement of neurological functioning, and manipulation of behavior; questions related to medical therapy, social policy, and broader considerations of human nature such as consciousness, free will, personal identity, and moral responsibility. May be taken for 2 units without a research paper. Prerequisite: Neuroscience, Biology, or Symbolic Systems major; or Human Biology core; or consent of instructor.
2-4 units, Spr (Hurlbut, W; Newsome, W)

NBIO 198. Directed Reading in Neurobiology
Prerequisite: consent of instructor. (Staff)
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NBIO 199. Undergraduate Research
Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN NEUROBIOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

NBIO 201. Social and Ethical Issues in the Neurosciences
(Same as NBIO 101) Influences on public debate and policy of scientific advances in the study of the brain and behavior: theories of brain function; philosophical and scientific approaches; advances in the neurosciences, possible uses in medical therapy, and interventions involving genetic screening, genetic selection, enhancement of neurological functioning, and manipulation of behavior; questions related to medical therapy, social policy, and broader considerations of human nature such as consciousness, free will, personal identity, and moral responsibility. May be taken for 2 units without a research paper. Prerequisite: Neuroscience, Biology, or Symbolic Systems major; or Human Biology core; or consent of instructor.
2-4 units, Spr (Hurlbut, W; Newsome, W)

NBIO 206. The Nervous System
Structure and function of the nervous system, including neuroanatomy, neurophysiology, and systems neurobiology. Topics include the properties of neurons and the mechanisms and organization underlying higher functions. Framework for general work in neurology, neuropathology, clinical medicine, and for more advanced work in neurobiology. Lecture and lab components must be taken together.
7-8 units, Win (Dolmetsch, R)

NBIO 216. Genetic Analysis of Behavior
(Same as MCP 216) Advanced seminar. Findings and implications of behavioral genetics as applied to invertebrate and vertebrate model systems. Topics include biological clocks, and sensation and central pattern generators. Relevant genetic techniques and historical perspective. Student presentation.
4 units, Win (Staff)

NBIO 218. Neural Basis of Behavior
Advanced seminar. The principles of information processing in the nervous system and the relationship of functional properties of neural systems with perception, behavior, and learning. Original papers; student presentations. Prerequisite: NBIO 206 or consent of instructor.

5 units, Spr (Knudsen, E; Raymond, J), alternate years, not given next year

NBIO 220. Central Mechanisms in Vision-based Cognition
Contemporary visual neuroscience, emphasizing the neural mechanisms underlying primate vision and visually guided behavior. Seven foundational topics in visual neuroscience; current papers concerning each topic. Student presentations. Computer-based demonstration exercises.

2-4 units, Spr (Staff)

NBIO 221. Frontiers in Translational Medicine
Small group course for first year MSTP and Master's in Medicine students only. Focus is on pathways for combining science and medicine during graduate and postdoctoral training and in one's career, and practical aspects of translational medicine. Guest lecturers are physician-scientists who have advanced the frontiers of translational medicine. Previous lecturers have included Drs. Gilbert Chu, Jamie Topper, Irv Weissman, Beverly Mitchell, Geoff Duyk, William Mobley, Judy Shizuru, and David Cox. Prerequisite: consent of instructor.

1 unit, Spr (Barres, B; Spulak, M)

NBIO 227. Understanding Techniques in Neuroscience
Techniques commonly used in the field of neuroscience, including molecular/genetic, electrophysiological, and whole brain imaging. Presentations by senior graduate students and examples from the literature. Optional laboratory demonstrations.

2 units, Aut (Pradhan, S; Adelson, J; Clark, K; Newsome, W)

NBIO 228. Mathematical Tools for Neuroscience
Student-instructed. For students with no math background beyond basic calculus, or as a review for more advanced students. Techniques useful for analysis of neural data including linear algebra, Fourier transforms, probability and statistics, signal detection, Bayesian inference, and information theory.

1-3 units, not given this year

NBIO 254. Molecular and Cellular Neurobiology
(Same as BIO 154, BIO 254) For advanced undergraduates and graduate students. Cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases. Satisfies Central Menu Areas 2 or 3. Prerequisite for undergraduates: Biology core or equivalent, or consent of instructors.

4-5 units, Aut (Clandinin, T; Luo, L; Shen, K), alternate years, not given next year

NBIO 258. Information and Signaling Mechanisms in Neurons and Circuits
(Same as MCP 258) How synapses, cells, and neural circuits process information relevant to a behaving organism. How phenomena of information processing emerge at several levels of complexity in the nervous system, including sensory transduction in molecular cascades, information transmission through axons and synapses, plasticity and feedback in recurrent circuits, and encoding of sensory stimuli in neural circuits.

4 units, not given this year

NBIO 299. Directed Reading in Neurobiology
Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NBIO 300. Professional Development and Integrity in Neuroscience
Required of Neurosciences Ph.D. students every quarter. Develops professional skills in critical assessment and oral presentation of findings from current neuroscience literature in the visual presentation of quantitative data and writing research grants. The role of animals in lab research, fraud in science, the responsibility of authors and reviewers, science in a multicultural environment, and the relationship between student and mentor. Student and faculty presentations and discussions.

1-2 units, Aut (Moore, T), Win (Moore, T), Spr (Moore, T)

NBIO 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NBIO 399. Graduate Research
Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NEUROLOGY AND NEUROLOGICAL SCIENCES (NENS) COURSES

UNDERGRADUATE COURSES IN NEUROLOGY AND NEUROLOGICAL SCIENCES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

NENS 25SI. Discoveries and Debates in Neuroscience Research
Contradictory results and models in the accelerating field of neuroscience research. Critical examination of controversial topics: the genetic determination of intelligence, the neurobiolobical correlates of consciousness, adult neural stem cell function and therapeutic potential, interpretation of cognitive tests in animals, the origin of brain tumors, the biology of addiction, and gender differences in brain function and disease. How to analyze scientific experiments and models with a critical eye.

1 unit, Win (Duane, D)

NENS 67N. Intracellular Trafficking and Neurodegeneration
(Stanford Introductory Seminar) Preference to freshmen. Cell structures and functions, the intracellular trafficking system that maintains exchanges of materials and information inside cells, and clinical features and pathologies of neurodegenerative diseases. Techniques for examining cellular and subcellular structures, especially cytoskeletons; functional insights generated from structural explorations. Prerequisite: high school biology.

3 units, Spr (Yang, Y)

NENS 199. Undergraduate Research
Students undertake research sponsored by an individual faculty member. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN NEUROLOGY AND NEUROLOGICAL SCIENCES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

NENS 202. Longevity
(Same as HUMBIO 149L, PSYCH 102) Interdisciplinary. Challenges to and solutions for the young from increased human life expectancy: health care, financial markets, families, work, and politics. Guest lectures from engineers, economists, geneticists, and physiologists.

4 units, given next year

NENS 204. Stroke Seminar
Standing at the intersection of many fields of medicine, including neurology, internal medicine, cerebrovascualr surgery, diagnostic and interventional radiology, and emergency medicine, as the third leading cause of death and the leading cause of disability, stroke is a critical topic for all practitioners of medicine. This seminar draws upon Stanford's leaders in stroke research to present and discuss the causes, presentation, treatment, and imaging characteristics of the disease.

1 unit, Win (Staff)

NENS 205. Neurobiology of Disease Seminar
Case demonstrations of selected disorders, discussion of the pathophysiological basis of the disorder, presentation of the basic prin-

ciples underlying modern diagnostic and therapeutic management, and a discussion of recent research advances for each disease entity. Prerequisite: Neurobiology 206 or consent of instructor.

3 units, Win (Staff)

NENS 206. Introduction to Neurology Seminar
Exploration of aspects of neurology, including subspecialties. Current issues, clinical cases, and opportunities in the field.

1 unit, Aut (Reimer, R; Jafari, A)

NENS 220. Computational Neuroscience
Computational approaches to neuroscience applied at levels ranging from neurons to networks. Addresses two central questions of neural computation: How do neurons compute; and how do networks of neurons encode/decode and store information? Focus is on biophysical (Hodgkin-Huxley) models of neurons and circuits, with emphasis on application of commonly available modeling tools (NEURON, MATLAB) to issues of neuronal and network excitability. Issues relevant to neural encoding and decoding, information theory, plasticity, and learning. Fundamental concepts of neuronal computation; discussion focus is on relevant literature examples of proper application of these techniques. Final project. Recommended for Neuroscience Program graduate students; open to graduate, medical, and advanced undergraduate students with consent of instructor. Prerequisite: NBIO 206. Recommended: facility with linear algebra and calculus.

4 units, Win (Staff)

NENS 267. Molecular Mechanisms of Neurodegenerative Disease
(Same as BIO 267) The epidemic of neurodegenerative disorders such as Alzheimer's and Parkinson's disease occasioned by an aging human population. Genetic, molecular, and cellular mechanisms. Clinical aspects through case presentations.

4 units, alternate years, not given this year

NENS 299. Directed Reading in Neurology and Neurological Science
Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NENS 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NENS 399. Graduate Research
Students undertake research sponsored by individual faculty members. Includes laboratory work in neurophysiology and neurochemistry.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NENS 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NENS 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NEUROSCIENCES PROGRAM (NEPR) COURSES

GRADUATE COURSES IN NEUROSCIENCES PROGRAM

NEPR 299. Directed Reading in Neurosciences
Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NEPR 399. Graduate Research
StudenInvestigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NEPR 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NEPR 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NEUROSURGERY (NSUR) COURSES

UNDERGRADUATE COURSES IN NEUROSURGERY

NSUR 70Q. Experimental Stroke
(Stanford Introductory Seminar) Preference to sophomores. How stroke is studied in the laboratory; advances in stroke research over the last two decades; and future directions. Topics include: cellular and molecular mechanisms of neuronal death and survival in the brain after stroke, including necrosis, apoptosis, inflammation, and cell signaling pathways; experimental tools for stroke treatment, such as gene therapy, cell therapy, hypothermia, preconditioning, postconditioning, and other pharmacological treatments; the gap and barrier between laboratory research and clinical translation.

2 units, Spr (Zhao, H)

NSUR 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN NEUROSURGERY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

NSUR 261. Principles and Practice of Stem Cell Engineering
(Same as BIOE 261) Quantitative models used to characterize incorporation of new cells into existing tissues emphasizing pluripotent cells such as embryonic and neural stem cells. Molecular methods to control stem cell decisions to self-renew, differentiate, die, or become quiescent. Practical, industrial, and ethical aspects of stem cell technology application. Final projects: team-reviewed grants and business proposals.

3 units, not given this year

NSUR 278A. From Science to Business: Innovation in Neurologic Disease Beyond Neurosurgery
For medical, business, and engineering students. The process of innovation and company building in the medical field, emphasizing the neurosciences. Overview of neurological diseases; business and regulatory aspects of device and biotech product development. Guest speakers on healthcare entrepreneurship. Venture capital and entrepreneurial mentors guide interdisciplinary student teams in evaluating a solution to an unmet clinical need or a project within a biotech company. May be taken for 2 units without the team project.

2-4 units, alternate years, not given this year

NSUR 278B. Independent Study on Healthcare Innovation and Entrepreneurship
Continuation of NSUR 278A for students wishing to work on actual strategy and implementation of their idea developed in 278A or, more generally, for students who wish to develop a strategic plan for a specific healthcare (drug or device) venture.

2-4 units, Aut (Kallmeyer, V; Steinberg, G), Win (Kallmeyer, V; Steinberg, G), Spr (Kallmeyer, V; Steinberg, G), Sum (Kallmeyer, V)

NSUR 279. Concepts in Drug Delivery and Drug Device Combinations
Open to all graduate students. Issues relating to drug-device combination products, including review of recently approved products such as cardiac stent), and development, regulatory, and reimbursement issues. Emphasis is on market evaluation, product development, and regulatory strategies. Lecture only for 2 units; project for 4 units.

2-4 units, Win (Kallmeyer, V; Steinberg, G), alternate years, not given next year

NSUR 280. Early Clinical Experience in Neurosurgery
Provides an observational experience as formulated by the instructor and student. Prerequisite: consent of instructor.

1-2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NSUR 299. Directed Reading in Neurosurgery
Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NSUR 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

NSUR 399. Graduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

OBSTETRICS AND GYNECOLOGY (OBGYN) COURSES

UNDERGRADUATE COURSES IN OBSTETRICS AND GYNECOLOGY

OBGYN 199. Undergraduate Research in Reproductive Biology
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN OBSTETRICS AND GYNECOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

OBGYN 202. Assisted Reproductive Technologies
(Same as DBIO 202, HUMBIO 150A) Primary and current literature in basic and clinical science aspects of assisted reproductive technologies (ART), and demonstrations of current ART techniques including in vitro fertilization and embryo culture, and micromanipulation procedures such as intracytoplasmic sperm injection and embryo biopsy and cryopreservation.Class only may be taken for 1 unit. 2 units includes papers and attendance at clinical demonstrations. 3 units includes a term paper. Recommended: DBIO 201, or consent of instructors.
1-3 units, Win (Porzig, E)

OBGYN 216. Current Issues in Reproductive Health
Reproductive Health is a broad subject encompassing many concepts and practices. Issues and services within the context of reproductive health include such diverse topics as fertility, pregnancy, contraception, abortion, sexuality, menopause and parenting. This course focuses on topics related to abortion services, fertility and contraception; current research and practices in family planning; legislation and issues of access. Sponsored by Medical Students for Choice.
1 unit, Win (Staff)

OBGYN 230. Women's Health Medical Forum
Required for the Women's Health Scholarly Concentration. Ten seminars featuring a Women's Health research presentation (by faculty or student), followed by discussion. Emphasis is on topics related to the five Stanford Institutes of Medicine (cardiovascular; cancer; stem cell; neurosciences; and immunity), and the subspecialties of Obstetrics & Gynecology. Assigned readings and related papers.
1 unit, Aut (Westphal, L), Win (Westphal, L), Spr (Westphal, L)

OBGYN 240. Sex Differences in Human Physiology and Disease
(Same as HUMBIO 140, MED 240) Chromosomal and hormonal influences on cells, tissues, and organs that underlie the development of reproductive organs and sexual dimorphism of the neuroendocrine system. Consequences of sex hormones and environmental factors that differ between men and women in systems including the musculoskeletal, neurological, cardiovascular, and immunological. Guest lecturers. Prerequisite: Human Biology core or equivalent, or consent of instructor.
2-3 units, Win (Stefanick, M)

OBGYN 256. Current Controversies in Women's Health
(Same as HUMBIO 125) Interdisciplinary. Focus is on the U.S. Topics include: health research; bioethical, legal, and policy issues; scientific and cultural perspectives; social influences; environmental and lifestyle effects on health; and issues related to special populations. Guest lecturers; student debates. Prerequisite: Human Biology core or equivalent, or consent of instructor.
2-3 units, Spr (Jacobson, M; Stefanick, M)

OBGYN 280. Early Clinical Experience in Obstetrics and Gynecology
Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.
1-2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

OBGYN 282. Pregnancy, Birth, and Infancy
(Same as PEDS 282) Comprehensive clinical experience where medical students follow pregnant women in the community to attend prenatal visits, delivery, and postnatal visits. Continuity clinic format, combined with didactic lessons, discussion seminars and practical teaching sessions. Students are exposed to clinical activities in a meaningful context, related to their on-going classroom studies in anatomy, physiology, embryology and human development, as well as social, economic, and personal issues related to medicine. This program spans one quarter, covering topics related to pregnancy, labor and delivery and newborn care. In addition to clinic experiences, students are expected to spend 1-2 hours/week in lectures and workshops, and to complete a reflection of their experiences in the course. Prerequisite: medical student.
3 units, Spr (El-Sayed, Y; Aby, J; Harrysson, I; Lomeli, D)

OBGYN 299. Directed Reading in Obstetrics and Gynecology
Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

OBGYN 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

OBGYN 399. Graduate Research in Reproductive Biology
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

OPHTHALMOLOGY (OPHT) COURSES

UNDERGRADUATE COURSES IN OPHTHALMOLOGY

OPHT 199. Undergraduate Research
Allows for qualified students to undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN OPHTHALMOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

OPHT 201. Clinical Topics in Ophthalmology
Introduction to the professional opportunities available to the ophthalmologist in the areas of clinical research, community health, biotech and pharmaceutical development, international blindness prevention, graduate and post-graduate education.
1 unit, Aut (Fredrick, D; Dreyfuss, A)

OPHT 202. Clinical Topics in Ophthalmology
(Continuation of 201) Professional opportunities available to the ophthalmologist in the areas of clinical research, community health, biotech and pharmaceutical development, international blindness prevention, graduate and post-graduate education.
1 unit, not given this year

OPHT 203. Introduction to Ophthalmology
(Continuation of 202) Introduction to the practical skills used within the field of ophthalmology. Diagnostic tools and instruments; applications of these tools; practice using instruments under the guidance of faculty and residents; practice in microsurgical techniques with one-on-one guidance.
1 unit, Spr (Staff)

OPHT 280. Early Clinical Experience in Ophthalmology
Provides an observational experience as formulated by the instructor and student. Prerequisite: consent of instructor.
1-2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

OPHT 299. Directed Reading in Ophthalmology
Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

OPHT 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

OPHT 399. Graduate Research
Students to undertake investigations sponsored by individual faculty members. Opportunities are available at both predoctoral and postdoctoral levels. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ORTHOPEDIC SURGERY (ORTHO) COURSES

UNDERGRADUATE COURSES IN ORTHOPEDIC SURGERY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ORTHO 97Q. Sport, Exercise, and Health: Exploring Sports Medicine
(Stanford Introductory Seminar) (Same as HUMBIO 97Q) Preference to sophomores. Sports medicine is the practice of clinical medicine at the interface between health and performance, competition and well-being. While sports medicine had its origins in providing care to athletes, medical advances developed in care of athletes exerted a great effect on the nature and quality of care to the broader community. Topics include sports injuries, medical conditions associated with sport and exercise, ethics, coaching, women's issues, fitness and health, and sports science. Case studies.
3 units, Aut (Matheson, G), Win (Matheson, G), Spr (Matheson)

ORTHO 102. Orthopaedic Surgical Anatomy
(Same as ORTHO 202) Open to medical students and undergraduates. Opportunity to enhance knowledge of anatomy as it pertains to the practice of orthopaedic surgery and to improve dissection skills. Follows the operative anatomy syllabus used by the Stanford Orthopaedic Surgery Residency Program. Sessions led by Stanford Orthopaedic Surgery attendings and residents. Didactic sessions, prosection review, dissection.
2 units, Sum (Huddleston, J)

ORTHO 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN ORTHOPEDIC SURGERY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

ORTHO 201. Musculoskeletal Exam Practicum
Student initiated course. Opportunity to enhance knowledge and skills for conducting musculoskeletal exams. Sessions led by Stanford Orthopaedic Surgery attendings and residents. Didactic introductions followed by hands-on practice of specific aspects of the musculoskeletal exam.
1 unit, Win (Wasterlain, A; Cheng, I)

ORTHO 202. Orthopaedic Surgical Anatomy
(Same as ORTHO 102) Open to medical and undergraduate students. Opportunity to enhance knowledge of anatomy as it pertains to the practice of Orthopaedic Surgery and to improve dissection skills. Follows the operative anatomy syllabus used by the Stanford Orthopaedic Surgery Residency Program. Sessions led by Stanford Orthopaedic Surgery attendings and residents. Didactic sessions, prosection review, dissection.
2 units, Sum (Huddleston, J)

ORTHO 222. Anatomy of Movement
Musculoskeletal and neuromuscular anatomy and physiology form the foundation of this multi-disciplinary course. Examines normal motor function and functional deficit from disease or injury. Clinical and scientific perspectives include orthopaedic surgery, neurology, mechanical engineering, computer science, anthropology, and art. Bioengineering challenges that assist or emulate human movement, such as design of an artificial joint or simulation of tendon transfer surgery for cerebral palsy are discussed. Evolution of upright walking and hand anatomy, as it became an instrument of purpose are discussed along with the expression of human movement throughout history in art masterpieces, photography, and animation. Student team projects. Lecture only for 3 units; project for 4 units.
3-4 units, not given this year

ORTHO 260. Tissue Engineering
Biological principles underlying the use of engineering strategies and biocompatible materials for tissue repair and regeneration. Structure, physiology, and mechanics of articular cartilage, bone, and dense soft connective tissues. Current ideas, approaches, and applications being implemented as therapeutic regimens for arthritis, spinal deformities, and limb salvage. Multidisciplinary constraints on the design and creation of tissue constructs. Prerequisite: familiarity with basic cell and molecular mechanisms underlying tissue differentiation.
3 units, not given this year

ORTHO 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

OVERSEAS SEMINARS (OSPGEN) COURSES

OSPGEN 40. Community Health in Oaxaca
Social, economic, and cultural factors impacting the health of Mexicans and Mexican immigrants to the United States. Broaden public health knowledge, increase linguistic competency in Spanish, and gain exposure to health care systems and clinical interactions in another culture. Close observation of clinicians at work in community health settings; service with local community health organizations. Structured reflection sessions support integration of studies with clinical observations and service work.
2 units, Aut (Garcia, G; Banchoff, A)

OSPGEN 41. Arts and Society in Contemporary China
Immersion in urban China's arts scene in Beijing and Shanghai with class meetings and discussions providing a deeper understanding of contemporary Chinese society. Emphasis on arts that are currently popular and influential rather than traditionally

Chinese. Museum and gallery visits; performance and concert attendance; observation of old and new architectural monuments; meetings with artists, writers and critics.

2 units, Aut (Cai, J)

OSPGEN 42. How to Build a Habitable Planet: An Example from the European Alps

Feedback and links between global climate, mountain building, and biological evolution and landscape development of the European Alps. Long and short-term carbon cycle and the role of human perturbation; climate of Europe and influence of global connections on climate change; origin of the glaciers, global cooling and the migration of humans into Europe; policies and strategies employed by EU to mitigate effects of global warming. Students and faculty camp in three different locations. Location: Alps in Switzerland, northern Italy and France.

2 units, Aut (Chamberlain, P)

OSPGEN 43. Turkey at the Crossroads of Energy, Sustainability, and Geography

Current analysis of energy systems and sustainability in Turkey. Energy Resources Engineering analysis of sustainability and use of energy resources. Questions of resources, extraction, transportation, and environmental quality are considered in concert. Comparative study of conventional fossil fuel energy resources versus renewable geothermal and solar energy.

2 units, Aut (Kovscek, A)

OSPGEN 44. Devising Otherness in Uganda and America: Creating a Theatrical Performance Based on Identity

Working with students from Makerere University, Kampala Uganda, students create a performance based on the questions: what do Americans think about Africa and Africans; and what do Africans think about America and Americans? Students perform together at both the National Theatre in Kampala and Pigott Theater at Stanford.

2 units, Aut (Ramsaur, M)

OSPGEN 45. British Contributions to Computing

Leading role played by the British in addressing fundamental and intellectually challenging problems in computer science; scientific advances in the United Kingdom that made computing possible. Ideas behind automatic computing developed by Charles Babbage and collaborator Ada Lovelace including the idea of building a programmable machine. Theoretical groundwork for computer science developed by English mathematician Alan Turing.

2 units, Aut (Roberts, E)

OSPGEN 46. America and Vietnam: After Three Decades

Legacies of the American war in Vietnam (circa 1961-1973) and contemporary aspects of Vietnam's integration into the global economy; visits to Ho Chi Minh City and vicinity, the imperial capital at Hue, and the modern capital at Hanoi. Student presentations on relevant topics and sites; and visits and seminars with officials, academics, students, and members of the business-industrial community.

2 units, Aut (Goldstein, J; Rakove, J)

OSPGEN 70. Indigenous Australia

Culture and ecology of desert Aboriginal people living in a remote region of W. Australia. Students live with their Martu hosts. Issues in greater Australian human prehistory; social, ecological, and political factors that shape contemporary relationships between rural Aborigines, their urban counterparts, and the broader Australian society. Location: Newman, Parnngurr Community, Western Australia.

2 units, Aut (Bird, R; Bird, D)

OSPGEN 88. The Bloomsbury Group

The 20th-century literary and intellectual concentration of individuals in Britain. Readings include Virginia Woolf and E.M. Forster. Students select a member of the group for individual concentration. Meetings in King's College, Cambridge, where the Bloomsbury Group originated, with visits to sites associated with the group in London and Sussex.

2 units, Aut (Stansky, P)

OVERSEAS STUDIES: AUSTRALIA (OSPAUSTL) COURSES

OSPAUSTL 10. Coral Reef Ecosystems

Key organisms and processes, and the complexity of coral reef ecosystems. Students explore the Great Barrier Reef from the southern end which demonstrates the physical factors that limit coral reefs, to the northern reef systems which demonstrate key aspects of these high biodiversity ecosystems. Human-related changes. Emphasis is on research experiences and development of analytical skills. Two units only counted for Biological Sciences major. GER:DB-EngrAppSci

3 units, Aut (Ward, S; Arrigo, K; Dunn, S)

OSPAUSTL 20. Coastal Resource Management

Problem solving, research, communication, teamwork, and social assessment skills in sustainable coastal zone management. Issues include: ecosystem functions and values at risk under the proposed development in case study; environmental outcomes most desirable for the local stakeholders and how those are defined; features of the human communities and their function as they relate to the management options; tools or mechanisms for a sustainable management outcome. Taught by multidisciplinary team that includes Australian and developing country experts. Two units only counted for Biological Sciences major. GER:DB-EngrAppSci

3 units, Aut (Johnstone, R)

OSPAUSTL 30. Coastal Forest Ecosystems

Prehistory of Australian rainforest and how rainforest structure and biodiversity change with altitude, latitude, and geology. Tropical coastal marine wetlands, mangrove forests, and the relationship between land- and sea-based biota. Biology and ecology of marine plants, mangroves, and tropical salt marsh. Introduction to specialized fields of marine plant biology and ecology including biogeography and evolution, aquatic plant ecophysiology, water quality and bioindicator techniques, pollution and eutrophication, and environmental control of marine plant distribution and productivity. Two units only counted for Biological Sciences major. GER:DB-EngrAppSci

3 units, Aut (Duke, N; Baker, C)

OSPAUSTL 40. Australian Studies

Introduction to Australian society, history, culture, politics, and identity. Social and cultural framework and working understanding of Australia in relationship to the focus on coastal environment in other program courses. Field trips. GER:DB-SocSci, EC-GlobalCom

3 units, Aut (Lilley, I)

OSPAUSTL 50. Targeted Research Project

Prior to arriving in Australia, students establish a link with University of Queensland faculty to develop project ideas that combine personal interests and career goals with opportunities presented by the Australian Coastal Studies program, such as how mangrove roots find sediment rich zones of the shore, or the dynamics of ecotourism in southern and northern coastal Queensland. Project report and presentation in Australia.

4 units, Aut (Staff)

OVERSEAS STUDIES CONSORTIUM IN BARCELONA—CASB (OSPBARCL)

OSPBARCL 101. Language and Culture in Catalonia
Preparation for students to function in the academic and social environment of Barcelona. Basic listening, reading, and comprehension in Catalan; review of Spanish with focus on writing academic papers and listening to lectures. Introduction to Barcelona with emphasis on contemporary history, culture, and politics. Bilingualism; multiculturalism; varieties of nationalism and globalization in context of Barcelona.
4 units, Aut (Staff)

OSPBARCL 111. The City in Modernity: Gaudi's Barcelona
Barcelona and Gaudi as paragigm for process of urban growth into modernity. Development of modern city; impact on film, art, and literature. Topics: organization of city life in specific spaces; urban literature; and urban art.
5 units, Aut (Staff)

OSPBARCL 121. Gendered Experiences: Women's Lives in Spanish History
Analysis of Spanish women's life experiences in past 500 years. Relationship between gender. society, culture, politics and progress in the Spanish context; additionally current debates and perspectives. Use of individual biographies know as life course/circle of selected women.
5 units, Aut (Staff)

OVERSEAS STUDIES: BEIJING (OSPBEIJ) COURSES

OSPBEIJ 9. Chinese Language Tutorial
2 units, Aut (Staff, 1), Spr (Staff, 1)

OSPBEIJ 10. Beijing Past and Present
Introduction to the history, culture, and people of Beijing via field trips to historical sites, old and new neighborhoods, art district and local museums, film and performance in and around Beijing.
1 unit, Aut (Shen, X), Spr (Shen, X)

OSPBEIJ 19. Population and Society in East Asia
Current demographic situation, and country differences. Emphasis is on China; attention to Japan and S. Korea. Relationship between social change and demographic change in the past. Factors influencing and influenced by fertility, mortality, and migration. Fertility control, the aging process, old age care, and migration. GER:DB-SocSci, EC-GlobalCom
4 units, Spr (Zhou, Y)

OSPBEIJ 21C. Second-Year Modern Chinese
5 units, Aut (Chen, L)

OSPBEIJ 23C. Second-Year Modern Chinese
5 units, Spr (Zhu, X)

OSPBEIJ 24. China's Economic Development
Historical stages, economic and political rationale, and effectiveness of the economic policies and institutional changes that have shaped China¿s economic emergence. China as case study for understanding how institutions and institutional change affect economic and social development. Guest speakers; field study; trip to rural areas. GER:DB-SocSci
5 units, Aut (Rozelle, S)

OSPBEIJ 27. Topics in China's Development
Independent study in one of: finding balance between growth and the environment; finding balance between urban and rural; finding balance between incentives in work and social welfare; China's elections at the grassroots; China's education system; or China's health system.
2-4 units, Aut (Staff)

OSPBEIJ 37. Independent Study on Aspects of Change in China
Independent work on topic proposed by student and approved by instructor.
3-4 units, Spr (Staff)

OSPBEIJ 39. China and the World
Ways China perceives and prioritizes key international issues; how China is viewed by other nations; and how China¿s interactions with the rest of the world shape and are shaped by its domestic challenges. GER:DB-SocSci
4-5 units, Spr (Fingar, T)

OSPBEIJ 41. Chinese Society and Business Culture
Key features of Chinese society and their applications to Chinese business culture from a sociological perspective. Structural differences between Chinese and U.S. societies and their social, economic, and cultural implications. Emerging patterns in areas such as retailing and consumer behaviors, work relations and management, and business negotiation and collaboration. GER:DB-SocSci, EC-GlobalCom
4 units, Spr (Li, B)

OSPBEIJ 42. Chinese Media Studies
Fundamental changes in Chinese media. Issues such as: how Chinese media emerge and evolve against the background of modern Chinese history; how they interact with government, sponsors, receivers, and other social institutions; and implications for Chinese social development. GER:DB-SocSci
4 units, Aut (Li, K)

OSPBEIJ 46. Introduction to Chinese Economy
Major aspects of Chinese economy and challenges it faces. Topics: historical background; transition to market economy; issues associated with the transition process. Cultural, political, and institutional environment from a historical perspective. Economic theory and empirical analysis applied to explain economic phenomena in China. GER:DB-SocSci, EC-GlobalCom
5 units, Spr (Chen, D)

OSPBEIJ 48. Chinese Literature: Tradition in Transformation
Classical Chinese literature from the beginning (ca. 1000 BC) to the 14th centure. Primary texts in translation with attention to the poetic works that feature Chinese literary tradition. Understanding of past experience of Chinese people living in another cultural space through observation, analysis, and reconstruction.
4 units, Aut (Zhang, P)

OSPBEIJ 66. Essentials of China's Criminal Justice System
Criminal laws and cases. Topics include criminal legal thinking, liability, prosecution and defense in criminal litigation, death penalty debates, evidence and compulsory measures, and the Chinese prison system. Comparisons with other systems. Human rights protection. GER:DB-SocSci, EC-GlobalCom
5 units, Aut (Wang, S)

OSPBEIJ 67. China-Africa and Middle East Relations
China¿s relations with the outside world, with a focus on Africa and the Middle East. Historically contextualized relations; evolution of relations within the international climate during different periods, especially in the present; impact of geopolitical and geoeconomic relations on the existing international order.
4 units, Aut (Wang, S; Li, A)

OSPBEIJ 101C. Third-Year Modern Chinese
5 units, Aut (Zhu, X)

OSPBEIJ 103C. Third-Year Modern Chinese
5 units, Spr (Wang, Y)

OSPBEIJ 199A. Directed Reading A
1-4 units, Aut (Staff), Spr (Staff)

OSPBEIJ 199B. Directed Reading B
1-4 units, Aut (Staff), Spr (Staff)

OSPBEIJ 211C. Advanced Modern Chinese
5 units, Aut (Wang, Y)

OVERSEAS STUDIES: BERLIN (OSPBER) COURSES

OSPBER 1Z. Accelerated German: First and Second Quarters
A jump start to the German language, enabling students with no prior German to study at the Berlin Center. Covers GERLANG 1 and 2 in one quarter.
8 units, Aut (Wohlfeil, J), Win (Wohlfeil, J)

OSPBER 2Z. Accelerated German, Second and Third Quarters
Qualifies students for participation in an internship following the study quarter. Emphasis is on communicative patterns in everyday life and in the German work environment, including preparation for interviews.
8 units, Spr (Wohlfeil, J)

OSPBER 11. The Vanishing City: Lost Architecture and the Art of Commemoration in Berlin
Berlin as archaeology of modernity and its lost utopias. The projection of new models simultaneous with destruction such as new Prussian, new fascist, new socialist, and new democratic Berlins. Field trips to sites including destroyed Prussian castles, Nazi buildings, and socialist architecture. Methods of visualizing what disappeared, deciphering what is left, and understanding what is new. GER:DB-Hum
4-5 units, Spr (Ebeling, K)

OSPBER 15. Shifting Alliances? The European Union and the U.S.
The development of European integration, a model for global security and peace, and a possible replacement for the U.S. position as unilateral superpower. Competing arguments about the state of transatlantic relations. GER:DB-SocSci, EC-GlobalCom
4-5 units, Win (Brueckner, U)

OSPBER 17. Split Images: A Century of Cinema
20th-century German culture through film. The silent era, Weimar, and the instrumentalization of film in the Third Reich. The postwar era: ideological and aesthetic codes of DEFA, new German cinema, and post-Wende filmmaking including Run Lola Run and Goodbye Lenin. Aesthetic aspects of the films including image composition, camera and editing techniques, and relation between sound and image. GER:DB-Hum, EC-GlobalCom
4 units, Win (Kramer, K)

OSPBER 21B. Intermediate German
Grammar review, vocabulary building, writing, and discussion of German culture, literature, and film. Corequisite: OSPBER 100B.
5 units, Aut (Strachota, K), Win (Kloetzer, S), Spr (Kloetzer, S)

OSPBER 26. Germany in Europe
Broad survey of German history, in a pan-European context, from its mythical origins in the forests of Germania to the reunification of 1989. Focus on politics and religion, including violence and war, and the place of the German polity within Europe.
5 units, Win (Buc, P)

OSPBER 27. Selected Topics in German History
Students choose one of the following for an independent study topic: medieval anti-Semitism and Nazi anti-Semitism, compared; the Teutonic Knights; Luther on politics and religion; the rise of Prussia; Germans and Romans in late antiquity. Weekly meetings to review progress and set goals.
3-5 units, Win (Staff)

OSPBER 30. Berlin vor Ort: A Field Trip Module
The cultures of Berlin as preserved in museums, monuments, and architecture. Berlin's cityscape as a narrative of its history from baroque palaces to vestiges of E. German communism, from 19th-century industrialism to grim edifices of the Sachsenhausen concentration camp.
1 unit, Aut (Jander, M), Win (Pabsch, M), Spr (Jander, M)

OSPBER 34. Science, Medicine and Technology in Nazi Germany
Exploration of the profound and complex relationship between science and politics under the Nazis. Three areas: the German atomic bomb project; the German rocket program; science, racism, and the Holocaust. Topics include behavior of scientists under Nazi rule; degree to which Nazis integrated science and engineering into their ideology; effect of Nazi ideology on scientific research and medical practice; harm done to German science by Nazi racial policies. Issues of ethics and historical interpretation central to course. GER:DB-SocSci
5 units, Aut (Holloway, D)

OSPBER 36. Germany in the Cold War
History of Germany from 1945 to 1990: the period of occupation; the creation of two German states and societies; the crises of the Cold War; Ostpolitik; and unification. Germany¿s centrality to the Cold War both because of geopolitics and because of the different ideas about social organization embodied in Germany¿s two parts. GER:DB-SocSci
3-5 units, Aut (Holloway, D)

OSPBER 40B. Introductory Electronics
Electrical quantities and their measurement, including operation of the oscilloscope. Function of electronic components including resistor, capacitor, and inductor. Analog circuits including the operational amplifier and tuned circuits. Digital logic circuits and their functions. Lab assignments. Prerequisite: PHYSICS 43. GER:DB-EngrAppSci
5 units, Aut (Lee, T), Win (Howe, R), Spr (Howe, R)

OSPBER 50B. Introductory Science of Materials
GER:DB-EngrAppSci
4 units, Aut (Staff, 1), Win (Staff, 1), Spr (Staff, 1)

OSPBER 56. A Laboratory of Modernity: Concert and Concerto in 19th-Century Germany
How the emerging institution of the concert and the musical genre of the concerto produced and mirrored identities of the rising bourgeoisie in 19th-century Germany: discourses about the value and idea of the concert; aspects of the performance; the music and its perception. The development of the genre of the concerto through live performances in Berlin concert halls. No musical reading skills required. GER:DB-Hum
4 units, Win (Bork, C)

OSPBER 60. Cityscape as History: Architecture and Urban Design in Berlin
Diversity of Berlin's architecture and urban design resulting from its historical background. Architect Ludwig Mies van der Rohe and his artistic ancestors. Role of the cultural exchange between Germany and the U.S. Changing nature of the city from the 19th century to the present. GER:DB-Hum
5 units, Aut (Pabsch, M)

OSPBER 62. Shades of Green: Environmental Policy in Germany and the U.S. in Historical Perspective
How political institutions, political culture, and economic structure influence domestic and foreign environmental policies across countries in areas such as climate change, urbanization, and management of finite resources. Impact on cooperative solutions between countries with focus on Germany and the U.S. GER:DB-SocSci
5 units, Win (Tempel, S)

OSPBER 66. Theory from the Bleachers: Reading German Sports and Culture
German culture past and present through the lens of sports. Intellectual, societal, and historical-political contexts. Comparisons to Britain, France, and the U.S. The concepts of Körperkultur, Leistung, Show, Verein, and Haltung. Fair play, the relation of team and individual, production and deconstruction of sports heroes and heroines, and sports nationalism. Sources include sports narrations and images, attendance at sports events, and English and German texts.
3 units, Win (Junghanns, W)

OSPBER 68. Protestant Reformation
New forms of Christian religious thought and practice that emerged in Western Europe in the early to mid-sixteenth century and decisively shaped the course of Western history. Religious status quo and other forms of religious dissent that challenged late medieval Christendom; proposals for reform exemplified by Martin Luther, Andreas Karlstadt, Thomas Müntzer; impact of the changes in religion and the conflicts over religion for society more broadly. GER:DB-Hum
4 units, Spr (Pitkin, B)

OSPBER 69. Theology in Dark Times: The Churches Under Hitler
Roles of the Christian churches, their intellectual representatives (almost all university professors), and clerical leaders in resisting, supporting, and capitulating to fascist ideology and anti-Semitism. Topics include: Emanuel Hirsch¿s embrace of National Socialism; Karl Barth¿s penning of the ¿Barmen Declaration¿ of the Confessing Church movement; the nationalistic ¿German Christians,¿ who added `das Volk,¿ i.e., race, to the Reformation concept of God¿s ¿orders of creation¿; controversies over Pope Pius XII¿s public neutrality toward the plight of the Jews in Europe; Dietrich Bonhoeffer¿s resistance to the Nazi regime. GER:DB-Hum
4 units, Spr (Sockness, B)

OSPBER 100B. Berlin Heute
Required for students enrolled in GERLANG 3B; open to students in other German language classes. Active use of German, including vocabulary from a variety of fields and disciplines, and discussion of current issues.
2 units, Aut (Topkara, U), Win (Topkara, U), Spr (Topkara, U)

OSPBER 101A. Contemporary Theater
Texts of plays supplemented by theoretical texts or reviews. Weekly theater visits, a tour of backstage facilities, and discussions with actors, directors, or other theater professionals. In German. Prerequisite: completion of GERLANG 3 or equivalent. GER:DB-Hum
5 units, Aut (Kramer, K), Spr (Kramer, K)

OSPBER 101B. Advanced German
For intermediate and advanced students. Focus is on Berlin through film, literature, music, live performance, news media, and field trips. Essay writing, vocabulary building, and in-class presentations. Reading literature and news stories, essay writing, vocabulary building, and in-class presentations.
5 units, Aut (Biege, M), Win (Biege, M), Spr (Biege, M)

OSPBER 115X. The German Economy: Past and Present
The history of the German economy in the Wilhelmine Empire, the Weimar Republic, the Third Reich, the postwar real socialism of the GDR, and the free market economy of the FRG. The processes of economic transition since unification and current challenges faced by united Germany. GER:DB-SocSci, DB-SocSci, EC-GlobalCom
4-5 units, Aut (Klein, I)

OSPBER 126X. A People's Union? Money, Markets, and Identity in the EU
The institutional architecture of the EU and its current agenda. Weaknesses, strengths, and relations with partners and neighbors. Discussions with European students. Field trips; guest speakers. GER:DB-SocSci, DB-SocSci, EC-GlobalCom
4-5 units, Spr (Brueckner, U)

OSPBER 161X. The German Economy in the Age of Globalization
Germany's role in the world economy: trade, international financial markets, position within the European Union; economic relations with Eastern Europe, Russia, the Third World, and the U.S. International aspects of German economic and environmental policies. The globalization of the world's economy and Germany's competitiveness as a location for production, services, and R&D, focusing on the German car industry. GER:DB-SocSci, DB-SocSci, EC-GlobalCom
4-5 units, Win (Klein, I)

OSPBER 174. Sports, Culture, and Gender in Comparative Perspective
Theory and history of mass spectator sports and their role in modern societies. Comparisons with U.S., Britain, and France; the peculiarities of sports in German culture. Body and competition cultures, with emphasis on the entry of women into sports, the modification of body ideals, and the formation and negotiation of gender identities in and through sports. The relationship between sports and politics, including the 1936 Berlin Olympic Games. GER:DB-SocSci, EC-Gender
5 units, Spr (Junghanns, W)

OSPBER 198D. Humboldt Universitat: Humanities 2
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPBER 198F. Humboldt Universitat: Social Sciences 2
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPBER 198H. Freie Universitat: Humanities 3
1-5 units, Spr (Staff)

OSPBER 198K. Weissensee Art University 1
1-4 units, Spr (Staff)

OSPBER 198L. Weissensee Art University 2
1-4 units, Spr (Staff)

OSPBER 198M. Weissensee Art University 3
1-4 units, Spr (Staff)

OSPBER 199A. Directed Reading A
2-4 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPBER 199B. Directed Reading B
2-3 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPBER 199D. Humboldt Universitat: Humanities
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPBER 199F. Humboldt Universitat: Social Sciences
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPBER 199G. Freie Universitat: Social Sciences 1
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPBER 199H. Freie Universitat: Humanities 1
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPBER 199J. Freie Universitat: Natural Sciences 1
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPBER 199K. Freie Universitat: Social Sciences 2
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPBER 199L. Freie Universitat: Humanities 2
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPBER 199M. Freie Universitat: Natural Sciences 2
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

OVERSEAS STUDIES: CAPE TOWN (OSPCPTWN) COURSES

OSPCPTWN 16. South Africa Sites of Memory
Required Course. Relation between conventional histories and different kinds of individual and collective memory that are focused on places and spaces, testing the relation between grand narratives and more particularized pasts. Questions of cultural heritage, in particular its contestations among individual, familial, local, national, and international interests.
2 units, Win (Stanton, T)

OSPCPTWN 17. Western Cape Sites of Memory
Required Course. Relation between conventional histories and different kinds of individual and collective memory that are focused on places and spaces, testing the relation between grand narratives and more particularized pasts. Questions of cultural heritage, in particular its contestations among individual, familial, local, national, and international interests.
1 unit, Spr (Stanton, T)

OSPCPTWN 18. Xhosa Language and Culture
History of the Xhosa language; understanding Xhosa culture and way of life. Listening, speaking, reading and writing, combined with the social uses of the language in everyday conversations and interactions. Intercultural communication. Content drawn from the students¿ experiences in local communities through their service learning/volunteer activities to support the building of the relationships in these communities. How language shapes communication and interaction strategies.
2 units, Win (Tyam, N), Spr (Tyam, N)

OSPCPTWN 22. Preparation for Community-Based Research in Community Health and Development
For students intending to engage in community-based research in South Africa in the summer following spring study quarter in Cape Town. Approaches and methods of collaborative, community-based research; qualitative data gathering and analysis methods in community-based research; effective collaboration with community partners and data sources; race and privilege in community-based research. Identifying research partners and

sponsors; articulating potential research questions; and planning research projects.

3 units, Spr (Stanton, T)

OSPCPTWN 23. History and Politics of South Africa in Transition

Key issues in contemporary South African politics including: South Africa¿s negotiated settlement; the sustainability of democracy in South Africa; the heterogeneity of South Africa; and questions of agency and subordination globally and locally. GER:EC-GlobalCom

4 units, Spr (Simons, M)

OSPCPTWN 24A. Targeted Research Project in Community Health and Development

Two-quarter sequence for students engaging in Cape Town-sponsored community based research. Introduction to approaches, methods and critical issues of partnership-based, community-engaged research and to the community-based research partners. Qualitative data gathering and analysis methods in community-based research; effective collaboration with community partners and data sources; race and privilege in community-based research. Preparation of research proposals and plans for research carried out during spring quarter through OSPCPTWN 24B.

3 units, Win (Stanton, T)

OSPCPTWN 24B. Targeted Research Project in Community Health and Development

Two-quarter sequence for students engaging in Cape Town-sponsored community-based research. Substantive community health or development investigations in collaboration with the Stanford Centre's community partners: Western Cape NGOs or government agencies, or community-based organizations or groups. Students' research supported through methods workshops, sharing of progress and problems, and data and findings presentations. Prerequisite: OSPCPTWN 24A.

5 units, Spr (Stanton, T)

OSPCPTWN 25. Independent Study of South African Built Environment, Economy, and Institutions

Students select from independent study topics such as: Political Economics of Informal Urban Settlements; Infrastructure Delivery in Developing Countries; the Unique Challenges of Marine Construction; Role of Students in the Anti-Apartheid Movement during the Late 1060s; Documenting Vanishing African Music and Dance Traditions; South African Fiction, Theater and Poetry; the History of Ostrich Ranching in South Africa.

1-4 units, Win (Staff)

OSPCPTWN 26. Managing Global Projects

Challenges associated with planning and managing both commercial and governmental/non-profit global projects; theory, methods, and tools to enhance global project outcomes. Student teams model and simulate cross-cultural teams engaged in global projects. Opportunities to participate in research in the Collaboratory for Research on Global Projects involving faculty from Stanford departments and schools; see http://crgp.stanford.edu.

3-4 units, Win (Levitt, R)

OSPCPTWN 27. Service Learning Practice

Prerequisite: OSPCPTWN 20 or permission of instructor

3 units, Spr (McMillan, J)

OSPCPTWN 31. Theory and Politics of Foreign Aid

Political economy approach to foreign aid. Context of debate on development: differences between developed and less developed countries, concept of poverty, how to measure development. History of foreign aid; main actors and characteristics of official development assistance. Theoretical and empirical impact of aid with regard to economic growth and governance. Benefits and problems associated with aid.

3 units, Win (Klingebiel, S)

OSPCPTWN 32. Learning, Development, and Social Change: Service Learning in the Contemporary South African Contex-

Adult learning and its role in community social action; development; service learning. Micro contexts of people's daily lives and experiences in the context of an emergent democracy; understanding possibilities of community action and mobilisation for social change. Service in a historically marginalised community near Cape Town to understand realities of everyday life in informal settlements, to engage with education in a developmental context, and to gain insight into sociopolitical factors that shape social action and learning. GER:DB-SocSci, EC-GlobalCom

3-5 units, Win (McMillan, J), Spr (McMillan, J)

OSPCPTWN 33. From Apartheid to Democracy: Namibia and South Africa

Comparison of the transition from apartheid to democracy in Namibia and South Africa. Focus on peaceful process involving negotiated settlement in South Africa. Significance of democracy in Namibia post 1990 and in South Africa post 1994; South Africa's truth and reconciliation commission and post-1994 economic policy.

4 units, Win (Saunders, C)

OSPCPTWN 36. The Archaeology of Southern African Hunter Gatherers

Archaeology, history and ethnography of the aboriginal hunter gatherers of southern Africa, the San people. Formative development of early modern humans and prehistory of hunters in southern Africa before the advent of herding societies; rock paintings and engravings of the subcontinent as situated in this history. Spread of pastoralism throughout Africa. Problems facing the descendants of recent hunter gatherers and herders in southern Africa, the Khoisan people. GER:DB-SocSci, EC-GlobalCom

4 units, Spr (Parkington, J)

OSPCPTWN 38. Genocide: The African Experience

Genocide as a major social and historical phenomenon, contextualized within African history. Time frame ranging from the extermination of indigenous Canary Islanders in the fourteenth and fifteenth centuries to more recent mass killings in Rwanda and Darfur. Emphasis on southern African case studies such Cape San communities and the Herero people in Namibia. Themes include: roles of racism, colonialism and nationalism in the making of African genocides. Relevance of other social phenomena such as modernity, Social Darwinism, ethnicity, warfare and revolution. Comparative perspective to elucidate global dimensions. GER:DB-SocSci, EC-GlobalCom

4 units, Win (Adhikari, M)

OSPCPTWN 40. Education in the Post-Apartheid City

The changing schooling landscape in the post apartheid city. How the desire for quality schooling is constructed and understood in light of the lived practices that people establish in and across the city¿s geographies. How schools establish their identities in relation to the complex urban processes in the post-apartheid city. Role of culture, politics and economics in making the cultures of schools in the city. The ¿lived¿ spatial dimensions of schools and schooling processes and practices in the city and the institutional and individual subjectivities they spawn in the city¿s diverse spaces. GER:DB-SocSci

4 units, Spr (Badroodien, A; Fataar, A)

OSPCPTWN 41. Race and the Division of Labor in South Africa: A Historical Perspective

Process of industrialization in South Africa, how it simultaneously depended on and contributed to the racial division that characterized the pre-1994 era; consequences in the post-apartheid workplace. Transformation of the economic sector from agriculture to mining and manufacturing through the opening up of South Africa to the global economy. Role of the state and its relationship with labor and capital as molded by race and class.

4 units, Win (Ngazimbi, X)

OSPCPTWN 43. Public and Community Health in Sub-Saharan Africa

Introduction to concept of public health as compared with clinical medicine. Within a public health context, the broad distribution of health problems in sub-Saharan Africa as compared with U.S. and Europe. In light of South Africa's status as a new democracy, changes that have occurred in health legislation, policy, and service arenas in past 16 years. Topics include: sector health care delivery, current distribution of infectious and chronic diseases, and issues related to sexual and reproductive health in South Africa. Site visits to public sector health services and health related NGOs.

4 units, Win (Staff)

OSPCPTWN 44. Negotiating Home, Citizenship and the South African City
Material and socio-cultural dimensions of the multiple spaces making up South African cities. The gendered, placed, sexual, and racial character of homes, neighborhoods, and cities. Ways in which crises such as housing shortages and tenure insecurity are materially and socially embodied in economically impoverished families and communities' lives. Interplay of this body politic with economic and political contexts in which the meaning of citizenship is crafted. Urban fieldwork with the Valhalla Park United Civic Front, a community-based organization in Cape Town. GER:DB-SocSci, EC-GlobalCom
4 units, Spr (Oldfield, S)

OSPCPTWN 52. The Ethics of Imperialism
Ethical underpinnings of empire; Europe's moral and political justification for often violent acquisition of distant territories and millions of new colonial subjects. European notions of liberal universalism (Mill, Tocqueville and others) as moral groundwork for colonial expansion. Colonial case studies: Leopole II's Congo, German Southwest Africa, and South Africa. Testing of European ideals to justify and critique racial inequality, violence, and genocide. Redefinition of imperialism under the guise of globalization beginning with international organizations such as the League of Nations. GER:DB-Hum
5 units, Spr (Daughton, J)

OSPCPTWN 53. The South African Environment in Historical Context
Group work to design a research project related to environmental change and conservation in South Africa in the 19th and 20th centuries. Using local archives, libraries, and other collections to identify a historical question, design a research project related to the political, social, cultural, and racial dynamics that have shaped modern S. African policies toward the environment.
5 units, Spr (Daughton, J)

OSPCPTWN 68. Cities in the 21st Century: Urbanization, Globalization and Security
Cities in a globalizing world. Themes: challenges posed by globalization; general and specific responses of cities to these challenges; security issues created by globalization and urbanization. Concerns related to food security, resource availability, and threat of political instability. Policies recommended by World Bank. Case study method. GER:DB-SocSci
4 units, Spr (Simons, M)

OSPCPTWN 199A. Directed Reading A
2-4 units, Win (Staff), Spr (Staff)

OSPCPTWN 199B. Directed Reading B
1-5 units, Spr (Staff)

OVERSEAS STUDIES: FLORENCE (OSPFLOR) COURSES

OSPFLOR 21F. Accelerated Second-Year Italian, Part A
Review of grammatical structures; grammar in its communicative context. Listening, speaking, reading, and writing skills practiced and developed through authentic material such as songs, newspaper articles, video clips, and literature. Insight into the Italian culture and crosscultural understanding.
5 units, Aut (Quercioli, F), Win (Quercioli, F), Spr (Quercioli, F)

OSPFLOR 22F. Accelerated Second-Year Italian Part B,
Grammatical structures, listening, reading, writing, speaking skills, and insight into the Italian culture through authentic materials. Intermediate to advanced grammar. Content-based course, using songs, video, and literature, to provide cultural background for academic courses.
5 units, Aut (Quercioli, F), Win (Quercioli, F), Spr (Staff, 1)

OSPFLOR 23. Rediscovering European Universities: The New Renaissance of Italian Higher Education
Worldwide market in higher education focusing on the role of Italy and all of Europe in providing education to Europeans and to the world. Reformation of European higher education represented by the Bologna Reforms. Implications of Italy¿s ongoing reforms on higher education in the United States. Field trips to the Universities of Florence and Bologna.
3 units, Spr (Bettinger, E)

OSPFLOR 24. Economics in the European Setting
Economics of Europe with special emphasis on the motivation for and challenges to the European Union. Role of the EU in fostering cooperation between countries and how it represents a significant departure from national autonomy. Focus on economics of local cities and states in Italy; how cities and states generate taxes in Italy and how the current form of financing state and local governments influences home ownership, unemployment, and mobility. Provision of education and health services to Italians.
3 units, Spr (Bettinger, E)

OSPFLOR 31F. Advanced Oral Communication: Italian
Refine language skills and develop insight into Italian culture using authentic materials. Group work and individual meetings with instructor. Minimum enrollment required. Prerequisite: ITALLANG 22A, 23 or placement.
3 units, Aut (Quercioli, F), Win (Quercioli, F), Spr (Quercioli, F)

OSPFLOR 34. The Woman in Florentine Art
Influence and position of women in the history of Florence as revealed in its art. Sculptural, pictorial, and architectural sources from a social, historical, and art historical point of view. Themes: the virgin mother (middle ages); the goddess of beauty (Botticelli to mannerism); the grand duchess (late Renaissance, Baroque); the lady, the woman (19th-20th centuries). GER:DB-Hum, EC-Gender
4 units, Aut (Verdon, T)

OSPFLOR 35. European Economic and Monetary Integration
Historical overview of economic and monetary integration process in Western Europe. European Union institutions: the Commission, the Parliament, the European Council, the Council of Ministers, and the Court of Justice. Microeconomic theory of inter-industry and intra-industry trade and the case of EU. Microeconomics of integration: the costs and benefits, also applicable to NAFTA. The Lisbon Strategy as a European response to the challenges of globalization. The euro, the dollar and the international monetary system. Monetary and fiscal policies in EMU: the European Central Bank and the Stability and Growth Pact. Prerequisites: ECON 51, 52 or equivalent. GER:DB-SocSci, EC-GlobalCom
5 units, Aut (Della Posta, P)

OSPFLOR 37. Directed Readings in Environmental Management in Europe
Students may choose from the following for independent study projects: policy instruments for environmental quality management; strategies for managing greenhouse gas emissions in the EU; environmental assessment requirements; beyond regulations: voluntary environmental management programs.
3-5 units, Aut (Staff)

OSPFLOR 38. Water Resources Engineering in Italy: Ancient Rome, Medieval Siena, and Modern Florence and Venice
Examination of significant examples of water resources development in Italian history as an introduction to the basic concepts of water resources engineering and management. Observation of results of application of basic ideas from hydrology and hydraulics to problems of water supply, waste water disposal and flood control. Topics include aqueducts of ancient Rome, water supply of Siena, flooding in Florence, and high water in Venice. GER:DB-EngrAppSci
4-5 units, Aut (Ortolano, L)

OSPFLOR 41. The Contemporary Art Scene in Tuscany: Theory and Practice
The ever-changing and multifaceted scene of contemporary art through visual and sensorial stimulation. How art is thought of and produced in Italy today. Hands-on experience. Sketching and exercises on-site at museums and exhibits, plus workshops on techniques. Limited enrollment.
3-5 units, Aut (Rossi, F)

OSPFLOR 42. Academic Internship
Mentored internships in banking, education, the fine arts, health, media, not-for-profit organizations, publishing, and retail. May be repeated for credit.
1-5 units, Aut (Campani, E), Win (Campani, E), Spr (Campani)

OSPFLOR 43. The Invention of the Book
From papyrus rolls in the Roman Empire through scripture laid out on parchment codices by the Catholic church to early printed books in Venice, follow the invention of the book. On-site study of ancient collections of some of the most remarkable libraries in the world. GER:DB-Hum

3-5 units, Win (Netz, R)

OSPFLOR 44. The Revolution in Science: Galileo and the Birth of Modern Scientific Thought
Galileo's life and scientific progress starting from his student years at the University of Pisa. Departure from traditional natural philosophy leading to radical reformation of cosmology and physics, emphasizing the science of motion. His innovative use of observation and measurement instruments, emphasizing the telescope. Cultural and social context. GER:DB-Hum

5 units, Win (Galluzzi, P)

OSPFLOR 45. Harmony: Ancient Science in the Italian Renaissance
The rules of Harmony and Proportion as observed during the Renaissance in art as in mechanics, in music as in architecture. Importance of proportion in major Florentine monuments. Intellectual route leading from Plato and Archimedes to Brunelleschi, Alberti and Galileo. GER:DB-Hum

3-5 units, Win (Netz, R)

OSPFLOR 48. Sharing Beauty: Florence and the Western Museum Tradition
The city's art and theories of how art should be presented. The history and typology of world-class collections. Social, economic, political, and aesthetic issues in museum planning and management. Collections include the Medici, English and American collectors of the Victorian era, and modern corporate and public patrons. GER:DB-Hum

4 units, Win (Rossi, F; Verdon, T)

OSPFLOR 49. The Cinema Goes to War: Fascism and World War II as Represented in Italian and European Cinema
Structural and ideological attributes of narrative cinema, and theories of visual and cinematic representation. How film directors have translated history into stories, and war journals into visual images. Topics: the role of fascism in the development of Italian cinema and its phenomenology in film texts; cinema as a way of producing and reproducing constructions of history; film narratives as fictive metaphors of Italian cultural identity; film image, ideology, and politics of style. GER:DB-Hum

5 units, Win (Campani, E)

OSPFLOR 50F. Introductory Science of Materials
GER:DB-EngrAppSci

4 units, Aut (Staff, 1), Win (Staff, 1), Spr (Staff, 1)

OSPFLOR 54. High Renaissance and Maniera
The development of 15th- and early 16th-century art in Florence and Rome. Epochal changes in the art of Michelangelo and Raphael in the service of Pope Julius II. The impact of Roman High Renaissance art on masters such as Fra' Bartolomeo and Andrea del Sarto. The tragic circumstances surrounding the early maniera: Pontormo and Rosso Fiorentino and the transformation of early Mannerism into the elegant style of the Medicean court. Contemporary developments in Venice. GER:DB-Hum

5 units, Spr (Verdon, T)

OSPFLOR 55. Academy of Fine Arts: Studio Art
Courses through the Academia delle Belle Arti. Details upon arrival. Minimum Autumn and Winter Quarter enrollment required; 1-3 units in Autumn. May be repeated for credit.

1-5 units, Aut (Staff, 1), Win (Staff, 1), Spr (Staff, 1)

OSPFLOR 56. University of Florence Courses

1-5 units, Aut (Campani, E), Win (Campani, E), Spr (Campani, E)

OSPFLOR 58. Space as History: Urban Change and Social Vision in Florence 1059 to the Present
A thousand years of intentional change in Florence. Phases include programmatic enlargement of ecclesiastical structures begun in the 11th century; aggressive expansion of religious and civic space in the 13th and 14th centuries; aggrandizement of private and public buildings in the 15th century; transformation of Florence into a princely capital from the 16th through the 18th centuries; traumatic remaking of the city¿s historic core in the 19th century; and development of new residential areas on the outskirts and in neighboring towns in the 20th and 21st centuries. GER:DB-Hum

4 units, Spr (Rossi, F; Verdon, T)

OSPFLOR 67. Women in Italian Cinema: Maternity, Sexuality, and the Image
Film in the social construction of gender through the representation of the feminine, the female, and women. Female subjects, gaze, and identity through a historical, technical, and narrative frame. Emphasis is on gender, identity, and sexuality with references to feminist film theory from the early 70s to current methodologies based on semiotics, psychoanalysis, and cultural studies. Advantages and limitations of methods for textual analysis and the theories which inform them. Primarily in Italian. GER:DB-Hum, EC-Gender

4 units, Spr (Campani, E)

OSPFLOR 69. The "You" No One Knows: Self Expression through Abstract Art
Overview of the birth and evolution of abstract art with visual background necessary to produce works of art free of a realistic representation. Movements and trends in abstract art; experimentation with different media and techniques.

4 units, Win (Rossi, F)

OSPFLOR 71. Becoming an Artist in Florence: Contemporary Art in Tuscany and New Tendencies in the Visual Future
Recent trends in art, current Italian artistic production, differences and the dialogue among visual arts. Events, schools, and movements of the 20th century. Theoretical background and practical training in various media. Work at the Stanford Center and on site at museums, exhibits, and out in the city armed with a sketchbook and camera. Emphasis is on drawing as the key to the visual arts. Workshops to master the techniques introduced. Limited enrollment.

3-5 units, Spr (Rossi, F)

OSPFLOR 78. An Extraordinary Experiment: Politics and Policies of the New European Union
Institutional design of EU, forthcoming changes, and comparison of the old and new designs. Interactions between the EU, member states, organized interests, and public opinion. Major policies of the EU that affect economics such as competition or cohesion policies, market deregulation, and single currency. Consequences of the expansion eastwards. The role of institutions as a set of constraints and opportunities for the economic actors; relationships between political developments and economic change in the context of regional integration; lessons for other parts of the world. GER:DB-SocSci, EC-GlobalCom

5 units, Spr (Morlino, L)

OSPFLOR 79. Migrations and Migrants: The Sociology of a New Phenomenon
Interdisciplinary approach to the study of immigration. Typology of forms of migration through politics put into action by the EU and within single nations. Related cultural and religious questions which elicit symbolic borders, territorialization of cultural identities, and the often spatial differentiation of immigrants and locals. The politics of integration and the instruments necessary to manage it. GER:DB-SocSci, EC-GlobalCom

5 units, Win (Allam, K)

OSPFLOR 106V. Italy: From Agrarian to Postindustrial Society
Italian history from the Risorgimento to the present. Society, crises, evolution, values, and the relation to the political institution in different periods. The ideologies, political doctrines, and historical events which contributed to the formation of modern Italy's predominant subcultures: Catholic and Socialist. GER:DB-SocSci, DB-SocSci, EC-GlobalCom

5 units, Aut (Mammarella, G)

OSPFLOR 111Y. From Giotto to Michelangelo: Introduction to the Renaissance in Florence
Lectures, site visits, and readings reconstruct the circumstances that favored the flowering of architecture, sculpture, and painting in Florence and Italy, late 13th to early 16th century. Emphasis is on the classical roots; the particular relationship with nature; the commitment to human expressiveness; and rootedness in the real-world experience, translated in sculpture and painting as powerful plasticity, perspective space, and interest in movement and emotion. GER:DB-Hum
4 units, Win (Verdon, T)

OSPFLOR 115Y. The Duomo and Palazzo della Signoria: Symbols of a Civilization
The history, history of art, and symbolism of the two principal monuments of Florence: the cathedral and the town hall. Common meaning and ideological differences between the religious and civic symbols of Florence's history from the time of Giotto and the first Guelf republic to Bronzino and Giovanni da Bologna and the Grand Duchy. GER:DB-Hum
4 units, Aut (Verdon, T)

OSPFLOR 134F. Modernist Italian Cinema
As the embodiment of modernity, cinema develops in the wake of modernism proper, but can be understood as one of its technological and aesthetic expressions. Topics: cinema's archaeology in futurist texts and theories with their nationalistic political flavor and their iconoclastic, radical, and interdisciplinary rethinking of the language and form of all the arts (Marinetti, Pirandello, D'Annuzio). GER:DB-Hum
5 units, Aut (Campani, E)

OSPFLOR 199A. Directed Reading A
1-4 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPFLOR 199B. Directed Reading B
1-4 units, Aut (Staff), Win (Staff), Spr (Staff)

OVERSEAS STUDIES CONSORTIUM IN KYOTO—KCJS (OSPKYOCT) COURSES

OSPKYOCT 103A. Third-Year Japanese I
Preparation for function beyond basic level in a Japanese-speaking environment by developing and enhancing communicative competence through: review of basic grammar; new grammar; reading short essays and articles with help of dictionary; short writing and speaking assignments using formal style to describe, explain, and discuss sociocultural topics; enhancing listening comprehension.
12 units, Aut (Staff)

OSPKYOCT 103B. Third-Year Japanese II
Preparation for function beyond basic level in a Japanese-speaking environment by developing and enhancing communicative competence through: review of basic grammar; new grammar; reading short essays and articles with help of dictionary; short writing and speaking assignments using formal style to describe, explain, and discuss sociocultural topics; enhancing listening comprehension.
12 units, Win (Staff)

OSPKYOCT 104A. Fourth-Year Japanese I
Emphasis on applications of correct grammar and strengthening academic communication skills through: reading longer essays, articles, and novels with some dictionary work; reading and writing assignments in paragraph format using formal style to describe, explain and discuss sociocultural topics; developing listening comprehension.
12 units, Aut (Staff)

OSPKYOCT 104B. Fourth-Year Japanese II
Emphasis on applications of correct grammar and strengthening academic communication skills through: reading longer essays, articles, and novels with some dictionary work; reading and writing assignments in paragraph format using formal style to describe, explain and discuss sociocultural topics; developing listening comprehension.
12 units, Win (Staff)

OSPKYOCT 105A. Fifth-Year Japanese I
For students with advanced proficiency. Goals include advanced command of grammar, composition, and stylistics. Emphasis is on academic Japanese preparing students to audit classes at a Japanese university.
12 units, Aut (Staff)

OSPKYOCT 105B. Fifth-Year Japanese II
For students with advanced proficiency. Goals include advanced command of grammar, composition, and stylistics. Emphasis is on academic Japanese preparing students to audit classes at a Japanese university.
12 units, Win (Staff)

OSPKYOCT 108. Lost in Translation
The art and practice of translating literary texts from a variety of periods and genres. Strategies for translation and essays on translation by literary translators and theorists. Notable translations of Japanese literature in connection with the original texts. Students develop individual translation projects.
6 units, Spr (Staff)

OSPKYOCT 119. Economy, Political Economy, Society and Culture in Japan
Current topics using both writings in English and short selections of non-specialized articles in Japanese from current sources. Analysis and discussion from a social science perspective.
6 units, Spr (Staff)

OSPKYOCT 127. Outside the Mainstream: The Minority Experience in Japan
Historical analysis of how minority communities came into existence and struggled to maintain a distinctive lifestyle in Japan's homogeneous society. Japan's 1979 ratification of UN International Covenant on Civil and Political Rights.
6 units, Aut (Staff), Win (Staff)

OSPKYOCT 128. Families and Work in Post-war Japan
Factors that promoted both change and continuity in the social division of labor between the interdependent spheres of work and family. How cultural strategies for organizing contemporary Japanese social life were conditioned 1) by rapid industrialization and growth and 2) by later economic stasis. Class, gender, and regional variations; role of social psychology in Japanese responses to work-family conflicts.
6 units, Aut (Staff), Win (Staff)

OSPKYOCT 133. Economic Development of Japan
Consideration of Japan and the United States together, both comparatively and in terms of direct relations between the two. Emphasis on direct interaction: the Perry Expeditions, the founding of Doshisha University, influence of American technology in building the Biwako Canal, and in the work American architects in Kyoto. Prerequisite: prior coursework in Japanese history.
6 units, Spr (Staff)

OSPKYOCT 154. History and Culture of Japan
Survey of cultural, political, and economic history of Japan. Fundamental values and aspirations of Japanese who lived in different historical periods; analysis of political, social, and economic systems developed to represent beliefs and ambitions of different eras. Impact on domestic events from inclusion in the East Asia cultural zone and from interactions with the West.
6 units, Aut (Staff), Win (Staff)

OSPKYOCT 161. Kyoto: The Past in the Present
Exploration and observation of the city of Kyoto as a means of understanding its long and complex history; changing connections between past and present. Topics include: nature in the city; Raku tea ceramics; Kyoto street plan; survival of Genji monogatari; Buddhist cemeteries; public baths; Biwako Canal.
6 units, Aut (Staff)

OSPKYOCT 163. The 19th Century in Japan and America
Consideration of Japan and the United States together, both comparatively and in terms of direct relations between the two. Emphasis on direct interaction: the Perry Expeditions, the founding of Doshisha University, influence of American technology in building the Biwako Canal, and in the work American architects in Kyoto. Prerequisite: prior coursework in Japanese history.
6 units, Spr (Staff)

OSPKYOCT 165. History of Architectural Space in Japan
Built environment of Kyoto and the Kansai area with a focus on housing and its historical and cultural background. Overview of major periods of Japanese history from Heian to present as framework to study characteristics of Japanese architecture: asymmetry versus symmetry, relation of inside and outside, ambiguity of space, living with the seasons.
6 units, Aut (Staff)

OSPKYOCT 185. Noh and Kyogen
Noh drama as a mirror of Muromachi period culture. Broad literary heritage and Buddhist precepts reflected in plays. Performance traditions such as Shinto ritual, court dance, harvest festivals, exorcism rites, and narrative entertainment. Wider context of world drama and dramatic theories of the creators of Noh. Close reading of representative plays and first hand experience of performance.
6 units, Spr (Staff)

OSPKYOCT 189. Japanese Religions
Development of Shinto, Buddhism and the New Religions of Japan in historical and contemporary context. Topics include: Shinto mythology; transmission of Buddhism to Japan; teaching, rituals, and practices of the Japanese schools of Buddhism; mountain asceticism; pilgrimage; funerary and memorial rites. Field trips to religious and cultural institutions, rituals and festivals in Kansai area.
6 units, Aut (Staff)

OSPKYOCT 197. Independent Studies
Focused research using the Japanese language and taking advantage of local Kyoto resources. Directed reading and research, weekly meetings with professor, and final research paper. For full-year students with language skills adequate for the proposed research.
6 units, Spr (Staff)

OSPKYOCT 198. Women's Issues in Japan
Women's issues as related to mens issues in Japan. The house system and the legalized prostitution system in modern Japan. Topics include marriage, gender division of labor, child bearing, contraception, and domestic violence. How the private sphere is influenced by the public sphere including politics, economy, and culture.
6 units, Spr (Staff)

OVERSEAS STUDIES: KYOTO—SCTI (OSPKYOTO) COURSES

OSPKYOTO 9K. First-Year Japanese Language, Culture, and Communication B
5 units, Spr (Staff, 1)

OSPKYOTO 17K. Second-Year Japanese Language, Culture, and Communication B
5 units, Spr (Staff)

OSPKYOTO 17R. Religion and Japanese Culture
Major religious traditions of Japan. Topics include: relation between religion and culture; ancient Japanese religion and Shinto; Buddhist schools of Heian Japan; Zen Buddhism as it flourished in the Kamakura period; Confucianism, as originally conceived in ancient China and as transmitted to Japan in the Edo period in its neo-Confucian form; characteristic modern practices. Field trips to religious centers to observe current religious practices. GER:DB-Hum, EC-GlobalCom
4-5 units, Spr (Ludvik, C)

OSPKYOTO 19K. Second-Year Japanese Language, Culture, and Communication B
5 units, Spr (Staff, 1)

OSPKYOTO 33. Digital Systems II
The design of processor-based digital systems. Instruction sets, addressing modes, data types. Assembly language programming, low-level data structures, introduction to operating systems and compilers. Processor microarchitecture, microprogramming, pipelining. Memory systems and caches. Input/output, interrupts, buses and DMA. System design implementation alternatives, software/hardware tradeoffs. Labs involve the design of processor subsystems and processor-based embedded systems. Prerequisite: 108A, CS 106B.
3-4 units, Spr (Kozyrakis, C)

OSPKYOTO 40K. Introductory Electronics
Electrical quantities and their measurement, including operation of the oscilloscope. Function of electronic components including resistor, capacitor, and inductor. Analog circuits including the operational amplifier and tuned circuits. Digital logic circuits and their functions. Lab assignments. Prerequisite: PHYSICS 43. GER:DB-EngrAppSci
5 units, Spr (Howe, R)

OSPKYOTO 60. Japan in World War II: Experiences and Memory
How various segments of Japanese society view the war in Asia, where fault lines lie, and what attempts have been made to achieve reconciliation. Topics include: origins of the Asia-Pacific War; foreign and domestic images of Japan's wartime actions; American Occupation policy and the Tokyo war crimes trial; impact of peace movements and the Cold War; the emergence of conflicting postwar narratives about the war; Asian perceptions of postwar Japan; the institutionalization of public memory; attempts and failures at reconciliation with Japan's neighbors; comparisons with Europe. GER:DB-SocSci, EC-GlobalCom
4-5 units, Spr (Duus, P; Horvat, A)

OSPKYOTO 119K. Third-Year Japanese Language, Culture, and Communication
5 units, Spr (Staff, 1)

OSPKYOTO 199. Directed Reading
1-4 units, Spr (Staff)

OSPKYOTO 210K. Advanced Japanese
5 units, Spr (Staff, 1)

OSPKYOTO 215X. The Political Economy of Japan
Institutions and processes in the political organization of economic activity in modern Japan. The interaction of public and private sector institutions in the growth of Japan's postwar economy. The organization and workings of key economic ministries and agencies of the government, private sector business groupings, government interaction, and public policy making. The transformation of Japanese industrial policy from the rapid growth of heavy and chemical industries to the promotion of high technology and communications industries. The international, political, and economic ramifications of the structure and importance of Japanese capitalism. GER:DB-SocSci
4-5 units, Spr (Hayashi, T)

OVERSEAS STUDIES: MADRID (OSPMADRD) COURSES

OSPMADRD 12M. Accelerated Second-Year Spanish I
Intensive sequence integrating language, culture, and geo/sociopolitics of Spain. Emphasis is on achieving advanced proficiency in oral and written discourse, including formal and informal situations, presentational language, and appropriate forms in academic and professional contexts. Prerequisite: one year of college Spanish or 11 or 21B more than two quarters (six months) prior to arriving in Madrid.
5 units, Aut (Camblor Portilla, M), Win (Camblor Portilla, M), Spr (Camblor Portilla, M)

OSPMADRD 13M. Accelerated Second-Year Spanish II
Intensive sequence integrating language, culture, and geo/sociopolitics of Spain. Emphasis is on achieving advanced proficiency in oral and written discourse, including formal and informal situations, presentational language, and appropriate forms in academic and professional contexts. Prerequisite: 11 or 21B

within two quarters (six months) of arriving in Madrid or 12 or 22B.

5 units, Aut (Camblor Portilla, M), Win (Camblor Portilla, M), Spr (Camblor Portilla, M)

OSPMADRD 14. Introduction to Spanish Culture

Required for Madrid students. Spain's historical, physical, and socioculutural diversity. Includes a weekend study trip and other cultural encounters. Linguistic skills and cultural knowledge through museum visits, readings, and writing a paper in Spanish. Study trips: Autumn Quarter to Cantabria-Léon and Basque country; Winter Quarter to Andalusia and Extremadura; Spring Quarter to Catalonia and Galacia.

1 unit, Aut (Tejerina-Canal, S), Win (Tejerina-Canal, S), Spr (Tejerina-Canal, S)

OSPMADRD 15. Flamenco Dance

Practical instruction. The rhythms and styles of flamenco and the expression of feelings proper to this art form which synthesizes song, music, and dance. Zapateado (footwork), braceo (arm positions and movement technique), and choreographies, including Rumba flamenca and Sevillanas. Enrollment limited. May be repeated for credit.

1 unit, Aut (Murcia Cánovas, L), Win (Murcia Cánovas, L), Spr (Murcia Cánovas, L)

OSPMADRD 32. Health Care Systems Design: Spain, Europe, and the United States

Principles of health care system design; examples from Spain, other European systems, and the United States. Central goals of health care systems in industrialized countries and the demographic, economic, and related challenges facing them. Approaches to system design. Tradeoffs between public sector and private sector approaches; financing issues; provider payment; care management; quality improvement. Operation of physician practices and hospitals. Economic concepts with themes from sociology, political science, demography, and related disciplines. GER:DB-SocSci

4 units, Win (Baker, L)

OSPMADRD 33. Spanish Language Tutorial

May be repeated for credit. Prerequisite: three years of Spanish at Stanford or placement.

2 units, Aut (Camblor Portilla, M), Win (Camblor Portilla, M), Spr (Camblor Portilla, M)

OSPMADRD 36. Independent Studies in Health Care Systems and Policy

Students my choose one of the following areas for independent study: problems and challenges facing health care systems; approaches to the effective design of health care systems; and comparisons of systems in different countries. Weekly meetings to discuss progress and review goals.

2-4 units, Win (Staff)

OSPMADRD 37. Madrid in Film

Madrid and its people as seen through the lens of contemporary filmmakers from the Franco era to the prosperous times exemplified by the cultural trend known as ¿La Movida.¿ Beginning with the fifties, analyze the different ways Madrid has been depicted in melodramas, social and political characters and stories. Historical, artistic and urban past of Madrid. GER:DB-Hum

3-5 units, Aut (Ruffinelli, J)

OSPMADRD 38. Spanish Catholicism: Religion, Mysticism, Architecture, Art

Survey with emphasis on the Spanish Inquisition, sixteenth century mysticism, and the church in the twentieth and twenty-first centuries (Vatican II, the turn to conservatism in the 1980s, contemporary practice, and Opus Dei). Visits to cathedrals to study the relation between Spanish religion and its architectural expressions. Works of religious art during the era of the Counter-Reformation up to the modern period. GER:DB-Hum

3 units, Spr (Sheehan, T)

OSPMADRD 39. Independent Studies in Spanish Literature or Film

Students may select independent study topics in the following areas: 20th-century Spanish poetry; 20th-century Spanish narratives; 20th-century Spanish cinema; 21st-century Spanish cinema; 20th-century Spanish societal issues; internatiional terrorism in the 20th century; Spanish emigration/immigration.

3-5 units, Aut (Staff)

OSPMADRD 40. Introduction to Literary and Cultural Analysis in the Spanish World

Technical and cultural vocabulary and methods to examine literary criticism in the literary genres, movements, and history of literature written in Spanish. Skills to consider Spanish texts critically. GER:DB-Hum

4-5 units, Aut (Tejerina-Canal, S)

OSPMADRD 41. Dissidence and Continuity: Spanish Theater, 1907 to the Present

Tradition, transformation, experimentation, rupture, renovation, and innovation in the theater in Spain as a reflection of the artistic, social and historical commotion that led to the Spanish Civil War, Franco, and the present democratic monarchy. Ortega y Gasset, Benavente, Grau, Valle-Inclán, García Lorca, Buero Vallejo, Sastre, Arrabal, Fernán Gómez, Paloma Pedrero, Yolanda Pallín or other playwrights who may be staged in Madrid theaters. GER:DB-Hum

4-5 units, Win (Tejerina-Canal, S)

OSPMADRD 42. A European Model of Democracy: The Case of Spain

Current Spanish political system, its main judicial and political institutions, outstanding actors' and the political process of the last decade. Historic antecedents; immediate precedents; and the current political system and life. Relation between the elements that constitute a political system; results of the process of democratization; integration to the EU. GER:DB-SocSci

5 units, Win (Bobillo de la Peña, F)

OSPMADRD 43. The Jacobean Star Way and Europe: Society, Politics and Culture

The Saint James' Way as a tool to understand historic dynamics from a global perspective. Its effect on the structures that form a political and institutional system, and its society, economy, and ideology. GER:DB-Hum, EC-GlobalCom

5 units, Spr (Larrañaga Zulueta, M)

OSPMADRD 45. Women in Art: Case Study in the Madrid Museums

Viewing the collections at the Prado Museum through study and analysis of the representations of women. Contemporary literary texts and images that situate paintings in the historical, social, and political conditions that produced the works. GER:DB-Hum, EC-Gender

4 units, Win (Doménech López, J)

OSPMADRD 46. Drawing with Four Spanish Masters: Goya, Velazquez, Picasso and Dali

Approaches, techniques, and processes in drawing. Visits to Madrid museums to study paintings and drawings by Goya, Velázquez, Picasso, and Dalí and to explore the experience of drawing. Subject matter: the figure, still life, interiors, landscape, and non-representational drawing. No previous experience required. Enrollment limited.

3 units, Aut (Sanchez Fuster, O)

OSPMADRD 50. Flirting with Spanish Metafiction: Cervantes, Velazquez, Fuentes, Amodovar

Literary theory and critical analysis of peninsular and Latin American texts. Emphasis is on the origins and development of self-conscious fiction (metafiction). Works by Cervantes, Velázquez, Unamuno, Borges, Fuentes, Torrente Ballester, and Almodóvar. Attendance at music, art, cinema, and Spanish novelist events. In Spanish. GER:DB-Hum

4-5 units, Spr (Tejerina-Canal, S)

OSPMADRD 51. The Meaning of Life: Art, Poetry, Philosophy

An investigation of the large questions about humanistic studies that often get lost such as: How does one investigate the meaning of a well-lived life? Using a novel (Sartre's Nausea), art works (Monet's Un Bar aux Folies Bergere; Monet's Still Life with Flowers and Van Gogh's Irises', poetry (Eliot, Prufrock, Waste

Land, and East Coker), and philosophy (Martin Heidegger's What Is Metaphysics?) raise the questions surrounding the course's title. GER:DB-Hum

3 units, Spr (Sheehan, T)

OSPMADRD 54. Contemporary Spanish Economy and the European Union

Concepts and methods for analysis of a country's economy with focus on Spain and the EU. Spain's growth and structural change; evolution of Spain's production sectors, agriculture, industry, and services; institutional factors such as the labor market and public sector; Spain's economic international relations, in particular, development of the EU, institutional framework, economic and monetary union, policies related to the European economic integration process, and U.S.-EU relationship. GER:DB-SocSci

5 units, Aut (Bunuel, M)

OSPMADRD 57. Health Care: A Contrastive Analysis between Spain and the U.S.

History of health care and evolution of the concept of universal health care based on need not wealth. Contrast with system in U.S. Is there a right to health care and if so, what does it encompass? The Spanish health care system; its major successes and shortcomings. Issues and challenges from an interdisciplinary perspective combining scientific facts with moral, political, and legal philosophy. GER:DB-SocSci

5 units, Spr (Perez Blanco, A)

OSPMADRD 60. Integration into Spanish Society: Service Learning and Professional Opportunities

Engagement with the real world of Madrid through public service work with NGOs and public service professions such as teaching. Depending on availability, topics relevant to present-day Spain may include: the national health plan, educational system, immigration, prostitution, refugees, youth, and fair trade. Fieldwork, lectures, and research paper. Limited enrollment. May be repeated for credit. Prerequisite: two years of college level Spanish or equivalent.

5 units, Aut (Klaiber, S), Win (Klaiber, S), Spr (Klaiber, S)

OSPMADRD 61. Society and Cultural Change: The Case of Spain

Complexity of socio-cultural change in Spain during the last three decades. Topics include: cultural diversity in Iberian world; social structure; family in Mediterranean cultures; ages and generations; political parties and ideologies; communication and consumption; religion; and leisure activities. GER:DB-SocSci

5 units, Aut (Munoz Carrion, A)

OSPMADRD 62. Spanish California: Historical Issues

Spanish exploration and colonization of California from the 16th century to the end of the Spanish colonial period in 1821. Themes include: geographical explorations in the context of European colonial expansion; demographic evolution of Native American inhabitants and immigrant population; general social and economic development of the colony; controversies surrounding the mission system; role of the Pacific coasts of North America in the Spanish enlightenment and in strategies for imperial defense and development in the revolutionary era of the late 18th and early 19th centuries.

5 units, Spr (Hilton, S)

OSPMADRD 71. Sociology of Communication

Understanding the sociocultural diversity of communication in Spain with the help of theoretical and practical tools. How communication happens through language and other means; significance of images in today's world; vision of the world produced by media; problems of social communication from perspective of reception. Offered at the Universidad Complutense with an additional tutorial for Stanford students.

5 units, Spr (Munoz Carrion, A)

OSPMADRD 72. Issues in Bioethics Across Cultures

Ethical dilemmas concerning the autonomy and dignity of human beings and other living creatures; principles of justice that rule different realms of private and public life. Interdisciplinary approach to assessing these challenges, combining scientific facts, health care issues, and moral philosophy. Sources include landmark bioethics papers.

5 units, Win (de Lora del Toro, P)

OSPMADRD 102M. Composition and Writing Workshop for Students in Madrid

Advanced. Writing as craft and process, emphasizing brainstorming, planning, outlining, drafting, revising, style, diction, and editing. Students choose topics related to their studies. Prerequisite: 13, 23B, or equivalent placement.

3-5 units, Aut (Camblor Portilla, M), Win (Camblor Portilla, M), Spr (Camblor Portilla, M)

OSPMADRD 199A. Directed Reading

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

OVERSEAS STUDIES: MOSCOW (OSPMOSC) COURSES

OSPMOSC 10M. Intensive First-Year Russian

9 units, Aut (Kurganova, L)

OSPMOSC 15. Academic Internship

Placements in areas such as banking, finances, consulting, journalism, language teaching, and technology. Introduction to Russian society and work experience. Evaluation and analysis of experience in final academic paper.

2-3 units, Aut (Abashkin, A)

OSPMOSC 51M. Second-Year Russian

5 units, Aut (Boldyreva, T)

OSPMOSC 62. Economic Reform and Economic Policy in Modern Russia

Russian economic history in the 20th century. Reasons and logic for economic transformation, major components of postcommunist economic transformation doctrine, and results of practical implementation. Mechanisms of economic policy decision making in modern Russia, and patterns of and alternatives in economic development. GER:DB-SocSci, EC-GlobalCom

5 units, Aut (Mau, V; Novikov, V)

OSPMOSC 72. Space, Politics, and Modernity in Russia

The idea of space as a key to understanding Russian politics and governance, economy, society, and culture. Phenomenology of Russian space: structure, topology, and features, including notions of enormity. Space in its relation to state power; how geography shaped Russian history and politics. Reification of space-state relationship on levels such as economy, politics and administration, security and social mobility, nationalism and imperialism, culture and language, and habits and ways. GER:DB-SocSci, EC-GlobalCom

5 units, Aut (Medvedev, S)

OSPMOSC 74. Post-Soviet Eurasia and SCO: Society, Politics, Integration

Analysis of the opportunities and challenges for political, economic, and military cooperation within the Shanghai Cooperation Organization (SCO). Likelihood of SCO¿s aspirations being realized and the potential of its becoming a political and military counterbalance to the West. Issues related to national security and security perceptions of post-Soviet states and China, their economic and energy ambitions and needs, and the role of external players in the region. GER:DB-SocSci, EC-GlobalCom

5 units, Aut (Bratersky, M; Kortunov, S)

OSPMOSC 78. Russian-American Relations: from the War of Independence to the War on Terror

Relations between Russia and the U.S. since the eighteenth century with an introduction covering the period prior to the American Revolution. GER:DB-SocSci

5 units, Aut (Ivanian, E)

OSPMOSC 80. Foundations of Russian Culture Through the Visual

Key elements of Russian culture, 16-19th centuries, explored by reference to visual objects that can be viewed in Moscow. Four themes: orthodoxy; autocracy; Europeanizing reforms; 19th-century intelligentsia, radical movement and realist historical art. Occasional excursions to see sights in situ, after reading and discussion. GER:DB-Hum

3-5 units, Aut (Kollmann, N)

OSPMOSC 81. Six Centuries of Russian History through Architecture: Walking Tour
Background lectures and discussion followed by excursions to sites that represent key stages in Russian history to the 20th century: Kremlin, Red Square, Kolomenskoe, WWII monuments, architectural representatives of Classicism, Art nouveau, Constructivism, Stalinist Monumentalism/Socialist Realism.
2 units, Aut (Kollmann, J; Kollmann, N)

OSPMOSC 111M. Third-Year Russian
5 units, Aut (Filatova, G)

OSPMOSC 177M. Fourth-Year Russian
5 units, Aut (Shishkina, I)

OSPMOSC 181M. Fifth-Year Russian
(Same as SLAVLANG 181M)
5 units, Aut (Kurganova, L)

OSPMOSC 199A. Directed Reading
2-5 units, Aut (Staff)

OVERSEAS STUDIES: OXFORD (OSPOXFRD) COURSES

OSPOXFRD 12. Oxford University, Yesterday and Today
Introduction to the history and culture of Oxford University. How the university's 800-year history has left its mark on the buildings for which Oxford is famous and how it helps explain the unique characteristics of the modern university: its collegiate structure, individualistic method of tutorial teaching, and idiosyncratic culture celebrated by writers such as Lewis Carroll, Gerard Manley Hopkins, and Evelyn Waugh. Lectures and walking-tours, mostly in the first three weeks of the term.
1 unit, Spr (Tyack, G)

OSPOXFRD 13. Politics and Economics of the Euro Zone
The political origins of the common European currency, how the idea of a shared currency spread throughout the community, and why some members, in particular, Britain, chose not to participate. How challenges to the dollar by the Euro and the Yuan have affected the world economy. Instances of financial instability of nations since 1990 and the extent to which bankers can act to stabilize world trade and investment flows. GER:DB-SocSci
5 units, Win (Goldstein, J)

OSPOXFRD 14. Independent Study: Selected Topics
Students select from three potential areas of independent study. If more than three students are interested in a particular topic, the class moves to a seminar format. Topics are: the European perspective on trade; European integration and the world economy; the expansion of the EU: will the EU survive?
1-5 units, Win (Staff)

OSPOXFRD 15. British Architecture and the Renaissance: 1500-1850
The influence of classicism and the Renaissance. Insights into European art and architecture and the history of Britain from the Tudor era to the Industrial Revolution. Study trips to London and elsewhere in England. GER:DB-Hum
4-5 units, Aut (Tyack, G)

OSPOXFRD 17. Novels of Sensation: Gothic, Detective Story, Prohibition, and Transgression in Victorian Fiction
Literary and moral value of transgressive sub-genres of the novel; what they reveal about Victorian society's anxiety over prohibited elements in the domestic and public spheres. Sources include gothic and detective novels. GER:DB-Hum
5 units, Aut (Plaskitt, E)

OSPOXFRD 18. Making Public Policy: An Introduction to Political Philosophy, Politics, and Economics
UK and U.S. What should society look like? How should incomes be distributed? How should it be taxed? How much inequality is acceptable? The overlap of economics with practical politics through political philosophy behind the government decisions; how public policy ought to be formulated. Issues include poverty, environmental policy, trade and globalization, and transport. GER:DB-SocSci
4-5 units, Win (McMahon, R)

OSPOXFRD 24. British and American Constitutional Systems in Comparative Perspective
Introduction to the study of constitutions and constitutional systems of government. The workings of the British and American systems of government. Comparative study of the most important constitutional issues facing Britain and the U.S. such as how suspected terrorists should be treated in a time of war. How to think about fundamental constitutional questions. GER:DB-SocSci
4-5 units, Spr (McMahon, R)

OSPOXFRD 35. Modern UK and European Government and Politics
Background of main political systems in Europe and recent developments in European politics. Topics: Blair's constitutional reforms; the consequences of the German reunification; Berlusconi's rise to power in Italy; the extreme right in France and elsewhere; the single currency; the enlargement of the EU; and proposals for a constitution and their recent rejection by the French and Dutch electorates. GER:DB-SocSci
4-5 units, Aut (Capoccia, G)

OSPOXFRD 45. British Economic Policy since World War II
Development of British economic policy making from 1945, focusing on political economy including: ideological motives of governments; political business cycle; and the influence of changing intellectual fashions. Policy areas: attitude to the pound; control of the business cycle; and the role of the state in the economy. Prerequisite: ECON 50. GER:DB-SocSci
5 units, Aut (Forder, J)

OSPOXFRD 57. The Rise of the Woman Writer 1660-1860
Emergence and rise of the professional woman writer from playwright and Royalist spy Aphra Behn (1640-89) to novelist and proto-feminist Charlotte Bronte (1816-55). How women writers dealt with criticism for writing publicly, placing each author and text in its historical and literary context. Range of poets, playwrights, and novelists including Eliza Haywood, Frances Burney, and Mary Elizabeth Braddon. Topics: gender roles and proto-feminism, the public versus the private sphere, sexuality, courtship and marriage. GER:DB-Hum, EC-Gender
5 units, Spr (Plaskitt, E)

OSPOXFRD 58. British Science and Technology
Current status of science and technology in Britain, particularly with regard to the decision-making process. Focus on biological and physical sciences. Comparisons with equivalent processes and institutions in the US.
3 units, Aut (Sinclair, R)

OSPOXFRD 59. Soccer and English Society
Changes in English society as mirrored by changes in soccer. English social history over the past 150 years with particular regard to the working class struggle and more modern-day development of cosmopolitan Britain.
5 units, Aut (Sinclair, R)

OSPOXFRD 61. Castles and Satanic Mills: the Medieval in British Art, Architecture and Literature, 1750-1914
Changing visions of the Middle Ages in British culture through painting and poetry, novels, architecture and sculpture. Beginning with Horace Walpole¿s Strawberry Hill and his Castle of Otranto and later Thomas Beckford¿s house Fonthill, interpretations of the Middle Ages up to the First World War. Includes Walter Scott, Victorian Gothic, Thomas Carlyle, John Ruskin, Charles Darwin, Gerald Hopkins, George Bodley and Ninian Comper.
4 units, Spr (Hill, R)

OSPOXFRD 67. Art in Oxford
Paintings and drawings in the collections of the University and colleges of Oxford and how they relate to key themes and critical approaches in the history of art. Themes include collecting and patronage, the impact of art historical scholarship on collections, drawing and its purposes, changing approaches to Renaissance art, symbolism and realism in 19th-century painting, and romantic and modern landscapes. Limited Enrollment.
3 units, Win (Tyack, G)

OSPOXFRD 70. The History of London
London's physical growth, emphasizing characteristics which set it apart from other capitals, and its economic, social and political development, including the problems of poverty and the inner city, the provision of public services, and the growth of suburbs and public transport. Challenges facing London in modern times.

Walking tours, especially less frequented areas. GER:DB-SocSci, EC-GlobalCom

4-5 units, Spr (Tyack, G)

OSPOXFRD 71. Oxford Trans-Idiomatic Arts Practicum

Work of art as a noun: observation, appreciation and criticism of local artistic landscape through field trip examinations of architecture, theater, opera, experimental music, jazz, popular music, painting, sculpture, installation art, photography, film, dance, and cuisine. Work of art as a verb: creation of original works of art inspired by local environment; projects might include recording of Oxford's sound ecology to transform into electronic music works, group performance art, original dance or movement pieces, found object sculpture, and public poetry readings related to and staged throughout the city.

3 units, Spr (Applebaum, M)

OSPOXFRD 72. The British Invasion

How the British have been effective at celebrating, appropriating, reinterpreting, and exporting American popular music culture. Understanding not only British culture, but also America as seen through British eyes and heard through British voices through examination of rich legacy of British popular music. Three generations of British popular music in the 1960s and 1970s: the music of the ¿British Invasion,¿ focusing on the Beatles; development of progressive rock (art rock) as embodied in groups such as Pink Floyd; the emergence of punk in both its revolutionary (e.g., the Clash) and nihilistic (e.g., the Sex Pistols) forms. GER:DB-Hum

3 units, Spr (Applebaum, M)

OSPOXFRD 92. Britain and the Second World War

Britain's economy, society, and culture after its participation throughout the whole length of the war, 1939-1945; subsequent relations with rest of the world. Chronological account and interpretation of participation; effect of the war on British people, especially civilians. Historical scholarship, contemporary writings, propaganda films and feature films, art and photography, and recent television documentaries with reminiscences of participants. GER:DB-Hum

5 units, Win (Tyack, G)

OSPOXFRD 98. Creative Writing Workshop

Selection and combination; poetic language; metaphor and cohesion; setting and the pathetic fallacy; sentence variety; genres; dialogue; point of view; narrative positions; colors and senses; time management; plotting. Limited enrollment based on writing sample.

3 units, Win (Kidd, H), Spr (Kidd, H)

OSPOXFRD 117W. Gender and Social Change in Modern Britain

Changes in the social institutions, attitudes, and values in Britain over the past 20 years with specific reference to shifts in gender relations. Demographic, economic and social factors; review of theoretical ideas. Men's and women's shifting roles in a fast-moving society. GER:DB-SocSci, DB-SocSci, EC-Gender

4-5 units, Win (Palmer, A)

OSPOXFRD 163X. Shakespeare: Critical Commentary

For English majors or minors only. Topics include the use of soliloquy, epilogues, alternation of prose and verse, rhetoric, meta-theatricality. Close reading technique. GER:DB-Hum

5 units, Aut (Rowley, R)

OSPOXFRD 195A. Tutorial in Anthropology
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 195B. Tutorial in Biology
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 195C. Tutorial in Classics
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 195E. Tutorial in Drama
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 195F. Tutorial in Economics
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 195G. Tutorial in Economic History
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 195J. Tutorial in Jurisprudence
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 195L. Tutorial in Health Care
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 195M. Tutorial in History of Science
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 195N. Tutorial in Human Biology
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 195P. Tutorial: Interdisciplinary
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 195R. Tutorial in International Relations
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 195T. Tutorial in Literature
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 195U. Tutorial in Music
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 195V. Tutorial in Philosophy
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 195Z. Tutorial in Political Science
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 196A. Tutorial in Psychology
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 196B. Tutorial in Religion
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 196C. Tutorial in Sociology
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 196E. Tutorial in History
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 196F. Tutorial in History of Art
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 196K. Tutorial in Zoology
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 196M. Tutorial in Public Policy
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 196N. Tutorial in Mathematics
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 197A. Tutorial in Anthropology
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 197B. Tutorial in Biology
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 197C. Tutorial in Classics
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 197E. Tutorial in Drama
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 197F. Tutorial in Economics
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 197J. Tutorial in Jurisprudence
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 197L. Tutorial in Health Care
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 197M. Tutorial in History of Science
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 197N. Tutorial in Human Biology
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 197P. Tutorial: Interdisciplinary
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 197R. Tutorial in International Relations
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 197T. Tutorial in English Literature
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 197U. Tutorial in Music
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 197V. Tutorial in Philosophy
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 197Z. Tutorial in Political Science
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 198A. Tutorial in Psychology
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 198C. Tutorial in Sociology
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 198E. Tutorial in History
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 198F. Tutorial in History of Art
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 198K. Tutorial in Zoology
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 198M. Tutorial in Public Policy
6-7 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 198N. Tutorial in Mathematics
6 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 199A. Directed Reading A
2-4 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 199B. Directed Reading B
2-5 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPOXFRD 199D. Directed Reading
1-3 units, Spr (Staff)

OVERSEAS STUDIES: PARIS (OSPPARIS) COURSES

OSPPARIS 10. Engineering Research Internship
For Paris Program students with academic experience in electronics, telecommunications or signal and image processing. Under direct guidance of researchers at Institut Supérieur d¿Electronique de Paris (ISEP), and where applicable, in collaboration with other French and international graduate students, contribute to the ISEP's ongoing research projects.
6 units, Aut (Staff, 1), Win (Staff, 1), Spr (Staff, 1)

OSPPARIS 14. Media Internship
Case studies and independent research as groundwork for comparative analysis of media on both sides of the Atlantic. Nature of media in the U.S and in France. Media as a means for understanding culture.
3 units, Aut (Halevi, E), Win (Halevi, E), Spr (Halevi, E)

OSPPARIS 18. French in the Working Environment
Preparation for internships in Paris. Understanding cultural differences between the U.S.and France in the business world: formailty/familiarity; written/spoken language; sense of time and space. Vocabulary and jargon specific to French busines world. Official letter writing in French.
1 unit, Aut (Ricci, M), Win (Ricci, M)

OSPPARIS 19. Arranged Internship 1
Two-quarter stay required. Internships can be arranged in a number of areas including the arts, architecture, politics, engineering, marketing and PR, media and journalism, health and psychological services, IT, NGO's, research, and hospitality administration.
3-6 units, Aut (Halevi, E), Win (Halevi, E), Spr (Halevi, E)

OSPPARIS 19B. Arranged Internship 2
Two-quarter stay required. Internships can be arranged in a number of areas including the arts, architecture, politics, engineering, marketing and PR, media and journalism, health and psychological services, IT, NGO's, research, and hospitality administration.
3-6 units, Aut (Halevi, E), Win (Halevi, E), Spr (Halevi, E)

OSPPARIS 22P. Intermediate French I
4 units, Aut (Reychman, P), Win (Molkou, E), Spr (Reychman, P)

OSPPARIS 23. Independent Study: The Vertebrate Skull
Projects based on questions posed by Thomas Huxley on theory of evolution. Using the extensive skull collection in Paris' Museum of Natural History, gain an understanding of how the scientific method can be used to transform the way we think about our world.
3 units, Win (Staff)

OSPPARIS 23P. Intermediate French II
4 units, Aut (Molkou, E), Win (Ricci, M), Spr (Gourevitch, S)

OSPPARIS 24. Introduction to French Society
Required of Paris program participants. Engagement with French society through language immersion, volunteer work, projects with French students, encounters with prominent figures, and visits to French political and cultural institutions.
1 unit, Aut (Staff, 1), Win (Staff, 1), Spr (Staff, 1)

OSPPARIS 29. Colonization, Decolonization and Immigration: Overview of French Global History in the 20th Century
Social and historical phenomena of colonization and decolonization in France during the 20th century, and their relation to the migratory movements that took shape after the Second World War. Case study of Algeria. Topics include: phenomenon of colonization in its administrative, judicial, social, economic and political context; conflicts leading to independence of colonized territories; migration of population before and after decolonization. GER:DB-SocSci, EC-GlobalCom
5 units, Aut (Hmed, C)

OSPPARIS 30. The Avant Garde in France through Literature, Art, and Theater
Multiple artistic trends and esthetic theories from Baudelaire to the Nouveau Roman, from the Surrealists to Oulipo, from the theater of cruelty to the theater of the absurd, from the Impressionists to Yves Klein. Interdisciplinary approach to reflect on the meaning of avant garde and modernity in general, and on the question of why revolutionary artists in France remained in search of institutional recognition, nonetheless. GER:DB-Hum
4 units, Spr (Karsenti, T)

OSPPARIS 32. Understanding French Politics
Key aspects of French politics including the constitutional framework, institutions, political parties and ideology, elections, political cultures, religion and politics, political elites and public policy-making, grass-root citizen participation, decentralization and local politics, and the major issues that structure and inform public debate, including attitudes and policies vis-à-vis the US. GER:DB-SocSci
4-5 units, Aut (Chamorel, P)

OSPPARIS 33. The Economics of Climate Change: Policies in Theory and Practice in the EU and the U.S.
Economic tools for tackling climate change. Analytical bases of existing cap-and-trade schemes. The European greenhouse gas Emission Trading Scheme within the frame of the Kyoto Protocol, and emerging regulatory or voluntary markets in the U.S. Carbon-pricing mechanisms with focus on power and gas markets. Possibilities of linking carbon pricing mechanisms on both sides of the Atlantic and conditions for integrating these markets into an international post-Kyoto agreement. GER:DB-SocSci, EC-GlobalCom
5 units, Spr (de Perthuis, C; Leguet, B)

OSPPARIS 36. French Writing Workshop
Offered upon request for students who have completed an Advanced French course. Focus on French writing style, enabling students to understand and master the subtleties of French writing.
3 units, Spr (Molkou, E)

OSPPARIS 40P. Introductory Electronics
Electrical quantities and their measurement, including operation of the oscilloscope. Function of electronic components including resistor, capacitor, and inductor. Analog circuits including the operational amplifier and tuned circuits. Digital logic circuits and their functions. Lab assignments. Prerequisite: PHYSICS 43. GER:DB-EngrAppSci
5 units, Aut (Lee, T), Spr (Howe, R)

OSPPARIS 41. EAP: Perspective, Volume, and Design
May be repeated for credit.
2 units, Aut (Staff, 1), Win (Staff, 1), Spr (Staff, 1)

OSPPARIS 42. EAP: Drawing with Live Models
May be repeated for credit.
2 units, Aut (Staff, 1), Win (Staff, 1), Spr (Staff, 1)

OSPPARIS 43. EAP: Painting and Use of Color
May be repeated for credit.
2 units, Aut (Staff, 1), Win (Staff, 1), Spr (Staff, 1)

OSPPARIS 44. EAP: Graphic Art
May be repeated for credit.
2 units, Aut (Staff, 1), Win (Staff, 1), Spr (Staff, 1)

OSPPARIS 45. Notre-Dame de Paris: French Literature and the History of Paris
Reading one of the eleven books each week, focus is on the literary structures of the novel and the cultural context, for a broader understanding of the period known as the autumn of the Middle Ages. Hugo's descriptions and comments as a point of departure for detailed examination of the theme of the week.
5 units, Aut (Apostolides, J)

OSPPARIS 49. French Connections in America: the 18th and 19th Centuries
The deep intellectual, political, and cultural ties that linked France and America in the eighteenth and nineteenth centuries. Role of France in American history through case studies, documents, and images produced by Americans in France and the French in America. Topics include: British and French empires in North America; the American and French revolutions; the place of French republican thought in the American transition to republican government; the experience of an American slave in Paris; social commentaries of Alexis de Tocqueville and Lewis Cass. GER:DB-Hum
5 units, Spr (Winterer, C)

OSPPARIS 50P. Introductory Science of Materials
GER:DB-EngrAppSci
4 units, Aut (Staff, 1), Win (Staff, 1), Spr (Staff, 1)

OSPPARIS 53. The Shape of Things to Come: the Evolution of Science and Society
Following in the footsteps of Huxley, learn the origins of the skeleton and how science and societies co-evolved. GER: DB-NatSci
4 units, Win (Helms, J)

OSPPARIS 54. The Artist's World: The Workshop, Patronage and Public in 19th and 20th Century France
Synergy between artists, their workshops, patrons, models and the public in 19th and 20th century France. Weekly sessions in museums, artists' studios, and special venues within and around Paris, attempting to understand the world of the artist, and how, in many cases, this world became not only a place of refuge, but a metaphor of the artistic creation itself. GER:DB-Hum
4 units, Win (Halevi, E)

OSPPARIS 57. Human Rights in Comparative Perspective
Human rights arose from Enlightenment principles but their status in the American and French constitutions differ. Have European court decisions created a transatlantic human rights model giving more weight to Anglo-Saxon legal tradition? Philosophical, historical, and legal resources; recent case studies from both sides of the Atlantic. GER:DB-SocSci, EC-GlobalCom
4-5 units, Win (Boussaguet, L)

OSPPARIS 58. Tintin as a Hero and a Myth
Introduction to the work of the highly original 20th-century artist, Hergé. Focus is on the Adventures of Tintin, analyzed from a triple perspective: as a visual art achievement, as a piece of literature, and as a myth.
5 units, Aut (Apostolides, J)

OSPPARIS 60. Representations of Women in Christian Art: Boldness and Virtue
Representation of women as biblical heroes and saints in Christian art. Codes of iconography and the attributes of women saints from the Renaissance to the 19th century; underlying social and moral force of these women figures throughout history. Class sessions in Paris museums. GER:DB-Hum
4 units, Spr (Gallini, B)

OSPPARIS 81. France During the Second World War: Between History and Memory
French politics and society from the causes of the collapse of the French Third Republic and the emergence of the French State at Vichy. The political and cultural measures of this regime in the shadow of Nazi Germany. Anti-Jewish laws and action; deportations by Vichy, the Germans, the French Fascists, and reactions to the fate of the Jews. Visions of the Resistance, the combat for liberation, and WW II in the collective memory of France. GER:DB-SocSci
5 units, Win (Virgili, F)

OSPPARIS 91. Globalization and Its Effect on France and the European Union
Economic and political impact of globalization on France and the EU and influence of France and the EU on the process of globalization. Issues of sovereignty and national identity for France; protection from versus integration into the network of globalization. GER:DB-SocSci, EC-GlobalCom
5 units, Win (Le Cacheux, J; Laurent, E)

OSPPARIS 92. Building Paris: Its History, Architecture, and Urban Design
The development of Parisian building and architecture from the 17th century to the present. Interaction of tradition and innovation in its transformation and its historical, political, and cultural underpinnings. Visits and case studies throughout Paris illustrate the formation of the city landscape and its culture. GER:DB-Hum
4 units, Spr (Halevi, E)

OSPPARIS 103A. French Lecture Series 1
1 unit, Aut (Staff), Win (Staff), Spr (Staff)

OSPPARIS 104A. French Lecture Series 2
1 unit, Aut (Halevi, E), Win (Halevi, E), Spr (Halevi, E)

OSPPARIS 105A. French Lecture Series 3
1 unit, Aut (Staff), Win (Staff), Spr (Staff)

OSPPARIS 107Y. The Age of Cathedrals: Religious Art and Architecture in Medieval France
The major artistic and cultural movements that changed the face of France from the period of Suger in the 12th century through the reign of St. Louis in the 13th century. Monastic spirituality progressively gave way to an urban culture focused on man and secular knowledge, which developed daring and sophisticated building techniques. The years 1150-1250 represented a period of architectural renaissance and l'Ile-de-France was its birthplace. GER:DB-Hum
4 units, Aut (Deremble, C; Deremble, J)

OSPPARIS 122X. Challenges of Integration in the European Union
European integration is now an economic, social, and political reality. This integration has a history of mutation and a transformation of its very foundation. Topics: the evolution of welfare states, elites, political parties, and systems in Europe; lobbies, trade unions, voluntary associations, social movements, popular protest, citizenship, democracy. GER:DB-SocSci
4-5 units, Spr (Strudel, S)

OSPPARIS 124P. Advanced French I
4 units, Aut (Ricci, M)

OSPPARIS 124X. Building the European Economy: Economic Policies and Challenges Ahead
Issues and challenges of European economic construction. The European Economic Union at the end of the 50s; European industrial, agricultural, social, and monetary economic policies. Topics: wider definitions of Europe, its relations with industrial and developing countries, and its challenges in confronting global economic crises. GER:DB-SocSci
5 units, Aut (Le Cacheux, J; Laurent, E)

OSPPARIS 125P. Advanced French II
4 units, Win (Guedon, P), Spr (Mercier, F)

OSPPARIS 153X. Health Systems and Health Insurance: France and the U.S., a Comparison across Space and Time
Should health systems be organized or left to the free market? What is the role of the state in the delivery of health care? The evolution of the health profession, health policy, and reform in France and the U.S.; measures restraining professional autonomy such as prescription guidelines in the French Medical Convention. Is the solution to the increase of health expenditures and reduced access to health care the end of autonomy for the medical profession? GER:DB-SocSci, EC-GlobalCom
4-5 units, Aut (Fessler, J)

OSPPARIS 180. Paris Special Topics
1-6 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPPARIS 186F. Contemporary African Literature in French
Focus is on African writers and those of the diaspora, bound together by a common history of slave trade, bondage, colonization, and racism. Their works belong to the past, seeking to save an oral heritage of proverbs, story tales, and epics, but they are also contemporary. GER:DB-Hum, EC-GlobalCom
4 units, Win (Mercier, F)

OSPPARIS 195C. Paris University: Health and Science 1
1-6 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPPARIS 195D. Paris University: Health and Science 2
1-6 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPPARIS 196C. Paris University: Humanities 1
1-6 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPPARIS 196D. Paris University: Humanities 2
1-6 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPPARIS 196E. Paris University: Humanities 3
1-6 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPPARIS 197C. Paris University: Social Science 1
1-6 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPPARIS 197D. Paris University: Social Science 2
1-6 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPPARIS 198C. Paris University: Engineering 1
1-6 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPPARIS 198D. Paris University: Engineering 2
1-6 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPPARIS 199A. Directed Reading A
1-6 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPPARIS 199B. Directed Reading B
1-6 units, Aut (Staff), Win (Staff), Spr (Staff)

OSPPARIS 199C. Directed Reading: C
1-6 units, Aut (Staff), Win (Staff), Spr (Staff)

OVERSEAS STUDIES: SANTIAGO (OSPSANTG) COURSES

OSPSANTG 10. Borges and Argentina
His work and readings of other key figures of Argentine literature during the period. Close reading technique. Readings in the context of the main developments in Argentine history, and in relationship to the major literary and philosophical trends of the 20th century. Topics include Borges' rejection of the novel, storytelling as a reaction against romanticism, philosophical concerns, paradoxical plot devices, humor, and influence in Latin America. Readings include short stories such as The Library of Babel and The Aleph, poems and essays, and texts by key Argentine writers of the period including Arlt, Bioy Casares, Silvina Ocampo, and Cortázar. GER:DB-Hum
4-5 units, Spr (Missana, S)

OSPSANTG 12S. Accelerated Second-Year Spanish, Part I: Chilean Emphasis
Intensive sequence integrating language, culture, and sociopolitics of Chile. Emphasis is on achieving advanced proficiency in oral and written discourse including formal and informal situations, presentational language, and appropriate forms in academic and professional contexts. Prerequisite: one year of college Spanish, or 11 or 21B if taken more than two quarters prior to arriving in Santiago.
5 units, Aut (Abad, M), Win (Abad, M), Spr (Abad, M)

OSPSANTG 13S. Accelerated Second-Year Spanish, Part II: Chilean Emphasis
Intensive sequence integrating language, culture, and sociopolitics of Chile. Emphasis is on achieving advanced proficiency in oral and written discourse including formal and informal situations, presentational language, and appropriate forms in academic and professional contexts. Prerequisite: 11 or 21B within two quarters of arriving in Santiago, or 12 or 22B.
5 units, Aut (Abad, M), Win (Abad, M), Spr (Abad, M)

OSPSANTG 14. Women Writers of Latin America in the 20th Century
Key figures in poetry, narrative fiction, theater, and testimonio, such as Mistral, Garro, Lispector, Poniatowska, Valenzuela, Eltit and Menchú. Close reading technique. Issues raised in literary texts that reflect the evolution of the condition of women in Latin America during the period. Topics include gender differences and relationships, tradition versus transgression, relationship between changes in the status of women and other egalitarian transformations, and women writers and the configuration of literary canons. GER:DB-Hum, EC-Gender
4-5 units, Aut (Missana, S), Win (Missana, S)

OSPSANTG 27. Humans and the Environment: The Great Transitions
Environmental conditions and major environmental changes that accompanied the major transitions: the change from hunter-gatherers to agriculture ca. 10000 years ago; the spread of farming over the next 6000 years; the early development of science and technology; the industrial revolution and the first demographic transition; the second demographic transition to low fertility; and the third demographic transition to long lives. Focus on four main dimensions: demography, culture and choice, environment, and technology, using an evolutionary perspective. 3 units may be counted toward Biology major. GER: DB-NatSci
3-5 units, Win (Tuljapurkar, S)

OSPSANTG 33. Spanish Language Tutorial
Prerequisite: two years of college Spanish or equivalent placement.
2 units, Aut (Toledo, G), Win (Toledo, G), Spr (Toledo, G)

OSPSANTG 40. Academic Internship
2-3 units, Aut (Jaksic, I), Win (Jaksic, I), Spr (Jaksic, I)

OSPSANTG 58. Living Chile: A Land of Extremes
Physical, ecological, and human geography of Chile. Perceptions of the Chilean territory and technologies of study. Flora, fauna, and human adaptations to regional environments. Guest lectures; field trips; workshops. GER:DB-EngrAppSci
5 units, Aut (Bustamante, M), Win (Staff, 1)

OSPSANTG 62. Topics in Chilean History
Independent study topic concerning any aspect of Chilean history such as independence and nation building, social and economic development, ideas and culture, dictatorship and democracy. Research paper based on primary and secondary sources. GER:DB-Hum
4-5 units, Win (Staff)

OSPSANTG 66. Latin American Current Affairs
Recent events in the region using Michael Reid's interdisciplinary work Forgotten Continent: The Battle for Latin America's Soul as a point of departure. Sources include essays, newspapers, magazines and films from several countries. Tools to formulate assessment of the contemporary situation and to undertake independent research projects. Topics include: populism, economic reform, regional integration, and cultural trends.
3-5 units, Aut (Hoyos, H)

OSPSANTG 67. 21st Century Chilean Literature
Analysis and discussion of prominent figures in the contemporary Chilean literary scene, primordially: Roberto Bolaño, Diamela Eltit, Alberto Fuguet, and Pedro Lemebel. In coordination with events at local bookstores and other cultural venues. Topics: post-dictatorship, neoliberalism, exile, urban fiction, popular culture, and gender discourses. GER:DB-Hum
3-5 units, Aut (Hoyos, H)

OSPSANTG 68. The Emergence of Nations in Latin America
Major themes of 19th-century Latin American history, including independence from Spain, the emergence of nation states, and the development of a new social, political, and economic order. GER:DB-SocSci
4-5 units, Aut (Jaksic, I), Spr (Jaksic, I)

OSPSANTG 85. Marine Ecology of Chile and the South Pacific
Relationships among physical processes in the ocean, biological productivity, and the exploitation of resources by high-thropic-level predators including human beings. Characterization of ecological patterns; identification of processes operating on marine systems. Open ocean ecosystems, intertidal and benthic regions of the world¿s oceans, and ecological research developed along

coastal regions, focusing on Chile¿s 4,000 km coastline. GER: DB-NatSci

5 units, Spr (Palma, A)

OSPSANTG 102S. Composition and Writing Workshop for Students in Santiago

Advanced. Writing as craft and process: brainstorming, planning, outlining, drafting, revising, style, diction, and editing. Non-Spanish majors or minors may choose topics related to their studies. Prerequisite: SPANLANG 13C, 13R, 13S, 23B, or equivalent.

3-5 units, Aut (Bobbert, A), Win (Rivano, P), Spr (Bobbert, A)

OSPSANTG 104X. Modernization and Culture in Latin America

Intellectual and cultural expressions of Latin America against the background of modernization viewed as a constant tension between rationalization and subjectification, change and identity preservation, and the logic of development or economic expansion and the logic of the culture. Readings include Morande, Cultura y modernización en América Latina and Sarlo, Una modernidad periférica. GER:DB-SocSci, EC-GlobalCom

5 units, Aut (Subercaseaux, B)

OSPSANTG 116X. Modernization and its Discontents: Chilean Politics at the Turn of the Century

Chile's strides towards becoming a developed country have engendered high levels of alienation and disaffection among significant sectors of the population. The roots of this apparent paradox of modernization, focusing on newly emerging actors in the Chilean political scene: Mapuche organizations, women's groups, the environmental movement, and new features of the established ones like trade unions and human rights activists. GER:DB-SocSci

5 units, Spr (Correa, G)

OSPSANTG 118X. Artistic Expression in Latin America

Elite, mass-media, and popular cultural changes in Chile under conditions of economic and political liberalization. The reception of cultural meanings from the center of the world social system (U.S., EU, and Japan), reformulation to respond to local conditions, and export in the shape of cultural artifacts. Innovative elements rooted in the regional and local culture. GER:DB-SocSci, EC-GlobalCom

5 units, Win (Albornoz, C)

OSPSANTG 119X. The Chilean Economy: History, International Relations, and Development Strategies

The Chilean economy in five stages, taking into account: the international economic position of Chile; internal economic structures closely related to the inherited historical conditions and to the changing international economic position of the country; and the economic strategies prevalent during the period and the concrete development policies conducted by government authorities. GER:DB-SocSci

5 units, Spr (Staff, 1)

OSPSANTG 129X. Latin America in the International System

Latin America's role in world politics, with emphasis on the history of and models for explaining U.S.-Latin American relations. Latin America's evolving relationship in the international system. GER:DB-SocSci

4-5 units, Win (Staff, 1)

OSPSANTG 130X. The Chilean Economy in Comparative Perspective

Introduction to the main debates and approaches developed to understand and analyze the economies of Latin America. Recent processes of transition to market economies. Common characteristics among countries of the region; the differences and special traits of individual countries. Historical, analytical, and empirical perspectives on topics at the center of controversies and specific policy problems over several decades. Recommended: ECON 1, 51, and 52. GER:DB-SocSci

5 units, Aut (Aninat, C), Win (Aninat, C)

OSPSANTG 141X. Politics and Culture in Chile

The relationship between politics and culture in Chile during the 20th century, reflecting on the effects of such relationships on esthetics and identity. The possibility that, in Chile, culture has been pulled by politics and social praxis, a condition that has created a deficit in cultural thickness. The oligarchic regime around 1920, the welfare state around 1940, projects of social transformation around 1970, dictatorship around 1980, women writers and Mapuche poetry in contemporary Chile. GER:DB-Hum, EC-GlobalCom

5 units, Spr (Subercaseaux, B)

OSPSANTG 196A. Universidad de Chile: Humanities I

(Staff)

4 units, Spr (Staff, 1)

OSPSANTG 196B. Universidad de Chile: Humanities II

4 units, Spr (Staff, 1)

OSPSANTG 196C. Universidad de Chile: Social Sciences I

4 units, Spr (Staff, 1)

OSPSANTG 196D. Universidad de Chile: Social Sciences II

4 units, Spr (Staff, 1)

OSPSANTG 196E. Universidad de Chile: Sciences

4 units, Spr (Staff, 1)

OSPSANTG 196F. Universidad de Chile: Sports

1 unit, Spr (Staff, 1)

OSPSANTG 196J. Pontificia Universidad de Chile: Humanities I

4 units, Spr (Staff, 1)

OSPSANTG 196K. Pontificia Universidad de Chile: Humanities II

4 units, Spr (Staff, 1)

OSPSANTG 196L. Pontificia Universidad de Chile: Social Sciences I

4 units, Spr (Staff, 1)

OSPSANTG 196M. Pontificia Universidad de Chile: Social Sciences II

4 units, Spr (Staff, 1)

OSPSANTG 196N. Pontificia Universidad Catolica de Chile: Sciences

4 units, Spr (Staff, 1)

OSPSANTG 196Q. Pontificia Universidad de Chile: Sports

1 unit, Spr (Staff, 1)

OSPSANTG 196R. Pontificia Universidad Catolica de Chile:: Engineering I

4 units, Spr (Staff)

OSPSANTG 196S. Pontificia Universidad Catolica de Chile: Engineering II

Student selection from courses at Pontificia Universidad Católica de Chile.

4 units, Spr (Staff)

OSPSANTG 221X. Political Transition and Democratic Consolidation: Chile in Comparative Perspective

The dynamics of the Chilean transition. Topics: challenges faced by democratic governments in the 90s framed by the legacy of military rule, 1973-90; political culture; institutional traditions of democracy; and the Chilean process within the broader context of Latin American political development. GER:DB-SocSci

5 units, Aut (Micco, S)

PATHOLOGY (PATH) COURSES

UNDERGRADUATE COURSES IN PATHOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

PATH 101. Cancer Biology

(Same as CBIO 101) Experimental approaches to understanding the origins, diagnosis, and treatment of cancer. Focus on key experiments and discoveries with emphasis on genetics, molecular biology, and cell biology. Topics include carcinogens, tumor virology, oncogenes, tumor suppressor genes, cell cycle regulation, angiogenesis, invasion and metastasis, cancer genomics, cancer epidemiology, and cancer therapies. Discussion sections based on primary research articles that describe key experiments in the field. Satisfies Central Menu Areas 1 or 2 for Bio majors. Prerequisite: Biology or Human Biology core or equivalent, or consent of instructor.

4 units, Win (Lipsick, J)

PATH 103Q. Lymphocyte Migration
(Stanford Introductory Seminar) Preference to sophomores. How lymphocytes leave the blood stream and enter tissues to participate in immune surveillance and the development of inflammation. Known as lymphocyte migration, this process involves a complex series of adhesion, activation and diapedesis events. The cellular mechanisms involved in lymphocyte migration, including lymphocyte adhesion molecules that interact with their counter-receptors on endothelial cells, and molecules, including cytokines and chemokines, that attract or activate lymphocytes. The roles of these molecules in the development of human diseases such as asthma, type 1 diabetes, and multiple sclerosis.

1 unit, Spr (Staff)

PATH 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN PATHOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

PATH 206. Epigenetics
(Same as BIO 156, BIO 256, GENE 206) For graduate students in the Biosciences and upper level Biology undergraduates. Mechanisms by which phenotypes not determined by the DNA sequence are stably inherited in successive cell divisions. From the discovery of position-effect variegation in Drosophila in the 1920s to present-day studies of covalent modifications of histones and DNA methylation. Topics include: position effect, gene silencing, heterochromatin, centromere identity, genomic imprinting, histone code, variant histones, and the role of epigenetics in cancer. Prerequisite: BIO41 and BIO42 , or GENE 203, or consent of instructor.

2 units, Spr (Lipsick, J; Gozani, O), alternate years, not given next year

PATH 210. Stem Cells in Development and Disease
Molecular and cellular mechanisms underlying the basic self-renewal and differentiation properties of stem cells in multiple tissues and organisms. How abnormal stem cell behavior may contribute to diseases such as cancer. How to manipulate stem cell behavior in vitro or in vivo for therapeutic purposes. Classical papers and recent literatures in the field of stem cell biology. Open to graduate, medical, and advanced undergraduate students. Prerequisite: consent of instructor.

1-2 units, Aut (Lu, B)

PATH 213. Gross Autopsy Pathology Laboratory
Examine/discuss unfixed dissected organs from current autopsies and correlate morphologic findings with the clinical history. Students view postmortem examinations and may participate (in a small group) in one postmortem examination with the assistance of residents and staff, and present the case to the class. Class scheduling is flexible. Additional unit for participation in a postmortem examination. Class may not be repeated. Prerequisite: HHD221.

2-3 units, Aut (Regula, D), Win (Regula, D)

PATH 218. Computational Analysis of Biological Images
(Same as GENE 218) Physical and computational tools for acquisition, processing, interpretation, and archiving of biological images. Emphasis is on digital microscopy.

2 units, Spr (Staff)

PATH 233. The Biology of Small Modulatory RNAs
(Same as GENE 233, MI 233) Open to graduate and medical students. How recent discoveries of miRNA, RNA interference, and short interfering RNAs reveal potentially widespread gene regulatory mechanisms mediated by small modulatory RNAs during animal and plant development. Required paper proposing novel research.

2 units, Aut (Chen, C; Fire, A)

PATH 234. Fundamentals of RNA Biology
(Same as GENE 234, MI 234) For graduate or medical students and (if space allows) to active participants from other segments of the Stanford Community (e.g., TGR students); undergraduates by instructor consent. Fundamental issues of RNA biology, with the goal of setting a foundation for students to explore the expanding world of RNA-based regulation. Each week a topic is covered by a faculty lecture and journal club presentations by students.

2 units, alternate years, not given this year

PATH 240. Clinical Studies in Pathology I
Broad exposure to the practice of pathology in an academic medical center. Students are assigned a faculty mentor and work closely with pathology residents, fellows and faculty. Two months are spent in surgical pathology where students help examine surgical resection specimens and biopsies and participate in making a final diagnosis. One month is spent in autopsy pathology where students perform autopsy prosections and formulate final anatomic diagnoses under the supervision of faculty. May be combined with Clinical Studies in Pathology II, and two additional quarters of PATH 399, Directed Research, to fulfill a 12 month Post-Sophomore year Fellowship in Pathology. Prerequisite: MD candidate; instructor consent.

3-9 units, Aut (Connolly, A; Higgins, J), Win (Connolly, A; Higgins, J), Spr (Higgins, J; Connolly, A), Sum (Natkunam, Y; Higgins, J)

PATH 241. Clinical Studies in Pathology II
In-depth exposure to the practice of pathology for students who have completed Clinical Studies in Pathology I. Students are assigned a faculty mentor and work closely with pathology residents, fellows and faculty. Two months are spent in surgical pathology where students help examine surgical resection specimens and biopsies and participate in making a final diagnosis. One month is spent in autopsy pathology where students perform autopsy prosections and formulate final anatomic diagnoses under the supervision of faculty. Additional time may be spent observing in sub-specialty areas of pathology that include dermatopatholgy, neuropathology, renal pathology, lymph node pathology or cytology. May be combined with Clinical Studies in Pathology I and two additional quarters of PATH 399, Directed Research, to fulfill a 12-month Post-Sophomore year Fellowship in Pathology. Prerequisite: consent of instructor and successful completion of Clinical Studies in Pathology I (PATH 240).

3-9 units, Aut (Connolly, A; Higgins, J), Win (Connolly, A; Higgins, J), Spr (Higgins, J; Connolly, A), Sum (Higgins, J; Natkunam, Y)

PATH 280. Early Clinical Experience in Pathology
Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

1-2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PATH 296. Stem Cell Biology and Regenerative Medicine
(Same as DBIO 296) For graduate and medical students. Embryonic and adult stem cells, including origin, regulation, self-renewal, differentiation, fate, and relationship to cancer; biological mechanisms and methods to translate findings to therapeutic applications. Medical students must enroll for 5 units; graduate students may choose to take only the basic science part for 3 units. Prerequisites: DBIO 201 and 210, or consent of instructor.

3-5 units, Win (Weissman, I; Nusse, R; Fuller, M)

PATH 299. Directed Reading in Pathology
Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PATH 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PATH 399. Graduate Research
Students undertake investigations sponsored by individual faculty members. Opportunities at the molecular, cellular, and clinicopathologic levels. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PHILOSOPHY (PHIL) COURSES

UNDERGRADUATE COURSES IN PHILOSOPHY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

PHIL 1. Introduction to Philosophy
Is there one truth or many? Does science tell us everything there is to know? Can our minds be purely physical? Do we have free will? Is faith rational? Should we always be rational? What is the meaning of life? Are there moral truths? What are truth, reality, rationality, and knowledge? How can such questions be answered? Intensive introduction to theories and techniques in philosophy from various contemporary traditions. GER:DB-Hum

5 units, Win (Hussain, N)

PHIL 2. Introduction to Moral Philosophy
(Same as ETHICSOC 20) What is the basis of moral judgment? What makes right actions right and wrong actions wrong? What makes a state of affairs good or worth promoting? What is it to have a good or virtuous character? Answers to classic questions in ethics through the works of traditional and contemporary authors. Fulfills the Philosophy ethical reasoning requirement. GER:DB-Hum

5 units, Aut (Schapiro, T)

PHIL 8N. Free Will and Responsibility
(Stanford Introductory Seminar) Preference to freshmen. In what sense are people free agents? Is freedom compatible with being fully a part of the same natural causal order that includes other physical and biological systems? What assumptions about freedom are made when people are held accountable morally and/or legally? When people are held accountable, and so responsible, can they also be seen as part of the natural, causal order? Or is there a deep incompatibility between these two ways of understanding ourselves? What assumptions about freedom are made when people deliberate about what to do? Are these assumptions in conflict with seeing oneself as part of the natural, causal order? Sources include recent and contemporary philosophical research. GER:DB-Hum

4 units, Win (Bratman, M)

PHIL 10N. Traveling Through Time
(Stanford Introductory Seminar) Preference to freshmen. Is time travel possible? People do it every day, at the rate of one minute per minute. Relativity theory suggests a sense in which one could travel to the distant future. But could one travel to the past? If so, why aren't there any time travelers around? If not, is that because of some law of physics or because the very idea of time travel is incoherent? Can any sense be made of the idea of changing the past? What would happen if one tried to prevent one's parents from having children? Sources inlcude classic and contemporary work in the physics and philosophy of time, as well as case studies in fiction and film. Guest speakers.

3 units, Spr (Burgess, A)

PHIL 11N. Skepticism
(Stanford Introductory Seminar) Preference to freshmen. Historical and contemporary philosophical perspectives on the limits of human knowledge of a mind-independent world and causal laws of nature. The nature and possibility of a priori knowledge. GER:DB-Hum

3 units, Aut (De Pierris, G)

PHIL 20S. Introduction to Moral Philosophy
What makes right actions right and wrong actions wrong? Must right actions promote some further good? What is the role of consequences in the evaluation of actions as right or good? Focus is on traditional attempts to account for what determines which actions are right, what is worth promoting, and what kind of person one ought to be. Readings from primarily historical figures such as Aristotle, Hume, Kant, Mill, and others.

3 units, Sum (Cheng-Guajardo, L)

PHIL 22. Ethics in Theory and Practice
(Same as ETHICSOC 10) Weekly talks by Stanford faculty on important questions of ethics that arise in private and public life. These questions arise in all disciplines and are central to many of the main problems confronting humanity today. Such questions include: what is our obligation to future generations? are there any human rights? what is the appropriate role of religion in politics? is capital punishment ever justified? what are the ethical obligations of a researcher? should the university teach moral values? what principles of justice should govern the distribution of K-12 education? Class meets Fridays from noon to 1:05. Format is an informal talk of about 35- 40 minutes, followed by discussion.

1 unit, Aut (Reich, R), Win (Reich, R), Spr (Reich, R)

PHIL 23L. Love and Friendship
People as different as Jesus Christ and Justin Timberlake think that love is crucial to living the good life. But what is love? What part should it play in people's lives? Is it just one value among many? Questions about the nature of love, the role it plays in moral philosophy, and its effect on individual autonomy. Readings from contemporary and historical sources.

2 units, not given this year

PHIL 23N. Neuroscience and the Self
The Self: Fiction or reality? Bundle of perceptions? Pragmatic role-concept? Fleeting moment of consciousness? Social invention? Narrative construct? Various philosophical conceptions of the self will be explored with a particular focus on the notion of the `narrative self.¿ Literature from neuroscience, psychology and philosophy will be considered.

2 units, not given this year

PHIL 23T. Intellectual trust in oneself and others
Most people have many false beliefs. Yet, one routinely relies on one's own beliefs and on the views of others. Does that mean that one takes oneself to be exceptionally good at forming true beliefs, and exceptionally good at detecting false beliefs in others? When is it justified to place intellectual trust in oneself and in others?

2 units, not given this year

PHIL 42. Philosophy through Theater: Choice and Chance
Dramatic literature as a window into philosophical work on freedom of the will and indeterminism. Students participate in the production of original one-act plays. GER:DB-Hum

4 units, not given this year

PHIL 43S. Happiness: Positive Psychology and Philosophy
The connection between research in positive psychology to determine what happiness is and the conditions under which human beings are happy with issues in moral philosophy regarding whether we should aim at happiness or think of it as a good. The assumptions about happiness made by positive psychologists. The philosophical insight into the question of how people should live that is gained by looking at the empirical results provide by psychologists.

3 units, not given this year

PHIL 50. Introductory Logic
Propositional and predicate logic; emphasis is on translating English sentences into logical symbols and constructing derivations of valid arguments. GER:DB-Math

4 units, Aut (Duarte, S), Spr (Staff)

PHIL 50S. Introductory Logic
Propositional and predicate logic. Themes include: translations of English sentences into logical symbols; semantics of and proof rules for propositional and predicate logic. Emphasis is on evaluating arguments with the syntax and semantics of contemporary logic. Special attention to the properties of the languages studied.

3 units, Sum (Angelides, A)

PHIL 60. Introduction to Philosophy of Science
(Same as HPS 60) 20th-century views on the nature of scientific knowledge. Logical positivism and Popper; the problem of induction; Kuhn, Feyerbend, and radical philosophies of science; subsequent attempts to rebuild moderate empiricist and realist positions. GER:DB-Hum

5 units, Spr (Ryckman, T)

PHIL 61. Science, Religion, and the Birth of Modern Philosophy
(Same as HPS 61) Galileo's defense of the Copernican world-system that initiated the scientific revolution of the 17th century, led to conflict between science and religion, and influenced the development of modern philosophy. Readings focus on Galileo and Descartes. GER:DB-Hum

5 units, not given this year

PHIL 63S. Bioethics
What is Bioethics? What are the major ethical controversies that bioethics investigate? What are the philosophical bases of bioethical reasoning? Overview of the field of bioethics, including the issues bioethicists examine and the philosophical tools they use to answer bioethical questions. Opportunities for students to investigate in detail three current controversies in bioethics: medical decisions relating to the beginning of life, the enhancement of life, and the end of life.
3 units, Sum (Scharding, T)

PHIL 71H. Philosophy and the Real World
Introduction to the humanities as an applied discipline; how literary and philosophical ideas illuminate and change how people live their lives as individuals and members of society. Focus is on short texts that illustrate how literary and philosophical ideas arise from social problems and attempt to confront those problems. Methods and approaches: how to read such texts; how to make arguments about them; how such texts shed light on contemporary situations.
2 units, not given this year

PHIL 72. Contemporary Moral Problems
(Same as ETHICSOC 185M) As individuals and as members of societies, we make choices that can be evaluated from a moral point of view. What choices should we make, and how should we justify these choices? For example, can we justify buying expensive sunglasses or MP3 players when the money could instead be given to provide others with basic nutrition? Does a preference for the taste of meat over that of other proteins justify killing animals? Focus is on our obligations to aid, and to avoid harming. Topics include aid and its allocation, abortion, animal rights and euthanasia. GER:EC-EthicReas
4 units, Win (Staff)

PHIL 76. Introduction to Global Justice
(Same as ETHICSOC 136R, INTNLREL 136R, POLISCI 136R, POLISCI 336) Recent work in political theory on global justice. Topics include global poverty, human rights, fair trade, immigration, climate change. Do developed countries have a duty to aid developing countries? Do rich countries have the right to close their borders to economic immigrants? When is humanitarian intervention justified? Readings include Charles Beitz, Thomas Pogge, John Rawls.
5 units, Spr (Oberman, K)

PHIL 80. Mind, Matter, and Meaning
Central topics in philosophy emphasizing development of analytical writing skills. What are human beings? Are human beings free? How do human minds and bodies interact? What does it all mean? Prerequisite: introductory philosophy course. GER:DB-Hum, WIM
5 units, Aut (Burgess, A), Spr (Crimmins, M)

PHIL 81. Philosophy and Literature
(Same as CLASSGEN 81, COMPLIT 181, ENGLISH 81, FRENGEN 181, ITALGEN 181, GERGEN 181) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum
4-5 units, Win (Anderson, L; Landy, J)

PHIL 90A. The Philosophy of John Perry
John Perry is among the most influential philosophers of the last several decades, making important contributions to the philosophy of language, metaphysics, and the philosophy of mind. Focus on Perry¿s work on indexicality, belief reports, reference, pragmatics, identity, personal identity, modality, and consciousness. Perry¿s work in these areas will be studied in conjunction with that of some key figures in the surrounding literatures, including Kaplan, Lewis, Stalnaker, Kripke, and Chalmers.
4 units, Aut (Giberman, D)

PHIL 90B. The Ethics of War
(Same as ETHICSOC 175M) Issues both in contemporary just war theory and political philosophy. Relevant questions include: Can conscription ever be justified? If not, is there anything wrong with targeting poor people as part of efforts to recruit a 'volunteer' military? If, during war itself, combatants act in ways prohibited by the moral requirements governing war's conduct, then does it make any moral difference whether they were acting as ordered? And how do we identify these moral requirements in the first place? For example, what distinguishes a legitimate target from an illegitimate one? What determines whether military action is disproportionate? What, if anything, is morally distinctive about terrorism? Explores the complexities behind these questions and others, with a view to evaluating the potential answers to them.
4 units, Win (Halliday, D)

PHIL 90C. Predicting the Future: Puzzles of Induction
Can we know that the future is likely to resemble the past? Do we have reason to believe that the Sun is even remotely likely to rise again tomorrow? Are we rationally justified in accepting the confident predictions of science and commonsense, based on well-observed regularities? Consider several paradoxes of induction (that is, extrapolation from observed to unobserved), including those raised by Hume, Hempel, and Goodman, the Doomsday and Sleeping Beauty paradoxes, as well as some attempts to solve or cope with them.
4 units, Spr (Elstein, D)

PHIL 100. Greek Philosophy
Greek philosophical thought, covering Socrates, Plato, Aristotle, and the Hellenistic schools (the Epicureans, the Stoics, and the Skeptics). Topics: the nature of the soul, virtue and happiness, knowledge, and reality. (Bobonich) GER:DB-Hum
4 units, Win (Duarte, S)

PHIL 101. Introduction to Medieval Philosophy
(Same as PHIL 201) Classics of Western philosophy by Augustine, Boethius, Anselm, Abelard, Aquinas, and Ockham. Explore the puzzles facing someone seeking to lead a good life and to understand herself and her world. A theory of will and human motivation, a theory of ethics based on the agent's intention, and a theory of divine omniscience and omnipotence consistent with divine goodness and human freedom. Works include On Free Choice, The Consolation of Philosophy, Ethics, Summa theologiae, and the Connection of the Virtues. GER:DB-Hum, EC-EthicReas
4 units, Spr (Wood, R)

PHIL 101A. Medieval Religious Philosophy
(Same as RELIGST 167) (Same as PHIL 101A.) Survey of medieval philosophy, focusing on God, world and words. A pervasive assumption about the structure of the world, that it reflected the categories of God's mind and emerged from an act of divine speech, gave impetus to the interest in the nature of language and its relation to the world. Scripture served as one kind of divine communication to human beings, and ""The Book of the World"" as another. The problem of universals, the question of how words relate to God, epistemology, theories of reference, semiotics, are some of the topics discussed. Readings from Augustine, Anselm, Aquinas, Scotus, and Ockham, etc. GER:DB-Hum
4 units, Aut (Gelber, H)

PHIL 102. Modern Philosophy, Descartes to Kant
Major figures in early modern philosophy in epistemology, metaphysics, and philosophy of mind. Writings by Descartes, Locke, Leibniz, Berkeley, Hume, and Kant. GER:DB-Hum
4 units, Aut (Wood, A)

PHIL 103. 19th-Century Philosophy
Focus is on ethics and the philosophy of history. Works include Mill's Utilitarianism, Hegel's The Philosophy of World History, Marx's Economic and Philosophic Manuscripts, Kierkegaard's The Sickness Unto Death, and Nietzsche's On the Genealogy of Morals. GER:DB-Hum
4 units, Spr (Scotland-Stewart, L)

PHIL 106. Ancient Skepticism
(Same as PHIL 206) The ancient Pyrrhonian skeptics who think that for any claim there is no more reason to assert it than deny it and that a life without any beliefs is the best route to happiness. Some ancient opponents of the Pyrrhonian skeptics and some relations between ancient and modern skepticism. GER:DB-Hum
4 units, not given this year

PHIL 107. Plato's Metaphysics and Epistemology
(Same as PHIL 207) Examine Plato's views on the nature of reality and knowledge by reading the relevant parts of dialogues such as the Parmenides, the Phaedo, the Philebus, and the Republic. GER:DB-Hum
4 units, Aut (Bobonich, C)

PHIL 110. Plato
(Same as PHIL 210) Plato's Republic. GER:DB-Hum
4 units, not given this year

PHIL 111. Aristotle and Contemporary Ethics
(Same as PHIL 211) Aristotle's Nicomachean Ethics, focusing on virtue, happiness, pleasure, practical reasoning, and particularism. Sources include the Eudemian Ethics, contemporary philosophers who have taken many of these topics up again, and contemporary material such as that by Anscombe, Foot, Hursthouse, Korsgaard, and McDowell. GER:DB-Hum
4 units, not given this year

PHIL 113. Hellenistic Philosophy
(Same as PHIL 213) Epicureans, skeptics, and stoics on epistemology, ethics, metaphysics, and psychology. GER:DB-Hum
4 units, not given this year

PHIL 115. Problems in Medieval Philosophy: Islamic Aristotelianism and Western Scholasticism
(Same as PHIL 215) Islamic Aristotelianism and western scholasticism: the western world adopted Aristotle's metaphysics and natural philosophy as the foundation of its educational system and scholarly life between 1210 and 1255. Christian Europe was thereby following the example set by Islam in Spain and the Near East. Today some people believe that this development was independent, and others think that the scholastics copied even their methods from Arabic philosophers. Historical evaluation of those claims. GER:DB-Hum
3-5 units, not given this year

PHIL 117. Descartes
(Same as PHIL 217) (Formerly 121/221.) Descartes's philosophical writings on rules for the direction of the mind, method, innate ideas and ideas of the senses, mind, God, eternal truths, and the material world. GER:DB-Hum
4 units, Aut (De Pierris, G)

PHIL 118. British Empiricism, 1660s-1730s
(Same as PHIL 218) GER:DB-Hum
4 units, not given this year

PHIL 119. Rationalists
(Same as PHIL 219) (Formerly 143/243.) Developments in 17th-century continental philosophy. Descartes's views on mind, necessity, and knowledge. Spinoza and Leibniz emphazing their own doctrines and their criticism of their predecessors. Prerequisite: 102. GER:DB-Hum
4 units, not given this year

PHIL 120A. The Leibniz-Clarke Correspondence
(Same as PHIL 220A) Correspondence on metaphysics, theology, and science. GER:DB-Hum
4 units, Win (De Pierris, G)

PHIL 122. Hume
(Same as PHIL 222) (Formerly 120/220; graduate students enroll in 222.) Hume's theoretical philosophy, in particular, skepticism and naturalism, the theory of ideas and belief, space and time, causation and necessity, induction and laws of nature, miracles, a priori reasoning, the external world, and the identity of the self. GER:DB-Hum
4 units, not given this year

PHIL 124. Topics in Early Modern Philosophy
Philosophical views of the highly influential rationalist philosophers Benedict (or Baruch) Spinoza (1632-1677) and G. W. Leibniz (1646-1716). Topics to be treated include: the nature of God and the question of his providential care for human beings, the concept of substance and its extension, the ontological relation of finite beings to God, the mental and its relation to the corporeal, and the nature of human freedom. GER:DB-Hum
4 units, Spr (Duarte, S)

PHIL 125. Kant's First Critique
(Same as PHIL 225) (Graduate students register for 225.) The founding work of Kant's critical philosophy emphasizing his contributions to metaphysics and epistemology. His attempts to limit metaphysics to the objects of experience. Prerequisite: course dealing with systematic issues in metaphysics or epistemology, or with the history of modern philosophy. GER:DB-Hum
4 units, Win (Wood, A)

PHIL 126B. Kant's Ethical Theory
(Same as PHIL 226B) (Graduate students register for 226B.) Kant's moral philosophy based primarily on the Groundwork of Metaphysics of Morals, Critique of Practical Reason, and The Metaphysics of Morals. GER:DB-Hum
4 units, Spr (Wood, A)

PHIL 127A. Kant's Value Theory
(Same as PHIL 227A) (Graduate students register for 227A.) The role of autonomy, principled rational self-governance, in Kant's account of the norms to which human beings are answerable as moral agents, citizens, empirical inquirers, and religious believers. Relations between moral values (goodness, rightness) and aesthetic values (beauty, sublimity). GER:DB-Hum
4 units, not given this year

PHIL 127B. Kant's Anthropology and Philosophy of History
(Same as PHIL 227B) Kant's conception of anthropology or human nature, based on his philosophy of history, which influenced and anticipated 18th- and 19th-century philosophers of history such as Herder, Fichte, Hegel, and Marx. Texts include Idea for a Universal History, Conjectural Beginning of Human History, and Anthropology from a Pragmatic Point of View. Topics include: Kant's pragmatic approach to the study of human nature; the difficulty of human self knowledge; the role of regulative and teleological principles in studying human history; and Kant's theory of race.
4 units, not given this year

PHIL 128. Fichte's Ethics
(Same as PHIL 228) (Graduate students register for 228.) The founder of the German Idealist movement who adopted but revised Kant's project of transcendental philosophy basing it on the principle of awareness of free self-activity. The awareness of other selves and of ethical relations to them as a necessary condition for self-awareness. His writings from 1793-98 emphasizing the place of intersubjectivity in his theory of experience. GER:DB-Hum
4 units, Win (Staff)

PHIL 130. Hegel
(Same as PHIL 230) (Formerly 122/222; graduate students register for 230.) Introduction to Hegel's philosophy, emphasizing his moral and political philosophy, through study of his last major work (1821). May be repeated for credit. Prerequisite: course in the history of modern philosophy. GER:DB-Hum
4 units, not given this year

PHIL 134. Phenomenology and Intersubjectivity
(Same as PHIL 234) (Graduate students register for 234.) Readings from Husserl, Stein, Heidegger, Sartre, and Merleau-Ponty on subjects related to awareness of others. Topics include solipsism, collective experience, empathy, and objectification of the other. GER:DB-Hum
4 units, not given this year

PHIL 135. Existentialism
(Same as PHIL 235) (Formerly 132/232.) Focus is on the existentialist preoccupation with human freedom. What constitutes authentic individuality? What is one's relation to the divine? How can one live a meaningful life? What is the significance of death? A rethinking of the traditional problem of freedom and determinism in readings from Rousseau, Kierkegaard, and Nietzsche, and the extension of these ideas by Sartre, Beauvoir, and Camus, including their social and political consequences in light of 20th-century fascism and feminism. GER:DB-Hum
4 units, Win (Scotland-Stewart, L)

PHIL 136. History of Analytic Philosophy
(Same as PHIL 236) (Formerly 147/247; graduate students register for 236.) Theories of knowledge in Frege, Carnap, and Quine. Emphasis is on conceptions of analyticity and treatment of logic and mathematics. Prerequisite: 50 and one course numbered 150-165 or 181-90. GER:DB-Hum
4 units, not given this year

PHIL 137. Wittgenstein
(Same as PHIL 237) (Graduate students register for 237.) The main themes and claims in Wittgenstein's later work concentrating on his views about meaning, mind, knowledge, the nature of phi-

losophical perplexity, and the nature of philosophical progress in his Philosophical Investigations. Emphasis is on the relationship between the novel arguments of the Investigations and its ways of writing up the results of philosophical questioning. GER:DB-Hum

4 units, Spr (Hills, D)

PHIL 138. Recent European Philosophy: Between Nature and History

(Same as PHIL 238) A critical introduction to the novel understandings of time, language, and cultural power developed by 20th-century continental thinkers, with close attention to work by Heidegger, Saussure, Benjamin, and Foucault. GER:DB-Hum

4 units, not given this year

PHIL 143. Quine

(Same as PHIL 243) (Formerly 183/283; graduate students register for 243.) The philosophy of Quine: meaning and communication; analyticity, modality, reference, and ontology; theory and evidence; naturalism; mind and the mental. GER:DB-Hum

4 units, not given this year

PHIL 150. Basic Concepts in Mathematical Logic

(Same as PHIL 250) (Formerly 159.) The concepts and techniques used in mathematical logic, primarily through the study of the language of first order logic. Topics: formalization, proof, propositional logic, quantifiers, sets, mathematical induction, and enumerability. GER:DB-Math

4 units, Aut (Barker-Plummer, D)

PHIL 150X. Basic Concepts in Mathematical Logic

Equivalent to the second half of 150. Students attend the first meeting of 150 and rejoin the class on October 30. Prerequisite: CS 103A or X, or PHIL 50.

2 units, Aut (Barker-Plummer, D)

PHIL 151. First-Order Logic

(Same as PHIL 251) (Formerly 160A.) The syntax and semantics of sentential and first-order logic. Concepts of model theory. Gödel's completeness theorem and its consequences: the Löwenheim-Skolem theorem and the compactness theorem. Prerequisite: 150 or consent of instructor. GER:DB-Math

4 units, Win (Mumma, J)

PHIL 152. Computability and Logic

(Same as PHIL 252) Approaches to effective computation: recursive functions, register machines, and programming styles. Proof of their equivalence, discussion of Church's thesis. Elementary recursion theory. These techniques used to prove Gödel's incompleteness theorem for arithmetic, whose technical and philosophical repercussions are surveyed. Prerequisite: 151. GER:DB-Math

4 units, Spr (Sommer, R)

PHIL 153. Feminist Theories and Methods Across the Disciplines

(Same as FEMST 103, FEMST 203, PHIL 253) The interdisciplinary foundations of feminist thought. The nature of disciplines and of interdisciplinary work. Challenges of feminism for scholarship and research. GER:EC-Gender

4-5 units, Win (Longino, H)

PHIL 154. Modal Logic

(Same as PHIL 254) (Graduate students register for 254.) Syntax and semantics of modal logic, and technical results like completeness and correspondence theory. Applications to philosophy and computer science. Prerequisite: 150 or preferably 151. GER:DB-Math

4 units, Spr (van Benthem, J)

PHIL 155. General Interest Topics in Mathematical Logic

Introduction to formalization using language of logic and to problems of philosophical logic and computer science that can be handled this way. Propositional calculus, Sudoku puzzles, resolution rule, problem P=NP. Possible worlds, modal logic with emphasis on individuation problems. May be repeated for credit.

4 units, Aut (Mints, G)

PHIL 157. Topics in Philosophy of Logic

(Same as PHIL 257) (Graduate students register for 257.) Disputed foundational issues in logic; the question of what the subject matter and boundaries of logic are, such as whether what is called second-order logic should be counted as logic. What is the proper notion of logical consequence? May be repeated for credit. Pre- or corequisite: 151, or consent of instructor.

3 units, not given this year

PHIL 160A. Newtonian Revolution

(Same as PHIL 260A) (Graduate students register for 260A.) 17th-century efforts in science including by Kepler, Galileo, Descartes, and Huygens, that formed the background for and posed the problems addressed in Newton¿s Principia. GER:DB-Hum

4 units, not given this year

PHIL 160B. Newtonian Revolution

(Same as PHIL 260B) (Graduate students register for 260B.) Newton¿s Principia in its historical context, emphasizing how it produced a revolution in the conduct of empirical research and in standards of evidence in science. GER:DB-Hum

4 units, not given this year

PHIL 162. Philosophy of Mathematics

(Same as MATH 162, PHIL 262) (Graduate students register for PHIL 262.) 20th-century approaches to the foundations and philosophy of mathematics. The background in mathematics, set theory, and logic. Schools and programs of logicism, predicativism, platonism, formalism, and constructivism. Readings from leading thinkers. Prerequisite: PHIL151 or consent of instructor. GER:DB-Math

4 units, not given this year

PHIL 163. Significant Figures in Philosophy of Science

(Same as PHIL 263) (Graduate students register for 263.) Directed study of two or more thinkers, past or present, who have made a lasting impact on contemporary philosophy of science. Subjects last year were Henri Poincaré, Pierre Duhem, and Gaston Bachelard. GER:DB-Hum

4 units, not given this year

PHIL 163H. The History of Scientific Methods, Pythagoras to Popper

(Same as HPS 154) History of scientific methods and associated science from ancient Greece to the 20th century. Case studies include Pythagoras, Plato, and Euclid; Aristotle; medieval science; scientific Renaissance of the 1540s; methodological clashes involving the Church, Galileo, Bacon, and Descartes; Newton; Faraday; Darwin; rise of statistical methods; beginnings of modern physics; Popper. The mutual influences of method and practice. What does and does not qualify as science. Recommended: background in history, philosophy, or a technical field such as mathematics, science, or engineering. GER:DB-Hum

4 units, Aut (McCaskey, J)

PHIL 164. Central Topics in the Philosophy of Science: Theory and Evidence

(Same as PHIL 264) (Graduate students register for 264.) The relation of theory to evidence and prediction, problems of induction, empirical under-determination of theory by evidence, and theory choice. Hypothetico-deductive, Bayesian, pragmatic, and inference to the best explanation models of explanation. The semantic approach to theories. GER:DB-Hum

4 units, Spr (Ryckman, T)

PHIL 164A. Central Topics in Philosophy of Science: Causation

(Same as PHIL 264A) (Graduate Students register for 264A.) Establishing causes in science, engineering, and medicine versus establishing them in Anglo-American law, considered in the context of Hume and Mill on causation. May be repeated for credit.

4 units, not given this year

PHIL 165. Philosophy of Physics

(Same as PHIL 265) (Graduate students register for 265.) Central topic alternates annually between space-time theories and philosophical issues in quantum mechanics. Topics last year: absolute and relational theories of space, time, and motion. Newton¿s critique of Descartes and debate with Leibniz. The principle of relativity and space-time formulations of Aristotelian, Galilean, and relativity physics. Mach¿s principle and the theory of general relativity. Einstein¿s struggles with the principle of general covariance. Space-time substantivalism, and the meaning of background independence. May be repeated for credit if content is different. GER:DB-Hum

4 units, Win (Ryckman, T)

PHIL 166. Probability: Ten Great Ideas About Chance

(Same as PHIL 266, STATS 167, STATS 267) Foundational approaches to thinking about chance in matters such as gambling, the law, and everyday affairs. Topics include: chance and decisions; the mathematics of chance; frequencies, symmetry, and chance;

Bayes great idea; chance and psychology; misuses of chance; and harnessing chance. Emphasis is on the philosophical underpinnings and problems. Prerequisite: exposure to probability or a first course in statistics at the level of STATS 60 or 116. GER:DB-Math

4 units, not given this year

PHIL 167A. Philosophy of Biology

(Same as PHIL 267A) (Graduate students register for 267A.) Evolutionary theory and in particular, on characterizing natural selection and how it operates. We examine debates about fitness, whether selection is a cause or force, the levels at which selection operates, and whether cultural evolution is a Darwinian process. GER:DB-Hum

2-4 units, not given this year

PHIL 167B. Philosophy, Biology, and Behavior

(Same as PHIL 267B) (Graduate students register for 267B.) Continuation of 167A/267A. Further philosophical study of key theoretical ideas in biology, focusing on problems involving explanation of behavior. Topics: evolutionary versus proximate causal explanations of behavior; genetic and other determinisms; and classification and measurement of behavior. Prerequisites: 167A; or one PHIL course and either one BIO course or Human Biology core; or equivalent with consent of instructor. GER:DB-Hum

4 units, Aut (Longino, H)

PHIL 167C. Associative Theories of Mind and Brain

(Same as PHIL 267C) After a historical survey of associative theories from Hume to William James, current versions will be analyzed including the important early ideas of Karl Lashley. Emphasis will be on the computational power of associative networks and their realization in the brain. GER:DB-Hum

4 units, Win (Suppes, P)

PHIL 168. Theories of Truth

(Same as PHIL 268) (Graduate students register for 268.) The correspondence, coherence, pragmatist and deflationary theories of truth. Tarski's semantic conception of truth and hierarchical truth definitions. The problems posed by the liar paradox for non-hierarchical theories. Formal theories of truth proposed since the 70s to deal with these problems.

4 units, not given this year

PHIL 169. Evolution of the Social Contract

(Same as PHIL 269) Explore naturalizing the social contract. Classroom presentations and term papers. Texts: Binmore - Natural Justice Skyrms - Evolution of the Social Contract.

4 units, Spr (Skyrms, B)

PHIL 170. Ethical Theory

(Same as ETHICSOC 170) Major strands in contemporary ethical theory. Readings include Bentham, Mill, Kant, and contemporary authors. GER:DB-Hum, EC-EthicReas

4 units, Spr (Schapiro, T)

PHIL 170B. Metaphor

(Same as PHIL 270B) Think and talk about two things at once: two different subject matters are mingled to rich and unpredictable effect. Close critical study of the main modern accounts of metaphors nature and interest, drawing on the work of writers, linguists, philosophers, and literary critics. Attention to how understanding, appreciation, and pleasure connect with one another in the experience of metaphor. Consideration of the possibility that metaphor or something very like it can occur in nonverbal media: gesture, dance, painting, music. GER:DB-Hum

4 units, Spr (Hills, D)

PHIL 171. Justice

(Same as ETHICSOC 171, IPS 208, PHIL 271, POLISCI 3P, POLISCI 136S) Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include protecting religious liberty, financing schools and elections, regulating markets, assuring access to health care, and providing affirmative action and group rights. Issues of global justice including human rights and global inequality. GER:DB-Hum, EC-EthicReas

4-5 units, Aut (Cohen, J)

PHIL 172. History of Modern Ethics

(Same as PHIL 272) Major strands in the history of modern, pre-Kantian moral philosophy. Emphasis is on the dialogue between empiricists and rationalists on the subject of the relationship between the natural and the normative. Authors include Frances Hutcheson, David Hume, Adam Smith, Samuel Clarke, and Richard Price. GER:DB-Hum

4 units, not given this year

PHIL 172B. Recent Ethical Theory

(Same as PHIL 272B) Study the works of several prominent contemporary moral philosophers. Possible authors include: Scanlon, Darwall, Nagel, Williams, Blackburn, Gibbard, Korsgaard. Prerequisite: students should have taken an introduction to moral philosophy (Phil. 20, Phil. 170 or equivalent). GER:DB-Hum

4 units, Win (Schapiro, T)

PHIL 173A. Aesthetics: Metaphor across the Arts

What if a metaphor is an instructively compact work of art, or if finding a metaphor apt is an instructively simple case of finding something aesthetically valuable? What does this reveal about the nature of art and language? Introduction to the philosophical study of art and aesthetic value, organized around metaphor. Contemporary accounts of metaphor as a verbal device. Arguments for the existence of nonverbal metaphor in nonliterary arts. The power and appeal of metaphors drawn from art, art criticism, theoretical inquiry, and everyday life. GER:DB-Hum

4 units, not given this year

PHIL 173B. Metaethics

(Same as PHIL 273B) (Graduate students register for 273B.) Can moral and ethical values be justified or is it just a matter of opinion? Is there a difference between facts and values? Are there any moral truths? Does it matter if there are not? Focus is not on which things or actions are valuable or morally right, but what is value or rightness itself. Contemporary metaethics. Prerequisites: 80, 181, and an ethics course. GER:DB-Hum

4 units, Win (Hussain, N)

PHIL 174. Freedom and the Practical Standpoint

(Same as PHIL 274) (Graduate students register for 274.) Confronted with the question of how to act, people think of themselves as freely determining their own conduct. Natural science poses a challenge to this by explaining all events, including human actions, in terms of causal processes. Are people justified in thinking of themselves as free? Major philosophical approaches to this question: incompatibilism, compatibilism, and the two-standpoint view. GER:DB-Hum

4 units, not given this year

PHIL 174A. Moral Limits of the Market

(Same as ETHICSOC 174A, PHIL 274A) Morally controversial uses of markets and market reasoning in areas such as organ sales, procreation, education, and child labor. Would a market for organ donation make saving lives more efficient; if it did, would it thereby be justified? Should a nation be permitted to buy the right to pollute? Readings include Walzer, Arrow, Rawls, Sen, Frey, Titmuss, and empirical cases. GER:DB-Hum

4 units, not given this year

PHIL 175. Philosophy of Law

(Same as PHIL 275) Philosophical foundations of law and the legal system. The justifiability of patterns of assigning legal responsibility within criminal law. Prerequisite: PHIL 80 and one additional PHIL course. GER:DB-Hum

4 units, Win (Bratman, M)

PHIL 175A. Ethics and Politics of Public Service

(Same as ETHICSOC 133, HUMBIO 178, PHIL 275A, POLISCI 133, PUBLPOL 103D) Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. GER:DB-SocSci

5 units, not given this year

PHIL 175M. Two Ethical Theories and Being a Person
(Same as PHIL 275M) The distinction between the ethics of being a person and the ethics of rules as opposed to the distinction between Kantian ethics and utilitarianism or consequentialism consequentialism. Comparison of these two types of ethics with respect to their relationship to agency and being a good person. Relations between Western ethics and those of other continents. GER:DB-Hum

4 units, not given this year

PHIL 176. Political Philosophy: The Social Contract Tradition
(Same as PHIL 276) (Graduate students register for 276.) Why and under what conditions do human beings need political institutions? What makes them legitimate or illegitimate? What is the nature, source, and extent of the obligation to obey the legitimate ones, and how should people alter or overthrow the others? Answers by political theorists of the early modern period: Hobbes, Locke, Rousseau, and Kant. GER:DB-Hum

4 units, not given this year

PHIL 176A. Classical Seminar: Origins of Political Thought
(Same as CLASSHIS 133, CLASSHIS 333, PHIL 276A, POLISCI 230A, POLISCI 330A) Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change. GER:DB-Hum

4-5 units, Win (Ober, J)

PHIL 176B. The Economic Individual in the Behavioral Sciences
(Same as PHIL 276B) (Graduate students register for 276B.)

4 units, not given this year

PHIL 177. Philosophical Issues Concerning Race and Racism
(Same as POLISCI 136) Concepts of race, race consciousness, and racism, and their connections. What is race and what is its role in racism? How should ethnic and racial identities be viewed to secure the conditions in which humanity can be seen as a single moral community whose members have equal respect? What laws, values, and institutions best embody the balance among competing goals of group loyalty, opposition to racism, and common humanity? Philosophical writings on freedom and equality, human rights, pluralism, and affirmative action. Historical accounts of group exclusion. GER:DB-Hum, EC-AmerCul

4 units, not given this year

PHIL 177M. Human Rights and Moral Questions
(Same as ETHICSOC 177M, ETHICSOC 277M, PHIL 277M) The proliferation of human rights in the discourse of international justice has raised questions in both moral and legal theory such as: What are human rights? How should they be conceptualized? Who ought to bear the duties associated with them? Can their protection justify military interventions into sovereign states? Course focus is on topics in moral and legal theory surrounding human rights including: the question of what these rights are; the various substantive moral justifications for the protection of human rights; the moral issues raised by the dominance of human rights in international law and relations; can any rights be universal? How are these rights to be framed in the light of crosscultural values and claims about cultural dominance? The connections between these questions.

5 units, Aut (Thomas, J)

PHIL 178. Ethics in Society Honors Seminar
(Same as ETHICSOC 190) For students planning honors in Ethics in Society. Methods of research. Students present issues of public and personal morality; topics chosen with advice of instructor.

3 units, Win (Reich, R)

PHIL 178A. The Ethics of Environmental Choices
(Same as EARTHSYS 178, EARTHSYS 278, PHIL 278A) (Formerly PHIL 278/378.) The institutional and individual dimensions of environmental choices. On the institutional side, examine externalities, the tragedy of the commons, sustainable development and environmental policy. On the individual side, discuss individual responsibility, intrinsic value, and moral pluralism. Focus is on decision making including the role of risk analysis, the rate of discount for effects on future generations, cost-benefit analysis, and scientific epistemology. GER:DB-Hum

4 units, not given this year

PHIL 178M. Environmental Justice
(Same as ETHICSOC 178M, ETHICSOC 278M, PHIL 278M, POLISCI 134L) Normative questions that arise in environmental policy debates, including arguments over pollution permit markets, conservation regulations, and global warming mitigation efforts. What are the morally relevant ways in which the environment is different from other economic resources? How should the environment be valued? What are the obligations to conserve for future generations? How should the burdens of conservation be distributed? Engages with a variety of philosophical traditions including utilitarianism, deep ecology, liberalism, and communitarianism.

4 units, Win (Staff)

PHIL 179S. Moral Psychology, Reasons for Action, and Moral Theory
(Same as PHIL 279S) What sorts of considerations does an ethical agent take to be good reasons for action? Work in moral psychology to illuminate the theory of practical reasons, and the theory of practical reasons to test the prospects for systematic moral theory. Can any systematic moral theory be reconciled with the moral psychology of ordinary, morally respectable agents? Reading include Bernard Williams, Rosalind Hursthouse, Peter Railton, T.M. Scanlon, and Barbara Herman.

4 units, not given this year

PHIL 180. Metaphysics
(Same as PHIL 280) Traditional philosophical riddles involving the notion of existence including: the ontological argument for the existence of God; the problem of intuitively true, negative existential statements; the sorites paradox; and the question of why there is anything at all. Conceptual tools philosophers use to address these questions, from nonexistent objects to possible worlds. Metametaphysics. GER:DB-Hum

4 units, Win (Burgess, A)

PHIL 180A. Realism, Anti-Realism, Irrealism, Quasi-Realism
(Same as PHIL 280A) Realism and its opponents as options across a variety of different domains: natural science, mathematics, ethics, and aesthetics. Clarify the various conceptions that fall under these terms and outline the reasons for and against adopting realism for the various domains. Highlight the general issues involved. Prerequisites: 80, 181 GER:DB-Hum

4 units, not given this year

PHIL 181. Philosophy of Language
(Same as PHIL 281) The study of conceptual questions about language as a focus of contemporary philosophy for its inherent interest and because philosophers see questions about language as behind perennial questions in other areas of philosophy including epistemology, philosophy of science, metaphysics, and ethics. Key concepts and debates about the notions of meaning, truth, reference, and language use, with relations to psycholinguistics and formal semantics. Readings from philosophers such as Frege, Russell, Wittgenstein, Grice, and Kripke. Prerequisites: 80 and background in logic. GER:DB-Hum

4 units, Aut (Crimmins, M)

PHIL 182. Truth
(Same as PHIL 282) Philosophical debates about the place in human lives and the value to human beings of truth and its pursuit. The nature and significance of truth-involving virtues such as accuracy, sincerity, and candor. GER:DB-Hum

4 units, not given this year

PHIL 184. Theory of Knowledge
(Same as PHIL 284) Competing theories of epistemic justification (foundationalism, coherentism, and externalism) against the background of radical scepticism. Readings from contemporary sources. Prerequisite: 80 or consent of instructor. GER:DB-Hum

4 units, Spr (Lawlor, K)

PHIL 184B. Philosophy of the Body
How essential is the body to people's conception of themselves as individuals and as human beings? What role does embodiment play in shaping cognitive capacities? How much or what kind of somatic awareness is required for agency? Embodiment theories of cognition. Readings from Plato, Descartes, Nietzsche, Merleau-Ponty, Parfit, novelist Michel Houellebecq, and contemporary philosophy of mind and cognitive science. GER:DB-Hum

4 units, not given this year

PHIL 184F. Feminist Theories of Knowledge
(Same as FEMST 166, PHIL 284F) Feminist critique of traditional approaches in epistemology and alternative feminist approaches to such topics as reason and rationality, objectivity, experience, truth, the knowing subject, knowledge and values, knowledge and power. GER:DB-Hum, EC-Gender

4 units, not given this year

PHIL 184P. Probability and Epistemology
Confirmation theory and various ways of trying to understand the concept of evidence. Discuss a series of issues in epistemology including probabilism (the view that you should assign degrees of belief to various propositions), conditionalization, confirmational holism, reliabilism and justification, and disagreement. GER:DB-Hum

4 units, not given this year

PHIL 185. Memory
Structure, content, functional role, and epistemic authority of human memories. Sources include philosophical and psychological literature from different schools and historical periods.

4 units, Aut (Hills, D)

PHIL 186. Philosophy of Mind
(Same as PHIL 286) (Graduate students register for 286.) Debates concerning the nature of mental states, their relation to physical states of the human body, how they acquire their content, how people come to know about them in themselves and others, and the roles they play in the explanation of human conduct. GER:DB-Hum

4 units, Spr (Taylor, K)

PHIL 187. Philosophy of Action
(Same as PHIL 287) (Graduate students register for 287.) What is it to be an agent? Is there a philosophically defensible contrast between being an agent and being a locus of causal forces to which one is subject? What is it to act purposively? What is intention? What is it to act intentionally? What is it to act for a reason? Are the reasons for which one acts causes of one's action? What is it to act autonomously? Readings include Davidson and Frankfurt. Prerequisite: 80. GER:DB-Hum

4 units, Spr (Bratman, M)

PHIL 188. Personal Identity
Does one persist through time the way that a skyscraper persists through space, by having different parts at different locations? Or is a person wholly present at every moment of life, in something more like the way that an elevator is present in each place as it travels up to the top floor? What criteria determine whether one is now the same person as some unique person located at some time in the past? Is the continuity of memories or other mental states sufficient for survival? Can one survive the loss or destruction of the body? Does a person really exist for more than just the present moment? How do different answers to these questions bear on moral, personal, and professional obligations? What kinds of considerations could help to answer these questions? Readings include survey, historical, and contemporary material. GER:DB-Hum

4 units, Spr (Giberman, D)

PHIL 189. Examples of Free Will
(Same as PHIL 289) Examples drawn from three domains: choice, computation, and conflict of norms. Conceptually, a distinction is made between examples that are predictable and those that are not, but skepticism about making a sharp distinction between determinism and indeterminism is defended. GER:DB-Hum

4 units, not given this year

PHIL 190. Introduction to Cognitive and Information Sciences
(Same as LINGUIST 144, PSYCH 132, SYMSYS 100) The history, foundations, and accomplishments of the cognitive sciences, including presentations by leading Stanford researchers in artificial intelligence, linguistics, philosophy, and psychology. Overview of the issues addressed in the Symbolic Systems major. GER:DB-SocSci

4 units, Spr (McClelland, J; van Benthem, J)

PHIL 193H. The Art of the Movies: Story, Drama, and Image
A philosophical study of how movies coordinate and transform elements they borrow from older arts of literary narrative, live theater, and graphic illustration. Examples from the career of Alfred Hitchcock. GER:DB-Hum

4 units, not given this year

PHIL 193W. Nietzsche, Doestoevsky, and Sartre
Literary works in which philosophical ideas and issues are put forward, such as prose poems, novels, and plays. Ideas and issues and the dramatic or narrative structures through which they are presented. Texts include: Nietzsche, Thus Spoke Zarathustra; Dostoevsky, The Brothers Karamazov; and Sartre, Nausea and No Exit. GER:DB-Hum

4 units, not given this year

PHIL 194A. Empiricism and the Philosophy of Mind
Priority to majors. 20th-century analytic and early modern philosophy of mind and epistemology. Main text is Wilfrid Sellars's Empiricism and the Philosophy of Mind; source materials and commentary. Enrollment limited to 12.

4 units, not given this year

PHIL 194B. The Ethics of Belief
Priority to majors. Are beliefs subject to moral evaluation? Can it be right or wrong to believe or disbelieve something? Are people morally required to believe only that for which there is sufficient evidence; or can the good consequences of believing something justify the belief, irrespective of the evidence? Contemporary and historical sources. Enrollment limited to 12.

4 units, not given this year

PHIL 194C. Time and Free Will
Classic and contemporary reading on free will, with special attention to the consequence argument for incompatibilism, and issues involving causation and time. GER:DB-Hum

4 units, Aut (Perry, J)

PHIL 194E. Beauty and Other Forms of Value
The nature and importance of beauty and of our capacity to discern it and respond to it, as discussed by philosophers and artists from various traditions and historical periods. Attempts to think out the relations between beauty and ethical values (such as goodness) on the one hand and cognitive values (such as truth) on the other. Fulfills capstone seminar requirement for the Philosophy and Literature tracks. GER:DB-Hum

4 units, Win (Hills, D)

PHIL 194N. Philosophical Issues in Cognitive Science
Philosophers generally do not perform systematic empirical observations or construct computational models. But philosophy remains important to cognitive science because it deals with fundamental issues that underlie the experimental and computational approach to mind. Abstract questions such as the nature of representation and computation. Relation of mind and body and methodological questions such as the nature of explanations found in cognitive science. Normative questions about how people should think as well as with descriptive ones about how they do. In addition to the theoretical goal of understanding human thinking, cognitive science can have the practical goal of improving it, which requires normative reflection on what we want thinking to be. Philosophy of mind does not have a distinct method, but should share with the best theoretical work in other fields a concern with empirical results. GER:DB-Hum

4 units, Spr (Crimmins, M)

PHIL 194P. Naming and Necessity
Saul Kripke's lectures on reference, modal metaphysics, and the mind/body problem. GER:DB-Hum

4 units, not given this year

PHIL 194R. Epistemic Paradoxes
Paradoxes that arise from concepts of knowledge and rational belief, such as the skeptical paradox, the preface paradox, and Moore¿s paradox. Can one lose knowledge without forgetting anything? Can one change one's mind in a reasonable way without gaining new evidence? GER:DB-Hum

4 units, not given this year

PHIL 195A. Unity of Science
Primarily for seniors.

4-5 units, not given this year

PHIL 195B. Donor Seminar: Practical Reasoning
Primarily for seniors. Relationships among action, deliberation, reasons, and rationality. On what basis do people decide what to do? What norms or rules structure reasoning? What constitutes rationality?

4 units, not given this year

PHIL 196. Tutorial, Senior Year
(Staff)
5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PHIL 197. Individual Work, Undergraduate
May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PHIL 198. The Dualist
Weekly meeting of the editorial board of The Dualist, a national journal of undergraduate work in philosophy. Open to all undergraduates. May be taken 1-3 quarters. (AU) (Potochnik, Yap)
1 unit, Aut (Kahn, S), Win (Glezer, T), Spr (Kahn, S)

PHIL 199. Seminar for Prospective Honors Students
Open to juniors intending to do honors in philosophy. Methods of research in philosophy. Topics and strategies for completing honors project. May be repeated for credit.
2 units, Spr (Miyake, T)

PHIL 249. Evidence and Evolution
(Same as PHIL 349) The logic behind the science. The concept of evidence and how it is used in science with regards to testing claims in evolutionary biology and using tools from probability theory, Bayesian, likelihoodist, and frequentist ideas. Questions about evidence that arise in connection with evolutionary theory. Creationism and intelligent design. Questions that arise in connection with testing hypotheses about adaptation and natural selection and hypotheses about phylogenetic relationships.
3-5 units, not given this year

PHIL 265C. Philosophy of Physics: Probability and Relativity
Conceptual puzzles in formulating probability concepts to be invariant in the sense of the Lorentz transformation of special relativity. Problems arise in both classical and quantum physics.
4 units, Spr (Suppes, P)

PHIL 277M. Human Rights and Moral Questions
(Same as ETHICSOC 177M, ETHICSOC 277M, PHIL 177M) The proliferation of human rights in the discourse of international justice has raised questions in both moral and legal theory such as: What are human rights? How should they be conceptualized? Who ought to bear the duties associated with them? Can their protection justify military interventions into sovereign states? Course focus is on topics in moral and legal theory surrounding human rights including: the question of what these rights are; the various substantive moral justifications for the protection of human rights; the moral issues raised by the dominance of human rights in international law and relations; can any rights be universal? How are these rights to be framed in the light of crosscultural values and claims about cultural dominance? The connections between these questions.
5 units, Aut (Thomas, J)

PHIL 278M. Environmental Justice
(Same as ETHICSOC 178M, ETHICSOC 278M, PHIL 178M, POLISCI 134L) Explores the normative questions that arise in environmental policy debates, including arguments over pollution permit markets, conservation regulations, and global warming mitigation efforts. What are the morally relevant ways in which the environment is different from other economic resources? How should the environment be valued? What are our obligations to conserve for future generations? How should the burdens of conservation be distributed? Engages with a variety of philosophical traditions including utilitarianism, deep ecology, liberalism, and communitarianism.
4 units, Win (Staff)

GRADUATE COURSES IN PHILOSOPHY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

PHIL 201. Introduction to Medieval Philosophy
(Same as PHIL 101) Classics of Western philosophy by Augustine, Boethius, Anselm, Abelard, Aquinas, and Ockham. Explore the puzzles facing someone seeking to lead a good life and to understand herself and her world. A theory of will and human motivation, a theory of ethics based on the agent's intention, and a theory of divine omniscience and omnipotence consistent with divine goodness and human freedom. Works include On Free Choice, The Consolation of Philosophy, Ethics, Summa theologiae, and the Connection of the Virtues.
4 units, Spr (Wood, R)

PHIL 206. Ancient Skepticism
(Same as PHIL 106) The ancient Pyrrhonian skeptics who think that for any claim there is no more reason to assert it than deny it and that a life without any beliefs is the best route to happiness. Some ancient opponents of the Pyrrhonian skeptics and some relations between ancient and modern skepticism.
4 units, not given this year

PHIL 207. Plato's Metaphysics and Epistemology
(Same as PHIL 107) Examine Plato's views on the nature of reality and knowledge by reading the relevant parts of dialogues such as the Parmenides, the Phaedo, the Philebus, and the Republic.
4 units, Aut (Bobonich, C)

PHIL 210. Plato
(Same as PHIL 110) Plato's Republic.
4 units, not given this year

PHIL 211. Aristotle and Contemporary Ethics
(Same as PHIL 111) Aristotle's Nicomachean Ethics, focusing on virtue, happiness, pleasure, practical reasoning, and particularism. Sources include the Eudemian Ethics, contemporary philosophers who have taken many of these topics up again, and contemporary material such as that by Anscombe, Foot, Hursthouse, Korsgaard, and McDowell.
4 units, not given this year

PHIL 213. Hellenistic Philosophy
(Same as PHIL 113) Epicureans, skeptics, and stoics on epistemology, ethics, metaphysics, and psychology.
4 units, not given this year

PHIL 215. Problems in Medieval Philosophy: Islamic Aristotelianism and Western Scholasticism
(Same as PHIL 115) Islamic Aristotelianism and Western Scholasticism: The Western World adopted Aristotle's metaphysics and natural philosophy as the foundation of its educational system and scholarly life between 1210 and 1255. Christian Europe was thereby following the example set by Islam in Spain and the Near East. Today some people believe that this development was independent, and others think that the Scholastics copied even their methods from Arabic philosophers. Historical evaluation of those claims.
3-5 units, not given this year

PHIL 217. Descartes
(Same as PHIL 117) (Formerly 121/221.) Descartes's philosophical writings on rules for the direction of the mind, method, innate ideas and ideas of the senses, mind, God, eternal truths, and the material world.
4 units, Aut (De Pierris, G)

PHIL 218. British Empiricism, 1660s-1730s
(Same as PHIL 118)
4 units, not given this year

PHIL 219. Rationalists
(Same as PHIL 119) (Formerly 143/243.) Developments in 17th-century continental philosophy. Descartes's views on mind, necessity, and knowledge. Spinoza and Leibniz emphazing their own doctrines and their criticism of their predecessors. Prerequisite: 102.
4 units, not given this year

PHIL 220A. The Leibniz-Clarke Correspondence
(Same as PHIL 120A) Correspondence on metaphysics, theology, and science.
4 units, Win (De Pierris, G)

PHIL 222. Hume
(Same as PHIL 122) (Formerly 120/220; graduate students enroll in 222.) Hume's theoretical philosophy, in particular, skepticism and naturalism, the theory of ideas and belief, space and time, causation and necessity, induction and laws of nature, miracles, a priori reasoning, the external world, and the identity of the self.
4 units, not given this year

PHIL 224. Kant's Philosophy of Physical Science
Kant's Metaphysical Foundations of Natural Science (1786), published between the first (1781) and second (1787) editions of the Critique of Pure Reason, in the scientific and philosophical context provided by Newtonian natural philosophy and the Leibnizean tradition. The place of this work in the development of Kant's thought. Prerequisite: acquaintance with either Kant's theoretical philosophy or the contemporaneous scientific context, principally Newton, Leibniz, and Euler.
4 units, not given this year

PHIL 224A. Mathematics in Kant's Philosophy
Recent work in Kant's philosophy of mathematics, examined with a view to the role of mathematics, both pure and applied, within Kant's philosophy more generally. Emphasis on the schematism chapter of the Critique of Pure Reason. Prerequisite: acquaintance with Kant's theoretical philosophy and the Critique of Pure Reason.
4 units, not given this year

PHIL 225. Kant's First Critique
(Same as PHIL 125) (Graduate students register for 225.) The founding work of Kant's critical philosophy emphasizing his contributions to metaphysics and epistemology. His attempts to limit metaphysics to the objects of experience. Prerequisite: course dealing with systematic issues in metaphysics or epistemology, or with the history of modern philosophy.
4 units, Win (Wood, A)

PHIL 226B. Kant's Ethical Theory
(Same as PHIL 126B) (Graduate students register for 226B.) Kant's moral philosophy based primarily on the Groundwork of Metaphysics of Morals, Critique of Practical Reason, and The Metaphysics of Morals.
4 units, Spr (Wood, A)

PHIL 227A. Kant's Value Theory
(Same as PHIL 127A) (Graduate students register for 227A.) The role of autonomy, principled rational self-governance, in Kant's account of the norms to which human beings are answerable as moral agents, citizens, empirical inquirers, and religious believers. Relations between moral values (goodness, rightness) and aesthetic values (beauty, sublimity).
4 units, not given this year

PHIL 227B. Kant's Anthropology and Philosophy of History
(Same as PHIL 127B) Kant's conception of anthropology or human nature, based on his philosophy of history, which influenced and anticipated 18th- and 19th-century philosophers of history such as Herder, Fichte, Hegel, and Marx. Texts include Idea for a Universal History, Conjectural Beginning of Human History, and Anthropology from a Pragmatic Point of View. Topics include: Kant's pragmatic approach to the study of human nature; the difficulty of human self knowledge; the role of regulative and teleological principles in studying human history; and Kant's theory of race.
4 units, not given this year

PHIL 228. Fichte's Ethics
(Same as PHIL 128) (Graduate students register for 228.) The founder of the German Idealist movement who adopted but revised Kant's project of transcendental philosophy basing it on the principle of awareness of free self-activity. The awareness of other selves and of ethical relations to them as a necessary condition for self-awareness. His writings from 1793-98 emphasizing the place of intersubjectivity in his theory of experience.
4 units, Win (Staff)

PHIL 230. Hegel
(Same as PHIL 130) (Formerly 122/222; graduate students register for 230.) Introduction to Hegel's philosophy, emphasizing his moral and political philosophy, through study of his last major work (1821). May be repeated for credit. Prerequisite: course in the history of modern philosophy.
4 units, not given this year

PHIL 233. Husserl
Husserl's phenomenology. Main themes in his philosophy and their interconnections, including consciousness, perception, intersubjectivity, lifeworld, ethics, mathematics and the sciences, and time and space. Works in English translation.
4 units, not given this year

PHIL 234. Phenomenology and Intersubjectivity
(Same as PHIL 134) (Graduate students register for 234.) Readings from Husserl, Stein, Heidegger, Sartre, and Merleau-Ponty on subjects related to awareness of others. Topics include solipsism, collective experience, empathy, and objectification of the other.
4 units, not given this year

PHIL 235. Existentialism
(Same as PHIL 135) (Formerly 132/232.) Focus is on the existentialist preoccupation with human freedom. What constitutes authentic individuality? What is one's relation to the divine? How can one live a meaningful life? What is the significance of death? A rethinking of the traditional problem of freedom and determinism in readings from Rousseau, Kierkegaard, and Nietzsche, and the extension of these ideas by Sartre, Beauvoir, and Camus, including their social and political consequences in light of 20th-century fascism and feminism.
4 units, Win (Scotland-Stewart, L)

PHIL 236. History of Analytic Philosophy
(Same as PHIL 136) (Formerly 147/247; graduate students register for 236.) Theories of knowledge in Frege, Carnap, and Quine. Emphasis is on conceptions of analyticity and treatment of logic and mathematics. Prerequisite: 50 and one course numbered 150-165 or 181-90.
4 units, not given this year

PHIL 237. Wittgenstein
(Same as PHIL 137) (Graduate students register for 237.) The main themes and claims in Wittgenstein's later work concentrating on his views about meaning, mind, knowledge, the nature of philosophical perplexity, and the nature of philosophical progress in his Philosophical Investigations. Emphasis is on the relationship between the novel arguments of the Investigations and its ways of writing up the results of philosophical questioning.
4 units, Spr (Hills, D)

PHIL 238. Recent European Philosophy: Between Nature and History
(Same as PHIL 138) A critical introduction to the novel understandings of time, language, and cultural power developed by 20th-century continental thinkers, with close attention to work by Heidegger, Saussure, Benjamin, and Foucault.
4 units, not given this year

PHIL 239. Teaching Methods in Philosophy
For Ph.D. students in their first or second year who are or are about to be teaching assistants for the department. May be repeated for credit.
1-4 units, Aut (Holliday, W), Spr (Holliday, W)

PHIL 240. Individual Work for Graduate Students
May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PHIL 241. Dissertation Development Seminar
Required of second-year Philosophy Ph.D. students; restricted to Stanford Philosophy Ph.D. students. Prerequisite: consent of instructor.
1-4 units, Sum (Bobonich, C)

PHIL 242. The Philosophical and Educational Thought of John Dewey
(Same as EDUC 304) Dewey's pragmatic philosophy and educational thought; his debt to Darwin, Hegel, Peirce, and James; his educational writings including Democracy and Education; and his call for a revolution in philosophy in Reconstruction in Philosophy. (SSPEP)
4 units, not given this year

PHIL 243. Quine
(Same as PHIL 143) (Formerly 183/283; graduate students register for 243.) The philosophy of Quine: meaning and communication; analyticity, modality, reference, and ontology; theory and evidence; naturalism; mind and the mental.
4 units, not given this year

PHIL 248. Medieval Latin Paleography
The history of medieval scripts and medieval abbreviation. Dating and placing Latin European medieval manuscripts. Editing medieval texts in philosophy, psychology, physics, and theology. Class project: an anonymous commentary on Aristotle's Ethics preserved in a Florentine manuscript.
3-5 units, Win (Staff)

PHIL 250. Basic Concepts in Mathematical Logic
(Same as PHIL 150) (Formerly 159.) The concepts and techniques used in mathematical logic, primarily through the study of the language of first order logic. Topics: formalization, proof, propositional logic, quantifiers, sets, mathematical induction, and enumerability.
4 units, Aut (Barker-Plummer, D)

PHIL 251. First-Order Logic
(Same as PHIL 151) (Formerly 160A.) The syntax and semantics of sentential and first-order logic. Concepts of model theory. Gödel's completeness theorem and its consequences: the Löwenheim-Skolem theorem and the compactness theorem. Prerequisite: 150 or consent of instructor.
4 units, Win (Mumma, J)

PHIL 252. Computability and Logic
(Same as PHIL 152) Approaches to effective computation: recursive functions, register machines, and programming styles. Proof of their equivalence, discussion of Church's thesis. Elementary recursion theory. These techniques used to prove Gödel's incompleteness theorem for arithmetic, whose technical and philosophical repercussions are surveyed. Prerequisite: 151.
4 units, Spr (Sommer, R)

PHIL 253. Feminist Theories and Methods Across the Disciplines
(Same as FEMST 103, FEMST 203, PHIL 153) The interdisciplinary foundations of feminist thought. The nature of disciplines and of interdisciplinary work. Challenges of feminism for scholarship and research.
4-5 units, Win (Longino, H)

PHIL 254. Modal Logic
(Same as PHIL 154) (Graduate students register for 254.) Syntax and semantics of modal logic, and technical results like completeness and correspondence theory. Applications to philosophy and computer science. Prerequisite: 150 or preferably 151.
4 units, Spr (van Benthem, J)

PHIL 257. Topics in Philosophy of Logic
(Same as PHIL 157) (Graduate students register for 257.) Disputed foundational issues in logic; the question of what the subject matter and boundaries of logic are, such as whether what is called second-order logic should be counted as logic. What is the proper notion of logical consequence? May be repeated for credit. Pre- or corequisite: 151, or consent of instructor.
3 units, not given this year

PHIL 258. Minds and Machines
Readings on arguments concerning mechanical models of the mind including Turing machine models to which Gödel's incompleteness theorems are relevant, and connectionist (neural net) models. Prerequisites: 151 (formerly 160A), 152, or equivalents. Recommended: 389. (Feferman)
4 units, not given this year

PHIL 260A. Newtonian Revolution
(Same as PHIL 160A) (Graduate students register for 260A.) 17th-century efforts in science including by Kepler, Galileo, Descartes, and Huygens, that formed the background for and posed the problems addressed in Newton¿s Principia.
4 units, not given this year

PHIL 260B. Newtonian Revolution
(Same as PHIL 160B) (Graduate students register for 260B.) Newton¿s Principia in its historical context, emphasizing how it produced a revolution in the conduct of empirical research and in standards of evidence in science.
4 units, not given this year

PHIL 262. Philosophy of Mathematics
(Same as MATH 162, PHIL 162) (Graduate students register for PHIL 262.) 20th-century approaches to the foundations and philosophy of mathematics. The background in mathematics, set theory, and logic. Schools and programs of logicism, predicativism, platonism, formalism, and constructivism. Readings from leading thinkers. Prerequisite: PHIL151 or consent of instructor.
4 units, not given this year

PHIL 263. Significant Figures in Philosophy of Science
(Same as PHIL 163) (Graduate students register for 263.) Directed study of two or more thinkers, past or present, who have made a lasting impact on contemporary philosophy of science. Subjects last year were Henri Poincaré, Pierre Duhem, and Gaston Bachelard.
4 units, not given this year

PHIL 264. Central Topics in the Philosophy of Science: Theory and Evidence
(Same as PHIL 164) (Graduate students register for 264.) The relation of theory to evidence and prediction, problems of induction, empirical under-determination of theory by evidence, and theory choice. Hypothetico-deductive, Bayesian, pragmatic, and inference to the best explanation models of explanation. The semantic approach to theories.
4 units, Spr (Ryckman, T)

PHIL 264A. Central Topics in Philosophy of Science: Causation
(Same as PHIL 164A) (Graduate Students register for 264A.) Establishing causes in science, engineering, and medicine versus establishing them in Anglo-American law, considered in the context of Hume and Mill on causation. May be repeated for credit.
4 units, not given this year

PHIL 265. Philosophy of Physics
(Same as PHIL 165) (Graduate students register for 265.) Central topic alternates annually between space-time theories and philosophical issues in quantum mechanics. Topics last year: absolute and relational theories of space, time, and motion. Newton¿s critique of Descartes and debate with Leibniz. The principle of relativity and space-time formulations of Aristotelian, Galilean, and relativity physics. Mach¿s principle and the theory of general relativity. Einstein¿s struggles with the principle of general covariance. Space-time substantivalism, and the meaning of background independence. May be repeated for credit if content is different.
4 units, Win (Ryckman, T)

PHIL 266. Probability: Ten Great Ideas About Chance
(Same as PHIL 166, STATS 167, STATS 267) Foundational approaches to thinking about chance in matters such as gambling, the law, and everyday affairs. Topics include: chance and decisions; the mathematics of chance; frequencies, symmetry, and chance; Bayes great idea; chance and psychology; misuses of chance; and harnessing chance. Emphasis is on the philosophical underpinnings and problems. Prerequisite: exposure to probability or a first course in statistics at the level of STATS 60 or 116.
4 units, not given this year

PHIL 267A. Philosophy of Biology
(Same as PHIL 167A) (Graduate students register for 267A.) Evolutionary theory and in particular, on characterizing natural selection and how it operates. We examine debates about fitness, whether selection is a cause or force, the levels at which selection operates, and whether cultural evolution is a Darwinian process.
2-4 units, not given this year

PHIL 267B. Philosophy, Biology, and Behavior
(Same as PHIL 167B) (Graduate students register for 267B.) Continuation of 167A/267A. Further philosophical study of key theoretical ideas in biology, focusing on problems involving explanation of behavior. Topics: evolutionary versus proximate causal explanations of behavior; genetic and other determinisms; and classification and measurement of behavior. Prerequisites: 167A; or one PHIL course and either one BIO course or Human Biology core; or equivalent with consent of instructor.
4 units, Aut (Longino, H)

PHIL 267C. Associative Theories of Mind and Brain
(Same as PHIL 167C) After a historical survey of associative theories from Hume to William James, current versions will be analyzed including the important early ideas of Karl Lashley. Emphasis will be on the computational power of associative networks and their realization in the brain.
4 units, Win (Suppes, P)

PHIL 268. Theories of Truth
(Same as PHIL 168) (Graduate students register for 268.) The correspondence, coherence, pragmatist and deflationary theories of

truth. Tarski's semantic conception of truth and hierarchical truth definitions. The problems posed by the liar paradox for non-hierarchical theories. Formal theories of truth proposed since the 70s to deal with these problems.

4 units, not given this year

PHIL 269. Evolution of the Social Contract

(Same as PHIL 169) Naturalizing the social contract. Texts: Binmore, Natural Justice; Skyrms, Evolution of the Social Contract.

4 units, Spr (Skyrms, B)

PHIL 270B. Metaphor

(Same as PHIL 170B) Think and talk about two things at once: two different subject matters are mingled to rich and unpredictable effect. Close critical study of the main modern accounts of metaphors nature and interest, drawing on the work of writers, linguists, philosophers, and literary critics. Attention to how understanding, appreciation, and pleasure connect with one another in the experience of metaphor. Consideration of the possibility that metaphor or something very like it can occur in nonverbal media: gesture, dance, painting, music.

4 units, Spr (Hills, D)

PHIL 271. Justice

(Same as ETHICSOC 171, IPS 208, PHIL 171, POLISCI 3P, POLISCI 136S) Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include protecting religious liberty, financing schools and elections, regulating markets, assuring access to health care, and providing affirmative action and group rights. Issues of global justice including human rights and global inequality.

4-5 units, Aut (Cohen, J)

PHIL 272. History of Modern Ethics

(Same as PHIL 172) Major strands in the history of modern, pre-Kantian moral philosophy. Emphasis is on the dialogue between empiricists and rationalists on the subject of the relationship between the natural and the normative. Authors include Frances Hutcheson, David Hume, Adam Smith, Samuel Clarke, and Richard Price.

4 units, not given this year

PHIL 272B. Recent Ethical Theory

(Same as PHIL 172B) Study the works of several prominent contemporary moral philosophers. Possible authors include: Scanlon, Darwall, Nagel, Williams, Blackburn, Gibbard, Korsgaard. Prerequisite: students should have taken an introduction to moral philosophy (Phil. 20, Phil. 170 or equivalent).

4 units, Win (Schapiro, T)

PHIL 273B. Metaethics

(Same as PHIL 173B) (Graduate students register for 273B.) Can moral and ethical values be justified or is it just a matter of opinion? Is there a difference between facts and values? Are there any moral truths? Does it matter if there are not? Focus is not on which things or actions are valuable or morally right, but what is value or rightness itself. Contemporary metaethics. Prerequisites: 80, 181, and an ethics course.

4 units, Win (Hussain, N)

PHIL 274. Freedom and the Practical Standpoint

(Same as PHIL 174) (Graduate students register for 274.) Confronted with the question of how to act, people think of themselves as freely determining their own conduct. Natural science poses a challenge to this by explaining all events, including human actions, in terms of causal processes. Are people justified in thinking of themselves as free? Major philosophical approaches to this question: incompatibilism, compatibilism, and the two-standpoint view.

4 units, not given this year

PHIL 274A. Moral Limits of the Market

(Same as ETHICSOC 174A, PHIL 174A) Morally controversial uses of markets and market reasoning in areas such as organ sales, procreation, education, and child labor. Would a market for organ donation make saving lives more efficient; if it did, would it thereby be justified? Should a nation be permitted to buy the right to pollute? Readings include Walzer, Arrow, Rawls, Sen, Frey, Titmuss, and empirical cases.

4 units, not given this year

PHIL 275. Philosophy of Law

(Same as PHIL 175) Philosophical foundations of law and the legal system. The justifiability of patterns of assigning legal responsibility within criminal law. Prerequisite: PHIL 80 and one additional PHIL course.

4 units, Win (Bratman, M)

PHIL 275A. Ethics and Politics of Public Service

(Same as ETHICSOC 133, HUMBIO 178, PHIL 175A, POLISCI 133, PUBLPOL 103D) Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford.

5 units, not given this year

PHIL 275M. Two Ethical Theories and Being a Person

(Same as PHIL 175M) The distinction between the ethics of being a person and the ethics of rules as opposed to the distinction between Kantian ethics and utilitarianism or consequentialism consequentialism. Comparison of these two types of ethics with respect to their relationship to agency and being a good person. Relations between Western ethics and those of other continents.

4 units, not given this year

PHIL 276. Political Philosophy: The Social Contract Tradition

(Same as PHIL 176) (Graduate students register for 276.) Why and under what conditions do human beings need political institutions? What makes them legitimate or illegitimate? What is the nature, source, and extent of the obligation to obey the legitimate ones, and how should people alter or overthrow the others? Answers by political theorists of the early modern period: Hobbes, Locke, Rousseau, and Kant.

4 units, not given this year

PHIL 276A. Classical Seminar: Origins of Political Thought

(Same as CLASSHIS 133, CLASSHIS 333, PHIL 176A, POLISCI 230A, POLISCI 330A) Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change.

4-5 units, Win (Ober, J)

PHIL 276B. The Economic Individual in the Behavioral Sciences

(Same as PHIL 176B) (Graduate students register for 276B.)

4 units, not given this year

PHIL 278A. The Ethics of Environmental Choices

(Same as EARTHSYS 178, EARTHSYS 278, PHIL 178A) (Formerly PHIL 278/378.) The institutional and individual dimensions of environmental choices. On the institutional side, examine externalities, the tragedy of the commons, sustainable development and environmental policy. On the individual side, discuss individual responsibility, intrinsic value, and moral pluralism. Focus is on decision making including the role of risk analysis, the rate of discount for effects on future generations, cost-benefit analysis, and scientific epistemology.

4 units, not given this year

PHIL 279. Collectivities

(Same as POLISCI 336J) Issues about the nature of collective action, shared intention, and cooperation, the role of sociality in the nature of mind, problems of preference and judgment aggregation, and, quite generally, different ways of thinking about the relationship of I to we. Enrollment limited to 30.

4 units, not given this year

PHIL 279S. Moral Psychology, Reasons for Action, and Moral Theory

(Same as PHIL 179S) What sorts of considerations does an ethical agent take to be good reasons for action? Work in moral psychology to illuminate the theory of practical reasons, and the theory of practical reasons to test the prospects for systematic moral theory. Can any systematic moral theory be reconciled with the moral psychology of ordinary, morally respectable agents? Reading include Bernard Williams, Rosalind Hursthouse, Peter Railton, T.M. Scanlon, and Barbara Herman.

4 units, not given this year

PHIL 280. Metaphysics
(Same as PHIL 180) Traditional philosophical riddles involving the notion of existence including: the ontological argument for the existence of God; the problem of intuitively true, negative existential statements; the sorites paradox; and the question of why there is anything at all. Conceptual tools philosophers use to address these questions, from nonexistent objects to possible worlds. Meta-metaphysics.
4 units, Win (Burgess, A)

PHIL 280A. Realism, Anti-Realism, Irrealism, Quasi-Realism
(Same as PHIL 180A) Realism and its opponents as options across a variety of different domains: natural science, mathematics, ethics, and aesthetics. Clarify the various conceptions that fall under these terms and outline the reasons for and against adopting realism for the various domains. Highlight the general issues involved. Prerequisites: 80, 181
4 units, not given this year

PHIL 281. Philosophy of Language
(Same as PHIL 181) The study of conceptual questions about language as a focus of contemporary philosophy for its inherent interest and because philosophers see questions about language as behind perennial questions in other areas of philosophy including epistemology, philosophy of science, metaphysics, and ethics. Key concepts and debates about the notions of meaning, truth, reference, and language use, with relations to psycholinguistics and formal semantics. Readings from philosophers such as Frege, Russell, Wittgenstein, Grice, and Kripke. Prerequisites: 80 and background in logic.
4 units, Aut (Crimmins, M)

PHIL 282. Truth
(Same as PHIL 182) Philosophical debates about the place in human lives and the value to human beings of truth and its pursuit. The nature and significance of truth-involving virtues such as accuracy, sincerity, and candor.
4 units, not given this year

PHIL 284. Theory of Knowledge
(Same as PHIL 184) Competing theories of epistemic justification (foundationalism, coherentism, and externalism) against the background of radical scepticism. Readings from contemporary sources. Prerequisite: 80 or consent of instructor.
4 units, Spr (Lawlor, K)

PHIL 284F. Feminist Theories of Knowledge
(Same as FEMST 166, PHIL 184F) Feminist critique of traditional approaches in epistemology and alternative feminist approaches to such topics as reason and rationality, objectivity, experience, truth, the knowing subject, knowledge and values, knowledge and power.
4 units, not given this year

PHIL 286. Philosophy of Mind
(Same as PHIL 186) (Graduate students register for 286.) Debates concerning the nature of mental states, their relation to physical states of the human body, how they acquire their content, how people come to know about them in themselves and others, and the roles they play in the explanation of human conduct.
4 units, Spr (Taylor, K)

PHIL 287. Philosophy of Action
(Same as PHIL 187) (Graduate students register for 287.) What is it to be an agent? Is there a philosophically defensible contrast between being an agent and being a locus of causal forces to which one is subject? What is it to act purposively? What is intention? What is it to act intentionally? What is it to act for a reason? Are the reasons for which one acts causes of one's action? What is it to act autonomously? Readings include Davidson and Frankfurt. Prerequisite: 80.
4 units, Spr (Bratman, M)

PHIL 289. Examples of Free Will
(Same as PHIL 189) Examples drawn from three domains: choice, computation, and conflict of norms. Conceptually, a distinction is made between examples that are predictable and those that are not, but skepticism about making a sharp distinction between determinism and indeterminism is defended.
4 units, not given this year

PHIL 300. Proseminar
Topically focused seminar. Required of all first year Philosophy PhD students
4 units, Aut (Taylor, K)

PHIL 312. Aristotle's Psychology
De Anima and parts of Parva Naturalia.
4 units, not given this year

PHIL 314. Practical Reasoning in Plato and Aristotle
It is often said that the greatest difference between Plato's ethics and those of Aristotle is that the latter thinks that practical and theoretical reason are distinct, but the former does not. We shall read some of both Plato and Aristotle and ask whether the above claim is true and then consider what the implications the differences between their views of practical reason have for the rest of their ethics.
2-4 units, not given this year

PHIL 317. Aristotle's Politics
Examine the fundamentals of Aristotle's political philosophy by reading the Politics as well relevant parts of some of his other ethical and political works.
4 units, Win (Bobonich, C)

PHIL 318. Aristotle's Ethics
Topics in Aristotle's ethical theory and related parts of his psychology.
4 units, not given this year

PHIL 319. Aristotles Metaphysics
Aristotle's views about substance and the nature and possibility of metaphysics. Focus is on Categories and Metaphysics Book Zeta.
3 units, not given this year

PHIL 321. Leibniz's Metaphysics
Leibniz's metaphysical views during his so-called ""mature period"" (early 1680s to 1716). Topics will include Leibniz's conception of substance, his alleged idealism, his doctrine of possible worlds and his doctrine of pre-established harmony. Reading of the Discourse on Metaphysics (1686) and the correspondence with Arnauld (1686-1690).
4 units, Spr (Duarte, S)

PHIL 322. Hume
Hume's theoretical philosophy emphasizing skepticism and naturalism, the theory of ideas and belief, space and time, causation and necessity, induction and laws of nature, miracles, a priori reasoning, the external world, and the identity of the self.
2-4 units, Win (De Pierris, G)

PHIL 323. Kant's Criticism of Metaphysics
Motivations and strategies of Kant's criticisms of traditional metaphysics in the Critique of Pure Reason. Leibnizian and Wolffian versions of the concept containment theory of truth and the Wolffian ideal of a conceptual system of metaphysical knowledge. Kant's analytic/synthetic distinction, focusing on its place in the rejection of metaphysics and in arguments about the ideas of reason in the transcendental dialectic. Prerequisite: course on the first Critique, or consent of instructor.
4 units, not given this year

PHIL 332. Nietzsche
Preference to doctoral students. Nietzsche's later works emphasizing The Gay Science, Beyond Good and Evil, and On the Genealogy of Morals. The shape of Nietzsche's philosophical and literary projects, and his core doctrines such as eternal recurrence, will to power, and perspectivism. Problems such as the proper regulation of belief, and the roles of science, morality, art, and illusion in life.
2-4 units, not given this year

PHIL 334. Habermas
Does Habermas have a distinctive account of normativity and normative judgements?
3-5 units, not given this year

PHIL 335. Topics in Aesthetics
May be repeated for credit.
4 units, not given this year

PHIL 340. Time and Free Will
Free will and the consequence argument of Peter van Inwagen and others. Focus is on the principle that one cannot change the past and the problem of backtracking conditionals, and less on the problem raised by determinismon. Hypotheses less drastic than determinism support backtrackers; given the backtracker, would some-

one¿s not having done something require that he change the past? Issues related to time, change, the phenomenology of agency, and McTaggart's argument about the reality of time.

3-5 units, not given this year

PHIL 348. Evolution of Signals

Evolutionary and learning dynamics applied to simple models of signaling, emergence of information and inference. Text: Skyrms, Signals: Evolution, Learning and Information; and articles.

4 units, Spr (Skyrms, B)

PHIL 349. Evidence and Evolution

(Same as PHIL 249) The logic behind the science. The concept of evidence and how it is used in science with regards to testing claims in evolutionary biology and using tools from probability theory, Bayesian, likelihoodist, and frequentist ideas. Questions about evidence that arise in connection with evolutionary theory. Creationism and intelligent design. Questions that arise in connection with testing hypotheses about adaptation and natural selection and hypotheses about phylogenetic relationships.

3-5 units, not given this year

PHIL 350A. Model Theory

Language and models of the first order, predicate calculus, complete and decidable theories. Fraisse-Ehrenfeucht games. Preservation theorems. Prerequisites: 150,151, or equivalent.

3 units, not given this year

PHIL 350B. Model Theory B

(Same as MATH 290B) Decidable theories. Model-theoretic background. Arithmetic of addition, real closed and algebraically closed fields, weak second order arithmetic, theories of terms, theories of arrays, temporal logic. Combining decision procedures. May be repeated for credit. Prerequisite: 151,152 or equivalents.

1-3 units, not given this year

PHIL 351A. Recursion Theory

Theory of recursive functions and recursively enumerable sets. Register machines, Turing machines, and alternative approaches. Gödel's incompleteness theorems. Recursively unsolvable problems in mathematics and logic. Introduction to higher recursion theory. The theory of combinators and the lambda calculus. Prerequisites: 151, 152, and 161, or equivalents.

3 units, not given this year

PHIL 351B. Proof Mining

Uses of proof theory in analysis and number theory. Proof mining: extraction of bounds from non-effective proofs. May be repeated for credit. Prerequisite: 151,152 or equivalents, and a calculus course.

1-3 units, not given this year

PHIL 352A. Set Theory

(Same as MATH 292A) The basics of axiomatic set theory; the systems of Zermelo-Fraenkel and Bernays-Gödel. Topics: cardinal and ordinal numbers, the cumulative hierarchy and the role of the axiom of choice. Models of set theory, including the constructible sets and models constructed by the method of forcing. Consistency and independence results for the axiom of choice, the continuum hypothesis, and other unsettled mathematical and set-theoretical problems. Prerequisites: PHIL151 and MATH 161, or equivalents.

3 units, Win (Mints, G)

PHIL 353A. Proof Theory

(Same as MATH 293A) Gentzen's natural deduction and sequential calculi for first-order propositional and predicate logics. Normalization and cut-elimination procedures. Relationships with computational lambda calculi and automated deduction. Prerequisites: 151, 152, and 161, or equivalents.

3 units, not given this year

PHIL 353B. Proof Theory B

Consistency ordinal as a measure of the strength of a mathematical theory. The open problem of describing the ordinal of mathematical analysis (second order arithmetic). Present state of the problem and approaches to a solution. Prerequisites: Phil 151,152 or equivalents

3 units, Spr (Mints, G)

PHIL 353C. Functional Interpretations

Finite-type arithmetic. Gödel's functional interpretation and Kreisel's modified realizability. Systems based on classical logic. Spector's extension by bar-recursive functionals. Kohlenbach's monotone interpretation and the bounded functional interpretation. The elimination of weak Kônig's lemma. Uniform boundedness. A look at Tao's hard/soft analysis distinction.

4 units, not given this year

PHIL 354. Topics in Logic

Epsilon-calculus. Syntacs and semantics of first-order epsilon-calculus. Hilbert's epsilon substitution method. Recent progress and open problems. May be repeated for credit. Prerequisite: 151,152 or equivalents

1-3 units, not given this year

PHIL 355. Logic and Social Choice

Topics in the intersection of social choice theory and formal logic. Voting paradoxes, impossibility theorems and strategic manipulation, logical modeling of voting procedures, preference versus judgment aggregation, role of language in social choice, and metatheory of social choice. May be repeated for credit. Prerequisite: 151 or consent of instructor.

4 units, not given this year

PHIL 356. Applications of Modal Logic

Applications of modal logic to knowledge and belief, and actions and norms. Models of belief revision to develop a dynamic doxastic logic. A workable modeling of events and actions to build a dynamic deontic logic on that foundation.

3 units, not given this year

PHIL 358. Rational Agency and Intelligent Interaction

(Same as CS 222) For advanced undergraduates, and M.S. and beginning Ph.D. students. Logic-based methods for knowledge representation, information change, and games in artificial intelligence and philosophy. Topics: knowledge, certainty, and belief; time and action; belief dynamics; preference and social choice; games; and desire and intention. Prerequisite: propositional and first-order logic.

3 units, Spr (Shoham, Y)

PHIL 359. Advanced Modal Logic

Mathematical analysis of modal systems, including bisimulation and expressive power, correspondence theory, algebraic duality, completeness and incompleteness, and extended modal logics, up to guarded fragments of first-order logic, fixed-point logics, and second-order logic. Prerequisite: 151, 154/254, or equivalent background.

4 units, Spr (van Benthem, J)

PHIL 360. Core Seminar in Philosophy of Science

Limited to first- and second-year Philosophy Ph.D. students.

4 units, not given this year

PHIL 365. Seminar in Philosophy of Science: Time

4 units, not given this year

PHIL 366. Evolution and Communication

Topics include information bottlenecks, signaling networks, information processing, invention of new signals, teamwork, evolution of complex signals, teamwork. Sources include signaling games invented by David Lewis and generalizations thereof, using evolutionary and learning dynamics.

4 units, not given this year

PHIL 370. Core Seminar in Ethics

Limited to first- and second-year students in the Philosophy Ph.D. program.

4 units, not given this year

PHIL 371D. Graduate Seminar on Equality

(Same as POLISCI 431L) This seminar will focus on ideas of equality of opportunity, with readings from political theory, as well as American constitutional law, political science, economics, and sociology. The readings will address four main questions: What is equality of opportunity? Why is equality of opportunity an important requirement of justice? What are the principal sources of inequalities of opportunity? And how might those inequalities be remedied? Readings from: Hayek, Rawls, Dworkin, Okin, Roemer, Tawney, Bourdieu, Barry, Jencks, Mazumder, Alstott, McLanahan, and Heckman.

5 units, Win (Cohen, J)

PHIL 372. Topics in Kantian Ethics
Selected topics in ethics, considering both Kant's texts and recent writings by Kant interpreters and moral philosophers in the Kantian tradition. Among the topics covered will be: Practical reason, personal relationships, duties to oneself, evil, right and politics, lying, constructivism in ethics.
4 units, not given this year

PHIL 372D. Graduate Seminar: John Rawls's Political Philosophy
(Same as POLISCI 332) Leading ideas in A Theory of Justice, Political Liberalism, and The Law of Peoples.
5 units, not given this year

PHIL 372E. Graduate Seminar on Moral Psychology
Recent philosophical works on desire, intention, the motivation of action, valuing, and reasons for action. Readings: Williams, Korsgaard, Smith, Blackburn, Velleman, Stampe, Frankfurt.
3-5 units, Win (Schapiro, T)

PHIL 372P. Practical Concepts in Practical Philosophy
Some philosophers argue that practical thinking and practical philosophy require the use of distinctively practical concepts, concepts that in some way originate in the practical or first-person standpoint. Examine and assess various versions of this claim. Readings from Korsgaard, Bok, Gibbard, Nagel, and others.
2-4 units, not given this year

PHIL 373. Moral Psychology: The Concept of Inclination
The weight placed by Kantian and rationalist moral theories on the distinction between inclination and reason. The concept of inclination as that which inclines but does not determine how people act. How are inclinations related to the people who hold them? Are they expressions of values, or more like internal weather? What is their nature? What does it mean to act from inclination? Are actions on inclination unchosen or just badly chosen? Historical and contemporary sources.
4 units, not given this year

PHIL 374. Caring and Practical Reasoning
What is it to care about something; how is caring related to desiring, emotions, and having policies; what is the relationship between caring and the will; why do people care about things; can attention to caring help explain the phenomenon of silencing reasons? Readings from contemporary literature, including Frankfurt, Watson, Bratman, Scanlon, Williams, Helm, and Kolodny. May be repeated for credit.
4 units, not given this year

PHIL 374C. Democracy and the Constitution
(Same as POLISCI 438)
5 units, Aut (Cohen, J)

PHIL 376. Agency and Personal Identity
How philosophical theories of agency interact with philosophical accounts of personal identity. Readings include David Velleman and Harry Frankfurt.
4 units, not given this year

PHIL 378. Amartya Sen's capability theory
Amartya Sen's pioneering work attempts to open up economics to missing informational and evaluative dimensions. Sen's capability approach and its implications for the study of economics, gender, and justice. Different ways that the capability approach has been developed, in particular by Martha Nussbaum, but also by other political philosophers.
4 units, Spr (Satz, D)

PHIL 379. Graduate Seminar in Metaethics
Theories about the meaning of ethical terms and the content of ethical judgements. Do these theories fit with best accounts of human agency and practical deliberation? Readings from recent literature. Prerequisites: 173B/273B, 181, 187/287 or equivalent.
2-4 units, Spr (Hussain, N)

PHIL 380. Core Seminar in Metaphysics and Epistemology
Limited to first- and second-year students in the Philosophy Ph.D. program.
4 units, not given this year

PHIL 381. Core Seminar in Philosophy of Language
Limited to first- and second-year students in the Philosophy Ph.D. program.
4 units, not given this year

PHIL 382. Seminar on Reference
Philosophical issues concerning the relationship between linguistic expressions and the objects to which they refer. Is it possible to get one unified theory of reference for different kinds of referring expressions such as proper names, pronouns, demonstratives, and other kinds of indexicals? Unsolved problems and desiderata for a theory of reference?
4 units, not given this year

PHIL 382A. Pragmatics and Reference
Grice's theory of conversational implicatures, relevance theory and other contemporary pragmatic theories, focusing on issues involving singular reference, pragmatic intrusion, and the semantics/pragmatics interface. The approach that Kepa Korta and Perry call critical pragmatics.
4 units, not given this year

PHIL 383. Philosophy of Mind Seminar
May be repeated for credit.
2-4 units, not given this year

PHIL 384. Seminar in Metaphysics and Epistemology
May be repeated for credit.
4 units, not given this year

PHIL 385. Pragmatics and Reference
How could a meaningful, declarative sentence fail to say anything true or false? Focus is on Huw Price's Facts and the Function of Truth.
4 units, Win (Perry, J)

PHIL 385B. Topics in Metaphysics and Epistemology: Vaguenes
Contemporary proposals for how and whether to explain and accommodate vagueness in reality and in representation.Theories of mental and linguistic representation that struggle to explain imprecise representation, and metaphysical theories of the ultimate structure of reality that are threatened with incoherence if worldly boundaries are vague. May be repeated for credit.
4 units, not given this year

PHIL 385C. Topics in Philosophy of Language: The Frege-Russell Problems
Various approaches to the difficulties for semantic theories raised by the behavior of propositional attitude sentences. How, if Superman and Clark are the same person, can Lois have different beliefs about them? Classic treatments of the issues including Frege, Russell, Quine, Davidson, and Kripke. Contemporary debates about the most promising approaches, including naive Russellianism and unarticulated constituent accounts.
2-4 units, not given this year

PHIL 385D. Topics in Philosophy of Language
4 units, Aut (Crimmins, M)

PHIL 385M. The Metaphysics of Meaning
4 units, Spr (Burgess, A)

PHIL 386B. Husserl and Adam Smith
Readings from Husserl and others in the phenomenological tradition, and recent work on intentionality and consciousness by philosophers and cognitive scientists.
4 units, not given this year

PHIL 386C. Subjectivity
Continuation of 386B.
4 units, not given this year

PHIL 387. Practical Rationality
Contemporary research on practical reason, practical rationality and reasons for action. May be repeated for credit
4 units, Aut (Bratman, M)

PHIL 387C. Consistency and Coherence
Some philosophers think that attitudes like belief and intention are subject to consistency and coherence requirements. Are there such general purpose cogency requirements on attitudes? If so, what is their nature and strength? What grounds these requirements; for instance, does the point or purpose of a belief or an intention ground consistency and coherence requirements on that attitude? How are such requirements on belief related to requirements on intention? How does the answer to such questions bear on understanding of the interrelations between theoretical and practical rationality?
2-4 units, not given this year

PHIL 387S. Practical Reasons and Practical Reasoning
Attempts to develop alternatives to Humean, instrumentalist conceptions of practical reasoning, and alternatives to Humean, noncognitivist views of practical reasons. Readings include Aurel Kolnai, Bernard Williams, David Wiggins, Joseph Raz, Michael Bratman, Elijah Millgram, and T.M. Scanlon.
4 units, not given this year

PHIL 388. Normativity
May be repeated for credit.
2-4 units, not given this year

PHIL 389. Advanced Topics in Epistemology
Skepticism and contextualism, epistemic closure, and problems generated by closure.
3-5 units, Aut (Lawlor, K)

PHIL 391. Research Seminar in Logic and the Foundations of Mathematics
(Same as MATH 391) Contemporary work. May be repeated a total of three times for credit.
1-3 units, Aut (Mints, G; Feferman, S), Win (Mints, G; Feferman, S), Spr (Staff)

PHIL 450. Thesis
(Staff)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PHIL 470. Proseminar in Moral Psychology
Restricted to Philosophy doctoral students. May be repeated for credit.
4 units, not given this year

PHIL 500. Advanced Dissertation Seminar
Presentation of dissertation work in progress by seminar participants. May be repeated for credit.
1 unit, Aut (Lawlor, K), Win (Lawlor, K), Spr (Lawlor, K)

PHIL 801. TGR Project
0 units, Sum (Staff)

PHIL 802. TGR Dissertation
(Staff)
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PHYSICS (PHYSICS) COURSES

UNDERGRADUATE COURSES IN PHYSICS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

PHYSICS 15. The Nature of the Universe
The structure, origin, and evolution of the major components of the Universe: planets, stars, and galaxies. Emphasis is on the formation of the Sun and planets, the evolution of stars, and the structure and content of the Milky Way galaxy. Topics: cosmic enigmas (dark matter, black holes, pulsars, x-ray sources), star birth and death, and the origins of and search for life in the solar system and beyond. GER:DB-NatSci
3 units, Aut (Madejski, G), Sum (Staff)

PHYSICS 16. Cosmic Horizons
The origin and evolution of the universe and its contents: stars, galaxies, quasars. The overall structure of the cosmos and the physical laws that govern matter, space, and time. Topics include the evolution of the cosmos from the origin of the elements and the formation of stars and galaxies, exotic astronomical objects (black holes, quasars, supernovae, and gamma ray bursts), dark matter, inflationary cosmology, and the fate of the cosmos. GER:DB-NatSci
3 units, not given this year

PHYSICS 17. Black Holes
Newton's and Einstein's theories of gravitation and their relationship to the predicted properties of black holes. Their formation and detection, and role in galaxies and high-energy jets. Hawking radiation and aspects of quantum gravity. GER:DB-NatSci
3 units, Spr (Michelson, P)

PHYSICS 18N. Revolution in Concepts of the Cosmos
(Stanford Introductory Seminar) Preference to freshmen. The evolution of concepts of the cosmos and its origin, from the Copernican heliocentric model to the current view based on Hubble's discovery of expansion of the Universe. Recent cosmological observations and the relevance of laboratory experiments in particle physics. One night of observations at the Stanford Observatory. GER:DB-NatSci
3 units, Win (Roodman, A)

PHYSICS 19. How Things Work: An Introduction to Physics
The principles of physics through familiar objects and phenomena, including airplanes, engines, refrigerators, lightning, radio, TV, microwave ovens, and fluorescent lights. Estimates of real quantities from simple calculations. Prerequisite: high school algebra and trigonometry. GER:DB-NatSci
3 units, not given this year

PHYSICS 21. Mechanics and Heat
For biology, social science, and premedical students. Introduction to Newtonian mechanics, fluid mechanics, theory of heat. Prerequisite: high school algebra and trigonometry; calculus not required. GER:DB-NatSci
3 units, Aut (Michelson, P)

PHYSICS 21S. Mechanics and Heat w/ laboratory
Equivalent to 21 and 22. GER:DB-NatSci
4 units, Sum (Fisher, G)

PHYSICS 22. Mechanics and Heat Laboratory
Pre- or corequisite: 21.
1 unit, Aut (Michelson, P)

PHYSICS 23. Electricity and Optics
Electric charges and currents, magnetism, induced currents; wave motion, interference, diffraction, geometrical optics. Prerequisite: 21. GER:DB-NatSci
3 units, Win (Manoharan, H)

PHYSICS 24. Electricity and Optics Laboratory
Guided hands-on exploration of concepts in electricity and magnetism, circuits and optics with an emphasis on student predictions, observations and explanations. Introduction to multimeters and oscilloscopes. Pre- or corequisite: 23.
1 unit, Win (Manoharan, H)

PHYSICS 25. Modern Physics
Introduction to modern physics. Relativity, quantum mechanics, atomic theory, radioactivity, nuclear reactions, nuclear structure, high energy physics, elementary particles, astrophysics, stellar evolution, and the big bang. Prerequisite: 23 or consent of instructor. GER:DB-NatSci
3 units, Spr (Linde, A)

PHYSICS 25S. Modern Physics with Laboratory
Equivalent to 25 and 26. GER:DB-NatSci
4 units, Sum (Fisher, G)

PHYSICS 26. Modern Physics Laboratory
Guided hands-on and simulation-based exploration of concepts in modern physics, including special relativity, quantum mechanics and nuclear physics with an emphasis on student predictions, observations and explanations. Pre- or corequisite: 25.
1 unit, Spr (Linde, A)

PHYSICS 28. Mechanics, Heat, and Electricity
For biology, social science, and premedical students. The sequence 28 and 29 fulfills, in ten weeks, the one-year college physics requirement with lab of most medical schools. Topics: Newtonian mechanics, fluid mechanics, theory of heat, electric charges, and currents. Calculus is used as a language and developed as needed. Prerequisite: high school algebra and trigonometry. GER:DB-NatSci
6 units, Sum (Fisher, G)

PHYSICS 29. Electricity and Magnetism, Optics, Modern Physics
Magnetism, induced currents; wave motion, optics; relativity, quantum mechanics, atomic theory, radioactivity, nuclear structure and reactions, elementary particles, astrophysics, and cosmology. Prerequisite: 28. GER:DB-NatSci
6 units, Sum (Fisher, G)

PHYSICS 41. Mechanics
Vectors, particle kinematics and dynamics, work, energy, momentum, angular momentum; conservation laws; rigid bodies; mechanical oscillations and waves. Discussions based on use of calculus. Corequisite: MATH 19 or 41, or consent of instructor. GER:DB-NatSci
4 units, Win (Church, S)

PHYSICS 41N. Mechanics: Insights, Applications, and Advances
Preference to freshman. Additional topics for students in PHYSICS 41 such as tidal forces, gyroscopic effects, fractal dimensions, and chaos. Corequisite: 41 or advanced placement.
1 unit, not given this year

PHYSICS 42. Classical Mechanics Laboratory
Hand-on exploration of concepts in classical mechanics: Newton's laws, conservation laws, rotational motion. Introduction to laboratory techniques, experimental equipment and data analysis. Pre- or corequisite: 41
1 unit, Win (Church, S)

PHYSICS 43. Electricity and Magnetism
Electrostatics, Coulomb's law, electric fields and fluxes, electric potential, properties of conductors, Gauss's law, capacitors and resistors, DC circuits; magnetic forces and fields, Biot-Savart law, Faraday's law, Ampere's law, inductors, transformers, AC circuits, motors and generators, electric power, Galilean transformation of electric and magnetic fields, Maxwell's equations; limited coverage of electromagnetic fields and special relativity. Prerequisites: 41 or equivialent, and MATH 19 or 41. Corequisite: MATH 20 or 42, or consent of instructor. GER:DB-NatSci
4 units, Spr (Fisher, I)

PHYSICS 43N. Understanding Electromagnetic Phenomena
(Stanford Introductory Seminar) Preference to freshmen. Expands on the material presented in 43; applications of concepts in electricity and magnetism to everyday phenomena and to topics in current physics research. Corequisite: 43 or advanced placement.
1 unit, Spr (Laughlin, R)

PHYSICS 44. Electricity and Magnetism Lab
Hands-on exploration of concepts in electricity and magnetism and circuits. Introduction to multimeters, function generators, oscilloscopes, and graphing techniques. Pre- or corequisite: 43.
1 unit, Spr (Fisher, I)

PHYSICS 45. Light and Heat
Reflection and refraction, lenses and lens systems; polarization, interference, and diffraction; temperature, properties of matter and thermodynamics, introduction to kinetic theory of matter. Prerequisites: 41 or equivalent, and MATH 19 or 41, or consent of instructor. GER:DB-NatSci
4 units, Aut (Gratta, G), Sum (Nanavati, C)

PHYSICS 45N. Advanced Topics in Light and Heat
(Stanford Introductory Seminar) Preference to freshmen. Expands on the subject matter presented in 45 to include optics and thermodynamics in everyday life, and applications from modern physics and astrophysics. Corequisite: 45 or advanced placement.
1 unit, Aut (Romani, R)

PHYSICS 46. Light and Heat Laboratory
Hands-on exploration of concepts in geometrical optics, wave optics and thermodynamics. Pre- or corequisite: 45.
1 unit, Aut (Gratta, G), Sum (Nanavati, C)

PHYSICS 50. Astronomy Laboratory and Observational Astronomy
Introduction to observational astronomy emphasizing the use of optical telescopes. Observations of stars, nebulae, and galaxies in laboratory sessions with 16- and 24-inch telescopes at the Stanford Observatory. Meets one evening per week from dusk until well after dark at the Stanford Observatory. No previous physics required. Limited enrollment. Lab. GER:DB-NatSci
3 units, Aut (Cabrera, B), Sum (Beck, J)

PHYSICS 59. Current Research Topics
Recommended for prospective Physics majors. Presentations of current research topics by faculty with research interests related to physics, often including tours of experimental laboratories where the research is conducted.
1 unit, Aut (Staff, 1)

PHYSICS 61. Mechanics and Special Relativity
(First in a three-part series: 61, 63, 65.) Advanced freshman physics. For students with a strong high school mathematics and physics background contemplating a major in Physics or interested in a rigorous treatment of physics. Special theory of relativity and Newtonian mechanics with multi- variable calculus. Postulates of special relativity, simultaneity, time dilation, length contraction, the Lorentz transformation, causality, and relativistic mechanics. Central forces, contact forces, linear restoring forces. Momentum transport, work, energy, collisions. Angular momentum, torque, moment of inertia in three dimensions. Damped and forced harmonic oscillators. Recommended prerequisites: Mastery of mechanics at the level of AP Physics C and AP Calculus B/C or equivalent. Recommended corequisite: MATH 51. GER:DB-NatSci
4 units, Aut (Moler, K)

PHYSICS 62. Classical Mechanics Laboratory
Introduction to laboratory techniques, experiment design, data collection and analysis simulations, and correlating observations with theory. Labs emphasize discovery with open-ended questions and hands-on exploration of concepts developed in PHYSICS 61 including Newton's laws, conservation laws, rotational motion. Pre-or corequisite 61
1 unit, Aut (Moler, K)

PHYSICS 63. Electricity, Magnetism, and Waves
(Second in a three-part series: 61, 63 ,65.) Advanced freshman physics. For students with a strong high school mathematics and physics background contemplating a major in Physics or interested in a rigorous treatment of physics. Electricity, magnetism and waves with some description of optics. Electrostatics and Gauss' law. Electric potential, electric field, conductors, image charges. Other theorems of vector calculus. Electric currents, DC circuits. Moving charges, magnetic field, Ampere's law. Solenoids, transformers, induction, AC circuits, resonance. Relativistic point of view for moving charges. Displacement current, Maxwell equations. Electromagnetic waves, dielectrics. Diffraction, interference, refraction, reflection, polarization. Prerequisite: PHYSICS 61 and MATH 51; Pre- or corequisite: MATH 52. GER:DB-NatSci
4 units, Win (Graham, P)

PHYSICS 64. Electricity, Magnetism and Optics Laboratory
Introduction to multimeters, breadboards, function generators and oscilloscopes. Emphasis on student-developed design of experimental procedure and data analysis for topics covered in PHYSICS 63: electricity, magnetism, circuits, and optics. Pre- or corequisite: 63
1 unit, Win (Graham, P)

PHYSICS 65. Quantum and Thermal Physics
(Third in a three-part series: 61, 63, 65.) Advanced freshman physics. For students with a strong high school mathematics and physics background contemplating a major in Physics or interested in a rigorous treatment of physics. Introduction to quantum mechanics: matter waves, atomic structure, Schrödinger's equation. Thermodynamics and statistical mechanics: entropy and heat, Boltzmann statistics, quantum statistics. Prerequisites: PHYSICS 61 & 63. Pre- or corequisite: MATH 53. GER:DB-NatSci
4 units, Spr (Romani, R)

PHYSICS 67. Introduction to Laboratory Physics
Methods of experimental design, data collection and analysis, statistics, and curve fitting in a laboratory setting. Experiments drawn from electronics, optics, heat, and modern physics. Lecture plus laboratory format. Required for 60 series Physics and Engineering Physics majors; recommended, in place of PHYSICS 44, for 40 series students who intend to major in Physics or Engineering Physics. Pre- or corequisite: 65 or 43.
2 units, Spr (Pam, R)

PHYSICS 70. Foundations of Modern Physics
Required for Physics majors who completed the 40 series, or the PHYSICS 60 series prior to 2005-06. Special relativity, the experimental basis of quantum theory, atomic structure, quantization of light, matter waves, Schrödinger equation. Prerequisites: 41, 43. Corequisite: 45. Recommended: prior or concurrent registration in MATH 53. GER:DB-NatSci
4 units, Aut (Kasevich, M)

PHYSICS 80N. The Technical Aspects of Photography
(Stanford Introductory Seminar) Preference to freshmen and sophomores with some background in photography. How cameras record photographic images on film and electronically. Technical photographic processes to use cameras effectively. Camera types and their advantages, how lenses work and their limitations, camera shutters, light meters and the proper exposure of film, film types, depth of focus, control of the focal plane and perspective, and special strategies for macro and night photography. View

cameras and range finder technical cameras. Students take photographs around campus. Prerequisite: high school physics.

3 units, Spr (Osheroff, D)

PHYSICS 83N. Physics in the 21st Century

(Stanford Introductory Seminar) Preference to freshmen. Current topics at the frontier of modern physics. Topics include subatomic particles and the standard model, symmetries in nature, extra dimensions of space, string theory, supersymmetry, the big bang theory of the origin of the universe, black holes, dark matter, and dark energy of the universe. Why the sun shines. Cosmology and inflation. GER:DB-NatSci

3 units, Aut (Kallosh, R)

PHYSICS 87N. The Physics of One: Nanoscale Science and Technology

Preference to freshmen. Contemporary interdisciplinary research in nanoscience and nanotechnology; the manipulation of nature's fundamental building blocks. Accomplishments and questions engendered by knowledge at the discrete limit of matter. Prerequisite: high school physics. GER:DB-NatSci

3 units, not given this year

PHYSICS 100. Introduction to Observational and Laboratory Astronomy

For physical science or engineering students. Emphasis is on the quantitative measurement of astronomical parameters such as distance, temperature, mass, composition of stars, galaxies, and quasars. Observation using the 0.4m and 0.6m telescopes at the Stanford Observatory. Limited enrollment. Prerequisites: one year of college physics; prior or concurrent registration in 65, or 70; and consent of instructor. GER:DB-NatSci

4 units, Spr (Allen, S)

PHYSICS 105. Intermediate Physics Laboratory I: Analog Electronics

Analog electronics including Ohm's law, passive circuits and transistor and op amp circuits, emphasizing practical circuit design skills to prepare undergraduates for laboratory research. Short design project. Minimal use of math and physics, no electronics experience assumed beyond introductory physics. Prerequisite: PHYSICS 43 or 63.

3 units, Aut (Pam, R)

PHYSICS 107. Intermediate Physics Laboratory II: Experimental Techniques and Data Analysis

Experiments on lasers, Gaussian optics, and atom-light interaction, with emphasis on data and error analysis techniques. Students describe a subset of experiments in scientific paper format. Prerequisites: completion of 40 or 60 series, and 70 and 105. Recommended: 130, prior or concurrent enrollment in 120. WIM

4 units, Win (Kasevich, M)

PHYSICS 108. Intermediate Physics Laboratory III: Project

Small student groups plan, design, build, and carry out a single experimental project in low-temperature physics. Prerequisites 105, 107.

3 units, Win (Osheroff, D), Spr (Kuo, C)

PHYSICS 110. Intermediate Mechanics

Lagrangian and Hamiltonian mechanics. Principle of least action, Galilean relativity, Lagrangian mechanical systems, Euler-Lagrange equations. Central potential, Kepler's problem, planetary motion. Scattering problems, disintegration, Rutherford scattering cross section. Harmonic motion in the presence of rapidly oscillating field. Poisson's brackets, canonical transformations, Liouville's theorem, Hamilton-Jacoby equation. Prerequisites: 41 or 61, and MATH 53

4 units, Spr (Funk, S)

PHYSICS 112. Mathematical Methods of Physics

Theory of complex variables, complex functions, and complex analysis. Fourier series and Fourier transforms. Special functions such as Laguerre, Legendre, and Hermite polynomials, and Bessel functions. The uses of Green's functions. Covers material of MATH 106 and 132 most pertinent to Physics majors. Prerequisites: MATH 50 or 50H series, and MATH 131P or MATH 173.

4 units, Win (Kallosh, R)

PHYSICS 113. Computational Physics

Numerical methods for solving problems in mechanics, electromagnetism, quantum mechanics, and statistical mechanics. Methods include numerical integration; solutions of ordinary and partial differential equations; solutions of the diffusion equation, Laplace's equation and Poisson's equation with relaxation methods; statistical methods including Monte Carlo techniques; matrix methods and eigenvalue problems. Short introduction to MatLab, used for class examples; class projects may be programmed in any language such as C. Prerequisites: MATH 53, prior or concurrent registration in 110, 121. Previous programming experience not required.

4 units, Spr (Cabrera, B)

PHYSICS 120. Intermediate Electricity and Magnetism I

(First in a two-part series: 120,121.) Vector analysis. Electrostatic fields, including boundary-value problems and multipole expansion. Dielectrics, static and variable magnetic fields, magnetic materials. Maxwell's equations. Prerequisites: PHYSICS 43 or 63; MATH 52 and 53. Pre- or corequisite: MATH 131P or MATH 173. Recommended corequisite: PHYSICS 112.

4 units, Win (Kahn, S)

PHYSICS 121. Intermediate Electricity and Magnetism

(Second in a two-part series: 120,121.) Conservation laws and electromagnetic waves, Poynting's theorem, tensor formulation, potentials and fields. Plane wave problems (free space, conductors and dielectric materials, boundaries). Dipole and quadruple radiation. Special relativity and transformation between electric and magnetic fields. Prerequisites: PHYSICS 120 and MATH 131P or MATH 173; Recommended: PHYSICS 112.

4 units, Spr (Hewett, J)

PHYSICS 130. Quantum Mechanics

(First in a two part series: 130,131.) The origins of quantum mechanics and wave mechanics. Schrödinger equation and solutions for one-dimensional systems. Commutation relations. Generalized uncertainty principle. Time-energy uncertainty principle. Separation of variables and solutions for three-dimensional systems, application to hydrogen atom. Spherically symmetric potentials and angular momentum eigenstates. Spin angular momentum. Prerequisites: PHYSICS 65 or 70, and 110. Pre- or corequisites: PHYSICS 120, 121, and MATH 131P or MATH 173.

4 units, Aut (Burchat, P)

PHYSICS 131. Quantum Mechanics II

(Second in a two-part series: 130,131.) Addition of angular momentum. Identical particles; Fermi and Bose statistics. Time-independent perturbation theory. Fine structure, the Zeeman effect and hyperfine splitting in the hydrogen atom. Variational principle. Prerequisite: PHYSICS 130. Pre- or corequisites: PHYSICS 120, 121, and MATH 131P or MATH 173.

4 units, Win (Bucksbaum, P)

PHYSICS 134. Advanced Topics in Quantum Mechanics

Time-dependent perturbation theory. Scattering theory, partial wave expansion, Born approximation. Additional topics may include WKB approximation; structure of multi-electron atoms (Hartree-Fock); nature of quantum measurement, EPR paradox and Bell's inequality; relativistic quantum mechanics (Dirac equation); quantum information science. Prerequisites: PHYSICS 130, 131.

4 units, Spr (Burchat, P)

PHYSICS 152A. Introduction to Particle Physics I

(Same as PHYSICS 252A) Elementary particles and the fundamental forces. Quarks and leptons. The mediators of the electromagnetic, weak and strong interactions. Interaction of particles with matter; particle acceleration, and detection techniques. Symmetries and conservation laws. Bound states. Decay rates. Cross sections. Feynman diagrams. Introduction to Feynman integrals. The Dirac equation. Feynman rules for quantum electrodynamics and for chromodynamics. Prerequisite: 130. Pre- or corequisite: 131.

3 units, Win (Burchat, P)

PHYSICS 152B. Introduction to Particle Physics II

(Same as PHYSICS 252B) Discoveries and observations in experimental particle physics and relation to theoretical developments. Asymptotic freedom. Charged and neutral weak interactions. Electroweak unification. Weak isospin. Gauge theories, spontaneous symmetry breaking and the Higgs mechanism. Quark and lepton mixing. CP violation. Neutrino oscillations. Prerequisites: 152 or 152A, 130, 131.

3 units, Spr (Gratta, G)

PHYSICS 160. Introduction to Stellar and Galactic Astrophysics
Observed characteristics of stars and the Milky Way galaxy. Physical processes in stars and matter under extreme conditions. Structure and evolution of stars from birth to death. White dwarfs, planetary nebulae, supernovae, neutron stars, pulsars, binary stars, x-ray stars, and black holes. Galactic structure, interstellar medium, molecular clouds, HI and HII regions, star formation, and element abundances. Prerequisites: 40 or 60 series, and 70.
3 units, Win (Romani, R)

PHYSICS 161. Introduction to Extragalactic Astrophysics and Cosmology
Observations of the distances and compositions of objects on cosmic scales: galaxies, galaxy clusters, quasars, and diffuse matter at high red shift. Big bang cosmology, physical processes in the early universe, the origin of matter and the elements, inflation, and creation of structure in the Universe. Observational evidence for dark matter and dark energy. Future of the Universe. Prerequisites: calculus and college physics at the level of the 40 or 60 series, and 70.
3 units, Spr (Wechsler, R)

PHYSICS 169A. Independent Study in Astrophysics and Honors Thesis: Selection of the Problem
Description of the problem, its background, work planned in the subsequent two quarters, and development of the theoretical apparatus or initial interpretation of the problem.
1-9 units, Aut (Staff)

PHYSICS 169B. Independent Study in Astrophysics and Honors Thesis: Continuation of Project
Substantial completion of the required computations or data analysis for the research project selected.
1-9 units, Win (Staff)

PHYSICS 169C. Independent Study in Astrophysics and Honors Thesis: Completion of Project
Completion of research and writing of a paper presenting methods used and results.
1-9 units, Spr (Staff)

PHYSICS 170. Thermodynamics, Kinetic Theory, and Statistical Mechanics I
(First in a two-part series: 170,171.) Basic probability and statistics for random processes such as random walks. The derivation of laws of thermodynamics from basic postulates; the determination of the relationship between atomic substructure and macroscopic behavior of matter. Temperature; equations of state, heat, internal energy, equipartition; entropy, Gibbs paradox; equilibrium and reversibility, heat engines; applications to various properties of matter; absolute zero and low temperature phenomena. Distribution functions, fluctuations, the partition function for classical and quantum systems, irreversible processes. Pre- or corequisite: PHYSICS 130.
4 units, Aut (Kachru, S)

PHYSICS 171. Thermodynamics, Kinetic Theory, and Statistical Mechanics II
(Second in a two-part series: 170,171.) Maxwell-Boltzmann distribution, Debye model and phonons. Transport phenomena, fluctuations, equilibrium between phases, phase changes, Bose-Einstein condensation, and the electron gas. Cooperative phenomena including ferromagnetism, the Ising model, and lattice gas. Irreversible processes. Prerequisite: PHYSICS 170. Pre- or corequisite: PHYSICS 131.
4 units, Win (Zhang, S)

PHYSICS 172. Solid State Physics
Crystal structures and bonding in solids. X-ray diffraction. Lattice dynamics and thermal properties. Electronic structure of solids; transport properties of metals; quantum oscillations; charge density waves. Properties and applications of semiconductors. Phenomenology and microscopic theory of superconductivity. Prerequisites: 170, 171.
3 units, Spr (Manoharan, H)

PHYSICS 190. Independent Study
Undergraduate research in experimental or theoretical physics under the supervision of a faculty member. Prerequisites: superior work as an undergraduate Physics major and consent of instructor.
1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PHYSICS 204A. Seminar in Theoretical Physics
Topics of recent interest may include cosmology, black hole physics, and strong-weak coupling duality transformations. May be repeated for credit.
3 units, Aut (Susskind, L)

PHYSICS 204B. Seminar in Theoretical Physics
Topics including quantum computing, Berry phase, and quantum Hall effect. May be repeated for credit.
3 units, Win (Doniach, S)

PHYSICS 205. Undergraduate Honors Research
Experimental or theoretical project and thesis in Physics under supervision of a faculty member. Planning of the thesis project is recommended to begin as early as middle of the junior year. Successful completion of an senior thesis requires a minimum of 3 graded units of this course completed during the senior year along with the other formal thesis requirements. Prerequisites: superior work in Physics as an undergraduate major and approval of the thesis application.
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN PHYSICS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

PHYSICS 210. Advanced Particle Mechanics
The Lagrangian and Hamiltonian dynamics of particles. Beyond small oscillations. Phase portraits, Hamilton-Jacoby theory, action-angle variables, adiabatic invariance. Nonlinear dynamical systems, continuous and discrete. Behavior near the fixed points, stability of solutions, attractors, chaotic motion. Transition to continuum mechanics. Prerequisite: 110 or equivalent.
3 units, Aut (Peskin, M)

PHYSICS 211. Continuum Mechanics
Elasticity, fluids, turbulence, waves, gas dynamics, shocks, and MHD plasmas. Examples from everyday phenomena, geophysics, and astrophysics.
3 units, Win (Blandford, R)

PHYSICS 212. Statistical Mechanics
Principles, ensembles, statistical equilibrium. Thermodynamic functions, ideal and near-ideal gases. Fluctuations. Mean-field description of phase-transitions and associated critical exponents. One-dimensional Ising model and other exact solutions. Renormalization and scaling relations. Prerequisites: 130, 131, 171, or equivalents.
3 units, Spr (Susskind, L)

PHYSICS 216. Back of the Envelope Physics
Techniques such as scaling and dimensional analysis, useful to make order-of-magnitude estimates of physical effects in different settings. Goals are to promote a synthesis of physics through solving problems, some not included in a standard curriculum. Applications include properties of materials, fluid mechanics, geophysics, astrophysics, and cosmology. Prerequisites: undergraduate mechanics, statistical mechanics, electricity and magnetism, and quantum mechanics.
3 units, Aut (Zhang, S)

PHYSICS 220. Classical Electrodynamics I
Special relativity: The principles of relativity, Lorentz transformations, four vectors and tensors, relativistic mechanics and the principle of least action. Lagrangian formulation, charges in electromagnetic fields, gauge invariance, the electromagnetic field tensor, covariant equations of electrodynamics and mechanics, four-current and continuity equation. Noether's theorem and conservation laws, Poynting's theorem, stress-energy tensor. Constant electromagnetic fields: conductors and dielectrics, magnetic media, electric and magnetic forces, and energy. Electromagnetic waves: Plane and monochromatic waves, spectral resolution, polarization, electromagnetic properties of matter, dispersion relations, wave guides and cavities. Prerequisites: PHYSICS 121 and 210, or equivalent; MATH 106 or 116, and 132 or equivalent.
3 units, Win (Kapitulnik, A)

PHYSICS 221. Classical Electrodynamics II
Electromagnetic waves in dielectric and conducting materials, causality and analyticity, negative index of refraction and metamaterials. Waveguides and cavities, nonlinear solitons and optical fibers. Maxwell's equations in fluids: hydromagnetics, bulk and

surface plasmons, plasmonics. Non-relativistic radiation: dipole and quadrupole radiation, scattering and diffraction. Spherical solutions for vector wave equation. Energy loss of moving particles in a medium, Cherenkov radiation. Relativistic radiation: Liénard-Wiechert potential, angular and frequency distribution, synchrotron radiation. Prerequisites: PHYSICS 220; MATH 106 or 116, and 132 or equivalent.

3 units, Spr (Senatore, L)

PHYSICS 230. Quantum Mechanics

Fundamental concepts. Introduction to Hilbert spaces and Dirac's notation. Postulates applied to simple systems, including those with periodic structure. Symmetry operations and gauge transformation. The path integral formulation of quantum statistical mechanics. Problems related to measurement theory. The quantum theory of angular momenta and central potential problems. Prerequisite: 131 or equivalent.

3 units, Aut (Shenker, S)

PHYSICS 231. Quantum Mechanics

Basis for higher level courses on atomic solid state and particle physics. Wigner-Eckart theorem and addition of angular momenta. Approximation methods for time-independent and time-dependent perturbations. Semiclassical and quantum theory of radiation, second quantization of radiation and matter fields. Systems of identical particles and many electron atoms and molecules. Prerequisite: 230.

3 units, Win (Shenker, S)

PHYSICS 232. Quantum Mechanics

Special topics. Elementary excitations in solids (the free electron gas, electronic band structure, phonons). Elementary scattering theory (Born approximation, partial wave analyses, resonance scattering). Relativistic single-particle equations. Dirac equation applied to central potentials, relativistic corrections, and nonrelativistic limits.

3 units, Spr (Shenker, S)

PHYSICS 240. Introduction to the Physics of Energy

Energy as a consumable. Forms and interconvertability. World joule budget. Equivalents in rivers, oil pipelines and nuclear weapons. Quantum mechanics of fire, batteries and fuel cells. Hydrocarbon and hydrogen synthesis. Fundamental limits to mechanical, electrical and magnetic strengths of materials. Flywheels, capacitors and high pressure tanks. Principles of AC and DC power transmission. Impossibility of pure electricity storage. Surge and peaking. Solar constant. Photovoltaic and thermal solar conversion. Physical limits on agriculture.

3 units, Aut (Laughlin, R)

PHYSICS 241. Introduction to Nuclear Energy

Radioactivity. Elementary nuclear processes. Energetics of fission and fusion. Cross-sections and resonances. Fissionable and fertile isotopes. Neutron budgets. Light water, heavy water and graphite reactors. World nuclear energy production. World reserves of uranium and thorium. Plutonium, reprocessing and proliferation. Half lives of fission decay products and actinides made by neutron capture. Nuclear waste. Three Mile Island and Chernobyl. Molten sodium breeders. Generation-IV reactors. Inertial confinement and magnetic fusion. Laser compression. Fast neutron production and fission-fusion hybrids. Prerequisites: strong undergraduate chemistry and physics. Recommended: PHYSICS 240 and 252A. Qualified undergraduates encouraged to enroll, with consent of instructor.

3 units, Win (Laughlin, R)

PHYSICS 252A. Introduction to Particle Physics I

(Same as PHYSICS 152A) Elementary particles and the fundamental forces. Quarks and leptons. The mediators of the electromagnetic, weak and strong interactions. Interaction of particles with matter; particle acceleration, and detection techniques. Symmetries and conservation laws. Bound states. Decay rates. Cross sections. Feynman diagrams. Introduction to Feynman integrals. The Dirac equation. Feynman rules for quantum electrodynamics and for chromodynamics. Prerequisite: 130. Pre- or corequisite: 131.

3 units, Win (Burchat, P)

PHYSICS 252B. Introduction to Particle Physics II

(Same as PHYSICS 152B) Discoveries and observations in experimental particle physics and relation to theoretical developments. Asymptotic freedom. Charged and neutral weak interactions. Electroweak unification. Weak isospin. Gauge theories, spontaneous symmetry breaking and the Higgs mechanism. Quark and lepton mixing. CP violation. Neutrino oscillations. Prerequisites: 152 or 152A, 130, 131.

3 units, Spr (Gratta, G)

PHYSICS 260. Introduction to Astrophysics and Cosmology

The observed properties and theoretical models of stars, galaxies, and the universe. Physical processes for production of radiation from cosmic sources. Observations of cosmic microwave background radiation. Newtonian and general relativistic models of the universe. Physics of the early universe, nucleosynthesis, baryogenesis, nature of dark matter and dark energy and inflation. Prerequisites: 110, 121, and 171, or equivalents.

3 units, Aut (Petrosian, V)

PHYSICS 262. Introduction to Gravitation

Introduction to general relativity. Curvature, energy-momentum tensor, Einstein field equations. Weak field limit of general relativity. Black holes, relativistic stars, gravitational waves, cosmology. Prerequisite: 121 or equivalent including special relativity.

3 units, Spr (Kallosh, R)

PHYSICS 275. Electrons in Nanostructures

The behavior of electrons in metals or semiconductors at length scales below 1 micron, smaller than familiar macroscopic objects but larger than atoms. Ballistic transport, Coulomb blockade, localization, quantum mechanical interference, and persistent currents. Topics may include quantum Hall systems, graphen, spin transport, spin-orbit coupling in nanostructures, magnetic tunnel junctions, Kondo systems, and 1-dimensional systems. Readings focus on the experimental research literature, and recent texts and reviews. Prerequisite: undergraduate quantum mechanics and solid state physics.

3 units, alternate years, not given this year

PHYSICS 290. Research Activities at Stanford

Required of first-year Physics graduate students; suggested for junior or senior Physics majors for 1 unit. Review of research activities in the department and elsewhere at Stanford at a level suitable for entering graduate students.

1-3 units, Aut (Graham, P)

PHYSICS 291. Practical Training

Opportunity for practical training in industrial labs. Arranged by student with the research adviser's approval. A brief summary of activities is required, approved by the research adviser.

3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PHYSICS 293. Literature of Physics

Study of the literature of any special topic. Preparation, presentation of reports. If taken under the supervision of a faculty member outside the department, approval of the Physics chair required. Prerequisites: 25 units of college physics, consent of instructor.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PHYSICS 294. Teaching of Physics Seminar

Required of all first-year Physics graduate students, plus other Teaching Assistants who are teaching Physics courses for the first time. Weekly seminar/discussions. Techniques for teaching physics, especially through interactive engagement. Review of Physics Education Research results. Simulated teaching situations. In-class observations and practice teaching.

1 unit, Aut (Pam, R)

PHYSICS 301. Astrophysics Laboratory

Open to all graduate students with a calculus-based physics background and some laboratory experience. Students make and analyze observations using telescopes at the Stanford Student Observatory. Topics include navigating the night sky, the physics of stars and galaxies, telescope instrumentation and operation, quantitative error analysis, and effective scientific communication. The course also introduces a number of hot topics in astrophysics and cosmology. Limited enrollment.

3 units, Spr (Allen, S)

PHYSICS 321. Laser Spectroscopy

Theoretical concepts and experimental techniques. Absorption, dispersion, Kramers-Kronig relations, line-shapes. Classical and laser linear spectroscopy. Semiclassical theory of laser atom interaction: time-dependent perturbation theory, density matrix, optical Bloch equations, coherent pulse propagation, multiphoton transitions. High-resolution nonlinear laser spectroscopy: saturation spectroscopy, polarization spectroscopy, two-photon and multipho-

ton spectroscopy, optical Ramsey spectroscopy. Phase conjugation. Four-wave mixing, harmonic generation. Coherent Raman spectroscopy, quantum beats, ultra-sensitive detection. Prerequisite: 230. Recommended: 231.

3 units, Spr (Kasevich, M)

PHYSICS 323. Laser Cooling and Trapping

Principles of laser cooling and atom trapping. Optical forces on atoms, forms of laser cooling, atom optics and atom interferometry, ultra-cold collisions, and introduction to Bose condensation of dilute gases. Emphasis is on the development of the general formalisms that treat these topics. Applications of the cooling and trapping techniques: atomic clocks, internal sensors, measurements that address high-energy physics questions, many-body effects, polymer science, and biology. Prerequisite: 231 or equivalent.

3 units, not given this year

PHYSICS 330. Quantum Field Theory

Quantization of scalar and Dirac fields. Introduction to supersymmetry. Feynman diagrams. Quantum electrodynamics. Elementary electrodynamic processes: Compton scattering; e+e- annihilation. Loop diagrams and electron (g-2). Prerequisites: 130, 131, or equivalents.

3 units, Aut (Devereaux, T)

PHYSICS 331. Quantum Field Theory

Functional integral methods. Local gauge invariance and Yang-Mills fields. Asymptotic freedom. Spontaneous symmetry breaking and the Higgs mechanism. Unified models of weak and electromagnetic interactions. Prerequisite: 330.

3 units, Win (Silverstein, E)

PHYSICS 332. Quantum Field Theory

Theory of renormalization. The renormalization group and applications to the theory of phase transitions. Renormalization of Yang-Mills theories. Applications of the renormalization group of quantum chromodynamics. Perturbation theory anomalies. Applications to particle phenomenology. Prerequisite: PHYSICS 330.

3 units, Spr (Wacker, J)

PHYSICS 351. Standard Model of Particle Physics

Symmetries, group theory, gauge invariance, Lagrangian of the Standard Model, flavor group, flavor-changing neutral currents, CKM quark mixing matrix, GIM mechanism, rare processes, neutrino masses, seesaw mechanism, QCD confinement and chiral symmetry breaking, instantons, strong CP problem, QCD axion. Prerequisite: Physics 330; Physics 331 and 332 recommended.

3 units, Win (Dimopoulos, S)

PHYSICS 360. Physics of Astrophysics

Theoretical concepts and tools for modern astrophysics. Radiation transfer equations; emission, scattering, and absorption mechanisms: Compton, synchrotron and bremsstrahlung processes; photoionization and line emission. Equations of state of ideal, interacting, and degenerate gasses. Application to astrophysical sources such as HII regions, supernova remnants, cluster of galaxies, and compact sources such as accretion disks, X-ray, gamma-ray, and radio sources. Prerequisites: 121, 171 or equivalent.

3 units, Win (Petrosian, V)

PHYSICS 361. Stellar and Galactic Astrophysics

Astronomical data on stars, star clusters, interstellar medium, and the Milky Way galaxy. Theory of stellar structure; hydrostatic equilibrium, radiation balance, and energy production. Stellar formation, Jean's mass, and protostars. Evolution of stars to the main sequence and beyond to red giants, white dwarfs, neutron stars, and black holes. Supernovae and compact sources. Structure of the Milky Way: disk and spiral arms; dark matter and the halo mass; central bulge or bar; and black hole. Prerequisite: 221 or equivalent. Recommended: 260, 360.

3 units, Spr (Blandford, R)

PHYSICS 362. Advanced Extragalactic Astrophysics and Cosmology

Observational data on the content and activities of galaxies, the content of the Universe, cosmic microwave background radiation, gravitational lensing, and dark matter. Models of the origin, structure, and evolution of the Universe based on the theory of general relativity. Test of the models and the nature of dark matter and dark energy. Physics of the early Universe, inflation, baryosynthesis, nucleosynthesis, and galaxy formation. Prerequisites: PHYSICS 210, 211, and 260 or 360.

3 units, not given this year

PHYSICS 363. Solar and Solar-Terrestrial Physics

Structure, mechanisms, and properties of the Sun's interior and atmosphere. Tools for solar observations; magnetic fields and polarimetry. Solar oscillations and helioseismology. Differential rotation and turbulent convection. Solar MHD, Alfven and magneto-acoustic waves. Solar cycle and dynamo. Magnetic energy release, reconnection, particle acceleration. Solar activity, sunspots, flares, coronal mass ejections; UV, X-ray, and high-energy particle emissions. The interaction of the solar wind with Earth's magnetosphere and its terrestrial effects; space weather. Prerequisite: 221 or equivalent.

3 units, not given this year

PHYSICS 364. Advanced Gravitation

Introduction to quantum fields in curved space-times, with applications to phenomena in cosmology and quantum gravity. Free scalar fields in curved space-time; quantum fields in an expanding universe; de Sitter space and fluctuations in inflationary cosmology; the Unruh effect; Hawking radiation and black hole thermodynamics. Recommended: 330, some familiarity with general relativity.

3 units, Win (Kachru, S)

PHYSICS 370. Theory of Many-Particle Systems

Application of quantum field theory to the nonrelativistic, many-body problem, including methods of temperature-dependent Green's functions and canonical transformations. Theory of finite-temperature, interacting Bose and Fermi systems with applications to superfluidity, superconductivity, and electron gas. Prerequisite: 232.

3 units, Aut (Staff)

PHYSICS 372. Condensed Matter Theory I

Fermi liquid theory, many-body perturbation theory, response function, functional integrals, interaction of electrons with impurities. Prerequisite: APPPHYS 273 or equivalent.

3 units, not given this year

PHYSICS 373. Condensed Matter Theory II

Superfluidity and superconductivity. Quantum magnetism. Prerequisite: 372.

3 units, alternate years, not given this year

PHYSICS 376. Superfluidity and Superconductivity

Introduction to superfluid He: two-fluid model, phonons, and rotons, Feynman description, vortices, Bogoliubov theory. Phenomenology of superconductors: London description, Ginzburg-Landau model, type-I vs. type-II materials, Josephson effects, thin films, Kosterlitz-Thouless behavior, electron-phonon coupling. BCS theory: bulk systems, tunneling, strong-coupling materials, dirty and gapless superconductivity, fluctuation effects, Ginzburg criterion. Recommended: APPPHYS 272, 273, or equivalents.

3 units, Spr (Staff)

PHYSICS 450. Primordial Cosmology

Early universe cosmology. Overview of the thermal history of the universe, big bang nucleosynthesis, and the physics of recombination and the CMB. Inflationary cosmology and generation of density pertubations. Ultraviolet sensitivity of inflation and its CMB predictions to Planck-suppressed operators, mechanisms for inflation in the context of string theory, and their observational signatures. Wilsonian naturalness arguments and shift symmetries; axion inflation in field theory and string theory as a case study. Overview of the relevant upcoming measurements from satellite and ground-based detectors. Recommended prerequisites : PHYSICS 262, 330, 331, 332

3 units, Aut (Silverstein, E)

PHYSICS 451. Eternal Inflation

The observational success of inflation, the existence of, and fine tuning of the cosmological constant, and the large landscape of string theories, all point to an eternally inflating multiverse, in which our local universe was produced by a tunneling event from an earlier more energetic vacuum. The course will cover Coleman DeLuccia tunneling, possible observational signals, and the search for a theoretical framework including the so-called ""measure problem."" Prerequisites: PHYSICS 330, 331, 332, 351

3 units, Win (Susskind, L)

PHYSICS 452. Physics Beyond the Standard Model

Grand unification, gauge coupling unification, proton decay; naturalness and the hierarchy problem; technicolor; the supersymmetric Standard Model, supersymmetric unification, SUSY dark matter, SUSY flavor problem; large extra dimensions and TeV scale grav-

ity; the cosmological constant problem, Weinberg's solution and the landscape, atomic principle and split supersymmetry; decaying dark matter as a probe of unification; axiverse and black hole superradiance. Prerequisites: PHYSICS 330, 331, 332, 351.

3 units, Spr (Dimopoulos, S)

PHYSICS 463. Special Topics in Astrophysics: Theoretical Cosmology

The application of general relativity to physical phenomena associated with spinning black holes and neutron stars to provide illustrations and tests of the theory of strong field gravity. Topics include: stationary axisymmetric metrics and stellar structure, orbits and rays, accretion disks, stellar companions, electromagnetic effects, gravitational radiation. Emphasis is on developing practical calculational techniques. Prerequisite: PHYSICS 262 or equivalent.

3 units, not given this year

PHYSICS 490. Research

Open only to Physics graduate students, with consent of instructor. Work is in experimental or theoretical problems in research, as distinguished from independent study of a non-research character in 190 and 293.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PHYSICS 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PHYSICS 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

POLITICAL SCIENCE (POLISCI) COURSES

UNDERGRADUATE COURSES IN POLITICAL SCIENCE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

POLISCI 1. Introduction to International Relations

Approaches to the study of conflict and cooperation in world affairs. Applications to war, terrorism, trade policy, the environment, and world poverty. Debates about the ethics of war and the global distribution of wealth. GER:DB-SocSci

5 units, Aut (Tomz, M)

POLISCI 1Z. Introduction to International Relations

Approaches to the study of conflict and cooperation in world affairs. Applications to war, terrorism, trade policy, the environment, and world poverty. Debates about the ethics of war and the global distribution of wealth. GER:DB-SocSci

5 units, Sum (Tomz, M)

POLISCI 2. Introduction to American National Government and Politics

(Same as AMSTUD 2) The role and importance of the ideal of democracy in the evolution of the American political system. American political institutions (the Presidency, Congress, and the Court) and political processes (the formation of political attitudes and voting) are examined against the backdrop of American culture and political history. The major areas of public policy in the current practice of the ideal of democracy. GER:DB-SocSci

5 units, Win (Fiorina, M; Frisby, T)

POLISCI 3P. Justice

(Same as ETHICSOC 171, IPS 208, PHIL 171, PHIL 271, POLISCI 136S) Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include protecting religious liberty, financing schools and elections, regulating markets, assuring access to health care, and providing affirmative action and group rights. Issues of global justice including human rights and global inequality. GER:DB-Hum, EC-EthicReas

4-5 units, Aut (Cohen, J)

POLISCI 4. Introduction to Comparing Political Systems

Politics in major regime types including democratic, authoritarian, and communist; how types of politics affect economic development and state/society relations. GER:DB-SocSci, EC-GlobalCom

5 units, Win (Rodden, J)

POLISCI 24N. The Politics of Communication

(Stanford Introductory Seminar) Preference to freshmen. How elected officials present and explain their work to constituents and how this communication shapes American politics. Elected officials use press releases, newsletters, press conferences, and public events to connect with their constituents. While almost none of this communication is formally required, it can have important consequences on what elected officials do in office and how constituents perceive their representatives' activities. The strategies elected officials use when communicating with constituents and the consequences of these strategies on the process of representation.

5 units, Win (Grimmer, J)

POLISCI 24Q. Law and Order

(Stanford Introductory Seminar) Preference to sophomores. The role of law in promoting social order. What is the rule of law? How does it differ from the rule of men? What institutions best support the rule of law? Is a state needed to ensure that laws are enforced? Should victims be allowed to avenge wrongs? What is the relationship between justice and mercy?

3 units, Aut (Rutten, A)

POLISCI 25N. The U.S. Congress in Historical and Comparative Perspective

(Stanford Introductory Seminar) Preference to freshmen. The development of legislatures from their medieval European origins to the present, with emphasis on the case of the U.S. Congress. The early role played by assemblies in placing limits on royal power, especially via the power of the purse. The U.S. Congress' contemporary performance; how that performance is affected by procedural legacies from the past that affect most democratic legislatures worldwide.

5 units, Spr (Cox, G)

POLISCI 42Q. The Rwandan Genocide

(Stanford Introductory Seminar) Between April and July of 1994 more than 800,000 Rwandans, mostly Tutsi but also moderate Hutus, were killed in the most rapid genocide the world has ever known. The percentage of Rwandans killed in a single day of the genocide was ten times greater than the percentage of Americans killed in the entire Vietnam war. What could bring humans to plan and carry out such an orgy of violence? Could it have been prevented? Why did the United States or any other major power not intervene to stop the killing? To what extent should the United Nations be held accountable for the failure to end the genocide? What were the consequences of the genocide for the region of Central Africa? How did international actors respond to the challenges of reconstructing Rwanda after the killings? What has happened to the perpetrators of the genocide? This course surveys scholarly and journalistic accounts of the genocide to seek answers to these questions. This seminar will

5 units, Spr (Stedman, S)

POLISCI 43N. Oil, Regime Change, and Conflict

(Stanford Introductory Seminar) Preference to sophomores. Relationships among dependence on oil export, democratization and authoritarian rule, and rising conflict. Case studies including Venezuela, Nigeria, Iran, Iraq, Chad, and Indonesia. The resource curse: the impact of oil on a country's political economy. The relationship between such economic dependence and regime type. Why oil exporting countries are more prone to conflict and civil war than other countries. Research paper.

5 units, Win (Karl, T)

POLISCI 44N. Everyday Political Life in the Authoritarian Middle East

(Stanford Introductory Seminar) Preference to freshmen. How individuals respond to state policy, use informal channels to influence politics, are subject to forms of repression, and challenge authoritarian government through Islamic and other types of organizations. Focus is on Egypt, Iraq, Syria, Yemen, and Iran.

5 units, Aut (Blaydes, L)

POLISCI 48N. Muslim Integration into France

(Stanford Introductory Seminar) Preference to freshmen. The specter of Islamized societies haunts Europe. Fears of a fifth column of terrorism and a challenge by a population of religious fanatics to a largely secularized continent are recurrent in political dialogue from Spain to Austria. Are these worries a result of everyday xenophobia common to situations of foreign immigration or whether certain immigrants from the Middle East, Turkey, South Asia and

Asia and Africa face special challenges due to their Islamic heritage? Sources include survey and experimental data from France, claims made about this immigrant population, readings in French political discourse and the European political context. Final paper that compares analysis of the data and claims in the literature.

5 units, Aut (Laitin, D)

POLISCI 110A. Theory and Practice in International Relations

Major approaches to understanding international politics including realism, liberalism, and constructivism, and their utility in explaining events and issues over the last century including the WWI and WWII, the Cold War, trade and globalization, and transnational terrorism. GER:DB-SocSci

5 units, not given this year

POLISCI 110B. Strategy, War, and Politics

Traditional and modern theories on the causes of war and sources of peace. Contrasting explanations for the origins of WW I and II; alternative theories of deterrence in the nuclear age; the causes of war in the Persian Gulf, ethnic conflicts, and terrorism in the post-Cold War era. GER:DB-SocSci

5 units, not given this year

POLISCI 110C. America and the World Economy

(Same as POLISCI 110X) (Students not taking this course for WIM, register for 110X.) American foreign economic policy. Issues: the evolution of American tariff and trade policy, the development of mechanisms for international monetary management, and American foreign investment policy reflected in the changing political goals pursued by American central decision makers. Prerequisite: 1 or equivalent. GER:DB-SocSci

5 units, not given this year

POLISCI 110D. War and Peace in American Foreign Policy

(Same as POLISCI 110Y) (Students not taking this course for WIM, register for 110Y.) The causes of war in American foreign policy. Issues: international and domestic sources of war and peace; war and the American political system; war, intervention, and peace making in the post-Cold War period. GER:DB-SocSci, DB-SocSci, WIM

5 units, Spr (Schultz, K)

POLISCI 110X. America and the World Economy

(Same as POLISCI 110C) (Students not taking this course for WIM, register for 110X.) American foreign economic policy. Issues: the evolution of American tariff and trade policy, the development of mechanisms for international monetary management, and American foreign investment policy reflected in the changing political goals pursued by American central decision makers. Prerequisite: 1 or equivalent. GER:DB-SocSci

5 units, not given this year

POLISCI 110Y. War and Peace in American Foreign Policy

(Same as POLISCI 110D) (Students not taking this course for WIM, register for 110Y.) The causes of war in American foreign policy. Issues: international and domestic sources of war and peace; war and the American political system; war, intervention, and peace making in the post-Cold War period. GER:DB-SocSci, DB-SocSci

5 units, Spr (Schultz, K)

POLISCI 111. Peace Studies

(Same as PSYCH 165) Interdisciplinary. The challenges of pursuing peace in a world with many conflicts and rising regional, ethnic, and religious antagonisms. Historical, social, psychological, and moral perspectives. Contributions of academic disciplines to the study of peace. Students explore a conflict and offer contributions to the building of peace. Limited enrollment. GER:DB-SocSci

5 units, not given this year

POLISCI 113F. The United Nations and Global Governance

The role of international institutions and organizations in the areas of health, environment, security, trade, development, and human rights. Evaluation, accountability, participation, legitimacy, and autonomy. GER:DB-SocSci

5 units, not given this year

POLISCI 114D. Democracy, Development, and the Rule of Law

(Same as IPS 230, INTNLREL 114D, POLISCI 314D) Links among the establishment of democracy, economic growth, and the rule of law. How democratic, economically developed states arise. How the rule of law can be established where it has been historically absent. Variations in how such systems function and the consequences of institutional forms and choices. How democratic systems have arisen in different parts of the world. Available policy instruments used in international democracy, rule of law, and development promotion efforts. GER:DB-SocSci

5 units, Aut (Diamond, L; Stoner-Weiss, K)

POLISCI 114S. International Security in a Changing World

(Same as IPS 241) The major international and regional security problems in the modern world. Interdisciplinary faculty lecture on the political and technical issues involved in nuclear proliferation, terrorism and homeland security, civil wars and insurgencies, and future great power rivalries. GER:DB-SocSci

5 units, Win (Sagan, S; Cuellar, M)

POLISCI 116. History of Nuclear Weapons

(Same as HISTORY 103E) The development of nuclear weapons and policies. How existing nuclear powers have managed their relations with each other. How nuclear war has been avoided so far and whether it can be avoided in the future. GER:DB-SocSci

5 units, not given this year

POLISCI 118P. U.S. Relations in Iran

The evolution of relations between the U.S. and Iran. The years after WW II when the U.S. became more involved in Iran. Relations after the victory of the Islamic republic. The current state of affairs and the prospects for the future. Emphasis is on original documents of U.S. diplomacy (White House, State Department, and the U.S. Embassy in Iran). Research paper.

5 units, Aut (Milani, A)

POLISCI 119Z. Modern Terrorism and Counter-Terrorism Strategies

The nature and characteristics of the terrorism phenomenon and the modus operandi of international terrorist organizations, including al-Qaeda and its proxies. The main concepts of counter-terrorism strategies. Focus is on: the definition of terrorism; terrorism as a means of political violence; the suicide attack phenomenon; terrorism and psychological warfare; media and public opinion; terrorism and public resilience; state sponsored terrorism; and the challenge of countering the motivations and the operational capabilities of the terrorists.

5 units, Sum (Ganor, B)

POLISCI 120A. American Political Sociology and Public Opinion: Who We Are and What We Believe

First of team-taught, intermediate-level, three-part sequence designed to introduce students to topics in American politics and government. The sociology of the U.S. and the political beliefs and values of Americans. Students may enroll for one, two, or three quarters, but the course is cumulative so maximum benefit results from enrollment in the entire sequence. Recommended: 2. GER:DB-SocSci

5 units, not given this year

POLISCI 120B. Campaigns, Voting, Media, and Elections

(Same as COMM 162, COMM 262) The theory and practice of American campaigns and elections. The behavior of the key players (candidates, parties, journalists, and voters) in terms of the institutional arrangements and political incentives that confront them. Current and recent election campaigns as laboratories for testing generalizations about campaign strategy and voter behavior. The academic literature dealing with the origins of partisan identity, electoral design, and the immediate effects of campaigns on public opinion, voter turnout, and voter choice. Issues of electoral reform and their more long-term consequences for governance and the political process. GER:DB-SocSci

4-5 units, Aut (Iyengar, S)

POLISCI 120C. American Political Institutions: Congress, the Executive Branch, and the Courts

How politicians, once elected, work together to govern America. The roles of the President, Congress, and Courts in making and enforcing laws. Focus is on the impact of constitutional rules on the incentives of each branch, and on how they influence law. WIM GER:DB-SocSci, DB-SocSci

5 units, Spr (Grimmer, J)

POLISCI 121. Urban Politics

(Same as PUBLPOL 133, URBANST 111) The major actors, institutions, processes, and policies of sub-state government in the U.S., emphasizing city general-purpose governments through a

comparative examination of historical and contemporary politics. Issues related to federalism, representation, voting, race, poverty, housing, and finances. Prerequisite: POLISCI 2 or consent of instructor. GER:DB-SocSci

5 units, Aut (Gale, D)

POLISCI 122. Introduction to American Law

(Same as AMSTUD 179, LAWGEN 106, PUBLPOL 302A) For undergraduates. The structure of the American legal system including the courts; American legal culture; the legal profession and its social role; the scope and reach of the legal system; the background and impact of legal regulation; criminal justice; civil rights and civil liberties; and the relationship between the American legal system and American society in general. GER:DB-SocSci

3-5 units, Aut (Friedman, L)

POLISCI 123. Politics and Public Policy

(Same as PUBLPOL 101, PUBLPOL 201) How policies come to be formed. How interests compete within public institutions to turn ideas into policies. Examples of this process from contemporary policy areas, including tax, social welfare, and environmental policy; results evaluated using equity and efficiency criteria. Prerequisite: POLISCI 2 (or equivalent for Public Policy majors). GER:DB-SocSci

5 units, Spr (Frisby, T)

POLISCI 123Z. United States Foreign Policy

The post-Cold War era focusing on foreign policy during the George W. Bush presidency: the war on terror; the wars in Iraq and Afghanistan; and the policy of preemption. Current challenges facing the U.S. from new global, economic, political, and security competition; the impact of domestic politics and institutional conflict on American foreign policy making; and possible directions.

5 units, Sum (Dorfman, G)

POLISCI 124R. The Federal System: Judicial Politics and Constitutional Law

The impact of constitutional rules on policy making in the U.S. with a focus on structural issues such as separation of powers and federalism. Topics such as: the role of unelected judges in a democracy; the rule of law; and the constitutionality of the war in Iraq. Prerequisites: POLISCI 2 or equivalent, and sophomore standing. GER:DB-SocSci, DB-SocSci, WIM

5 units, Win (Rutten, A)

POLISCI 124S. Civil Liberties: Judicial Politics and Constitutional Law

The role and participation of courts, primarily the U.S. Supreme Court, in public policy making and the political system. Judicial activity in civil liberty areas (religious liberty, free expression, race and sex discrimination, political participation, and rights of persons accused of crime). Prerequisites: 2 or equivalent, and sophomore standing. GER:DB-SocSci

5 units, Spr (Rutten, A)

POLISCI 125S. Chicano/Latino Politics

(Same as CHICANST 125S) The political position of Latinos and Latinas in the U.S.. Focus is on Mexican Americans, with attention to Cuban Americans, Puerto Ricans, and other groups. The history of each group in the American polity; their political circumstances with respect to the electoral process, the policy process, and government; the extent to which the demographic category Latino is meaningful; and group identity and solidarity among Americans of Latin American ancestry. Topics include immigration, education, affirmative action, language policy, and environmental justice.

5 units, Aut (Michelson, M)

POLISCI 128S. The Constitution: A Short History

(Same as HISTORY 57) A broad survey of the Constitution, from its Revolutionary origins to the contemporary disputes over interpretation. Topics include the invention of the written constitution and interpretative canons; the origins of judicial review; the Civil War and Reconstruction as constitutional crises; the era of substantive due process; the rights revolution; and the Constitution in wartime. GER:EC-AmerCul

5 units, not given this year

POLISCI 130B. History of Political Thought II: Early Modern Political Thought, 1500-1700

(Same as POLISCI 330B) The development of constitutionalism, Renaissance humanism and the Reformation, and changing relationships between church and states. Emphasis is on the relationships among political thought, institutional frameworks, and immediate political problems and conflicts. The usefulness of the history of political thought to political science. GER:DB-Hum

5 units, not given this year

POLISCI 132S. Theories of Civil Society, Philanthropy, and the Nonprofit Sector

(Same as ETHICSOC 132X, POLISCI 132X, POLISCI 332S) Students taking this course for a WIM, register for PoliSci 132S. The historical development and modern structure of civil society emphasizing philanthropy and the nonprofit sector. What is the basis of private action for the public good? How are charitable dollars distributed and what role do nonprofit organizations and philanthropic dollars play in a modern democracy? How do nongovernmental organizations operate domestically and globally? Readings in political philosophy, political sociology, and public policy.

5 units, Spr (Sievers, B; Reich, R)

POLISCI 132X. Theories of Civil Society, Philanthropy, and the Nonprofit Sector

(Same as ETHICSOC 132X, POLISCI 132S, POLISCI 332S) Students taking this course for a WIM, register for PoliSci 132S. The historical development and modern structure of civil society emphasizing philanthropy and the nonprofit sector. What is the basis of private action for the public good? How are charitable dollars distributed and what role do nonprofit organizations and philanthropic dollars play in a modern democracy? How do nongovernmental organizations operate domestically and globally? Readings in political philosophy, political sociology, and public policy.

5 units, Spr (Sievers, B; Reich, R)

POLISCI 133. Ethics and Politics of Public Service

(Same as ETHICSOC 133, HUMBIO 178, PHIL 175A, PHIL 275A, PUBLPOL 103D) Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. GER:DB-SocSci

5 units, not given this year

POLISCI 134. Democracy and the Communication of Consent

(Same as COMM 136, COMM 236) (Graduate students register for COMM 236.) Focus is on competing theories of democracy and the forms of communication they presuppose, combining normative and empirical issues, and historical and contemporary sources. Topics include representation, public opinion, mass media, small group processes, direct democracy, the role of information, and the prospects for deliberative democracy. GER:DB-SocSci

4-5 units, not given this year

POLISCI 134L. Environmental Justice

(Same as ETHICSOC 178M, ETHICSOC 278M, PHIL 178M, PHIL 278M) Explores the normative questions that arise in environmental policy debates, including arguments over pollution permit markets, conservation regulations, and global warming mitigation efforts. What are the morally relevant ways in which the environment is different from other economic resources? How should the environment be valued? What are our obligations to conserve for future generations? How should the burdens of conservation be distributed? Engages with a variety of philosophical traditions including utilitarianism, deep ecology, liberalism, and communitarianism.

4 units, Win (Staff)

POLISCI 136. Philosophical Issues Concerning Race and Racism

(Same as PHIL 177) Concepts of race, race consciousness, and racism, and their connections. What is race and what is its role in racism? How should ethnic and racial identities be viewed to secure the conditions in which humanity can be seen as a single moral community whose members have equal respect? What laws, values, and institutions best embody the balance among competing goals of group loyalty, opposition to racism, and common humanity? Philosophical writings on freedom and equality, human rights,

pluralism, and affirmative action. Historical accounts of group exclusion. GER:DB-Hum, EC-AmerCul

4 units, not given this year

POLISCI 136R. Introduction to Global Justice

(Same as ETHICSOC 136R, INTNLREL 136R, PHIL 76, POLISCI 336) Recent work in political theory on global justice. Topics include global poverty, human rights, fair trade, immigration, climate change. Do developed countries have a duty to aid developing countries? Do rich countries have the right to close their borders to economic immigrants? When is humanitarian intervention justified? Readings include Charles Beitz, Thomas Pogge, John Rawls.

5 units, Spr (Oberman, K)

POLISCI 136S. Justice

(Same as ETHICSOC 171, IPS 208, PHIL 171, PHIL 271, POLISCI 3P) Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include protecting religious liberty, financing schools and elections, regulating markets, assuring access to health care, and providing affirmative action and group rights. Issues of global justice including human rights and global inequality. GER:DB-Hum, EC-EthicReas

4-5 units, Aut (Cohen, J)

POLISCI 137R. Justice at Home and Abroad: Civil Rights in the 21st Century

(Same as EDUC 261X, ETHICSOC 137R, POLISCI 337R) Focus is on theories of justice. How the core ideals of freedom, equality, and security animate theories which John Rawls considers the first virtue of social institutions. Topics include the U.S. Constitution as a legal framework for the operation of these ideals, civil rights legislation and litigation as the arena of tensions between those ideals, and how ideas of justice function both at home and abroad to impact civil liberties in today's war on terror.

5 units, Win (Reich, R; Steyer, J; Karlan, P)

POLISCI 140. Political Economy of Development

Emphasis is on the interplay between political economic processes, and national and international factors from Latin America, Africa, and Asia. Do governments provide the foundations for economic development? The role of the state in solving problems of violence and capital accumulation. GER:DB-SocSci, EC-GlobalCom

5 units, not given this year

POLISCI 140C. The Comparative Political Economy of Post-Communist Transitions

Dominant theoretical perspectives of comparative democratization and marketization; focus is on the political economy of transition in Eastern Europe and Eurasia while comparing similar processes in Latin America and Asia. Topics include: meanings of democracy, synergy between democracies and markets, causes of the collapse of communism, paths to political liberalization and democracy, civil society, constitutions, parliaments, presidents, the rule of law, electoral systems, market requirements, strategies of reform, the Russian experience of market building, exporting democracy and the market, and foreign aid and assistance.

5 units, Win (Stoner-Weiss, K)

POLISCI 140L. China in World Politics

(Same as POLISCI 340L) The implications of the rise of China in contemporary world politics and for American foreign policy, including issues such as arms and nuclear proliferation, regional security arrangements, international trade and investment, human rights, environmental problems, and the Taiwan and Tibet questions. GER:DB-SocSci, EC-GlobalCom

5 units, Aut (Miller, L)

POLISCI 142B. British Politics

The impact on the world's oldest democracy of major changes in policies, politics, and the institution of government made over the last two decades by Margaret Thatcher and Tony Blair. GER:DB-SocSci, EC-GlobalCom

5 units, Spr (Dorfman, G)

POLISCI 142Z. Politics in the Name of Identity

How national, ethnic, religious, racial, tribal, and regional identities have been politicized. How identity is used as a motive, cause, or justification for peaceful or violent political actions. Issues such as suicide bombers, the U.S. immigration bill, and ethnic cleansing. Case studies. GER:DB-SocSci

5 units, not given this year

POLISCI 147. Comparative Democratic Development

Social, cultural, political, economic, and international factors affecting the development and consolidation of democracy in historical and comparative perspective. Individual country experiences with democracy, democratization, and regime performance. Emphasis is on the third wave of democratization over the past three decades and contemporary possibilities for democratic change. (Diamond) GER:DB-SocSci, EC-GlobalCom

5 units, not given this year

POLISCI 148. Chinese Politics: The Transformation and the Era of Reform

(Same as POLISCI 348) Overview of the reforms in China since 1978 that have made its economy one of the fastest growing in the world yet it still has the Chinese Communist Party at the helm wielding one party rule. Key questions addressed include the following: What has been the process and challenges of reform that have reshaped China¿s economic landscape? What are the political consequences of these dramatic economic changes? Why has the CCP remained strong while other communist regimes have failed? Markets have spread but what is the role of the state? What are the opportunities for political participation and prospects for political change? Materials will include readings, lectures, and selected films. This course has no prerequisites. (Graduate students register for 348.) GER:DB-SocSci, EC-GlobalCom

5 units, Win (Oi, J)

POLISCI 149S. Islam and the West

Changes in relative power and vitality of each side. The relationship in the Middle Ages revolved around power and domination, and since the Renaissance around modernity. Focus is on Muslims of the Middle East. GER:DB-SocSci, EC-GlobalCom

5 units, Spr (Milani, A)

POLISCI 149T. Middle Eastern Politics

Topics in contemporary Middle Eastern politics including institutional sources of underdevelopment, political Islam, electoral authoritarianism, and the political economy of oil.

5 units, Win (Blaydes, L)

POLISCI 150A. Political Methodology I

(Same as POLISCI 350A) Introduction to probability and statistical inference, with applications to political science and public policy. Prerequisite: elementary calculus. GER:DB-Math

5 units, Aut (Rivers, D)

POLISCI 150B. Political Methodology II

(Same as POLISCI 350B) Understanding and using the linear regression model in a social-science context: properties of the least squares estimator; inference and hypothesis testing; assessing model fit; presenting results for publication; consequences and diagnosis of departures from model assumptions; outliers and influential observations, graphical techniques for model fitting and checking; interactions among exploratory variables; pooling data; extensions for binary responses. GER:DB-Math

5 units, Win (Jackman, S)

POLISCI 150C. Political Methodology III

(Same as POLISCI 350C) Models for discrete outcomes, time series, measurement error, and simultaneity. Introduction to nonlinear estimation, large sample theory. Prerequisite: 150B/350B.

3-5 units, Spr (Wand, J)

POLISCI 151B. Data Analysis for Political Science

Operationalization of concepts, measurement, scale construction, finding and pooling/merging data, cross-tabulations, tests of association, comparison of means, correlation, scatterplots, and regression models. How to present the results of data analysis in research reports, essays, and theses. Emphasis is on getting and using data with appropriate statistical software. Prior mathematics not required. GER:DB-Math

5 units, not given this year

POLISCI 152. Introduction to Game Theoretic Methods in Political Science

(Same as POLISCI 352) Concepts and tools of non-cooperative game theory developed using political science questions and applications. Formal treatment of Hobbes' theory of the state and major criticisms of it; examples from international politics. Primarily for graduate students; undergraduates admitted with consent of instructor.

3-5 units, not given this year

POLISCI 157. Sampling and Surveys
(Same as POLISCI 357) The importance of sample surveys as a source of social science data including public opinion, voting, welfare programs, health, employment, and consumer behavior. Survey design, sampling theory, and estimation. Nonresponse, self-selection, measurement error, and web survey methods. Prerequisite: 150B or equivalent.
5 units, not given this year

POLISCI 204. Selena Diana Jenkins International Human Rights Colloquium
(Same as IPS 271, INTNLREL 110, POLISCI 304) 10 international and domestic human rights scholars, judges, and activists who have made significant contributions to international justice, women's and children's rights, environmental rights, and indigenous rights. Students encouraged to present their ongoing research and develop new research projects (individually and collaboratively). Students wishing to do significant research and reading in the context of the seminar may, in consultation with one of the instructors, sign up for independent study. Law students are first required to be enrolled in an International Human Rights in the law school in order to participate.
1 unit, Win (Stacy, H)

POLISCI 210. Special Topics: The Political Economy of Immigration
The goal of this class is to explore the political economy of immigration in receiving states over the last two hundred years, with a special focus on the current debates over immigration in the US today. The course assumes some knowledge of international relations and a more limited background in economic theory and economic history. Course readings and lectures are designed to provide both a theoretical orientation and the substantive information necessary to understand and analyze a range of policy issues that now confront immigrant-receiving states.
5 units, Win (Peters, M)

POLISCI 210C. Globalization and Its Discontents
Whose interests are served by the liberalization of trade and finance? What impact can multilateral organizations like the World Bank, International Monetary Fund, and World Trade Organization have on the economic policies of member states and the functioning of the global economy? What determines the policies or rules promoted by these organizations? What motivates foreign aid policies? What is globalization? How can its impacts on different countries and populations be assessed? Policy-oriented questions that emerge from these topics. Should government offset the welfare costs of globalization, and if so, how? Which priorities should be protected despite free trade liberalization? Is free trade fair trade? How should the World Bank and IMF be reformed to meet the needs of the international political economy in the 21st century? How should the international community address the current financial crisis? What is the appropriate balance between government regulation and market freedom
5 units, Spr (Gould, E)

POLISCI 210R. International Conflict: Management and Resolution
(Same as IPS 250, POLISCI 310R, PSYCH 383) (Same as LAW 656) Interdisciplinary. Theoretical insights and practical experience in resolving inter-group and international conflicts. Sources include social psychology, political science, game theory, and international law. Personal, strategic, and structural barriers to solutions. How to develop a vision of a mutually bearable shared future, trust in the enemy, and acceptance of loss that a negotiated settlement may produce. Spoilers who seek to sabotage agreements. Advantages and disadvantages of unilateral versus reciprocal measures. Themes from the Stanford Center of International Conflict and Negotiation (SCICN). Prerequisite for undergraduates: consent of instructor.
3 units, Win (Ross, L; Holloway, D; Weiner, A)

POLISCI 211. Political Economy of East Asia
(Formerly 117.) Comparative and international political economy of E.and S.E. Asia. Industrial development and the Asian miracle, economic integration, regional cooperation, the Asian financial crisis, and contemporary challenges.
5 units, Spr (Lipscy, P)

POLISCI 213R. Political Economy of Financial Crisis
(Same as POLISCI 313R) Political responses to domestic and international financial crises. Monetary and fiscal policy. The role of interest groups. International cooperation and the role of the IMF.
5 units, not given this year

POLISCI 213S. A Post American Century? American Foreign Policy in a Unipolar World
This seminar examines recent policy from Bush to Obama in the context of two classic traditions: Wilsonianism vs. Realism. What is the role of the international system, what is the weight of domestic forces like ideology, history and identity? Prerequisite: junior or senior standing. GER:DB-SocSci
5 units, Aut (Joffe, J)

POLISCI 214R. Challenges and Dilemmas in American Foreign Policy
(Same as POLISCI 314R) This seminar will examine the complexities and trade offs involved in foreign policy decision-making at the end of the twentieth century and the dawn of the post-9/11 era. Students will analyze dilemmas confronting policymakers through case studies including post-conflict reconstruction and state-building, nuclear proliferation, democratization and peace negotiation. The seminar will conclude with a 48-hour crisis simulation. For advanced undergraduates and graduate students. Application for enrollment required. Pick up application in Political Science Department (Encina West 100).
5 units, Win (Rice, C)

POLISCI 216. Law, Economics and Politics of International Trade
(Same as ECON 164) Taught by an economist and a lawyer. Examines aspects of the WTO system from legal and economic perspectives. Integrates a careful examination of topical legal issues with theoretical and empirical research in economics to develop both positive and normative themes regarding the WTO as an international institution. Overview of the economics of international cooperation on trade, and an introduction to the WTO as an institution and its core obligations. Topics may include: the dispute resolution system; the choice between multilateral and regional or bilateral trade agreements; the role of developing countries in the WTO; and the relationship between WTO law, domestic regulation and national sovereignty. Prerequisite: Econ 51 or equivalent undergraduate microeconomics.
2-5 units, Win (Bagwell, K; Sykes, A)

POLISCI 216E. International History and International Relations Theory
(Same as HISTORY 202, HISTORY 306E, POLISCI 316) The relationship between history and political science as disciplines. Sources include studies by historians and political scientists on topics such as the origins of WW I, the role of nuclear weapons in international politics, the end of the Cold War, nongovernmental organizations in international relations, and change and continuity in the international system. GER:DB-SocSci
5 units, not given this year

POLISCI 219. Directed Reading and Research in International Relations
May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

POLISCI 220R. The Presidency
(Same as POLISCI 320R) A comprehensive perspective on the American presidency. Topics include elections, policy making, control of the bureaucracy, unilateral action, war making. Goal is to understand why presidents behave as they do, and why the presidency as an institution has developed as it has, with emphasis on the dynamics of the American political system and how they condition incentives, opportunities, and power.
5 units, Win (Moe, T)

POLISCI 220S. The Supreme Court in Race, Law, and Politics
The U. S. Supreme Court as part of the ongoing governing process in the American political system. This relationship becomes real as students take on the persona of participants involved in a hypothetical case, including Justices of the Supreme Court, referred to as the Supreme Court Simulation Experience (SCSE). Students develop background data on the position participants might take on the issue(s) presented. Various briefs are filed with the court and argued by lawyers for the respective parties. Limited enrollment.

Prerequisites: junior standing and POLISCI 2 or equivalent, or consent of instructor.

5 units, Spr (Barker, L)

POLISCI 221. Democratic Theory and Democratic Citizenship
The value of tolerance and its implications for the principles and practices of democracy. Tolerance as understood by political philosophers and citizens. Readings include: John Stuart Mill's, On Liberty; Isaiah Berlin's, Two Concepts of Liberty; and modern studies of public opinion. Topics include: ideas and liberty; value pluralism; the interplay of authority and obedience; the role of political elites and mass publics in democratic societies; multiculturalism. Principal forms of value conflict in contemporary liberal democracies. GER:DB-Hum

5 units, Spr (Sniderman, P)

POLISCI 221F. Race and American Politics
How the issue of race has helped define the modern era of American politics. Major theories of political cleavage over public policies dealing with race.

5 units, not given this year

POLISCI 222P. Creating the American Republic
(Same as HISTORY 251) Concepts and developments in the late 18th-century invention of American constitutionalism; the politics of constitution making and ratifying; emergence of theories of constitutional interpretation including originalism; early notions of judicial review. Primary and secondary sources.

5 units, not given this year

POLISCI 222R. Culture, Identity, and Diversity
The interplay of liberalism, pluralism, and diversity. GER:DB-SocSci

5 units, Win (Sniderman, P)

POLISCI 222S. Topics in Constitutional History
(Same as AMSTUD 251, HISTORY 251G) Ideas of rights in American history emphasizing the problem of defining constitutional rights, the free exercise of religion, freedom of expression, and the contemporary debate over rights talk and the idiom of human rights. GER:DB-SocSci, EC-AmerCul

5 units, Win (Rakove, J)

POLISCI 224H. Heretics to Headscarves
(Same as HISTORY 202C, JEWISHST 182C) Broad survey of religious discrimination and persecution in the Euro-American tradition, and the rise of tolerationist ideas and practices, from Augustine's rationale for punishing dissenters to the current European debates over the regulation of Islam. Topics include the Inquisition; struggles over toleration in Reformation Europe; the impact of Locke, Bayle, and Spinoza; Spanish practice in the Americas; and the American constitutional experiment in free exercise.

5 units, Aut (Rakove, J)

POLISCI 224T. Legislatures, Courts, and Public Policy
To understand the role of courts, focus is on a series of judicial decisions. To make sense of these decisions, focus is on material from the political, social, and economic history of the relevant statutes, such as debates and votes in Congress, later statutes, and speeches by politicians. To make sense of this primary evidence, focus is on a theoretical approach to American politics to be developed in the first weeks of the course. WIM

5 units, Aut (Rutten, A)

POLISCI 225E. The Laws of Politics: Term Limits, Campaign Finance, Blanket Primaries, and Redistricting
The intersection of election law, politics, and academia. Major policy changes that affect the way that politics works, the legal decisions that govern them, and the academic research aimed at influencing policymakers and judges. Topics include campaign finance, redistricting, blanket primaries, and term limits. Students make presentations summarizing cases and research, prepare legal briefs of their own, and argue their cases before a mock Supreme Court.

5 units, not given this year

POLISCI 225L. Positive Political Theory and the Law
(Same as POLISCI 325L) An introduction to this new and expanding field. Applications to a range of legal and political issues, including statutory interpretation, political economy of regulation, administrative law, and constitutional law.

5 units, Spr (Weingast, B)

POLISCI 226. Race and Racism in American Politics
(Same as CSRE 226, POLISCI 326) Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.

5 units, Aut (Segura, G)

POLISCI 226T. The Politics of Education
(Same as POLISCI 326T) America's public schools are government agencies, and virtually everything about them is subject to political authority and to decision making through the political process. Goal is to understand the politics of education and its impacts on the nation's schools. Focus is on the modern era of reform, with attention to the most prominent efforts to bring about fundamental change through accountability (including No Child Left Behind), school choice (charter schools, vouchers), pay for performance, and to the politics of blocking that has made genuine reform difficult to achieve.

5 units, Spr (Moe, T)

POLISCI 227P. Contemporary Political Issues
Examination of public opinion surrounding issues important in contemporary American politics, including but not limited to the economy, immigration, race, abortion, sexuality, foreign and defense policy, age, and role of government. Students perform primary research. Prerequisites: POLISCI 2, STATS 160 or equivalent, and consent of instructor.

5 units, Spr (Fiorina, M)

POLISCI 229. Directed Reading and Research in American Politics
May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

POLISCI 230A. Classical Seminar: Origins of Political Thought
(Same as CLASSHIS 133, CLASSHIS 333, PHIL 176A, PHIL 276A, POLISCI 330A) Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change. GER:DB-Hum

4-5 units, Win (Ober, J)

POLISCI 231S. Contemporary Theories of Justice
Social and political justice and contemporary debates in political theory. Recent works that develop the principles of justice, and the political arrangements that best satisfy their requirements. Limited enrollment. WIM GER:DB-Hum, DB-SocSci, EC-EthicReas

5 units, not given this year

POLISCI 232T. The Dialogue of Democracy
(Same as AMSTUD 137, COMM 137, COMM 237, POLISCI 332T) All forms of democracy require some kind of communication so people are aware of issues and make decisions. Competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small-scale discussions or sound bites on television? Or social media? What is the role of technology in changing democratic practices, to mobilize, to persuade, to solve public problems? Readings from political theory about democratic ideals from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. Contemporary examinations of the media and the Internet to see how those practices are changing and how the ideals can or cannot be realized. GER:EC-EthicReas

4-5 units, Win (Fishkin, J)

POLISCI 237. Models of Democracy
(Same as COMM 212, COMM 312, POLISCI 337) Ancient and modern varieties of democracy; debates about their normative and practical strengths and the pathologies to which each is subject. Focus is on participation, deliberation, representation, and elite competition, as values and political processes. Formal institutions, political rhetoric, technological change, and philosophical critique. Models tested by reference to long-term historical natural experiments such as Athens and Rome, recent large-scale political experiments such as the British Columbia Citizens' Assembly, and controlled experiments.

3-5 units, not given this year

POLISCI 239. Directed Reading and Research in Political Theory
May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

POLISCI 240. Special Topics: Politics of Wealth Redistribution
The mechanisms through which individual and group preferences are transformed into policies in democracies. Because these mechanisms influence how powerful elites under dictatorship choose to extend or relinquish rule, it also examines the determinants of redistribution under autocracy. Premise is that in practice all government programs and policies are redistributive in nature. As a result, an analysis of who gets what and why is crucial to gaining an understanding of these policies. The institutions that shape incentives for governments to implement redistribution; the mechanisms, actors, and international conditions that can erode government incentives or capabilities to redistribute. Topics in redistribution. Students work on developing the analytical skills necessary to become critical and well-informed consumers of social science research.
5 units, Win (Albertus, M)

POLISCI 240P. Trials, Truth, and Memory
5 units, Win (Karl, T)

POLISCI 240T. American Efforts at Promoting Democracy Abroad: Theory and Reality
Theoretical and intellectual debates about democracy promotion with focus on realism versus liberalism. The evolution of these debates with attention to the Cold War, the 90s, and American foreign policy after 9/11. Tools for and bureaucratic struggles over how to promote democracy. Contemporary case studies.
5 units, Spr (Diamond, L)

POLISCI 241. Special Topics: Democracy and Inequality
The course has two primary objectives. First, we will evaluate the claim that democracy is more effective and more credible than autocracy at serving the interests of poor and working-class citizens. We will do so using quantitative cross-national evidence, historical evidence, and in-depth case studies of how political institutions within democracies and autocracies shape redistributive social policies. The second objective of the course is to develop the analytical tools of social-scientific inquiry: What are the empirical implications of theoretical arguments? What kinds of evidence would increase our confidence that a particular explanation is right? How should we measure inputs and outcomes? Is there a simpler alternative explanation? How would we design a study to test our hypotheses?
5 units, Spr (Elis, R)

POLISCI 241L. Democracy and the Market in Eastern Europe
Opportunities and challenges of double transitions towards democracy and capitalism. Topics include shock therapy versus gradualism, opposition to economic reform, the role of political competition and international actors in reform outcomes, and the creation of institutional supports for markets and democracy.
5 units, Aut (Young, P)

POLISCI 241S. Spatial Approaches to Social Science
(Same as ANTHRO 130D, ANTHRO 230D) This multidisciplinary course combines different approaches to how GIS and spatial tools can be applied in social science research. We take a collaborative, project oriented approach to bring together technical expertise and substantive applications from several social science disciplines. The course aims to integrate tools, methods, and current debates in social science research and will enable students to engage in critical spatial research and a multidisciplinary dialogue around geographic space.
5 units, Win (Rodden, J; Engel, C)

POLISCI 242D. Political Economy of Property Rights
(Same as HISTORY 278A) This course seeks to understand how property rights systems influence economic growth and the stewardship of resources. We are also interested in explaining the political process by which societies create property systems. In order to answer these questions we will read and discuss the work of political scientists, economists, and historians.
5 units, Win (Haber, S)

POLISCI 242P. Comparative Politics of Corruption
Causes, effects, and solutions to various forms of corruption in business and politics in both developing regions (e.g. Asia, E. Europe) and developed ones (the US and the EU).
5 units, Win (Staff)

POLISCI 243R. Research Seminar in Democratization and Human Rights
Goal is to produce a minimum 30-page paper based on field research abroad. Students prepare research problem statement, meet individually with the professor, and circulate drafts for class comment. Graduate students should register for directed reading under the professor's name. GER:DB-SocSci
5 units, Spr (Karl, T)

POLISCI 245P. Politics and Society in Israel
Focus is on Israel's political system and social makeup, from the pre-state period (Yishuv) to the 2009 elections. The ideological roots of Zionism; the core issues which comprise the Arab-Israeli conflict. Key aspects of the Israeli political system, including election methods, parties, and the constitutional status. The religious, ethnic, and national cleavages that manifest in Israeli public life and politics.
5 units, Spr (Lev-On, E)

POLISCI 245R. Politics in Modern Iran
Modern Iran has been a smithy for political movements, ideologies, and types of states. Movements include nationalism, constitutionalism, Marxism, Islamic fundamentalism, social democracy, Islamic liberalism, and fascism. Forms of government include Oriental despotism, authoritarianism, Islamic theocracy, and liberal democracy. These varieties have appeared in Iran in an iteration shaped by history, geography, proximity to oil and the Soviet Union, and the hegemony of Islamic culture. GER:DB-SocSci, EC-GlobalCom
5 units, Win (Milani, A)

POLISCI 246. African Politics
Key issues in African political economy: the nature and legacy of colonial rule; the African state; voting, elections, and Africa's democratic transitions; the sources of Africa's poor economic performance; ethnicity in political and social life; violence, social conflict, and civil war. Emphasis is on mastering the literature on African politics and developing intuitions and skills to permit students to become producers of high quality research in the area.
5 units, not given this year

POLISCI 246L. Struggle and Transformation: Political Economy of Southern Africa
Born in struggle, majority rule in southern Africa brought promise: a fundamental transformation from a racialized order to a developmental departure in which initiative and opportunity would no longer depend on race, gender, and class. Progress has been dramatic. Yet, inequalities have intensified and the liberation promise remains to be achieved. Contemporary southern Africa and the intersection of politics, economy, and society. Focused comparisons and cases studies address disaffection and legitimacy, participation and exclusion, democracy and control, parties and protest, struggles and transformation, within countries and across the region. No prerequisites.
5 units, Spr (Samoff, J)

POLISCI 248S. Latin American Politics
Fundamental transformations in Latin America in the last two decades: why most governments are now democratic or semidemocratic; and economic transformation as countries abandoned import substitution industrialization policies led by state intervention for neoliberal economic polices. The nature of this dual transformation. GER:DB-SocSci
5 units, Win (Magaloni, B)

POLISCI 249. Directed Reading and Research in Comparative Politics
May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

POLISCI 259. Directed Reading and Research in Political Methodology
May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

POLISCI 299A. Senior Project
Students conduct independent research work towards a senior honors thesis. See ""Honors Program"" above. (Staff)
1-5 units, Aut (Staff)

POLISCI 299B. Senior Project
Students conduct independent research work towards a senior honors thesis. See ""Honors Program"" above. (Staff)
1-5 units, Win (Staff)

POLISCI 299C. Senior Project
Students conduct independent research work towards a senior honors thesis. See ""Honors Program"" above. (Staff)
1-5 units, Spr (Staff)

POLISCI 299Q. Junior Research Seminar
Required of students interested in writing a senior honors thesis. Students must submit an honors application to the PoliSci office in Encina West 100 by the first Friday of spring quarter.
2 units, Spr (Magaloni, B)

POLISCI 299Q. Honors Research: Democracy, Development, and the Rule of Law in Developing Countries
(Same as INTNLREL 199) Restricted to students in the CDDRL option of the International Relations honors program. Goal is to prepare students to do research and/or fieldwork to complete their thesis research. Main currents in democracy and development literature concerning how economic growth and democratization are related; how the rule of law supports these processes in countries undergoing change. Student presentations of thesis questions; student groups develop research problems and designs. May be repeated for credit.
3-5 units, Spr (Stoner-Weiss, K)

POLISCI 336S. Justice
(Same as ETHICSOC 171, IPS 208, PHIL 171, PHIL 271, POLISCI 3P, POLISCI 136S) Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include protecting religious liberty, financing schools and elections, regulating markets, assuring access to health care, and providing affirmative action and group rights. Issues of global justice including human rights and global inequality. GER:DB-Hum, EC-EthicReas
4-5 units, Aut (Cohen, J)

GRADUATE COURSES IN POLITICAL SCIENCE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

POLISCI 304. Selena Diana Jenkins International Human Rights Colloquium
(Same as IPS 271, INTNLREL 110, POLISCI 204) 10 international and domestic human rights scholars, judges, and activists who have made significant contributions to international justice, women's and children's rights, environmental rights, and indigenous rights. Students encouraged to present their ongoing research and develop new research projects (individually and collaboratively). Students wishing to do significant research and reading in the context of the seminar may, in consultation with one of the instructors, sign up for independent study. Law students are first required to be enrolled in an International Human Rights in the law school in order to participate.
1 unit, Win (Stacy, H)

POLISCI 310A. International Relations Theory, Part I
First of a three-part graduate sequence. History of international relations, current debates, and applications to problems of international security and political economy.
5 units, Aut (Schultz, K)

POLISCI 310B. International Relations Theory, Part II
Second of a three-part graduate sequence. History of international relations theory, current debates, and applications to problems of international security and political economy. Prerequisite: 310A.
5 units, Win (Lipscy, P)

POLISCI 310C. Research in International Relations
Third of a three-part graduate sequence. Focus is on developing research papers begun in 310A or B, and exploring active areas of research in the field. Prerequisite: 310B.
5 units, Spr (Sagan, S)

POLISCI 310R. International Conflict: Management and Resolution
(Same as IPS 250, POLISCI 210R, PSYCH 383) (Same as LAW 656) Interdisciplinary. Theoretical insights and practical experience in resolving inter-group and international conflicts. Sources include social psychology, political science, game theory, and international law. Personal, strategic, and structural barriers to solutions. How to develop a vision of a mutually bearable shared future, trust in the enemy, and acceptance of loss that a negotiated settlement may produce. Spoilers who seek to sabotage agreements. Advantages and disadvantages of unilateral versus reciprocal measures. Themes from the Stanford Center of International Conflict and Negotiation (SCICN). Prerequisite for undergraduates: consent of instructor.
3 units, Win (Ross, L; Holloway, D; Weiner, A)

POLISCI 311A. Workshop in International Relations
For graduate students. Contemporary work. Organized around presentation of research by students and outside scholars. May be repeated for credit.
1-2 units, Aut (Schultz, K)

POLISCI 311B. Workshop in International Relations
For graduate students. Contemporary work. Organized around presentation of research by students and outside scholars. May be repeated for credit.
1-2 units, Win (Schultz, K)

POLISCI 311C. Workshop in International Relations
Organized around presentation of research by students and outside scholars. May be repeated for credit.
1-2 units, not given this year

POLISCI 312S. Managing Global Complexity
(Same as IPS 201) The value of major theories and concepts in international relations for understanding and addressing global policy issues. Country case study with policy challenges such as development, democracy promotion, proliferation, and terrorism; the challenge of creating coherent policies that do not run at cross purposes. Case study of a policy challenge that cuts across academic disciplines and policy specializations to provide the opportunity to bring together skills and policy perspectives.
3 units, Spr (Krasner, S; Stoner-Weiss, K)

POLISCI 313R. Political Economy of Financial Crisis
(Same as POLISCI 213R) Political responses to domestic and international financial crises. Monetary and fiscal policy. The role of interest groups. International cooperation and the role of the IMF.
5 units, not given this year

POLISCI 314D. Democracy, Development, and the Rule of Law
(Same as IPS 230, INTNLREL 114D, POLISCI 114D) Links among the establishment of democracy, economic growth, and the rule of law. How democratic, economically developed states arise. How the rule of law can be established where it has been historically absent. Variations in how such systems function and the consequences of institutional forms and choices. How democratic systems have arisen in different parts of the world. Available policy instruments used in international democracy, rule of law, and development promotion efforts.
5 units, Aut (Diamond, L; Stoner-Weiss, K)

POLISCI 314R. Challenges and Dilemmas in American Foreign Policy
(Same as POLISCI 214R) This seminar will examine the complexities and trade offs involved in foreign policy decision-making at the end of the twentieth century and the dawn of the post-9/11 era. Students will analyze dilemmas confronting policymakers through case studies including post-conflict reconstruction and state-building, nuclear proliferation, democratization and peace negotiation. The seminar will conclude with a 48-hour crisis simulation. For advanced undergraduates and graduate students. Application for enrollment required. Pick up application in Political Science Department (Encina West 100).
5 units, Win (Rice, C)

POLISCI 314S. Decision Making in U.S. Foreign Policy
(Same as IPS 314S) Priority to IPS students. Formal and informal processes involved in U.S. foreign policy decision making. The formation, conduct, and implementation of policy, emphasizing the role of the President and executive branch agencies. Theoretical and analytical perspectives; case studies.
5 units, Spr (Blacker, C)

POLISCI 316. International History and International Relations Theory
(Same as HISTORY 202, HISTORY 306E, POLISCI 216E) The relationship between history and political science as disciplines. Sources include studies by historians and political scientists on topics such as the origins of WW I, the role of nuclear weapons in international politics, the end of the Cold War, nongovernmental organizations in international relations, and change and continuity in the international system.
5 units, not given this year

POLISCI 319. Directed Reading in International Relations
May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

POLISCI 320R. The Presidency
(Same as POLISCI 220R) A comprehensive perspective on the American presidency. Topics include elections, policy making, control of the bureaucracy, unilateral action, war making. Goal is to understand why presidents behave as they do, and why the presidency as an institution has developed as it has, with emphasis on the dynamics of the American political system and how they condition incentives, opportunities, and power.
5 units, Win (Moe, T)

POLISCI 323R. The Press and the Political Process
(Same as COMM 160, COMM 260) (Graduate students register for COMM 260.) The role of mass media and other channels of communication in political and electoral processes.
4-5 units, alternate years, not given next year

POLISCI 324. Graduate Seminar in Political Psychology
(Same as COMM 308) For students interested in research in political science, psychology, or communication. Methodological techniques for studying political attitudes and behaviors. May be repeated for credit.
1-3 units, Aut (Krosnick, J), Win (Krosnick, J), Spr (Krosnick, J)

POLISCI 325L. Positive Political Theory and the Law
(Same as POLISCI 225L) An introduction to this new and expanding field. Applications to a range of legal and political issues, including statutory interpretation, political economy of regulation, administrative law, and constitutional law.
5 units, Spr (Weingast, B)

POLISCI 326. Race and Racism in American Politics
(Same as CSRE 226, POLISCI 226) Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.
5 units, Aut (Segura, G)

POLISCI 326T. The Politics of Education
(Same as POLISCI 226T) America's public schools are government agencies, and virtually everything about them is subject to political authority and to decision making through the political process. Goal is to understand the politics of education and its impacts on the nation's schools. Focus is on the modern era of reform, with attention to the most prominent efforts to bring about fundamental change through accountability (including No Child Left Behind), school choice (charter schools, vouchers), pay for performance, and to the politics of blocking that has made genuine reform difficult to achieve.
5 units, Spr (Moe, T)

POLISCI 329. Directed Reading and Research in American Politics
May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

POLISCI 330A. Classical Seminar: Origins of Political Thought
(Same as CLASSHIS 133, CLASSHIS 333, PHIL 176A, PHIL 276A, POLISCI 230A) Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change.
4-5 units, Win (Ober, J)

POLISCI 330B. History of Political Thought II: Early Modern Political Thought, 1500-1700
(Same as POLISCI 130B) The development of constitutionalism, Renaissance humanism and the Reformation, and changing relationships between church and states. Emphasis is on the relationships among political thought, institutional frameworks, and immediate political problems and conflicts. The usefulness of the history of political thought to political science.
5 units, not given this year

POLISCI 331S. Politics and Collective Action
(Same as IPS 206A, PUBLPOL 304A) Classic theories for why collective action problems occur and how they can be solved. Politics of aggregating individual decisions into collective action, including voting, social protest, and competing goals and tactics of officials, bureaucrats, interest groups, and other stakeholders. Economic, distributive, and moral frameworks for evaluating collective action processes and outcomes. Applications to real-world policy problems involving collective action.
4 units, Spr (Hanson, W)

POLISCI 332. Graduate Seminar: John Rawls's Political Philosophy
(Same as PHIL 372D) Leading ideas in A Theory of Justice, Political Liberalism, and The Law of Peoples.
5 units, not given this year

POLISCI 332S. Theories of Civil Society, Philanthropy, and the Nonprofit Sector
(Same as ETHICSOC 132X, POLISCI 132S, POLISCI 132X) Students taking this course for a WIM, register for PoliSci 132S. The historical development and modern structure of civil society emphasizing philanthropy and the nonprofit sector. What is the basis of private action for the public good? How are charitable dollars distributed and what role do nonprofit organizations and philanthropic dollars play in a modern democracy? How do nongovernmental organizations operate domestically and globally? Readings in political philosophy, political sociology, and public policy.
5 units, Spr (Sievers, B; Reich, R)

POLISCI 332T. The Dialogue of Democracy
(Same as AMSTUD 137, COMM 137, COMM 237, POLISCI 232T) All forms of democracy require some kind of communication so people are aware of issues and make decisions. Competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small-scale discussions or sound bites on television? Or social media? What is the role of technology in changing democratic practices, to mobilize, to persuade, to solve public problems? Readings from political theory about democratic ideals from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. Contemporary examinations of the media and the Internet to see how those practices are changing and how the ideals can or cannot be realized.
4-5 units, Win (Fishkin, J)

POLISCI 334. Philanthropy and Civil Society
(Same as EDUC 374, SOC 374) Associated with the Center for Philanthropy and Civil Society (PACS). Year-long workshop for doctoral students and advanced undergraduates writing senior theses on the nature of civil society or philanthropy. Focus is on pursuit of progressive research and writing contributing to the current scholarly knowledge of the nonprofit sector and philanthropy. Accomplished in a large part through peer review. Readings include recent scholarship in aforementioned fields. May be repeated for credit for a maximum of 9 units.
1-3 units, Aut (Powell, W; Reich, R), Win (Powell, W; Reich, R), Spr (Powell, W; Reich, R)

POLISCI 336. Introduction to Global Justice
(Same as ETHICSOC 136R, INTNLREL 136R, PHIL 76, POLISCI 136R) Recent work in political theory on global justice. Topics include global poverty, human rights, fair trade, immigration, climate change. Do developed countries have a duty to aid developing countries? Do rich countries have the right to close

their borders to economic immigrants? When is humanitarian intervention justified? Readings include Charles Beitz, Thomas Pogge, John Rawls.

5 units, Spr (Oberman, K)

POLISCI 336J. Collectivities

(Same as PHIL 279) Issues about the nature of collective action, shared intention, and cooperation, the role of sociality in the nature of mind, problems of preference and judgment aggregation, and, quite generally, different ways of thinking about the relationship of I to we. Enrollment limited to 30.

4 units, not given this year

POLISCI 337. Models of Democracy

(Same as COMM 212, COMM 312, POLISCI 237) Ancient and modern varieties of democracy; debates about their normative and practical strengths and the pathologies to which each is subject. Focus is on participation, deliberation, representation, and elite competition, as values and political processes. Formal institutions, political rhetoric, technological change, and philosophical critique. Models tested by reference to long-term historical natural experiments such as Athens and Rome, recent large-scale political experiments such as the British Columbia Citizens' Assembly, and controlled experiments.

3-5 units, not given this year

POLISCI 337R. Justice at Home and Abroad: Civil Rights in the 21st Century

(Same as EDUC 261X, ETHICSOC 137R, POLISCI 137R) Focus is on theories of justice. How the core ideals of freedom, equality, and security animate theories which John Rawls considers the first virtue of social institutions. Topics include the U.S. Constitution as a legal framework for the operation of these ideals, civil rights legislation and litigation as the arena of tensions between those ideals, and how ideas of justice function both at home and abroad to impact civil liberties in today's war on terror.

5 units, Win (Reich, R; Steyer, J; Karlan, P)

POLISCI 337S. Seminar on Liberation Technologies

(Same as CS 546) This one-unit seminar will present speakers relevant in a variety of ways to how various forms of information technology are being used to defend human rights, improve governance, deepen democracy, empower the poor, promote economic development, protect the environment, enhance public health, and pursue a variety of other social goods.

1 unit, Aut (Cohen, J; Diamond, L), Win (Diamond, L; Winograd, T; Cohen, J), Spr (Winograd, T; Cohen, J)

POLISCI 339. Directed Reading and Research in Political Theory

May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

POLISCI 340L. China in World Politics

(Same as POLISCI 140L) The implications of the rise of China in contemporary world politics and for American foreign policy, including issues such as arms and nuclear proliferation, regional security arrangements, international trade and investment, human rights, environmental problems, and the Taiwan and Tibet questions.

5 units, Aut (Miller, L)

POLISCI 344. Politics and Geography

The role of geography in topics in political economy, including development, political representation, voting, redistribution, regional autonomy movements, fiscal competition, and federalism.

3-5 units, not given this year

POLISCI 344U. Political Culture

An approach to culture emphasizing equilibrium attributes through relationships among culture, choice, coordination, and common knowledge. Implications for the study of political processes and institutions.

5 units, not given this year

POLISCI 346S. The Logic of Authoritarian Government, Ancient and Modern

(Same as HISTORY 378A) If authoritarianism is less economically efficient than democracy, and if authoritarianism is a less stable form of political organization than democracy, then why are there more authoritarian governments than democracies? To address this paradox, focus is on theoretical and empirical literature on authoritarian governments, and related literatures on the microeconomic analysis of property rights and credible commitments.

5 units, not given this year

POLISCI 348. Chinese Politics: The Transformation and the Era of Reform

(Same as POLISCI 148) (Graduate students register for 348.) Overview of the reforms in China since 1978 that have made its economy one of the fastest growing in the world yet it still has the Chinese Communist Party at the helm wielding one party rule. Key questions include the following: What has been the process and challenges of reform that have reshaped China's economic landscape? What are the political consequences of these dramatic economic changes? Why has the CCP remained strong while other communist regimes have failed? Markets have spread but what is the role of the state? What are the opportunities for political participation and prospects for political change? Materials include readings, lectures, and films. No prerequisites.

5 units, Win (Oi, J)

POLISCI 349. Directed Reading and Research in Comparative Politics

May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

POLISCI 350A. Political Methodology I

(Same as POLISCI 150A) Introduction to probability and statistical inference, with applications to political science and public policy. Prerequisite: elementary calculus.

5 units, Aut (Rivers, D)

POLISCI 350B. Political Methodology II

(Same as POLISCI 150B) Understanding and using the linear regression model in a social-science context: properties of the least squares estimator; inference and hypothesis testing; assessing model fit; presenting results for publication; consequences and diagnosis of departures from model assumptions; outliers and influential observations, graphical techniques for model fitting and checking; interactions among exploratory variables; pooling data; extensions for binary responses.

5 units, Win (Jackman, S)

POLISCI 350C. Political Methodology III

(Same as POLISCI 150C) Models for discrete outcomes, time series, measurement error, and simultaneity. Introduction to nonlinear estimation, large sample theory. Prerequisite: 150B/350B.

3-5 units, Spr (Wand, J)

POLISCI 351A. Foundations of Political Economy

Introduction to political economy with an emphasis on formal models of collective choice, public institutions, and political competition. Topics include voting theory, social choice, institutional equilibria, agenda setting, interest group politics, bureaucratic behavior, and electoral competition.

4 units, Aut (Callander, S)

POLISCI 351B. Economic Analysis of Political Institutions

Applying techniques such as information economics, games of incomplete information, sequential bargaining theory, repeated games, and rational expectations of microeconomic analysis and game theory to political behavior and institutions. Applicatoins include agenda formation in legislatures, government formation in parliamentary systems, the implications of legislative structure, elections and information aggregation, lobbying, electoral competition and interest groups, the control of bureaucracies, interest group competition, and collective choice rules.

4 units, Win (Shotts, K)

POLISCI 351C. Testing Models of Governmental Decision Making

(Same as POLECON 682) This course surveys applications of formal models to several stages of decision making, primarily in the U.S. national government and with an emphasis on the legislative branch. The course begins with explicit consideration of issues in philosophy of science and introduces an analytic framework to be applied to specific research throughout remaining sessions. Substantive topics and applications covered include strategies of committees, roll call voting, policy formation, effects of special rules, congressional-presidential relations, and congressional-agency relations. Students should have taken POLECON 680 and POLECON 681. Also listed as Political Science 351C.

4 units, Spr (Krehbiel, K)

POLISCI 352. Introduction to Game Theoretic Methods in Political Science
(Same as POLISCI 152) Concepts and tools of non-cooperative game theory developed using political science questions and applications. Formal treatment of Hobbes' theory of the state and major criticisms of it; examples from international politics. Primarily for graduate students; undergraduates admitted with consent of instructor.
3-5 units, not given this year

POLISCI 353A. Workshop in Statistical Modeling
Theoretical aspects and empirical applications of statistical modeling in the social sciences. Guest speakers. Students present a research paper. Prerequisite: 350B or equivalent.
1-2 units, Aut (Wand, J)

POLISCI 353B. Workshop in Statistical Modeling
Continuation of 353A. Prerequisite: 353A.
1-2 units, Win (Wand, J)

POLISCI 353C. Workshop in Statistical Modeling
Continuation of 353A. May be repeated for credit. Prerequisite: 353A.
1-2 units, Spr (Wand, J)

POLISCI 357. Sampling and Surveys
(Same as POLISCI 157) The importance of sample surveys as a source of social science data including public opinion, voting, welfare programs, health, employment, and consumer behavior. Survey design, sampling theory, and estimation. Nonresponse, self-selection, measurement error, and web survey methods. Prerequisite: 150B or equivalent.
5 units, not given this year

POLISCI 359. Advanced Individual Study in Political Methodology
May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

POLISCI 364. Theories of Political Institutions
Organized activity as it reflects the organization of political life. Eclectic and interdisciplinary. Emphasis is on political institutions and formal organizations, and the norms, expectation, and routines characteristic of informal political structure.
4 units, not given this year

POLISCI 365. Organizational Decision Making
Behavioral theories of organization. Emphasis is on the institutional applications of bounded rationality. Models of incrementalism; evolutionary models of change; organizational learning. The differences between predictions of theories of perfect rationality and those of imperfect rationality. Organizational responses (constructive and pathological) to constraints on information processing. Institutional contexts; public agencies and firms.
5 units, not given this year

POLISCI 369. Directed Reading and Research in Political Organizations
Advanced individual study in public administration. (Staff)
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

POLISCI 400. Dissertation
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

POLISCI 403. International Conflict Resolution Colloquium
(Same as PSYCH 283) (Same as LAW 611.) Sponsored by the Stanford Center on International Conflict and Negotiation (SCICN). Conflict, negotiation, and dispute resolution with emphasis on conflicts and disputes with an international dimension, including conflicts involving states, peoples, and political factions such as the Middle East and Northern Ireland. Guest speakers. Issues including international law, psychology, and political science, economics, anthropology, and criminology.
1 unit, not given this year

POLISCI 404. Dispute Resolution in International Economic Law
(Same as LAW 356.) Topics include: theoretical work on international trade and investment disputes; empirical work on WTO dispute resolution and the efficacy of developing country participation; and legal analysis of current, prominent disputes in the WTO and under international investment treaties. Substantial paper required. May be repeated for credit.
1 unit, Win (Bagwell, K; Sykes, A)

POLISCI 420A. Approaches to the Study of American Politics
Theories of American politics, focusing on Congress, the presidency, the bureaucracy, and the courts.
5 units, Aut (Segura, G; Grimmer, J)

POLISCI 420B. Topics in American Political Behavior
For graduate students with background in American politics embarking on their own research. Current research in American politics, emphasizing political behavior and public opinion. Possible topics: uncertainty and ambivalence in political attitudes, heterogeneity in public opinion, the structure of American political ideology, political learning, the media as a determinant of public opinion, and links between public opinion and public policy.
5 units, Win (Sniderman, P; Iyengar, S)

POLISCI 420C. American Political Institutions
Field seminar. Major theoretical perspectives, controversies, and literature on the substance of American politics, including Congress, the Presidency, federalism, bureaucracy, and the courts. Preparation for performing publishable research. Prerequisites: 420A,B.
5 units, Spr (Cox, G)

POLISCI 422. Workshop in American Politics
Research seminar. Frontiers in mass political behavior. Sources include data sets from the 2004 election cycle. Prerequisite: 420B or equivalent.
1-2 units, Aut (Segura, G; Jackman, S), Win (Jackman, S; Segura, G), Spr (Jackman, S; Segura, G)

POLISCI 423P. Race in American Politics
This course focuses on the role of racism in shaping the political choices of the ordinary American in the twenty-first century. Its premise is the necessity of rigorous conceptual and empirical analysis. Among the questions that it will probe are: To what extent do explicitly racist attitudes persist? How important a force in politics is subtle or implicit racism? To what extent are there counter-balancing forces, and to the extent that they are, how do they express themselves politically?
5 units, Spr (Sniderman, P)

POLISCI 430A. Wealthy Hellas
(Same as CLASSHIS 330A) Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, however (much of it conducted here at Stanford), suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. We will develop and test hypotheses to explain the rate and pace of economic change in the Greek world.
4-5 units, Win (Ober, J; Morris, I)

POLISCI 430B. Wealthy Hellas
(Same as CLASSHIS 330B) Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, much of it conducted at Stanford, suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. Students develop and test hypotheses to explain the rate and pace of economic change in the Greek world.
1-5 units, Spr (Ober, J; Morris, I)

POLISCI 431L. Graduate Seminar on Equality
(Same as PHIL 371D) Focus on ideas of equality of opportunity, with readings from political theory, as well as American constitutional law, political science, economics, and sociology. What is equality of opportunity? Why is equality of opportunity an important requirement of justice? What are the principal sources of inequalities of opportunity? And how might those inequalities be remedied? Readings from: Hayek, Rawls, Dworkin, Okin, Roemer, Tawney, Bourdieu, Barry, Jencks, Mazumder, Alstott, McLanahan, and Heckman.
5 units, Win (Cohen, J)

POLISCI 433. Workshop in Political Theory
For graduate students. May be repeated for credit.
1-2 units, Aut (Cohen, J; Reich, R), Win (Cohen, J; Reich, R), Spr (Cohen, J; Reich, R)

POLISCI 438. Democracy and the Constitution
(Same as PHIL 374C)
5 units, Aut (Cohen, J)

POLISCI 440A. Theories in Comparative Politics
Required of Political Science Ph.D. students with comparative politics as first or second concentration; others by consent of instructor. Theories addressing major concerns in the comparative field including democracy, regime change, the state, revolutions, national heterogeneity, and economic performance.
5 units, Aut (Laitin, D)

POLISCI 440B. Political Economy of Development
(Same as HISTORY 378E) Required of Political Science Ph.D. students with comparative politics as a first or second concentration; others by consent of the instructor. The origins of political and economic institutions and their impact on long run outcomes for growth and democracy. Emphasis is on the analysis of causal models, hypothesis testing, and the quality of evidence.
5 units, Win (Haber, S)

POLISCI 440C. Methods in Comparative Politics
Required of Political Science Ph.D. candidates with comparative politics as a first or second concentration; others by consent of instructor. Current methodological standards in comparative politics. Students develop their own research design that meets these standards.
5 units, Spr (Wand, J; Laitin, D)

POLISCI 440D. Workshop in Comparative Politics
Faculty, guest speakers, and graduate students conducting research in comparative politics present work-in-progress. Graduate students may enroll for up to 5 total units apportioned by quarter. Auditors welcome. Graduate students whose major or minor field is comparative politics must make at least one presentation to the seminar.
1-2 units, Aut (Magaloni, B; Blaydes, L), Win (Blaydes, L; Magaloni, B), Spr (Magaloni, B; Blaydes, L)

POLISCI 441L. Grad Seminar on Middle Eastern Politics
Survey of major topics in the study of Middle Eastern politics including state formation, authoritarian resilience and political Islam
5 units, Win (Blaydes, L)

POLISCI 443S. Political Economy of Reform in China
Content, process, and problems of China¿s post-Mao reforms. Changes in property rights, markets, credit, and the role of the state in economic development. Comparative insights about reform in the Chinese communist system that distinguishes it from the experience of regimes in E. Europe and the former Soviet Union.
5 units, not given this year

POLISCI 443T. Approaches to Chinese Politics
Major secondary literature on Chinese politics, involving the evolution of theoretical concepts and social scientific approaches characterizing the field. Subjects include changes made to defining fundamental issues of Chinese political theory, and the implications of shifts in research methods and analytical tools. Prerequisite: basic knowledge of politics of post-1949 China.
5 units, Spr (Oi, J)

POLISCI 444. Comparative Political Economy: Advanced Industrial Societies
Political economy approaches to key policy outcomes including redistribution, the size of government, fiscal behavior, and pork-barrel politics. Theories related to institutions, interest groups, and geography, focusing on middle- and upper-income countries.
3-5 units, not given this year

POLISCI 448R. Workshop: China Social Science
(Same as SOC 368W) For Ph.D. students in the social sciences and history. Research on contemporary society and politics in the People's Republic of China. May be repeated for credit. Prerequisite: consent of instructor.
1 unit, Aut (Walder, A; Oi, J), Win (Walder, A; Oi, J), Spr (Walder, A; Zhou, X; Oi, J)

POLISCI 451. Design and Analysis of Experiments
5 units, Spr (Iyengar, S; Jackman, S)

POLISCI 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

POLISCI 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PORTUGUESE LANGUAGE (PORTLANG) COURSES

UNDERGRADUATE COURSES IN PORTUGUESE LANGUAGE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

PORTLANG 1. First-Year Portuguese, First Quarter
Emphasis is on oral comprehension and proficiency in speaking. Students learn the language as they contrast Brazilian culture with their own. Lab. Completion of 3 fulfills the University Foreign Language Requirement.
5 units, Aut (Staff)

PORTLANG 1A. Accelerated First-Year Portuguese, Part 1
For students with two years of college level study of a Romance language, preferably Spanish. Goal is to use socially and culturally appropriate forms in conversations, providing and obtaining information, and expressing feelings, emotions, and opinions. Students learn the language as they contrast Brazilian culture with their own. Lab. Completion of 2A fulfills the University's foreign language requirement.
3-5 units, Aut (Sotelino, K), Win (Sotelino, K), Spr (Sotelino, K)

PORTLANG 2. First-Year Portuguese, 2nd Quarter
Continuation of 1. Speaking and oral comprehension and reading and writing skills. Lab. Prerequisite: 1.
5 units, Win (Staff)

PORTLANG 2A. Accelerated First-Year Portuguese, Part 2
Continuation of 1A. Completion of 2A fulfills the University's foreign language requirement.
3-5 units, Aut (Wiedemann, L), Win (Wiedemann, L), Spr (Wiedemann, L)

PORTLANG 3. First-Year Portuguese
Emphasizes speaking and oral comprehension proficiency and the development of reading and writing skills. Literary and journalistic readings, studying of Brazilian popular music, and viewing short documentaries are the basis for discussions on Brazilian culture and current events. Lab. Completion of 3 fulfills the University Foreign Language Requirement. Prerequisite: 2 or equivalent.
5 units, Spr (Staff)

PORTLANG 11A. Accelerated Second-Year Portuguese, Part 1
Goal is to use socially and culturally appropriate forms in narrations, descriptions, and expression of ideas and opinions Prerequisite: first-year sequence, equivalent, or consent of instructor.
3-5 units, Aut (Wiedemann, L), Win (Wiedemann, L), Spr (Wiedemann, L)

PORTLANG 12A. Accelerated Second-Year Portuguese, Part 2
Continuation of 11A. Goal is to use socially and culturally appropriate forms in narrations, descriptions, and expression of ideas and opinions. Emphasis on expository writing. Prerequisite: 11A, equivalent, or consent of instructor.
3-5 units, Aut (Wiedemann, L), Win (Wiedemann, L), Spr (Wiedemann, L)

PORTLANG 50. Reading in Portuguese
Introductory class for students with superior reading proficiency in Spanish or another Romance language. Reading competence for research and courses in Luso-Brazilian studies. Literary, journalistic, and academic readings. Fulfills University reading requirement for advanced degrees. May be offered alternate years.
3-4 units, Spr (Staff)

PORTLANG 99. Language Specials
Prerequisite: consent of instructor. (Staff)
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

PORTLANG 101. Reading Brazil
For intermediate or advanced students. Short expository readings, guest lectures, discussions, compositions on Brazilian issues. Review of grammatical structures. Vocabulary building with emphasis on common idiomatic expressions and troublesome lexical

distinctions. Prerequisite: 12A or equivalent, or consent of instructor.

3-4 units, Aut (Wiedemann, L)

PORTLANG 102. Brazil in Text: Advanced Grammar and Composition

For intermediate and advanced students. Further development of academic writing. Short fictional and expository readings, guest lectures, discussions, compositions on Brazilian issues. Emphasis is on building paragraphs, organizing arguments, and justifying positions. May be used as workshop to write papers in Portuguese for another course. May be repeated once for credit. Prerequisite: 12A or equivalent, or consent of instructor.

3-4 units, Win (Wiedemann, L)

PORTLANG 103. Advanced Conversation: Brazil Today

For intermediate and advanced students. Reading and discussions on issues from current newspapers and magazines, reading comprehension strategies with online news updates, and vocabulary building with emphasis on formal expository writing. Writing practice if desired. Students prepare short presentations and lead subsequent discussions. May be repeated once for credit. Prerequisite: 12A or consent of instructor.

3 units, Spr (Wiedemann, L)

PORTLANG 193Q. Spaces and Voices of Brazil through Film

(Stanford Introductory Seminar) (Same as ILAC 193Q) How a country is perceived and defines itself is a result of complex forces, and involves the reproduction of social relations and complex social constructions both on the part of those who live there and those who see it from a distance. The perceptions of what Brazil is and what defines the country has changed, but has conserved some defining traits. Introduction to the history, culture, politics, and artistic production of Brazil through feature films, documentaries, and readings. Movies include Banana is my Business, Black Orpheus, Olga, They Don't Use Black-Tie, City of God, Central Station, Gaijin, and Four Days in September. In English. GER:DB-Hum, EC-GlobalCom

3-4 units, Aut (Wiedemann, L)

GRADUATE COURSES IN PORTUGUESE LANGUAGE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

PORTLANG 297. Directed Reading

Prerequisite: consent of instructor. (Staff)

1-4 units, Aut (Staff), Win (Staff), Spr (Staff)

PORTLANG 394. Graduate Studies in Portuguese Conversation

Prerequisite: consent of instructor. (Staff)

1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

PORTLANG 395. Graduate Studies in Portuguese

Prerequisite: consent of instructor. (Staff)

2-5 units, Aut (Staff), Win (Staff), Spr (Staff)

PSYCHOLOGY (PSYCH) COURSES

UNDERGRADUATE COURSES IN PSYCHOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

PSYCH 1. Introduction to Psychology

Human behavior and mental processes including the nervous system, consciousness, learning, memory, development, emotion, psychopathology, interpersonal process, society, and culture. Current research. GER:DB-SocSci

5 units, Aut (Gross, J), Win (Knutson, B), Spr (Walton, G)

PSYCH 7Q. Language Understanding by Children and Adults

(Stanford Introductory Seminar) How do we first learn to find meaning in strings of speech sounds? Understanding spoken language requires the rapid integration of acoustic information with linguistic knowledge and with conceptual knowledge based on experience with how things happen in the world. Topics include research on early development of language understanding and laboratory methods of how young children make sense of speech. Observations of preschool children and visits to Stanford laboratories. Might be repeatable for credit.

3 units, Aut (Fernald, A)

PSYCH 8N. The New Longevity

(Stanford Introductory Seminar) Preference to freshmen. Adult development from the perspective of life-span theory, a conceptual framework that views development as a series of adaptations to physical, societal and individual resources and constraints. Demographic and medical changes, how individuals typically change socially, emotionally and cognitively as they move through adulthood. An understanding of the conceptual foundations of the life-span approach and place aging of young people today in historical context. GER:DB-SocSci

3 units, Spr (Carstensen, L)

PSYCH 10. Introduction to Statistical Methods: Precalculus

(Same as STATS 60, STATS 160) Techniques for organizing data, computing, and interpreting measures of central tendency, variability, and association. Estimation, confidence intervals, tests of hypotheses, t-tests, correlation, and regression. Possible topics: analysis of variance and chi-square tests, computer statistical packages. GER:DB-Math

5 units, Aut (Walther, G), Win (Thomas, E), Spr (Taylor, J), Sum (Richards, W)

PSYCH 11N. Origin of Mental Life

(Stanford Introductory Seminar) Preference to freshmen. Mental life in infancy; how thinking originates. How do babies construe the objects, events, people, and language that surround them? Recent advances in psychological theory, hypotheses, and evidence about how the infant human mind develops. GER:DB-SocSci

3 units, Spr (Markman, E)

PSYCH 12N. Self Theories

(Stanford Introductory Seminar) Preference to freshmen. The impact of people's belief in a growing versus fixed self on their motivation and performance in school, business, sports, and relationships. How such theories develop and can be changed. GER:DB-SocSci

3 units, Aut (Dweck, C)

PSYCH 26N. Language Acquisition: Exploring the Minds of Children

(Stanford Introductory Seminar) Language is an extraordinary competence distinguishing humans from other species, yet there is debate about the role of biology in guiding language acquisition. Does language development follow an innate ¿bioprogram¿ or does it build on more general cognitive abilities, influenced by early experience? Topics include biological and experiential influences on the emergence of linguistic ability as children learn a first language. Discussions of theory and research, visits to Stanford laboratories and observations of very young language learners.

3 units, Win (Fernald, A)

PSYCH 28N. The Cultural Shaping of Mental Health and Illness

(Stanford Introductory Seminar) (Same as CSRE 28N) This seminar examines how our cultural ideas and practices shape our conceptions, perceptions, experiences, and treatment of emotional wellness and distress. We will read and discuss empirical research and case studies from psychology, anthropology, sociology, and medicine. Course requirements include weekly reading and thought papers, weekly discussion, and a final research project and presentation.

3 units, Win (Tsai, J)

PSYCH 30. Introduction to Perception

Behavioral and neural aspects of perception focusing on visual and auditory perception. Topics include: scientific methods for studying perception, anatomy and physiology of the visual and auditiory systems, color vision, depth perception, motion perception, stereopsis, visual recognition, pitch and loudness perception, speech perception, and reorganization of the visual system in the blind. GER:DB-NatSci

3 units, Aut (Grill-Spector, K)

PSYCH 45. Introduction to Learning and Memory

The literature on learning and memory including cognitive and neural organization of memory, mechanisms of remembering and forgetting, and why people sometimes falsely remember events that never happened. Cognitive theory and behavioral evidence

integrated with data from patient studies and functional brain imaging. Recommended: 1.

3 units, Spr (Wagner, A)

PSYCH 50. Introduction to Cognitive Neuroscience

Topics in human neuropsychology. The functional organization of the human nervous system and of brain imaging techniques (MRI, PET). Hemispheric specialization and the brain basis of perception, memory, language, emotion, spatial cognition, and problem solving. Neuropsychological deficits in neurological disorders and their implications in understanding normal function. Recommended: 1 GER:DB-NatSci

4 units, Aut (McClure, S)

PSYCH 55. Introduction to Cognition and the Brain

Major topics in cognitive psychology and neuroscience, including empirical approaches to perception, language, learning, memory, knowledge representation, problem solving, and reasoning.

4 units, Win (Boroditsky, L)

PSYCH 60. Introduction to Developmental Psychology

Psychological development from birth to adulthood, emphasizing infancy and the early and middle childhood years. The nature of change during childhood and theories of development. Recommended: 1. GER:DB-SocSci

3 units, Win (Frank, M)

PSYCH 60A. Introduction to Developmental Psychology Section

Guided observation of children age 2-5 at Bing Nursery School. Corequisite: 60.

2 units, Win (Lomangino, A; Hartman, B; Robinette, K)

PSYCH 70. Introduction to Social Psychology

Topics related to the influence of other people on individuals' thoughts, emotions, and behaviors. Factors that affect the way that we perceive ourselves and others; how people influence others; how persuasion happens; what causes us to like, love, help, or hurt others; and how social psychology helps to understand quesions about law, business, and health. GER:DB-SocSci

4 units, Win (Brown, J)

PSYCH 75. Introduction to Cultural Psychology

The cultural sources of diversity in thinking, emotion, motivation, self, personality, morality, development, and psychopathology. Recommended: 1. WIM GER:DB-SocSci, EC-GlobalCom

5 units, Spr (Markus, H)

PSYCH 80. Introduction to Personality and Affective Science

Current empirical and theoretical approaches to personality. How and why do people differ? Does personality change over time? Can people change their personalities? What makes people happy? What are the physical, mental, and social consequences of personalities? Prerequisite: 1. GER:DB-SocSci

3 units, Spr (Tsai, J)

PSYCH 90. Introduction to Clinical Psychology

History of clinical psychology, models and assessment of personality, behavior, cognition, psychopathology, and approaches to the treatment of abnormal behavior. Emphasis is on current theory, research, issues in, and the role of clinical psychology in contemporary society. Recommended: 1. GER:DB-SocSci

3 units, Aut (Haas, A)

PSYCH 101. Community Health Psychology

(Same as HUMBIO 128) Social ecological perspective on health emphasizing how individual health behavior is shaped by social forces. Topics include: biobehavioral factors in health; health behavior change; community health promotion; and psychological aspects of illness, patient care, and chronic disease management. Prerequisites: HUMBIO 3B or PSYCH 1, or equivalent.

4 units, Win (Heaney, C)

PSYCH 102. Longevity

(Same as HUMBIO 149L, NENS 202) Interdisciplinary. Challenges to and solutions for the young from increased human life expectancy: health care, financial markets, families, work, and politics. Guest lectures from engineers, economists, geneticists, and physiologists. GER:DB-SocSci

4 units, given next year

PSYCH 104. Uniquely Human

Are humans the only species that displays altruism, experiences uncertainty, and is capable of language and deception? Sources include empirical and theoretical papers in comparative psychology. Prerequisite: 1.

3 units, Win (Hard, B)

PSYCH 104S. Affective Neuroscience

New frontiers in neuroscience research on emotion. Topics such as neuroscience methodologies, genetic contributions to the experience of emotion, neural bases of emotion, animal models of emotion, and biological approaches to emotional or affective dysfunction.

3 units, Sum (Ballard, K; Wu, C)

PSYCH 105S. General Psychology

The scientific study of behavior and mental processes focusing on history, methods, and findings of the field of psychology. How psychology affects people's lives. How to evaluate psychological claims.

3 units, Sum (Popick, J; Chen, M; Jacobs, S)

PSYCH 107S. Introduction to Social Psychology

A comprehensive overview of social psychology with in-depth lectures exploring the history of the field, reviewing major findings and highlighting areas of current research. Focus is on classic studies that have profoundly changed our understanding of human nature and social interaction, and, in turn, have triggered significant paradigm shifts within the field. Topics include: individuals and groups, conformity and obedience, attraction, intergroup relations, and judgment and decision-making.

3 units, Sum (Hetey, R; Carr, P; Brannon, T)

PSYCH 109S. Cognitive Psychology

Theories and empirical findings in the field of cognitive psychology. How do people perceive? How do they remember? How do they think? How such questions are addressed in the areas of memory, language, perception, reasoning, judgment, and decision making.

3 units, Sum (Toskos, A; Paluy, Y)

PSYCH 110. Research Methods and Experimental Design

Structured research exercises and design of an individual research project. Prerequisite: consent of instructor. GER:DB-SocSci

5 units, not given this year

PSYCH 111S. Abnormal Psychology

What is it like to be clinically depressed, to see things no one else sees, to be a victim of a traumatic experience? What are psychological, biological, and social factors involved in depression, schizophrenia, or post-traumatic stress disorder? The subjective experience, causal factors, clinical presentation, methods of assessment, treatment, and sociocultural context of psychological disorders.

3 units, Sum (Szczurek, L; Zolotsev, P)

PSYCH 113S. Developmental Psychology

A unified view of the developing child. How developmental psychology can be applied to the general understanding of children and the process of growing into adulthood. Findings in the areas of the child's cognitive, language, social, neurological, physical, emotional, personality, and moral development. Strengths and weaknesses of various perspectives and approaches scientists use to learn about children.

3 units, Sum (Weisleder Grynspan, A; Mazur, H; Romero, C)

PSYCH 115S. Personality Psychology

Focus on current empirical and theoretical approaches to personality. Lectures organized around the following questions central to personality research: How and why do people differ? How are individual differences measured? Does personality change over time? How does personality interact with sociocultural factors to influence behavior? What makes people happy? What are the physical, mental, and social consequences of personalities?

3 units, Sum (Chim, L; Sims, T; Henetz, T)

PSYCH 119. Psychology and Public Policy

(Same as PUBLPOL 172) Applications of psychology to public and social policy. Factors that affect the influence of psychological research and individual psychology on the creation of policy, and the influence of policy on attitudes and behavior at the personal and societal levels. Topics include education, health care, and criminal justice.

5 units, not given this year

PSYCH 120. Cellular Neuroscience: Cell Signaling and Behavior
(Same as BIO 153) Neural interactions underlying behavior. Prerequisites: PSYCH 1 or basic biology. GER:DB-NatSci
4 units, not given this year

PSYCH 124S. Applying Psychology to Modern Life
A scientific examination of everyday modern life. Topics include: how research on attention and memory can be applied to improve study strategies; how advertisers persuade and how their techniques can be resisted; how interpersonal conflicts can be avoided through knowledge of common errors in judging other people; and how studies on attraction and love can improve close relationships.
3 units, Sum (Master, A; Butler, L)

PSYCH 125. Beyond Stereotype Threat: Claiming a Rightful Place in an Academic Community
(Same as CTL 130) Stereotype threat as mitigating the quality of a student's test performance; its impact on academic success at Stanford. How to reduce the impact of stereotype threat on Stanford students.
3 units, Win (Glickman, A)

PSYCH 131. Language and Thought
(Same as PSYCH 262) The psychology of language including: production and understanding in utterances; from speech sounds to speaker's meaning; children's acquisition of the first language; and the psychological basis for language systems. Language functions in natural contexts and their relation to the processes by which language is produced, understood, and acquired. Prerequisite: 1 or LINGUIST 1. GER:DB-SocSci
4 units, Aut (Clark, H)

PSYCH 132. Introduction to Cognitive and Information Sciences
(Same as LINGUIST 144, PHIL 190, SYMSYS 100) The history, foundations, and accomplishments of the cognitive sciences, including presentations by leading Stanford researchers in artificial intelligence, linguistics, philosophy, and psychology. Overview of the issues addressed in the Symbolic Systems major. GER:DB-SocSci
4 units, Spr (McClelland, J; van Benthem, J)

PSYCH 133. Human Cognitive Abilities
(Same as EDUC 369) Psychological theory and research on human cognitive abilities; their nature, development, and measurement; and their importance in society. Persistent controversies and new areas of research, recent perspectives on the nature-nurture debate and the roles of genetics, health and education in shaping HCAs. Prerequisite: PSYCH 1 or equivalent. (PSE) GER:DB-SocSci, DB-SocSci
3 units, not given this year

PSYCH 134. Seminar on Language and Deception
Deceptive, exploitative, and other noncooperative uses of language. How is language used to deceive or exploit? Where are these techniques practiced and why? What are the personal, ethical, and social consequences of these practices? Prerequisite: 131, LINGUIST 1, or PHIL 181. GER:DB-SocSci
3 units, Win (Clark, H)

PSYCH 138. Wise Interventions
(Same as PSYCH 238) Classic and contemporary psychological interventions; the role of psychological factors in social reforms for social problems involving healthcare, the workplace, education, intergroup, relations, and the law. Topics include theories of intervention, the role of laboratory research, evaluation, and social policy.
4 units, Win (Walton, G)

PSYCH 140S. Sport Psychology
Focus is on research methods and findings and how to apply these findings to students' own performance. Topics include methods of performance enhancement, psychological characteristics of top performers, group dynamics and processes, effective leadership practices, the effects of stereotyping on sport participation and performance, and debates in the field. Emphasis is on sports, although most topics can be applied to performance in general.
3 units, Sum (Zitek, E)

PSYCH 141. Cognitive Development
How children's thinking and mental abilities change from infancy on. The major theories and explanations of intellectual growth. Sources include classic findings and state-of-the-art research on cognitive development. Prerequisite: 1. GER:DB-SocSci
3 units, Aut (Markman, E)

PSYCH 143. Developmental Anomalies
For advanced students. Developmental disorders and impairments. What the sparing of mental abilities in otherwise devastating disorders (or vice versa) tells about the mind and its development in the normal case. Examples of disorders and impairments: autism, congenital blindness, deafness, mental retardation, attachment disorder, and Williams syndrome. Limited enrollment. Prerequisite: consent of instructor. GER:DB-SocSci
3 units, not given this year

PSYCH 145. Seminar on Infant Development
For students preparing honors research. Conceptual and methodological issues related to research on developmental psycholinguistics; training in experimental design; and collection, analysis, and interpretation of data.
1-2 units, Spr (Fernald, A)

PSYCH 146. Observation of Children
Learning about children through guided observations at Bing Nursery School, Psychology's lab for research and training in child development. Physical, emotional, social, cognitive, and language development. Recommended: 60. GER:DB-SocSci
3-5 units, Aut (Hartman, B; Lomangino, A; Robinette, K), Spr (Hartman, B; Lomangino, A; Robinette, K)

PSYCH 147. Development in Early Childhood
Supervised experience with young children at Bing Nursery School. 3 units require 4 hours per week in Bing classrooms throughout the quarter; 4 units require 7 hours per week; 5 units require 10.5 hours per week. Seminar on developmental issues in the Bing teaching/learning environment. Recommended: 60 or 146, or consent of instructor.
3-5 units, Aut (Winters, J; Chandra, P; O'Hanlon, E), Win (Winters, J; Chandra, P; O'Hanlon, E), Spr (Winters, J; Chandra, P; O'Hanlon, E)

PSYCH 149. The Infant Mind: Cognitive Development over the First Year
How do babies learn so much in so little time? Emphasis is on cognitive and perceptual development, and the relationship between brain and behavior in infancy. Prerequisite: 1. Recommended: 60 or 141. GER:DB-SocSci
3 units, not given this year

PSYCH 150. Race and Crime
Topics in race, crime, and punishment in the United States. Readings and discussion focus on theoretical and empirical research on policing, sentencing, and incarceration. Readings will be drawn from psychology, sociology, criminology, economics, and legal studies.
3 units, Win (Eberhardt, J)

PSYCH 151. Emotion Regulation and Psychopathology
Overview of specific emotion regulation impairments in various psychopathologies and discussion of how current treatment protocols are likely to aid recovery by forming more adaptive emotion regulation ability. Topics include: foundations and emotion regulation models, emotion regulation impairments in mood disorders (unipolar depression and bipolar disorder), anxiety disorders (social phobia, post traumatic stress disorder, general anxiety disorder), eating disorders (anorexia and bulimia nervosa), and personality disorders (narcissistic personality disorder, borderline personality disorder).
3 units, Win (Staff)

PSYCH 152. Mediation for Dispute Resolution
(Same as EDUC 131) Mediation as more effective and less expensive than other forms of settling disputes such as violence, lawsuits, or arbitration. How mediation can be structured to maximize the chances for success. Simulated mediation sessions.
3 units, Aut (Krumboltz, J)

PSYCH 154. Judgment and Decision-Making
Survey of research on how we make assessments and decisions particularly in situations involving uncertainty. Emphasis will be on instances where behavior deviates from optimality. Overview of recent works examining the neural basis of judgment and decision-making.
3 units, Spr (McClure, S)

PSYCH 155. Introduction to Comparative Studies in Race and Ethnicity
(Same as CSRE 196C, ENGLISH 172D, SOC 146) How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. GER:DB-SocSci, EC-AmerCul
5 units, Win (Markus, H; Moya, P)

PSYCH 157. Social Foundations of Expertise and Intelligence
Psychological conceptions of expertise, ability, and intelligence and the research methods used to study these attributes. Topics include: research on how expertise in a diverse set of disciplines is developed; the role of practice in nurturing expertise; whether intelligence predicts life outcomes; the genetic and environmental determinants of intelligence; whether genes or environment explain racial differences such as the Black-White performance gap and the East Asian achievement advantage; and the Flynn effect.
3 units, not given this year

PSYCH 158. Emotions: History, Theories, and Research
(Same as PSYCH 259) Graduate students register for 259. Theoretical and empirical issues in the domain of emotions. The history of emotion theories, current approaches, and the interaction between emotion and cognition.
1-3 units, not given this year

PSYCH 159. Psychology of Attitude Change and Social Influence
Review of classic and current research on attitudes, attitude change and persuasion. Increase appreciation for the ways that our thoughts, actions, and feelings are shaped and manipulated by social influences.
3 units, Spr (Brown, J)

PSYCH 161. Emotion
(Same as PSYCH 261) (Graduate students register for 261.) The scientific study of emotion. Topics: models of emotion, emotion antecedents, emotional responses (facial, subjective, and physiological), functions of emotion, emotion regulation, individual differences, and health implications. Focus is on experimentally tractable ideas. GER:DB-SocSci
3 units, not given this year

PSYCH 165. Peace Studies
(Same as POLISCI 111) Interdisciplinary. The challenges of pursuing peace in a world with many conflicts and rising regional, ethnic, and religious antagonisms. Historical, social, psychological, and moral perspectives. Contributions of academic disciplines to the study of peace. Students explore a conflict and offer contributions to the building of peace. Limited enrollment. GER:DB-SocSci
5 units, not given this year

PSYCH 167. Seminar on Aggression
The causes and modification of individual and collective aggression. Major issues in aggression: social labeling of injurious conduct, social determinants of aggression, effects of the mass media, institutionally sanctioned violence, terrorism, psychological mechanisms of moral disengagement, modification of aggressive styles of behavior, and legal sanctions and deterrence doctrines.
3 units, not given this year

PSYCH 168. Emotion Regulation
(Same as PSYCH 268) (Graduate students register for 268.) The scientific study of emotion regulation. Topics: historical antecedents, conceptual foundations, autonomic and neural bases, individual differences, developmental and cultural aspects, implications for psychological and physical health. Focus is on experimentally tractable ideas. GER:DB-SocSci
3 units, Spr (Gross, J)

PSYCH 171. Research Seminar on Aging
Two quarter practicum exposes students to multiple phases of research by participating in a laboratory focusing on social behavior in adulthood and old age. Review of current research; participation in ongoing data collection, analysis, and interpretation. Prerequisites: 1, research experience, and consent of instructor.
4 units, Aut (Carstensen, L), Win (Carstensen, L), Spr (Carstensen, L)

PSYCH 179. The Psychology of Everyday Morality
(Same as PSYCH 270) (Graduate students register for 270.) For graduate students, coterms, and senior Psychology majors. Traditional approaches focusing on how morality colors mundane human activities such as eating and on morality as defined by actors themselves rather than social scientists. Moral hypocrisy, food and disgust, taboo trade-offs, moral reproach, and prejudice with compunction. Limited enrollment. Prerequisite: 70 and consent of instructor.
4 units, not given this year

PSYCH 183. Mind, Culture, and Society Research Core
Required of students in the mind, culture, and society specialization track. Research training on a variety of projects that explore how social identities such as race, class, gender, and culture affect psychological experiences across domains including education, law, business and health. Must participate for two consecutive quarters. Permission of instructor required.
2-3 units, Aut (Markus, H; Eberhardt, J), Win (Eberhardt, J; Markus, H), Spr (Markus, H; Eberhardt, J)

PSYCH 186. The Psychology of Everyday Morality
(Same as PSYCH 286) Recent literature on morality from a social psychological perspective. Topics include moral judgment, moral intuitions, moral hypocrisy, moral identity, moralization, moral reproach, shame and guilt, temptations, and self-regulation. Contemporary psychological research emphasizing descriptive approaches (what people actually do) rather than normative ones (what one should do).
3 units, not given this year

PSYCH 189. Stanford Center on Longevity Practicum
Student involvement in an interdisciplinary center aimed at changing the culture of human aging using science and technology.
3 units, Aut (Carstensen, L), Win (Carstensen, L), Spr (Carstensen, L), Sum (Carstensen, L)

PSYCH 190. Special Research Projects
May be repeated for credit. Prerequisite: consent of instructor.
1-6 units, Aut (Staff), Win (Monin, B), Spr (Staff)

PSYCH 193. Special Laboratory Research
May be repeated for credit. Prerequisites: 1, 10, and consent of instructor.
1-6 units, Aut (Staff), Win (Dweck, C), Spr (Staff), Sum (Staff)

PSYCH 194. Reading and Special Work
Independent study. May be repeated for credit. Prerequisite: consent of instructor.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PSYCH 195. Special Laboratory Projects
Independent study. May be repeated for credit. Prerequisites: 1, 10, and consent of instructor.
1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PSYCH 196. Contemporary Psychology: Overview of Theory, Research, Applications
Capstone experience for juniors and seniors that bridges course work with research opportunities. Lectures representing the department's areas: social, personality, developmental, neuroscience, and cognitive psychology. Faculty present current research. Discussions led by advanced graduate students in the field represented by that week's guest. Students write research proposals. Small grants available to students to conduct a pilot study of their proposed research. Limited enrollment. Prerequisite: consent of instructor. GER:DB-SocSci
3 units, Aut (Clark, H)

PSYCH 198. Senior Honors Research
Limited to students in the senior honors program. Finishing the research and data analysis, written thesis, and presentation at the Senior Honors Convention. May be repeated for credit.
1-4 units, Aut (Staff), Win (Ross, L), Spr (Ross, L)

PSYCH 199. Temptations and Self Control
(Same as PSYCH 299) (Graduate students register for 299.) Why do people do things that that they come to regret? How can people minimize behavior such as exercise avoidance, angry words, overeating, unsafe sex, and dangerous driving? Sources include classical and current research from experimental psychology, neuroscience, behavioral economics, and neuroeconomics. Real-world applications.
2 units, not given this year

PSYCH 289. Sensory Representations in Language and Memory
Is recollecting an experience similar to re-experiencing it? How closely tied is one's knowledge to the perceptual representations and processes that may have given rise to it? What role do perceptuo-motor representations play in understanding language? The recent literature on perceptual re-activation in episodic memory, perceptual grounding in semantic representations, and neural reuse of perceptual mechanisms for abstract thought. Emphasis is on recent research with an interdisciplinary scope, including discussion of theory, behavioral findings, neural mechanisms, and computational models. Prerequisite: PSYCH 207 or consent of instructor.

1-3 units, Aut (Boroditsky, L; Wagner, A)

GRADUATE COURSES IN PSYCHOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

PSYCH 192. Career and Personal Counseling
(Same as EDUC 134, EDUC 234) Theories and methods for helping people create more satisfying lives for themselves. Simulated counseling experiences.

3 units, Spr (Krumboltz, J)

PSYCH 201. Social Psychology Lecture Series
Required of social psychology graduate students. Guest lecturers from Stanford and other institutions. May be repeated for credit. (Miller)

3 units, not given this year

PSYCH 202. Cognitive Neuroscience
Graduate core course. The anatomy and physiology of the brain. Methods: electrical stimulation of the brain, neuroimaging, neuropsychology, psychophysics, single-cell neurophysiology, theory and computation. Neuronal pathways and mechanisms of attention, consciousness, emotion, language, memory, motor control, and vision. Prerequisite: 207 or consent of instructor.

3 units, Spr (McClure, S)

PSYCH 204A. Human Neuroimaging Methods
This course introduces the student to human neuroimaging using magnetic resonance scanners. The course is a mixture of lectures and hands-on software tutorials. The course begins by introducing basic MR principles. Then various MR measurement modalities are described, including several types of structural and functional imaging methods. Finally algorithms for analyzing and visualizing the various types of neuroimaging data are explained, including anatomical images, functional data, diffusion imaging (e.g., DTI) and magnetization transfer. Emphasis is on explaining software methods used for interpreting these types of data.

1-3 units, Aut (Wandell, B; Dougherty, R)

PSYCH 204B. Computational Neuroimaging: Analysis Methods
Neuroimaging methods with focus on data analysis techniques. Basic MR physics and BOLD signals. Methods for neuroimaging data using real and simulated data sets. Topics include: linearity of the fmri signal; time versus space resolution tradeoffs; noise in neuroimaging; correlation analysis; visualization methods; cortical reconstruction, inflation, and flattening; reverse engineering; can cognitive states be predicted from brain activation? Prerequisite: consent of instructor.

1-3 units, not given this year

PSYCH 205. Foundations of Cognition
Topics: attention, memory, language, similarity and analogy, categories and concepts, learning, reasoning, and decision making. Emphasis is on processes that underlie the capacity to think and how these are implemented in the brain and modeled computationally. The nature of mental representations, language and thought, modular versus general purpose design, learning versus nativism. Prerequisite: 207 or consent of instructor.

1-3 units, Win (Boroditsky, L)

PSYCH 206. Cortical Plasticity: Perception and Memory
Seminar. Topics related to cortical plasticity in perceptual and memory systems including neural bases of implicity memory, recognition memory, visual priming, and perceptual learning. Emphasis is on recent research with an interdisciplinary scope, including theory, behavioral findings, neural mechanisms, and computational models. May be repeated for credit. Recommended: 30, 45

1-3 units, Win (Grill-Spector, K; Wagner, A)

PSYCH 207. Professional Seminar for First-Year Ph.D. Graduate Students
Required of and limited to first-year Ph.D. students in Psychology. Major issues in contemporary psychology with historical backgrounds.

2-3 units, Aut (McClelland, J)

PSYCH 208. Advanced Topics in Self-Defense
Seminar. Threat to the self and how people deal with them. Readings from social psychological areas including social comparison, self-affirmation, self-completion, self-discrepancy, shame and guilt, terror management, dimensions of self-worth, self-regulation, self-presentation, psychophysiology, and moral identity. Enrollment limited to 15.

1-3 units, not given this year

PSYCH 209A. The Neural Basis of Cognition: A Parallel Distributed Processing Approach
Models and data to support the notion that brain representations are patterns of activity over widely dispersed populations of neurons, that mental processing involves coherent distributed engagement of neurons in these populations, and that learning and development occur primarily through the adjustment of the strengths of the connections between the neurons. How models may be used to explain aspects of human cognition, development, and effects of brain damage on cognition. Prerequisites: linear algebra, differential equations, a programming course, and two courses in psychology or neuroscience.

3-4 units, Win (McClelland, J)

PSYCH 209B. Applications of Parallel Distributed Processing Models to Cognition and Cognitive Neuroscience
Research seminar. Builds on project proposal developed in 209A. Hands-on use of computational models to address phenomena in cognitive psychology and cognitive neuroscience. Classic and modern papers, and student presentations of their own projects. Final paper in the form of a journal article submission. Prerequisite: 209A.

4 units, Spr (McClelland, J)

PSYCH 210. Foundations of Memory
Memory and human cognition. Behavioral and neural data indicate that memory is not a unitary faculty but consists of multiple systems that support learning and remembering, each with its own processing characteristics and neurobiological substrates. What is known about memory emphasizing the cognitive and neural architectures of working, declarative, and nondeclarative memory. Recommended: 45.

3 units, not given this year

PSYCH 211. Developmental Psychology
Prerequisite: 207 or consent of instructor.

1-3 units, Win (Markman, E; Dweck, C)

PSYCH 212. Social Psychology
Classic studies in experimental social psychology. Group and group dynamics; compliance and social pressure; conformity, cooperation, conflict, and social dilemmas; attraction and preference; attitudes and attitude change; social comparison, emotion, and affiliation; dissonance, consistency, and self-justification; attribution and self-perception; judgment and decision making, motivation, automaticity, and culture. Prerequisite: 207 or consent of instructor.

1-3 units, Win (Lepper, M; Ross, L)

PSYCH 213. Affective Science
Core graduate course on affective science. Definitional issues such as differences between emotion and mood, as well as issues related to the function of affect, such as the role affect plays in daily life. Autonomic, neural, genetic, and expressive aspects of affective responding. The role of affect in cognitive processing, specifically how affective states direct attention and influence memory, as well as the role of affect in decision making. Emotion regulation and the strategic control of emotion; the cultural shaping of emotional experience and regulation; disorders of emotion; and developmental trajectories of experience and control from early to very late life. Prerequisite: PSYCH 207 or consent of instructor.

3 units, Win (Gross, J)

PSYCH 215. Mind, Culture, and Society
Social psychology from the context of society and culture. The interdependence of psychological and sociocultural processes: how sociocultural factors shape psychological processes, and how psychological systems shape sociocultural systems. Theoretical developments to understand social issues, problems, and polity. Works of Baldwin, Mead, Asch, Lewin, Burner, and contemporary theory and empirical work on the interdependence of psychology and social context as constituted by gender, ethnicity, race, religion, and region of the country and the world. Prerequisite: 207 or consent of instructor.
3 units, not given this year

PSYCH 216. Public Policy and Social Psychology: Implications and Applications
(Same as IPS 207B, PUBLPOL 305B) Theories, insights, and concerns of social psychology relevant to how people perceive issues, events, and each other, and links between beliefs and individual and collective behavior. Topics include: situationist and subjectivist traditions of applied and theoretical social psychology; social comparison, dissonance, and attribution theories; social identity, stereotyping, racism, and sources of intergroup conflict and misunderstanding; challenges to universality assumptions regarding human motivation, emotion, and perception of self and others; the problem of producing individual and collective changes in norms and behavior.
4 units, Spr (Ross, L)

PSYCH 217. Topics and Methods Related to Culture and Emotion
Preference to graduate students. How cultural factors shape emotion and other feeling states. Empirical and ethnographic literature, theories, and research on culture and emotion. Applications to clinical, educational, and occupational settings. Research in psychology, anthropology, and sociology. May be repeated for credit.
1-3 units, not given this year

PSYCH 218. Early Social Cognitive Development
Current literature on social and cognitive development in infancy emphasizing the interface between the two domains. May be repeated for credit. Prerequisite: consent of instructor.
1-3 units, not given this year

PSYCH 220. Special Topics in Cognitive Development
For graduate students and advanced undergraduates. How research from cognitive development, decision making, and preference change can inform interventions on important social issues. May be repeated for credit.
1-3 units, not given this year

PSYCH 221. Applied Vision and Image Systems
The design and control of color imaging devices (display, printers, cameras, and scanners). Aspects of human vision relevant to software and hardware design. Topics: digital halftoning, color calibration, color metrics, flicker sensitivity, motion compensation, human spatial resolution, visual masking, JPEG principles, printer design, scanner design, and color software architecture. Lab.
1-3 units, Win (Wandell, B)

PSYCH 223. Social Norms
(Same as OB 630) This course covers research and theory on the origins and function of social norms. Topics include the estimation of public opinion, the function of norms as ideals and standards of judgment, and the impact of norms on collective and individual behavior. In addition to acquainting students with the various forms and functions of social norms the course will provide students with experience in identifying and formulating tractable research questions.
4 units, not given this year

PSYCH 224. Research Topics in Emotion Regulation
Current research findings and methods, ongoing student research, and presentations by visiting students and faculty. May be repeated for credit. Prerequisite: consent of instuctor.
1 unit, not given this year

PSYCH 226. Models and Mechanisms of Memory
Current topics in memory as explored through computational models addressing experimental findings and physiological and behavioral investigations. Topics include: explicit and inplict learning; role of MTL structures in learning and memory; and single versus dual processes approaches to recognition. May be repeated for credit.
1-3 units, not given this year

PSYCH 232. Brain and Decision Making
Neuroeconomics combines experimental techniques from neuroscience, psychology, and experimental economics, such as electrophysiology, fMRI, eye tracking, and behavioral studies, and models from computational neuroscience and economics. May be repeated for credit. Prerequisite: consent of instructor.
3 units, Spr (Knutson, B)

PSYCH 233. MATLAB and Psychtoolbox for the Behavioral Sciences
Topics such as experiment design, stimulus presentation, counterbalancing, response collection, data analysis, and plotting. Programming experiments. Final project programming a complete behavioral experiment relevant to student's research. Prerequisite: introductory programming such as CS 105 or 106, or consent of instructor.
1-3 units, not given this year

PSYCH 234. Topics in Affective Disorders
Current research topics including epidemiology and phenomenology of affective disorders, psychological theories of depression, gender differences in affective disorders, cognitive and social functioning of depressed persons, psychobiology of affective disorders, depression in children, postpartum depression, suicide issues in the treatment of depression, and cultural aspects of affective disorders. Prerequisite: graduate standing in Psychology or consent of instructor.
1-3 units, given next year

PSYCH 236. The Social Self
The psychological bases of complex social organization such as work teams and national and cultural identities. Topics include: the effect of social influence on perception, beliefs, attitudes, emotions, and behaviors; shared intentionality; and the relational bases of learning, motivation, and performance. Works of classic scholars (Asch, Lewin) and contemporary researchers in social, developmental, and comparative psychology. Prerequisite: graduate standing or consent of instructor.
3 units, not given this year

PSYCH 238. Wise Interventions
(Same as PSYCH 138) Classic and contemporary psychological interventions; the role of psychological factors in social reforms for social problems involving healthcare, the workplace, education, intergroup, relations, and the law. Topics include theories of intervention, the role of laboratory research, evaluation, and social policy.
4 units, Win (Walton, G)

PSYCH 243. General Development Seminar
May be repeated for credit. Prerequisite: consent of instructors.
1-2 units, Win (Markman, E; Dweck, C; Fernald, A)

PSYCH 244. Psychology of Aging
Theory and research in gerontology. Normal and abnormal changes that occur in biological, cognitive, and psychological aging. Emphasis is on the environmental factors that influence the aging process. Prerequisite: graduate standing in Psychology or consent of instructor.
1-3 units, not given this year

PSYCH 245. Social Psychological Perspectives on Stereotyping and Prejudice
Classic and contemporary social psychological approaches to prejudice and stereotyping. Emphasis is on how stereotypes are employed and maintained, and the influence of stereotyping and prejudice on behavior in domains including education, employment, politics, and law. Limited enrollment.
3 units, Win (Eberhardt, J)

PSYCH 246. Cognitive and Neuroscience Friday Seminar
Participant presentations. May be repeated for credit. Prerequisite: graduate standing in psychology or neuroscience program.
1 unit, Aut (Wagner, A), Win (Wagner, A), Spr (Wagner, A)

PSYCH 247. Fundamentals of Neuroscience for Non-Life-Scientists
Human behavior and the human brain and how it enables perception, learning, decision making, planning, and action with a focus on how neuroscience may be presented or used in law, business, or education contexts. Neurotechnology and experimental methods used to conduct research.
2 units, not given this year

PSYCH 249. Human Motivation
Current research and theory including questions concerning the nature of human motives, intrinsic motivation, self-regulation, the roles of affect and cognition, and lifespan and cultural influences on motivation. Prerequisite: 207 or consent of instructors.
1-3 units, Spr (Lepper, M; Dweck, C)

PSYCH 250. High-level Vision: Behaviors, Neurons and Computational Models
(Same as CS 423) Interdisplinary approach aimed at understanding vision from several disciplines: neurophysiology, psychophysics, cognition, algorithms, and computational models. Focus is on the problem of scene understanding, covering topics from multiple perspectives drawing on recent research in psychology, neuroscience and computer science. Ongoing debates in the field, and discussion of recent empirical findings. Topics include theories of visual recognition for scene perception. What are the behavioral and cognitive characteristics of scene perception, and their connections to objection recognition. What are the neural computations that underlie scene perception? What are the roles of attention, expectation and experience in shaping scene recognition?
1-3 units, not given this year

PSYCH 251. Affective Neuroscience
Theory and research. Comparative and human research approaches map affective function to neuroanatomical and neurochemical substrates. Prerequisite: consent of instructor.
3 units, Spr (Knutson, B)

PSYCH 252. Statistical Methods for Behavioral and Social Sciences
For students who seek experience and advanced training in empirical research. Analysis of data from experimental through factorial designs, randomized blocks, repeated measures; regression methods through multiple regression, model building, analysis of covariance; categorical data analysis through two-way tables. Integrated with the use of statistical computing packages. Prerequisite: 10 or equivalent.
1-6 units, Aut (Thomas, E; Monin, B)

PSYCH 253. Statistical Theory, Models, and Methodology
Practical and theoretical advanced data analytic techniques such as loglinear models, signal detection, meta-analysis, logistic regression, reliability theory, and factor analysis. Prerequisite: 252 or EDUC 257.
3 units, Spr (Thomas, E)

PSYCH 257. Individually Supervised Practicum
Satisfies INS requirements for curricular practical training. Relevant experience for graduate students as part of their program of study. May be repeated for credit. Prerequisites: graduate standing in Psychology, consent of adviser. (Staff)
3-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PSYCH 258. Graduate Seminar in Social Psychology Research
For students who are already or are planning to become involved in research on social construal and the role that it plays in a variety of phenomena, notably the origin and escalation of conflict.
1-3 units, Aut (Markus, H), Win (Markus, H), Spr (Markus, H)

PSYCH 259. Emotions: History, Theories, and Research
(Same as PSYCH 158) Graduate students register for 259. Theoretical and empirical issues in the domain of emotions. The history of emotion theories, current approaches, and the interaction between emotion and cognition.
1-3 units, not given this year

PSYCH 260. Reinforcement Learning in the Brain
Recent advances in neural and behavioral models of reinforcement learning. Reinforcement learning models. Key findings in applying models to brain activity and behavior.
2-3 units, not given this year

PSYCH 261. Emotion
(Same as PSYCH 161) (Graduate students register for 261.) The scientific study of emotion. Topics: models of emotion, emotion antecedents, emotional responses (facial, subjective, and physiological), functions of emotion, emotion regulation, individual differences, and health implications. Focus is on experimentally tractable ideas.
3 units, not given this year

PSYCH 261A. Learning and Cognition in Activity
(Same as EDUC 295) Methods and results of research on learning, understanding, reasoning, problem solving, and remembering, as aspects of participation in social organized activity. Principles of coordination that support cognitive achievements and learning in activity settings in work and school environments.
3 units, Spr (Pea, R)

PSYCH 262. Language and Thought
(Same as PSYCH 131) The psychology of language including: production and understanding in utterances; from speech sounds to speaker's meaning; children's acquisition of the first language; and the psychological basis for language systems. Language functions in natural contexts and their relation to the processes by which language is produced, understood, and acquired. Prerequisite: 1 or LINGUIST 1.
4 units, Aut (Clark, H)

PSYCH 265. Social Psychology and Social Change
(Same as EDUC 107X, EDUC 371X) The major ideas, theories, and findings of social psychology and their applied status. Emphasis is on historical issues, classic experiments, and seminal theories, and their implications for topics relevant to education. Contemporary research also discussed. Advanced undergraduates and graduate students from other disciplines are welcome.
2-3 units, Spr (Cohen, G)

PSYCH 266. Current Debates in Learning and Memory
Memory is not a unitary faculty, but consists of multiple forms of learning and remembering. The cognitive and neural architectures of memory, focusing on the application of functional brain imaging (primarily fMRI and ERP). Recommended: 45
1-3 units, not given this year

PSYCH 267. Human Memory: Facts, Fallacies, and Fragile Powers
Seminar. Applications of memory concepts in everyday life and in social and clinical settings. Topics include personal identity, childhood amnesia, autobiographic memory, emotions and memory, memory distortions, illusions, self-serving biases, recovery of repressed memories, false memories, implicit memories, and unconscious influences on social behavior, with applications to psychopathology.
1-3 units, not given this year

PSYCH 268. Emotion Regulation
(Same as PSYCH 168) (Graduate students register for 268.) The scientific study of emotion regulation. Topics: historical antecedents, conceptual foundations, autonomic and neural bases, individual differences, developmental and cultural aspects, implications for psychological and physical health. Focus is on experimentally tractable ideas.
3 units, Spr (Gross, J)

PSYCH 269. Graduate Seminar in Affective Science
May be repeated for credit. Prerequisite: graduate standing in Psychology. (Tsai)
1 unit, Aut (Tsai, J), Win (Tsai, J), Spr (Tsai, J)

PSYCH 270. The Psychology of Everyday Morality
(Same as PSYCH 179) (Graduate students register for 270.) For graduate students, coterms, and senior Psychology majors. Traditional approaches focusing on how morality colors mundane human activities such as eating and on morality as defined by actors themselves rather than social scientists. Moral hypocrisy, food and disgust, taboo trade-offs, moral reproach, and prejudice with compunction. Limited enrollment. Prerequisite: 70 and consent of instructor.
4 units, not given this year

PSYCH 272. Special Topics in Psycholinguistics
May be repeated for credit. Prerequisite: consent of instructor.
1-3 units, Spr (Clark, H)

PSYCH 273. Graduate Seminar on Language, Cognition, and Perception
Current topics and debates. Readings from psychology, linguistics, neuroscience, ethology, anthropology, and philosophy. May be repeated for credit.
3 units, not given this year

PSYCH 274. Graduate Research Workshop on Psychological Interventions
(Same as EDUC 287X) Psychological research has the potential to create novel interventions that promote the public good. Psychologically wise intervention research. Course supports student efforts to conduct such interventions, especially in the context of education, broadly conceived, as well as other areas. Classic interventions and important topics in intervention research, including effective delivery mechanisms, sensitive behavioral outcomes, the role of theory and psychological process, and considerations of the role of time and of mechanisms that can sustain treatment effects over time. Students present and receive feedback on their own ongoing and/or future intervention research. Prerequisite: graduate standing in Psychology or Education, or consent of instructor.
3 units, Win (Walton, G; Cohen, G)

PSYCH 275. Graduate Research
Intermediate-level research undertaken with members of departmental faculty. Prerequisite: consent of instructor. (Staff)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PSYCH 279. Topics in Cognitive Control
The processes that enable flexible behavior by biasing contextually relevant perceptual, mnemonic, and response representations or processing pathways. Cognitive control is central to volitional action, allowing work with memory, task/goal states, and overriding inappropriate responses. Current models of cognitive control, functional neuroimaging, and neuropsychological evidence. Recommended: 45.
1-3 units, not given this year

PSYCH 281. Practicum in Teaching
Enrollment limited to teaching assistants in selected Psychology courses. May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PSYCH 282. Practicum in Teaching PSYCH 1
Logistical TA training including: preparing for sections; creating, correcting exams; grading an iterative writing assignment; office hours; review sessions; developing audiovisual expertise; communicating via coursework. Review of student evaluations with instructor to set goals and strategies. Second quarter focuses on pedagogical improvement. Limited to current PSYCH 1 TAs. May be repeated for credit.
1-2 units, Aut (Gross, J), Win (Knutson, B), Spr (Walton, G)

PSYCH 283. International Conflict Resolution Colloquium
(Same as POLISCI 403) (Same as LAW 611.) Sponsored by the Stanford Center on International Conflict and Negotiation (SCICN). Conflict, negotiation, and dispute resolution with emphasis on conflicts and disputes with an international dimension, including conflicts involving states, peoples, and political factions such as the Middle East and Northern Ireland. Guest speakers. Issues including international law, psychology, and political science, economics, anthropology, and criminology.
1 unit, not given this year

PSYCH 284. Computational Modeling of a Range of Neural Circuits
Lectures, student presentations, and extensive software exercises. Focus on quantifiable models of neural signaling, starting with physical specification of input signals, sensory transductions, spiking, and mean electrical field potentials, and the inter-relation to BOLD signals (fMRI). Applications will be drawn from many examples, but a there will be a particular focus on the visual pathways and how measurements and models relate to visual perception.
1 unit, Spr (Wandell, B; Grill-Spector, K)

PSYCH 286. The Psychology of Everyday Morality
(Same as PSYCH 186) Recent literature on morality from a social psychological perspective. Topics include moral judgment, moral intuitions, moral hypocrisy, moral identity, moralization, moral reproach, shame and guilt, temptations, and self-regulation. Contemporary psychological research emphasizing descriptive approaches (what people actually do) rather than normative ones (what one should do).
3 units, not given this year

PSYCH 288. Hierarchical Linear Modeling for Psychological Sciences
HLM is a statistical theory and a computer program used to analyze multi-level data, such as trials within participants or students within classrooms. HLM allows researchers to analyze data at each level of analysis separately, to partition the total variance across different levels, to explain variance at each level separately using level-appropriate predictors, and to model cross-level interactions. How to use the HLM program and to model various types of multilevel data using it. May be repeated for credit.
1-3 units, not given this year

PSYCH 290. Graduate Research Methods
Primary tool use for psychologists: basics of experiment design; computer-based experiments; web-based experiments; data analysis packages and data presentation; exploratory statistics; eye-tracking methods; psychophysiology methods; survey construction; corpus and discourse analysis; and perhaps hypnosis. Prerequisite: Ph.D. student in Psychology.
2 units, not given this year

PSYCH 291. Psychology Teaching Methods
Open to graduate students and advanced undergraduates. Principles of good teaching. Students practice teaching skills.
1-2 units, not given this year

PSYCH 297. Seminar for Coterminal Master of Arts
Contemporary issues and student research. Student and faculty presentations.
1-2 units, Spr (Clark, H)

PSYCH 299. Temptations and Self Control
(Same as PSYCH 199) (Graduate students register for 299.) Why do people do things that that they come to regret? How can people minimize behavior such as exercise avoidance, angry words, overeating, unsafe sex, and dangerous driving? Sources include classical and current research from experimental psychology, neuroscience, behavioral economics, and neuroeconomics. Real-world applications.
2 units, not given this year

PSYCH 303. Human and Machine Hearing
Topics: linear and nonlinear system theory applied to sound and hearing; understanding how to model human hearing in the form of algorithms that can process general sounds efficiently; how to construct, display, and interpret auditory images; how to extract features compatible with machine-learning systems; how to build systems that extract information from sound to do a job; and example applications of machine hearing to speech, music, security and surveillance, personal sound diaries, smart house. Prerequisites: basic calculus and algorithms.
3 units, Aut (Lyon, R)

PSYCH 373. Research Seminar: Mind, Brain, and Computation
Faculty and student research presentations focusing on work linking cellular, systems, cognitive, behavioral, and computational neuroscience. May be repeated for credit.
1 unit, Aut (McClelland, J), Win (McClelland, J), Spr (McClelland, J)

PSYCH 383. International Conflict: Management and Resolution
(Same as IPS 250, POLISCI 210R, POLISCI 310R) (Same as LAW 656) Interdisciplinary. Theoretical insights and practical experience in resolving inter-group and international conflicts. Sources include social psychology, political science, game theory, and international law. Personal, strategic, and structural barriers to solutions. How to develop a vision of a mutually bearable shared future, trust in the enemy, and acceptance of loss that a negotiated settlement may produce. Spoilers who seek to sabotage agreements. Advantages and disadvantages of unilateral versus reciprocal measures. Themes from the Stanford Center of International Conflict and Negotiation (SCICN). Prerequisite for undergraduates: consent of instructor.
3 units, Win (Ross, L; Holloway, D; Weiner, A)

PSYCH 459. Frontiers in Interdisciplinary Biosciences
(Same as BIO 459, BIOC 459, BIOE 459, CHEMENG 459, CHEM 459) Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See http://biox.stanford.edu/courses/459.html. Recommended: basic mathematics, biology, chemistry, and physics.

1 unit, Aut (Robertson, C), Win (Robertson, C), Spr (Robertson, C)

PSYCH 801. Master's TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PSYCH 802. PhD TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

PUBLIC POLICY (PUBLPOL) COURSES

UNDERGRADUATE COURSES IN PUBLIC POLICY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

PUBLPOL 53SI. Creating and Analyzing Public Policy: The Roosevelt Institution
How to get your work into the public discourse. Students work in groups to draft policy recommendations for local policymakers serving as project sponsors.

2 units, Win (Abrams, W)

PUBLPOL 101. Politics and Public Policy
(Same as POLISCI 123, PUBLPOL 201) How policies come to be formed. How interests compete within public institutions to turn ideas into policies. Examples of this process from contemporary policy areas, including tax, social welfare, and environmental policy; results evaluated using equity and efficiency criteria. Prerequisite: POLISCI 2 (or equivalent for Public Policy majors). GER:DB-SocSci

5 units, Spr (Frisby, T)

PUBLPOL 102. Organizations and Public Policy
(Same as PUBLPOL 202) Analysis of organizational processes emphasizing organizations that operate in a non-market environment. Prerequisite: ECON 1A. GER:DB-SocSci

5 units, Spr (Bendor, J)

PUBLPOL 103B. Ethics and Public Policy
(Same as MS&E 197, STS 110) Ethical issues in science- and technology-related public policy conflicts. Focus is on complex, value-laden policy disputes. Topics: the nature of ethics and morality; rationales for liberty, justice, and human rights; and the use and abuse of these concepts in policy disputes. Case studies from biomedicine, environmental affairs, technical professions, communications, and international relations. GER:DB-Hum, EC-EthicReas

5 units, Win (McGinn, R)

PUBLPOL 103C. Justice
(Same as ETHICSOC 171, IPS 208, PHIL 171, PHIL 271, POLISCI 3P, POLISCI 136S) Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include protecting religious liberty, financing schools and elections, regulating markets, assuring access to health care, and providing affirmative action and group rights. Issues of global justice including human rights and global inequality. GER:DB-Hum, EC-EthicReas

4-5 units, Aut (Cohen, J)

PUBLPOL 103D. Ethics and Politics of Public Service
(Same as ETHICSOC 133, HUMBIO 178, PHIL 175A, PHIL 275A, POLISCI 133) Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. GER:DB-SocSci

5 units, not given this year

PUBLPOL 104. Economic Policy Analysis
(Same as ECON 150, PUBLPOL 204) The relationship between microeconomic analysis and public policy making. How economic policy analysis is done and why political leaders regard it as useful but not definitive in making policy decisions. Economic rationales for policy interventions, methods of policy evaluation and the role of benefit-cost analysis, economic models of politics and their application to policy making, and the relationship of income distribution to policy choice. Theoretical foundations of policy making and analysis, and applications to program adoption and implementation. Prerequisite: ECON 50.

5 units, Win (Rosston, G; Landais, C)

PUBLPOL 106. Economics of Legal Rules and Institutions
(Same as ECON 154, PUBLPOL 206) Design and consequences of laws, given alternative policy objectives. Welfarist approach to legal policy; deontological perspectives including Kant, Locke, Mill, and Rawls. Economic efficiency and agent rationality, law as mitigation of market and cognitive failures, effects of law on expectations and incentives, balancing costs of type I and type II legal errors. Empirical studies of law's effects. Applications: property, tort, contract, antitrust, discrimination, crime, legal procedure. Examples chiefly from U.S. law, but analytical tools of general applicability. Prerequisite: ECON 50. WIM

5 units, Aut (Owen, B)

PUBLPOL 107. Public Finance and Fiscal Policy
(Same as ECON 141) What role should and does government play in the economy? What are the effects of government expenditure, borrowing, and taxation? Policy topics: budget surpluses/deficits; tax reform; social security, public goods, and externalities; fiscal federalism; public investment; and cost-benefit analysis. Prerequisites: 51, 52 (can be taken concurrently).

5 units, Spr (Boskin, M)

PUBLPOL 114. The Logic of Collective Choice
(Same as PUBLPOL 214) Social, economic, and political outcomes usually depend on the interaction of individual choices, studied through: social choice theory, which studies how we aggregate what individuals want into what the collective wants; and game theory, which studies how people aggregate what individuals want into what the group gets. Topics include rationality of preferences, majority rule and other choice methods, fairness and efficiency, institutional constraints on choice (such as agenda control), the institutional incentives, and collective action.

4 units, Aut (Lax, J)

PUBLPOL 119. Sociology of Terrorism
(Same as SOC 109, SOC 209) Multidisciplinary, including psychology, sociology, political science,and economics. Comparison of terrorist organizations and movements across institutions, places, and times; their motives, tactics, financing, and organization. Guest lecturers. Sources include movies, novels, and research literature. GER:DB-SocSci

5 units, Spr (Meyersson Milgrom, E)

PUBLPOL 121. Policy and Climate Change
Science and economics, including recent findings. History and evolution of local, state, regional, national, and international policy. California's recent landmark climate change bill. Future policy prospects, emphasizing national and international levels.

5 units, Aut (Nation, J)

PUBLPOL 125. Law and Public Policy
How lawyers argue and judges decide cases versus other forms of rhetoric and decision making. Legal reasoning and dispute resolution within Anglo-American common law and in comparative perspective across diverse societies. The relationship between law and public policy on current issues related to culture, technology, race, education, sexuality, abortion, gun control, civil liberties, national security and the environment. Sources include judicial

opinions, interdisciplinary legal scholarship, ethnography, literature, and film. GER:DB-SocSci

5 units, Spr (Greenberg, J)

PUBLPOL 133. Urban Politics

(Same as POLISCI 121, URBANST 111) The major actors, institutions, processes, and policies of sub-state government in the U.S., emphasizing city general-purpose governments through a comparative examination of historical and contemporary politics. Issues related to federalism, representation, voting, race, poverty, housing, and finances. Prerequisite: POLISCI 2 or consent of instructor. GER:DB-SocSci

5 units, Aut (Gale, D)

PUBLPOL 135. Regional Politics and Decision Making in Silicon Valley

Dynamics of regional leadership and decision making in Silicon Valley, a complex region composed of 40 cities and four counties without any overarching framework for governance. Formal and informal institutions shaping outcomes in the region. Case studies include transportation, workforce development, housing and land use, and climate change.

3 units, Spr (Benest, F; Hancock, R)

PUBLPOL 154. Politics and Policy in California

State politics and policy making, including the role of the legislature, legislative leadership, the governor, special interests, campaign finance, the public, ballot initiatives, the state constitution, the media, and the role of research organizations. Case studies include pension reform, health care, term limits and other political reform measures, open primaries, infrastructure improvements, and the budget. Changes in constitutional and in state statutes that can improve policy making in California.

5 units, Win (Nation, J)

PUBLPOL 168. Global Organizations: Managing Diversity

(Same as SOC 168, SOC 268) Analytical tools derived from the social sciences to analyze global organizations and projects, and applied to the tradeoffs between different designs of teams and organizations. Focus is on tribal mentality and how to design effective organizations and projects for policy implementation within and across institutional settings. Recommended: 102, MS&E 180, or SOC 160. GER:DB-SocSci

5 units, Win (Meyersson Milgrom, E)

PUBLPOL 172. Psychology and Public Policy

(Same as PSYCH 119) Applications of psychology to public and social policy. Factors that affect the influence of psychological research and individual psychology on the creation of policy, and the influence of policy on attitudes and behavior at the personal and societal levels. Topics include education, health care, and criminal justice.

5 units, not given this year

PUBLPOL 183. Philanthropy and Social Innovation

Philanthropy's role in modern society and the translation of its vision and capital into social action. Topics: individual giving; philanthropic landscape and models; foundation mission and infrastructure; philanthropic strategy and grantmaking; accountability and knowledge management; global and corporate philanthropy; and public policy engagement. Readings: business school cases and industry articles. Guest speakers include individual donors and foundation presidents. Mandatory discussion section. Enrollment limited.

3 units, Spr (Arrillaga, L)

PUBLPOL 184. Poverty and Policies in Developing Economies

Economic models of growth and poverty, differences in growth rates among countries, and the persistence of poverty. Models of physical and human capital accumulation, and recent theories of the importance of institutions, social capital, and political factors. The effectiveness of social policies in developing countries, emphasizing India, in the light of theories of growth and poverty, and in terms of immediate goals and long-term consequences. Policies include schooling and health, anti-poverty, banking, and political decentralization. Prerequisites: ECON 1A,B. GER:DB-SocSci

5 units, Spr (Kochar, A)

PUBLPOL 194. Technology Policy

How the U.S. federal government promotes, uses, and regulates new technologies; how it decides technology policies; and debates over how to use technology to advance national goals. Topics: American attitudes towards technology; technologies for defense, homeland security, energy, health, and economic competitiveness; and when and how to regulate nanotechnology, stem-cell research, government surveillance, and digital copyright. Recommended: POLISCI 2.

5 units, Win (Windham, P)

PUBLPOL 197. Junior Honors Seminar

(Same as ECON 198) Primarily for students who expect to write an honors thesis. Weekly sessions discuss writing an honors thesis proposal (prospectus), submitting grant applications, and completing the honors thesis. Readings focus on writing skills and research design. Students select an adviser, outline a program of study for their senior year, and complete a prospectus by the end of the quarter. Enrollment limited to 25.

5 units, Win (Rothwell, G), Spr (Rothwell, G)

PUBLPOL 198. Directed Readings in Public Policy

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

PUBLPOL 199. Senior Research

May be repeated for credit.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

PUBLPOL 200A. Senior Seminar

Students conduct original research for oral presentations and a paper on a policy-related topic. Topic and methods of analysis determined by student in consultation with instructor. Goal is to improve analytical, research, writing, and communication skills. Prerequisites: core courses in Public Policy or consent of instructor.

3 units, Aut (Sprague, M)

PUBLPOL 200B. Senior Seminar: Conducting Policy Analysis for Local Agencies

Small student teams conduct policy analyses requested by local policymakers. With guidance from the instructor and policymaker, each team researches a real-world problem and devises implementable policy recommendations to help address it. The project culminates in a professional report and presentation to the policymaker. Prerequisites: core courses in Public Policy or consent of instructor. GER:DB-SocSci

5 units, Win (Sprague, M)

PUBLPOL 200C. Senior Seminar: Conducting Policy analysis for Local Agencies

Small student teams conduct policy analyses requested by local policymakers. With guidance from the instructor and policymaker, each team researches a real-world problem and devises implementable policy recommendations to help address it. The project culminates in a professional report and presentation to the policymaker. Prerequisites: core courses in Public Policy or consent of instructor.

5 units, Spr (Sanders, N)

GRADUATE COURSES IN PUBLIC POLICY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

PUBLPOL 201. Politics and Public Policy

(Same as POLISCI 123, PUBLPOL 101) How policies come to be formed. How interests compete within public institutions to turn ideas into policies. Examples of this process from contemporary policy areas, including tax, social welfare, and environmental policy; results evaluated using equity and efficiency criteria. Prerequisite: POLISCI 2 (or equivalent for Public Policy majors).

5 units, Spr (Frisby, T)

PUBLPOL 202. Organizations and Public Policy

(Same as PUBLPOL 102) Analysis of organizational processes emphasizing organizations that operate in a non-market environment. Prerequisite: ECON 1A.

5 units, Spr (Bendor, J)

PUBLPOL 204. Economic Policy Analysis

(Same as ECON 150, PUBLPOL 104) The relationship between microeconomic analysis and public policy making. How economic policy analysis is done and why political leaders regard it as useful but not definitive in making policy decisions. Economic rationales for policy interventions, methods of policy evaluation and the role of benefit-cost analysis, economic models of politics and their application to policy making, and the relationship of income distribution to policy choice. Theoretical foundations of policy making

and analysis, and applications to program adoption and implementation. Prerequisite: ECON 50.

5 units, Win (Rosston, G; Landais, C)

PUBLPOL 206. Economics of Legal Rules and Institutions
(Same as ECON 154, PUBLPOL 106) Design and consequences of laws, given alternative policy objectives. Welfarist approach to legal policy; deontological perspectives including Kant, Locke, Mill, and Rawls. Economic efficiency and agent rationality, law as mitigation of market and cognitive failures, effects of law on expectations and incentives, balancing costs of type I and type II legal errors. Empirical studies of law's effects. Applications: property, tort, contract, antitrust, discrimination, crime, legal procedure. Examples chiefly from U.S. law, but analytical tools of general applicability. Prerequisite: ECON 50.

5 units, Aut (Owen, B)

PUBLPOL 214. The Logic of Collective Choice
(Same as PUBLPOL 114) Social, economic, and political outcomes usually depend on the interaction of individual choices, studied through: social choice theory, which studies how we aggregate what individuals want into what the collective wants; and game theory, which studies how people aggregate what individuals want into what the group gets. Topics include rationality of preferences, majority rule and other choice methods, fairness and efficiency, institutional constraints on choice (such as agenda control), the institutional incentives, and collective action.

4 units, Aut (Lax, J)

PUBLPOL 231. Health Care Regulation, Finance and Policy
(Same as HRP 391) (SAME AS LAW 348) Provides the legal, institutional, and economic background necessary to understand the financing and production of health services in the U.S. Potential topics include: health reform, health insurance (Medicare and Medicaid, employer-sponsored insurance, the uninsured), medical malpractice and quality regulation, pharmaceuticals, the corporate practice of medicine, regulation of fraud and abuse, and international comparisons.

3 units, Win (Kessler, D)

PUBLPOL 301A. Microeconomics
(Same as IPS 204A) Microeconomic concepts relevant to decision making. Topics include: competitive market clearing, price discrimination; general equilibrium; risk aversion and sharing, capital market theory, Nash equilibrium; welfare analysis; public choice; externalities and public goods; hidden information and market signaling; moral hazard and incentives; auction theory; game theory; oligopoly; reputation and credibility. Prerequisites: ECON 50 and MATH 51 or equiv.

4 units, Aut (Bulow, J)

PUBLPOL 301B. Cost-Benefit Analysis and Evaluation
(Same as IPS 204B) Relationship between microeconomic analysis and public policy making. Economic rationales for policy interventions. Economic models of politics and application to policy making. Relationship of income distribution to policy choice. Welfare evaluation of public and private decisions. Education policy, social security, and health care. Prerequisite: PUBLPOL 301A or ECON 51.

4 units, Spr (Lim, C)

PUBLPOL 302A. Introduction to American Law
(Same as AMSTUD 179, LAWGEN 106, POLISCI 122) For undergraduates. The structure of the American legal system including the courts; American legal culture; the legal profession and its social role; the scope and reach of the legal system; the background and impact of legal regulation; criminal justice; civil rights and civil liberties; and the relationship between the American legal system and American society in general.

3-5 units, Aut (Friedman, L)

PUBLPOL 302B. Introduction to Economic Analysis of Law
(Same as LAW 528.) This course will provide a broad overview of the scholarly field known as law and economics. The focus will be on how legal rules and institutions can correct market failures. We will discuss the economic function of contracts and, when contracts fail or are not feasible, the role of legal remedies to resolve disputes. We will also discuss at some length the choice between encouraging private parties to initiate legal actions to correct externalities and governmental actors, such as regulatory authorities. Extensive attention will be given to the economics of litigation, and to how private incentives to bring lawsuits differs from the social value of litigation. The economic motive to commit crimes, and the optimal governmental response to crime, will be studied in depth. Specific topics within the preceding broad themes include: the Coase Theorem; the tradeoff between the certainty and severity of punishment; the choice between ex ante and ex post sanctions; neglige

3 units, Win (Polinsky, M)

PUBLPOL 302C. Advanced Topics in Law and Economics
(Same as LAW 529.) This course complements the Introduction to Economic Analysis of Law course (Public Policy 302B) and provides a more advanced treatment of the topics discussed in that course (see that course description for topics covered). Students enrolling in Advanced Topics in Law and Economics must also enroll in Introduction to Economic Analysis of Law. The Advanced Topics course will meet for one hour each week immediately following one of the meetings of the Introduction course. In the Advanced Topics course students will be introduced to formal economic modeling of laws and legal institutions. Because this course is part of the core curriculum for the Master in Public Policy degree, intermediate-level training in microeconomics (at the undergraduate level) and some comfort in the use of calculus is required.

1 unit, Win (Polinsky, M)

PUBLPOL 303A. Foundations Of Statistical Inference
(Same as IPS 205A) (Same as LAW 362.) Statistical background and introduction to regression. Topics include hypothesis testing, linear regression, nearest-neighbors regression, and other statistical concepts. Hands-on empirical analysis using popular statistical packages. Goal is to analyze empirical studies, conduct empirical research, and to crossexamine or work with statistical experts.

4 units, Aut (Strnad, J)

PUBLPOL 303B. Econometrics
(Same as IPS 205B) (Same as LAW 366.) Descriptive statistics. Regression analysis. Hypothesis testing. Analysis of variance. Heteroskedasticity, serial correlation, errors in variables, simultaneous equations. The construction and use of models for analyzing economic and social phenomena. Bayesian analysis. Univariate and bivariate analysis. Simple regression model. Multiple regression model. Inference and heteroskedasticity. Linear probability model. Instrumental variables. Maximum likelihood methods. Measurement of social and political attitudes and ideologies. Statistical analysis of large data sets.

4 units, Win (Strnad, J)

PUBLPOL 303C. Bayesian Statistics and Econometrics
(Same as LAW 243.) Linear and nonlinear regression, covariance structures, panel data, qualitative variable models, nonparametric and semiparametric methods, time series, Bayesian model averaging and variable selection. Bayesian methodology including Markov chain Monte Carlo methods, hierarchical models, model checking, mixture models, empirical Bayes approaches, approximations, and computational issues and foundations. Prerequisite: graduate-level econometrics or equivalent.

5 units, Aut (Strnad, J)

PUBLPOL 304A. Politics and Collective Action
(Same as IPS 206A, POLISCI 331S) Classic theories for why collective action problems occur and how they can be solved. Politics of aggregating individual decisions into collective action, including voting, social protest, and competing goals and tactics of officials, bureaucrats, interest groups, and other stakeholders. Economic, distributive, and moral frameworks for evaluating collective action processes and outcomes. Applications to real-world policy problems involving collective action.

4 units, Spr (Hanson, W)

PUBLPOL 305A. Judgment and Decision Making
(Same as IPS 207A) (Same as LAW 333.) Theories and research on heuristics and biases in human inference, judgment, and decision making. Experimental and theoretical work in prospect theory emphasizing loss and risk aversion. Challenges that psychology offers to the rationalist expected utility model; attempts to meet this challenge through integration with modern behavioral economics. Decision making biases and phenomena of special relevance to public policy such as group polarization, group think, and collective action.

4 units, Win (Brest, P)

PUBLPOL 305B. Public Policy and Social Psychology: Implications and Applications
(Same as IPS 207B, PSYCH 216) Theories, insights, and concerns of social psychology relevant to how people perceive issues, events, and each other, and links between beliefs and individual and collective behavior. Topics include: situationist and subjectivist traditions of applied and theoretical social psychology; social comparison, dissonance, and attribution theories; social identity, stereotyping, racism, and sources of intergroup conflict and misunderstanding; challenges to universality assumptions regarding human motivation, emotion, and perception of self and others; the problem of producing individual and collective changes in norms and behavior.
4 units, Spr (Ross, L)

PUBLPOL 306. Writing and Rhetoric for Policy Audiences
This course offers hands-on learning of effective writing and presentation techniques for audiences that include policy makers, decision and stake-holders, interest groups, the media, and the public. Class time will be spent learning lessons in rhetoric, reviewing different written genres (op-ed, report, memo), editing and peer review using large screens and laptops, as well as analyzing and practicing presentations (PPT, elevator pitch, radio broadcast, board meeting). Sources include policy briefings, memos, model videos, rhetoric handouts, style manual. Students will write and make oral and multimedia arguments, individually and in teams; students will also be responsible for peer review, introducing speakers, and moderating discussions at the colloquia. Enrollment limited. Prerequisite: consent of instructor.
4 units, Win (O'Brien, A; Owen, B)

PUBLPOL 307. Justice
(Same as ETHICSOC 171, IPS 208, PHIL 171, PHIL 271, POLISCI 3P, POLISCI 136S) Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include protecting religious liberty, financing schools and elections, regulating markets, assuring access to health care, and providing affirmative action and group rights. Issues of global justice including human rights and global inequality.
4-5 units, Aut (Cohen, J)

PUBLPOL 309. Practicum
(Same as IPS 209) Applied policy exercises in various fields. Multidisciplinary student teams apply skills to a contemporary problem in a major policy exercise with a public sector client such as a government agency. Problem analysis, interaction with the client and experts, and presentations. Emphasis is on effective written and oral communication to lay audiences of recommendations based on policy analysis.
1-10 units, Aut (Nation, J; Hensler, D), Win (Nation, J)

PUBLPOL 309X. Public Policy Research Project
Supervised research internship. Individual students perform policy research for outside client, applying analytical skills from core curriculum. Requires permission of program director.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff)

PUBLPOL 310. Master of Arts Thesis
Restricted to students writing a master's thesis in Public Policy. May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

PUBLPOL 311. Public Policy Colloquium
Weekly colloquia speaker series required for M.P.P. and M.A. in Public Policy students. Themes vary each quarter.
1 unit, Aut (Owen, B; Rosston, G), Win (Owen, B; Rosston, G), Spr (Owen, B; Rosston, G)

PUBLPOL 312. Public Policy for Science and Technology
This course will describe Federal science policy and the process and players by which it is made. The connections between science policy and the economy, national security, and health will be discussed. The roles that National Laboratories, universities, and industry play in the science enterprise will be examined.
2 units, Aut (White, R)

PUBLPOL 317. Comparing Institutional Forms: Public, Private, and Nonprofit
(Same as EDUC 377, GSBGEN 346, SOC 377) Seminar. For students interested in the nonprofit sector, and those in the joint Business and Education program. The missions, functions, and capabilities of nonprofit, public, and private organizations. Focus is on sectors with significant competition among institutional forms, including health care, social services, the arts, and education. Sources include scholarly articles, cases, and historical materials. Advanced undergraduates require consent of instructor.
4 units

PUBLPOL 321. Sentencing, Corrections, and Criminal Justice Policy
(Same as LAW 621). This course familiarizes students with the history, structure, and performance of America's sentencing and corrections system. ""Sentencing"" is the process by which criminal sanctions are imposed in individual cases following criminal convictions. ""Corrections"" deals with the implementation and evaluation of criminal sentences after they are handed down. In fact, the two subject areas are inseparable. This course examines sentencing and corrections from global and historical views, from theoretical and policy perspectives, and with close attention to many problem-specific areas. It explores sentencing theories and their application, the nature, scope and function of corrections, the impact of mass incarceration on crime and communities, the effectiveness of rehabilitation, the relationship between sanctions and crime, and the consequences of prisoner reentry. These topics are considered as they play out in current political and policy debates. Guest lectures may
3 units, Win (Petersilia, J)

RADIATION ONCOLOGY (RADO) COURSES

UNDERGRADUATE COURSES IN RADIATION ONCOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

RADO 101. Readings in Radiation Biology
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

RADO 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN RADIATION ONCOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

RADO 202. The Basic Science of Radiation Therapy
For residents or fellows in the training program in the Division of Radiation Therapy, and for interested medical students. Basic processes of radiation biology that underly the treatment of malignant diseases by radiation. Carcinogenesis and mutagenesis by radiation are also covered. Prerequisite: familiarity with cell biology and physiology; consent of instructor.
1 unit, Spr (Denko, N)

RADO 280. Early Clinical Experience in Radiation Oncology
Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.
1-2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

RADO 299. Directed Reading in Radiation Oncology
Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

RADO 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

RADO 399. Graduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

RADIOLOGY (RAD) COURSES

UNDERGRADUATE COURSES IN RADIOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

RAD 72Q. Flouresence Imaging in Living Cells
Preference to sophomores. Basic principles of fluorescent probes and their applications for live-cell imaging. Topics include: general classes of flourescent probes together with their fluorescence mechanisms; strategies and methods for live cell labeling and imaging of specific proteins. Examples of applications of fluorescence imaging are presented. Provides students first-hand experience in fluorescence imaging research, and exploration of cutting edge techniques. Readings include current reviews and key original articles.

2 units, not given this year

RAD 101. Readings in Radiology Research
Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

RAD 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN RADIOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

RAD 200. Imaging Anatomy and Pathology
Supplements traditional disectional anatomy with modern cross-sectional imaging, and traditional examination of the cadaver with study of live subjects. Chest-abdominal and pelvic anatomy; congenital, traumatic, and neoplastic processes that affect these structures. Preparation for encounters with imaging tests in clinical medicine and surgery. Also open to graduate students in fields related to imaging sciences.

2 units, Spr (Federle, M; Penner, R)

RAD 203. Introduction to Interventional Radiology
Designed to expose pre-clinical and clinical MD students to minimally-invasive procedures using image guidance through a combination of didactics, simulation, and cathlab observation. Weekly organ-based and/or disease-based lectures are followed by simulation and faculty shadowing. Daily case-based presentations by faculty, technical demonstrations, and informal discussions reinforce the learning experience.

1 unit, not given this year

RAD 220. Introduction to Imaging and Image-based Human Anatomy
(Same as BIOE 220) The physics of medical imaging and human anatomy through medical images. Emphasis is on normal anatomy, contrast mechanisms, and the relative strengths of each imaging modality. Labs reinforce imaging techniques and anatomy. Prerequisites: basic biology, physics.

3 units, Win (Gold, G; Pauly, K)

RAD 222A. Multimodality Molecular Imaging in Living Subjects I
(Same as BIOE 222A) Provides an overview of the biology, instruments and chemistries for imaging of cellular and molecular processes in living animals and humans. Covers molecular biology, instrumentation physics, and chemistry of molecular imaging probes as an introduction to preclinical and clinical molecular imaging.

4 units, Aut (Contag, C; Xing, L; Rao, J)

RAD 222B. Multimodality Molecular Imaging in Living Subjects II
(Same as BIOE 222B) Focuses on molecular probes that target specific disease mechanisms. Covers molecular probe design for dynamic measures of biological function and how to deliver these to the target tissues for informative assays that reveal cellular and molecular changes.

4 units, Win (Contag, C; Xing, L; Rao, J)

RAD 222C. Multimodality Molecular Imaging in Living Subjects III
(Same as BIOE 222C) Topics course comprised of discussion and review of primary literature. Focuses on emerging chemistries and instruments that address unmet needs for improved diagnosis and disease management in cancer, neurological disease, cardiovascular medicine and musculoskeletal disorders. Identifies problems or controversies in the field, and resolves them through understanding the relevant primary literature.

4 units, Spr (Contag, C; Xing, L; Rao, J)

RAD 226. In Vivo Magnetic Resonance Spectroscopy and Imaging
Collections of identical independent nuclear spins are described by the classical vector model of magnetic resonance imaging (MRI); however, interactions among spins, as occur in many in vivo processes, require a more complete description. Physics and engineering principles of these in vivo magnetic resonance phenomena with emphasis on current research questions and clinical applications. Topics: quantum mechanical description of magnetic resonance, density matrix theory, product operator formalism, relaxation theory and contrast mechanisms, spectroscopic imaging, spectral editing, and multinuclear studies. Prerequisites: EE 369B or familiarity with magnetic resonance, working knowledge of linear algebra.

3 units, Win (Spielman, D)

RAD 227. Functional MRI Methods
(Same as BIOPHYS 227) Basics of functional magnetic resonance neuroimaging, including data acquisition, analysis, and experimental design. Journal club sections. Cognitive neuroscience and clinical applications. Prerequisites: basic physics, mathematics; neuroscience recommended.

3 units, Win (Glover, G)

RAD 228. Magnetic Resonance Imaging Programming Topics
Primarily for students working on research projects involving MRI pulse sequence programming. Introductory and student-initiated topics in seminars and hands-on labs. Image contrast mechanisms achieved by pulse sequences that control radiofrequency and gradient magnetic fields in real time, while acquiring data in an organized manner for image reconstruction. Prerequisites: EE 369B and consent of instructor.

3 units, Sum (Hargreaves, B)

RAD 280. Early Clinical Experience in Radiology
Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

1-2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

RAD 299. Directed Reading in Radiology
Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

RAD 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

RAD 399. Graduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

RELIGIOUS STUDIES (RELIGST) COURSES

UNDERGRADUATE COURSES IN RELIGIOUS STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

RELIGST 10N. The Problem of God: Aquinas to the New Atheism
(Stanford Introductory Seminar) Critical inquiry the meaning and credibility of theistic belief through exemplary classic formulations, modern critics, and contemporary defenders. What has the

idea of God meant to serious minds in the past? And in the modern or postmodern world? GER:DB-Hum

4 units, Win (Sockness, B)

RELIGST 11N. The Meaning of Life: Philosophical, Aesthetic, and Religious Perspectives

(Stanford Introductory Seminar) Preference to freshmen. Ultimate questions about life. The unexamined life is not worth living, but also the unlived life is not worth examining. Students and professor examine their own lives in the light of questions that the readings and lectures bring up. The big picture: is there such a thing as the meaning of life? What is entailed in making personal/existential sense of one's own life? What constitutes the good life, lived in society? How can a university education bear upon the search for a meaningful life? What methods for or approches to life can one learn from studies in the humanities? Sources include artworks, poems, texts, and a film. Works such: Plato's allegory of the Cave from The Republic; Manet's A Bar at the Folies Bergere.

3 units, Aut (Sheehan, T)

RELIGST 12. Introduction to Hinduism

Historical study from earliest period to the present, including religious poetry, narrative, performance, concepts of self and liberation, yoga, ritual, God and gods, views of religion through history, region, class, caste, and gender. GER:DB-Hum, EC-GlobalCom

4 units, not given this year

RELIGST 14. Exploring Buddhism

From its beginnings to the 21st century. Principal teachings and practices, institutional and social forms, and artistic and iconographical expressions. GER:DB-Hum, EC-GlobalCom

4 units, Spr (Harrison, P)

RELIGST 15N. Travels through the Afterlife

(Stanford Introductory Seminar) (Same as JEWISHST 15N) Since the beginning of civilization, humans have refused to believe that physical death is the end of life and have sought in various ways to travel into the afterlife. One cannot know what lies beyond death, but there are other kinds of insights to be learned from these otherworldly journeys. The origins and history of the afterlife, going back in time to ancient Egypt, Mesopotamia, Israel, Greece, and medieval Europe to survey these cultures' view of death and what lies beyond it. What has happened to belief in the afterlife in modern American culture. Goal is to confront one of the most difficult aspects of life, the fear of death and oblivion, and to explore the power of thought and imagination to move beyond the confines of mortality. GER:DB-Hum

4 units, Aut (Weitzman, S)

RELIGST 16N. The Story of Human Virtues

Bravery, Temperance, Generosity, Justice, Wisdom, and Friendship. Plato and Aristotle on human virtues, and select Muslim, Jewish, Christian, and secular appropriations and transformations of that Greek heritage. GER:DB-Hum

4 units, not given this year

RELIGST 16SI. Religion and Spirituality: LGBTQ Perspectives

(Same as JEWISHST 16SI) Many lesbian, gay, bisexual, transgender, and queer (LGBTQ) people today are finding that mainstream religious institutions do not meet their unique spiritual needs, and they are looking elsewhere to create meaningful spiritual lives. How LGBTQ people are creating and practicing religion and spirituality in the U.S. The diversity of American LGBTQ religious and spiritual traditions, both within and beyond the boundaries of traditional religions. Religious and spiritual practices created by and for LGBTQ people and communities, rather than the responses of religious institutions towards the reality of LGBTQ people in their midst. Students attend an LGBTQ worship service in a tradition of their choice. Goal is a better understanding of, and appreciation for, the diversity of religious and spiritual traditions within LGBTQ communities.

1 unit, Aut (Fonrobert, C)

RELIGST 18. Zen Buddhism

Classical Zen thought in China, and its background, origins, and development. GER:DB-Hum, EC-GlobalCom

4 units, not given this year

RELIGST 19S. Angels in America: Western Religion and Contemporary Culture

How religion is presented in the media. Cultural representations that shape and disrupt this image of the relationship between being religious and being modern. How believers and doubters in Islam, Judaism, and Christianity are portrayed in popular culture. Sources include the music of Dar Williams and M.I.A., the plays of Tony Kushner, and the Canadian sitcom Little Mosque on the Prairie. How gay believers, agnostic leaders, terrorists, and born-again children of secular parents complicate the notion of religious belief in today¿s world.

3 units, not given this year

RELIGST 20. Introduction to the Zoroastrian Religion

Introduction to Zoroastrianism through a survey of its defining themes, including an examination of the figure of the prophet Zarathustra, modes of transmitting sacred knowledge, the nature of good and evil, and the importance of ritual practice and practitioners. How Zoroastrianism views the individual with respect to the body, the life cycle, and issues of gender and sexuality. The intersection of religion and ethnicity that has defined Zoroastrianism from its origins in the 2nd millennium BCE in Central Asia up to the present day. GER:DB-Hum

3 units, Win (Vevaina, Y)

RELIGST 23. Exploring Judaism

Introduction to the varied beliefs, ritual practices, and sacred stories of Judaism, moving from foundational texts like the Bible and the Talmud to recent changes in Jewish religious life that have arisen in response to secular and feminist critiques, the Holocaust, and the emergence of the State of Israel. GER:DB-Hum

4 units, not given this year

RELIGST 24. Exploring Christianity

The historical development of Christian religious thought and practice from Jesus to the present. Emphasis is on the formation of Christianity's major teachings and their transformation and diverse expressions in the medieval, reformation, and modern periods. Readings focus on primary texts. GER:DB-Hum

4 units, not given this year

RELIGST 27. Exploring Islam

Introduction to Islam, its core beliefs and practices, through architecture and the arts. Explore the visual language through which these have been expressed across diverse Muslim societies. GER:DB-Hum, EC-GlobalCom

4 units, Aut (Nanji, A)

RELIGST 35. Introduction to Chinese Religions

(Formerly 55.) Confucianism, Daoism, Buddhism, and the interchange among these belief systems and institutions. Set against the background of Chinese history, society, and culture, with attention to elite and popular religious forms. GER:DB-Hum, EC-GlobalCom

4 units, not given this year

RELIGST 37. Introduction to Japanese Religions

Major themes in Japanese religious culture, including gods, religious sites, and specialist and popular practices. Films and readings from literary, ethnographic, and historical sources in translation. GER:DB-Hum

4 units, Spr (Horton, S)

RELIGST 46. Introduction to Daoism

(Formerly 56.) Historical survey from origins to the present. Main schools, notions, communal rites, and individual practices, and the relation of Daoism to facets of Chinese culture. GER:DB-Hum

4 units, not given this year

RELIGST 54. The Roots of Right and Wrong in Christianity, Judaism, and Islam

What Christian, Jewish, and premodern Muslim thinkers have to say about these questions: what makes an act right or wrong; can a basis for right and wrong be identified independently of revealed religion; is observing commands and prohibitions sufficient to lead a life of virtue and refinement? Readings in primary texts. GER:DB-Hum

4 units, not given this year

RELIGST 57. Millennium, Messiahs, and Mayhem
How the apocalypse has captured the imaginations and influenced the behaviors of many Jews and Christians who predict the end of the world during their lifetimes, whether facilitated by the arrival of a human or divine emissary, preceded by a cataclysm, or announced by a renunciation of normative morals. Examples include the Book of Revelations, the Dead Sea Scrolls, the Brotherhood of the Free Spirit, Shabtai Tzvi, Jacob Frank, the Mormons, and Chabad Chasidism.

4 units, not given this year

RELIGST 62. Philosophy of Religion
Classic and modern questions in the philosophy of religion traced through Western and Eastern traditions: the coherence of theism, relativism, verification and ethics of belief, and mystical experience. Readings from traditional and modern texts. GER:DB-Hum

4 units, not given this year

RELIGST 82. Approaches to the Study of Religion: Christianity
Historical and contemporary Christianity from four viewpoints: ritual and prayer; sacred texts and creeds; ethics and life; and community governance. GER:DB-Hum

4 units, not given this year

RELIGST 84. Mystics, Pilgrims, Monks, and Scholars: Religious Devotion in Medieval Christianity
The variety and vitality of religious expression in medieval Christian Europe. How Christians sought God through mystical encounter, the structure of monastic life, visits to shrines, devotion to the saints, and the study of scripture and ancient Christian wisdom. Readings focus on primary texts. GER:DB-Hum

4 units, Aut (Pitkin, B)

RELIGST 90. Buddhism and Gender
In the Buddhist tradition there are contradictory approaches to gender: in some cases, gender is described as an illusion; in others, the female body is an impediment to enlightenment. How do Buddhists - men and women, lay and monastic - interpret these divergent views? Different Buddhist approaches to the category of gender. Values associated with masculinity and femininity in Buddhist philosophy, the gendered symbolism surrounding buddhahood, images of the masculine and feminine in Buddhist texts, and the experiences of lay and monastic men and women.

4 units, not given this year

RELIGST 95. How to Read the Bible
(Same as JEWISHST 95) What does the Bible mean? Seeks to help students answer this question for themselves by introducing some of the many ways in which the Bible has been read over the ages. The focus will be the book of Genesis, but the real subject is the history of biblical interpretation¿how Genesis has been understood by theologians, writers, artists, scholars and others¿and the ultimate goal is not merely to engage the Bible itself but to gain a better appreciation of the act of reading, why people read differently and the consequences of that difference for religious history. GER:DB-Hum

4 units, Aut (Weitzman, S), Sum (Weitzman, S)

RELIGST 101. Who is Allah?
Introduction to classical Islamic theology. How did notions about God's nature define theological communities? What made some ideas more likely than others to function as markers of group identity? Were the different sects distinguished by different methods of reading scriptures? Did differences in the interpretation of the Qur'ân generate the communal divisions, or did differing communal identities generate different interpretations of the Qur'ân? God's power (free will versus predestination) the age of the Universe (pre-eternal world vs coming into being at some point) roots of ethics (what makes an act right or wrong.) Readings of the greatest philosophers and theologians in classical Islam. GER:DB-Hum

3 units, not given this year

RELIGST 102. Modern Islam
How Muslims have engaged in diverse ways with the Modern World and with new ethical, social and political challenges from the 19th century on. GER:DB-Hum

5 units, Aut (Nanji, A)

RELIGST 103. Religion and Global Conflict
A weekly lecture series - drawing upon experts in various disciplines, departments, and centers on campus and beyond - which seeks to understand and explain religion's renewed, and often violent, public and political relevance for global affairs at the beginning of the 21st century.

2 units, not given this year

RELIGST 104. The Daoist Body
The human body as seen in Daoist traditions and related areas, particularly cosmol- ogy and medicine. Major sources including images and charts, and the views of the human being that they reflect. GER:DB-Hum, EC-GlobalCom

4 units, Aut (Bokenkamp, S)

RELIGST 105. Truthful Fictions: Religion in Popular Narratives
What do St. Augustine's Confessions, Dante's Divine Comedy, and Joss Whedon's Buffy the Vampire Slayer have in common? What can Cylons tell us about character and free will? How some of today's new mythologies explore religious themes like hope, transcendence, selfhood, ethics, spiritual crisis, and heroism. Materials include novels, graphic novels, television, and film. GER:DB-Hum

4 units, Spr (West, C)

RELIGST 107. Hindus and Muslims in South Asia
The history of Hindus and Muslims living together in S. Asia for over 1,000 years. Peace and conflict, composite cultures, and interdependent social worlds. Partition in 1947 and the creation of separate nations. Religion, arts, society, and politics. GER:DB-Hum, EC-GlobalCom

4 units, not given this year

RELIGST 108. The Mahabharata
How the Sanskrit epic and its versions in other languages are interwoven with the history of Hinduism and S. Asian arts, philosophy, and social and political thought. How the text is interpreted through performance, including village ritual dramas, classical dance, and mass market television. GER:DB-Hum

4 units, not given this year

RELIGST 108A. Religious Epics of India: The Ramayana
The much-loved Ramayana story, from the ancient Sanskrit epic poem of Valmiki to other avatars through the ages--vernacular and Sanskrit poetry, theater, the chart-busting television serial of the late 1980s, classic comics, animated film. Religion, politics, cultural ideals, gender, media,. Recent battles over ""Ram's birthplace"" in Ayodhya and their effects on Hindu-Muslim relations and political power. GER:DB-Hum

4 units, not given this year

RELIGST 111. Religions of Mexico
Key issues in the study of religion and religions of Mexico. Sacred cities of the Aztec and Maya, the encounter between Christianity and indigenous religions and contemporary religious performances in Mexico and among Mexican Americans. Theoretical frames of Mircea Eliade, Emile Durkheim, and Victor Turner. Emphasis is on the recently recovered indigenous codex known as the Mapa de Cuauhtinchan #2. GER:DB-Hum

4 units, not given this year

RELIGST 112. Handmaids and Harlots: Biblical Women in Jewish and Christian Traditions
Miraculous births, wandering in the wilderness, encounters with angels: stories of Hagar, Sarah, Hannah, and Mary, and how their tales are read and re-told by later Jews and Christians. Sources include the Hebrew Bible and New Testament, Jewish and Christian commentary, and religious iconography. GER:DB-Hum, EC-Gender

4 units, not given this year

RELIGST 113B. Japanese Religion Through Film
Themes in premodern and modern Japanese religion though animations, movies and documentaries GER:DB-Hum

4 units, Aut (Lin, I)

RELIGST 114B. Religions of Korea
Religious traditions in Korea from antiquity to the present. An examination of texts including Buddha tales, official histories, spatial representations, popular literature, modern media reports and other primary sources. The impact of imperialism, modernity, and nationalism on the contemporary practice of religion.

4 units, Aut (Koo, S)

RELIGST 115. Hope and Prophetic Politics: Abraham Joshua Heschel and Martin Luther King, Jr.
The biblically informed prophetic tradition that has long shaped the history of American religious and political thought and that has often clashed with an impulse towards empire and the desire to accumulate power. Focus is on Abraham Joshua Heschel and Martin Luther King, Jr., 20th-century religious intellectuals whose lives and works draw on this tradition to raise and address questions basic to the role of religion in public life. GER:DB-Hum
4 units, not given this year

RELIGST 117. The Future of Christianity
Developments affecting the world¿s largest religion in the new millennium: shifting demographics; declining numbers in mainline Christian denominations in North America and Europe; the emergence of ¿global Christianity¿ in Africa, Asia, and South America; Christianity after the baby boomer generation; ""flash point"" issues (sexuality, global economic system, politics, bioethics); religious pluralism. Will Christianity have a future? What kind of future? GER:DB-Hum
4 units, Spr (Pitkin, B)

RELIGST 118. Gandhi, King, and Nonviolence
(Same as HISTORY 105) Lives, times, theory, and practice of Mohandas Gandhi and Martin Luther King, Jr.; their significance to issues of violence and nonviolence today. GER:DB-Hum
4 units, not given this year

RELIGST 123. Islam Today
Case studies from the Muslim world to explore contemporary developments that affect Muslims in maintaining religious identity and continuity. GER:DB-Hum
4 units, Spr (Nanji, A)

RELIGST 124. Sufi Islam
The complex of Islamic intellectual and social perspectives subsumed under the term Sufism. Sufi mystical philosophies and historical and social evolution. Major examples include: Qushayrî, Râbi'a, Junayd, Hallâj, Sulamî, Ibn al-'Arabî, Rûmî, Nizâm al-Dîn Awliyâ'. Social and political roles of Sufi saints and communities. Readings include original prose and poetry in translation, secondary discussions, and ethnography. GER:DB-Hum
4 units, not given this year

RELIGST 125. Authority of the Past in Islamic Thought
How have Muslims thought about the past as a source for contextualizing the present and generating prescriptions for right conduct? What imaginations of time undergird major Islamic intellectual perspectives? A wide-ranging exploration based on readings from the Quran, lives of prophets, chronicles, philosophy of history, hagiography, epic and mythology, and ethnography.
4 units, Win (Bashir, S)

RELIGST 126. Protestant Reformation
16th-century evangelical reformers (Luther, Calvin, Zwingli) and reform movements (Lutheran, Reformed, Anabaptist) in their medieval context. GER:DB-Hum
4 units, not given this year

RELIGST 127A. Kabbalah: The Mystical Teachings of Judaism
Jewish mystical literature, especially the Zohar. Mystical concepts of the divine: masculine and feminine aspects of the Godhead, divine sonship; eroticism and sexuality; cosmogony and apocalypse; mystical secrecy and popularization, including the contemporary Kabbalah movement in the U.S. and figures such as Madonna and Roseanne. Guest lectures by scholars of Kabbalah including Moshe Idel from Jerusalem and Daniel Matt, the American translator of the Zohar.
2 units, not given this year

RELIGST 129. Modern Jewish Thought
From the early Enlightenment to the present. Universalism, subjectivity, and redemption within Judaism's encounter with modernity as reflected on by Jewish intellectuals within the Western philosophical tradition; how modern Jewish intellectuals have shaped and been shaped by current debates. Challenges to religious identity by secularism, capitalism, and the nation state. Messianism, mysticism, reactionary romanticism, critical theory, post-Holocaust philosophy, spirituality, and feminism. Thinkers include Spinoza, Marx, Freud, Buber, Strauss, the Frankfurt school, Benjamin, Arendt, and Levinas.
4 units, not given this year

RELIGST 130. Genesis and Gender: Male and Female in Judaism, Christianity, and Islam
(Same as JEWISHST 120) What does it mean to be a man or a woman? And what role have classical and religious traditions played in shaping understandings of gender differences? Investigation of the construction of gender identities, roles, and differences in Greek and Roman sources and three monotheistic faiths. Interpretation and retellings of the story of Adam and Eve in the Bible and the Qu¿ran, commentaries, lives and practices of religious communities, religious iconography down to the present. GER:DB-Hum, EC-Gender
4 units, Aut (Fonrobert, C; Pitkin, B)

RELIGST 132. Jesus the Christ
How did Jesus of Nazareth, who never claimed to be Christ or divine, become the son of God after his death? Sources include the history of first-century Judaism and Christianity.
4 units, not given this year

RELIGST 132C. Jesus the Jew in First Century Christianity
Contemporary historical-critical methods in investigating how one might study Jewish and Christian texts of the 1st century CE. Social contexts including economic realities and elite ideological views. What can be known historically about 1st-century Judaism and Jesus' part it in it. How Jewish apocalyptic messianism shaped the birth of Christianity and its trajectory through the 1st century. GER:DB-Hum
4 units, not given this year

RELIGST 132D. Early Christian Gospels
(Same as CLASSGEN 132) An exploration of Christian gospels of the first and second century. Emphasis on the variety of images and interpretations of Jesus and the good news, the broader Hellenistic and Jewish contexts of the gospels, the processes of developing and transmitting gospels, and the creation of the canon. Readings include the Gospel of John, the Gospel of Mark, the Gospel of Thomas, the Gospel of Mary and other canonical and non-canonical gospels. GER:DB-Hum
4 units, Spr (Copeland, K)

RELIGST 132E. Christianity and Poetry
(Same as COMPLIT 156) This course examines the relationship between poetry and Christianity from Dante to T.S. Eliot. The course will focus on how Christian devotional practices (prayer, meditation), and liturgical forms appear in poetry. Does ""poetic faith"" (Coleridge) differ from religious faith? How do poets address God? What poetic devices do they use to pray, repent, or give thanks? Authors include Dante, St. Teresa of Avila, John Donne, Emily Dickinson, and Eliot.
3-5 units, Spr (Staff)

RELIGST 133. Inventing Christianity in Late Antiquity
The transformation of an apocalyptic sect into an imperial religion from 200 to 600 C.E. Shifts in structures of authority, worship, and belief mapped against shifts in politics, economics and religion in the larger Roman empire. Cultural visions of this history including Edward Gibbon's Decline and Fall of the Roman Empire, Dan Brown's conspiracy theory in The Da Vinci Code, and Elaine Pagels' The Secret Gospel of Thomas. GER:DB-Hum
4 units, not given this year

RELIGST 136. Buddhist Yoga
Buddhist models of spiritual practice emphasizing issues in the interpretation of the contemplative path. GER:DB-Hum, EC-GlobalCom
4 units, not given this year

RELIGST 139. Nihilism
The history of a religious specter. Examine the challenges and promises of ¿nihilistic thinking¿ in the wide context of European moral thought, focusing on the role it played in major 19th/20th century critiques of modernity (notably with the so-called ¿end of metaphysics¿). Particular emphasis will be on the role of ¿nothing¿ as category of thought, and why so many religious thinkers and philosophers have tried to make something out of it. Readings to include Pascal, Jacobi, Kierkegaard, Nietzsche, Barth, Heidegger, Benjamin, Nishitani, Arendt, and the ¿return to religion¿ in late postmodern thought. Examples from literature/art and culture (Doestoevsky, Dada, contemporary culture critique) to enrich and ground the discussions.
3-5 units, Win (Khawaja, N)

RELIGST 144. John Calvin and Christian Faith
Close reading and analysis of Calvin's Institutes of the Christian Religion as a classic expression of Christian belief. GER:DB-Hum

4 units, not given this year

RELIGST 146. Religious Mystery and Rational Reflection
The boundaries of rational knowledge about Christian faith through a reading of the transcendental project of Jesuit theologian Karl Rahner. Rahner's thought, informed by various sources (e.g., the mystics, Aquinas, Kant, Hegel and Ignatius Loyola), results in an interpretation of Christian faith that strives for intellectual honesty in the face of challenges from science, atheism, and postmodern culture. Yet it leaves room for a fundamental human openness to the source and goal of self-transcendence, what Rahner calls holy mystery. Weekly short position papers required. GER:DB-Hum

4 units, Spr (Crowley, P)

RELIGST 148. From Jesus to Paul
Jesus considered himself God's definitive prophet, but he did not think he was God, and had no intention of founding a new religion. How did this Jewish prophet become the gentile God and the founder of Christianity? The role of Paul. GER:DB-Hum

4 units, not given this year

RELIGST 148A. St. Paul and the Politics of Religion
The major letters written by Paul, the Apostle, and his biography, Acts of the Apostles. Historical context in first century Jewish cultural politics. Origins of Christianity, and the split into Judaism and Christianity. The relationship between Jews and non-Jews. The juxtaposition of law and faith. Origins of cultural universalism. Paul as Jewish radical versus Paul, the first Christian thinker and theologian. Recent philosophical readings of Paul (Taubes, Badiou, and Agamben). GER:DB-Hum

4 units, not given this year

RELIGST 150. The Lotus Sutra: History of a Buddhist Book
The Lotus school of Mahayana, and its Indian sources, Chinese formulation, and Japanese developments. GER:DB-Hum, DB-Hum, EC-GlobalCom

4 units, not given this year

RELIGST 151A. Buddhist Art in a Cosmopolitan Environment
The Buddhist art of Gandhara, historical Northwest India, was the product of a complex interplay of different cultures, religions and societies in the region. Gandharan art from the historic circumstances that led to its development in the first century AD to its gradual disappearance in its homeland around 500 AD. GER:DB-Hum

4 units, not given this year

RELIGST 154. Buddhism Today: Responses to New Global Challenges
How do the traditions of Buddhism cope with new social, ethical, and global challenges? Case studies from Sri Lanka, Japan, and the West. The historical position of Buddhist social thought. Buddhism's ascetic and meditative legacy: friend or foe of social engagement? GER:DB-Hum, EC-GlobalCom

4 units, not given this year

RELIGST 156. Goddesses and Gender in Hinduism
India's tradition of worshiping female forms of the divine, including Kali, Durga, Lakshmi, Saraswati, Radha, Sita, and local deities. The stories, histories, iconographies, theologies, arts, and practices associated with these goddesses. How the worship of goddesses impacts the lives of women. Readings include Is the Goddess a Feminist? GER:DB-Hum, EC-Gender

4 units, not given this year

RELIGST 159. Music and Religion in South Asia
Music and other arts in South Asia are often intertwined with religion. Guest teacher Tara Kini, a Hindustani classical singer from India, will join Prof. Hess in introducing history, theory and practice of music as it relates to religion, especially Hinduism and Islam, in South Asia. How is sound understood as revelation of divinity? How do songs express devotional emotion and theology? How do film songs show popular religious culture? How do musical performance and construction of history become arenas for political ideology? Students will do musical practice along with academic study. Guest artists will appear. No background required. GER:DB-Hum, EC-GlobalCom

4-5 units, Aut (Hess, L)

RELIGST 159A. Religion and Performance
(Same as RELIGST 359A) What happens when religion is viewed through the lens of performance? Texts become dramas, songs, recitations, oral commentaries, dances, movies, and political appropriations. Beliefs become embodied enactments; doctrine puts on a costume and indulges in role play. Approaches to performance theory through religious enactments such as ritual, prayer, festival, drama, music, and film. Most examples from S. Asian religions; students may undertake research projects into other cultures and traditions. GER:DB-Hum

4 units, not given this year

RELIGST 161. Religion and Its Modern Critics
(Same as RELIGST 261) Philosophical critique of religion as it developed in the modern west. Looking primarily at Feuerbach, Marx, Nietzsche and Freud--the so-called ""masters of suspicion""--consider the century-long effort to understand religious consciousness as a form of projection, ideology or illusion. Central concern will be to evaluate the major claim of the critics: that religion fosters a sense of alienation or estrangement within the human condition GER:DB-Hum

4 units, Spr (Kangas, D)

RELIGST 162. Spirituality and Nonviolent Urban and Social Transformation
(Same as URBANST 126) A life of engagement in social transformation is often built on a foundation of spiritual and religious commitments. Case studies of nonviolent social change agents including Rosa Parks in the civil rights movement, César Chávez in the labor movement, and WIlliam Sloane Coffin in the peace movement; the religious and spiritual underpinnings of their commitments. Theory and principles of nonviolence. Films and readings. Service learning component includes placements in organizations engaged in social transformation. Service Learning Course (certified by Haas Center). GER:DB-Hum

5 units, not given this year

RELIGST 167. Medieval Religious Philosophy
(Same as PHIL 101A) (Same as PHIL 101A.) Survey of medieval philosophy, focusing on God, world and words. A pervasive assumption about the structure of the world, that it reflected the categories of God's mind and emerged from an act of divine speech, gave impetus to the interest in the nature of language and its relation to the world. Scripture served as one kind of divine communication to human beings, and ""The Book of the World"" as another. The problem of universals, the question of how words relate to God, epistemology, theories of reference, semiotics, are some of the topics discussed. Readings from Augustine, Anselm, Aquinas, Scotus, and Ockham, etc. GER:DB-Hum

4 units, Aut (Gelber, H)

RELIGST 170C. Reading in Biblical Hebrew
Third of a three quarter sequence. Readings and translation of biblical narratives emphasizing grammar and literary techniques. Prerequisite: AMELANG 170B.

4 units, not given this year

RELIGST 172. Sex, Body, and Gender in Medieval Religion
Anxiety about sex and the body increased markedly during the early years of Christianity, while the doctrine of the Incarnation put the human body at the center of religious concern. Ideals of virginity, chastity, ascetic self-denial of necessities like food, sleep, and freedom from pain were central to lay and clerical piety. The religious theory and practice associated with questions about sex, body, and gender in the Middle Ages as constructed in literature, mythology, ritual, mystic, and monastic texts. GER:DB-Hum, EC-Gender

4 units, not given this year

RELIGST 174. Martyrdom in the Ancient World
(Same as CLASSGEN 174) Jewish, pagan and Christian groups under Roman rule all told tales of persecution and resistance. How did they use these stories, and the historical experiences behind them, to form group identity? Emphasis is on ancient documents in translation, and modern scholarly interpretations, to examine the competing agendas of parties involved, group dynamics, individual motivation, symbolic violence, and the body as a locus of power and control. GER:DB-Hum

4 units, not given this year

RELIGST 174E. Kierkegaard: Existentialism and Religion
(Same as RELIGST 374E) Kierkegaard is rightly called one of the founders of existentialism. Like Socrates, the one philosopher in the western tradition to whom he felt consciously in debt, Kierkegaard sought to return philosophy to the work of thinking through the human condition in all its uncertainty and finitude. Although 20th century existentialists like Sartre and Camus were self-consciously atheist, Kierkegaard's existentialism has religious origins. Through readings of Kierkegaard's philosophical and religious texts, explore the possibility of an existentialist interpretation of the human condition that is religious in nature. Kierkegaard's development of a 'philosophy of existence' as a response to major trends in modern European thought, particularly in response to the philosophies of German idealism (Kant, Hegel) and romanticism. GER:DB-Hum
4 units, not given this year

RELIGST 176. Religious Diversity: Theoretical and Practical Issues
What does it mean for a religion to be true? If one religion is true, what about the truth of other religious possibilities? How, and why, should religious traditions be compared? Readings address tolerance and pluralism, relativism, comparative theory, and new religious virtues. GER:DB-Hum
4 units, not given this year

RELIGST 183. The Death of God: Between Hegel and Marx
The radical transformations in Western notions of God between the death of Hegel and the birth of historical materialism, arguing that questions about theism and atheism, humanism, and history formulated in the period 1831-50 are still pertinent today. Texts from Hegel, the young Hegelians, Feuerbach, and Marx on issues of God, history, and the social dimensions of human nature. GER:DB-Hum
4 units, not given this year

RELIGST 185. Prophetic Voices of Social Critique
Judges, Samuel, Amos, and Isaiah depict and question power, strong leaders who inevitably fail, the societal inequities and corruption inevitable in prosperity, and the interplay between prophet as representative of God and the human king. How these texts succeed in their scrutiny of human power and societal arrangements through attention to narrative artistry and poetic force, and condemnation of injustice. Includes service-learning component in conjunction with the Haas Center. GER:DB-Hum
4 units, not given this year

RELIGST 199. Individual Work
Prerequisite: consent of instructor and department. May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

RELIGST 201. Classical Islamic Law
(Same as RELIGST 301) Emphasis is on methods of textual interpretation. History of premodern Islamic law, including origins, formation of schools of law, and social and political contexts. Laws of sale, marriage, divorce, and the obligation to forbid wrong. GER:DB-Hum
3-5 units, not given this year

RELIGST 203. Myth, Place, and Ritual in the Study of Religion
(Same as RELIGST 303) Sources include: ethnographic texts and theoretical writings; the approaches of Charles Long, Jonathan Z. Smith, Victor Turner, Michael D. Jackson, and Wendy Doniger; and lived experiences as recounted in Judith Sherman's Say the Name: A Survivor's Tale in Prose and Poetry, Jackson's At Home in the World, Marie Cardinal's The Words to Say It, and John Phillip Santos¿ Places Left Unfinished at the Time of Creation. GER:DB-Hum
3-5 units, not given this year

RELIGST 207A. Modern African Islam through Literature
(Same as RELIGST 307A) Read the works of Modern Muslim Literature in Africa. Explore the expressions and modes by which Islam and its contemporary condition are represented in African contexts. GER:DB-Hum
4 units, Spr (Nanji, A)

RELIGST 210. Translating the Daode Jing
One of the most frequently translated works in world literature. Challenges faced by translators, support from commentaries and related sources, and assumptions underlying translations into Western languages. Recommended: classical Chinese. GER:DB-Hum
4 units, not given this year

RELIGST 212. Chuang Tzu
The Chuang Tzu (Zhuangzi) in its original setting and as understood by its spiritual progeny. Limited enrollment. GER:DB-Hum
5 units, not given this year

RELIGST 216. Japanese Buddhism
Focus on the religious lives of lay people in medieval Japan, as evidenced in collections of Buddhist stories (setsuwashu), narrative picture scrolls (emaki), and related historical materials. All readings are in English, but the instructor will also work with students interested in reading the original Japanese. GER:DB-Hum
4 units, Win (Horton, S)

RELIGST 217. Japanese Studies of Religion in China
(Same as RELIGST 317) (Graduate students register for 317.) Readings in Japanese secondary sources on Chinese religions.
3 units, not given this year

RELIGST 220. Modern Muslim Thought: Philosophy, Politics, Society
Focus is on major challenges of the modern period. Historicity and plurality. Questions concerning governance, law, development, and political and social order in majority and minority Muslim contexts. Readings include original works in English and in translation. GER:DB-Hum
5 units, not given this year

RELIGST 220B. Crypto-Muslim Culture in Early Modern Spain
(Same as ILAC 214) What is known about the secret religious practice and culture of the Moriscos, Spain's large minority community of Muslim converts to Christianity (1500-1609)? What role did their handwritten literature (largely Islamic texts written in Castilian but copied out in Arabic script) play in the formation and maintenance of their culture? What can these Crypto-Muslim communities teach us regarding the place of Muslim culture in Western Europe today? The course will be taught in English; knowledge of Spanish and/or Arabic script is useful but not necessary.
3-5 units, Win (Barletta, V)

RELIGST 221. The Talmud
(Same as RELIGST 321) Strategies of interpretation, debate, and law making. Historical contexts. Prerequisite: Hebrew. GER:DB-Hum
4 units, not given this year

RELIGST 221A. Philology of Rabbinic Literature
(Same as RELIGST 321A) The genesis of rabbinic texts as texts. Evolution from oral stage to manuscript to printed text. Questions of redaction versus edition. Focus on Palestinian and Babylonian Talmud, with excursions into midrashic texts. Prerequisite: strong background in Hebrew. Knowledge of Aramaic preferred.
3-5 units, not given this year

RELIGST 221B. The Talmud as Literature
(Same as RELIGST 321B) In what sense can Talmud be studied as literature? Which voices can be identified? Concepts of author, editor, or redactor. The basic textual units of Talmud: sugya, chapter, and tractate. The sugya as literary genre. The aesthetic of talmudic dialectics. Prerequisite: Strong Hebrew, Aramaic preferred. GER:DB-Hum
3-5 units, not given this year

RELIGST 221C. Aramaic Jewish texts
(Same as JEWISHST 221C, JEWISHST 321C, RELIGST 321C) Reading of Aramaic Jewish texts with special focus on grammar and syntax. Foundations of classical Aramaic, the two major dialects of rabbinic Aramaic, the Palestinian (Galilean) and the Babylonian. Readings from Midrash, Piyyut, Talmud and Geonic materials and attempt to follow the development of the language though time. The course is intended for students with substantial knowledge of Hebrew. GER:DB-Hum
2-5 units, Aut (Balberg, M; Fonrobert, C)

RELIGST 222. Literature and Society in Medieval Islam
The development of literary traditions, 600-1500. Major poetic and prose topoi through examples from Arabic, Persian, and Turkish literature in translation. Literature's place in Islamic societies and biographies of significant authors. The religious value of literary

forms. Literary canons as unifying agents in different parts of the medieval Muslim world. Comparison between high and folk literatures. The role of aesthetic paradigms in the formation of Islamic religious and cultural identities. GER:DB-Hum

4 units, not given this year

RELIGST 222B. Sufism Seminar

(Same as RELIGST 322B) Sufism through original texts and specialized scholarship. Prerequisite: ability to read at least one major language of Islamic religious literature (Arabic, Persian, Turkish, Urdu). GER:DB-Hum

3-5 units, not given this year

RELIGST 222C. Debauchery and asceticism

(Same as RELIGST 322C) Arabic texts written by and about early Muslim figures famous either for their limitless self-indulgence or their rigorous self-denial. Language and style of these texts, their implied or explicit dialogue with religious values, and their possible relation to each other. Questions of representation, self-representation, and biographical fallacy. Intended for students with reading knowledge of Arabic.

3-5 units, not given this year

RELIGST 223. Studying Islam: History, Methods, Debates

Islam as a subject of academic inquiry since the 19th century. Origins and critiques of major methodological perspectives in Islamic studies such as philology, religious studies, history, art history, and anthropology. Landmarks in the development of the field and the work of major scholars. Academic debates regarding unity versus diversity, orientalism, fundamentalism and Islamism, Sufism, and gender. Current trends in scholarship on medieval and modern Muslim societies. Prerequisite: course work in Islamic studies or methodology in religious studies. GER:DB-Hum

4 units, not given this year

RELIGST 223A. The Arabic Qur'an

(Same as RELIGST 323A) Early history, language, structure, style, chronology, motifs, themes, and interpretation. Knowledge of Arabic required. GER:DB-Hum

3-5 units, not given this year

RELIGST 224. Classical Islamic Texts

(Same as RELIGST 324) Premodern Islamic scholarship. Genre-specific historical research methods. The hadith literature, tafsir, biographical dictionaries, fiqh, tarikh, and geographical works. Prerequisite: reading knowledge of Arabic. GER:DB-Hum

3-5 units, not given this year

RELIGST 224B. Unveiling the Sacred: Explorations in Islamic Religious Imagination

(Same as RELIGST 324B) Poetry and prose in translation as well as historical studies. Islamic movements invested in the idea that the sensory world has a hidden or esoteric counterpart that can be understood or experienced through following particular religious programs. Various forms of Shi'ism and Sufism, millenarian and apocalyptic movements, the Nation of Islam and its offshoots. Philosophical propositions, historical contexts, and the role of ritual in the construction of religious systems. GER:DB-Hum

3-5 units, not given this year

RELIGST 226. Philosophy and Kabbalah in Jewish Society: Middle Ages and Early Modern Period

(Same as RELIGST 326) Characteristics of religious philosophy from Saadia Gaon to Maimonides, Jewish opposition to and support of philosophy in the medieval Christian and Muslim world, texts from the early development of Kabbalah, the relationship between philosophy and Kabbalah, and conflicting views of Kabbalah from the 16th through 18th centuries.

5 units, not given this year

RELIGST 226A. Judaism and Hellenism

(Same as RELIGST 326A) interactions and conflicts between Jews and Greeks in the centuries following the conquests of Alexander the Great and the cultural/religious repercussions of their encounter. In what ways were Jews influenced by Greek culture? In what ways, and for what reasons, did they resist it? And how the interaction of these cultures shape the subsequent development of Judaism and Christianity? Jewish texts in the Greco-Roman period, including Jewish-Greek writers like Philo of Alexandria, the Apocrypha, the Dead Sea Scrolls, selected writings from the New Testament, and the Passover Haggadah. GER:DB-Hum

3-5 units, not given this year

RELIGST 226B. Judaism and Christianity in the Mediterranean World: Contact, Comptetition, and Conflict

(Same as CLASSGEN 126, CLASSGEN 226, JEWISHST 226B, JEWISHST 326B, RELIGST 326B) Jewish beginnings of Christianity in the first century C.E.; process of differentiation between various Jewish and Christian groups; effect of Roman-Jewish wars on Jewish and Christian identity formation; Jewish Christians, Christian Jews, and other heretics; rise of the discourse of orthodoxy and heresy; the emergence of the Adversus Judaeos tradition; theology as a realm of mutual attraction and conflict. Readings include Epistles of Paul in the New Testament, Christian authors from Justin through Augustine, excerpts from Rabbinic Texts (Mishnah, Midrash and Talmud), along with current literature on religion, ethnicity, and identity in the Roman world. GER:DB-Hum

5 units, Aut (Fonrobert, C)

RELIGST 226C. Mystics and Merrymakers: Innovations in Modern Judaism

(Same as JEWISHST 226C, JEWISHST 326C, RELIGST 326C) How does a tradition many thousands of years old make a space for itself in the dynamic landscape of contemporary America? Judaism has continually adapted to its surroundings, and in the twentieth century new movements have reconstructed, revisioned, and renewed Jewish practice. A space within has been claimed by a series of previously disenfranchised Jews including women, queer Jews, and Jews of color. Examine some of the most innovative of these changes from Jewish feminism to the Chabad Hasidic revival. GER:DB-Hum

3 units, Win (Rosenberg, J; Fonrobert, C)

RELIGST 227. The Qur'an

(Same as RELIGST 327) Early history, themes, structure, chronology, and premodern interpretation. Relative chronology of passages. GER:DB-Hum

5 units, not given this year

RELIGST 229. Winged Bulls and Sun Disks: Religion and Politics in the Persian Empire

Since Herodotus in the 5th century BCE, the Persian Empire has been represented as the exemplar of oriental despotism and imperial arrogance, a looming presence and worthy foil for the West and Greek democracy. History of the Achaemenid Empire, beginning with the rise of the Medes in the 7th century BCE to the fall of the Achaemenids to Alexander the Great¿s armies in 331 BCE. Focus on the intimate relationship between religion and empire and will also survey the diverse cultural institutions and religious practices found within the Empire. Evaluate contemporary representations of the Persians in politics and popular culture, such as the recent film ¿300¿ and the graphic novel on which it is based, in an attempt to better appreciate the enduring cultural legacy of the Greco-Persian wars. GER:DB-Hum

3 units, Spr (Vevaina, Y)

RELIGST 230B. Zen Studies

(Same as RELIGST 330B) Readings in recent English-language scholarship on Chan and Zen Buddhism GER:DB-Hum

4 units, Spr (Foulk, T)

RELIGST 236. European Reformations

(Same as HISTORY 231G, HISTORY 331G, RELIGST 336) Readings in and discussion of theological and social aspects of sixteenth century reformations: Luther, Radical Reform, Calvin, and Council of Trent, missionary expansion, religious conflict, creative and artistic expressions. Texts include primary sources and secondary scholarly essays and monographs.

4-5 units, Win (Stokes, L; Pitkin, B)

RELIGST 237. Jewish and Christian Rome, 1st to 6th Centuries

To what extent are Judaism and Christianity products of the Roman Empire, and shaped by its politics? Literature concerning Jewish and Christian perceptions of power, and archaeological and artistic traces of both religions in the imperial city of Rome. What roles did strategies of resistance and accommodation play in the formation of these religious communities¿ emerging identities? Possible optional field trip to Rome over Spring break. GER:DB-Hum

5 units, not given this year

RELIGST 238. Christian Neo-Platonism, East and West
(Same as RELIGST 338) Christianity's shift to neo-Platonic Greek philosophical categories and its significance for contemporary spirituality. Readings from Plotinus, Proclus, Greek fathers such as Pseudo-Dionysus, and from Ambrose and Augustine. GER:DB-Hum
3-5 units, not given this year

RELIGST 239. Luther and the Reform of Western Christianity
(Same as RELIGST 339) Luther's theology, ethics, biblical interpretation, and social reforms and their significance for the remaking of Western Christianity. Readings include Luther's own writings and secondary sources about Luther and his world. GER:DB-Hum
3-5 units, not given this year

RELIGST 241B. Mystics and Mysticism
(Same as RELIGST 341B) The varieties of meaning and significance the term mysticism takes on in religious studies though an exploration of accounts of mystical experiences: visions, bodily sensations, sense of the sacred, along with practices engaged in and texts written by those claiming such experiences for themselves or others. Focus is on medieval/renaissance Christians but students are invited to explore examples from other times, traditions and places. GER:DB-Hum
5 units, Win (Gelber, H)

RELIGST 245. Religion, Reason, and Romanticism
The late 18th-century European cultural shift from rationalist to romantic modes of thought and sensibility. Debates about religion as catalysts for the new Zeitgeist. Readings include: the Jewish metaphysician, Mendelssohn; the dramatist, Lessing; the philosopher of language and history, Herder; the critical idealist, Kant; and the transcendental idealist, Fichte. GER:DB-Hum
5 units, not given this year

RELIGST 247. Chinese Buddhist Texts
(Same as RELIGST 347) Readings in Chinese Buddhist texts, including selections from s¿tras, ¿¿stras, Vinaya texts, indigenous monastic rules (qingui), and Chan texts (yulu, gongan). Prerequisite: background in classical Chinese GER:DB-Hum
3-5 units, Win (Foulk, T)

RELIGST 247B. Readings in Chinese Religious Texts: The Lingbao Scriptures
(Same as RELIGST 347B) A survey of the original Lingbao scriptures. Composed in the late-4th / early 5th century, these texts radically revised Daoist practice, incorporated elements of Buddhist thought and practice, and created liturgies that are still used in Daoist communities today. (Reading knowledge of Literary Chinese ¿¿ required). GER:DB-Hum
4 units, Aut (Bokenkamp, S)

RELIGST 248. Chinese Buddhism in World Historical Perspective
(Same as RELIGST 348) Shared cosmologies, trade routes, and political systems. Prerequisite: background in Chinese or Japanese.
3-5 units, not given this year

RELIGST 248A. Chinese Buddhism Beyond the Great Wall
(Same as RELIGST 348A) The thought, practice, and cultural resonance of the sorts of originally Chinese Buddhism that flourished to the north and northwest of China proper during the two to three centuries following the fall of the Tang - i.e., under the Khitan Liao (907-1125) and the Tangut Xixia (1032-1227) dynasties - with special emphasis on the later fortunes of the Huayan, Chan, and Mijiao (Esoteric) traditions. Prerequisite: reading knowledge of Chinese. GER:DB-Hum
3-5 units, not given this year

RELIGST 250. Classics of Indian Buddhism
Texts in English translation includING discourses (sutras), philosophical treatises, commentaries, didactic epistles, hymns, biographies, and narratives. GER:DB-Hum
4 units, not given this year

RELIGST 250B. Depictions of the Buddha
(Same as RELIGST 350B) The image of the Buddha changes relatively little from its earliest conceptions. The role of the image and the notion of the Buddha do change fundamentally with time and place. South Asian depictions of the Buddha from the earliest symbolic representations to the wrathful and peaceful forms found in the esoteric Buddhism of India and the Himalayas, as well as the changing conceptions of the Buddha to which these depictions are related. GER:DB-Hum
3-5 units, not given this year

RELIGST 251. Readings in Indian Buddhist Texts
(Same as RELIGST 351) (Graduate students register for 351.) Introduction to Buddhist literature through reading original texts in Sanskrit. Prerequisite: Sanskrit. GER:DB-Hum
3-5 units, Spr (Harrison, P)

RELIGST 251A. Buddhist Visions of Paradise
(Same as RELIGST 351A) Textual and art-historical evidence for the early development in the greater Indian cultural area of the cult of the Buddhas of the present and their paradise worlds (""Pure Land Buddhism""). GER:DB-Hum
3-5 units, not given this year

RELIGST 253. Mountains, Buddhist Practice, and Religious Studies
(Same as RELIGST 353) The notion of the sacred mountain. Readings from ethnographic and theoretical works, and primary sources. GER:DB-Hum
3-5 units, not given this year

RELIGST 254. Recent Contributions to Buddhist Studies
May be repeated for credit.
4 units, not given this year

RELIGST 257. Readings in Daoist Texts
(Same as RELIGST 357) Readings from primary sources. Prerequisite: classical Chinese.
4 units, not given this year

RELIGST 258. Japanese Buddhist Texts
(Same as RELIGST 358) Readings in medieval Japanese Buddhist materials. May be repeated for credit. Prerequisite: background in Japanese or Chinese. GER:DB-Hum
3-5 units, not given this year

RELIGST 261. Religion and Its Modern Critics
(Same as RELIGST 161) Philosophical critique of religion as it developed in the modern west. Looking primarily at Feuerbach, Marx, Nietzsche and Freud, the so-called masters of suspicion, consider the century-long effort to understand religious consciousness as a form of projection, ideology, or illusion. Central concern is to evaluate the major claim of the critics: that religion fosters a sense of alienation or estrangement within the human condition. GER:DB-Hum
4 units, Spr (Kangas, D)

RELIGST 263. Judaism and the Body
Representations and discourses of the body in Jewish culture; theories of body and ritual. Case studies of circumcision, menstrual impurity, and intersexuality. Readings include classical texts in Jewish tradition and current discussions of these textual traditions. GER:DB-Hum, EC-Gender
4 units, not given this year

RELIGST 265. Research Methods and Resources in Jewish Studies
(Same as JEWISHST 225, JEWISHST 325, RELIGST 365) Enhance students' research skills in the interdisciplinary field of Jewish Studies, emphasizing electronic reference sources, but also archival resources and print publications. Coverage includes: Basic reference sources in Jewish Studies, History and bibliography of the Hebrew book, Hebrew Bible, Talmud, Religious studies (post-Talmudic), Jewish philosophy, Jewish history (by period; by region), Jewish languages, Hebrew literature, Yiddish literature, Zionism and Israel, Sephardic Jewry, women, Holocaust, miscellaneous topics (art, music, folklore and ethnography, sociology, genealogy, geography, pseudonyms, honorifics, abbreviations). Class sessions will also include special workshops on Hebrew / Yiddish / Ladino romanization (transliteration/transcription).
1-3 units, Win (Baker, Z)

RELIGST 271A. Dante's Spiritual Vision
Poetry, ethics, and theology in Dante's Divine Comedy. Supplementary readings from classical authors such as St. Thomas Aquinas, and from modern writers, such as Jorge Borges. Fulfills capstone seminar requirement for the Philosophy and Literature tracks. Students may take 271A without taking 271B. Consent of the instructor required. GER:DB-Hum
4-5 units, Aut (Yearley, L)

RELIGST 271B. Dante's Spiritual Vision
Poetry, ethics, and theology in Dante's Divine Comedy. Supplementary readings from classical authors such as St. Thomas, and from modern writers, such as Jorge Borges. Fulfills capstone seminar requirement for the Philosophy and Literature tracks. Prerequisite: 271A GER:DB-Hum

4-5 units, Win (Yearley, L)

RELIGST 272. Kant on Religion
(Same as RELIGST 372) Critical examination of Kant¿s principle writings on religion against the background of his general theoretical and practical philosophy and guided by the hypothesis that his philosophy of religion continues to offer significant insights and resources to contemporary theories of religion. Recent reassessments of Kant on religion in the secondary literature will also be read and discussed

3-5 units, not given this year

RELIGST 273. Historicism and Its Problems
(Same as RELIGST 373) The emergence, varieties, and crises of historicism as a world view and approach to the study of religion in the 19th and 20th centuries. The implications of historical reason and historical consciousness for the philosophy of religion, ethics, and theology. GER:DB-Hum

3-5 units, not given this year

RELIGST 274. From Kant to Kierkegaard
(Same as RELIGST 374) (Graduate students register for 374.) The main currents of religious thought in Germany from Kant's critical philosophy to Kierkegaard's revolt against Hegelianism. Emphasis is on the theories of religion, the epistemological status of religious discourse, the role of history (especially the figure of Jesus), and the problem of alienation/reconciliation in seminal modern thinkers: Kant, Schleiermacher, Hegel, and Kierkegaard. GER:DB-Hum

3-5 units, not given this year

RELIGST 275. Kierkegaard and Religious Existentialism
(Same as RELIGST 375) (Graduate students register for 375.) Close reading of Kierkegaard¿s magnum opus, Concluding Unscientific Postscript to Philosophical Fragments, in its early 19th-century context. GER:DB-Hum

3-5 units, not given this year

RELIGST 277. The Later Heidegger
(Same as RELIGST 377) Lectures and seminar discussions of the problematic of the later Heidegger (1930 - 1976) in the light of his entire project. Readings from ""Pathmarks,"" ""Four Seminars,"" ""On Time and Being,"" and other texts. GER:DB-Hum

3 units, Aut (Sheehan, T)

RELIGST 278. Heidegger: Confronting the Ultimate
(Same as RELIGST 378) Heidegger's work on meaning, the self, and the sacred. Texts include Being and Time, courses and opuscula up to 1933, the Letter on Humanism, and Contributions of Philosophy. GER:DB-Hum

3-5 units, not given this year

RELIGST 279. Heidegger and the Holy
(Same as RELIGST 379) Heidegger's philosophy as opening a new door onto the possibility of experiencing the sacred after the collapse of traditional metaphysical theology. A close reading of Being and Time as an introduction to the question of the holy.

4 units, not given this year

RELIGST 280. Schleiermacher: Reconstructing Religion
(Same as RELIGST 380) Idealist philosopher, Moravian pietist, early German Romantic, co-founder of the University of Berlin, head preacher at Trinity Church, translator of Plato's works, Hegel's opponent, pioneer in modern hermeneutics, father of modern theology. Schleiermacher's controversial reconception of religion and theology in its philosophical context. GER:DB-Hum

3-5 units, Aut (Sockness, B)

RELIGST 282. King Solomon and the Search for Wisdom
(Same as JEWISHST 228, JEWISHST 328, RELIGST 382) What is wisdom according to the Bible? The course addresses this question by surveying various biblical and post-biblical texts associated with King Solomon. Other topics include the on-going debate over the historical existence of a Solomonic kingdom, the origins and history of the Jerusalem Temple, and Solomon's role in Jewish, Christian and Islamic tradition.

4 units, Win (Weitzman, S)

RELIGST 290. Majors Seminar
Required of all majors and joint majors. The study of religion reflects upon itself. Representative modern and contemporary attempts to ""theorize,"" and thereby understand, the phenomena of religion in anthropology, psychology, sociology, cultural studies, and philosophy. WIM. WIM

5 units, Win (Sockness, B)

RELIGST 297. Senior Essay/Honors Essay Research
Guided by faculty adviser. May be repeated for credit. Prerequisite: consent of instructor and department.

3-5 units, Aut (Staff), Win (Staff), Spr (Staff)

RELIGST 298. Senior Colloquium
For Religious Studies majors writing the senior essay or honors thesis. Students present work in progress, and read and respond to others. Approaches to research and writing in the humanities.

5 units, Spr (Fonrobert, C)

GRADUATE COURSES IN RELIGIOUS STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

RELIGST 219. Buddhism and Death
The role of pre and post mortem practices in ancient and modern Buddhist traditions; examples from India, China, and Japan. How the clergy and laity conceived of the process of dying, and how those beliefs were transformed into rituals.

4 units, not given this year

RELIGST 301. Classical Islamic Law
(Same as RELIGST 201) Emphasis is on methods of textual interpretation. History of premodern Islamic law, including origins, formation of schools of law, and social and political contexts. Laws of sale, marriage, divorce, and the obligation to forbid wrong.

3-5 units, not given this year

RELIGST 302. Islamic Studies Proseminar
Research methods and materials for the study of Islam.

1-5 units, Aut (Bashir, S)

RELIGST 303. Myth, Place, and Ritual in the Study of Religion
(Same as RELIGST 203) Sources include: ethnographic texts and theoretical writings; the approaches of Charles Long, Jonathan Z. Smith, Victor Turner, Michael D. Jackson, and Wendy Doniger; and lived experiences as recounted in Judith Sherman's Say the Name: A Survivor's Tale in Prose and Poetry, Jackson's At Home in the World, Marie Cardinal's The Words to Say It, and John Phillip Santos¿ Places Left Unfinished at the Time of Creation.

3-5 units, not given this year

RELIGST 304A. Theories and Methods
Required of graduate students in Religious Studies. Approaches to the study of religion. Prerequisite: consent of instructor.

4 units, not given this year

RELIGST 304B. Theories and Methods
Required of graduate students in Religious Studies. Approaches to the study of religion. Prerequisite: consent of instructor.

4 units, Aut (Bashir, S)

RELIGST 307A. Modern African Islam through Literature
(Same as RELIGST 207A) Read the works of Modern Muslim Literature in Africa. Explore the expressions and modes by which Islam and its contemporary condition are represented in African contexts.

4 units, Spr (Nanji, A)

RELIGST 308. Medieval Japanese Buddhism
Japanese religion and culture, including Buddhism, Shinto, popular religion, and new religions, through the medium of film.

3-5 units, not given this year

RELIGST 312. Buddhist Studies Proseminar
Research methods and materials for the study of Buddhism. May be repeated for credit. Prerequisite: reading knowledge of Chinese or Japanese.

1-5 units, not given this year

RELIGST 317. Japanese Studies of Religion in China
(Same as RELIGST 217) (Graduate students register for 317.) Readings in Japanese secondary sources on Chinese religions.
3 units, not given this year

RELIGST 321. The Talmud
(Same as RELIGST 221) Strategies of interpretation, debate, and law making. Historical contexts. Prerequisite: Hebrew.
4 units, not given this year

RELIGST 321A. Philology of Rabbinic Literature
(Same as RELIGST 221A) The genesis of rabbinic texts as texts. Evolution from oral stage to manuscript to printed text. Questions of redaction versus edition. Focus on Palestinian and Babylonian Talmud, with excursions into midrashic texts. Prerequisite: strong background in Hebrew. Knowledge of Aramaic preferred.
3-5 units, not given this year

RELIGST 321B. The Talmud as Literature
(Same as RELIGST 221B) In what sense can Talmud be studied as literature? Which voices can be identified? Concepts of author, editor, or redactor. The basic textual units of Talmud: sugya, chapter, and tractate. The sugya as literary genre. The aesthetic of talmudic dialectics. Prerequisite: Strong Hebrew, Aramaic preferred.
3-5 units, not given this year

RELIGST 321C. Aramaic Jewish texts
(Same as JEWISHST 221C, JEWISHST 321C, RELIGST 221C) Reading of Aramaic Jewish texts with special focus on grammar and syntax. Foundations of classical Aramaic, the two major dialects of rabbinic Aramaic, the Palestinian (Galilean) and the Babylonian. Readings from Midrash, Piyyut, Talmud and Geonic materials and attempt to follow the development of the language though time. The course is intended for students with substantial knowledge of Hebrew.
2-5 units, Aut (Balberg, M; Fonrobert, C)

RELIGST 322B. Sufism Seminar
(Same as RELIGST 222B) Sufism through original texts and specialized scholarship. Prerequisite: ability to read at least one major language of Islamic religious literature (Arabic, Persian, Turkish, Urdu).
3-5 units, not given this year

RELIGST 322C. Debauchery and asceticism
(Same as RELIGST 222C) Arabic texts written by and about early Muslim figures famous either for their limitless self-indulgence or their rigorous self-denial. Language and style of these texts, their implied or explicit dialogue with religious values, and their possible relation to each other. Questions of representation, self-representation, and biographical fallacy. Intended for students with reading knowledge of Arabic.
3-5 units, not given this year

RELIGST 323A. The Arabic Qur'an
(Same as RELIGST 223A) Early history, language, structure, style, chronology, motifs, themes, and interpretation. Knowledge of Arabic required.
3-5 units, not given this year

RELIGST 324. Classical Islamic Texts
(Same as RELIGST 224) Premodern Islamic scholarship. Genre-specific historical research methods. The hadith literature, tafsir, biographical dictionaries, fiqh, tarikh, and geographical works. Prerequisite: reading knowledge of Arabic.
3-5 units, not given this year

RELIGST 324B. Unveiling the Sacred: Explorations in Islamic Religious Imagination
(Same as RELIGST 224B) Poetry and prose in translation as well as historical studies. Islamic movements invested in the idea that the sensory world has a hidden or esoteric counterpart that can be understood or experienced through following particular religious programs. Various forms of Shi'ism and Sufism, millenarian and apocalyptic movements, the Nation of Islam and its offshoots. Philosophical propositions, historical contexts, and the role of ritual in the construction of religious systems.
3-5 units, not given this year

RELIGST 326. Philosophy and Kabbalah in Jewish Society: Middle Ages and Early Modern Period
(Same as RELIGST 226) Characteristics of religious philosophy from Saadia Gaon to Maimonides, Jewish opposition to and support of philosophy in the medieval Christian and Muslim world, texts from the early development of Kabbalah, the relationship between philosophy and Kabbalah, and conflicting views of Kabbalah from the 16th through 18th centuries.
5 units, not given this year

RELIGST 326A. Judaism and Hellenism
(Same as RELIGST 226A) interactions and conflicts between Jews and Greeks in the centuries following the conquests of Alexander the Great and the cultural/religious repercussions of their encounter. In what ways were Jews influenced by Greek culture? In what ways, and for what reasons, did they resist it? And how the interaction of these cultures shape the subsequent development of Judaism and Christianity? Jewish texts in the Greco-Roman period, including Jewish-Greek writers like Philo of Alexandria, the Apocrypha, the Dead Sea Scrolls, selected writings from the New Testament, and the Passover Haggadah.
3-5 units, not given this year

RELIGST 326B. Judaism and Christianity in the Mediterranean World: Contact, Comptetition, and Conflict
(Same as CLASSGEN 126, CLASSGEN 226, JEWISHST 226B, JEWISHST 326B, RELIGST 226B) Jewish beginnings of Christianity in the first century C.E.; process of differentiation between various Jewish and Christian groups; effect of Roman-Jewish wars on Jewish and Christian identity formation; Jewish Christians, Christian Jews, and other heretics; rise of the discourse of orthodoxy and heresy; the emergence of the Adversus Judaeos tradition; theology as a realm of mutual attraction and conflict. Readings include Epistles of Paul in the New Testament, Christian authors from Justin through Augustine, excerpts from Rabbinic Texts (Mishnah, Midrash and Talmud), along with current literature on religion, ethnicity, and identity in the Roman world.
5 units, Aut (Fonrobert, C)

RELIGST 326C. Mystics and Merrymakers: Innovations in Modern Judaism
(Same as JEWISHST 226C, JEWISHST 326C, RELIGST 226C) How does a tradition many thousands of years old make a space for itself in the dynamic landscape of contemporary America? Judaism has continually adapted to its surroundings, and in the twentieth century new movements have reconstructed, revisioned, and renewed Jewish practice. A space within has been claimed by a series of previously disenfranchised Jews including women, queer Jews, and Jews of color. Examine some of the most innovative of these changes from Jewish feminism to the Chabad Hasidic revival.
3 units, Win (Rosenberg, J; Fonrobert, C)

RELIGST 327. The Qur'an
(Same as RELIGST 227) Early history, themes, structure, chronology, and premodern interpretation. Relative chronology of passages.
5 units, not given this year

RELIGST 328S. The Study of the Midrash
Two-week block seminar; four sessions. Talmudic philology; development and transmission of the Talmudic text and manuscripts. Relationship between Midrash and Mishnah and between Mishnah and Tosefta; development of talmudic sugiot; relationship between the Babylonian and Palestinian Talmud.
1-2 units, given occasionally

RELIGST 330B. Zen Studies
(Same as RELIGST 230B) Readings in recent English-language scholarship on Chan and Zen Buddhism
4 units, Spr (Foulk, T)

RELIGST 336. European Reformations
(Same as HISTORY 231G, HISTORY 331G, RELIGST 236) Readings in and discussion of theological and social aspects of sixteenth century reformations: Luther, Radical Reform, Calvin, and Council of Trent, missionary expansion, religious conflict, creative and artistic expressions. Texts include primary sources and secondary scholarly essays and monographs.
4-5 units, Win (Stokes, L; Pitkin, B)

RELIGST 338. Christian Neo-Platonism, East and West
(Same as RELIGST 238) Christianity's shift to neo-Platonic Greek philosophical categories and its significance for contemporary spirituality. Readings from Plotinus, Proclus, Greek fathers such as Pseudo-Dionysus, and from Ambrose and Augustine.
3-5 units, not given this year

RELIGST 339. Luther and the Reform of Western Christianity
(Same as RELIGST 239) Luther's theology, ethics, biblical interpretation, and social reforms and their significance for the remaking of Western Christianity. Readings include Luther's own writings and secondary sources about Luther and his world.
3-5 units, not given this year

RELIGST 341. Comparative Perspective on Confucian Texts
Classical Confucian texts, in prose and poetry, interpreted through comparative perspectives drawn from both inside and outside China. Consent of the instructor required.
4-5 units, Win (Yearley, L)

RELIGST 341B. Mystics and Mysticism
(Same as RELIGST 241B) The varieties of meaning and significance the term mysticism takes on in religious studies though an exploration of accounts of mystical experiences: visions, bodily sensations, sense of the sacred, along with practices engaged in and texts written by those claiming such experiences for themselves or others. Focus is on medieval/renaissance Christians but students are invited to explore examples from other times, traditions and places.
5 units, Win (Gelber, H)

RELIGST 347. Chinese Buddhist Texts
(Same as RELIGST 247) Readings in Chinese Buddhist texts, including selections from s¿tras, ¿¿stras, Vinaya texts, indigenous monastic rules (qingui), and Chan texts (yulu, gongan). Prerequisite: background in classical Chinese
3-5 units, Win (Foulk, T)

RELIGST 347B. Readings in Chinese Religious Texts: The Lingbao Scriptures
(Same as RELIGST 247B) A survey of the original Lingbao scriptures. Composed in the late-4th / early 5th century, these texts radically revised Daoist practice, incorporated elements of Buddhist thought and practice, and created liturgies that are still used in Daoist communities today. (Reading knowledge of Literary Chinese ¿¿ required).
4 units, Aut (Bokenkamp, S)

RELIGST 348. Chinese Buddhism in World Historical Perspective
(Same as RELIGST 248) Shared cosmologies, trade routes, and political systems. Prerequisite: background in Chinese or Japanese.
3-5 units, not given this year

RELIGST 348A. Chinese Buddhism Beyond the Great Wall
(Same as RELIGST 248A) The thought, practice, and cultural resonance of the sorts of originally Chinese Buddhism that flourished to the north and northwest of China proper during the two to three centuries following the fall of the Tang - i.e., under the Khitan Liao (907-1125) and the Tangut Xixia (1032-1227) dynasties - with special emphasis on the later fortunes of the Huayan, Chan, and Mijiao (Esoteric) traditions. Prerequisite: reading knowledge of Chinese.
3-5 units, not given this year

RELIGST 349. Meditation and Mythology in Chinese Buddhism
Readings in Chinese texts and English scholarly literature on issues such as specific techniques and hagiographical imagery in Chinese Buddhist traditions of self-cultivation. Prerequisite: background in Chinese or Japanese.
3-5 units, not given this year

RELIGST 350. Modern Western Religious Thought Proseminar
Selected topics in recent and contemporary religious thought. May be repeated for credit.
1-5 units, not given this year

RELIGST 350B. Depictions of the Buddha
(Same as RELIGST 250B) The image of the Buddha changes relatively little from its earliest conceptions. The role of the image and the notion of the Buddha do change fundamentally with time and place. South Asian depictions of the Buddha from the earliest symbolic representations to the wrathful and peaceful forms found in the esoteric Buddhism of India and the Himalayas, as well as the changing conceptions of the Buddha to which these depictions are related.
3-5 units, not given this year

RELIGST 351. Readings in Indian Buddhist Texts
(Same as RELIGST 251) (Graduate students register for 351.) Introduction to Buddhist literature through reading original texts in Sanskrit. Prerequisite: Sanskrit.
3-5 units, Spr (Harrison, P)

RELIGST 351A. Buddhist Visions of Paradise
(Same as RELIGST 251A) Textual and art-historical evidence for the early development in the greater Indian cultural area of the cult of the Buddhas of the present and their paradise worlds (""Pure Land Buddhism"").
3-5 units, not given this year

RELIGST 353. Mountains, Buddhist Practice, and Religious Studies
(Same as RELIGST 253) The notion of the sacred mountain. Readings from ethnographic and theoretical works, and primary sources.
3-5 units, not given this year

RELIGST 357. Readings in Daoist Texts
(Same as RELIGST 257) Readings from primary sources. Prerequisite: classical Chinese.
4 units, not given this year

RELIGST 358. Japanese Buddhist Texts
(Same as RELIGST 258) Readings in medieval Japanese Buddhist materials. May be repeated for credit. Prerequisite: background in Japanese or Chinese.
3-5 units, not given this year

RELIGST 359A. Religion and Performance
(Same as RELIGST 159A) What happens when religion is viewed through the lens of performance? Texts become dramas, songs, recitations, oral commentaries, dances, movies, and political appropriations. Beliefs become embodied enactments; doctrine puts on a costume and indulges in role play. Approaches to performance theory through religious enactments such as ritual, prayer, festival, drama, music, and film. Most examples from S. Asian religions; students may undertake research projects into other cultures and traditions.
4 units, not given this year

RELIGST 365. Research Methods and Resources in Jewish Studies
(Same as JEWISHST 225, JEWISHST 325, RELIGST 265) Enhance students' research skills in the interdisciplinary field of Jewish Studies, emphasizing electronic reference sources, but also archival resources and print publications. Coverage includes: Basic reference sources in Jewish Studies, History and bibliography of the Hebrew book, Hebrew Bible, Talmud, Religious studies (post-Talmudic), Jewish philosophy, Jewish history (by period; by region), Jewish languages, Hebrew literature, Yiddish literature, Zionism and Israel, Sephardic Jewry, women, Holocaust, miscellaneous topics (art, music, folklore and ethnography, sociology, genealogy, geography, pseudonyms, honorifics, abbreviations). Class sessions will also include special workshops on Hebrew / Yiddish / Ladino romanization (transliteration/transcription).
1-3 units, Win (Baker, Z)

RELIGST 370. Comparative Religious Ethics
The difference that the word religious makes in religious ethics and how it affects issues of genre. Theoretical analyses with examples from W. and E. Asia. Prerequisite: consent of instructor.
4 units, not given this year

RELIGST 372. Kant on Religion
(Same as RELIGST 272) Critical examination of Kant¿s principle writings on religion against the background of his general theoretical and practical philosophy and guided by the hypothesis that his philosophy of religion continues to offer significant insights and resources to contemporary theories of religion. Recent reassessments of Kant on religion in the secondary literature will also be read and discussed
3-5 units, not given this year

RELIGST 373. Historicism and Its Problems
(Same as RELIGST 273) The emergence, varieties, and crises of historicism as a world view and approach to the study of religion in the 19th and 20th centuries. The implications of historical reason and historical consciousness for the philosophy of religion, ethics, and theology.
3-5 units, not given this year

RELIGST 374. From Kant to Kierkegaard
(Same as RELIGST 274) (Graduate students register for 374.) The main currents of religious thought in Germany from Kant's critical philosophy to Kierkegaard's revolt against Hegelianism. Emphasis is on the theories of religion, the epistemological status of religious discourse, the role of history (especially the figure of Jesus), and the problem of alienation/reconciliation in seminal modern thinkers: Kant, Schleiermacher, Hegel, and Kierkegaard.
3-5 units, not given this year

RELIGST 374E. Kierkegaard: Existentialism and Religion
(Same as RELIGST 174E) Kierkegaard is rightly called one of the founders of existentialism. Like Socrates, the one philosopher in the western tradition to whom he felt consciously in debt, Kierkegaard sought to return philosophy to the work of thinking through the human condition in all its uncertainty and finitude. Although 20th century existentialists like Sartre and Camus were self-consciously atheist, Kierkegaard's existentialism has religious origins. Through readings of Kierkegaard's philosophical and religious texts, explore the possibility of an existentialist interpretation of the human condition that is religious in nature. Kierkegaard's development of a 'philosophy of existence' as a response to major trends in modern European thought, particularly in response to the philosophies of German idealism (Kant, Hegel) and romanticism.
4 units, not given this year

RELIGST 375. Kierkegaard and Religious Existentialism
(Same as RELIGST 275) (Graduate students register for 375.) Close reading of Kierkegaard¿s magnum opus, Concluding Unscientific Postscript to Philosophical Fragments, in its early 19th-century context.
3-5 units, not given this year

RELIGST 377. The Later Heidegger
(Same as RELIGST 277) Lectures and seminar discussions of the problematic of the later Heidegger (1930 - 1976) in the light of his entire project. Readings from ""Pathmarks,"" ""Four Seminars,"" ""On Time and Being,"" and other texts.
3 units, Aut (Sheehan, T)

RELIGST 378. Heidegger: Confronting the Ultimate
(Same as RELIGST 278) Heidegger's work on meaning, the self, and the sacred. Texts include Being and Time, courses and opuscula up to 1933, the Letter on Humanism, and Contributions of Philosophy.
3-5 units, not given this year

RELIGST 379. Heidegger and the Holy
(Same as RELIGST 279) Heidegger's philosophy as opening a new door onto the possibility of experiencing the sacred after the collapse of traditional metaphysical theology. A close reading of Being and Time as an introduction to the question of the holy.
4 units, not given this year

RELIGST 380. Schleiermacher: Reconstructing Religion
(Same as RELIGST 280) Idealist philosopher, Moravian pietist, early German Romantic, co-founder of the University of Berlin, head preacher at Trinity Church, translator of Plato's works, Hegel's opponent, pioneer in modern hermeneutics, father of modern theology. Schleiermacher's controversial reconception of religion and theology in its philosophical context.
3-5 units, Aut (Sockness, B)

RELIGST 382. King Solomon and the Search for Wisdom
(Same as JEWISHST 228, JEWISHST 328, RELIGST 282) What is wisdom according to the Bible? The course addresses this question by surveying various biblical and post-biblical texts associated with King Solomon. Other topics include the on-going debate over the historical existence of a Solomonic kingdom, the origins and history of the Jerusalem Temple, and Solomon's role in Jewish, Christian and Islamic tradition.
4 units, Win (Weitzman, S)

RELIGST 385. Research in Buddhist Studies
Independent study in Buddhism. May be repeated for credit. Prerequisite: consent of instructor.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

RELIGST 386. Research in Islamic Studies
Independent study in Islamic Studies. May be repeated for credit. Prerequisite: consent of instructor.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

RELIGST 387. Research in Jewish Studies
Independent study in Jewish Studies. May be repeated for credit. Prerequisite: consent of instructor.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

RELIGST 388. Research in Modern Religious Thought, Ethics, and Philosophy
Independent study in Modern Religious Thought, Ethics, and Philosophy. May be repeated for credit. Prerequisite: consent of instructor.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

RELIGST 389. Individual Work for Graduate Students
May be repeated for credit. Prerequisite: consent of instructor.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

RELIGST 390. Teaching Internship
Required supervised internship for PhDs.
3-5 units, Aut (Staff), Win (Staff), Spr (Staff)

RELIGST 391. Pedagogy
Required of Ph.D. students. May be repeated for credit.
1 unit, Aut (Rosenberg, J)

RELIGST 392. Paper in the Field
Prerequisite: consent of graduate director. May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

RELIGST 395. Master of Arts Thesis
2-9 units, Aut (Staff), Win (Staff), Spr (Staff)

RELIGST 399. Recent Works in Religious Studies
Readings in secondary literature for Religious Studies doctoral students. May be repeated for credit.
1-2 units, Spr (Fonrobert, C)

RELIGST 801. TGR Project
(Staff)
0 units, Aut (Staff), Win (Staff), Spr (Staff)

RELIGST 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

RUSSIAN, EAST EUROPEAN, AND EURASIAN STUDIES (REES) COURSES

UNDERGRADUATE COURSES IN RUSSIAN, EAST EUROPEAN, AND EURASIAN STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

REES 35. Films of Central Asia
Films with English subtitles from Tajikistan, Uzbekistan, Kazakhstan, Kyrgyzstan, and Turkmenistan. May be repeated once for credit. (AU)
1-2 units, Win (Kunanbaeva, A), Spr (Kunanbaeva, A)

REES 100. Current Issues in Russian, East European, and Eurasian Studies
Enrollment limited to REEES students. Scholars present analyses of methodologies, challenges, and current issues in the study of Russia, E. Europe, and Eurasia.
1 unit, Aut (Crews, R; Wessling, R), Win (Crews, R; Wessling, R), Spr (Crews, R; Wessling, R)

REES 105. Central and East European Politics
(Same as REES 205) Focus is on how the states of Central and East Europe, including the Baltic states, have moved from communism and the Soviet Bloc to democracy, NATO and the EU. Topics include the communist legacy, transitions and their legacies, ethnic issues, and the evolution of economic and social policies, and the comparison of democratization processes in these countries to democracies in other regions, such as Latin America and southern Europe. GER:DB-SocSci
5 units, not given this year

REES 130. With God in Russia: Orthodox Christianity in the 19th and 20th Centuries
(Same as REES 330) The experience of religion, particularly Orthodoxy, under tsars and commissars. Religion as a lived experience; practice and belief in the provinces and villages, intertwining of religion and folk customs (the so-called double faith); condition of the Church before and after the Revolutions of 1917; religion under Soviet control; and liberation of the Church since the collapse of the Soviet Union.
4-5 units, not given this year

GRADUATE COURSES IN RUSSIAN, EAST EUROPEAN, AND EURASIAN STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

REES 200. Current Issues in Russian, East European, and Eurasian Studies
Enrollment limited to REEES students. Scholars present analyses of methodologies, challenges, and current issues in the study of Russia, E. Europe, and Eurasia.
1 unit, Aut (Crews, R; Wessling, R), Win (Crews, R; Wessling, R), Spr (Crews, R; Wessling, R)

REES 205. Central and East European Politics
(Same as REES 105) Focus is on how the states of Central and East Europe, including the Baltic states, have moved from communism and the Soviet Bloc to democracy, NATO and the EU. Topics include the communist legacy, transitions and their legacies, ethnic issues, and the evolution of economic and social policies, and the comparison of democratization processes in these countries to democracies in other regions, such as Latin America and southern Europe.
5 units, not given this year

REES 299. Directed Reading
1-12 units, Aut (Staff), Win (Staff), Spr (Staff)

REES 320. State and Nation Building in Central Asia
Issues of identity, development, and security following the dissolution of the Soviet Union and the emergence of independent states in Central Asia and the Southern Caucasus. Topics include the impact of 9/11, the spread of radical Islamist movements in the region, its growing role as a transit route for drugs, weapons, and possibly nuclear materials, the impact of the Soviet legacy, the nature of political and economic transformations, relations with neighboring countries, security challenges, and options facing U.S. policy makers.
5 units, Aut (Lapidus, G)

SCIENCE, TECHNOLOGY, AND SOCIETY (STS) COURSES

For information on undergraduate programs in Science, Technology, and Society, see page 000 of this bulletin.

UNDERGRADUATE COURSES IN SCIENCE, TECHNOLOGY, AND SOCIETY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

STS 101. Science, Technology, and Contemporary Society
(Same as ENGR 130, STS 201) Key social, cultural, and values issues raised by contemporary scientific and technological developments; distinctive features of science and engineering as sociotechnical activities; major influences of scientific and technological developments on 20th-century society, including transformations and problems of work, leisure, human values, the fine arts, and international relations; ethical conflicts in scientific and engineering practice; and the social shaping and management of contemporary science and technology. GER:DB-SocSci
4-5 units, Aut (McGinn, R)

STS 101Q. Technology in Contemporary Society
(Stanford Introductory Seminar) Preference to sophomores. Introduction to the STS field. The natures of science and technology and their relationship, what is most distinctive about these forces today, and how they have transformed and been affected by contemporary society. Social, cultural, and ethical issues raised by recent scientific and technological developments. Case studies from areas such as information technology and biotechnology, with emphasis on the contemporary U.S. Unexpected influences of science and technology on contemporary society and how social forces shape scientific and technological enterprises and their products. Enrollment limited to 12. GER:DB-SocSci
4 units, Aut (McGinn, R)

STS 103Q. Reading and Writing Poetry about Science
(Stanford Introductory Seminar) (Same as ENGLISH 103Q) Preference to sophomores. Students will study recent poetry inspired by the phenomena and history of the sciences in order to write such poems themselves. These poems bring sensuous human experience to bear on biology, ecology, neuroscience, physics, astronomy, and geology, as well as on technological advances and missteps. Poets such as Mark Doty, Jody Gladding, Albert Goldbarth, Jorie Graham, Sarah Lindsay, Adrienne Rich, W.S. Merwin, and C. K. Williams. Grounding in poetics, research in individually chosen areas of science, weekly analytical and creative writing. Enrollment limited to 12.
4 units, Win (Roberts, E; Rusk, L)

STS 110. Ethics and Public Policy
(Same as MS&E 197, PUBLPOL 103B) Ethical issues in science- and technology-related public policy conflicts. Focus is on complex, value-laden policy disputes. Topics: the nature of ethics and morality; rationales for liberty, justice, and human rights; and the use and abuse of these concepts in policy disputes. Case studies from biomedicine, environmental affairs, technical professions, communications, and international relations. GER:DB-Hum, EC-EthicReas, WIM
5 units, Win (McGinn, R)

STS 112. Ten Things: An Archaeology of Design
(Same as CLASSART 113, CLASSART 213) Connections among science, technology, society and culture by examining the design of a prehistoric hand axe, Egyptian pyramid, ancient Greek perfume jar, medieval castle, Wedgewood teapot, Edison's electric light bulb, computer mouse, Sony Walkman, supersonic aircraft, and BMW Mini. Interdisciplinary perspectives include archaeology, cultural anthropology, science studies, history and sociology of technology, cognitive science, and evolutionary psychology. GER:DB-SocSci
3-5 units, Aut (Shanks, M)

STS 114. Technology, Ecology, and the Imagination of the Future
(Same as ENGLISH 153G) Seminar. Literary visions of the future from the 60s to the present. How such texts imagine new and existing technologies in interrelation with the evolution of natural ecosystems. The development of wild habitats, alterations of the human body, and visions of the future city. The role of images and stories about globalization. Literary, scientific, and technical texts. GER:DB-Hum
5 units, not given this year

STS 115. Ethical Issues in Engineering
(Same as ENGR 131) Moral rights and responsibilities of engineers in relation to society, employers, colleagues, and clients; cost-benefit-risk analysis, safety, and informed consent; the ethics of whistle blowing; ethical conflicts of engineers as expert witnesses, consultants, and managers; ethical issues in engineering design, manufacturing, and operations; ethical issues arising from engineering work in foreign countries; and ethical implications of the social and environmental contexts of contemporary engineering. Case studies, guest practitioners, and field research. Limited enrollment. GER:DB-Hum
4 units, Spr (McGinn, R)

STS 144. Game Studies: Issues in Design, Technology, and Player Creativity
What can be learned about innovation from digital games? Digital game technologies, communities, and cultures. Topics include game design, open source ideas and modding, technology studies, player/consumer-driven innovation, fan culture, transgressive play, and collaborative co-creation drawn from virtual worlds and online games.
4 units, not given this year

STS 152. Nuclear Weapons, Risk and Hope
Recent research indicates that depending on nuclear weapons for our security is thousands of times riskier than society will tolerate with respect to nuclear power plants. This seminar explores methods for estimating the risk, why society ignores the danger, and what can be done to correct that imbalance. No prerequisites, and at a level understandable to non-majors, including in the humanities.
1 unit, Aut (Hellman, M)

STS 180. Imagining the Computer, Wiring the World
(Same as STS 280) The theme of revolution in the popular imagination about computing. How people imagine themselves as members of a global network society, navigating cyberspace and pioneering a bold, new information age. But where did modern information technology come from? Has it brought about revolution, and if so for whom? The cultural and political visions that shaped modern computing, and how the resulting technology has shaped a globalizing sociopolitical order.
4 units, Spr (Slayton, R)

STS 190. Junior Honors Seminar
For juniors intending to pursue honors in STS or a related discipline. Goal is to identify a research problem and identify key components of honors research and thesis writing such as literature reviews, methodologies, theoretical frameworks, and writing standards.
3-4 units, Win (Slayton, R)

STS 199. Individual Work
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

STS 200. Senior Colloquium
Analytical and theoretical texts treating the natures and interplay of science, technology, and society. Prerequisite: STS major with senior standing and four STS core courses, or consent of instructor.
4 units, Win (Downer, J), Spr (Downer, J)

STS 210. Ethics, Science, and Technology
Ethical issues raised by advances in science and technology. Topics: biotechnology including agriculture and reproduction, the built environment, energy technologies, and information technology. Prerequisite: 110 or another course in ethics. Limited enrollment. GER:DB-Hum
4 units, alternate years, not given this year

STS 290A. Senior Honors Seminar
For seniors pursuing STS honors. Goal is to write a literature review with adviser consultation.
1-5 units, Aut (Slayton, R)

STS 290B. Senior Honors Seminar
For seniors pursuing STS honors. Goal is to analyze data and write up results.
1-5 units, Win (Slayton, R)

STS 290C. Senior Honors Seminar
For seniors pursuing STS honors. Goal is to complete the final thesis.
1-5 units, Spr (Slayton, R)

GRADUATE COURSES IN SCIENCE, TECHNOLOGY, AND SOCIETY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

STS 201. Science, Technology, and Contemporary Society
(Same as ENGR 130, STS 101) Key social, cultural, and values issues raised by contemporary scientific and technological developments; distinctive features of science and engineering as sociotechnical activities; major influences of scientific and technological developments on 20th-century society, including transformations and problems of work, leisure, human values, the fine arts, and international relations; ethical conflicts in scientific and engineering practice; and the social shaping and management of contemporary science and technology.
4-5 units, Aut (McGinn, R)

STS 280. Imagining the Computer, Wiring the World
(Same as STS 180) The theme of revolution in the popular imagination about computing. How people imagine themselves as members of a global network society, navigating cyberspace and pioneering a bold, new information age. But where did modern information technology come from? Has it brought about revolution, and if so for whom? The cultural and political visions that shaped modern computing, and how the resulting technology has shaped a globalizing sociopolitical order.
4 units, Spr (Slayton, R)

STS 299. Advanced Individual Work
(Staff)
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

SLAVIC GENERAL (SLAVGEN) COURSES

UNDERGRADUATE COURSES IN SLAVIC GENERAL

Primarily for undergraduates; graduate students may enroll with consent of adviser.

SLAVGEN 110. The Gogol Bordello: Ukraine as a Meeting House of Cultures
(Same as SLAVGEN 210) The cohabitation of authors and cultural geography in multiethnic Ukraine. Comparison of Ukrainian texts, images of Ukraine and Ukrainians by their Polish, Jewish, German, and Russian cohabitants. Possible authors include : Andrukhovych, Aleichem, Babel, Celan, Franko, Gogol, Lewycka, Mickiewicz, Shevchenko, Pushkin, Schulz, Ukraina, and Zabuzhko. GER:DB-Hum
3-5 units, not given this year

SLAVGEN 122. Yiddish Story
(Same as SLAVGEN 222) The humor, drama, anger, and artistry of modern E. European and American Yiddish writers including Sholem Aleichem, I. L. Peretz, Isaac Bashevis Singer, Chaim Grade, and Yankev Glatshteyn. In English. GER:DB-Hum, EC-GlobalCom
5 units, not given this year

SLAVGEN 123. The Yiddish Novel
(Same as SLAVGEN 223) How Yiddish novels reveal changes in modern Jewish life and literature in Europe and the U.S. The influences of folklore, traditional Jewish culture, and European literature. Works by Isaac and Joshua Singer, Joseph Opatoshu, Der Nister, Chava Rosenfarb, Sholem Asch, and David Bergelson. Readings in English; optional sessions for close readings in Yiddish. GER:DB-Hum
3-4 units, not given this year

SLAVGEN 133. Poles and Others: Literature and History in Modern Poland
(Same as SLAVGEN 233) The physical and cultural territories of the former Polish-Lithuanian Commonwealth have long been objects of contest. The 20th century witnessed two or three rebirths of Poland and one or two deaths; a belated modernization of Polish society; the final inclusion of Polish-speaking peasants and burghers in a Polish national identity; and the exclusion of Jews, Germans, Lithuanians, Belarusans, Ukrainians, and others from the state and participation in a partially shared culture. GER:DB-Hum
3-4 units, not given this year

SLAVGEN 141. Staging the Revolution: Russian Theater and Society, 1917-1937
(Same as SLAVGEN 241) Between 1917 and 1937, artistic experimentation in the Russian theater coincided with political and social changes in Russian society. Modernist artists interpreted the revolution as an artistic possibility to demolish conventions of representation. Mass festivals, circus, and street performances replaced the old theater. In the time of the Great Terror and staged trials, theater and opera remained among the leading arts, but state patronage caused a major reorientation of artistic practices. Readings include plays by Mayakovsky, Bulgakov, Babel, Tretiakov, and Erdman. Readings in English. GER:DB-Hum
4 units, not given this year

SLAVGEN 145. Age of Experiment: From Pushkin to Dostoevsky
(Same as SLAVGEN 245) Before the Great 19th c. Russian Novel broke the barrier for realist and philosophical heft, Russian writers experimented furiously in short fictional forms. We will read a rich assortment of texts from Pushkin and Gogol through early Tolstoy

and Dostoevsky, with an eye to literary innovation and influence on modern short form. GER:DB-Hum, EC-GlobalCom

3-4 units, Aut (Greenleaf, M)

SLAVGEN 146. The Great Russian Novel: History and Other Theories of Time and Action

(Same as SLAVGEN 246) Connections of philosophy to literary form in Turgenev's Fathers and Sons, Tolstoy's War and Peace, Dostoevsky's The Brothers Karamazov, and Chekov's The Cherry Orchard, and other stories. GER:DB-Hum, EC-GlobalCom

3-4 units, Win (Greenleaf, M)

SLAVGEN 147. The Age of War and Revolution: A Survey of Russian Literature and Culture, 1900-1950s

(Same as SLAVGEN 247) First of two-part sequence. Russian modernism and the avant garde.The Russian Revolution, the era of the NEP, Soviet civilization, and the literature of opposition following Stalin¿s death. Texts in English translation. GER:DB-Hum, EC-GlobalCom

3-4 units, Spr (Draskoczy, J)

SLAVGEN 148. Dissent and Disenchantment: A Survey of Russian Literature and Culture, 1953 to the Present

(Same as SLAVGEN 248) From the death of Stalin to post-communist Russia. Literature of the thaw and de-Stalinization, official and unofficial literature of dissent, samizdat, village and urban prose, literature of the new emigration, late Soviet underground, sots-art, perestroika, and post-communist literature and culture. Texts in English translation. For graduate credit for research paper, register for 399. GER:DB-Hum, EC-GlobalCom

3-4 units, not given this year

SLAVGEN 150. Countercultures in Conversation: Russian and American Rock Music and Protest Poetry

(Same as SLAVGEN 250) Non-conformist protest movements in contemporary Russian poetry; historical and cultural context; and comparison with similar processes in American social and cultural life. Sources include Russian and American poetry, songs, and DVDs. Fourth unit for readings in Russian. GER:DB-Hum

3-4 units, not given this year

SLAVGEN 151. Dostoevsky and His Times

(Same as COMPLIT 119, COMPLIT 219, SLAVGEN 251) Open to juniors, seniors, and graduate students. Major works in English translation with reference to related developments in Russian and European culture, literary criticism, and intellectual history. GER:DB-Hum

4 units, not given this year

SLAVGEN 153. Russian Jewish LIterature

(Same as SLAVGEN 253) Russian Jewish experience inspired books and films in Hebrew, Yiddish, Russian and English that reveal a world of conflict, humor and beauty. From the mid-19th century to the t21st century. Authors include Haim Nahman Bialik, Sholem Aleichem, Isaac babel, Osip Mandelstam, Joseph Brodsky, Leonid Tsypkin, Ludmila Ulitskaia, Gary Shteyngardt. GER:DB-Hum

3-4 units, not given this year

SLAVGEN 162. Gender Images in Film

(Same as SLAVGEN 262) Film creates permanent new images of femininity. One of its conscious prerequisites is the notion of social stereotypes. The development of enduring images of the film heroine, 1914-90, through a comparison of the Russian, American, and W. European cinema, and analytical approaches to them from feminist film theory. GER:EC-Gender

3 units, not given this year

SLAVGEN 163. Gender in Postwar Russian Culture

(Same as SLAVGEN 263) Issues of femininity and masculinity in Russian literature, film, and popular culture from the 40s to the present. Readings include fiction, memoirs, poetry, drama, and theoretical works in gender studies. GER:EC-Gender

3-4 units, not given this year

SLAVGEN 165. Poetry, Painting, and Music of the Russian Avant Garde

(Same as SLAVGEN 265) Interrelationships between poetry and other arts in Russia, 1905-30. The pursuit of synthesis of arts and the modernist agenda of life creation and immortality. Parallel developments in literature, painting, and music, and style and poetics. Russian modernist poetry in the context of changes in the language of visual arts and music). Women poets and artists. Native sources and Western influences; non-Russian elements and transnational tendencies. The impact of scientific discoveries and technological inventions on artistic experimentation.

3-4 units, not given this year

SLAVGEN 166. Transcending (Meta)Physical Borders: Russian Cinema since 1964

(Same as SLAVGEN 266) Soviet and Russian films which explore the theme of transcending physical (national) and metaphysical (supernatural) borders. Sources include classics of art-house cinema (Paradzhanov, Shepitko, Tarkovsky, Mikhalkov) and more recent feature films of independent Russia (Muratova, Sokurov, Bekmambetov, Popogrebsky-Khlebnikov). GER:DB-Hum

3-4 units, Win (Skakov, N)

SLAVGEN 181. Philosophy and Literature

(Same as CLASSGEN 81, COMPLIT 181, ENGLISH 81, FRENGEN 181, ITALGEN 181, GERGEN 181) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum

4-5 units, Win (Anderson, L; Landy, J)

GRADUATE COURSES IN SLAVIC GENERAL

Primarily for graduate students; undergraduates may enroll with consent of instructor.

SLAVGEN 210. The Gogol Bordello: Ukraine as a Meeting House of Cultures

(Same as SLAVGEN 110) The cohabitation of authors and cultural geography in multiethnic Ukraine. Comparison of Ukrainian texts, images of Ukraine and Ukrainians by their Polish, Jewish, German, and Russian cohabitants. Possible authors include : Andrukhovych, Aleichem, Babel, Celan, Franko, Gogol, Lewycka, Mickiewicz, Shevchenko, Pushkin, Schulz, Ukraina, and Zabuzhko.

3-5 units, not given this year

SLAVGEN 221. Modernism and the Jewish Voice in Europe

(Same as COMPLIT 247, GERGEN 221A) Some of the most haunting literary voices of the 20th century emerged from the Jewish communities of Eastern and Central Europe. The Jewishness of the modernists is thematized, asking whether it contributed to shared attitudes toward text, history, or identity. Their works are situated in specific linguistic traditions: Yiddish, Hebrew, Russian, Polish, or German. Primary readings from Ansky, Bialik, Mandelstam, Babel, Schulz, Kafka, Celan; secondary readings in history, E. European literature, and theory, including Marx, Freud, Benjamin, and Arendt.

3-4 units, not given this year

SLAVGEN 222. Yiddish Story

(Same as SLAVGEN 122) The humor, drama, anger, and artistry of modern E. European and American Yiddish writers including Sholem Aleichem, I. L. Peretz, Isaac Bashevis Singer, Chaim Grade, and Yankev Glatshteyn. In English.

5 units, not given this year

SLAVGEN 223. The Yiddish Novel

(Same as SLAVGEN 123) How Yiddish novels reveal changes in modern Jewish life and literature in Europe and the U.S. The influences of folklore, traditional Jewish culture, and European literature. Works by Isaac and Joshua Singer, Joseph Opatoshu, Der Nister, Chava Rosenfarb, Sholem Asch, and David Bergelson. Readings in English; optional sessions for close readings in Yiddish.

3-4 units, not given this year

SLAVGEN 233. Poles and Others: Literature and History in Modern Poland
(Same as SLAVGEN 133) The physical and cultural territories of the former Polish-Lithuanian Commonwealth have long been objects of contest. The 20th century witnessed two or three rebirths of Poland and one or two deaths; a belated modernization of Polish society; the final inclusion of Polish-speaking peasants and burghers in a Polish national identity; and the exclusion of Jews, Germans, Lithuanians, Belarusans, Ukrainians, and others from the state and participation in a partially shared culture.
3-4 units, not given this year

SLAVGEN 241. Staging the Revolution: Russian Theater and Society, 1917-1937
(Same as SLAVGEN 141) Between 1917 and 1937, artistic experimentation in the Russian theater coincided with political and social changes in Russian society. Modernist artists interpreted the revolution as an artistic possibility to demolish conventions of representation. Mass festivals, circus, and street performances replaced the old theater. In the time of the Great Terror and staged trials, theater and opera remained among the leading arts, but state patronage caused a major reorientation of artistic practices. Readings include plays by Mayakovsky, Bulgakov, Babel, Tretiakov, and Erdman. Readings in English.
4 units, not given this year

SLAVGEN 245. Age of Experiment: From Pushkin to Dostoevsky
(Same as SLAVGEN 145) Before the Great 19th c. Russian Novel broke the barrier for realist and philosophical heft, Russian writers experimented furiously in short fictional forms. We will read a rich assortment of texts from Pushkin and Gogol through early Tolstoy and Dostoevsky, with an eye to literary innovation and influence on modern short form.
3-4 units, Aut (Greenleaf, M)

SLAVGEN 246. The Great Russian Novel: History and Other Theories of Time and Action
(Same as SLAVGEN 146) Connections of philosophy to literary form in Turgenev's Fathers and Sons, Tolstoy's War and Peace, Dostoevsky's The Brothers Karamazov, and Chekov's The Cherry Orchard, and other stories.
3-4 units, Win (Greenleaf, M)

SLAVGEN 247. The Age of War and Revolution: A Survey of Russian Literature and Culture, 1900-1950s
(Same as SLAVGEN 147) First of two-part sequence. Russian modernism and the avant garde.The Russian Revolution, the era of the NEP, Soviet civilization, and the literature of opposition following Stalin¿s death. Texts in English translation.
3-4 units, Spr (Draskoczy, J)

SLAVGEN 248. Dissent and Disenchantment: A Survey of Russian Literature and Culture, 1953 to the Present
(Same as SLAVGEN 148) From the death of Stalin to post-communist Russia. Literature of the thaw and de-Stalinization, official and unofficial literature of dissent, samizdat, village and urban prose, literature of the new emigration, late Soviet underground, sots-art, perestroika, and post-communist literature and culture. Texts in English translation. For graduate credit for research paper, register for 399.
3-4 units, not given this year

SLAVGEN 250. Countercultures in Conversation: Russian and American Rock Music and Protest Poetry
(Same as SLAVGEN 150) Non-conformist protest movements in contemporary Russian poetry; historical and cultural context; and comparison with similar processes in American social and cultural life. Sources include Russian and American poetry, songs, and DVDs. Fourth unit for readings in Russian.
3-4 units, not given this year

SLAVGEN 251. Dostoevsky and His Times
(Same as COMPLIT 119, COMPLIT 219, SLAVGEN 151) Open to juniors, seniors, and graduate students. Major works in English translation with reference to related developments in Russian and European culture, literary criticism, and intellectual history.
4 units, not given this year

SLAVGEN 253. Russian Jewish LIterature
(Same as SLAVGEN 153) Russian Jewish experience inspired books and films in Hebrew, Yiddish, Russian, and English that reveal a world of conflict, humor and beauty. From the mid-19th century to the 21st century. Authors include Haim Nahman Bialik, Sholem Aleichem, Isaac babel, Osip Mandelstam, Joseph Brodsky, Leonid Tsypkin, Ludmila Ulitskaia, Gary Shteyngardt.
3-4 units, not given this year

SLAVGEN 262. Gender Images in Film
(Same as SLAVGEN 162) Film creates permanent new images of femininity. One of its conscious prerequisites is the notion of social stereotypes. The development of enduring images of the film heroine, 1914-90, through a comparison of the Russian, American, and W. European cinema, and analytical approaches to them from feminist film theory.
3 units, not given this year

SLAVGEN 263. Gender in Postwar Russian Culture
(Same as SLAVGEN 163) Issues of femininity and masculinity in Russian literature, film, and popular culture from the 40s to the present. Readings include fiction, memoirs, poetry, drama, and theoretical works in gender studies.
3-4 units, not given this year

SLAVGEN 265. Poetry, Painting, and Music of the Russian Avant Garde
(Same as SLAVGEN 165) Interrelationships between poetry and other arts in Russia, 1905-30. The pursuit of synthesis of arts and the modernist agenda of life creation and immortality. Parallel developments in literature, painting, and music, and style and poetics. Russian modernist poetry in the context of changes in the language of visual arts and music). Women poets and artists. Native sources and Western influences; non-Russian elements and transnational tendencies. The impact of scientific discoveries and technological inventions on artistic experimentation.
3-4 units, not given this year

SLAVGEN 266. Transcending (Meta)Physical Borders: Russian Cinema since 1964
(Same as SLAVGEN 166) Soviet and Russian films which explore the theme of transcending physical (national) and metaphysical (supernatural) borders. Sources include classics of art-house cinema (Paradzhanov, Shepitko, Tarkovsky, Mikhalkov) and more recent feature films of independent Russia (Muratova, Sokurov, Bekmambetov, Popogrebsky-Khlebnikov).
3-4 units, Win (Skakov, N)

SLAVGEN 269. Folklore Theory and Slavic Folklore
For two centuries intellectuals have seen the stories of peasants, children, and others as folklore to be collected and studied to understand ethnic histories, human universalities, orality versus literacy, and mass politics. Readings include folklore theorists such as Grimm, Propp, Ong, Lord and Perry, Dundes, and Bauman and Briggs. Sources include Slavic and Jewish lore, but students can examine other traditions. Assignments include folklore collection. Russian readers may sign up for a section on Russian lore and its theory (one extra unit).
3-5 units, Spr (Safran, G)

SLAVGEN 313. Visuality and Literacy Workshop
Relationships among visual arts, theater, and literature in the culture of modernity.
1-2 units, not given this year

SLAVIC LANGUAGE (SLAVLANG) COURSES

UNDERGRADUATE COURSES IN SLAVIC LANGUAGE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

SLAVLANG 1. First-Year Russian, First Quarter
Functionally-based communicative approach, including essential Russian grammar. Discussions of Russian culture and the Russian view of reality. 1: Aut, 2: Win, 3: Spr
5 units, Aut (Gruen, I)

SLAVLANG 2. First-Year Russian, Second Quarter
Continuation of 1. Prerequisite 1 or equivalent.
5 units, Win (Gruen, I)

SLAVLANG 3. First-Year Russian, Third Quarter
Continuation of 2. Prerequisite 2 or equivalent.
5 units, Spr (Khassina, E)

SLAVLANG 5. Russian for Native Speakers, First Quarter
Self-paced.Reading and writing skills and communicating in formal and informal settings. Does not fulfill the University foreign language requirement.
2 units, Aut (Staff)

SLAVLANG 6. Russian for Native Speakers, Second Quarter
Continuation of 5.
2 units, Win (Staff)

SLAVLANG 7. Russian for Native Speakers, Third Quarter
Continuation of 6.
2 units, Spr (Khassina, E)

SLAVLANG 42. Russian for Returnees
For students returning from the Stanford Program in Moscow; others welcome. Goal is to prepare students who took first-year Russian abroad for SLAVLANG 53.
2 units, Win (Staff)

SLAVLANG 51. Second-Year Russian, First Quarter
More difficult grammar such as numbers, verb conjugation, and aspect. Vocabulary, speaking skills. Prerequisite 3 or equivalent.
5 units, Aut (Khassina, E)

SLAVLANG 52. Second-Year Russian, Second Quarter
Continuation of 51. Prerequisite 51 or equivalent.
5 units, Win (Khassina, E)

SLAVLANG 53. Second-Year Russian, Third Quarter
Continuation of 52. Prerequisite 52 or equivalent.
5 units, Spr (Khassina, E)

SLAVLANG 55. Intermediate Russian Conversation
May be repeated for credit. Prerequisite: first-year Russian or equivalent placement.
2 units, not given this year

SLAVLANG 60A. Beginning Russian Conversation
(AU)
1 unit, Aut (Staff)

SLAVLANG 60B. Intermediate Russian Conversation
(AU)
1 unit, Win (Schupbach, R)

SLAVLANG 60C. Advanced Russian Conversation
(AU)
1 unit, Spr (Staff)

SLAVLANG 60D. East European Breweries and Brewing
(AU) (Staff)
1 unit, Win (Staff), Spr (Staff)

SLAVLANG 60F. Slavic Films Series
AU
1 unit, Win (Staff)

SLAVLANG 60P. Slav Dom Theme Projects
1 unit, Aut (Staff), Win (Staff), Spr (Staff)

SLAVLANG 60T. Teaching Slavic Conversation
(AU)
1 unit, Aut (Staff), Win (Schupbach, R), Spr (Staff)

SLAVLANG 99. Language Specials
Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

SLAVLANG 111. Third-Year Russian, First Quarter
A snapshot of Russian life. Reading comprehension, conversational competence, grammatical accuracy, and cultural sophistication. 111: Aut, 112: Win, 113: Spr
4 units, Aut (Greenhill, R)

SLAVLANG 112. Third-Year Russian, Second Quarter
Continuation of 111. Prerequisite 111 or equivalent.
4 units, Win (Greenhill, R)

SLAVLANG 113. Third-Year Russian, Third Quarter
Continuation of 112. Prerequisite 112 or equivalent.
4 units, Spr (Greenhill, R)

SLAVLANG 177. Fourth-Year Russian
Culture, history, and current events. Films, classical and contemporary writers, newspaper articles, documentaries, radio and TV programs, and music. Review and fine-tuning of grammar and idiomatic usage. Prerequisite: 113 or equivalent.
3 units, Aut (Staff)

SLAVLANG 178. Fourth-Year Russian
Continuation of 177. Prerequisite: 117 or equivalent.
3 units, Win (Greenhill, R)

SLAVLANG 179. Fourth-Year Russian
Continuation of 178. Prerequisite: 178 or equivalent.
3 units, Spr (Greenhill, R)

SLAVLANG 181. Fifth-Year Russian, First Quarter
Language proficiency maintenance; appropriate for majors and non-majors with significant language experience overseas. Discussions, oral presentations, and writing essays on contemporary Russia.
3 units, Aut (Khassina, E)

SLAVLANG 182. Fifth-Year Russian, Second Quarter
Continuation of 181. Prerequisite 181 or equivalent.
3 units, Win (Khassina, E)

SLAVLANG 183. Fifth-Year Russian, Third Quarter
Continuation of 182. Prerequisite 182.
3 units, Spr (Greenhill, R)

SLAVLANG 184A. Russian Reading Conversation and Composition
Proficiency in reading, spoken and written Russian through literary and non-literary texts, movies, and contemporary media. Emphasis is on debate, oral presentations, and essay writing.
2-3 units, not given this year

SLAVLANG 184A. Russian Reading Conversation and Composition
Proficiency in reading, spoken and written Russian through literary and non-literary texts, movies, and contemporary media. Emphasis is on debate, oral presentations, and essay writing.
2-3 units, not given this year

SLAVLANG 184B. Russian Advanced Conversation and Composition
Proficiency in spoken and written Russian through literary and non-literary texts, movies, and contemporary media. Emphasis is on debate, oral presentations, and essay writing.
2-3 units, not given this year

SLAVLANG 184C. Russian Advanced Conversation and Composition
Proficiency in spoken and written Russian through literary and non-literary texts, movies, and contemporary media. Emphasis is on debate, oral presentations, and essay writing.
2-3 units, not given this year

SLAVLANG 199. Individual Work
Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN SLAVIC LANGUAGE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

SLAVLANG 299. Independent Study
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SLAVLANG 395. Graduate Studies in Russian
Prerequisite: consent of instructor. (Staff)
2-5 units, Aut (Staff), Win (Staff), Spr (Staff)

SLAVIC LITERATURE (SLAVLIT) COURSES

UNDERGRADUATE COURSES IN SLAVIC LITERATURE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

SLAVLIT 129. Poetry as System: Introduction to Theory and Practice of Russian Verse
(Same as SLAVLIT 229) The history and theory of Russian versification from the 17th to the 20th century. Prerequisite: reading knowledge of Russian. GER:DB-Hum
4 units, not given this year

SLAVLIT 167. Introduction to Russian Cultural Studies
The fundamentals of literary analysis of poetics and rhetoric, as well as concepts and topics in Russian intellectual history. Goal is to improve students' comprehension and expression in Russian while building a conceptual vocabulary for understanding Russian literature and historical thought. In Russian. Prerequisite: third-year Russian or equivalent. GER:DB-Hum
3-5 units, not given this year

SLAVLIT 169. Advanced Russian Seminar: Reading Pushkin's Evgenii Onegin
A close reading of Pushkin's masterpiece in the context of the changes that were taking place in literary life of his times. Eugene Onegin and the birth of modern Russian novel. The evolution of Pushkin's literary style and narrative techniques. Final paper. In Russian. Prerequisites: three years of Russian or consent of instructor.
2-4 units, not given this year

SLAVLIT 179. Literature from Old Rus' and Medieval Russia
(Same as SLAVLIT 279) From earliest times through the 17th century. The development of literary and historical genres, and links among literature and art, architecture, and religious culture. Readings in English; graduate students read in original.
4 units, Spr (Zhivov, V)

SLAVLIT 182. Pushkin's Eugene Onegin
Russian literature's central masterpiece. In Russian. (Fleishman)
4 units, not given this year

SLAVLIT 183. Readings in the Russian Press
(Same as SLAVLIT 283) For students at the fifth-year Russian level. Advanced language training based on Russian newspapers and magazines. Discussion of issues regarding the Russian media and reading articles of a typical Russian press format.
4 units, not given this year

SLAVLIT 184. The History of the Russian Literary Language
(Same as SLAVLIT 284) Major structural and semantic changes from the 10th to the 19th centuries. Recommended: 211, 212.
4-5 units, not given this year

SLAVLIT 187. Russian Poetry of the 18th and 19th Centuries
(Same as SLAVLIT 287) Required of majors in Russian language and literature; open to undergraduates who have completed three years of Russian, and to graduate students. The major poetic styles of the 19th century as they intersected with late classicism, the romantic movement, and the realist and post-realist traditions. Representative poems by Lomonosov, Derzhavin, Zhukovskii, Pushkin, Baratynskii, Lermontov, Tiutchev, Nekrasov, Fet, Soloviev. In Russian.
3-4 units, not given this year

SLAVLIT 188. Russian Poetry
Required of majors in Russian literature. Developments in 19th- and 20th-century Russian poetry including symbolism, acmeism, futurism, and literature of the absurd. Emphasis is on close readings of individual poems. Discussions in Russian.
3-4 units, Spr (Staff)

SLAVLIT 189A. Honors Research
Senior honors students enroll for 5 units in Winter while writing the honors thesis, and may enroll in 189B for 2 units in Spring while revising the thesis. Prerequisite: DLCL 189.
5 units, Win (Staff), Spr (Staff)

SLAVLIT 189B. Honors Research
Open to juniors with consent of adviser while drafting honors proposal. Open to senior honors students while revising honors thesis. Prerequisites for seniors: 189A, DLCL 189.
2 units, Aut (Staff), Spr (Staff)

SLAVLIT 199. Individual Work for Undergraduates
Open to Russian majors or students working on special projects. May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN SLAVIC LITERATURE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

SLAVLIT 200A. Introduction to Russian Literary Scholarship: Russian Formalism and Structuralism
Required of first-year Slavic graduate students and honors students. Elements of literary work and principles of literary history. 20th-century Russian literary scholarship emphasizing Russian formalism and structuralism. The relationship of literary studies with the other areas of humanistic research such as linguistics, history, art criticism, semiotics, and cultural studies. Bibliographic and archival research.
3-4 units, not given this year

SLAVLIT 200B. Introduction to Slavic Bibliography and Archival Research
1 unit, not given this year

SLAVLIT 203. Academic Russian
How to read and analyze secondary sources, formulate arguments, and present intellectual work in Russian. In Russian. Prerequisite: four years of Russian or equivalent.
3 units, Spr (Staff)

SLAVLIT 211. Introduction to Old Church Slavic
The first written language of the Slavic people. Grammar. Primarily a skills course, with attention to the historical context of Old Church Slavic.
4 units, Win (Timberlake, A)

SLAVLIT 212. Old Russian and Old Church Slavic
Continuation of 211. Readings in additional canonical Old Church Slavic texts, following the Church Slavic tradition as it develops in early Rus (Kiev, Novgorod). Selections from the Primary Chronicle, Boris and Gleb, The Life of Theodosius. The general issues of writing and the reception of Byzantine culture in early Rus.
3 units, not given this year

SLAVLIT 215. Russian Poetry after Brodsky
The Bronze Age of Russian poetry in the 70s-80s as a time of enthusiasm for poetic diction and achievement, attempts to reclaim connections with Russian and European traditions, and avant garde experimentation. The new metaphysics, the problem of the poet's self, new forms, and the limitations of the poetic domain. Poets include Leonid Aronzon, Victor Krivulin, Elena Shvartz, Ivan Zhdanov, Petr Cheigin, Gennadii Aigui, and Leonid Gubanov. Readings in Russian. Undergraduates require consent of instructor.
3-4 units, not given this year

SLAVLIT 224. The Russian Postmodern Novel
What is the place of postmodernism in Russia? The course aims to answer the question by engaging with theories of postmodernity (Baudrillard, Barthes, Derrida) and through close reading of three gems of Russian postmodern literature: Vladimir Sorokin's Marina's Thirtieth Love, Sasha Sokolov's Astrophobia, and Viktor Pelevin's Buddha's Little Finger. Novels read in Russian.
3-4 units, Win (Skakov, N)

SLAVLIT 225. Readings in Russian Realism
Open to graduate students and advanced undergraduates. Russian realist and naturalist prose emerged in a historical context that fostered specific ideas about the function and form of the literary word. Readings from Turgenev, Goncharov, Leskov, Saltykov-Shchedrin, Dostoevsky, Garshin, Tolstoy, Chekhov, Gorky, Bunin. Discussions in English.
4 units, not given this year

SLAVLIT 226. Bakhtin and His Legacy
Quests for my own word are in fact quests for a word that is not my own, a word that is more than myself, writes Mikhail Bakhtin

towards the end of his life. It was this ceaseless pursuit of another word that allowed Bakhtin, one of the most distinguished literary critics of the 20th century, to author several influential literary theory concepts, many of which deal with the ideas of multiplicity, diversity and unfinalizability. The seminar explores these core concepts through close reading of key texts in English and investigates their reverberations in the writings of other thinkers such as Lotman, Kristeva, de Man, and Derrida.

3-4 units, not given this year

SLAVLIT 229. Poetry as System: Introduction to Theory and Practice of Russian Verse

(Same as SLAVLIT 129) The history and theory of Russian versification from the 17th to the 20th century. Prerequisite: reading knowledge of Russian.

4 units, not given this year

SLAVLIT 232. Formalism, Semiotics, Bakhtin: Key Texts

Graduate seminar. The main texts of the two influential Russian literary theory groups: formalism (Viktor Shklovsky, Yiurii Tynianov, Roman Jakobson, and Boris Eikhenbaum) and the Moscow-Tartu school of semiotics (Yiurii Lotman and Boris Uspensky). Key essays of Mikhail Bakhtin, who arguably represents the most influential one-man movement in the history of literary theory.

3-4 units, Aut (Skakov, N)

SLAVLIT 269. Pushkin and the Golden Age

Graduate seminar. The formation of a simultaneously imperial and Enlightenment culture under Catherine the Great, and how Pushkin and his contemporaries realized its potentials and contradictions. Literary texts in light of other verbal discourses and artistic media; the field of 18th-century and imperial studies in Russia. Undergraduates require consent of instructor.

3 units, not given this year

SLAVLIT 270. Pushkin

Major poems and prose with detailed examination of his cultural milieu. Emphasis is on changes in the understanding of literary concepts relevant to this period of Russian literature (poetic genres, the opposition between poetry and prose, romanticism). (Staff)

2-3 units, not given this year

SLAVLIT 272. Osip Mandelstam: from Acmeism to Postmodernism

Mandelstam's oeuvre and Russian modernism: poetry, thought, culture and politics, criticism and scholarship). Russian symbolism (Ivanov, Bely, Blok, Annensky, Kuzmin); acmeism/futurism; reception; Mandelstam in Soviet civilization; poet's social function; memory, biography, and cultural theory; acmeist paradigm in the late Soviet/post-Soviet poetry (Sots-Art, Kibirov, Gandlevsky, Rubinshtein, et al.). Open to graduate students and advanced undergraduates familiar with and interested in Russian literary history, Russian, and/or modernist poetry.

2-4 units, Aut (Freidin, G)

SLAVLIT 279. Literature from Old Rus' and Medieval Russia

(Same as SLAVLIT 179) From earliest times through the 17th century. The development of literary and historical genres, and links among literature and art, architecture, and religious culture. Readings in English; graduate students read in original.

4 units, Spr (Zhivov, V)

SLAVLIT 283. Readings in the Russian Press

(Same as SLAVLIT 183) For students at the fifth-year Russian level. Advanced language training based on Russian newspapers and magazines. Discussion of issues regarding the Russian media and reading articles of a typical Russian press format.

4 units, not given this year

SLAVLIT 284. The History of the Russian Literary Language

(Same as SLAVLIT 184) Major structural and semantic changes from the 10th to the 19th centuries. Recommended: 211, 212.

4-5 units, not given this year

SLAVLIT 287. Russian Poetry of the 18th and 19th Centuries

(Same as SLAVLIT 187) Required of majors in Russian language and literature; open to undergraduates who have completed three years of Russian, and to graduate students. The major poetic styles of the 19th century as they intersected with late classicism, the romantic movement, and the realist and post-realist traditions. Representative poems by Lomonosov, Derzhavin, Zhukovskii, Pushkin, Baratynskii, Lermontov, Tiutchev, Nekrasov, Fet, Soloviev. In Russian.

3-4 units, not given this year

SLAVLIT 299. Individual Work for Graduate Students

For graduate students in Slavic working on theses or engaged in special work. Prerequisite: written consent of instructor.

1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SLAVLIT 310. Civilizing Process: Paradigms of Society and Culture in Modern Russian Literature and Film

Texts representing theoretical models of society and culture in confrontation with works of Russian fiction and film. Emphasis is on Norbert Elias's civilizing process and related theories. Topics: body and desire (Freud, Bakhtin); manners and civilizing process (Elias, Cuddihy, Lotman); symbolic forms, ritual, and systems (Geertz, Zorin); identities and practices (de Certeau, Bourdieu); subcultures (Hebdidge). Authors include Mayakovsky, Babel, Mandelstam, Bulgakov, Platonov, Zoshchenko, Erofeev, Pelevin, Trifonov, and Petrushevskaia; film makers: Mamin and Rogozhkin. Recommended: knowledge of Russian.

2-4 units, not given this year

SLAVLIT 399. Advanced Research Seminar in Russian Literature

Follow-up to 200- or 300-series seminars, as needed. May be repeated for credit.

2-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SLAVLIT 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SLAVLIT 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SOCIOLOGY (SOC) COURSES

UNDERGRADUATE COURSES IN SOCIOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

SOC 1. Introduction to Sociology

Concepts, methods, and theoretical orientations. Sociological imagination illustrated by recent theory and research. Possible topics: the persistence of class cleavages; ethnic, racial, and gender inequalities; religious beliefs and the process of secularization; functions and dysfunctions of educational institutions; criminology and social deviance; social movements and social protest; production and reproduction of culture; rise of organizational society. GER:DB-SocSci

5 units, Aut (Szelenyi, S)

SOC 15N. The Transformation of Socialist Societies

(Stanford Introductory Seminar) Preference to freshmen. The impact of societal organization on the lives of ordinary people in socialist societies and in the new societies arising through the processes of political, economic, and social transformation. Do the concepts of democratization and marketization suffice to characterize ongoing changes? Enrollment limited to 16. GER:DB-SocSci, EC-GlobalCom

3 units, Win (Tuma, N)

SOC 16N. African Americans and Social Movements

(Stanford Introductory Seminar) Theory and research on African Americans' roles in post-Civil Rights, US social movements. Topics include women¿s right, LGBT rights, environmental movement, and contemporary political conservativism.

3 units, Spr (Fields, C)

SOC 22N. The Roots of Social Protest

(Stanford Introductory Seminar) Preference to freshmen. The conditions under which social protest occurs and the emergence, success, and viability of contemporary social movements. Examples include women's civil rights, ecology, and antiwar and anti-globilization movements in the U.S. and elsewhere. Sociological theories to explain the timing, location, and causes of mobilization; how researchers evaluate these theories. Comparison of tactics, trajectories, and outcomes. GER:DB-SocSci, EC-GlobalCom

3 units, Win (Olzak, S)

SOC 45Q. Understanding Race and Ethnicity in American Society

(Stanford Introductory Seminar) Preference to sophomores. Historical overview of race in America, race and violence, race and

socioeconomic well-being, and the future of race relations in America. Enrollment limited to 16. GER:DB-SocSci

5 units, Aut (Snipp, C)

SOC 100ASB. Pre-field Course for Alternative Spring Break

Limited to students participating in the Alternative Spring Break program. See http://asb.stanford.edu for more information.

1 unit, Win (Staff)

SOC 106. Political Sociology

(Same as SOC 206) The body of state rules and institutions that work in generating legitimate and illegitimate policy claims. Interests and identities that challenged the capacity of the national state to produce effective policies. Economic processes above the national level have that undermine the role of the state as the arena for the composition of disparate interests. GER:DB-SocSci

5 units, not given this year

SOC 107. China After Mao

(Same as SOC 207) China's post-1976 recovery from the late Mao era; its reorientation toward an open market-oriented economy; the consequences of this new model and runaway economic growth for standards of living, social life, inequality, and local governance; the political conflicts that have accompanied these changes. GER:DB-SocSci

5 units, not given this year

SOC 108. Political & Historical Sociology

(Same as SOC 208) The differences between historical and sociological analysis of past events. The difference between constructing sociological explanations and describing past events. Topics include: the rise of Christianity, the mafia in a Sicilian village, the trade network of the East India Company. GER:DB-SocSci

5 units, Spr (Staff)

SOC 109. Sociology of Terrorism

(Same as PUBLPOL 119, SOC 209) Multidisciplinary, including psychology, sociology, political science,and economics. Comparison of terrorist organizations and movements across institutions, places, and times; their motives, tactics, financing, and organization. Guest lecturers. Sources include movies, novels, and research literature. GER:DB-SocSci

5 units, Spr (Meyersson Milgrom, E)

SOC 109D. Relationships in Contemporary America

Research and theory on personal relationships in modern U.S. society. Topics include friendship, sibling relationships, marriage, cohabiting unions, non-committed sexual unions and family.

5 units, Sum (Shafer, E)

SOC 110. Politics and Society

(Same as SOC 210) (Graduate students register for 210.) Themes of political sociology, conceptions of power and state structures throughout history, the origins and expansion of the modern state, linkages between state and society, impact of the modern world system on national policies, internal distribution of power and authority, structure of political group formation and individual participation in modern states, and future trends of politics and society in a globalized world. Emphasis is on developing conceptual understandings of state, society, and politics in the modern world. GER:DB-SocSci

5 units, not given this year

SOC 110D. Analysis for the Social Sciences

Practical introduction to social science analysis. Work in small groups on analysis of a social science puzzle (an unexpected or counterintuitive fact) by identifying possible social mechanisms behind the puzzle, examining them with techniques of social science research and proposing a plausible explanation.

5 units, Sum (Staff)

SOC 111. State and Society in Korea

(Same as SOC 211) 20th-century Korea from a comparative historical perspective. Colonialism, nationalism, development, state-society relations, democratization, and globalization with reference to the Korean experience. GER:DB-SocSci, EC-GlobalCom

5 units, Win (Staff)

SOC 114. Economic Sociology

(Same as SOC 214) (Graduate students register for 214.) The sociological approach to production, distribution, consumption, and markets, emphasizing the impact of norms, power, social structure, and institutions on the economy. Comparison of classic and contemporary approaches to the economy among the social science disciplines. Topics: consumption, labor markets, organization of professions such as law and medicine, the economic role of informal networks, industrial organization, including the structure and history of the computer and popular music industries, business alliances, capitalism in non-Western societies, and the transition from state socialism in E. Europe and China. GER:DB-SocSci

5 units, Aut (Granovetter, M)

SOC 115. Topics in Economic Sociology

(Same as SOC 315) (Graduate students register for 315.) Discussion of topics initially explored in 114/214, with emphasis on countries and cultures outside N. America. Possible topics: families and ethnic groups in the economy, corporate governance and control, corporate strategy, relations among firms in industrial districts and business groups, the impact of national institutions and cultures on economic outcomes, transitions from state socialism and the role of the state in economic development. Possible case studies: the U.S., Germany, Italy, Britain, France, Brazil, Korea, India, Japan, and China. Prerequisite: 114/214 or 314. GER:DB-SocSci

5 units, Win (Granovetter, M)

SOC 117A. China Under Mao

(Same as SOC 217A) (Graduate students register for 217A.) The transformation of Chinese society from the 1949 revolution to the eve of China's reforms in 1978: creation of a socialist economy, reorganization of rural society and urban workplaces, emergence of new inequalities of power and opportunity, and new forms of social conflict during Mao's Cultural Revolution of 1966-69 and its aftermath. GER:DB-SocSci, EC-GlobalCom

5 units, not given this year

SOC 118. Social Movements and Collective Action

(Same as SOC 218) Why social movements arise, who participates in them, the obstacles they face, the tactics they choose, and how to gauge movement success or failure. Theory and empirical research. Application of concepts and methods to social movements such as civil rights, environmental justice, antiglobalization, and anti-war. GER:DB-SocSci

5 units, not given this year

SOC 119. Understanding Large-Scale Societal Change: The Case of the 1960s

(Same as SOC 219) The demographic, economic, political, and cultural roots of social change in the 60s; its legacy in the present U.S. GER:DB-SocSci

5 units, not given this year

SOC 120. Interpersonal Relations

(Same as SOC 220) (Graduate students register for 220.) Forming ties, developing norms, status, conformity, deviance, social exchange, power, and coalition formation; important traditions of research have developed from the basic theories of these processes. Emphasis is on understanding basic theories and drawing out their implications for change in a broad range of situations, families, work groups, and friendship groups. GER:DB-SocSci

5 units, Win (Ridgeway, C)

SOC 121. The Individual in Social Structure: Foundations in Sociological Social Psychology

Dynamics of the relationship between the individual and social structure, the relationship between the individual and immediate social context, and relationships between individuals. Focus is on the dominant theoretical perspectives in sociological social psychology: social structure and personality, structural social psychology, and symbolic interactionism.

5 units, not given this year

SOC 123. Sex and Love in Modern Society

(Same as SOC 223) Social influences on private intimate relations involving romantic love and sexuality. Topics include the sexual revolution, contraception, dating, hook-ups, cohabitation, sexual orientation, and changing cultural meanings of marriage, gender, and romantic love. GER:DB-SocSci, EC-Gender

5 units, not given this year

SOC 126. Introduction to Social Networks
(Same as SOC 226) (Graduate students register for 226.) Theory, methods, and research. Concepts such as density, homogeneity, and centrality; applications to substantive areas. The impact of social network structure on individuals and groups in areas such as communities, neighborhoods, families, work life, and innovations. GER:DB-SocSci

5 units, not given this year

SOC 127. Bargaining, Power, and Influence in Social Interaction
(Same as SOC 227) (Graduate students register for 227.) Research and theoretical work on bargaining, social influence, and issues of power and justice in social settings such as teams, work groups, and organizations. Theoretical approaches to the exercise of power and influence in social groups and related issues in social interaction such as the promotion of cooperation, effects of competition and conflict, negotiation, and intergroup relations. Enrollment limited to 40. GER:DB-SocSci

5 units, not given this year

SOC 128. Introduction to Social Network Analysis
(Same as SOC 228) (Graduate students register for SOC 228.) Theory and methods of network analysis in sociology (with an emphasis on social movements), anthropology, history, social psychology, economics, political science, and public health. Prerequisite: basic mathematics.

5 units, Aut (Parigi, P)

SOC 129X. Urban Education
(Same as EDUC 112X, EDUC 212X, SOC 229X) (Graduate students register for EDUC 212X or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education. GER:DB-SocSci

3-4 units, Spr (Carter, P)

SOC 130. Education and Society
(Same as EDUC 120C, EDUC 220C, SOC 230) The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling. GER:DB-SocSci

4-5 units, Aut (Ramirez, F)

SOC 132. Sociology of Education: The Social Organization of Schools
(Same as EDUC 110, EDUC 310, SOC 332) Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy. GER:DB-SocSci

4 units, Win (Carter, P)

SOC 133. Law and Wikinomics: The Economic and Social Organization of the Legal Profession
(Same as SOC 333) (Graduate and Law students enroll in 333.) Seminar. Emphasis is on the labor market for large-firm lawyers, including the market for entry-level lawyers, attorney retention and promotion practices, lateral hiring of partners, and increased use of forms of employment such as the non-equity form of partnership. Race and gender discrimination and occupational segregation; market-based pressure tactics for organizational reform. Students groups collect and analyze data about the profession and its markets. Multimedia tools for analysis and for producing workplace reforms. May be repeated for credit. Prerequisite: consent of instructor.

1-5 units, Win (Dauber, M)

SOC 134. Education, Gender, and Development
(Same as EDUC 197) Theories and perspectives from the social sciences relevant to the role of education in changing, modifying, or reproducing structures of gender differentiation and hierarchy. Cross-national research on the status of girls and women and the role of development organizations and processes. (SSPEP) GER:EC-Gender

4 units, Spr (Wotipka, C)

SOC 135. Poverty, Inequality, and Social Policy in the United States
(Same as SOC 235) Causes and consequences. Effects of antipoverty policies, and debates over effective social policies. Focus is on how poverty and inequality are experienced by families, children, and communities. Topics include welfare reform and labor market policies, education, and community-based antipoverty strategies. GER:DB-SocSci

5 units, Spr (Szelenyi, S)

SOC 136. Sociology of Law
(Same as SOC 236) (Graduate students register for 236) Major issues and debates. Topics include: historical perspectives on the origins of law; rationality and legal sanctions; normative decision making and morality; cognitive decision making; crime and deviance; the law in action versus the law on the books; organizational responses to law in the context of labor and employment; the roles of lawyers, judges, and juries; and law and social change emphasizing the American civil rights movement. GER:DB-SocSci

5 units, Win (Dauber, M)

SOC 136A. Law and Society
(Same as SOC 236A) Law and social inequality. Major sociological perspectives on where the law comes from, what law and justice systems do, and how they work.

5 units, not given this year

SOC 136B. Advanced Topics in Sociology of Law
(Same as SOC 236B) (Same as LAW 538.) Historical perspectives on the origins of law, rationality and legal sanctions, law on the books versus the law in action, crime and deviance, school desegregation, privitization of prisons, American civil rights, file sharing, jury decision making, the role of lawyers and judges, and cynicism about the American legal system.

5 units, not given this year

SOC 137. Inequality and Access to Justice
(Same as SOC 237) Sources of inequalities and contemporary attempts to respond to them with innovative programs and other reforms. Case studies of problems and solutions, taking examples from criminal justice, civil justice and human rights.

5 units, Win (Sandefur, R)

SOC 138. American Indians in Comparative Historical Perspective
(Same as SOC 238) (Graduate students register for 238.) Demographic, political, and economic processes and events that shaped relations between Euro-Americans and American Indians, 1600-1890. How the intersection of these processes affected the outcome of conflicts between these two groups, and how this conflict was decisive in determining the social position of American Indians in the late 19th century and the evolution of the doctrine of tribal sovereignty. GER:DB-SocSci, EC-AmerCul

5 units, Win (Snipp, C)

SOC 139. American Indians in Contemporary Society
(Same as SOC 239) (Graduate students register for 239.) The social position of American Indians in contemporary American society, 1890 to the present. The demographic resurgence of American Indians, changes in social and economic status, ethnic identification and political mobilization, and institutions such as tribal governments and the Bureau of Indian Affairs. Recommended: 138 or a course in American history. GER:DB-SocSci, EC-AmerCul

5 units, Spr (Snipp, C)

SOC 140. Introduction to Social Stratification
(Same as SOC 240) (Graduate students register for 240.) The main classical and modern explanations of the causes of social, economic, and political inequality. Issues include: power; processes that create and maintain inequality; the central axes of inequality in contemporary societies (race, ethnicity, class, and gender); the consequences of inequality for individuals and groups; and how social policy can mitigate and exacerbate inequality. Cases include technologically simple groups, the Indian caste system, and the modern U.S. GER:DB-SocSci

5 units, Spr (Staff)

SOC 141. Controversies about Inequality
(Same as SOC 241) (Graduate students register for 241.) Debate format involving Stanford and guest faculty. Forms of inequality including racial, ethnic, and gender stratification; possible policy interventions. Topics such as welfare reform, immigration policy, affirmative action, discrimination in labor markets, sources of

income inequality, the duty of rich nations to help poor nations, and causes of gender inequality. GER:DB-SocSci

5 units, Aut (Grusky, D)

SOC 142. Sociology of Gender

(Same as SOC 242) (Graduate students register for 242.) Gender inequality in contemporary American society and how it is maintained. The social and relative nature of knowledge and the problems this poses for understanding sex differences and gendered behavior in society. Analytical levels of explanation for gender inequalities: socialization, interaction processes, and socioeconomic processes; arguments and evidence for each approach. The social consequences of gender inequality such as the feminization of poverty, and problems of interpersonal relations. GER:EC-Gender

5 units, Win (Correll, S)

SOC 144. Inequality and the Workplace

(Same as SOC 244) How characteristics of workplaces, such as hiring practices, workforce diversity, organizational policies and legal mandates, produce variation in inequality. Examines the sources, extent, and consequences of workplace inequality across gender, racial and ethnic lines. Topics include earnings, social status, geographical location, and opportunities for people in the workforce.

5 units, not given this year

SOC 145. Race and Ethnic Relations

(Same as SOC 245) (Graduate students register for 245.) Race and ethnic relations in the U.S. and elsewhere. The processes that render ethnic and racial boundary markers, such as skin color, language, and culture, salient in interaction situations. Why only some groups become targets of ethnic attacks. The social dynamics of ethnic hostility and ethnic/racial protest movements. GER:DB-SocSci, EC-AmerCul

5 units, Win (Snipp, C)

SOC 146. Introduction to Comparative Studies in Race and Ethnicity

(Same as CSRE 196C, ENGLISH 172D, PSYCH 155) How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. GER:DB-SocSci, EC-AmerCul

5 units, Win (Markus, H; Moya, P)

SOC 147A. Comparative Ethnic Conflict

(Same as SOC 247A) Causes and consequences of racial and ethnic conflict, including nationalist movements, ethnic genocide, civil war, ethnic separatism, politics, indigenous peoples' movements, and minority rights movements around the world. GER:DB-SocSci, EC-GlobalCom

5 units, not given this year

SOC 148. Racial Identity

(Same as SOC 248) The construction and meanings of racial identities in the U.S. Attention to multiracial identities and the shifting boundaries of racial categories in contemporary America. GER:DB-SocSci, EC-AmerCul

5 units, not given this year

SOC 149. The Urban Underclass

(Same as SOC 249, URBANST 112) (Graduate students register for 249.) Recent research and theory on the urban underclass, including evidence on the concentration of African Americans in urban ghettos, and the debate surrounding the causes of poverty in urban settings. Ethnic/racial conflict, residential segregation, and changes in the family structure of the urban poor. GER:DB-SocSci, EC-AmerCul

5 units, Win (Rosenfeld, M)

SOC 155. The Changing American Family

(Same as SOC 255) Family change from historical, social, demographic, and legal perspectives. Extramarital cohabitation, divorce, later marriage, interracial marriage, and same-sex cohabitation. The emergence of same-sex marriage as a political issue. Are recent changes in the American family really as dramatic as they seem? Theories about what causes family systems to change. GER:DB-SocSci, EC-AmerCul

5 units, Aut (Rosenfeld, M)

SOC 160. Formal Organizations

(Same as SOC 260) (Graduate students register for 260.) The roles of formal organizations in production processes, market transactions, and social movements; and as sources of income and ladders of mobility. Relationships of modern organizations to environments and internal structures and processes. Concepts, models, and tools for analyzing organizational phenomena in contemporary societies. Sources include the literature and case studies. GER:DB-SocSci

5 units, Spr (Zhou, X)

SOC 161. The Social Science of Entrepreneurship

(Same as SOC 261) (Graduate students register for 261.) Who is likely to become an entrepreneur and where is entrepreneurship likely to occur? Classic and contemporary theory and research. Interaction with expert practitioners in creating entrepreneurial opportunities including venture and corporate capitalists. The role of culture, markets, hierarchies, and networks. Market creation and change, and factors that affect success of new organizations. Field projects on entrepreneurial environments such as technology licensing offices, entrepreneurial development organizations, venture capital firms, and corporate venturing groups. GER:DB-SocSci

5 units, Spr (Thornton, P)

SOC 162. Markets and Governance

(Same as SOC 262) Social and political forces that shape market outcomes. The emergence and creation of markets, how markets go wrong, and the roles of government and society in structuring market exchange. Applied topics include development, inequality, globalization, and economic meltdown.

5 units, Spr (Young, C)

SOC 164. Immigration and the Changing United States

(Same as SOC 264) The role of race and ethnicity in immigrant group integration in the U.S. Topics include: theories of integration; racial and ethnic identity formation; racial and ethnic change; immigration policy; intermarriage; hybrid racial and ethnic identities; comparisons between contemporary and historical waves of immigration. GER:DB-SocSci

5 units, Spr (Jimenez, T)

SOC 165. Seminar on the Everday Lives of Immigrants

(Same as SOC 265) Everyday experience of immigrants and the immigrant second generation through the ethnographic lens. Ethnographies that focus on the immigrant experience. Limited enrollment.

5 units, not given this year

SOC 166. Mexicans, Mexican Americans, and Chicanos in American Society

(Same as SOC 266) Contemporary sociological issues affecting Mexican-origin people in the U.S. Topics include: the immigrant experience, immigration policy, identity, socioeconomic integration, internal diversity, and theories of incorporation. GER:DB-SocSci

5 units, Aut (Jimenez, T)

SOC 167A. Asia-Pacific Transformation

(Same as SOC 267A) Post-WW II transformation in the Asia-Pacific region, with focus on the ascent of Japan, the development of newly industrialized capitalist countries (S. Korea and Taiwan), the emergence of socialist states (China and N. Korea), and the changing relationship between the U.S. and these countries. GER:DB-SocSci, EC-GlobalCom

5 units, not given this year

SOC 168. Global Organizations: Managing Diversity

(Same as PUBLPOL 168, SOC 268) Analytical tools derived from the social sciences to analyze global organizations and projects, and applied to the tradeoffs between different designs of teams and organizations. Focus is on tribal mentality and how to design effective organizations and projects for policy implementation within and across institutional settings. Recommended: 102, MS&E 180, or SOC 160. GER:DB-SocSci

5 units, Win (Meyersson Milgrom, E)

SOC 170. Classics of Modern Social Theory

(Same as SOC 270) (Graduate students register for 270). Preference to Sociology majors. Contributions of Marx, Weber, and Durkheim to contemporary sociology. Topics: the problem of social order and the nature of social conflict; capitalism and bureaucracy; the relationship between social structure and politics; the social sources of religion and political ideology; and the evolution of modern societies. Examples from contemporary research illus-

trate the impact of these traditions. Limited enrollment. GER:DB-SocSci

5 units, Aut (McDermott, M)

SOC 180A. Foundations of Social Research

(Same as SOC 280A) Formulating a research question, developing hypotheses, probability and non-probability sampling, developing valid and reliable measures, qualitative and quantitative data, choosing research design and data collection methods, challenges of making causal inference, and criteria for evaluating the quality of social research. Emphasis is on how social research is done, rather than application of different methods. Limited enrollment; preference to Sociology and Urban Studies majors, and Sociology coterms. GER:DB-SocSci

5 units, Aut (McClintock, E), Spr (McClintock, E)

SOC 180B. Evaluation of Evidence

(Same as SOC 280B) Methods for analyzing and evaluating data in sociological research: comparative historical methods, ethnographic observation, quantitative analysis of survey data, experimentation, and simulation. Emphasis is on application of these methods through small data analysis projects. Limited enrollment; preference to Sociology majors. GER:DB-SocSci

5 units, Win (Rosenfeld, M)

SOC 181B. Sociological Methods: Statistics

(Same as SOC 281B) (Graduate students register for 281B.) Statistical methods of relevance to sociology: contingency tables, correlation, and regression.

5 units, not given this year

SOC 190. Undergraduate Individual Study

Prior arrangement required.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SOC 191. Undergraduate Directed Research

Work on a project of student's choice under supervision of a faculty member. Prior arrangement required.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SOC 192. Undergraduate Research Apprenticeship

Work in an apprentice-like relationship with faculty on an ongoing research project. Prior arrangement required.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SOC 193. Undergraduate Teaching Apprenticeship

Prior arrangement required.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SOC 196. Senior Thesis

Work on an honors thesis project under faculty supervision (see description of honors program). Must be arranged early in the year of graduation or before.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SOC 200. Junior/Senior Seminar for Majors

For Sociology majors. Capstone course in which sociological problems are framed, linked to theories, and answers pursued through research designs. Independent research. How to formulate a research question; how to integrate theory and methods. Prerequisites: SOC 170, 180B.

5 units, Aut (McDermott, M), Spr (McDermott, M)

SOC 201. Preparation for Senior Project

(Same as URBANST 201) First part of capstone experience for Urban Studies majors pursuing an internship-based research project or honors thesis. Assignments culminate in a research proposal, which may be submitted for funding. Students also identify and prepare for a related internship, normally to begin in Spring Quarter in URBANST 201B or in Summer. Research proposed in the final assignment may be carried out in Spring or Summer Quarter; consent required for Autumn Quarter research. Service Learning Course (certified by Haas Center).

5 units, Win (Kahan, M)

SOC 202. Preparation for Honors Thesis

(Same as URBANST 202) Primarily for juniors in Sociology; sophomores who plan to be off-campus Winter Quarter of their junior year may register with consent of instructor. Students write a research prospectus and grant proposal, which may be submitted for funding. Research proposal in final assignment may be carried out in Spring or Summer Quarter; consent required for Autumn Quarter research. WIM

5 units, Win (McAdam, D)

SOC 234. Research Seminar on Access to Justice

(Same as SOC 334) The functions and dysfunctions of modern legal systems. Topics include: official statements of the U.S. and the EU about the rights of parties to civil disputes; the roles of lawyers as gatekeepers and facilitators; the filtering process by which injuries and experiences become the basis for legal claims; access to and use of courts; the balance of power and advantage between individual persons and organizations in disputes. Prerequisite: advanced undergraduate or graduate standing, or consent of instructor.

1-5 units, not given this year

SOC 252. Current Social Change: Austria, Europe and the USA

(Same as SOC 352) For graduate students and advanced undergraduates. Theoretical classification and comparative analysis of current European and American societies. Structures of and megatrends in the developements of population, family, education, work, class, gender and ethnicity, democracy, and social policy.

3-5 units, Win (Staff)

SOC 253. Rise, Current Challenges and Transformations of the Welfare State

(Same as SOC 353) For graduate students and advanced undergraduates. Theoretical classification and comparative analysis of welfare regimes in Europe and North America. Systems like accident, health, unemployement and pension insurance, family subsidies and public welfare. Social policy reform past the background of current socioeconomic change.

3-5 units, Spr (Staff)

GRADUATE COURSES IN SOCIOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

SOC 206. Political Sociology

(Same as SOC 106) The body of state rules and institutions that work in generating legitimate and illegitimate policy claims. Interests and identities that challenged the capacity of the national state to produce effective policies. Economic processes above the national level have that undermine the role of the state as the arena for the composition of disparate interests.

5 units, not given this year

SOC 207. China After Mao

(Same as SOC 107) China's post-1976 recovery from the late Mao era; its reorientation toward an open market-oriented economy; the consequences of this new model and runaway economic growth for standards of living, social life, inequality, and local governance; the political conflicts that have accompanied these changes.

5 units, not given this year

SOC 208. Political & Historical Sociology

(Same as SOC 108) The differences between historical and sociological analysis of past events. The difference between constructing sociological explanations and describing past events. Topics include: the rise of Christianity, the mafia in a Sicilian village, the trade network of the East India Company.

5 units, Spr (Staff)

SOC 209. Sociology of Terrorism

(Same as PUBLPOL 119, SOC 109) Multidisciplinary, including psychology, sociology, political science,and economics. Comparison of terrorist organizations and movements across institutions, places, and times; their motives, tactics, financing, and organization. Guest lecturers. Sources include movies, novels, and research literature.

5 units, Spr (Meyersson Milgrom, E)

SOC 210. Politics and Society

(Same as SOC 110) (Graduate students register for 210.) Themes of political sociology, conceptions of power and state structures throughout history, the origins and expansion of the modern state, linkages between state and society, impact of the modern world system on national policies, internal distribution of power and authority, structure of political group formation and individual participation in modern states, and future trends of politics and society in a globalized world. Emphasis is on developing conceptual understandings of state, society, and politics in the modern world.

5 units, not given this year

SOC 211. State and Society in Korea
(Same as SOC 111) 20th-century Korea from a comparative historical perspective. Colonialism, nationalism, development, state-society relations, democratization, and globalization with reference to the Korean experience.
5 units, Win (Staff)

SOC 214. Economic Sociology
(Same as SOC 114) (Graduate students register for 214.) The sociological approach to production, distribution, consumption, and markets, emphasizing the impact of norms, power, social structure, and institutions on the economy. Comparison of classic and contemporary approaches to the economy among the social science disciplines. Topics: consumption, labor markets, organization of professions such as law and medicine, the economic role of informal networks, industrial organization, including the structure and history of the computer and popular music industries, business alliances, capitalism in non-Western societies, and the transition from state socialism in E. Europe and China.
5 units, Aut (Granovetter, M)

SOC 217A. China Under Mao
(Same as SOC 117A) (Graduate students register for 217A.) The transformation of Chinese society from the 1949 revolution to the eve of China's reforms in 1978: creation of a socialist economy, reorganization of rural society and urban workplaces, emergence of new inequalities of power and opportunity, and new forms of social conflict during Mao's Cultural Revolution of 1966-69 and its aftermath.
5 units, not given this year

SOC 218. Social Movements and Collective Action
(Same as SOC 118) Why social movements arise, who participates in them, the obstacles they face, the tactics they choose, and how to gauge movement success or failure. Theory and empirical research. Application of concepts and methods to social movements such as civil rights, environmental justice, antiglobalization, and anti-war.
5 units, not given this year

SOC 219. Understanding Large-Scale Societal Change: The Case of the 1960s
(Same as SOC 119) The demographic, economic, political, and cultural roots of social change in the 60s; its legacy in the present U.S.
5 units, not given this year

SOC 220. Interpersonal Relations
(Same as SOC 120) (Graduate students register for 220.) Forming ties, developing norms, status, conformity, deviance, social exchange, power, and coalition formation; important traditions of research have developed from the basic theories of these processes. Emphasis is on understanding basic theories and drawing out their implications for change in a broad range of situations, families, work groups, and friendship groups.
5 units, Win (Ridgeway, C)

SOC 223. Sex and Love in Modern Society
(Same as SOC 123) Social influences on private intimate relations involving romantic love and sexuality. Topics include the sexual revolution, contraception, dating, hook-ups, cohabitation, sexual orientation, and changing cultural meanings of marriage, gender, and romantic love.
5 units, not given this year

SOC 224A. Traditions of Microsociology
(Same as EDUC 312A) The educational applications of sociological and social psychological theory and research to interaction processes in schools. Readings include: foundational works by Mead, Schutz, and Simmel; contemporary work by Goffman, Homans, Merton, Blau, and Harold. Readings span empirical settings such as work, classrooms, gangs, primate societies, and children's games. Topics: processes of influence, role differentiation, identity formation, social mechanisms, and intra/inter group dynamics of peer relations. Methods for observation and analysis of small groups. (SSPEP)
4 units, not given this year

SOC 224B. Microsociology: Social Structure and Interaction
(Same as EDUC 312B) How to interpret interpersonal situations using microsociological theories. Focuses on the role of intention, identity, routines, scripts, rituals, conceptual frameworks, talk and emotions in social interaction. Processes by which interactions reverberate outward to transform groups and social structures. Special consideration will be placed on organizational contexts like schools, workplaces and policy decision arenas.
4 units, Aut (McFarland, D)

SOC 226. Introduction to Social Networks
(Same as SOC 126) (Graduate students register for 226.) Theory, methods, and research. Concepts such as density, homogeneity, and centrality; applications to substantive areas. The impact of social network structure on individuals and groups in areas such as communities, neighborhoods, families, work life, and innovations.
5 units, not given this year

SOC 227. Bargaining, Power, and Influence in Social Interaction
(Same as SOC 127) (Graduate students register for 227.) Research and theoretical work on bargaining, social influence, and issues of power and justice in social settings such as teams, work groups, and organizations. Theoretical approaches to the exercise of power and influence in social groups and related issues in social interaction such as the promotion of cooperation, effects of competition and conflict, negotiation, and intergroup relations. Enrollment limited to 40.
5 units, not given this year

SOC 228. Introduction to Social Network Analysis
(Same as SOC 128) (Graduate students register for SOC 228.) Theory and methods of network analysis in sociology (with an emphasis on social movements), anthropology, history, social psychology, economics, political science, and public health. Prerequisite: basic mathematics.
5 units, Aut (Parigi, P)

SOC 229X. Urban Education
(Same as EDUC 112X, EDUC 212X, SOC 129X) (Graduate students register for EDUC 212X or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.
3-4 units, Spr (Carter, P)

SOC 230. Education and Society
(Same as EDUC 120C, EDUC 220C, SOC 130) The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling.
4-5 units, Aut (Ramirez, F)

SOC 231. World, Societal, and Educational Change: Comparative Perspectives
(Same as EDUC 136, EDUC 306D) Theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation building; education, mobility, and equality; education, international organizations, and world culture.
4-5 units, Win (Martin, P)

SOC 235. Poverty, Inequality, and Social Policy in the United States
(Same as SOC 135) Causes and consequences. Effects of antipoverty policies, and debates over effective social policies. Focus is on how poverty and inequality are experienced by families, children, and communities. Topics include welfare reform and labor market policies, education, and community-based antipoverty strategies.
5 units, Spr (Szelenyi, S)

SOC 236. Sociology of Law
(Same as SOC 136) (Graduate students register for 236) Major issues and debates. Topics include: historical perspectives on the origins of law; rationality and legal sanctions; normative decision making and morality; cognitive decision making; crime and deviance; the law in action versus the law on the books; organizational responses to law in the context of labor and employment; the roles of lawyers, judges, and juries; and law and social change emphasizing the American civil rights movement.
5 units, Win (Dauber, M)

SOC 236A. Law and Society
(Same as SOC 136A) Law and social inequality. Major sociological perspectives on where the law comes from, what law and justice systems do, and how they work.

5 units, not given this year

SOC 236B. Advanced Topics in Sociology of Law
(Same as SOC 136B) (Same as LAW 538.) Historical perspectives on the origins of law, rationality and legal sanctions, law on the books versus the law in action, crime and deviance, school desegregation, privitization of prisons, American civil rights, file sharing, jury decision making, the role of lawyers and judges, and cynicism about the American legal system.

5 units, not given this year

SOC 237. Inequality and Access to Justice
(Same as SOC 137) Sources of inequalities and contemporary attempts to respond to them with innovative programs and other reforms. Case studies of problems and solutions, taking examples from criminal justice, civil justice and human rights.

5 units, Win (Sandefur, R)

SOC 238. American Indians in Comparative Historical Perspective
(Same as SOC 138) (Graduate students register for 238.) Demographic, political, and economic processes and events that shaped relations between Euro-Americans and American Indians, 1600-1890. How the intersection of these processes affected the outcome of conflicts between these two groups, and how this conflict was decisive in determining the social position of American Indians in the late 19th century and the evolution of the doctrine of tribal sovereignty.

5 units, Win (Snipp, C)

SOC 239. American Indians in Contemporary Society
(Same as SOC 139) (Graduate students register for 239.) The social position of American Indians in contemporary American society, 1890 to the present. The demographic resurgence of American Indians, changes in social and economic status, ethnic identification and political mobilization, and institutions such as tribal governments and the Bureau of Indian Affairs. Recommended: 138 or a course in American history.

5 units, Spr (Snipp, C)

SOC 240. Introduction to Social Stratification
(Same as SOC 140) (Graduate students register for 240.) The main classical and modern explanations of the causes of social, economic, and political inequality. Issues include: power; processes that create and maintain inequality; the central axes of inequality in contemporary societies (race, ethnicity, class, and gender); the consequences of inequality for individuals and groups; and how social policy can mitigate and exacerbate inequality. Cases include technologically simple groups, the Indian caste system, and the modern U.S.

5 units, Spr (Staff)

SOC 241. Controversies about Inequality
(Same as SOC 141) (Graduate students register for 241.) Debate format involving Stanford and guest faculty. Forms of inequality including racial, ethnic, and gender stratification; possible policy interventions. Topics such as welfare reform, immigration policy, affirmative action, discrimination in labor markets, sources of income inequality, the duty of rich nations to help poor nations, and causes of gender inequality.

5 units, Aut (Grusky, D)

SOC 242. Sociology of Gender
(Same as SOC 142) (Graduate students register for 242.) Gender inequality in contemporary American society and how it is maintained. The social and relative nature of knowledge and the problems this poses for understanding sex differences and gendered behavior in society. Analytical levels of explanation for gender inequalities: socialization, interaction processes, and socioeconomic processes; arguments and evidence for each approach. The social consequences of gender inequality such as the feminization of poverty, and problems of interpersonal relations.

5 units, Win (Correll, S)

SOC 244. Inequality and the Workplace
(Same as SOC 144) How characteristics of workplaces, such as hiring practices, workforce diversity, organizational policies and legal mandates, produce variation in inequality. Examines the sources, extent, and consequences of workplace inequality across gender, racial and ethnic lines. Topics include earnings, social status, geographical location, and opportunities for people in the workforce.

5 units, not given this year

SOC 245. Race and Ethnic Relations
(Same as SOC 145) (Graduate students register for 245.) Race and ethnic relations in the U.S. and elsewhere. The processes that render ethnic and racial boundary markers, such as skin color, language, and culture, salient in interaction situations. Why only some groups become targets of ethnic attacks. The social dynamics of ethnic hostility and ethnic/racial protest movements.

5 units, Win (Snipp, C)

SOC 247A. Comparative Ethnic Conflict
(Same as SOC 147A) Causes and consequences of racial and ethnic conflict, including nationalist movements, ethnic genocide, civil war, ethnic separatism, politics, indigenous peoples' movements, and minority rights movements around the world.

5 units, not given this year

SOC 248. Racial Identity
(Same as SOC 148) The construction and meanings of racial identities in the U.S. Attention to multiracial identities and the shifting boundaries of racial categories in contemporary America.

5 units, not given this year

SOC 249. The Urban Underclass
(Same as SOC 149, URBANST 112) (Graduate students register for 249.) Recent research and theory on the urban underclass, including evidence on the concentration of African Americans in urban ghettos, and the debate surrounding the causes of poverty in urban settings. Ethnic/racial conflict, residential segregation, and changes in the family structure of the urban poor.

5 units, Win (Rosenfeld, M)

SOC 255. The Changing American Family
(Same as SOC 155) Family change from historical, social, demographic, and legal perspectives. Extramarital cohabitation, divorce, later marriage, interracial marriage, and same-sex cohabitation. The emergence of same-sex marriage as a political issue. Are recent changes in the American family really as dramatic as they seem? Theories about what causes family systems to change.

5 units, Aut (Rosenfeld, M)

SOC 257. Causal Inference in Quantitative Educational and Social Science Research
(Same as EDUC 255B) Quantitative methods to make causal inferences in the absence of randomized experiment including the use of natural and quasi-experiments, instrumental variables, regression discontinuity, matching estimators, longitudinal methods, fixed effects estimators, and selection modeling. Assumptions implicit in these approaches, and appropriateness in research situations. Students develop research proposals relying on these methods. Prerequisites: exposure to quantitative research methods; multivariate regression.

3-5 units, Win (Reardon, S)

SOC 258. Applied Quasi-Experimental Research in Education
(Same as EDUC 255C) Hands-on practice in analysis of data from experimental and quasi-experimental research designs, including: instrumental variables estimators; regression discontinuity estimators; difference-in-difference estimators; matching estimators; fixed effects estimators; and panel data methods including individual fixed effects models, lagged covariate adjustment models, growth models. Prerequisite: EDUC 255B, EDUC 257C, or SOC 257.

3-5 units, Spr (Reardon, S)

SOC 260. Formal Organizations
(Same as SOC 160) (Graduate students register for 260.) The roles of formal organizations in production processes, market transactions, and social movements; and as sources of income and ladders of mobility. Relationships of modern organizations to environments and internal structures and processes. Concepts, models, and tools for analyzing organizational phenomena in contemporary societies. Sources include the literature and case studies.

5 units, Spr (Zhou, X)

SOC 261. The Social Science of Entrepreneurship
(Same as SOC 161) (Graduate students register for 261.) Who is likely to become an entrepreneur and where is entrepreneurship likely to occur? Classic and contemporary theory and research. Interaction with expert practitioners in creating entrepreneurial

opportunities including venture and corporate capitalists. The role of culture, markets, hierarchies, and networks. Market creation and change, and factors that affect success of new organizations. Field projects on entrepreneurial environments such as technology licensing offices, entrepreneurial development organizations, venture capital firms, and corporate venturing groups.

5 units, Spr (Thornton, P)

SOC 262. Markets and Governance

(Same as SOC 162) Social and political forces that shape market outcomes. The emergence and creation of markets, how markets go wrong, and the roles of government and society in structuring market exchange. Applied topics include development, inequality, globalization, and economic meltdown.

5 units, Spr (Young, C)

SOC 264. Immigration and the Changing United States

(Same as SOC 164) The role of race and ethnicity in immigrant group integration in the U.S. Topics include: theories of integration; racial and ethnic identity formation; racial and ethnic change; immigration policy; intermarriage; hybrid racial and ethnic identities; comparisons between contemporary and historical waves of immigration.

5 units, Spr (Jimenez, T)

SOC 265. Seminar on the Everday Lives of Immigrants

(Same as SOC 165) Everyday experience of immigrants and the immigrant second generation through the ethnographic lens. Ethnographies that focus on the immigrant experience. Limited enrollment.

5 units, not given this year

SOC 266. Mexicans, Mexican Americans, and Chicanos in American Society

(Same as SOC 166) Contemporary sociological issues affecting Mexican-origin people in the U.S. Topics include: the immigrant experience, immigration policy, identity, socioeconomic integration, internal diversity, and theories of incorporation.

5 units, Aut (Jimenez, T)

SOC 267A. Asia-Pacific Transformation

(Same as SOC 167A) Post-WW II transformation in the Asia-Pacific region, with focus on the ascent of Japan, the development of newly industrialized capitalist countries (S. Korea and Taiwan), the emergence of socialist states (China and N. Korea), and the changing relationship between the U.S. and these countries.

5 units, not given this year

SOC 268. Global Organizations: Managing Diversity

(Same as PUBLPOL 168, SOC 168) Analytical tools derived from the social sciences to analyze global organizations and projects, and applied to the tradeoffs between different designs of teams and organizations. Focus is on tribal mentality and how to design effective organizations and projects for policy implementation within and across institutional settings. Recommended: 102, MS&E 180, or SOC 160.

5 units, Win (Meyersson Milgrom, E)

SOC 270. Classics of Modern Social Theory

(Same as SOC 170) (Graduate students register for 270). Preference to Sociology majors. Contributions of Marx, Weber, and Durkheim to contemporary sociology. Topics: the problem of social order and the nature of social conflict; capitalism and bureaucracy; the relationship between social structure and politics; the social sources of religion and political ideology; and the evolution of modern societies. Examples from contemporary research illustrate the impact of these traditions. Limited enrollment.

5 units, Aut (McDermott, M)

SOC 273. Gender and Higher Education: National and International Perspectives

(Same as EDUC 273) The effects of interactions between gender and the structures of higher education; policies seeking changes in those structures. Topics: undergraduate and graduate education, faculty field of specialization, rewards and career patterns, sexual harassment, and the development of feminist scholarship and pedagogy.

4 units, not given this year

SOC 280A. Foundations of Social Research

(Same as SOC 180A) Formulating a research question, developing hypotheses, probability and non-probability sampling, developing valid and reliable measures, qualitative and quantitative data, choosing research design and data collection methods, challenges of making causal inference, and criteria for evaluating the quality of social research. Emphasis is on how social research is done, rather than application of different methods. Limited enrollment; preference to Sociology and Urban Studies majors, and Sociology coterms.

5 units, Aut (McClintock, E), Spr (McClintock, E)

SOC 280B. Evaluation of Evidence

(Same as SOC 180B) Methods for analyzing and evaluating data in sociological research: comparative historical methods, ethnographic observation, quantitative analysis of survey data, experimentation, and simulation. Emphasis is on application of these methods through small data analysis projects. Limited enrollment; preference to Sociology majors.

5 units, Win (Rosenfeld, M)

SOC 281B. Sociological Methods: Statistics

(Same as SOC 181B) (Graduate students register for 281B.) Statistical methods of relevance to sociology: contingency tables, correlation, and regression.

5 units, not given this year

SOC 300. Workshop: Teaching Development

For first-year Sociology doctoral students only. The principles for becoming an effective instructor, adviser, and mentor to undergraduates. Topics: ethics, course organization and syllabus development, test construction and grading, conflict resolution, common classroom problems, and University policies related to matters such as sexual harassment. Technologies and other topics related to making effective presentations, and campus resources to improve classroom performance. Roundtable discussions with faculty and advanced graduate students known for teaching excellence. Students may be asked to give a demonstration lecture.

2 units, Spr (Seo, P)

SOC 305. Graduate Proseminar

For first-year Sociology doctoral students only. Introduction and orientation to the field of Sociology.

1 unit, Aut (Olzak, S)

SOC 308. Social Demography

For graduate students and advanced undergraduates. Topics: models of fertility behavior, migration models, stable population theory, life table analysis, data sources, and measurement problems. How population behavior affects social processes, and how social processes influence population dynamics. Recommended: sociological research methods; basic regression analysis and log linear models.

4-5 units, Aut (Snipp, C)

SOC 309. Nations and Nationalism

The nation as a form of collective identity in the modern era. Major works in the study of nations and nationalism from comparative perspectives with focus on Europe and E. Asia.

4-5 units, not given this year

SOC 310. Political Sociology

Theory and research on the relationship between social structure and politics. Social foundations of political order, the generation and transformation of ideologies and political identities, social origins of revolutionary movements, and social consequences of political revolution. Prerequisite: doctoral student.

4-5 units, Spr (Staff)

SOC 311A. Workshop: Comparative Studies of Educational and Political Systems

(Same as EDUC 387A) Analysis of quantitative and longitudinal data on national educational systems and political structures. May be repeated for credit. Prerequisite: consent of instructor. (SSPEP/ICE)

1-5 units, Aut (Ramirez, F)

SOC 311B. Workshop: Comparative Systems of Educational and Political Systems

(Same as EDUC 387B) Analysis of quantitative and longitudinal data on national educational systems and political structures. May be repeated for credit. Prerequisite: consent of instructor. (SSPEP/ICE)

1-5 units, Win (Ramirez, F; Meyer, J)

SOC 311C. Workshop: Comparative Studies of Educational and Political Systems

(Same as EDUC 387C) Analysis of quantitative and longitudinal data on national educational systems and political structures. Pre-

requisite: consent of instructor. May be repeated for credit. (SSPEP/ICE)

1-5 units, Spr (Ramirez, F; Meyer, J)

SOC 312W. Workshop: Political Sociology, Social Movements, and Collective Action

Faculty and student presentations of ongoing research on topics including: social movement and organizations, and the relationship between them; democracy movements; legislative and policy outcomes; and collective action tactics, strategies, and trajectories. May be repeated for credit. Restricted to Sociology doctoral students; others by consent of instructor.

1-2 units, Aut (McAdam, D; Olzak, S; Walder, A), Win (McAdam, D; Olzak, S; Walder, A), Spr (McAdam, D; Olzak, S; Walder, A)

SOC 314. Economic Sociology

Classical and contemporary literature covering the sociological approach to markets and the economy, and comparing it to other disciplines. Topics: consumption, labor, professions, industrial organization, and the varieties of capitalism; historical and comparative perspectives on market and non-market provision of goods and services, and on transitions among economic systems. The relative impact of culture, institutions, norms, social networks, technology, and material conditions. Prerequisite: doctoral student status or consent of instructor.

4-5 units, Aut (Granovetter, M)

SOC 315. Topics in Economic Sociology

(Same as SOC 115) (Graduate students register for 315.) Discussion of topics initially explored in 114/214, with emphasis on countries and cultures outside N. America. Possible topics: families and ethnic groups in the economy, corporate governance and control, corporate strategy, relations among firms in industrial districts and business groups, the impact of national institutions and cultures on economic outcomes, transitions from state socialism and the role of the state in economic development. Possible case studies: the U.S., Germany, Italy, Britain, France, Brazil, Korea, India, Japan, and China. Prerequisite: 114/214 or 314.

5 units, Win (Granovetter, M)

SOC 315W. Workshop: Economic Sociology and Organizations

Theory, methods, and research in the sociology of the economy and of formal organizations, through presentations of ongoing work by students, faculty, and guest speakers, and discussion of recent literature and controversies. May be repeated for credit. Restricted to Sociology doctoral students; others by consent of instructor.

1-2 units, Aut (Granovetter, M; Zhou, X; Parigi, P), Win (Granovetter, M; Zhou, X; Parigi, P), Spr (Granovetter, M; Zhou, X; Parigi, P)

SOC 316. Historical and Comparative Sociology

Theory and research on macro-historical changes of sociological significance such as the rise of capitalism, the causes and consequences of revolutions, and the formation of the modern nation state and global world system. Methodological issues in historical and comparative sociology.

4-5 units, Win (Shin, G)

SOC 317W. Workshop: Social Networks

(Same as EDUC 317X) Yearlong workshop where doctoral students are encouraged to collaborate with peers and faculty who share an interest in researching the network dynamics, histories and theories of action that help explain particular social phenomena. Students present their own research and provide helpful feedback on others' work. Presentations may concern dissertation proposals, grants, article submissions, book proposals, datasets, methodologies and other texts. Repeatable for credit.

1-2 units, Aut (McFarland, D; Parigi, P), Win (McFarland, D; Parigi, P), Spr (McFarland, D; Parigi, P)

SOC 318. Social Movements and Collective Action

Topics: causes, dynamics, and outcomes of social movements; organizational dimensions of collective action; and causes and consequences of individual activism.

4-5 units, Win (Staff)

SOC 320. Foundations of Social Psychology

Major theoretical perspectives, and their assumptions and problems, in interpersonal processes and social psychology. Techniques of investigation and methodological issues. Perspectives: symbolic interaction, social structure and personality, and cognitive and group processes.

4-5 units, Win (Ridgeway, C)

SOC 321W. Workshop: Social Psychology and Social Structure

Advanced graduate student workshop in social psychology. Current theories and research agendas, recent publications, and presentations of ongoing research by faculty and students. May be repeated for credit. Prerequisite: consent of instructor.

1-2 units, Aut (Cook, K; Ridgeway, C; Correll, S), Win (Cook, K; Ridgeway, C; Correll, S), Spr (Cook, K; Ridgeway, C; Correll, S)

SOC 322. Social Interaction, Social Structure, and Social Exchange

Current theory and research on topics such as social cognition and identity, group processes, bargaining and negotiation, social justice, social dilemmas and exchange, and networks and collective action. The social exchange approach.

4-5 units, not given this year

SOC 323. Sociology of the Family

Sociological research on changing family forms. Topics include courtship, marriage, fertility, divorce, conflict, relationship skills and satisfaction, gender patterns, power relations within the family, and class and race differences in patterns.

4-5 units, not given this year

SOC 324. Social Networks

How the study of social networks contributes to sociological research. Application of core concepts to patterns of relations among actors, including connectivity and clusters, duality of categories and networks, centrality and power, balance and transitivity, structural equivalence, and blockmodels. Friendship and kinship networks, diffusion of ideas and infectious diseases, brokerage in markets and organizations, and patronage and political influence in historical contexts.

3-5 units, not given this year

SOC 327. Frontiers of Social Psychology

Advanced topics, current developments, theory, and empirical research. Possible topics include social identity processes, status beliefs and processes, social exchange, affect and social cohesion, legitimacy, social difference and inequality, norms, and social dilemmas.

1-5 units, not given this year

SOC 330. Sociology of Knowledge Creation

(Same as EDUC 120X, EDUC 320X) The sociology of knowledge creation explores systematic relationships between thought and social structure in order to examine how human beings construct, interpret, and view reality. How knowledge is socially constructed, patterned, and used, and how everyday and tacit forms of knowledge are achieved. Emphasis is on the creation and patterning of scientific paradigms, social science disciplines, and the field of education.

3-4 units, Win (McFarland, D)

SOC 331. The Conduct of Qualitative Inquiry

(Same as EDUC 327A) Two quarter sequence for doctoral students to engage in research that anticipates, is a pilot study for, or feeds into their dissertations. Prior approval for dissertation study not required. Students engage in common research processes including: developing interview questions; interviewing; coding, analyzing, and interpreting data; theorizing; and writing up results. Participant observation as needed. Preference to students who intend to enroll in 327C.

3-4 units, not given this year

SOC 332. Sociology of Education: The Social Organization of Schools

(Same as EDUC 110, EDUC 310, SOC 132) Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy.

4 units, Win (Carter, P)

SOC 333. Law and Wikinomics: The Economic and Social Organization of the Legal Profession
(Same as SOC 133) (Graduate and Law students enroll in 333.) Seminar. Emphasis is on the labor market for large-firm lawyers, including the market for entry-level lawyers, attorney retention and promotion practices, lateral hiring of partners, and increased use of forms of employment such as the non-equity form of partnership. Race and gender discrimination and occupational segregation; market-based pressure tactics for organizational reform. Students groups collect and analyze data about the profession and its markets. Multimedia tools for analysis and for producing workplace reforms. May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Win (Dauber, M)

SOC 334. Research Seminar on Access to Justice
(Same as SOC 234) The functions and dysfunctions of modern legal systems. Topics include: official statements of the U.S. and the EU about the rights of parties to civil disputes; the roles of lawyers as gatekeepers and facilitators; the filtering process by which injuries and experiences become the basis for legal claims; access to and use of courts; the balance of power and advantage between individual persons and organizations in disputes. Prerequisite: advanced undergraduate or graduate standing, or consent of instructor.
1-5 units, not given this year

SOC 336. Sociology of Law
Sociological examination of law as a mechanism of social regulation and as a field of knowledge. Explores classical and contemporary theoretical and empirical contributions to the sociology of law. Law and social control, law and social change, social reality of the law, the profession and practice of law, legal mobilization, and the influence of race, gender, and social status in legal decisions and processes.
3-5 units, not given this year

SOC 338W. Workshop: Sociology of Law
(Same as LAW 581.) Required for joint degree J.D./Ph.D. students in Sociology in the first three years of program; open to Ph.D. students in Sociology and related disciplines. Empirical, sociological study of law and legal institutions. Topics such as the relation of law to inequality and stratification, social movements, organizations and institutions, political sociology and state development, and the social construction of disputes and dispute resolution processes. Research presentations. Career development issues. May be repeated for credit.
1-5 units, Win (Sandefur, R)

SOC 339. Gender Meanings and Processes
Current theories and research on the social processes, such as socialization, status processes, stereotyping, and cognition, that produce gender difference and inequality. Intersections of gender with race, class, and bodies. Applications to workplaces, schools, families, and intimate relationships. Prerequisite: Sociology doctoral student or consent of instructor
1-5 units, Spr (Correll, S)

SOC 340. Social Stratification
Classical and contemporary approaches to the unequal distribution of goods, status, and power. Modern analytic models of the effects of social contact, cultural capital, family background, and luck in producing inequality. The role of education in stratification. The causes and consequences of inequality by race and gender. The structure of social classes, status groupings, and prestige hierarchies in various societies. Labor markets and their role in inequality. The implications of inequality for individual lifestyles. The rise of the new class, the underclass, and other emerging forms of stratification. Prerequisite: Ph.D. student or consent of instructor.
4-5 units, Spr (Grusky, D)

SOC 341W. Workshop: Inequality
Causes, consequences, and structure of inequality; how inequality results from and shapes social classes, occupations, professions, and other aspects of the economy. Research presentations by students, faculty, and guest speakers. Discussion of controversies, theories, and recent writings. May be repeated for credit. Restricted to Sociology doctoral students; others by consent of instructor.
1-2 units, Aut (Grusky, D; Correll, S), Win (Grusky, D; Correll, S; Tuma, N), Spr (Grusky, D; Correll, S; Tuma, N)

SOC 342B. Gender and Social Structure
The role of gender in structuring contemporary life. Social forces affecting gender at the psychological, interactional, and structural levels. Gender inequality in labor markets, education, the household, and other institutions. Theories and research literature.
4-5 units, not given this year

SOC 345. Seminar in Comparative Race and Ethnic Relations
Restricted to doctoral students. Factors that create, maintain, and diminish the salience of race and ethnic boundaries. Theoretical debates surrounding the emergence, persistence, and change in racial and ethnic boundaries, nationalism and sovereignty, and mobilization. Empirical evidence on race and ethnic tensions, conflict, and warfare. The relationship between democracy, immigration, and diversity.
4-5 units, not given this year

SOC 346. Workshop: Ethnography
Restricted to doctoral students. Student research employing ethnographic methods. May be repeated for credit. Prerequisite: consent of instructor.
1-2 units, not given this year

SOC 347. Race and Ethnicity in Society and Institutions
(Same as EDUC 315X) Primarily for doctoral students. Major theories and empirical research. Emphasis is on schooling and race, racial identity, urban issues, and the impact of immigration on race relations.
1-5 units, not given this year

SOC 348. Advanced Topics in the Sociology of Gender
Seminar for graduate students who have research projects in progress that focus on questions about gender and society. Research projects can be at any stage from the initial development to the final writing up of results. Focus is on questions posed by the research projects of the seminar participants. Readings include relevant background to each other's questions and present their own work in progress. A final paper reports the progress on the seminar member's research project.
3-5 units, Spr (Staff)

SOC 350W. Workshop: Migration, Race, Ethnicity and Nation
Current theories and research, recent publications, and presentations of ongoing research by faculty and students. May be repeated for credit. Prerequisite: consent of instructor.
1-3 units, Aut (McDermott, M; Jimenez, T), Win (McDermott, M; Jimenez, T), Spr (McDermott, M; Jimenez, T)

SOC 352. Current Social Change: Austria, Europe and the USA
(Same as SOC 252) For graduate students and advanced undergraduates. Theoretical classification and comparative analysis of current European and American societies. Structures of and megatrends in the developements of population, family, education, work, class, gender and ethnicity, democracy, and social policy.
3-5 units, Win (Staff)

SOC 353. Rise, Current Challenges and Transformations of the Welfare State
(Same as SOC 253) For graduate students and advanced undergraduates. Theoretical classification and comparative analysis of welfare regimes in Europe and North America. Systems like accident, health, unemployement and pension insurance, family subsidies and public welfare. Social policy reform past the background of current socioeconomic change.
3-5 units, Spr (Staff)

SOC 357. Immigration and Assimilation
Major theoretical debates and empirical applications in the study of immigrant assimilation. Topics include racial and ethnic identity, socioeconomic integration, political participation, and national identity. Companion to SOC 358.
3-5 units, not given this year

SOC 358. Sociology of Immigration
Topics include: the process of migration; historical perspectives; immigrant integration; transnationalism; immigration policy; labor; nations and nationalism.
1-5 units, Aut (Jimenez, T)

SOC 359. Organizations and Uncertainty
Organizations and environments characterized by institutional uncertainty. Beliefs at the roots of shared routines and institutional

myths are absent. Institutionalists and neo-institutionalists, organizations facing uncertain institutional environments.

3-5 units, Spr (Parigi, P)

SOC 361. Social Psychology of Organizations

Seminar. Social psychological theories and research relevant to organizational behavior. Current research topics; theories in micro-organizational behavior. Topics include models of attribution, choice and decision making, intergroup behavior, stereotyping, and social influence. Prerequisites: Ph.D student; graduate-level social psychology course.

4 units, Win (Miller, D)

SOC 361W. Workshop: Networks and Organizations

(Same as EDUC 361) For students doing advanced research. Group comments and criticism on dissertation projects at any phase of completion, including data problems, empirical and theoretical challenges, presentation refinement, and job market presentations. Collaboration, debate, and shaping research ideas. Prerequisite: courses in organizational theory or social network analysis.

1-3 units, Aut (Powell, W), Win (Powell, W), Spr (Powell, W)

SOC 362. Organization and Environment

Leading sociological approaches to analyzing relations of organizations and environments emphasizing dynamics. Theoretical formulations, research designs, and results of empirical studies.

4 units, Aut (Staff)

SOC 363. Social and Political Process in Organizations

Social psychological and sociological research at the meso, or intermediate between micro and macro, level of analysis. Topics vary from year to year, but usually include organizational routines and learning; mobility and and attainment processes; gender and race inequality and discrimination; social networks; cultural perspectives on organizations, and related topics. Prerequisite: Ph.D student.

4 units, Spr (Staff), alternate years, not given next year

SOC 363A. Seminar on Organizational Theory

(Same as EDUC 375A, MS&E 389) The social science literature on organizations assessed through consideration of the major theoretical traditions and lines of research predominant in the field.

5 units, Aut (Powell, W)

SOC 363B. Seminar on Organizations: Institutional Analysis

(Same as EDUC 375B) Seminar. Key lines of inquiry on organizational change, emphasizing network, institutional, and evolutionary arguments.

3-5 units, not given this year

SOC 366. Organization Studies: Theories and Analyses

(Same as EDUC 288) Principles of organizational behavior and analysis; theories of group and individual behavior; organizational culture; and applications to school organization and design. Case studies.

5 units, Aut (Meyerson, D)

SOC 366A. Organizational Ecology

(Same as OB 601) This seminar examines theoretical and methodological issues in the study of the ecology of organizations. Particular attention is given to the dynamics that characterize the interface between organizational populations and their audiences.

4 units

SOC 367. Institutional Analysis of Organizations

Reading and research on the nature, origins, and effects of the modern institutional system. Emphasis is on the effects of institutional systems on organizational structure.

3-5 units, not given this year

SOC 368W. Workshop: China Social Science

(Same as POLISCI 448R) For Ph.D. students in the social sciences and history. Research on contemporary society and politics in the People's Republic of China. May be repeated for credit. Prerequisite: consent of instructor.

1 unit, Aut (Walder, A; Oi, J), Win (Walder, A; Oi, J), Spr (Walder, A; Zhou, X; Oi, J)

SOC 369. Social Network Analysis

(Same as EDUC 316) Introduction to social network theory, methods, and research applications in sociology. Network concepts of interactionist (balance, cohesion, centrality) and structuralist (structural equivalence, roles, duality) traditions are defined and applied to topics in small groups, social movements, organizations, communities. Students apply these techniques to data on schools and classrooms. (SSPEP)

4-5 units, Aut (McFarland, D)

SOC 370A. Sociological Theory: Social Structure, Inequality, and Conflict

Restricted to doctoral students.The traditions of structural analysis derived from the work of Marx, Weber, and related thinkers. Antecedent ideas in foundational works are traced through contemporary theory and research on political conflict, social stratification, formal organization, and the economy.

5 units, Aut (Olzak, S)

SOC 370B. Social Interaction and Group Process

Theoretical strategies for the study of interaction, group, and network processes, including rational choice and exchange theory, the theory of action, symbolic interactionism, formal sociology, and social phenomenology. Antecedent ideas in foundational works and contemporary programs of theoretical research.

3-5 units, alternate years, not given this year

SOC 372. Theoretical Analysis and Design

Theoretical analysis and the logical elements of design, including the systematic analysis of the logical structure of arguments, the relationship of arguments to more encompassing theoretical or metatheoretical assumptions, the derivation of logical implications from arguments, assessments of theoretically significant problems or gaps in knowledge.

3-5 units, Aut (Zelditch, M)

SOC 374. Philanthropy and Civil Society

(Same as EDUC 374, POLISCI 334) Associated with the Center for Philanthropy and Civil Society (PACS). Year-long workshop for doctoral students and advanced undergraduates writing senior theses on the nature of civil society or philanthropy. Focus is on pursuit of progressive research and writing contributing to the current scholarly knowledge of the nonprofit sector and philanthropy. Accomplished in a large part through peer review. Readings include recent scholarship in aforementioned fields. May be repeated for credit for a maximum of 9 units.

1-3 units, Aut (Powell, W; Reich, R), Win (Powell, W; Reich, R), Spr (Powell, W; Reich, R)

SOC 376. Perspectives on Organization and Environment

Sociologists and organizational scholars have increasingly come to recognize that networks are not simply relevant as conduits for the flow of information and resources, but are critical determinants of identity, shaping preferences and influencing perceptions of the qualities that inhere in actors. Research that informs the link between networks and identity based on intellectual traditions such as social exchange theory, role theory, and economic and historical sociology.

4 units, Win (Staff)

SOC 377. Comparing Institutional Forms: Public, Private, and Nonprofit

(Same as EDUC 377, GSBGEN 346, PUBLPOL 317) Seminar. For students interested in the nonprofit sector, and those in the joint Business and Education program. The missions, functions, and capabilities of nonprofit, public, and private organizations. Focus is on sectors with significant competition among institutional forms, including health care, social services, the arts, and education. Sources include scholarly articles, cases, and historical materials. Advanced undergraduates require consent of instructor.

4 units

SOC 378. Seminar on Institutional Theory and World Society

Sociological analyses of the rise and impact of the expanded modern world order, with its internationalized organizations and globalized discourse. Consequences for national and local society: education, political organization, economic structure, the environment, and science. The centrality of the individual and the rationalized organization as legitimated actors.

1-5 units, Win (Meyer, J)

SOC 380. Qualitative Methods

Priority to Sociology doctoral students. Emphasis is on observational and interview-based research. Limited enrollment.

3-5 units, Spr (McDermott, M)

SOC 381. Sociological Methodology I: Introduction

Enrollment limited to first-year Sociology doctoral students. Basic math and statistics. Types of variables, how to recode and transform variables, and how to manage different types of data sets.

How to use and think about weights. Introduction to statistical packages and programming. Introduction to multiple regression, and introduction to the interpretation of regression results.

5 units, Aut (Rosenfeld, M)

SOC 382. Sociological Methodology II: Multivariate Regression

Preference to Sociology doctoral students. Required for Ph.D. in Sociology. Enrollment limited to first-year Sociology doctoral students. Rigorous treatment of linear regression models, model assumptions, and various remedies for when these assumptions are violated. Introduction to panel data analysis. Enrollment limited to 15. Prerequisites: 381.

4-5 units, Win (Young, C)

SOC 383. Sociological Methodology III: Models for Discrete Outcomes

Required for Ph.D. in Sociology; enrollment limited to first-year Sociology doctoral students. The rationale for and interpretation of static and dynamic models for the analysis of discrete variables. Prerequisites: 381 and 382, or equivalents.

5 units, Spr (Zhou, X)

SOC 384. New Models and Methods in the Social Sciences

Two-week intensive introduction to new statistical approaches. Emphasis is on applications. Topics may include network models, multilevel models, latent class models, mixed methods, new qualitative methods, growth models, geostatistical tools, survey-based experiments, new methods for estimating causal effects, web-based surveys, advanced discrete choice models, and diffusion models.

2-5 units, Sum (Grusky, D)

SOC 385A. Research Practicum 1

Workshop on research methods for second year Sociology doctoral students. Ongoing student research, methodological problems, and possible solutions. Required for second year paper.

1 unit, Aut (Zhou, X)

SOC 385B. Research Practicum II

Continuation of 385A. Workshop on research methods for second year Sociology doctoral students. Ongoing student research, methodological problems, and possible solutions. Required for second year paper.

1 unit, Win (England, P)

SOC 388. Log-Linear Models

Analysis of categorical data with log-linear and negative binomial models. Measures of fit and hypothesis testing.

3-5 units, not given this year

SOC 389. Mixed Method Research Design and Analysis

Research designs that incorporate qualitative and quantitative analyses in a single project. The tension between thinking case-wise and variable-wise; how the focus on relationships between variables that is the hallmark of the quantitative approach can be brought into qualitative work.

3-5 units, not given this year

SOC 390. Graduate Individual Study

May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SOC 391. Graduate Directed Research

May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SOC 392. Research Apprenticeship

May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SOC 393. Teaching Apprenticeship

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SOPHOMORE COLLEGE (SCS) COURSES

See Undergraduate Education section for more information.

BIO 10SC. Natural History, Marine Biology, and Research

Monterey Bay is home to the nation's largest marine sanctuary and also home to Stanford's Hopkins Marine Station. This course, which is based at Hopkins, explores the spectacular biology of Monterey Bay and the artistic and political history of the region. The course focuses on issues of conservation, sanctuary, and stewardship of the oceans and coastal lands. We will meet with conservationists, filmmakers, artists, authors, environmentalists, politicians, land-use planners, and lawyers, as well as scientists and educators, to learn what is being done to appreciate, protect, and study the coastline and near-shore waters at local and national levels. We will take a look at the discipline of marine biology to discover the range of topics and methods of research it embraces and to help define some of the larger issues in biology that loom in our future. The course emphasizes interactions and discussions between individuals, groups, and our guests; it is a total immersion experience. We wi

CS 10SC. Great Ideas in Computer Science

Computers have come to permeate many aspects of our lives, from how we communicate with each other to how we produce and consume information. And while it is all too easy to think of computing in terms of the products and applications we see emerging from technology companies, the intellectual foundations of computer science go much deeper. Indeed, beneath the surface of the tools we use, the social networks we engage in, and the web of information we search, lays a field rich with fascinating, intellectually exciting, and sometimes unexpectedly surprising ideas. In this seminar, we will explore several of the great ideas in computer science, looking at both challenging problems and their impact on real applications. From understanding how search engines on the Web work to looking at mathematical theories underlying social networks, from questioning whether a computer can be intelligent to analyzing the notion of what is even possible to compute, this seminar will take us on a ser

2 units, Aut (Sahami, M; Roberts, E)

DRAMA 11SC. Learning Theater: From Audience to Critic at the Oregon Shakespeare Festival

Who doesn't love going to a play: sitting in the darkened theater, an anonymous member of the audience waiting to be entertained, charmed, and challenged? But how many of us know enough about the details of the plays, their interpretation, their production, and acting itself, to allow us to appreciate fully the theatrical experience? In this seminar, we will spend 13 days in Ashland, Oregon, at the Oregon Shakespeare Festival (OSF), where we will attend these plays: Shakespeare's The Merchant of Venice, Twelfth Night, Hamlet, and Henry IV, Part One; Ping Chong's adaptation of Akira Kurosawa's Throne of Blood; Lisa Nottage's Ruined; Joseph Hanreddy and J.R. Sullivan's adaptation of Jane Austen's Pride and Prejudice; Joe Masteroff's She Loves Me (music by Jerry Bock, lyrics by Sheldon Harnick); and Richard Montoya and Culture Clash's American Night. We will also spend time backstage, meeting with actors, designers, and artistic and administrative directors of OSF.

EARTHSYS 12SC. Environmental and Geological Field Studies in the Rocky Mountains

(Same as EESS 12SC, GES 12SC) The ecologically and geologically diverse Rocky Mountain area is being strongly impacted by changing land use patterns, global and regional environmental change, and societal demands for energy and natural resources. This three-week field program emphasizes coupled environmental and geological problems in the Rocky Mountains, covering a broad range of topics including the geologic origin of the American West from three billion years ago to the present; paleoclimatology and the glacial history of this mountainous region; the long- and short-term carbon cycle and global climate change; and environmental issues in the American West related to changing land-use patterns and increased demand for its abundant natural resources.

2 units, Aut (Chamberlain, P)

EE 10SC. Mathematics of the Information Age

Empedocles taught that the world is made of four elements; earth, air, fire, and water. And what of the quintessence? Physics banished the ether as that elusive fifth element, but our current age has settled on ""information"" as the element that permeates and connects the world. What is information? Can it be measured and manipulated like the other elements? The primary steps -- before circuits and chips and computers take charge -- are mathematical, and information became mathematical through the work of Claude

Shannon on problems in communication. Shannon laid the foundations for the digital revolution that has become part of our everyday lives. The mathematics of the information age is likewise a part of your everyday life, from images to iTunes to the Internet, and the mathematics is quite accessible. We will discuss the elements of information theory and how information is represented in different ways for different purposes.

2 units, Aut (Osgood, B)

EESS 12SC. Environmental and Geological Field Studies in the Rocky Mountains

(Same as EARTHSYS 12SC, GES 12SC) The ecologically and geologically diverse Rocky Mountain area is being strongly impacted by changing land use patterns, global and regional environmental change, and societal demands for energy and natural resources. This three-week field program emphasizes coupled environmental and geological problems in the Rocky Mountains, covering a broad range of topics including the geologic origin of the American West from three billion years ago to the present; paleoclimatology and the glacial history of this mountainous region; the long- and short-term carbon cycle and global climate change; and environmental issues in the American West related to changing land-use patterns and increased demand for its abundant natural resources. These broad topics are integrated into a coherent field-study as we examine earth/environmental science-related questions in three different settings: 1) the three-billion-year-old rocks and the modern glaciers of the Wind River Mountains of Wyoming; 2) the sediments

2 units, Aut (Chamberlain, P)

ETHICSOC 10SC. The Meaning of Life: Moral and Spiritual Inquiry through Literature

Short novels and plays will provide the basis for reflection on ethical values and the purpose of life. Some of the works to be studied are F. Scott Fitzgerald's The Great Gatsby, George Bernard Shaw's Major Barbara, Hermann Hesse's Siddhartha, Jane Smiley's Good Will, Robert Bolt's A Man for All Seasons, and John Steinbeck's Of Mice and Men. We will read for plot, setting, character, and theme using a two-text method- looking at the narrative of the literary work and students' own lives-rather than either deconstructing the literature or relating it to the author's biography and psychology. The questions we will ask have many answers. Why are we here? How do we find meaningful work? What can death teach us about life? What is the meaning of success? What is the nature of true love? How can one find balance between work and personal life? How free are we to seek our own destiny? What obligations do we have to others?

HISTORY 21SC. Celluloid America: Explorations in Film and History

In this course, we will explore the history and culture of the United States through film, examining both the history of this quintessentially American medium and the ways in which American history has been represented in movies. Topics include the invention of moving picture technology, the creation of cinema ""language,"" the rise and fall of the Hollywood studio system, the emergence and evolution of film genres (westerns, romantic comedies, film noir, science fiction, Blaxploitation, etc.), the quest for overseas markets for American movies, race and film, and the future of movies in the digital age. Among the films we will be discussing are Birth of a Nation, The Jazz Singer, Stagecoach, It Happened One Night, Citizen Kane, Casablanca, Invasion of the Body Snatchers, American Graffiti, Superfly, Taxi Driver, Blade Runner, Unforgiven, Bamboozled, Saving Private Ryan, Children of Men, and In the Valley of Elah. The course will include daily readings and discussions as well as a numb

2 units, Aut (Campbell, J)

HISTORY 22SC. A Tale of Two Cities: London and San Francisco

San Francisco and London are two of the world's best-loved and most-visited cities. They have certain things in common: both are ports, situated on the edge of continents; both are major commercial and cultural centres; and both have been shaped by immigration. Their differences are more obvious than their similarities, however, and these differences are to a large extent explained by their very different histories. London was founded by the Romans and was, for a period in its recent history, the capital of an Empire on which the sun famously never set; San Francisco did not emerge as a city until well into the 19th century and even now has something of the character of a ""city state"" rather than a national or state capital. Though often considered one of the most European of American cities, San Francisco is in fact laid out on the typically American grid plan; the planning of London is, by contrast, chaotic.

2 units, Aut (Tyack, G)

MATSCI 11SC. Energy Technologies for a Sustainable Future

Wondering what the buzz is about sustainability, renewable energy, and clean fuels? Meeting the world's growing energy needs in a sustainable fashion is one of the most pressing problems of our time. This class will introduce the scope of the energy problem and define some of the options for sustainable energy. We will look into the scientific basis of sustainable energy technologies, such as solar cells, which convert the energy of the sun directly into electricity, and fuel cells, which convert chemical energy directly into electricity. Other topics will include biofuels, i.e., fuel derived from plant matter, and clean fuels such as hydrogen. The course will emphasize the fundamental science behind the devices and highlight some of the cutting-edge technological issues that are currently being explored. Assigned reading will include books on global energy issues as well as technical reading on the science and engineering of sustainable energy technologies. We will visit several local

2 units, Aut (Clemens, B)

POLISCI 10SC. American Foreign Policy and the Challenges of the Twenty-First Century

Investigation of foreign policy challenges and choices facing the Obama administration. Topics include: examination of domestic constraints such as public opinion; Congress and bureaucracy on foreign policy and international challenges of climate change and energy, nuclear policy, biological security; failing states and regional conflict; terrorism; global economic crisis; and the ongoing crises in the broader Middle East. Course includes a 48-hour simulation.

2 units, Aut (Stedman, S)

POLISCI 22SC. The Face of Battle

Our understanding of warfare often derives from the lofty perspective of political leaders and generals: what were their objectives and what strategies were developed to meet them? This top-down perspective slights the experience of the actual combatants and non-combatants caught in the crossfire. This course focuses on the complexity of the process by which strategy is translated into tactical decisions by the officers and foot soldiers on the field of battle. We will focus on three battles in American history: Gettysburg (July 1863), the Battle of Little Bighorn (June 1876), and the Battle of Lozano Ridge in Afghanistan (November 2003). In addition to reading major works on these battles and the conflicts in which they occurred, we will travel to Gettysburg, Pennsylvania, and the Little Bighorn battlefield in Montana.

2 units, Aut (Sagan, S)

SPANISH LANGUAGE (SPANLANG) COURSES

UNDERGRADUATE COURSES IN SPANISH LANGUAGE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

SPANLANG 1. First-Year Spanish, First Quarter
Emphasis is on developing socially and culturally appropriate proficiency in interpersonal, interpretive, and presentational spheres. Influences shaping the production of oral and written texts in the Spanish- and English-speaking world.
5 units, Aut (Staff), Win (Del Carpio, C), Spr (Reinhold, V)

SPANLANG 1A. Accelerated First-Year Spanish, Part 1
Completes first-year sequence in two rather than three quarters. For students with previous knowledge of Spanish, or those with a strong background in another Romance language. 2A fulfills the University language requirement. Prerequisite: written and oral placement tests.
5 units, Aut (Ortiz Cuevas, C), Win (Ortiz Cuevas, C)

SPANLANG 2. First-Year Spanish, Second Quarter
Continuation of 1. Emphasis is on developing socially and culturally appropriate proficiency in interpersonal, interpretive, and presentational spheres. Influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Prerequisite 1.
5 units, Aut (Nissler, P), Win (Staff), Spr (Del Carpio, C)

SPANLANG 2A. Accelerated First-Year Spanish, Part 2
Completes first-year sequence in two rather than three quarters. For students with previous knowledge of Spanish, or those with a strong background in another Romance language. 2A fulfills the University language requirement. Prerequisite: written and oral placement tests. Continuation of 1A. Fulfills the University language requirement. Prerequisite: 1A or written and oral placement tests.
5 units, Win (Won, H), Spr (Ortiz Cuevas, C)

SPANLANG 3. First-Year Spanish, Third Quarter
Continuation of 2. Emphasis is on developing socially and culturally appropriate proficiency in interpersonal, interpretive, and presentational spheres. Influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Prerequisite 2. Fulfills the University language requirement.
5 units, Aut (Reinhold, V), Win (Urruela, M), Spr (Staff)

SPANLANG 5A. Intensive First-Year Spanish, Part A
Goal is to engage in interactions with Spanish speakers in socially and culturally appropriate forms. Social and cultural influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Stanford graduate students restricted to 9 units register for 205A,B,C.
5 units, Sum (Reinhold, V)

SPANLANG 5B. Intensive First-Year Spanish, Part B
Continuation of 5A.
5 units, Sum (Del Carpio, C)

SPANLANG 5C. Intensive First-Year Spanish, Part C
Continuation of 5B.
5 units, Sum (Junguito Camacho, M)

SPANLANG 10. Beginning Oral Communication
Additional pronunciation, vocabulary, and speaking skills. May be repeated once for credit. Prerequisite: one quarter of Spanish, demonstrated oral proficiency above the novice level; may be taken concurrently with 2, 2A, or 3.
2 units, Aut (Won, H), Win (Brates, V), Spr (Corso, I)

SPANLANG 11C. Second-Year Spanish: Cultural Emphasis, First Quarter
Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socioculturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: one year of college Spanish or equivalent.
4-5 units, Aut (Ashby, Z), Win (Urruela, M), Spr (Sanchez, K)

SPANLANG 11R. Second-Year Spanish: Emphasis on International Relations, First Quarter
Sequence integrating geopolitics and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language, international relations, and socioeconomics of the Spanish-speaking world. Prerequisite: one year of college Spanish or equivalent.
4-5 units, Aut (Brates, V)

SPANLANG 12C. Second-Year Spanish: Cultural Emphasis, Second Quarter
Continuation of 11C. Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socioculturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: 11 or equivalent.
4-5 units, Aut (Urruela, M), Win (Miano, A), Spr (Malik, C)

SPANLANG 12R. Second-Year Spanish: Emphasis on International Relations, Second Quarter
Continuation of 11R. Sequence integrating geopolitics and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language, international relations, and socioeconomics of the Spanish-speaking world. Prerequisite: Prerequisite 11R or equivalent.
4-5 units, Win (Brates, V)

SPANLANG 13C. Second-Year Spanish: Cultural Emphasis, Third Quarter
Continuation of 12C. Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socioculturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: 12 or equivalent.
4-5 units, Aut (Santana, C), Win (Molitoris, J), Spr (Won, H)

SPANLANG 13R. Second-Year Spanish: Emphasis on International Relations, Third Quarter
Continuation of 12R. Sequence integrating geopolitics and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language, international relations, and socioeconomics of the Spanish-speaking world. Prerequisite: 12R or equivalent. Fulfills the IR major language requirement.
4-5 units, Spr (Brates, V)

SPANLANG 15. Intermediate Oral Communication
Emphasis is on interaction in Spanish locally and globally. Regional vocabularies and cultures at home and abroad. Interaction with local native Spanish speakers and communities globally via the Internet. May be repeated once for credit. Prerequisite: first-year Spanish and demonstrated oral proficiency above the low intermediate level.
3 units, Aut (Won, H), Win (Brates, V), Spr (Brates, V), Sum (Staff)

SPANLANG 15. Intermediate Oral Communication
(Same as SPANLANG 215) For grads only. Same as Summer session 15
3 units, Sum (Staff)

SPANLANG 21B. Second-Year Spanish for Heritage Language Students, First Quarter
Emphasis is on ability to communicate orally and in writing. Spelling and the written accent. Goal is to understand, interpret, and analyze texts, movies, radio, and television. Written language skills include rules for editing written language. Third quarter focus is on the development of written and oral styles and registers used in more formal settings.
3-5 units, Aut (Sierra, A)

SPANLANG 22B. Second-Year Spanish for Heritage Language Students, Second Quarter
Continuation of 21B. Emphasis is on ability to communicate orally and in writing. Continuation of 21B. Spelling and the written accent. Goal is to understand, interpret, and analyze texts, movies, radio, and television. Written language skills include rules for editing written language. Third quarter focus is on the development of written and oral styles and registers used in more formal settings. Prerequisite 21B or equivalent.
3-5 units, Win (Sierra, A)

SPANLANG 23B. Second-Year Spanish for Heritage Language Students, Third Quarter
Continuation of 22B. Emphasis is on ability to communicate orally and in writing. Spelling and the written accent. Goal is to understand, interpret, and analyze texts, movies, radio, and television. Written language skills include rules for editing written language. Third quarter focus is on the development of written and oral styles and registers used in more formal settings. Prerequisite: 22B or equivalent.
3-5 units, Spr (Sierra, A)

SPANLANG 25A. Intensive Second-Year Spanish, Part A
Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socioculturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: one year of college Spanish or equivalent.
4 units, Sum (Gonzalez Flores, F)

SPANLANG 25B. Intensive Second-Year Spanish, Part B
Continuation of 25A. Prerequisite: 25A or equivalent.
4 units, Sum (Nissler, P)

SPANLANG 25C. Intensive Second-Year Spanish, Part C
Continuation of 25B. Prerequisite: 25B or equivalent.
4 units, Sum (Builes, R)

SPANLANG 60A. Beginning Spanish Conversation
(AU)
1 unit, Aut (Urruela, M)

SPANLANG 60B. Intermediate Spanish Conversation
(AU)
1 unit, Win (Urruela, M)

SPANLANG 60C. Advanced Spanish Conversation
(AU)
1 unit, Spr (Staff)

SPANLANG 60K. Cooking Class
(AU)
1 unit, Win (Urruela, M)

SPANLANG 60M. Movie Series - Telenovelas
1 unit, Win (Urruela, M)

SPANLANG 60P. Yost Lecture Series
1 unit, Aut (Madison, V), Win (Madison, V), Spr (Madison, V)

SPANLANG 60S. Speaking Spanish
Spanish: Idioms, Expressions, and Slang.
1 unit, Spr (Urruela, M)

SPANLANG 60T. Teaching Spanish Conversation
(AU) (Staff)
1 unit, Aut (Urruela, M), Win (Urruela, M), Spr (Urruela, M)

SPANLANG 99. Language Specials
May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SPANLANG 100. Advanced Oral Communication
For students who have completed second-year Spanish or who have oral skills above the intermediate level. Interactive activities require students to persuade, analyze, support opinions, and gather and interpret others' points of view. Focus is on vocabulary enrichment and idiomatic expressions. Cultural, literary, political, and journalistic readings. May be repeated once for credit. Prerequisite: 13 or equivalent.
3 units, Aut (Leni, E), Win (Catoira, L), Spr (Catoira, L)

SPANLANG 101. The Structure of Spanish
Criteria and skills to analyze Spanish grammatical structure. Identification of word functions in sentences and texts, types of sentences, and terminology. Structure of nouns, adjectives, and verbs, and their relationship with meaning. The differences between Spanish grammar as a formal system and in everyday life. Prerequisite: 13C, 13R, 23B, or equivalent. (Sierra)
3-5 units, Aut (Miano, A)

SPANLANG 102. Composition and Writing Workshop
Individual development of the ability to write in Spanish. Emphasis is on style and diction, and on preparing and writing essays on literary topics. Non-Spanish majors or minors may choose topics more closely related to their studies for projects. Prerequisite: two years of college Spanish or equivalent. WIM
3-5 units, Aut (Brates, V), Win (Miano, A), Spr (Brates, V)

SPANLANG 102B. Composition and Writing Workshop for Heritage Language Students
For students with a good understanding of written accents, spelling, and syntax. Focus is on the craft of writing with emphasis on brainstorming, planning, outlining, drafting, revising, style, diction, and editing. Writing essays on literary topics. Non-Spanish majors or minors may choose topics related to their studies. Prerequisite: 23B or equivalent.
3-5 units, not given this year

SPANLANG 121M. Spanish for Medical Students
(Same as HRP 280) Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on taking the medical history. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge.
3 units, Aut (Corso, I)

SPANLANG 122M. Spanish for Medical Students
(Same as HRP 281) Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on performing a physical examination. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge.
3 units, Win (Corso, I)

SPANLANG 123M. Spanish for Medical Students
(Same as HRP 282) Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on different specialties and medical conditions. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge.
3 units, Spr (Corso, I)

SPANLANG 131M. Spanish for Heritage and Foreign Language Pre-Med and Public Health Students
For pre-med or public health students who grew up in homes where Spanish is spoken or for students who possess a considerable command of Spanish. Focus is on developing the ability to provide information on health-related topics to Spanish speakers in the U.S. Students participate in the organization and delivery of information on preventive health care in a workshop setting to a Spanish-speaking community.
3-4 units, not given this year

SPANLANG 199. Individual Reading
May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN SPANISH LANGUAGE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

SPANLANG 1G. Accelerated First-Year Business Spanish, Part 1
For GSB students only. Limited enrollment.
4 units, Win (Reinhold, V)

SPANLANG 2G. Accelerated First-Year Business Spanish, Part 2
Continuation of 1G. For GSB students only. Limited enrollemnt
4 units, Spr (Reinhold, V)

SPANLANG 3G. Spanish for Business Professionals
For GSB students only. Limited enrollment.
4 units, Aut (Reinhold, V)

SPANLANG 50. Reading Spanish
For students who have already taken Spanish for at least one year or have superior reading proficiency in another Romance language. Emphasis is on academic texts. Fulfills University reading requirements for advanced degrees if students earn a grade of 'B.'
3 units, Win (Sierra, A)

SPANLANG 205A. Intensive First-Year Spanish, Part A
For Stanford graduate students restricted to 9 units. Goal is to engage in interactions with Spanish speakers using socially and culturally appropriate forms. Social and cultural influences shaping

the production of oral and written texts in the Spanish- and English-speaking world.
3-5 units, Sum (Staff)

SPANLANG 205B. Intensive First-Year Spanish, Part B
Continuation of 205A. For Stanford graduate students restricted to 9 units. Goal is to engage in interactions with Spanish speakers using socially and culturally appropriate forms. Social and cultural influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Prerequisite 205A.
3-5 units, Sum (Staff)

SPANLANG 205C. Intensive First-Year Spanish
Continuation of 205B. For Stanford graduate students restricted to 9 units.For Stanford graduate students restricted to 9 units. Goal is to engage in interactions with Spanish speakers using socially and culturally appropriate forms. Social and cultural influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Prerequisite 205B.
3-5 units, Sum (Staff)

SPANLANG 215. Intermediate Oral Communication
(Same as SPANLANG 15) For grads only. Same as Summer session 15
3 units, Sum (Staff)

SPANLANG 394. Graduate Studies in Spanish Conversation
Prerequisite: consent of instructor.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

SPANLANG 395. Graduate Studies in Spanish
Prerequisite: consent of instructor.
2-5 units, Aut (Staff), Win (Staff), Spr (Staff)

SPECIAL LANGUAGE PROGRAM (SPECLANG) COURSES

UNDERGRADUATE COURSES IN SPECIAL LANGUAGE PROGRAM

Primarily for undergraduates; graduate students may enroll with consent of adviser.

SPECLANG 75. Greek Culture, Ideals, and Themes
Introduction to Greek culture and its global influence in a social historical context, through images from its past and institutions in contemporary Greek society. Limited enrollment. GER:DB-Hum, EC-GlobalCom
3 units, Spr (Prionas, E)

SPECLANG 105A. Intermediate Albanian, First Quarter
3 units, Aut (Bacaj, T)

SPECLANG 105B. Intermediate Albanian, Second Quarter
3 units, Win (Bacaj, T)

SPECLANG 105C. Intermediate Albanian, Third Quarter
3 units, Spr (Bacaj, T)

SPECLANG 107A. Beginning Bulgarian, First Quarter
3 units, Aut (Staff)

SPECLANG 107B. Beginning Bulgarian, Second Quarter
3 units, Win (Staff)

SPECLANG 107C. Beginning Bulgarian, Third Quarter
3 units, Spr (Staff)

SPECLANG 112A. Intermediate Hungarian Conversation, First Quarter
3 units, Aut (Szoke, E)

SPECLANG 112B. Intermediate Hungarian Conversation, Second Quarter
3 units, Win (Szoke, E)

SPECLANG 129A. Beginning Ukrainian, First Quarter
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Ukrainian culture.
3 units, Aut (Jarboe, L)

SPECLANG 129B. Beginning Ukrainian, Second Quarter
Continuation of 129A.
3 units, Win (Jarboe, L)

SPECLANG 129C. Beginning Ukrainian, Third Quarter
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Ukrainian culture.
3 units, Spr (Jarboe, L)

SPECLANG 130A. Intermediate Ukrainian, First Quarter
Continuation of 129C.
3 units, Aut (Jarboe, L)

SPECLANG 130B. Intermediate Ukrainian, Second Quarter
Continuation of 130A.
3 units, Win (Jarboe, L)

SPECLANG 130C. Intermediate Ukrainian, Third Quarter
Continuation of 130B.
3 units, Spr (Jarboe, L)

SPECLANG 144A. Beginning Tagalog, First Quarter
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Tagalog culture.
3 units, Aut (Staff)

SPECLANG 144B. Beginning Tagalog, Second Quarter
Continuation of 144A.
3 units, Win (Seno, J)

SPECLANG 144C. Beginning Tagalog, Third Quarter
Continuation of 144B.
3 units, Spr (Seno, J)

SPECLANG 145A. Intermediate Tagalog, First Quarter
Grammar structures and vocabulary through authentic materials. Cultural proficiency. Fulfills the University language requirement.
3 units, Aut (Staff)

SPECLANG 145B. Intermediate Tagalog, Second Quarter
Continuation of 145A.
3 units, Win (Seno, J)

SPECLANG 145C. Intermediate Tagalog, Third Quarter
Continuation of 145B.
3 units, Spr (Seno, J)

SPECLANG 146A. Advanced Tagalog, First Quarter
3 units, Aut (Staff)

SPECLANG 146B. Advanced Tagalog, Second Quarter
3 units, Win (Seno, J)

SPECLANG 146C. Advanced Tagalog, Third Quarter
3 units, Spr (Seno, J)

SPECLANG 150A. Beginning Vietnamese, First Quarter
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Vietnamese culture.
3 units, Aut (Nguyen, D)

SPECLANG 150B. Beginning Vietnamese, Second Quarter
Continuation of 150A.
3 units, Win (Nguyen, D)

SPECLANG 150C. Beginning Vietnamese, Third Quarter
Continuation of 150B.
3 units, Spr (Nguyen, D)

SPECLANG 151A. Intermediate Vietnamese, First Quarter
Continuation of 150C. Fulfills the University language requirement.
3 units, Aut (Nguyen, D)

SPECLANG 151B. Intermediate Vietnamese, Second quarter
Continuation of 151A.
3 units, Win (Nguyen, D)

SPECLANG 151C. Intermediate Vietnamese, Third Quarter
Continuation of 151B.
3 units, Spr (Nguyen, D)

SPECLANG 152A. Beginning Hindi, First Quarter
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Hindi culture.
4 units, Aut (Desai, S)

SPECLANG 152B. Beginning Hindi, Second Quarter
Continuation of 152A.
4 units, Win (Desai, S)

SPECLANG 152C. Beginning Hindi, Third Quarter
Continuation of 152B. Fulfills the University language requirement.
4 units, Spr (Desai, S)

SPECLANG 153A. Intermediate Hindi, First Quarter
Second year sequence requires completion of first year or consent of the instructor. Focus on expanding all language skills, mastering grammar patterns and new vocabulary through authentic readings, writing essays, oral presentations and the use of multimedia-based materials. Focus on cultural proficiency.
4 units, Aut (Desai, S)

SPECLANG 153B. Intermediate Hindi, Second Quarter
Continuation of 153A.
4 units, Win (Desai, S)

SPECLANG 153C. Intermediate Hindi, Third Quarter
Continuation of 153B.
4 units, Spr (Desai, S)

SPECLANG 154A. Advanced Hindi, First Quarter
Continuation of 153C.
4 units, Aut (Staff)

SPECLANG 154B. Advanced Hindi, Second Quarter
Continuation of 154A.
4 units, Win (Anushree, A)

SPECLANG 154C. Advanced Hindi, Third Quarter
Continuation of 154B.
4 units, Spr (Anushree, A)

SPECLANG 164A. Beginning Czech, First Quarter
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Czech culture.
3 units, Aut (Dusatko, J)

SPECLANG 164B. Beginning Czech, Second Quarter
Continuation of 164A.
3 units, Win (Dusatko, J)

SPECLANG 164C. Beginning Czech, Third Quarter
Continuation of 164B.
3 units, Spr (Dusatko, J)

SPECLANG 165A. Intermediate Czech, First Quarter
Continuation of 164C. Fulfills the University language requirement.
3 units, Aut (Dusatko, J)

SPECLANG 165B. Intermediate Czech, Second Quarter
Continuation of 165A.
3 units, Win (Dusatko, J)

SPECLANG 165C. Intermediate Czech, Third Quarter
Continuation of 165B.
3 units, Spr (Dusatko, J)

SPECLANG 167A. Beginning Polish, First Quarter
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Polish culture.
3 units, Aut (Szudelski, G)

SPECLANG 167B. Beginning Polish, Second Quarter
Continuation of 167A.
3 units, Win (Szudelski, G)

SPECLANG 167C. Beginning Polish, Third Quarter
Continuation of 167B.
3 units, Spr (Szudelski, G)

SPECLANG 168A. Intermediate Polish, First Quarter
Continuation of 167C. Fulfills the University language requirement.
3 units, Aut (Szudelski, G)

SPECLANG 168B. Intermediate Polish, Second Quarter
Continuation of 168A.
3 units, Win (Szudelski, G)

SPECLANG 168C. Intermediate Polish, Third Quarter
Continuation of 168B.
3 units, Spr (Szudelski, G)

SPECLANG 170A. Beginning Modern Greek, First Quarter
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Greek culture.
4 units, Aut (Prionas, E)

SPECLANG 170B. Beginning Modern Greek, Second Quarter
Continuation of 170A.
4 units, Win (Prionas, E)

SPECLANG 170C. Beginning Modern Greek, Third Quarter
Continuation of 170B. Emphasis on speaking, reading, writing and listening. Student-centered, interactive approach focuses on mastering the basic grammar structures and basic vocabulary through a multimodal approach. Introduction to the Greek culture. Fulfills the University language requirement.
4 units, Spr (Prionas, E)

SPECLANG 171B. Intermediate Modern Greek, Second Quarter
Grammar structures and vocabulary through authentic materials. Cultural proficiency.
4 units, Win (Prionas, E)

SPECLANG 171C. Intermediate Modern Greek, Third Quarter
Grammar structures and vocabulary through authentic materials. Cultural proficiency.
4 units, Spr (Prionas, E)

SPECLANG 173A. Beginning Hungarian, First Quarter
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Hungarian culture.
3 units, Aut (Szoke, E), Win (Szoke, E)

SPECLANG 173B. Beginning Hungarian, Second Quarter
Continuation of 173A.
3 units, Win (Szoke, E)

SPECLANG 174A. Beginning Quechua, First Quarter
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Quechua culture.
3 units, Aut (Fajardo, J)

SPECLANG 174B. Beginning Quechua, Second Quarter
Continuation of 174A.
3 units, Win (Fajardo, J)

SPECLANG 176B. Beginning Thai, Second Quarter
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Thai culture.
3 units, Win (Moore, R)

SPECLANG 177A. Intermediate Thai, First Quarter
Grammar structures and vocabulary through authentic materials. Cultural proficiency.
3 units, Aut (Staff)

SPECLANG 177B. Intermediate Thai, Second Quarter
Grammar structures and vocabulary through authentic materials. Cultural proficiency.
3 units, Win (Staff)

SPECLANG 177C. Intermediate Thai, Third Quarter
Grammar structures and vocabulary through authentic materials. Cultural proficiency.
3 units, Spr (Moore, R)

SPECLANG 178A. Beginning Sign Language, First Quarter
Comprehension and production skills; cultural awareness necessary for communication. Limited enrollment.
4 units, Aut (Haas, C)

SPECLANG 178B. Beginning Sign Language, Second Quarter
continuation of 178A.
4 units, Win (Haas, C)

SPECLANG 178C. Beginning Sign Language, Third Quarter
Continuation of 178B. Fulfills the University language requirement.
4 units, Spr (Haas, C)

SPECLANG 179A. Intermediate Sign Language, First Quarter
Additional functional structures, lexical items, and history. Limited enrollment.
4 units, Aut (Haas, C)

SPECLANG 179B. Intermediate Sign Language, Second Quarter
Continuation of 179A. Limited enrollment.
4 units, Win (Haas, C)

SPECLANG 179C. Intermediate Sign Language, Third Quarter
Continuation of 179B. Limited enrollment.
4 units, Spr (Haas, C)

SPECLANG 183A. Beginning Sanskrit, First Quarter
Sanskrit script and literary readings.
3 units, Aut (Porta, F)

SPECLANG 183B. Beginning Sanskrit, Second Quarter
Sanskrit script and literary readings.
3 units, Win (Porta, F)

SPECLANG 183C. Beginning Sanskrit, Third Quarter
Sanskrit script and literary readings.
3 units, Spr (Porta, F)

SPECLANG 186A. Beginning Serbo-Croatian, First Quarter
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Serb and Croat culture.
3 units, Aut (Rakicevic, B)

SPECLANG 186B. Beginning Serbo-Croatian, Second Quarter
Continuation of 186A.
3 units, Win (Rakicevic, B)

SPECLANG 186C. Beginning Serbo-Croatian, Third Quarter
Continuation of 186B.
3 units, Spr (Rakicevic, B)

SPECLANG 189A. Beginning Hawaiian, First Quarter
4 units, Aut (Peralto, S)

SPECLANG 189B. Beginning Hawaiian, Second Quarter
4 units, Win (Peralto, S)

SPECLANG 189C. Beginning Hawaiian, Third Quarter
4 units, Spr (Peralto, S)

SPECLANG 192A. Beginning Kazakh, First Quarter
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Kazakh culture.
3 units, Aut (Kunanbaeva, A)

SPECLANG 192B. Beginning Kazakh, Second Quarter
Continuation of 192A.
3 units, Win (Kunanbaeva, A)

SPECLANG 192C. Beginning Kazakh, Third Quarter
Continuation of 192B.
3 units, Spr (Kunanbaeva, A)

SPECLANG 193A. Intermediate Kazakh, First Quarter
Continuation of 192C. Fulfills the University language requirement.
3 units, Aut (Kunanbaeva, A)

SPECLANG 193B. Intermediate Kazakh, Second Quarter
Continuation of 193A.
3 units, Win (Kunanbaeva, A)

SPECLANG 193C. Intermediate Kazakh, Third Quarter
Continuation of 193B.
3 units, Spr (Kunanbaeva, A)

SPECLANG 198Q. Modern Greece in Film and Literature
(Stanford Introductory Seminar) Preference to sophomores. Cultural and literary highlights. Filmmakers include Kakoyannis, Dassen, Boulmetis, Angelopoulos, and Scorsese; readings from Eugenides, Gage, Kavafis, Kazantzakis, Samarakis, Seferis, and Elytis. GER:DB-Hum, DB-Hum, EC-GlobalCom
3-5 units, Aut (Prionas, E)

SPECLANG 215A. Modern Greek for Heritage Language Learners, First Quarter
For students of Greek background. Sources include authentic texts, multimedia materials, and Greek media.
2-4 units, Aut (Prionas, E)

SPECLANG 215B. Modern Greek for Heritage Language Learners, Second Quarter
Continuation of 215A.
2-4 units, Win (Prionas, E)

SPECLANG 238A. Beginning Uzbek, First Quarter
3 units, Aut (Kunanbaeva, A)

SPECLANG 238B. Beginning Uzbek, Second Quarter
Continuation of 238A.
3 units, Win (Kunanbaeva, A)

SPECLANG 238C. Beginning Uzbek, Third Quarter
Continuation of 238B.
3 units, Spr (Kunanbaeva, A)

SPECLANG 241A. Ukrainian for Speakers of a Slavic Language, First Quarter
3 units, Aut (Jarboe, L)

SPECLANG 241B. Ukrainian for Speakers of a Slavic Language, Second Quarter
Continuation of 241A.
3 units, Win (Staff)

SPECLANG 241C. Ukrainian for Speakers of a Slavic Language, Third Quarter
Continuation of 241B.
3 units, not given this year

SPECLANG 247. Introduction to Siouan Language and Culture I
Three dialects of the Siouan language: Dakota, Nakota, and Lakota. The focus is on the Lakota dialect with accompanying notation on when it is appropriate to use the other two dialects. Immersion techniques relying on cultural context, such as use of songs as poetry including current usage on Utube of Round Dance songs by today's youth to illustrate the adaptation of cultural ways to fit today's world. Dakota/Lakota grammar, Dakota/Lakota texts, andintroduction to a writing system. Definition of what oral culture means and the role of memory in the preservation of a way of life.
5 units, Win (Shaw, D)

SPECLANG 247A. Beginning Lakota, First Quarter
4 units, Aut (Staff)

SPECLANG 247B. Beginning Lakota, Second Quarter
4 units, Win (Staff)

SPECLANG 247C. Beginning Lakota, Third Quarter
4 units, Spr (Staff)

SPECLANG 248. Introduction to Siouan Language and Culture II
Focused approach on one cultural aspect of Dakota/Nakota/Lakota culture through the analysis of Dakota/Nakota /Lakota words in the lyrics of songs sung in the Sundance.
5 units, Spr (Shaw, D)

SPECLANG 250A. Beginning Romanian, First Quarter
3 units, Aut (Negip-Schatt, S)

SPECLANG 250B. Beginning Romanian, Second Quarter
3 units, Win (Negip-Schatt, S)

SPECLANG 250C. Beginning Romanian, Third Quarter
3 units, Spr (Negip-Schatt, S)

SPECLANG 251A. Intermediate Romanian, First Quarter
3 units, Aut (Negip-Schatt, S)

SPECLANG 251B. Intermediate Romanian, Second Quarter
3 units, Win (Negip-Schatt, S)

SPECLANG 251C. Intermediate Romanian, Third Quarter
3 units, Spr (Negip-Schatt, S)

SPECLANG 252A. Advanced Romanian, First Quarter
3 units, Aut (Negip-Schatt, S)

SPECLANG 252B. Advanced Romanian, Second Quarter
3 units, Win (Negip-Schatt, S)

SPECLANG 252C. Advanced Romanian, Thrid Quarter
3 units, Spr (Negip-Schatt, S)

SPECLANG 254A. Advanced Hungarian, First Quarter
3 units, Aut (Szoke, E)

SPECLANG 254B. Advanced Hungarian, second Quarter
3 units, Win (Szoke, E)

SPECLANG 254C. Advanced Hungarian, Third Quarter
3 units, Win (Staff), Spr (Szoke, E)

GRADUATE COURSES IN SPECIAL LANGUAGE PROGRAM

Primarily for graduate students; undergraduates may enroll with consent of instructor.

SPECLANG 297. Directed Reading
Prerequisite: consent of instructor.
1-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff), by arrangement

SPECLANG 395. Graduate Studies in Special Language
Prerequisite: consent of instructor.
1-4 units, Aut (Staff), Win (Staff), Spr (Staff)

STANFORD INTRODUCTORY SEMINARS

See Undergraduate Education section for more information. F = preference to freshmen.

AA 113N. Structures: Why Things Don't (and Sometimes Do) Fall Down
(Stanford Introductory Seminar) Preference to freshmen. How structures created by nature or built by human beings keep things up and keep things in. Topics: nature's structures from microorganisms to large vertebrae; buildings from ancient dwellings to modern skyscrapers; spacecraft and airplanes; boats from ancient times to America's Cup sailboats, and how they win or break; sports equipment; and biomedical devices including bone replacements and cardiovascular stents. How composite materials are used to make a structure light and strong. GER:DB-EngrAppSci
3 units, Win (Springer, G)

AA 116N. Electric Automobiles and Aircraft
(Stanford Introductory Seminar) (Same as EE 25Q) Transportation accounts for nearly one-third of American energy use and greenhouse gas emissions and three-quarters of American oil consumption. It has crucial impacts on climate change, air pollution, resource depletion, and national security. Students wishing to address these issues will need to reconsider how we move, finding sustainable transportation solutions. This course will provide an introduction to the issue, covering the past and present of transportation and its impacts; examining alternative fuel proposals; and digging deeper into the most promising option: battery electric vehicles. Energy requirements of air, ground, and maritime transportation; design of electric motors, power control systems, drive trains, and batteries; and technologies for generating renewable energy. Two fun opportunities for hands-on experiences with electric cars. Prerequisites: Introduction to calculus and Physics AP or elementary mechanics.
3 units, Aut (Cox, D; Enge, P)

AMSTUD 35N. A Union of Diversities: Charles Ives and American Musical Traditions
(Stanford Introductory Seminar) (Same as MUSIC 35N) Preference to freshmen. The life and work of Charles Ives, and the polarized reception his compositions received. Music includes Ives' Victorian songs and his symphonic works; his philosophical and political writings, historic recordings, oral and photographic histories, and live performances. Hands-on work with original manuscripts and editions. Recommended: ability to read music. GER:DB-Hum
3 units, Spr (Barth, G)

AMSTUD 114N. Visions of the 1960s
(Stanford Introductory Seminar) Preference to sophomores. Introduction to the ideas, sensibility, and, to a lesser degree, the politics of the American 60s. Topics: the early 60s vision of a beloved community; varieties of racial, generational, and feminist dissent; the meaning of the counterculture; and current interpretive perspectives on the 60s. Film, music, and articles and books. GER:DB-Hum, EC-AmerCul
5 units, Aut (Gillam, R)

ANTHRO 22N. Ethnographies of North America: An Introduction to Cultural and Social Anthropology
(Stanford Introductory Seminar) Preference to freshmen. Ethnographic look at human behavior, including cultural transmission, social organization, sex and gender, culture change, and related topics in N. America. Films. GER:DB-SocSci
3-4 units, Win (Wilcox, M)

ANTHRO 25N. Contemporary Japanese Popular Culture
(Stanford Introductory Seminar) This is a seminar focusing on the intersection between politics and popular culture in contemporary Japan. It will survey a range of social and political implications of practices of popular culture. Topics include representations of gender in J-pop, manga, and anime, the otaku culture and its pathologization. Students will be introduced to theories of popular culture in general, and a variety of contemporary anthropological studies on Japanese popular culture in particular as well.
1-3 units, Aut (Inoue, M)

ANTHRO 26N. Hauntings, Visions, and Prophecy
(Stanford Introductory Seminar) This course explores the conditions under which people have experiences that they identify as ¿supernatural¿: experiences of something that is not physically present. We will explore the cultural and psychological dimensions of this very real phenomenon. We will not, however, make ontological judgments about whether something which is experienced as externally present is in fact externally present: in other words, this is a class about culture and psychology, not about metaphysics. We will do experimental work, using our selves and fellow classmates, as subjects, to understand who, when and how people have experiences that they deem ¿super¿natural.
3-5 units, Win (Luhrmann, T)

APPPHYS 78Q. Tools of Nanotechnology
(Stanford Introductory Seminar) Preference to sophomores. Topics include: current and future applications of nanotechnology, nanofabrication tools, nanoscale characterization and manipulation tools, scanning probe microscopy (SPM), Stanford nanotechnology research examples, hands-on activities, research lab tours. Prerequisite: high school physics. GER:DB-EngrAppSci
3 units, Aut (Beetz, T)

APPPHYS 79N. Energy Options for the 21st Century
(Stanford Introductory Seminar) Preference to freshmen. Choices for meeting the future energy needs of the U.S. and the world. Basic physics of energy sources, technologies that might be employed, and related public policy issues. Trade-offs and societal impacts of different energy sources. Policy options for making rational choices for a sustainable world energy economy. GER:DB-EngrAppSci
3 units, Aut (Fox, J; Geballe, T)

ASNAMST 74N. Race and Ethnicity in Contemporary American Fiction: Boundaries and Border Crossings
(Stanford Introductory Seminar) (Same as ENGLISH 74N) The question of ""place"" and ""locality"" in studies of identity and racial formation. Goal is to engage and examine texts with a critical eye both toward the social contexts represented and to the imaginative aesthetic techniques that American writers of color offer to bring their fictional worlds to life. Theme of border hopping and boundary crossing in works by authors including Charles Johnson, Toni Morrison, Alejandro Morales, Julie Otsuka, Stephen Graham Jones, and Lan Samantha Chang. GER:DB-Hum
3 units, Win (Sohn, S)

BIOC 118Q. Genomics and Medicine
(Stanford Introductory Seminar) Preference to sophomores. Knowledge gained from sequencing human, bacterial, and viral genomes and implications for medicine and biomedical research. Novel diagnoses (chips, SNPs and gene expression) and treatment of diseases including gene therapy, stem cell therapy, and rational drug design. Ethical implications of stem cell therapy and uses of genetic information. Use of genome and disease databases to determine gene function in disease, diagnosis, and potential treatments. See http://biochem118.stanford.edu/. GER:DB-EngrAppSci
3 units, Aut (Brutlag, D)

BIOE 70Q. Medical Device Innovation
(Stanford Introductory Seminar) Preference to sophomores. Survey of innovative technologies and medical devices used in multiple medical specialties. Guest lecturers include Stanford Medical School physicians, entrepreneurs, and venture capitalists. Focus on how to identify clinical needs and design device solutions to address those needs. Fundamentals of starting a company. Field trips to local medical device companies and design house. No previous engineering training required.
3 units, Spr (Mandato, J)

BIO 2N. Photons, Biological Photosynthesis, and Quantum Mechanics
(Stanford Introductory Seminar) Light driven reactions are fundamental to life on earth. Examination of basic properties of light, the role of light in photosynthesis, pertinent aspects of quantum mechanics, and the harnessing of light in bio- and nanotechnology. Discussion will emphasize intuitive understanding. High school biology and physics required. GER:DB-NatSci
3 units, Aut (Schnitzer, M)

BIO 3N. Views of a Changing Sea: Literature & Science
(Stanford Introductory Seminar) The state of a changing world ocean, particularly in the eastern Pacific, will be examined through

historical and contemporary fiction, non-fiction and scientific publications. Issues will include harvest and mariculture fisheries, land-sea interactions and oceanic climate change in both surface and deep waters. GER:DB-NatSci

3 units, Spr (Gilly, W)

BIO 4N. Personalized Genomic Medicine

(Stanford Introductory Seminar) Exploration of the exciting new field of personalized genomic medicine. Personalized medicine is based on the idea that each person's unique genome sequence can be used to predict risk of acquiring specific diseases, and to make more informed medical choices. Learn about the fascinating science behind these approaches; where they are heading in the future; and the ethical implications such technology presents. Lectures will be augmented with hands-on experience in exploring and analyzing a real person's genome.

3 units, Aut (Fraser, H)

BIO 8N. Human Evolution

(Stanford Introductory Seminar) A survey of the anatomical and behavioral evidence for human evolution and of the increasingly important information from molecular genetics. Emphasis on the split between the human and chimpanzee lines 6-7 million years ago, the appearance of the australopiths by 4.1 million years ago, the emergence of the genus Homo about 2.5 million years ago, the spread of Homo from Africa 1.7-1.6 million years ago, the subsequent divergence of Homo into different species on different continents, and the expansion of fully modern humans (Homo sapiens) from Africa about 50,000 years ago to replace the Neanderthals and other non-modern Eurasians.

5 units, Win (Klein, R)

BIO 14N. Plants and Civilization

(Stanford Introductory Seminar) Preference to freshmen. The role of plants in the development of civilization. Topics: the use of forests, woodlands, and grazing lands; centers of origins and spread of crops; viticulture, and wine and beer making; the spice route and the age of exploration; the use of plants as medicine; the global spread of weeds; engineering plants for the future; the importance of tea, coffee, chocolate, sugar, potatoes, natural dyes, and rubber in societal affairs and change. GER:DB-NatSci

3 units, Win (Mooney, H)

BIO 23N. FACEBUG: The Social Life of Microbes

(Stanford Introductory Seminar) Exploration of three crucial aspects of microbial life. First, examine how the unseen microbial majority is responsible for critical but under-appreciated aspects of the biology of the planet. Second, investigate the array of current genomic and imaging tools available to probe microscopic organisms in the environment. Last, we will research the importance of microbial communities and social dynamics in ecological and human health settings. GER:DB-NatSci

3 units, Aut (Bhaya, D)

BIO 26N. Maintenance of the Genome

(Stanford Introductory Seminar) Preference to freshmen. Focus is on DNA repair systems that monitor the genome to ensure genomic stability in the face of natural endogenous threats to DNA and those due to radiation and genotoxic environmental chemicals. Redundancy of the genetic message ensured by complementary DNA strands facilitates recovery of information by excision repair when one of the strands is damaged. Predisposition to cancer is often a consequence of defective DNA repair. Relevance for oncology, aging, developmental biology, environmental health, and neurobiology. GER:DB-NatSci

3 units, Spr (Hanawalt, P)

BIO 31Q. Ants: Behavior, Ecology, and Evolution

(Stanford Introductory Seminar) Preference to sophomores. Behavior: the organization of colonies, how they operate without central control, how they resemble other complex systems like brains. Ecology: how populations of colonies change, comparing the ecology of a species in SW American desert and invasive Argentine ants. Evolution: why are there so many species of ants; how are they alike, how do they differ, and why? Ants as the theme for exploring how to do research in animal behavior, ecology, and evolution. Research project will be on the invasive Argentine ant: its distribution on campus, foraging trails, and nest structure.

3 units, Spr (Gordon, D)

BIO 33N. Conservation Science and Practice

(Stanford Introductory Seminar) Preference to freshmen. Interdisciplinary. The science and art of conservation today. The forces that are driving change in Earth's atmosphere, lands, waters, and variety of life forms. Which broad dimensions of the biosphere, and which elements of ecosystems, most merit protection? The prospects for, and challenges in, making conservation economically attractive and commonplace. Field trip; project. GER:DB-NatSci

3 units, Spr (Daily, G)

BIOMEDIN 109Q. Genomics: A Technical and Cultural Revolution

(Stanford Introductory Seminar) (Same as GENE 109Q) Preference to sophomores. Concepts of genomics, high-throughput methods of data collection, and computational approaches to analysis of data. The social, ethical, and economic implications of genomic science. Students may focus on computational or social aspects of genomics.

3 units, Win (Altman, R)

CHEMENG 35N. Renewable Energy for a Sustainable World

(Stanford Introductory Seminar) Preference to freshmen. An overall world energy assessment, projections, and technologies. How to assess good and bad potential impacts of leading renewable energy candidates: benefit versus impact ratio using quantitative cradle-to-grave approach. Technologies suitable for near-term application in developing economic systems. Governmental policies, governmental versus private sector investments, raw materials supply issues, and impact of cultural influences on technology choices and speed of implementation. GER:DB-EngrAppSci

3 units, Aut (Swartz, J)

CHEMENG 60Q. Environmental Regulation and Policy

(Stanford Introductory Seminar) Preference to sophomores. How environmental policy is formulated in the U.S. How and what type of scientific research is incorporated into decisions. How to determine acceptable risk, the public's right to know of chemical hazards, waste disposal and clean manufacturing, brownfield redevelopment, and new source review regulations. The proper use of science and engineering including media presentation and misrepresentation, public scientific and technical literacy, and emotional reactions. Alternative models to formulation of environmental policy. Political and economic forces, and stakeholder discussions. GER:DB-EngrAppSci

3 units, Aut (Robertson, C; Libicki, S)

CHEMENG 70Q. Masters of Disaster

(Stanford Introductory Seminar) Preference to sophomores. For students interested in science, engineering, politics, and the law. Learn from past disasters to avoid future ones. How disasters can be tracked to failures in the design process. The roles of engineers, artisans, politicians, lawyers, and scientists in the design of products. Failure as rooted in oversight in adhering to the design process. Student teams analyze real disasters and design new products presumably free from the potential for disastrous outcomes. GER:DB-EngrAppSci

3 units, Aut (Robertson, C; Moalli, J)

CHEMENG 80Q. Art, Chemistry, and Madness: The Science of Art Materials

(Stanford Introductory Seminar) Preference to sophomores. Chemistry of natural and synthetic pigments in five historical palettes: earth (paleolithic), classical (Egyptian, Greco-Roman), medieval European (Middle Ages), Renaissance (old masters), and synthetic (contemporary). Composite nature of paints using scanning electron microscopy images; analytical techniques used in art conservation, restoration, and determination of provenance; and inherent health hazards. Paintings as mechanical structures. Hands-on laboratory includes stretching canvas, applying gesso grounds, grinding pigments, preparing egg tempera paint, bamboo and quill pens, gilding and illumination, and papermaking. GER:DB-EngrAppSci

3 units, Spr (Frank, C; Loesch-Frank, S)

CHEM 24N. Nutrition and History

(Stanford Introductory Seminar) Preference to freshmen. Intended to broaden the introductory chemistry experience. The biochemical basis of historically important nutritional deficiencies (vitamins, minerals, starvation, metabolic variants that predispose to disease) and environmental toxins is related to physiological action and the sociological, political, and economic consequences of its effect on

human populations. Prerequisite: high school chemistry. Recommended: 31A,B, or 31X, or 33.

3 units, Spr (Huestis, W)

CHEM 25N. Science in the News

(Stanford Introductory Seminar) Preference to freshmen. Possible topics include: diseases such as avian flu, HIV, and malaria; environmental issues such as climate change, atmospheric pollution, and human population; energy sources in the future; evolution; stem cell research; nanotechnology; and drug development. Focus is on the scientific basis for these topics as a basis for intelligent discussion of societal and political implications. Sources include the popular media and scientific media for the nonspecialist, especially those available on the web.

3 units, Aut (Andersen, H)

CHEM 25Q. Science-in-Theatre: A New Genre?

(Stanford Introductory Seminar) (Same as DRAMA 25N) Preference to sophomores. How scientists acquire their rules, mores, and idiosyncrasies through a form of intellectual osmosis in a mentor-disciple relationship. Scientists represented as Frankensteins or nerds, rather than normal. Why more intellectually challenging plays have appeared on the Anglo-American theatre scene where scientific behavior and even science are presented accurately. Students engage in a playwriting experiment.

3 units, Win (Djerassi, C)

CHEM 26N. The What, Why, How and wow's of Nanotechnology

(Stanford Introductory Seminar) Preference to freshmen. Introduction to nanotechnology with discussion of basic science at the nanoscale, its difference from molecular and macroscopic scales, and implications and applications. Developments in nanotechnology in the past two decades, from imaging and moving single atoms on surfaces to killing cancer cells with nanoscale tools and gadgets. GER:DB-NatSci

3 units, Spr (Dai, H)

CHICANST 117N. Film, Nation, Latinidad

(Stanford Introductory Seminar) (Same as CSRE 117N, ILAC 117N) Examination of films from Spain, Mexico, and Latina/o USA that expand, trouble, contest, parody, or otherwise interrogate notions of national identity. Filmmakers may include Lourdes Portillo, Alejandro González Iñárritu, John Sayles, Maria Novaro, Pedro Almodóvar, and Gregory Nava.

3-4 units, Spr (Yarbro-Bejarano, Y)

CHINGEN 70N. Marvelous Creatures: Animals and Humans in Chinese Literature

(Stanford Introductory Seminar) Preference to freshmen. Read novels and short stories as well as view films that feature an array of marvelous creatures from late imperial times to the contemporary era. What animal imageries and metaphors can reveal about the Chinese and how they relate to the natural, supernatural, and human worlds across the centuries. GER:DB-Hum, EC-GlobalCom

3-4 units, Spr (Lee, H)

CEE 31Q. Accessing Architecture Through Drawing

(Stanford Introductory Seminar) Preference to sophomores. Drawing architecture provides a deeper understanding of the intricacies and subtleties that characterize contemporary buildings. How to dissect buildings and appreciate the formal elements of a building, including scale, shape, proportion, colors and materials, and the problem solving reflected in the design. Students construct conventional architectural drawings, such as plans, elevations, and perspectives. Limited enrollment. GER:DB-EngrAppSci

4 units, Aut (Barton, J), Win (Barton, J)

CEE 32Q. Place: Making Space Now

(Stanford Introductory Seminar) This seminar argues that architects are ultimately ""place-makers"" and questions what that means in the contemporary world. The idea of contemporary place-making will include a critique of the history of modern place-making through an examination of modern form, a discussion of ""non-places"" and the role of cyber technologies in making space and place, as well as the nature of ""in-between spaces"".

3 units, Spr (Barton, J; Beischer, T)

CEE 70N. Water, Public Health, and Engineering

(Stanford Introductory Seminar) Preference to sophomores. Linkages between water, wastewater and public health, with an emphasis on engineering interventions. Topics include the history of water and wastewater infrastructure development in the U.S. and Europe; evolution of epidemiological approaches for water-related health challenges; biological and chemical contaminants in water and wastewater and their management; and current trends and challenges in access to water and sanitation around the world. How to identify ways in which freshwater contributes to human health; exposure routes for water- and sanitation-illness; how to classify these illnesses by pathogen type and their geographic distribution; how to identify the health and economic consequences of water- and sanitation-related illnesses; costs and benefits of curative and preventative interventions; and how to interpret data related to epidemiological concepts. No previous experience in engineering is required. GER:DB-EngrAppSci

3 units, Spr (Davis, J)

CEE 80N. The Art of Structural Engineering

(Stanford Introductory Seminar) Preference to freshmen. The history of modern bridges, buildings, and other large-scale structures. Students learn about modern structures, the social context in which they are built and their symbolic value. Principles of structural engineering and calculating efficiency and safety taught through case studies. Field trip to Bay Area landmark and hands-on exercises including building and testing a model bridge. Students from all backgrounds welcome. GER:DB-EngrAppSci

4 units, Aut (Billington, S)

CLASSART 21Q. Eight Great Archaeological Sites in Europe

(Stanford Introductory Seminar) Preference to sophomores. Focus is on excavation, features and finds, arguments over interpretation, and the place of each site in understanding the archaeological history of Europe. Goal is to introduce the latest archaeological and anthropological thought, and raise key questions about ancient society. The archaeological perspective foregrounds interdisciplinary study: geophysics articulated with art history, source criticism with analytic modeling, statistics interpretation. A web site with resources about each site, including plans, photographs, video, and publications, is the basis for exploring. GER:DB-Hum

3-5 units, Aut (Shanks, M)

CLASSGEN 5N. The Nile and its Life-cycles

(Stanford Introductory Seminar) Studying the Nile River, in all its aspects involving antiquity. Particular focus on the period between 500 BC and AD 500, with limited materials before and after said period. Is it useful or misleading to think of the river itself as ancient? What happens when we consider the Nile spatially as a whole? Since only a part of the river flows through Egypt we will also focus on Ethiopia, the Sudan and equatorial Africa, which were also objects of ancient Greek and Roman fascination.

3-5 units, Aut (Parker, G)

CLASSGEN 6N. Antigone: From Ancient Democracy to Contemporary Dissent

(Stanford Introductory Seminar) (Same as DRAMA 12N) Preference to freshmen. Tensions inherent in the democracy of ancient Athens; how the character of Antigone emerges in later drama, film, and political thought as a figure of resistance against illegitimate authority; and her relevance to contemporary struggles for women's and workers' rights and national liberation. Readings and screenings include versions of Antigone by Sophocles, Anouilh, Brecht, Fugard/Kani/Ntshona, Paulin, Glowacki, Gurney, and von Trotta. GER:DB-Hum, EC-Gender

3-5 units, Aut (Rehm, R)

CLASSGEN 16N. New Worlds from Homer to Columbus

(Stanford Introductory Seminar) Preference to sophomores. What did the ancient Greeks and Romans imagine far away places and peoples to be like? What did they think the world looked like? What was the modern afterlife of these ancient travel experiences? Focus on Greek and Roman travels and encounters with alien peoples and exotic places (from Homer's Odyssey to the Roman historian Tacitus' descriptions of Britain and German), accounts of the New World and its peoples by both explorers and missionaries (from Columbus to Las Casas) and visual representations.

3-5 units, Spr (Ceserani, G)

CLASSGEN 24N. Sappho: Erotic Poetess of Lesbos

(Stanford Introductory Seminar) Preference to freshmen. Sappho's surviving fragments in English; traditions referring to or fantasizing about her disputed life. How her poetry and legend inspired women authors and male poets such as Swinburne, Baudelaire, and Pound. Paintings inspired by Sappho in ancient and modern times,

and composers who put her poetry to music. GER:DB-Hum, EC-Gender

4-5 units, Win (Peponi, A)

CLASSHIS 24N. The Roman Empire: Its Grandeur and Fall
(Stanford Introductory Seminar) (Same as HISTORY 11N) Preference to Freshmen. Prerequisite: IHUM 69A. Explore themes on the Roman Empire and its decline from the 1st through the 5th centuries C.E.. What was the political and military glue that held this diverse, multi-ethnic empire together? What were the bases of wealth and how was it distributed? What were the possibilities and limits of economic growth? How integrated was it in culture and religion? What were the causes and consequences of the conversion to Christianity? Why did the Empire fall in the West? How suitable is the analogy of the U.S. in the 21st century?

3 units, Spr (Saller, R)

COMM 118Q. Theories of Film Practice
(Stanford Introductory Seminar) Preference to sophomores. How theory connects with practice in the production of film and television. Film and television from the perspectives of practitioners who have theorized about their work in directing, editing, screenwriting, cinematography, and sound, and social scientists whose research has explored similar issues empirically.

4 units, Win (Breitrose, H)

COMPLIT 10N. Shakespeare and Performance in a Global Context
(Stanford Introductory Seminar) Preference to freshmen. The problem of performance including the performance of gender through the plays of Shakespeare. In-class performances by students of scenes from plays. The history of theatrical performance. Sources include filmed versions of plays, and readings on the history of gender, gender performance, and transvestite theater. GER:DB-Hum, EC-Gender

3 units, Spr (Parker, P)

COMPLIT 11Q. Shakespeare, Playing, Gender
(Stanford Introductory Seminar) Preference to sophomores. Focus is on several of the best and lesser known plays of Shakespeare, on theatrical and other kinds of playing, and on ambiguities of both gender and playing gender. Topics: transvestism inside and outside the theater, medical and other discussions of sex changes from female to male, hermaphrodites, and fascination with the monstrous. GER:DB-Hum, EC-Gender

3 units, Win (Staff)

COMPLIT 40Q. Aesthetics of Dissent: the Case of Islamic Iran
(Stanford Introductory Seminar) Censorship, Borges tells us, is the mother of metaphors. The Islamic regime in Iran censors all aesthetic production in the country. But Iranian dissident artists, from film-makers and fiction writers to composers in a thriving underground musical scene, have cleverly found ways to fight these draconian measures. They have developed an impressive body of work that is as sophisticated in style as it is rich in its discourse of democracy and dissent. The purpose of the seminar is to understand the aesthetic tropes of dissent in Iran, and the social and theological roots of rules of censorship. Masterpieces of post-revolutionary film, fiction, and music will be discussed in the context of tumultuous history of dissent in Islamic Iran.

3 units, Aut (Milani, A)

COMPLIT 41N. Borderlands of Literature and Culture
(Stanford Introductory Seminar) In this seminar we will focus on the transnational themes of memory, identity, and US-Mexico border thinking and writing. We will explore the transnational poetry, autoethnographies, short stores, novels, and rock en español musics/videos by Americo Paredes, Gloria Anzaldua, Sandra Cisneros, Guillermo Gomez-Pena, Alicia Gaspar de Alba, Carlos Fuentes, Elly Guerra, and Cafe Tacuba, among others.

3-4 units, Aut (Saldivar, J)

COMPLIT 41Q. Ethnicity and Literature
(Stanford Introductory Seminar) Preference to sophomores. What is meant by ethnic literature? How is ethnic writing different from non-ethnic writing, or is there such a thing as either? How does ethnicity as an analytic perspective affect the way literature is read by ethnic peoples? Articles and works of fiction; films on ethnic literature and cultural politics. How ethnic literature represents the nexus of social, historical, political, and personal issues. GER:DB-Hum, EC-AmerCul

5 units, Spr (Palumbo-Liu, D)

COMPLIT 51N. Comparative Fictions of Ethnicity
(Stanford Introductory Seminar)

5 units, Win (Staff)

COMPMED 81N. Comparative Anatomy and Physiology of Mammals
(Stanford Introductory Seminar) Preference to freshmen. Emphasis is on a comparative approach to anatomy and physiology of a wide range of mammals, the unique adaptations of each species in terms of its anatomical, and behavioral characteristics, and how these species interact with human beings and other animals. Dissection required. Class size is limited to 16. GER:DB-NatSci

3 units, Win (Bouley, D)

COMPMED 83N. Horse Medicine
(Stanford Introductory Seminar) Preference to freshmen. The most common equine diseases, ranging from colic to lameness are reviewed using problem-oriented approach. Topics include: equine infectious diseases, care of the newborn foal, medical emergencies, and neurological disorders. A lab on the physical and neurological examination of the horse at the Red Barn.

1-2 units, Spr (Staff)

COMPMED 84Q. Globally Emerging Zoonotic Diseases
(Stanford Introductory Seminar) Preference to sophomores. Infectious diseases impacting veterinary and human health around the world today. Mechanisms of disease, epidemiology, and underlying diagnostic, treatment and control principles associated with these pathogens.

3 units, Spr (Felt, S)

COMPMED 87Q. Introduction to the Mouse in Biomedical Research
(Stanford Introductory Seminar) Preference to sophomores. Focus is on the laboratory mouse, one of the most widely used models for biomedical research. Topics include the natural history and origin of the laboratory mouse; characteristics of commonly used strains; mouse anatomy, physiology, and husbandry; common mouse diseases and their effects on research; coat color genetics; and genetically engineered mouse technology. Demonstrations and hands-on experience with necropsy, mouse handling, and research techniques.

3 units, Aut (Nagamine, C)

CSRE 28N. The Cultural Shaping of Mental Health and Illness
(Stanford Introductory Seminar) (Same as PSYCH 28N) This seminar examines how our cultural ideas and practices shape our conceptions, perceptions, experiences, and treatment of emotional wellness and distress. We will read and discuss empirical research and case studies from psychology, anthropology, sociology, and medicine. Course requirements include weekly reading and thought papers, weekly discussion, and a final research project and presentation.

3 units, Win (Tsai, J)

CSRE 117N. Film, Nation, Latinidad
(Stanford Introductory Seminar) (Same as CHICANST 117N, ILAC 117N) Examination of films from Spain, Mexico, and Latina/o USA that expand, trouble, contest, parody, or otherwise interrogate notions of national identity. Filmmakers may include Lourdes Portillo, Alejandro González Iñárritu, John Sayles, Maria Novaro, Pedro Almodóvar, and Gregory Nava.

3-4 units, Spr (Yarbro-Bejarano, Y)

CSRE 160N. Latino/Latina Performance in the United States
(Stanford Introductory Seminar) (Same as DRAMA 17N) Preference to freshmen. This course will introduce works by U.S. Latino and Latina performance artists producing from the margins of the mainstream Euro-American theater world. We will examine how performance art serves as a kind of dramatized political forum for Latino/a artists, producing some of the most transgressive explorations of queer and national/ethnic identities in the U.S. today. By the course¿s conclusion, each student will create and perform in a staged reading of an original performance piece. GER:DB-Hum, EC-AmerCul

3 units, Win (Moraga, C)

CS 21N. Can Machines Know? Can Machines Feel?
(Stanford Introductory Seminar) Preference to freshmen. Can mental attitudes attributed to people and sometimes to animals, including knowledge, belief, desire, and intention, also be ascribed to machines? Can light sensors have a belief? Can a pool cleaning robot or tax-preparation software have an intention? If not, why

not? If yes, what are the rules of such ascription, and do they vary between human beings and machines? Sources include philosophy, neuroscience, computer science, and artificial intelligence. Topics: logic, probability theory, and elements of computation. Students present a paper. GER:DB-EngrAppSci

3 units, Spr (Shoham, Y)

CS 45N. Computers and Photography: From Capture to Sharing

(Stanford Introductory Seminar) Preference to freshmen with exerience in photography and use of computers. How a photographer creates photos, makes them available for computer viewing, reliably stores them, organizes them, tags them, searches them, and distributes them online. Access to a digital SLR camera and to PhotoShop Elements or equivalent software is required; no programming experience required. Digital SLRs and editing software will be provided to those students who do not wish to use their own.

3-4 units, Aut (Garcia-Molina, H)

CS 73N. The Business of the Internet

(Stanford Introductory Seminar) Preference to freshmen. Issues in Internet history, technology, and public policy are discussed as well as the Internet's impact on commerce, education, government, and health care. Writing for the web. Participants develop a substantial website. GER:DB-EngrAppSci

3 units, Spr (Wiederhold, G; Barr, A; Tessler, S)

CS 74N. Digital Dilemmas

(Stanford Introductory Seminar) Preference to freshmen. Issues where policy decision making requires understanding computer and communications technology. Technology basics taught in non-technology terms. Topics include consumer privacy, government surveillance, file sharing and intellectual property, and electronic voting. GER:DB-EngrAppSci

3 units, Aut (Dill, D)

DLCL 70N. From Vampires to Bathroom Walls: Folklore and Literature

(Stanford Introductory Seminar) In the early 19th century, some Europeans started seeing the stories and songs of illiterate peasants as folklore to be collected, preserved, and perhaps transformed into new literature, art, and music. These folktales, such as legends of vampires, continue to inspire artists. The idea of folklore has expanded to include the shared practices or utterances of any group with at least one linking factor, including latrinalia (wall writings in a public bathroom). Sources include folklore from German, English, Russian, and Yiddish sources, and theoretical essays. Students collect living folklore, and analyze and present it.

4 units, Spr (Safran, G)

DRAMA 10N. Arts and Ideas: 20th Century Art in Conflict

(Stanford Introductory Seminar) The second quarter of Art & Ideas builds on the examples of Modernism students in Arts and Ideas studied in the first quarter. The Frosh Seminar ¿20th-Century Art in Conflict¿ will focus on drama and film that experiments with new possibilities of form, shaping the direction of later artistic practice. We will trace how the political and aesthetic concerns of the 20th century reflect and exploit new technologies, both in theater and film, altering the position and function of author, actor, director, and audience.

4 units, Spr (Rehm, R)

DRAMA 11N. Dramatic Tensions: Theater and the Marketplace

(Stanford Introductory Seminar) Preference to freshmen. Tension between artistic and commercial forces in modern theater; the conflicted state of the art form. Sources include major and emerging contemporary figures in commercial, fringe, and nonprofit theater in the U.S. and UK. Visits with writers, directors, and dramaturges. GER:DB-Hum

3-4 units, Aut (Freed, A)

DRAMA 12N. Antigone: From Ancient Democracy to Contemporary Dissent

(Stanford Introductory Seminar) (Same as CLASSGEN 6N) Preference to freshmen. Tensions inherent in the democracy of ancient Athens; how the character of Antigone emerges in later drama, film, and political thought as a figure of resistance against illegitimate authority; and her relevance to contemporary struggles for women's and workers' rights and national liberation. Readings and screenings include versions of Antigone by Sophocles, Anouilh, Brecht, Fugard/Kani/Ntshona, Paulin, Glowacki, Gurney, and von Trotta. GER:DB-Hum, EC-Gender

3-5 units, Aut (Rehm, R)

DRAMA 13N. Law and Drama

(Stanford Introductory Seminar) Preference to Freshmen.Beyond the obvious traits that make a good (court room) drama, theater and jurisprudence have much more in common. Just as drama is engaged not only in entertainment but also in examination of social conventions and mechanisms, so law is not only concerned with dispensing justice but with shaping and maintaining a viable human community. In this class we will read and discuss a series of plays in which court proceedings are at the center of dramatic action and concluding with an investigation of the new genre of documentary drama.

3-5 units, Aut (Jakovljevic, B)

DRAMA 17N. Latino/Latina Performance in the United States

(Stanford Introductory Seminar) (Same as CSRE 160N) Preference to freshmen. This course will introduce works by U.S. Latino and Latina performance artists producing from the margins of the mainstream Euro-American theater world. We will examine how performance art serves as a kind of dramatized political forum for Latino/a artists, producing some of the most transgressive explorations of queer and national/ethnic identities in the U.S. today. By the course¿s conclusion, each student will create and perform in a staged reading of an original performance piece. GER:DB-Hum, EC-AmerCul

3 units, Win (Moraga, C)

DRAMA 25N. Science-in-Theatre: A New Genre?

(Stanford Introductory Seminar) (Same as CHEM 25Q) Preference to sophomores. How scientists acquire their rules, mores, and idiosyncrasies through a form of intellectual osmosis in a mentor-disciple relationship. Scientists represented as Frankensteins or nerds, rather than normal. Why more intellectually challenging plays have appeared on the Anglo-American theatre scene where scientific behavior and even science are presented accurately. Students engage in a playwriting experiment.

3 units, Win (Djerassi, C)

DRAMA 180Q. Noam Chomsky: The Drama of Resistance

(Stanford Introductory Seminar) Preference to sophomores. Chomsky's ideas and work which challenge the political and economic paradigms governing the U.S. Topics include his model for linguistics; cold war U.S. involvements in S.E. Asia, the Middle East, Central and S. America, the Caribbean, and Indonesia and E. Timor; the media, terrorism, ideology, and culture; student and popular movements; and the role of resistance. GER:DB-Hum

3-5 units, Aut (Rehm, R)

EARTHSYS 38N. The Worst Journey in the World: The Science, Literature, and History of Polar Exploration

(Stanford Introductory Seminar) (Same as EESS 38N, GES 38N) Preference to freshmen. The isolation of polar explorers under the harshest conditions on Earth, and the chronicles of their explorations and hardships dating to the 1500s for the Arctic and the 1700s for the Antarctic. Focus is on scientific and geographic achievements. Sources include The Worst Journey in the World by Apsley Cherry-Garrard who in 1911 participated in a midwinter Antarctic sledging trip to recover emperor penguin eggs. Class jointly authors essay on themes from such literature. Optional field trip into the high Sierra in December. (Dunbar) GER:DB-NatSci

3 units, Win (Dunbar, R)

EARTHSYS 43Q. Environmental Problems

(Stanford Introductory Seminar) (Same as GES 43Q) Preference to sophomores. Components of multidisciplinary environmental problems and ethical questions associated with decision making in the regulatory arena. Students lead discussions on environmental issues such as groundwater contamination from point and nonpoint sources, cumulative watershed effects related to timber and mining practices, acid rain, and subsurface disposal of nuclear waste. GER:DB-NatSci

3 units, Win (Loague, K)

EARTHSYS 46N. Exploring the Critical Interface between the Land and Monterey Bay: Elkhorn Slough

(Stanford Introductory Seminar) (Same as EESS 46N) Preference to freshmen. Field trips to sites in the Elkhorn Slough, a small agriculturally impacted estuary that opens into Monterey Bay, a model ecosystem for understanding the complexity of estuaries,

and one of California's last remaining coastal wetlands. Readings include Jane Caffrey's Changes in a California Estuary: A Profile of Elkhorn Slough. Basics of biogeochemistry, microbiology, oceanography, ecology, pollution, and environmental management.
3 units, Spr (Francis, C)

EARTHSYS 57Q. Climate Change from the Past to the Future
(Stanford Introductory Seminar) (Same as EESS 57Q) Preference to sophomores. Numeric models to predict how climate responds to increase of greenhouse gases. Paleoclimate during times in Earth's history when greenhouse gas concentrations were elevated with respect to current concentrations. Predicted scenarios of climate models and how these models compare to known hyperthermal events in Earth history. Interactions and feedbacks among biosphere, hydrosphere, atmosphere, and lithosphere. Topics include long- and short-term carbon cycle, coupled biogeochemical cycles affected by and controlling climate change, and how the biosphere responds to climate change. Possible remediation strategies.
3 units, Aut (Chamberlain, P)

ECON 11N. Understanding the Welfare System
(Stanford Introductory Seminar) Preference to freshmen. Welfare reform legislation and the devolution revolution. The transfer of responsibility for antipoverty programs to the states. How recent reforms change the welfare system and who is likely to be affected. Food stamps, AFDC, TANF, SSI, and Medicaid. Income transfer programs such as earned income tax credit and income taxes, and labor market regulations such as minimum wages and overtime rules. Economic principles to understand the effectiveness of these programs and their consequences on the behavior of families. Pre- or corequisite: ECON 1. Recommended: basic understanding of labor markets, taxes, and transfers.
2 units, Aut (MaCurdy, T)

ECON 17N. Energy, the Environment, and the Economy
(Stanford Introductory Seminar) Preference to freshmen. The relationship between environmental quality and production and consumption of energy. Can environmentally-friendly energy production and consumption compete with conventional sources? How to estimate and compare environmental impact costs of nonrenewable sources such as fossil fuels and nuclear power versus renewable sources such as solar and wind power. Implicit subsidies in conventional energy sources and the environmental costs of these subsidies. Regulatory and legal barriers to more environmentally friendly energy sources.
2 units, Spr (Wolak, F)

EE 14N. Things about Stuff
(Stanford Introductory Seminar) Preference to freshmen. The stories behind disruptive inventions such as the telegraph, telephone, wireless, television, transistor, and chip are as important as the inventions themselves, for they elucidate broadly applicable scientific principles. Focus is on studying consumer devices; projects include building batteries, energy conversion devices and semiconductors from pocket change. Students may propose topics and projects of interest to them. The trajectory of the course is determined in large part by the students themselves. GER:DB-EngrAppSci
3 units, Aut (Lee, T)

EE 15N. The Art and Science of Engineering Design
(Stanford Introductory Seminar) The goal of this seminar is to introduce freshmen to the design process associated with an engineering project. The seminar will consist of a series of lectures. The first part of each lecture will focus on the different design aspects of an engineering project, including formation of the design team, developing a project statement, generating design ideas and specifications, finalizing the design, and reporting the outcome. Students will form teams to follow these procedures in designing a term project of their choice over the quarter. The second part of each lecture will consist of outside speakers, including founders of some of the most exciting companies in Silicon Valley, who will share their experiences about engineering design. On-site visits to Silicon Valley companies to showcase their design processes will also be part of the course. The seminar serves three purposes: (1) it introduces students to the design process of turning an idea into a final GER:DB-EngrAppSci
3 units, Win (Goldsmith, A; Le, M)

EE 17N. Engineering the Micro and Nano Worlds: From Chips to Genes
(Stanford Introductory Seminar) Preference to freshmen. The first part is hands-on micro- and nano-fabrication including the Stanford Nanofabrication Facility (SNF) and the Stanford Nanocharacterization Laboratory (SNL) and field trips to local companies and other research centers to illustrate the many applications; these include semiconductor integrated circuits ('chips'), DNA microarrays, microfluidic bio-sensors and microelectromechanical systems (MEMS). The second part is to create, design, propose and execute a project. Most of the grade will be based on the project. By the end of the course you will, of course, be able to read critically a New York Times article on nanotechnology. More importantly you will have experienced the challenge (and fun) of designing, carrying out and presenting your own experimental project. As a result you will be better equipped to choose your major. This course can complement (and differs from) the seminars offered by Profs Philip Wong and Hari Manohar GER:DB-EngrAppSci
3 units, Spr (Pease, R)

EE 21N. What is Nanotechnology?
(Stanford Introductory Seminar) Nanotechnology is an often used word and it means many things to different people. Scientists and Engineers have some notion of what nanotechnology is, societal perception may be entirely different. In this course, we start with the classic paper by Richard Feynman (""There's Plenty of Room at the Bottom""), which laid down the challenge to the nanotechnologists. Then we discuss two classic books that offer a glimpse of what nanotechnology is: Engines of Creation: The Coming Era of Nanotechnology by Eric Drexler, and Prey by Michael Crichton. Drexler's thesis sparked the imagination of what nano machinery might do, whereas Crichton's popular novel channeled the public's attention to this subject by portraying a disastrous scenario of a technology gone astray. We will use the scientific knowledge to analyze the assumptions and predictions of these classic works. We will draw upon the latest research advances to illustrate the possibilities and impossibilitie GER:DB-EngrAppSci
3 units, Win (Wong, P)

EE 25Q. Electric Automobiles and Aircraft
(Stanford Introductory Seminar) (Same as AA 116N) Transportation accounts for nearly one-third of American energy use and greenhouse gas emissions and three-quarters of American oil consumption. It has crucial impacts on climate change, air pollution, resource depletion, and national security. Students wishing to address these issues will need to reconsider how we move, finding sustainable transportation solutions. This course will provide an introduction to the issue, covering the past and present of transportation and its impacts; examining alternative fuel proposals; and digging deeper into the most promising option: battery electric vehicles. Energy requirements of air, ground, and maritime transportation; design of electric motors, power control systems, drive trains, and batteries; and technologies for generating renewable energy. Two fun opportunities for hands-on experiences with electric cars. Prerequisites: Introduction to calculus and Physics AP or elementary mechanics.
3 units, Aut (Cox, D; Enge, P)

EE 60N. Man versus Nature: Coping with Disasters Using Space Technology
(Stanford Introductory Seminar) (Same as GEOPHYS 60N) Stanford Introductory Seminar. Preference to freshman. Natural hazards, such as earthquakes, volcanoes, floods, hurricanes, and fires, affect the lives of thousands of people worldwide everyday. Over the past twenty years developments in spaceborne imaging technology have made it possible to monitor and respond to such disasters much more rapidly than in the past, saving lives and money. Additionally, greater understanding of the physical processes involved allows us to anticipate and plan for mitigation of the consequences of the disasters. In this course we will explore these new tools, how they are applied to natural disasters, and learn how the remotely-sensed data are manipulated and analyzed. The technical material consists of a summary of basic geophysical properties of the Earth, their physical characteristics that can be sensed remotely, and the design of satellite systems to measure these phenomena and predict/mitigate natural hazards. GER:DB-EngrAppSci
4 units, Aut (Zebker, H)

ENGR 159Q. Japanese Companies and Japanese Society
(Stanford Introductory Seminar) (Same as MATSCI 159Q) Preference to sophomores. The structure of a Japanese company from the point of view of Japanese society. Visiting researchers from Japanese companies give presentations on their research enterprise. The Japanese research ethic. The home campus equivalent of a Kyoto SCTI course. GER:DB-SocSci

3 units, Spr (Sinclair, R)

ENGLISH 14Q. Tis All in Pieces: John Donne and the Early Modern World
(Stanford Introductory Seminar) One of the most innovative and dramatic poets in literary history, John Donne's writing bears the marks of the changes that were occurring on the threshold of the modern world, in such areas as science, astronomy, religion, exploration, theatre, and art. Donne's dramatic realism exerted a shaping influence on: modern poets as Browning, Eliot, and Rich; on contemporary composers such as Bob Dylan, Van Morrison, and Benjamin Britten; and on Pulitzer Prize-winning playwright Margaret Edson. Topics include Donne's work within the vibrant historical and cultural milieu of the early modern world and related developments in early modern art and theatre. GER:DB-Hum

2-3 units, Win (Brooks, H)

ENGLISH 22N. Virginia Woolf: Art and Politics
(Stanford Introductory Seminar) Introduction to Woolf's diverse oeuvres: her novels, essays, short stories, diaries, and letters focusing on how she devised an art form shaped by political consciousness but not subordinate to it. How, for Woolf, were art and politics, the private and the public, the artist and the activist conjoined. Navigation of the multiple intersections of Woolf's artistic experimentation and sociopolitical consciousness from 1917 to 1941. GER:DB-Hum

3 units, Aut (Staveley, A)

ENGLISH 62N. Eros in Modern American Poetry
(Stanford Introductory Seminar) Preference to freshmen. Anne Carson, treating love from Sappho to Socrates, shows how the Greeks derived their philosophy from the erotic poetic tradition. Readings include: Carson's poetry which locates erotic desire in the larger context of the desire for knowledge; classic Japanese haiku masters such as Basho; and William Carlos Williams, Louise Bogan, and C.K. Williams. GER:DB-Hum

3 units, Spr (Fields, K)

ENGLISH 65N. Contemporary Women Fiction Writers
(Stanford Introductory Seminar) Preference to freshmen. Novels and story collections by women writers whose work explores: domestic and global politics; love, sexuality, and orientation; and spirituality and its meanings. Readings includes Dandicant, Eisenberg, Munro, Morrison, O'Brien, and Erdrich. GER:DB-Hum

3 units, Aut (Tallent, E)

ENGLISH 73N. Conflict and Resolution in the Novel
(Stanford Introductory Seminar) Preference to freshmen. The social work of the novel, its strategies for articulating difference, and its capacity to objectify points of view and posit resolutions to ideological disputes. The novel as an artistic device, part of material history, and style of social consciousness. Its relationship to language and cultural systems of representation. Readings from Franz Kafka, Milan Kundera, Toni Morrison, Umberto Eco, and John Coetzee. GER:DB-Hum

3 units, Aut (Shloss, C)

ENGLISH 74N. Race and Ethnicity in Contemporary American Fiction: Boundaries and Border Crossings
(Stanford Introductory Seminar) (Same as ASNAMST 74N) The question of ""place"" and ""locality"" in studies of identity and racial formation. Goal is to engage and examine texts with a critical eye both toward the social contexts represented and to the imaginative aesthetic techniques that American writers of color offer to bring their fictional worlds to life. Theme of border hopping and boundary crossing in works by authors including Charles Johnson, Toni Morrison, Alejandro Morales, Julie Otsuka, Stephen Graham Jones, and Lan Samantha Chang. GER:DB-Hum

3 units, Win (Sohn, S)

ENGLISH 77N. Living in the Past: Italy in the Anglo-American Imagination
(Stanford Introductory Seminar) Preference to freshmen. Italy as metaphor, in depictions by British and American writers from Shakespeare and Byron to D.H.Lawrence and Robert Hellenga. GER:DB-Hum

3 units, Win (Evans, M)

ENGLISH 81N. Lyric Voice
(Stanford Introductory Seminar) Lyric poetry asks its reader to imagine a speaking voice. But whose voice inhabits the lyric poem? How have historical developments ¿ such as new printing technologies, the rise of liberal individualism, or the emergence of sound recording - influenced our sense of how a lyric should sound? Treatment of poems from a variety of historical periods while stressing the crucial role of the poetry of British Romanticism in shaping the modern sense of the lyric voice. GER:DB-Hum

3 units, Spr (Rovee, C)

ENGLISH 82Q. Shakespeare's Plays
(Stanford Introductory Seminar) Preference to sophomores. Eight representative plays; sonnets. Student papers provide topics for discussion. Students direct and perform scenes from the plays studied. GER:DB-Hum

5 units, Aut (Rebholz, R)

ENGLISH 103Q. Reading and Writing Poetry about Science
(Stanford Introductory Seminar) (Same as STS 103Q) Preference to sophomores. Students will study recent poetry inspired by the phenomena and history of the sciences in order to write such poems themselves. These poems bring sensuous human experience to bear on biology, ecology, neuroscience, physics, astronomy, and geology, as well as on technological advances and missteps. Poets such as Mark Doty, Jody Gladding, Albert Goldbarth, Jorie Graham, Sarah Lindsay, Adrienne Rich, W.S. Merwin, and C. K. Williams. Grounding in poetics, research in individually chosen areas of science, weekly analytical and creative writing. Enrollment limited to 12.

4 units, Win (Roberts, E; Rusk, L)

EESS 38N. The Worst Journey in the World: The Science, Literature, and History of Polar Exploration
(Stanford Introductory Seminar) (Same as EARTHSYS 38N, GES 38N) Preference to freshmen. The isolation of polar explorers under the harshest conditions on Earth, and the chronicles of their explorations and hardships dating to the 1500s for the Arctic and the 1700s for the Antarctic. Focus is on scientific and geographic achievements. Sources include The Worst Journey in the World by Apsley Cherry-Garrard who in 1911 participated in a midwinter Antarctic sledging trip to recover emperor penguin eggs. Class jointly authors essay on themes from such literature. Optional field trip into the high Sierra in December. (Dunbar) GER:DB-NatSci

3 units, Win (Dunbar, R)

EESS 46N. Exploring the Critical Interface between the Land and Monterey Bay: Elkhorn Slough
(Stanford Introductory Seminar) (Same as EARTHSYS 46N) Preference to freshmen. Field trips to sites in the Elkhorn Slough, a small agriculturally impacted estuary that opens into Monterey Bay, a model ecosystem for understanding the complexity of estuaries, and one of California's last remaining coastal wetlands. Readings include Jane Caffrey's Changes in a California Estuary: A Profile of Elkhorn Slough. Basics of biogeochemistry, microbiology, oceanography, ecology, pollution, and environmental management.

3 units, Spr (Francis, C)

EESS 57Q. Climate Change from the Past to the Future
(Stanford Introductory Seminar) (Same as EARTHSYS 57Q) Preference to sophomores. Numeric models to predict how climate responds to increase of greenhouse gases. Paleoclimate during times in Earth's history when greenhouse gas concentrations were elevated with respect to current concentrations. Predicted scenarios of climate models and how these models compare to known hyperthermal events in Earth history. Interactions and feedbacks among biosphere, hydrosphere, atmosphere, and lithosphere. Topics include long- and short-term carbon cycle, coupled biogeochemical cycles affected by and controlling climate change, and how the biosphere responds to climate change. Possible remediation strategies.

3 units, Aut (Chamberlain, P)

FEMST 188N. Imagining Women: Writers in Print and in Person
(Stanford Introductory Seminar) Gender roles, gender relations and sexual identity explored in contemporary literature and conversation with guest authors. Poetry and narrative examining relationships between race and gender set in 19th-21st centuries in The Phillippines, Jamaica, Japan, China and various parts of the U.S. Expository writing and oral skills are emphasized. Writing experience not necessary. GER:DB-Hum, EC-Gender
4-5 units, Win (Miner, V)

FEMST 191Q. Writing Women's Lives
(Stanford Introductory Seminar) Creative writing through dialogue focusing on prose about the lives of women in different cultures and generations. Novels, short stories, and micro-narrative including fiction and memoir. Students produce work using research, memory, imagination, and metaphor.
2 units, Aut (Miner, V)

FRENGEN 55N. After Epic: Romance, Lyric, and Novelistic Responses in Western European Literature
(Stanford Introductory Seminar) Stanford Introductory Seminar. Preference to freshmen. Exploration of the quest in diverse genres: medieval romance (Chrétien de Troyes), Ovidian fables (Marie de France), allegorical dream quests (Roman de la Rose), and the novel (Cervantes¿ Don Quixote). How do stories of bodily transformation or animal fables challenge epic narratives of patriarchy or moral transcendence, and grand narratives of civilization? How does the art of courtly love and medieval allegory replace the mythology of classical epics? Focus on close analysis of primary texts with secondary research.
3-4 units, Spr (Galvez, M)

FRENGEN 190Q. Parisian Cultures of the 19th and Early 20th Centuries
(Stanford Introductory Seminar) Preference to sophomores. Political, social, and cultural events in Paris from the Napoleonic era and the Romantic revolution to the 30s. The arts and letters of bourgeois, popular, and avant garde cultures. Illustrated with slides. GER:DB-Hum
4 units, Win (Bertrand, M)

GENE 109Q. Genomics: A Technical and Cultural Revolution
(Stanford Introductory Seminar) (Same as BIOMEDIN 109Q) Preference to sophomores. Concepts of genomics, high-throughput methods of data collection, and computational approaches to analysis of data. The social, ethical, and economic implications of genomic science. Students may focus on computational or social aspects of genomics.
3 units, Win (Altman, R)

GES 1BN. Introductory to Geology: California Desert Field Geology
(Stanford Introductory Seminar) California's Death Valley and Owens Valley are used as natural laboratories for studying active geologic processes and a billion years of earth history: ancient ocean sediments, mountain building, earthquake faulting, glacial landscapes, volcanic eruptions, hot springs and ore deposits, prehistoric climate changes, and historic human impacts. The course culminates in a 6-day field trip to these areas during Spring Break. Class lectures provide the basics of plate tectonics and physical geology. Laboratory exercises involve rock identification and interpreting topographic and geologic maps and remote sensing imagery. Camping and moderate hiking required. Limited enrollment. Only one of GES 1A, 1B, or 1C may be taken for credit. Recommended: high school chemistry. GER:DB-NatSci
4 units, Win (Mahood, G)

GES 38N. The Worst Journey in the World: The Science, Literature, and History of Polar Exploration
(Stanford Introductory Seminar) (Same as EESS 38N, EARTHSYS 38N) Preference to freshmen. The isolation of polar explorers under the harshest conditions on Earth, and the chronicles of their explorations and hardships dating to the 1500s for the Arctic and the 1700s for the Antarctic. Focus is on scientific and geographic achievements. Sources include The Worst Journey in the World by Apsley Cherry-Garrard who in 1911 participated in a midwinter Antarctic sledging trip to recover emperor penguin eggs. Class jointly authors essay on themes from such literature. Optional field trip into the high Sierra in December. (Dunbar) GER:DB-NatSci
3 units, Win (Dunbar, R)

GES 39N. Forensic Geoscience: Stanford CSI
(Stanford Introductory Seminar) Preference to freshmen. Geological principles, materials, and techniques indispensable to modern criminal investigations. Basic earth materials, their origin and variability, and how they can be used as evidence in criminal cases and investigations such as artifact provenance and environmental pollution. Sources include case-based, simulated forensic exercises and the local environments of the Stanford campus and greater Bay Area. Local field trips; research presentation and paper. GER:DB-NatSci
3 units, Aut (Maher, K)

GES 40N. Diamonds
(Stanford Introductory Seminar) Preference to freshmen. Topics include the historyof diamonds as gemstones, prospecting and mining, and their often tragic politics. How diamond samples provide clues for geologists to understand the Earth's deep interior and the origins of the solar system. Diamond's unique materials properties and efforts in synthesizing diamonds. GER:DB-NatSci
3 units, Spr (Mao, W)

GES 43Q. Environmental Problems
(Stanford Introductory Seminar) (Same as EARTHSYS 43Q) Preference to sophomores. Components of multidisciplinary environmental problems and ethical questions associated with decision making in the regulatory arena. Students lead discussions on environmental issues such as groundwater contamination from point and nonpoint sources, cumulative watershed effects related to timber and mining practices, acid rain, and subsurface disposal of nuclear waste. GER:DB-NatSci
3 units, Win (Loague, K)

GES 55Q. The California Gold Rush: Geologic Background and Environmental Impact
(Stanford Introductory Seminar) Preference to sophomores. Topics include: geologic processes that led to the concentration of gold in the river gravels and rocks of the Mother Lode region of California; and environmental impact of the Gold Rush due to population increase, mining operations, and high concentrations of arsenic and mercury in sediments from hard rock mining and milling operations. Recommended: introductory geology. GER:DB-NatSci
3 units, Win (Bird, D)

GEOPHYS 60N. Man versus Nature: Coping with Disasters Using Space Technology
(Stanford Introductory Seminar) (Same as EE 60N) Stanford Introductory Seminar. Preference to freshman. Natural hazards, such as earthquakes, volcanoes, floods, hurricanes, and fires, affect the lives of thousands of people worldwide everyday. Over the past twenty years developments in spaceborne imaging technology have made it possible to monitor and respond to such disasters much more rapidly than in the past, saving lives and money. Additionally, greater understanding of the physical processes involved allows us to anticipate and plan for mitigation of the consequences of the disasters. In this course we will explore these new tools, how they are applied to natural disasters, and learn how the remotely-sensed data are manipulated and analyzed. The technical material consists of a summary of basic geophysical properties of the Earth, their physical characteristics that can be sensed remotely, and the design of satellite systems to measure these phenomena and predict/mitigate natural hazards. GER:DB-EngrAppSci
4 units, Aut (Zebker, H)

GERGEN 104N. Resistance Writings in Nazi Germany
(Stanford Introductory Seminar) Preference to sophomores. The letters and diaries of individuals who resisted Nazi oppression and paid with their lives. Readings include the Scholl diaries, Bonhoeffer¿s letters and his Ethics, and letter exchanges from other crucial figures. No knowledge of German required; students may read texts in original if able. GER:DB-Hum

3 units, Win (Bernhardt, E)

GERGEN 122Q. The Culture of Pessimism in 19th- and 20th-Century Europe
(Stanford Introductory Seminar) European culture long relied on a narrative of inexorable human progress. Starting in the 19th century, this triumphalist narrative was shadowed by another tradition that rejected such trust in progress. The pessimistic tradition in Europe in literature, philosophy, the study of history, anthropology, and psychology; the distinction between pessimism in the fields of morality, culture, and intellectual life. Authors include Giacomo Leopardi, Arthur Schopenhauer, Lautréamont, T. S. Eliot, and Sigmund Freud. GER:DB-Hum

3-5 units, Spr (Daub, A)

GERLIT 123N. The Brothers Grimm and Their Fairy Tales
(Stanford Introductory Seminar) Preference to freshmen. Historical, biographical, linguistic, and literary look at the Kinder- and Hausmärchen of Jacob and Wilhelm Grimm. Readings from the fairy tales, plus materials in other media such as film and the visual arts. Small group performances of dramatized fairy tales. In German. Prerequisite: GERLANG 3 or equivalent. GER:DB-Hum

1-4 units, Spr (Robinson, O)

HRP 89Q. Introduction to Cross Cultural Issues in Medicine
(Stanford Introductory Seminar) Preference to sophomores. Introduction to social factors that impact health care delivery, such as ethnicity, immigration, language barriers, and patient service expectations. Focus is on developing a framework to understand culturally unique and non-English speaking populations in the health care system. GER:EC-AmerCul

3 units, Win (Corso, I)

HISTORY 6N. Utopia: History of Nowhere Land
(Stanford Introductory Seminar) What would the perfect society be? How would work be organized, and education, honor and profit be distributed? How would children be raised, and who would govern? Such questions have engaged philosophers, revolutionaries, and dreamers in every historical age. Examines utopian literature from ancient Greece through the modern age, focusing on the early modern period. GER:DB-Hum

4 units, Win (Stokes, L)

HISTORY 11N. The Roman Empire: Its Grandeur and Fall
(Stanford Introductory Seminar) (Same as CLASSHIS 24N) Preference to Freshmen. Prerequisite: IHUM 69A. Explore themes on the Roman Empire and its decline from the 1st through the 5th centuries C.E.. What was the political and military glue that held this diverse, multi-ethnic empire together? What were the bases of wealth and how was it distributed? What were the possibilities and limits of economic growth? How integrated was it in culture and religion? What were the causes and consequences of the conversion to Christianity? Why did the Empire fall in the West? How suitable is the analogy of the U.S. in the 21st century?

3 units, Spr (Saller, R)

HISTORY 20Q. Russia in the Early Modern European Imagination
(Stanford Introductory Seminar) Preference to sophomores. The contrast between the early modern image of Europe as free, civilized, democratic, rational, and clean against the notion of New World Indians, Turks, and Chinese as savage. The more difficult, contemporary problem regarding E. Europe and Russia which seemed both European and exotic. Readings concerning E. Europe and Russia from the Renaissance to the Enlightenment; how they construct a positive image of Europe and conversely a negative stereotype of E. Europe. Prerequisite: PWR 1. GER:DB-Hum, EC-GlobalCom

5 units, Win (Kollmann, N)

HISTORY 31Q. British History Revealed by the Arts of the 20th Century
(Stanford Introductory Seminar) Discusses various art forms as works of their own but more importantly in the context of this course how they relate to British society. Students will select a particular work of art within the genre for the week-- building, novel, poem, image, musical piece, movie, etc.-- and report how it illuminates the history of Britain in the first half of the 20th century. Preference to sophomores, then freshman.

4 units, Spr (Stansky, P)

HISTORY 35N. Industrial Revolution: History, Ethics & Consequences of Mod. Economic Development
(Stanford Introductory Seminar) Explores the enduring controversies surrounding the transformation of the British economy in the 18th century. Using iron, coal, steam, and cotton as examples, we will explore the historical and economic debates about its reach, speed, and relationship to other aspects of British and world history. Topics include: the social, political, environmental, and cultural consequences in Britain and the expanding British empire as well as an ethical assessment of the Industrial Revolution and the lessons it has offered for the theory and practice of economic development ever since. Readings will include historical and economic literature as well as contemporary accounts. GER:DB-SocSci

5 units, Spr (Satia, P)

HISTORY 36N. Gay Autobiography
(Stanford Introductory Seminar) Preference to freshmen. Gender, identity, and solidarity as represented in nine autobiographies: Isherwood, Ackerley, Duberman, Monette, Louganis, Barbin, Cammermeyer, Gingrich, and Lorde. To what degree do these writers view sexual orientation as a defining feature of their selves? Is there a difference between the way men and women view identity? What politics follow from these writers' experiences? GER:DB-Hum, EC-Gender

4 units, Spr (Robinson, P)

HISTORY 48Q. South Africa: Contested Transitions
(Stanford Introductory Seminar) Preference to sophomores. The inauguration of Nelson Mandela as president in May 1994 marked the end of an era and a way of life for S. Africa. The changes have been dramatic, yet the legacies of racism and inequality persist. Focus: overlapping and sharply contested transitions. Who advocates and opposes change? Why? What are their historical and social roots and strategies? How do people reconstruct their society? Historical and current sources, including films, novels, and the Internet. GER:DB-Hum, EC-GlobalCom

3 units, Win (Samoff, J)

HISTORY 58N. Thomas Jefferson and His World
(Stanford Introductory Seminar) Thomas Jefferson was the most cosmopolitan American of his age, yet he was also the one member of his generation about whom Americans continue to have the most vexed feelings. This seminar explores the many facets of Jefferson's life and personality, considering such topics as his political ideas and actions, his ideas about religion, education, property, race, and slavery, and the problem of applying moral judgment to historical actors.

4 units, Win (Rakove, J)

HISTORY 62N. The Atomic Bomb in Policy and History
(Stanford Introductory Seminar) Preference to freshmen. Emphasis is on declassified files from WW II and recent interpretations. Why did the U.S. drop A-bombs on Japan? Were there viable alternatives, and, if so, why were they not pursued? What did the use of the A-bombs mean then and later? How have postwar interpreters explained, and justified or criticized, the A-bombings? Approaches from history, international relations, American studies, political science, and ethics address the underlying conceptions, the roles of evidence, the logic and models of explanation, ethical values, and cultural/social influences. GER:DB-SocSci

5 units, Spr (Bernstein, B)

HISTORY 82N. Modern Islamic Movements
(Stanford Introductory Seminar) Muslim political mobilization in local and global settings. Topics include: Pan-Islam, the Muslim Brothers, Khomeinism, Hezbollah, al-Qaeda, the Taliban, and the geopolitics of social movements.

5 units, Aut (Crews, R)

HISTORY 95N. Mapping the World: Cartography and the Modern Imagination
(Stanford Introductory Seminar) Preference to freshmen. Focus is on cutting-edge research. Topics: the challenge of grasping the globe as a whole; geography's roots in empire; maps as propaganda and as commodities; the cultural production of scale; and the car-

tography of imaginery worlds.Sources include resources in the Green Library Special Collections and in the Stanford Spatial History Lab. GER:DB-SocSci

5 units, Spr (Wigen, K)

HUMBIO 82Q. The Omnivore's Dilemma - Or Is It?

(Stanford Introductory Seminar) The omnivore's dilemma- making the right food choices from the vast number possible. The health implications of our food choices. Why we make these choices- the positive and negative influences of the food industry, research in nutritional science, and public health policies and the resulting confusion about what we should eat. Discussion-based class with readings including ""In Defense of Food"" by M. Pollan and primary reference materials. Introduction to the scientific literature in human nutrition.

3 units, Aut (Endemann, G)

HUMBIO 84Q. Social Justice, Responsibility, Health

(Stanford Introductory Seminar) Preference to sophomores. Reducing health disparities among segments of the US population is an over-arching goal of the Centers for Disease Control and Prevention (CDC). Evidence for and cause of existing health disparities; criteria for calling a health disparity unjust; and assignment of responsibility for maintaining or recovering good health. Service Learning Course (certified by Haas Center).

4 units, Aut (Heaney, C)

HUMBIO 86Q. Love as a Force for Social Change

(Stanford Introductory Seminar) Preference to sophomores. Biological, psychological, religious, social and cultural perspectives on the concept of love. How love is conceptualized across cultures; love as the basis of many religions; different kinds of love; the biology of love; love as sickness; love and sex; the languages of love including art, literature, music, and poetry. Emphasis is on writing. Oral presentation. A requirement of this class is participation in public blogs.

3 units, Win (Murray, A)

HUMBIO 90Q. Contemporary Issues in Human Experimentation

(Stanford Introductory Seminar) Preference to sophomores. The guiding principles currently used to protect human subjects in terms of informed consent and protection of privacy; ethical issues relating to compensatory mechanisms for inherent risks; historical perspective and the development of the current mechanisms to safeguard the privacy and integrity of the individual; examples of use/abuse of human experimentation during medieval, Nazi, and modern times. Guest speakers currently performing human experiments or involved in approving such experimentation.

3 units, Aut (Constantinou, C)

HUMBIO 91Q. Neuroethology: The Neural Control of Behavior

(Stanford Introductory Seminar) Preference to sophomores. Animal behavior offers insights about evolutionary adaptations. The origins of the study of animal behavior and its development to the present. Discussion of original research papers. The use and misuse of parallels between animal and human behavior. Possible field trip to observe animals in their natural habitat. GER:DB-NatSci

3 units, Aut (Fernald, R)

HUMBIO 96Q. Injustice, Advocacy and Courage: The Path of Everyday Heroes

(Stanford Introductory Seminar) This course will study the paradigms of people of courage, action and energy who have fought against injustice by advocating for causes against great odds and at personal risk. The focus will be on everyday people who have taken action, often at great personal risk, not for ambition, but because of their convictions and steadfast commitment to their beliefs.

3 units, Win (Abrams, W)

HUMBIO 97Q. Sport, Exercise, and Health: Exploring Sports Medicine

(Stanford Introductory Seminar) (Same as ORTHO 97Q) Preference to sophomores. Sports medicine is the practice of clinical medicine at the interface between health and performance, competition and well-being. While sports medicine had its origins in providing care to athletes, medical advances developed in care of athletes exerted a great effect on the nature and quality of care to the broader community. Topics include sports injuries, medical conditions associated with sport and exercise, ethics, coaching, women's issues, fitness and health, and sports science. Case studies.

3 units, Aut (Matheson, G), Win (Matheson, G), Spr (Matheson, G)

HUMBIO 99Q. Becoming a Doctor: Readings from Medical School, Medical Training, Medical Practice

(Stanford Introductory Seminar) Preference to sophomores. For students considering medicine as a career. Goal is to acquaint students with medical school, training in medicine and surgery, and the practice of medicine and surgery. Topics include: how to pick a medical school and a residency; how medicine affects family life, especially children; the differences between surgical and medical specialties; the advantages and disadvantages among academic/teaching, pure research, group practice, HMO, hospital staff, or private practice; malpractice concerns; and financial considerations.

3 units, Aut (Zaroff, L)

ILAC 114N. Lyric Poetry

(Stanford Introductory Seminar) Preference to freshmen. For students who have successfully completed two years of college Spanish. Elements and expressive devices of lyric poetry: multidimensional language, denotation, connotation, image, metaphor, symbol, allegory, paradox, irony, meaning, idea, rhythm, and meter. Poets of Spain and Latin America of the late 19th and early 20th century including G. A. Bécquer, Rosalía de Castro, Rubén Darío, Miguel de Unamuno, Antonio Machado, García Lorca, Pablo Neruda, and Gabriela Mistral. In English and Spanish.

3-5 units, Aut (Predmore, M)

ILAC 117N. Film, Nation, Latinidad

(Stanford Introductory Seminar) (Same as CHICANST 117N, CSRE 117N) Examination of films from Spain, Mexico, and Latina/o USA that expand, trouble, contest, parody, or otherwise interrogate notions of national identity. Filmmakers may include Lourdes Portillo, Alejandro González Iñárritu, John Sayles, Maria Novaro, Pedro Almodóvar, and Gregory Nava.

3-4 units, Spr (Yarbro-Bejarano, Y)

ILAC 193Q. Spaces and Voices of Brazil through Film

(Stanford Introductory Seminar) (Same as PORTLANG 193Q) How a country is perceived and defines itself is a result of complex forces, and involves the reproduction of social relations and complex social constructions both on the part of those who live there and those who see it from a distance. The perceptions of what Brazil is and what defines the country has changed, but has conserved some defining traits. Introduction to the history, culture, politics, and artistic production of Brazil through feature films, documentaries, and readings. Movies include Banana is my Business, Black Orpheus, Olga, They Don't Use Black-Tie, City of God, Central Station, Gaijin, and Four Days in September. In English. GER:DB-Hum, EC-GlobalCom

3-4 units, Aut (Wiedemann, L)

JEWISHST 15N. Travels through the Afterlife

(Stanford Introductory Seminar) (Same as RELIGST 15N) Since the beginning of civilization, humans have refused to believe that physical death is the end of life and have sought in various ways to travel into the afterlife. We cannot know what lies beyond death, but there are other kinds of insights to be learned from these otherworldly journeys. The first part of the course will explore the origins and history of the afterlife, going back in time to ancient Egypt, Mesopotamia, Israel, Greece, and medieval Europe to survey these cultures' view of death and what lies beyond it. The second part of the course will investigate what has happened to belief in the afterlife in modern American culture. Our ultimate goal is to confront one of the most difficult aspects of life--our fear of death and oblivion--and also to explore the power of thought and imagination to move beyond the confines of mortality. GER:DB-Hum

4 units, Aut (Weitzman, S)

LINGUIST 5N. What's Your Accent? Investigations in Acoustic Phonetics

(Stanford Introductory Seminar) Preference to freshmen. Phonetic variation across accents of English; experimental design; practical experience examining accents of seminar participants; acoustic analysis of speech using Praat. GER:DB-SocSci

3 units, Win (Sumner, M)

LINGUIST 83N. Translation
(Stanford Introductory Seminar) Preference to sophomores. What is a translation? The increased need for translations in the modern world due to factors such as tourism and terrorism, localization and globalization, diplomacy and treaties, law and religion, and literature and science. How to meet this need; different kinds of translation for different purposes; what makes one translation better than another; why some texts are more difficult to translate than others. Can some of this work be done by machines? Are there things that cannot be said in some languages? GER:DB-SocSci
3 units, Aut (Kay, M)

MS&E 22Q. The Flaw of Averages
(Stanford Introductory Seminar) Uncertain assumptions in business and public policy are often replaced with single ¿best guess¿ or average numbers. This leads to a fallacy as fundamental as the belief that the earth is flat, which I call the Flaw of Averages. It states, in effect, that: plans based on average assumptions are wrong on average. This class will discuss mitigations of the flaw of averages using simulation and other methods from probability management.
3 units, Aut (Savage, S)

MS&E 92Q. International Environmental Policy
(Stanford Introductory Seminar) Preference to sophomores. Science, economics, and politics of international environmental policy. Current negotiations on global climate change, including actors and potential solutions. Sources include briefing materials used in international negotiations and the U.S. Congress.
4 units, Win (Weyant, J)

MS&E 93Q. Nuclear Weapons, Energy, Proliferation, and Terrorism
(Stanford Introductory Seminar) Preference to sophomores. What are nuclear weapons; what do they do? How are they different from other weapons? What drives proliferation of nuclear weapons? Why do countries want them? Can they be eliminated? What about Iran and North Korea? What role does nuclear energy play? Can it help combat global climate change? What are the risks of nuclear terrorism? Recommended: a course in international relations, engineering, or physical science. GER:DB-EngrAppSci, DB-EngrAppSci
3 units, Spr (Hecker, S)

MATSCI 81N. Bioengineering Materials to Heal the Body
(Stanford Introductory Seminar) Preference to freshmen. How scientists and engineers are designing new materials for surgeon to use in replacing body parts such as heart tissue or the spinal cord. How cells, in the body and transplanted stem cells, communicate with implanted materials. Real-world examples of materials developed for tissue engineering and regenerative medicine therapies. Students identify a clinically important disease or injury that requires a better material, research approaches to the problem, and debate possible engineering solutions. GER:DB-EngrAppSci
3 units, Win (Heilshorn, S)

MATSCI 159Q. Japanese Companies and Japanese Society
(Stanford Introductory Seminar) (Same as ENGR 159Q) Preference to sophomores. The structure of a Japanese company from the point of view of Japanese society. Visiting researchers from Japanese companies give presentations on their research enterprise. The Japanese research ethic. The home campus equivalent of a Kyoto SCTI course. GER:DB-SocSci
3 units, Spr (Sinclair, R)

MATH 87Q. Mathematics of Knots, Braids, Links, and Tangles
(Stanford Introductory Seminar) Preference to sophomores. Types of knots and how knots can be distinguished from one another by means of numerical or polynomial invariants. The geometry and algebra of braids, including their relationships to knots. Topology of surfaces. Brief summary of applications to biology, chemistry, and physics.
3 units, Win (Wieczorek, W)

ME 12N. The Jet Engine
(Stanford Introductory Seminar) Preference to freshmen. How a jet engine works; the technologies and analytical techniques required to understand them. Dynamics, thermodynamics, turbomachinery, combustion, advanced materials, cooling technologies, and control systems. Visits to research laboratories, examination of a partially disassembled engine, and probable operation of a small jet engine. Prerequisites: high school physics. GER:DB-EngrAppSci
3 units, Aut (Eaton, J)

ME 14N. How Stuff Is Made
(Stanford Introductory Seminar) The design and engineering of products and processes. Machined, fabric, food, and electrical goods. Tradeoffs in choice of serial, continuous, and batch fabrication. Final project: students research and create a web site about the engineering aspects of a product and its processes. Field trips to manufacturing facilities.
3 units, Aut (Pruitt, B)

ME 18Q. Teamology: Creative Teams and Individual Development
(Stanford Introductory Seminar) Preference to sophomores. Roles on a problem solving team that best suit individual creative characteristics. Two teams are formed for teaching experientially how to develop less conscious abilities from teammates creative in those roles. Reinforcement teams have members with similar personalities; problem solving teams are composed of people with maximally different personalities.
3 units, Aut (Wilde, D)

ME 21N. Renaissance Machine Design
(Stanford Introductory Seminar) Preference to freshmen. Technological innovations of the 1400s that accompanied the proliferation of monumental art and architecture by Brunelleschi, da Vinci, and others who designed machines and invented novel construction, fresco, and bronze-casting techniques. The social and political climate, from the perspective of a machine designer, that made possible and demanded engineering expertise from prominent artists. Hands-on projectsto provide a physical understanding of Renaissance-era engineering challenges and introduce the pleasure of creative engineering design. Technical background not required. GER:DB-EngrAppSci
3 units, Spr (Cutkosky, M)

ME 25N. Global Warming and Climate Change: Fact or Fiction
(Stanford Introductory Seminar) Preference to freshmen. Scientific arguments concerning debates between the view that anthropogenic activities are not causing global warming versus the view that these activities are responsible for a global warming that results in significant climate change. Consequences of increased demand for energy. Prerequisites: high school physics, chemistry, and biology.
3 units, Win (Bowman, C)

ME 26N. Think Like a Designer
(Stanford Introductory Seminar) Introduces students to techniques designers use to create highly innovative solutions across domains. The project-based class will emphasize approaches to problem identification and problem solving. Topics include need-finding, structured brainstorming, synthesis, rapid prototyping, and visual communication; field trips to a local design firm, a robotics lab, and a machining lab. A secondary goal of the seminar is to introduce students to the pleasures of creative design and hands-on development of tangible solutions.
3 units, Aut (Banerjee, S)

MED 70Q. Cancer and the Immune System
(Stanford Introductory Seminar) Preference to sophomores. Myths and facts surrounding the idea that the immune system is capable of recognizing malignant cells. The biological basis and function of effector arms of the immune system; how these mechanisms may be used to investigate the biological basis and potential therapy of cancer. How the immune system functions.
3 units, Win (Negrin, R)

MED 83Q. Ethical, Legal, and Social Dimensions of Stem Cell Research
(Stanford Introductory Seminar) Preference to sophomores. Ethical, legal, social, and economic dimensions of stem cell research such as the discovery of human embryonic stem cells and the international landscape of public policy. How stem cells work, their role in the upkeep of the human body, and current and future uses in medicine. Issues at the intersection of science and society such as human-animal hybrids, notions of justice in intellectual property law, distribution of health care, and the major ethical frameworks defining the debate.
3 units, Spr (Scott, C)

MED 88Q. Dilemmas in Current Medical Practice
(Stanford Introductory Seminar) Preference to sophomores. Social, political, scientific, and economic forces influencing medical practice. Spiraling costs, impaired access to health care, and disillusionment toward the health care system. Attempts by government and medical insurers to control costs through managed care and health maintenance organizations. Medical education and how it has affected the practice of medicine. Alternative health care, preventive medicine, and the doctor-patient relationship. The paradox of health in America: why do so many people who are healthy feel unhealthy? Mandatory observation of instructors in their medical practices.
3 units, Aut (Croke, J; Jones, H)

MED 108Q. Human Rights and Health
(Stanford Introductory Seminar) Preference to sophomores. History of human-rights law. International conventions and treaties on human rights as background for social and political changes that could improve the health of groups and individuals. Topics such as: regional conflict and health, the health status of refugees and internally displaced persons; child labor; trafficking in women and children; HIV/AIDS; torture; poverty, the environment and health; access to clean water; domestic violence and sexual assault; and international availability of drugs. Possible optional opportunities to observe at community sites where human rights and health are issues. Guest speakers from national and international NGOs including Doctors Without Borders; McMaster University Institute for Peace Studies; UC Berkeley Human Rights Center; Kiva. PowerPoint presentation on topic of choice required.
3 units, Win (Laws, A)

MUSIC 13Q. Classical Music and Politics: Western Music in Modern China
(Stanford Introductory Seminar) Preference to sophomores. Social history, cultural studies, China studies, international relations, and music. From the Italian Jesuit, Matteo Ricci who presented a clavichord to the Chinese emperor to the emergence of a modern generation of Chinese musicians. GER:DB-Hum, EC-GlobalCom
3 units, Spr (Cai, J)

MUSIC 17N. The Operas of Mozart
(Stanford Introductory Seminar) Preference to freshmen. Four of Mozart's mature operas, the earliest works in the operatic repertoire never to go out of fashion. What accounts for this extraordinary staying power? Focus on the history of their composition, performance, and reception, and their changing significance from Mozart's time to the present. GER:DB-Hum
3 units, Win (Berger, K)

MUSIC 17Q. Perspectives in North American Taiko
(Stanford Introductory Seminar) Preference to sophomores. Taiko, or Japanese drum, is a newcomer to the American music scene. Emergence of the first N. American taiko groups coincided with increased Japanese American activism, and to some it is symbolic of Japanese American identity. N. American taiko is associated with Japanese American Buddhism. Musical, cultural, historical, and political perspectives of taiko. Hands-on drumming. Japanese music and Japanese American history, and relations among performance, cultural expression, community, and identity. GER:DB-Hum, EC-AmerCul
4 units, Spr (Sano, S; Uyechi, L)

MUSIC 32N. Sculpting with Sounds, Images, and Words
(Stanford Introductory Seminar) Preference to freshmen. Contemporary culture abounds in multimedia forms, in which sounds, images and words are interwoven in unique ways. What are their individual and combined powers? How would you harness them? Participants face these questions in creative projects as well as through in-class viewing, analysis and debates, readings, guest lectures and student presentations. The seminar is taught at the Center for Computer Research in Music and Acoustics where students have access to new media technologies. GER:DB-Hum, DB-Hum
3 units, Win (Kapuscinski, J)

MUSIC 35N. A Union of Diversities: Charles Ives and American Musical Traditions
(Stanford Introductory Seminar) (Same as AMSTUD 35N) Preference to freshmen. The life and work of Charles Ives, and the polarized reception his compositions received. Music includes Ives' Victorian songs and his symphonic works; his philosophical and political writings, historic recordings, oral and photographic histories, and live performances. Hands-on work with original manuscripts and editions. Recommended: ability to read music. GER:DB-Hum
3 units, Spr (Barth, G)

MUSIC 38N. Singing Early Music
(Stanford Introductory Seminar) Preference to freshmen. 15th- and 16th-century musical repertories and their contexts; performance practice. GER:DB-Hum
3 units, Aut (Rodin, J)

NENS 67N. Intracellular Trafficking and Neurodegeneration
(Stanford Introductory Seminar) Preference to freshmen. Cell structures and functions, the intracellular trafficking system that maintains exchanges of materials and information inside cells, and clinical features and pathologies of neurodegenerative diseases. Techniques for examining cellular and subcellular structures, especially cytoskeletons; functional insights generated from structural explorations. Prerequisite: high school biology.
3 units, Spr (Yang, Y)

NSUR 70Q. Experimental Stroke
(Stanford Introductory Seminar) Preference to sophomores. How stroke is studied in the laboratory; advances in stroke research over the last two decades; and future directions. Topics include: cellular and molecular mechanisms of neuronal death and survival in the brain after stroke, including necrosis, apoptosis, inflammation, and cell signaling pathways; experimental tools for stroke treatment, such as gene therapy, cell therapy, hypothermia, preconditioning, postconditioning, and other pharmacological treatments; the gap and barrier between laboratory research and clinical translation.
2 units, Spr (Zhao, H)

ORTHO 97Q. Sport, Exercise, and Health: Exploring Sports Medicine
(Stanford Introductory Seminar) (Same as HUMBIO 97Q) Preference to sophomores. Sports medicine is the practice of clinical medicine at the interface between health and performance, competition and well-being. While sports medicine had its origins in providing care to athletes, medical advances developed in care of athletes exerted a great effect on the nature and quality of care to the broader community. Topics include sports injuries, medical conditions associated with sport and exercise, ethics, coaching, women's issues, fitness and health, and sports science. Case studies.
3 units, Aut (Matheson, G), Win (Matheson, G), Spr (Matheson,)

PATH 103Q. Lymphocyte Migration
(Stanford Introductory Seminar) Preference to sophomores. How lymphocytes leave the blood stream and enter tissues to participate in immune surveillance and the development of inflammation. Known as lymphocyte migration, this process involves a complex series of adhesion, activation and diapedesis events. The cellular mechanisms involved in lymphocyte migration, including lymphocyte adhesion molecules that interact with their counter-receptors on endothelial cells, and molecules, including cytokines and chemokines, that attract or activate lymphocytes. The roles of these molecules in the development of human diseases such as asthma, type 1 diabetes, and multiple sclerosis.
1 unit, Spr (Staff)

PHIL 8N. Free Will and Responsibility
(Stanford Introductory Seminar) In what sense are we, or might we be free agents? Is our freedom compatible with our being fully a part of the same natural, causal order that includes other physical and biological systems? What assumptions about freedom do we make when we hold people accountable morally and/or legally? When we hold people accountable, and so responsible, can we also see them as part of the natural, causal order? Or is there a deep incompatibility between these two ways of understanding ourselves? What assumptions about our freedom do we make when we deliberate about what to do? Are these assumptions in conflict with seeing ourselves as part of the natural, causal order? We will explore these and related questions primarily by way of careful study of recent and contemporary philosophical research on these matters. GER:DB-Hum
4 units, Win (Bratman, M)

PHIL 10N. Traveling Through Time
(Stanford Introductory Seminar) Is time travel possible? Yes. We do it every day, at the rate of one minute per minute. Relativity

theory even suggests a sense in which we could travel to the distant future. But could we travel to the past? If so, why aren't there any time travelers around? If not, is that because of some law of physics or because the very idea of time travel is incoherent? Suppose I were to go back in time and try to save JFK. Would I be bound to fail? What would stop me? Couldn't I just try again? If I eventually succeeded, would I thereby create a new branch in time? Or can we make sense of the idea of changing the past? What would happen if I tried to prevent my parents from having kids? What went on in the last season of Lost? We'll try to answer questions like these by looking at classic and contemporary work in the physics and philosophy of time, as well as pertinent case studies in fiction and film. Special guest speakers from the future are hereby

3 units, Spr (Burgess, A)

PHIL 11N. Skepticism

(Stanford Introductory Seminar) Preference to freshmen. Historical and contemporary philosophical perspectives on the limits of human knowledge of a mind-independent world and causal laws of nature. The nature and possibility of a priori knowledge. GER:DB-Hum

3 units, Aut (De Pierris, G)

PHYSICS 18N. Revolution in Concepts of the Cosmos

(Stanford Introductory Seminar) Preference to freshmen. The evolution of concepts of the cosmos and its origin, from the Copernican heliocentric model to the current view based on Hubble's discovery of expansion of the Universe. Recent cosmological observations and the relevance of laboratory experiments in particle physics. One night of observations at the Stanford Observatory. GER:DB-NatSci

3 units, Win (Roodman, A)

PHYSICS 43N. Understanding Electromagnetic Phenomena

(Stanford Introductory Seminar) Preference to freshmen. Expands on the material presented in 43; applications of concepts in electricity and magnetism to everyday phenomena and to topics in current physics research. Corequisite: 43 or advanced placement.

1 unit, Spr (Laughlin, R)

PHYSICS 45N. Advanced Topics in Light and Heat

(Stanford Introductory Seminar) Preference to freshmen. Expands on the subject matter presented in 45 to include optics and thermodynamics in everyday life, and applications from modern physics and astrophysics. Corequisite: 45 or advanced placement.

1 unit, Aut (Romani, R)

PHYSICS 80N. The Technical Aspects of Photography

(Stanford Introductory Seminar) Preference to freshmen and sophomores with some background in photography. How cameras record photographic images on film and electronically. Technical photographic processes to use cameras effectively. Camera types and their advantages, how lenses work and their limitations, camera shutters, light meters and the proper exposure of film, film types, depth of focus, control of the focal plane and perspective, and special strategies for macro and night photography. View cameras and range finder technical cameras. Students take photographs around campus. Prerequisite: high school physics.

3 units, Spr (Osheroff, D)

PHYSICS 83N. Physics in the 21st Century

(Stanford Introductory Seminar) Preference to freshmen. Current topics at the frontier of modern physics. Topics include subatomic particles and the standard model, symmetries in nature, extra dimensions of space, string theory, supersymmetry, the big bang theory of the origin of the universe, black holes, dark matter, and dark energy of the universe. Why the sun shines. Cosmology and inflation. GER:DB-NatSci

3 units, Aut (Kallosh, R)

POLISCI 24N. The Politics of Communication

(Stanford Introductory Seminar) This course will explore how elected officials present and explain their work to constituents and how this communication shapes American politics. Elected officials use press releases, newsletters, press conferences, and public events to connect with their constituents. While almost none of this communication is formally required, it can have important consequences on what elected officials do in office and how constituents perceive their representatives¿ activities. We will explore the strategies elected officials use when communicating with constituents and identify the consequences of these strategies on the process of representation.

5 units, Win (Grimmer, J)

POLISCI 24Q. Law and Order

(Stanford Introductory Seminar) Preference to sophomores. The role of law in promoting social order. What is the rule of law? How does it differ from the rule of men? What institutions best support the rule of law? Is a state needed to ensure that laws are enforced? Should victims be allowed to avenge wrongs? What is the relationship between justice and mercy?

3 units, Aut (Rutten, A)

POLISCI 25N. The US Congress in Historical and Comparative Perspective

(Stanford Introductory Seminar) This course traces the development of legislatures from their medieval European origins to the present, with primary emphasis on the case of the U.S. Congress. Students will learn about the early role played by assemblies in placing limits on royal power, especially via the ¿power of the purse.¿ About half the course will then turn to a more detailed consideration of the U.S. Congress¿s contemporary performance, analyzing how that performance is affected by procedural legacies from the past that affect most democratic legislatures worldwide.

5 units, Spr (Cox, G)

POLISCI 42Q. The Rwandan Genocide

(Stanford Introductory Seminar) Between April and July of 1994 more than 800,000 Rwandans, mostly Tutsi but also moderate Hutus, were killed in the most rapid genocide the world has ever known. The percentage of Rwandans killed in a single day of the genocide was ten times greater than the percentage of Americans killed in the entire Vietnam war. What could bring humans to plan and carry out such an orgy of violence? Could it have been prevented? Why did the United States or any other major power not intervene to stop the killing? To what extent should the United Nations be held accountable for the failure to end the genocide? What were the consequences of the genocide for the region of Central Africa? How did international actors respond to the challenges of reconstructing Rwanda after the killings? What has happened to the perpetrators of the genocide? This course surveys scholarly and journalistic accounts of the genocide to seek answers to these questions. This seminar will

5 units, Spr (Stedman, S)

POLISCI 43N. Oil, Regime Change, and Conflict

(Stanford Introductory Seminar) Preference to sophomores. Relationships among dependence on oil export, democratization and authoritarian rule, and rising conflict. Case studies including Venezuela, Nigeria, Iran, Iraq, Chad, and Indonesia. The resource curse: the impact of oil on a country's political economy. The relationship between such economic dependence and regime type. Why oil exporting countries are more prone to conflict and civil war than other countries. Research paper.

5 units, Win (Karl, T)

POLISCI 44N. Everyday Political Life in the Authoritarian Middle East

(Stanford Introductory Seminar) Preference to freshmen. How individuals respond to state policy, use informal channels to influence politics, are subject to forms of repression, and challenge authoritarian government through Islamic and other types of organizations. Focus is on Egypt, Iraq, Syria, Yemen, and Iran.

5 units, Aut (Blaydes, L)

POLISCI 48N. Muslim Integration into France

(Stanford Introductory Seminar) Preference to freshmen. The specter of Islamized societies haunts Europe. Fears of a fifth column of terrorism and a challenge by a population of religious fanatics to a largely secularized continent are recurrent in political dialogue from Spain to Austria. Are these worries a result of everyday xenophobia common to situations of foreign immigration or whether certain immigrants from the Middle East, Turkey, South Asia and Africa face special challenges due to their Islamic heritage? Sources include survey and experimental data from France, claims made about this immigrant population, readings in French political discourse and the European political context. Final paper that compares analysis of the data and claims in the literature.

5 units, Aut (Laitin, D)

PORTLANG 193Q. Spaces and Voices of Brazil through Film
(Stanford Introductory Seminar) (Same as ILAC 193Q) How a country is perceived and defines itself is a result of complex forces, and involves the reproduction of social relations and complex social constructions both on the part of those who live there and those who see it from a distance. The perceptions of what Brazil is and what defines the country has changed, but has conserved some defining traits. Introduction to the history, culture, politics, and artistic production of Brazil through feature films, documentaries, and readings. Movies include Banana is my Business, Black Orpheus, Olga, They Don't Use Black-Tie, City of God, Central Station, Gaijin, and Four Days in September. In English. GER:DB-Hum, EC-GlobalCom
3-4 units, Aut (Wiedemann, L)

PSYCH 7Q. Language Understanding by Children and Adults
(Stanford Introductory Seminar) How do we first learn to find meaning in strings of speech sounds? Understanding spoken language requires the rapid integration of acoustic information with linguistic knowledge and with conceptual knowledge based on experience with how things happen in the world. Topics include research on early development of language understanding and laboratory methods of how young children make sense of speech. Observations of preschool children and visits to Stanford laboratories. Might be repeatable for credit.
3 units, Aut (Fernald, A)

PSYCH 8N. The New Longevity
(Stanford Introductory Seminar) Adult development from the perspective of life-span theory, a conceptual framework that views development as a series of adaptations to physical, societal and individual resources and constraints. Students will learn about demographic and medical changes, ways that individuals typically change socially, emotionally and cognitively as they move through adulthood. An understanding of the conceptual foundations of the life-span approach and place aging of young people today in historical context. GER:DB-SocSci
3 units, Spr (Carstensen, L)

PSYCH 11N. Origin of Mental Life
(Stanford Introductory Seminar) Preference to freshmen. Mental life in infancy; how thinking originates. How do babies construe the objects, events, people, and language that surround them? Recent advances in psychological theory, hypotheses, and evidence about how the infant human mind develops. GER:DB-SocSci
3 units, Spr (Markman, E)

PSYCH 12N. Self Theories
(Stanford Introductory Seminar) Preference to freshmen. The impact of people's belief in a growing versus fixed self on their motivation and performance in school, business, sports, and relationships. How such theories develop and can be changed. GER:DB-SocSci
3 units, Aut (Dweck, C)

PSYCH 26N. Language Acquisition: Exploring the Minds of Children
(Stanford Introductory Seminar) Language is an extraordinary competence distinguishing humans from other species, yet there is debate about the role of biology in guiding language acquisition. Does language development follow an innate ¿bioprogram¿ or does it build on more general cognitive abilities, influenced by early experience? Topics include biological and experiential influences on the emergence of linguistic ability as children learn a first language. Discussions of theory and research, visits to Stanford laboratories and observations of very young language learners.
3 units, Win (Fernald, A)

PSYCH 28N. The Cultural Shaping of Mental Health and Illness
(Stanford Introductory Seminar) (Same as CSRE 28N) This seminar examines how our cultural ideas and practices shape our conceptions, perceptions, experiences, and treatment of emotional wellness and distress. We will read and discuss empirical research and case studies from psychology, anthropology, sociology, and medicine. Course requirements include weekly reading and thought papers, weekly discussion, and a final research project and presentation.
3 units, Win (Tsai, J)

RELIGST 10N. The Problem of God: Aquinas to the New Atheism
(Stanford Introductory Seminar) Critical inquiry the meaning and credibility of theistic belief through exemplary classic formulations, modern critics, and contemporary defenders. What has the idea of God meant to serious minds in the past? And in the modern or postmodern world? GER:DB-Hum
4 units, Win (Sockness, B)

RELIGST 11N. The Meaning of Life: Philosophical, Aesthetic, and Religious Perspectives
(Stanford Introductory Seminar) Raise ultimate questions about life. Yes, the unexamined life is not worth living, but also the unlived life is not worth examining. Students and professor examine their own lives in the light of questions that the readings and lectures bring up: 1. The big picture: Is there such a thing as ""the"" meaning of life? 2. What is entailed in making personal-existential sense of one's own life? 3. What constitutes the good life, lived in society? 4. How can a university education bear upon the search for a meaningful life? 5. What ""methods"" for or approches to life can one learn from studies in the humanities? After introductory lectures, the seminar studies a series of artworks, poems, diverse texts, and a film, all of which bear on the questions mentioned above -- works such: 1. Plato's Allegory of the Cave, from ""The Republic"" 2. Manet's ""A bar at the Folies Bergere"" 3. A comparison/contrast of Monet's early (1862) ""Still Life"" and van Gogh's late (18
3 units, Aut (Sheehan, T)

RELIGST 15N. Travels through the Afterlife
(Stanford Introductory Seminar) (Same as JEWISHST 15N) Since the beginning of civilization, humans have refused to believe that physical death is the end of life and have sought in various ways to travel into the afterlife. We cannot know what lies beyond death, but there are other kinds of insights to be learned from these otherworldly journeys. The first part of the course will explore the origins and history of the afterlife, going back in time to ancient Egypt, Mesopotamia, Israel, Greece, and medieval Europe to survey these cultures' view of death and what lies beyond it. The second part of the course will investigate what has happened to belief in the afterlife in modern American culture. Our ultimate goal is to confront one of the most difficult aspects of life--our fear of death and oblivion--and also to explore the power of thought and imagination to move beyond the confines of mortality. GER:DB-Hum
4 units, Aut (Weitzman, S)

STS 101Q. Technology in Contemporary Society
(Stanford Introductory Seminar) Preference to sophomores. Introduction to the STS field. The natures of science and technology and their relationship, what is most distinctive about these forces today, and how they have transformed and been affected by contemporary society. Social, cultural, and ethical issues raised by recent scientific and technological developments. Case studies from areas such as information technology and biotechnology, with emphasis on the contemporary U.S. Unexpected influences of science and technology on contemporary society and how social forces shape scientific and technological enterprises and their products. Enrollment limited to 12. GER:DB-SocSci
4 units, Aut (McGinn, R)

STS 103Q. Reading and Writing Poetry about Science
(Stanford Introductory Seminar) (Same as ENGLISH 103Q) Preference to sophomores. Students will study recent poetry inspired by the phenomena and history of the sciences in order to write such poems themselves. These poems bring sensuous human experience to bear on biology, ecology, neuroscience, physics, astronomy, and geology, as well as on technological advances and missteps. Poets such as Mark Doty, Jody Gladding, Albert Goldbarth, Jorie Graham, Sarah Lindsay, Adrienne Rich, W.S. Merwin, and C. K. Williams. Grounding in poetics, research in individually chosen areas of science, weekly analytical and creative writing. Enrollment limited to 12.
4 units, Win (Roberts, E; Rusk, L)

SOC 15N. The Transformation of Socialist Societies
(Stanford Introductory Seminar) Preference to freshmen. The impact of societal organization on the lives of ordinary people in socialist societies and in the new societies arising through the processes of political, economic, and social transformation. Do the concepts of democratization and marketization suffice to character-

ize ongoing changes? Enrollment limited to 16. GER:DB-SocSci, EC-GlobalCom

3 units, Win (Tuma, N)

SOC 16N. African Americans and Social Movements

(Stanford Introductory Seminar) Theory and research on African Americans' roles in post-Civil Rights, US social movements. Topics include women¿s right, LGBT rights, environmental movement, and contemporary political conservativism.

3 units, Spr (Fields, C)

SOC 22N. The Roots of Social Protest

(Stanford Introductory Seminar) Preference to freshmen. The conditions under which social protest occurs and the emergence, success, and viability of contemporary social movements. Examples include women's civil rights, ecology, and antiwar and anti-globilization movements in the U.S. and elsewhere. Sociological theories to explain the timing, location, and causes of mobilization; how researchers evaluate these theories. Comparison of tactics, trajectories, and outcomes. GER:DB-SocSci, EC-GlobalCom

3 units, Win (Olzak, S)

SOC 45Q. Understanding Race and Ethnicity in American Society

(Stanford Introductory Seminar) Preference to sophomores. Historical overview of race in America, race and violence, race and socioeconomic well-being, and the future of race relations in America. Enrollment limited to 16. GER:DB-SocSci

5 units, Aut (Snipp, C)

SPECLANG 198Q. Modern Greece in Film and Literature

(Stanford Introductory Seminar) Preference to sophomores. Cultural and literary highlights. Filmmakers include Kakoyannis, Dassen, Boulmetis, Angelopoulos, and Scorsese; readings from Eugenides, Gage, Kavafis, Kazantzakis, Samarakis, Seferis, and Elytis. GER:DB-Hum, DB-Hum, EC-GlobalCom

3-5 units, Aut (Prionas, E)

STATS 42Q. Undergraduate Admissions to Selective Universities: A Statistical Perspective

(Stanford Introductory Seminar) The goal is the building of a statistical model, based on applicant data, for predicting admission to selective universities. The model will consider factors such as gender, ethnicity, legacy status, public-private schooling, test scores, effects of early action, and athletics. Common misconceptions and statistical pitfalls are investigated. The applicant data are not those associated with any specific university.

2 units, Aut (Switzer, P)

SURG 68Q. Current Concepts in Transplantation

(Stanford Introductory Seminar) Preference to sophomores. Biological aspects of cell and organ transplantation, including issues that arise in the media. Diseases for which transplantation is a treatment, the state of the art in human transplantation, transplantation of animal tissue into humans (xenotransplantation), development of new tissue and organs in the laboratory (tissue engineering and cloning), and development of drugs and biological strategies to promote long-term survival of the tissue or organ (tolerance). How to write a scientific abstract, critique scientific literature, and research and present topics in contemporary transplantation.

3 units, Spr (Martinez, O; Krams, S)

SURG 70Q. Surgical Anatomy of the Hand: From Rodin to Reconstruction

(Stanford Introductory Seminar) The surgical anatomy of the hand is extremely complex in terms of structure and function. Exploration of the anatomy of the hand in different contexts: its representation in art forms, the historical development of the study of hand anatomy, current operative techniques for reconstruction, advances in tissue engineering, and the future of hand transplantation.

2 units, Win (Chang, J)

STATISTICS (STATS) COURSES

UNDERGRADUATE COURSES IN STATISTICS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

STATS 42Q. Undergraduate Admissions to Selective Universities: A Statistical Perspective

(Stanford Introductory Seminar) The goal is the building of a statistical model, based on applicant data, for predicting admission to selective universities. The model will consider factors such as gender, ethnicity, legacy status, public-private schooling, test scores, effects of early action, and athletics. Common misconceptions and statistical pitfalls are investigated. The applicant data are not those associated with any specific university.

2 units, Aut (Switzer, P)

STATS 50. Mathematics of Sports

(Same as MCS 100) The use of mathematics, statistics, and probability in the analysis of sports performance, sports records, and strategy. Topics include mathematical analysis of the physics of sports and the determinations of optimal strategies. New diagnostic statistics and strategies for each sport. Corequisite: STATS 116. GER:DB-Math

3 units, not given this year

STATS 60. Introduction to Statistical Methods: Precalculus

(Same as PSYCH 10, STATS 160) Techniques for organizing data, computing, and interpreting measures of central tendency, variability, and association. Estimation, confidence intervals, tests of hypotheses, t-tests, correlation, and regression. Possible topics: analysis of variance and chi-square tests, computer statistical packages. GER:DB-Math

5 units, Aut (Walther, G), Win (Thomas, E), Spr (Taylor, J), Sum (Richards, W)

STATS 110. Statistical Methods in Engineering and the Physical Sciences

Introduction to statistics for engineers and physical scientists. Topics: descriptive statistics, probability, interval estimation, tests of hypotheses, nonparametric methods, linear regression, analysis of variance, elementary experimental design. Prerequisite: one year of calculus. GER:DB-Math

4-5 units, Aut (Needell, D), Sum (Khalessi, S)

STATS 116. Theory of Probability

Probability spaces as models for phenomena with statistical regularity. Discrete spaces (binomial, hypergeometric, Poisson). Continuous spaces (normal, exponential) and densities. Random variables, expectation, independence, conditional probability. Introduction to the laws of large numbers and central limit theorem. Prerequisites: MATH 52 and familiarity with infinite series, or equivalent. GER:DB-Math

3-5 units, Aut (Siegmund, D), Spr (Donoho, D), Sum (D'Aristotile, A)

STATS 141. Biostatistics

(Same as BIO 141) Introductory statistical methods for biological data: describing data (numerical and graphical summaries); introduction to probability; and statistical inference (hypothesis tests and confidence intervals). Intermediate statistical methods: comparing groups (analysis of variance); analyzing associations (linear and logistic regression); and methods for categorical data (contingency tables and odds ratio). Course content integrated with statistical computing in R. GER:DB-Math

4-5 units, Aut (De la Cruz Cabrera, O), Win (Feldman, M)

STATS 166. Computational Biology
(Same as BIOMEDIN 366, STATS 366) Course is designed to introduce students from the mathematical, physical and engineering sciences to selected current issues in computational biology and bioinformatics. Topics: principles of gene expression measurement by microarrays and sequencing, methods to measure locations of protein-DNA interaction, the application of these techniques in the study of gene regulation, approaches to the mapping of genes by association studies. Emphasis is on the statistical and computational issues in these studies. Assignments: weekly reading of papers and a final project.
2-3 units, Spr (Wong, W)

STATS 167. Probability: Ten Great Ideas About Chance
(Same as PHIL 166, PHIL 266, STATS 267) Foundational approaches to thinking about chance in matters such as gambling, the law, and everyday affairs. Topics include: chance and decisions; the mathematics of chance; frequencies, symmetry, and chance; Bayes great idea; chance and psychology; misuses of chance; and harnessing chance. Emphasis is on the philosophical underpinnings and problems. Prerequisite: exposure to probability or a first course in statistics at the level of STATS 60 or 116. GER:DB-Math
4 units, not given this year

STATS 191. Introduction to Applied Statistics
Statistical tools for modern data analysis. Topics include regression and prediction, elements of the analysis of variance, bootstrap, and cross-validation. Emphasis is on conceptual rather than theoretical understanding. Applications to social/biological sciences. Student assignments/projects require use of the software package R. Recommended: 60, 110, or 141. GER:DB-Math
3-4 units, Win (Taylor, J)

STATS 199. Independent Study
For undergraduates.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN STATISTICS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

STATS 160. Introduction to Statistical Methods: Precalculus
(Same as PSYCH 10, STATS 60) Techniques for organizing data, computing, and interpreting measures of central tendency, variability, and association. Estimation, confidence intervals, tests of hypotheses, t-tests, correlation, and regression. Possible topics: analysis of variance and chi-square tests, computer statistical packages.
5 units, Aut (Walther, G), Win (Thomas, E), Spr (Taylor, J), Sum (Richards, W)

STATS 200. Introduction to Statistical Inference
Modern statistical concepts and procedures derived from a mathematical framework. Statistical inference, decision theory; point and interval estimation, tests of hypotheses; Neyman-Pearson theory. Bayesian analysis; maximum likelihood, large sample theory. Prerequisite: 116.
3 units, Win (Romano, J), Sum (Labo, P)

STATS 202. Data Mining and Analysis
Data mining is used to discover patterns and relationships in data. Emphasis is on large complex data sets such as those in very large databases or through web mining. Topics: decision trees, association rules, clustering, case based methods, and data visualization.
3 units, Aut (Holmes, S), Sum (Patel, R)

STATS 203. Introduction to Regression Models and Analysis of Variance
Modeling and interpretation of observational and experimental data using linear and nonlinear regression methods. Model building and selection methods. Multivariable analysis. Fixed and random effects models. Experimental design. Pre- or corequisite: 200.
3 units, Win (Staff)

STATS 205. Introduction to Nonparametric Statistics
Nonparametric analogs of the one- and two-sample t-tests and analysis of variance; the sign test, median test, Wilcoxon's tests, and the Kruskal-Wallis and Friedman tests, tests of independence. Nonparametric regression and nonparametric density estimation, modern nonparametric techniques, nonparametric confidence interval estimates.
3 units, not given this year

STATS 206. Applied Multivariate Analysis
Introduction to the statistical analysis of several quantitative measurements on each observational unit. Emphasis is on concepts, computer-intensive methods. Examples from economics, education, geology, psychology. Topics: multiple regression, multivariate analysis of variance, principal components, factor analysis, canonical correlations, multidimensional scaling, clustering. Pre- or corequisite: 200.
3 units, not given this year

STATS 207. Introduction to Time Series Analysis
Time series models used in economics and engineering. Trend fitting, autoregressive and moving average models and spectral analysis, Kalman filtering, and state-space models. Seasonality, transformations, and introduction to financial time series. Prerequisite: basic course in Statistics at the level of 200.
3 units, Spr (Donoho, D)

STATS 208. Introduction to the Bootstrap
The bootstrap is a computer-based method for assigning measures of accuracy to statistical estimates. By substituting computation in place of mathematical formulas, it permits the statistical analysis of complicated estimators. Topics: nonparametric assessment of standard errors, biases, and confidence intervals; related resampling methods including the jackknife, cross-validation, and permutation tests. Theory and applications. Prerequisite: course in statistics or probability.
3 units, Win (Efron, B)

STATS 209. Understanding Statistical Models and their Social Science Applications
(Same as EDUC 260X, HRP 239) Critical examination of statistical methods in social science applications, especially for cause and effect determinations. Topics: path analysis, multilevel models, matching and propensity score methods, analysis of covariance, instrumental variables, compliance, longitudinal data, mediating and moderating variables. See http://www-stat.stanford.edu/~rag/stat209. Prerequisite: intermediate-level statistical methods
3 units, Win (Rogosa, D)

STATS 211. Research Methods for Meta-Analysis
(Same as HRP 206) Meta-analysis as a quantitative method for combining the results of independent studies enabling researchers to evaluate available evidence. Examples of meta-analysis in medicine, education, and social and behavioral sciences. Statistical methods include nonparametric methods, contingency tables, regression and analysis of variance, and Bayesian methods. Project involving an existing published meta-analysis. Prerequisite: basic sequence in statistics.
3 units, Win (Olkin, I)

STATS 212. Applied Statistics with SAS
Data analysis and implementation of statistical tools in SAS. Topics: reading in and describing data, categorical data, dates and longitudinal data, correlation and regression, nonparametric comparisons, ANOVA, multiple regression, multivariate data analysis, using arrays and macros in SAS. Prerequisite: statistical techniques at the level of STATS 191 or 203; knowledge of SAS not required.
3 units, Sum (Walker, M)

STATS 215. Statistical Models in Biology
Poisson and renewal processes, Markov chains in discrete and continuous time, branching processes, diffusion. Applications to models of nucleotide evolution, recombination, the Wright-Fisher process, coalescence, genetic mapping, sequence analysis. Theoretical material approximately the same as in STATS 217, but emphasis is on examples drawn from applications in biology, especially genetics. Prerequisite: 116 or equivalent.
3 units, Aut (Zhang, N)

STATS 217. Introduction to Stochastic Processes
Discrete and continuous time Markov chains, poisson processes, random walks, branching processes, first passage times, recurrence

and transience, stationary distributions. Non-Statistics masters students may want to consider taking STATS 215 instead. Prerequisite: STATS 116 or consent of instructor.

3 units, Win (Rajaratnam, B), Sum (D'Aristotile, A)

STATS 218. Introduction to Stochastic Processes

Renewal theory, Brownian motion, Gaussian processes, second order processes, martingales.

3 units, Spr (Needell, D)

STATS 219. Stochastic Processes

(Same as MATH 136) Introduction to measure theory, Lp spaces and Hilbert spaces. Random variables, expectation, conditional expectation, conditional distribution. Uniform integrability, almost sure and Lp convergence. Stochastic processes: definition, stationarity, sample path continuity. Examples: random walk, Markov chains, Gaussian processes, Poisson processes, Martingales. Construction and basic properties of Brownian motion. Prerequisite: STATS 116 or MATH 151 or equivalent. Recommended: MATH 115 or equivalent.

3 units, Aut (Zuniga, J)

STATS 221. Introduction to Mathematical Finance

Interest rate and discounted value. Financial derivatives, hedging, and risk management. Stochastic models of financial markets, introduction to Ito calculus and stochastic differential equations. Black-Scholes pricing of European options. Optimal stopping and American options. Prerequisites: MATH 53, STATS 116, or equivalents.

3-4 units, Sum (Staff)

STATS 237. Time Series Modeling and Forecasting

Box-Jenkins and Bayesian approaches. State-space and change-point models. Application to revenue prediction, forecasting product demand, and other real world problems. Development and assessment of models and forecasts in practical applications. Hands-on experience with real data.

3 units, Sum (Staff)

STATS 239A. Workshop in Quantitative Finance

Topics of current interest.

1 unit, not given this year

STATS 239B. Workshop in Quantitative Finance

Topics of current interest. May be repeated for credit.

1 unit, not given this year

STATS 240. Statistical Methods in Finance

(SCPD students register for 240P.) Regression analysis and applications to investment models. Principal components and multivariate analysis. Likelihood inference and Bayesian methods. Financial time series. Estimation and modeling of volatilities. Statistical methods for portfolio management. Prerequisite: STATS 200 or equivalent.

3-4 units, Aut (Lai, T)

STATS 240P. Statistical Methods in Finance

For SCPD students; see 240.

3 units, Aut (Lai, T)

STATS 241. Financial Modeling Methodology and Applications

(SCPD students register for 241P.) Substantive and empirical modeling approaches. Statistical trading strategies and their evaluation. Nonparametric regression. Advanced time series modeling and forecasting. Options and interest rate markets. Credit markets and default risk modeling. Prerequisite: 240 or equivalent.

3-4 units, Win (Lai, T)

STATS 241P. Financial Modeling Methodology and Applications

For SCPD students; see 241.

3 units, Win (Lai, T)

STATS 242. Algorithmic Trading and Quantitative Strategies

An introduction to financial trading strategies based on methods of statistical arbitrage that can be automated. Methodologies related to high frequency data and stylized facts on asset returns; models of order book dynamics and order placement, dynamic trade planning with feedback; momentum strategies, pairs trading. Emphasis on developing and implementing models that reflect the market and behavioral patterns. Prerequisite: STATS 240 or equivalent.

3 units, Sum (Velu, R)

STATS 243. Statistical Models and Methods for Risk Management and Surveillance

(SCPD students register for 243P.) Banking and bank regulation. Market risk and credit risk, asset and liability management. Logistic regression, generalized linear models and generalized mixed models. Censored data and survival analysis, loan prepayment and default as competing risks. Back testing, stress testing and Monte Carlo methods. Risk surveillance, early warning and adaptive risk control methodologies. Prerequisite: STATS 240 or equivalent.

3-4 units, not given this year

STATS 243P. Statistical Models and Methods for Risk Management and Surveillance

For SCPD students; see 243.

3 units, not given this year

STATS 250. Mathematical Finance

(Same as MATH 238) Stochastic models of financial markets. Forward and futures contracts. European options and equivalent martingale measures. Hedging strategies and management of risk. Term structure models and interest rate derivatives. Optimal stopping and American options. Corequisites: MATH 236 and 227 or equivalent.

3 units, Win (Papanicolaou, G)

STATS 253. Spatial Statistics

(Same as STATS 352) Statistical descriptions of spatial variability, spatial random functions, grid models, spatial partitions, spatial sampling, linear and nonlinear interpolation and smoothing with error estimation, Bayes methods and pattern simulation from posterior distributions, multivariate spatial statistics, spatial classification, nonstationary spatial statistics, space-time statistics and estimation of time trends from monitoring data, spatial point patterns, models of attraction and repulsion. Applications to earth and environmental sciences, meteorology, astronomy, remote-sensing, ecology, materials.

3 units, not given this year

STATS 260A. Workshop in Biostatistics

(Same as HRP 260A) Applications of statistical techniques to current problems in medical science.

1-2 units, Aut (Olshen, R)

STATS 260B. Workshop in Biostatistics

(Same as HRP 260B) Applications of statistical techniques to current problems in medical science.

1-2 units, Win (Olshen, R)

STATS 260C. Workshop in Biostatistics

(Same as HRP 260C) Applications of statistical techniques to current problems in medical science.

1-2 units, Spr (Sabatti, C; Olshen, R)

STATS 261. Intermediate Biostatistics: Analysis of Discrete Data

(Same as BIOMEDIN 233, HRP 261) Methods for analyzing data from case-control and cross-sectional studies: the 2x2 table, chi-square test, Fisher's exact test, odds ratios, Mantel-Haenzel methods, stratification, tests for matched data, logistic regression, conditional logistic regression. Emphasis is on data analysis in SAS. Special topics: cross-fold validation and bootstrap inference.

3 units, Win (Sainani, K)

STATS 262. Intermediate Biostatistics: Regression, Prediction, Survival Analysis

(Same as HRP 262) Methods for analyzing longitudinal data. Topics include Kaplan-Meier methods, Cox regression, hazard ratios, time-dependent variables, longitudinal data structures, profile plots, missing data, modeling change, MANOVA, repeated-measures ANOVA, GEE, and mixed models. Emphasis is on practical applications. Prerequisites: basic ANOVA and linear regression.

3 units, Spr (Sainani, K)

STATS 267. Probability: Ten Great Ideas About Chance
(Same as PHIL 166, PHIL 266, STATS 167) Foundational approaches to thinking about chance in matters such as gambling, the law, and everyday affairs. Topics include: chance and decisions; the mathematics of chance; frequencies, symmetry, and chance; Bayes great idea; chance and psychology; misuses of chance; and harnessing chance. Emphasis is on the philosophical underpinnings and problems. Prerequisite: exposure to probability or a first course in statistics at the level of STATS 60 or 116.
4 units, not given this year

STATS 270. A Course in Bayesian Statistics
(Same as STATS 370) Advanced-level Bayesian statistics. Topics: Discussion of the mathematical and theoretical foundation for Bayesian inferential procedures. Examination of the construction of priors and the asymptotic properties of likelihoods and posterior densities. Discussion including but not limited to the case of finite dimensional parameter space. Prerequisite: familiarity with standard probability and multivariate distribution theory.
3 units, not given this year

STATS 290. Paradigms for Computing with Data
For Statistics graduate students and others whose research involves data analysis and development of associated computational software. Programming and computing techniques to support projects in data analysis and related research. Prerequisites: CS 106, and STATS 110 or 141, or equivalent background.
3 units, Win (Narasimhan, B; Chambers, J)

STATS 297. Practical Training
For students in the M.S. program in Financial Mathematics only. Students obtain employment in a relevant industrial or research activity to enhance their professional experience. May be repeated for credit once. Prerequisite: consent of adviser.
1-3 units, Aut (Lai, T), Win (Lai, T), Spr (Lai, T), Sum (Lai, T)

STATS 298. Industrial Research for Statisticians
Masters-level research as in 299, but must be conducted for an off-campus employer. Final report required. Prerequisite: enrollment in Statistics M.S. or Ph.D. program, prior to candidacy.
1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

STATS 299. Independent Study
For Statistics M.S. students only. Reading or research program under the supervision of a Statistics faculty member. May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

STATS 300. Advanced Topics in Statistics
May be repeated for credit.
3 units, Sum (Meulman, J)

STATS 300A. Theory of Statistics
Elementary decision theory; loss and risk functions, Bayes estimation; UMVU estimator, minimax estimators, shrinkage estimators. Hypothesis testing and confidence intervals: Neyman-Pearson theory; UMP tests and uniformly most accurate confidence intervals; use of unbiasedness and invariance to eliminate nuisance parameters. Large sample theory: basic convergence concepts; robustness; efficiency; contiguity, locally asymptotically normal experiments; convolution theorem; asymptotically UMP and maximin tests. Asymptotic theory of likelihood ratio and score tests. Rank permutation and randomization tests; jackknife, bootstrap, subsampling and other resampling methods. Further topics: sequential analysis, optimal experimental design, empirical processes with applications to statistics, Edgeworth expansions, density estimation, time series.
2-4 units, Aut (Walther, G)

STATS 300B. Theory of Statistics
Elementary decision theory; loss and risk functions, Bayes estimation; UMVU estimator, minimax estimators, shrinkage estimators. Hypothesis testing and confidence intervals: Neyman-Pearson theory; UMP tests and uniformly most accurate confidence intervals; use of unbiasedness and invariance to eliminate nuisance parameters. Large sample theory: basic convergence concepts; robustness; efficiency; contiguity, locally asymptotically normal experiments; convolution theorem; asymptotically UMP and maximin tests. Asymptotic theory of likelihood ratio and score tests. Rank permutation and randomization tests; jackknife, bootstrap, subsampling and other resampling methods. Further topics: sequential analysis, optimal experimental design, empirical processes with applications to statistics, Edgeworth expansions, density estimation, time series.
2-4 units, Win (Romano, J)

STATS 300C. Theory of Statistics
Decision theory formulation of statistical problems. Minimax, admissible procedures. Complete class theorems (""all"" minimax or admissible procedures are ""Bayes""), Bayes procedures, conjugate priors, hierarchical models. Bayesian non parametrics: di-aichlet, tail free, polya trees, bayesian sieves. Inconsistency of bayes rules.
2-4 units, Spr (Candes, E)

STATS 305. Introduction to Statistical Modeling
Review of univariate regression. Multiple regression. Geometry, subspaces, orthogonality, projections, normal equations, rank deficiency, estimable functions and Gauss-Markov theorem. Computation via QR decomposition, Gramm-Schmidt orthogonalization and the SVD. Interpreting coefficients, collinearity, graphical displays. Fits and the Hat matrix, leverage & influence, diagnostics, weighted least squares and resistance. Model selection, Cp/Aic and crossvalidation, stepwise, lasso. Basis expansions, splines. Multivariate normal distribution theory. ANOVA: Sources of measurements, fixed and random effects, randomization. Emphasis on problem sets involving substantive computations with data sets. Prerequisites: consent of instructor, 116, 200, applied statistics course, CS 106A, MATH 114.
2-4 units, Aut (Hastie, T)

STATS 306A. Methods for Applied Statistics
Regression modeling extended to categorical data. Logistic regression. Loglinear models. Generalized linear models. Discriminant analysis. Categorical data models from information retrieval and Internet modeling. Prerequisite: 305 or equivalent.
2-4 units, Win (Owen, A)

STATS 306B. Methods for Applied Statistics
Unsupervised learning techniques in statistics, machine learning, and data mining.
2-4 units, Spr (Tibshirani, R)

STATS 310A. Theory of Probability
(Same as MATH 230A) Mathematical tools: asymptotics, metric spaces; measure and integration; Lp spaces; some Hilbert spaces theory. Probability: independence, Borel-Cantelli lemmas, almost sure and Lp convergence, weak and strong laws of large numbers. Weak convergence and characteristic functions; central limit theorems; local limit theorems; Poisson convergence. Prerequisites: 116, MATH 171.
2-4 units, Aut (Montanari, A)

STATS 310B. Theory of Probability
(Same as MATH 230B) Stopping times, 0-1 laws, Kolmogorov consistency theorem. Uniform integrability. Radon-Nikodym theorem, branching processes, conditional expectation, discrete time martingales. Exchangeability. Large deviations. Laws of the iterated logarithm. Birkhoff's and Kingman's ergodic theorems. Recurrence, entropy. Prerequisite: 310A or MATH 230A.
2-4 units, Win (Diaconis, P)

STATS 310C. Theory of Probability
(Same as MATH 230C) Continuous time stochastic processes: martingales, Brownian motion, stationary independent increments, Markov jump processes and Gaussian processes. Invariance principle, random walks, LIL and functional CLT. Markov and strong Markov property. Infinitely divisible laws. Some ergodic theory. Prerequisite: 310B or MATH 230B.
2-4 units, Spr (Dembo, A)

STATS 314. Advanced Statistical Methods
Topic this year is multiple hypothesis testing. The demand for new methodology for the simultaneous testing of many hypotheses as driven by modern applications in genomics, imaging, astronomy, and finance. High dimensionality: how tests of many hypotheses may be considered simultaneously. Classical techniques, and recent developments. Stepwise methods, generalized error rates such as the false discovery rate, and the role of resampling. May be repeated for credit.
2-3 units, not given this year

STATS 315A. Modern Applied Statistics: Learning
Overview of supervised learning. Linear regression and related methods. Model selection, least angle regression and the lasso, stepwise methods. Classification. Linear discriminant analysis,

logistic regression, and support vector machines (SVMs). Basis expansions, splines and regularization. Kernel methods. Generalized additive models. Kernel smoothing. Gaussian mixtures and the EM algorithm. Model assessment and selection: crossvalidation and the bootstrap. Pathwise coordinate descent. Sparse graphical models. Prerequisites: STATS 305, 306A,B or consent of instructor.

2-3 units, Win (Hastie, T)

STATS 315B. Modern Applied Statistics: Data Mining
Two-part sequence. New techniques for predictive and descriptive learning using ideas that bridge gaps among statistics, computer science, and artificial intelligence. Emphasis is on statistical aspects of their application and integration with more standard statistical methodology. Predictive learning refers to estimating models from data with the goal of predicting future outcomes, in particular, regression and classification models. Descriptive learning is used to discover general patterns and relationships in data without a predictive goal, viewed from a statistical perspective as computer automated exploratory analysis of large complex data sets.

2-3 units, Spr (Friedman, J)

STATS 316. Stochastic Processes on Graphs
Local weak convergence, Gibbs measures on trees, cavity method, and replica symmetry breaking. Examples include random k-satisfiability, the assignment problem, spin glasses, and neural networks. Prerequisite: 310A or equivalent.

1-3 units, not given this year

STATS 317. Stochastic Processes
Semimartingales, stochastic integration, Ito's formula, Girsanov's theorem. Gaussian and related processes. Stationary/isotropic processes. Integral geometry and geometric probability. Maxima of random fields and applications to spatial statistics and imaging.

2-3 units, not given this year

STATS 318. Modern Markov Chains
Tools for understanding Markov chains as they arise in applications. Random walk on graphs, reversible Markov chains, Metropolis algorithm, Gibbs sampler, hybrid Monte Carlo, auxiliary variables, hit and run, Swedson-Wong algorithms, geometric theory, Poincare-Nash-Cheger-Log-Sobolov inequalities. Comparison techniques, coupling, stationary times, Harris recurrence, central limit theorems, and large deviations.

2-3 units, Aut (Diaconis, P)

STATS 319. Literature of Statistics
Literature study of topics in statistics and probability culminating in oral and written reports. May be repeated for credit.

1-3 units, Aut (Romano, J), Win (Owen, A), Spr (Walther, G)

STATS 320. Heterogeneous Data with Kernels
Mathematical and computational methods necessary to understanding analysis of heterogeneous data using generalized inner products and Kernels. For areas that need to integrate data from various sources, biology, environmental and chemical engineering, molecular biology, bioinformatics. Topics: Distances, inner products and duality. Multivariate projections. Complex heterogeneous data structures (networks, trees, categorical as well as multivariate continuous data). Canonical correlation analysis, canonical correspondence analysis. Kernel methods in Statistics. Representer theorem. Kernels on graphs. Kernel versions of standard statistical procedures. Data cubes and tensor methods.

3 units, Spr (Holmes, S)

STATS 322. Function Estimation in White Noise
Gaussian white noise model sequence space form. Hyperrectangles, quadratic convexity, and Pinsker's theorem. Minimax estimation on Lp balls and Besov spaces. Role of wavelets and unconditional bases. Linear and threshold estimators. Oracle inequalities. Optimal recovery and universal thresholding. Stein's unbiased risk estimator and threshold choice. Complexity penalized model selection. Connecting fast wavelet algorithms and theory. Beyond orthogonal bases.

2-3 units, Aut (Johnstone, I)

STATS 324. Multivariate Analysis
Classic multivariate statistics: properties of the multivariate normal distribution, determinants, volumes, projections, matrix square roots, the singular value decomposition; Wishart distributions, Hotelling's T-square; principal components, canonical correlations, Fisher's discriminant, the Cauchy projection formula.

2-3 units, not given this year

STATS 329. Large-Scale Simultaneous Inference
Estimation, testing, and prediction for microarray-like data. Modern scientific technologies, typified by microarrays and imaging devices, produce inference problems with thousands of parallel cases to consider simultaneously. Topics: empirical Bayes techniques, James-Stein estimation, large-scale simultaneous testing, false discovery rates, local fdr, proper choice of null hypothesis (theoretical, permutation, empirical nulls), power, effects of correlation on tests and estimation accuracy, prediction methods, related sets of cases (""enrichment""), effect size estimation. Theory and methods illustrated on a variety of large-scale data sets.

1-3 units, not given this year

STATS 330. An Introduction to Compressed Sensing
(Same as CME 362) Compressed sensing is a new data acquisition theory asserting that one can design nonadaptive sampling techniques that condense the information in a compressible signal into a small amount of data. This revelation may change the way engineers think about signal acquisition. Course covers fundamental theoretical ideas, numerical methods in large-scale convex optimization, hardware implementations, connections with statistical estimation in high dimensions, and extensions such as recovery of data matrices from few entries (famous Netflix Prize).

2-3 units, Spr (Staff)

STATS 338. Topics in Biostatistics
Data monitoring and interim analysis of clinical trials. Design of Phase I, II, III trials. Survival analysis. Longitudinal data analysis.

3 units, not given this year

STATS 345. Computational Algorithms for Statistical Genetics
(Same as GENE 245) Computational algorithms for human genetics research. Topics include: permutation, bootstrap, expectation maximization, hidden Markov model, and Markov chain Monte Carlo. Rationales and techniques illustrated with existing implementations commonly used in population genetics research, disease association studies, and genomics analysis. Prerequisite: GENE 244 or consent of instructor.

2-3 units, alternate years, not given this year

STATS 351A. An Introduction to Random Matrix Theory
(Same as MATH 231A) Patterns in the eigenvalue distribution of typical large matrices, which also show up in physics (energy distribution in scattering experiments), combinatorics (length of longest increasing subsequence), first passage percolation and number theory (zeros of the zeta function). Classical compact ensembles (random orthogonal matrices). The tools of determinental point processes.

3 units, not given this year

STATS 352. Spatial Statistics
(Same as STATS 253) Statistical descriptions of spatial variability, spatial random functions, grid models, spatial partitions, spatial sampling, linear and nonlinear interpolation and smoothing with error estimation, Bayes methods and pattern simulation from posterior distributions, multivariate spatial statistics, spatial classification, nonstationary spatial statistics, space-time statistics and estimation of time trends from monitoring data, spatial point patterns, models of attraction and repulsion. Applications to earth and environmental sciences, meteorology, astronomy, remote-sensing, ecology, materials.

3 units, not given this year

STATS 362. Monte Carlo
Random numbers and vectors: inversion, acceptance-rejection, copulas. Variance reduction: antithetics, stratification, control variates, importance sampling. MCMC: Markov chains, detailed balance, Metropolis-Hastings, random walk Metropolis, independence sampler, Gibbs sampling, slice sampler, hybrids of Gibbs and Metropolis, tempering. Sequential Monte Carlo. Quasi-Monte Carlo. Randomized quasi-Monte Carlo. Examples, problems and motivation from Bayesian statistics, machine learning, computational finance and graphics.

2-3 units, Aut (Owen, A)

STATS 366. Computational Biology
(Same as BIOMEDIN 366, STATS 166) Course is designed to introduce students from the mathematical, physical and engineering sciences to selected current issues in computational biology and bioinformatics. Topics: principles of gene expression measurement by microarrays and sequencing, methods to measure locations of protein-DNA interaction, the application of these tech-

niques in the study of gene regulation, approaches to the mapping of genes by association studies. Emphasis is on the statistical and computational issues in these studies. Assignments: weekly reading of papers and a final project.

2-3 units, Spr (Wong, W)

STATS 367. Statistical Models in Genetics

Statistical problems in association and linkage analysis of qualitative and quantitative traits in human and experimental populations; sequence alignment and analysis; population genetics/evolution (Wright-Fisher model, Kingman coalescent, models of nucleotide substitution); related computational algorithms. Prerequisites: knowledge of probability through elementary stochastic processes and statistics through likelihood theory.

2-3 units, Win (Siegmund, D)

STATS 370. A Course in Bayesian Statistics

(Same as STATS 270) Advanced-level Bayesian statistics. Topics: Discussion of the mathematical and theoretical foundation for Bayesian inferential procedures. Examination of the construction of priors and the asymptotic properties of likelihoods and posterior densities. Discussion including but not limited to the case of finite dimensional parameter space. Prerequisite: familiarity with standard probability and multivariate distribution theory.

3 units, not given this year

STATS 374. Large Deviations

(Same as MATH 234) Combinatorial estimates and the method of types. Large deviation probabilities for partial sums and for empirical distributions, Cramer's and Sanov's theorems and their Markov extensions. Applications in statistics, information theory, and statistical mechanics. Prerequisite: MATH 230A or STATS 310.

3 units, not given this year

STATS 375. Inference in Graphical Models

Graphical models as a unifying framework for describing the statistical relationships between large sets of variables; computing the marginal distribution of one or a few such variables. Focus is on sparse graphical structures, low-complexity algorithms, and their analysis. Topics include: variational inference; message passing algorithms; belief propagation; generalized belief propagation; survey propagation. Analysis techniques: correlation decay; distributional recursions. Applications from engineering, computer science, and statistics. Prerequisite: EE 278, STATS 116, or CS 228. Recommended: EE 376A or STATS 217.

3 units, Win (Montanari, A)

STATS 376A. Information Theory

(Same as EE 376A) The fundamental ideas of information theory. Entropy and intrinsic randomness. Data compression to the entropy limit. Huffman coding. Arithmetic coding. Channel capacity, the communication limit. Gaussian channels. Kolmogorov complexity. Asymptotic equipartition property. Information theory and Kelly gambling. Applications to communication and data compression. Prerequisite: EE178 or EE278 or STATS 116, or equivalent.

3 units, Win (Cover, T)

STATS 376B. Information Theory

(Same as EE 376B) Rate distortion theory and Kolmogorov complexity. Information theory and statistics. Method of types. Stein's lemma. AEP. Information capacity of networks. Slepian-Wolf theorem. Optimal investment and information theory. Universal portfolios and universal data compression. Maximum entropy and Burg's theorem. Prerequisite: EE376A.

3 units, Spr (Cover, T)

STATS 390. Consulting Workshop

Skills required of practicing statistical consultants, including exposure to statistical applications. Students participate as consultants in the department's drop-in consulting service, analyze client data, and prepare formal written reports. Seminar provides supervised experience in short term consulting. May be repeated for credit. Prerequisites: course work in applied statistics or data analysis, and consent of instructor.

1-3 units, Aut (Owen, A), Win (Taylor, J), Spr (Olshen, R), Sum (Staff)

STATS 398. Industrial Research for Statisticians

Doctoral research as in 298, but must be conducted for an off-campus employer. Final report required. May be repeated for credit. Prerequisite: Statistics Ph.D. candidate.

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

STATS 399. Research

Research work as distinguished from independent study of nonresearch character listed in 199. May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

STATS 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

STATS 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

STRUCTURAL BIOLOGY (SBIO) COURSES

UNDERGRADUATE COURSES IN STRUCTURAL BIOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

SBIO 199. Undergraduate Research

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN STRUCTURAL BIOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

SBIO 228. Computational Structural Biology

(Same as BIOPHYS 228) Interatomic forces and interactions such as electrostatics and hydrophobicity, and protein structure in terms of amino acid properties, local chain conformation, secondary structure, domains, and families of folds. How protein motion can be simulated. Bioinformatics introduced in terms of methods that compare proteins via their amino acid sequences and their three-dimensional structures. Structure prediction via simple comparative modeling. How to detect and model remote homologues. Predicting the structure of a protein from knowledge of its amino acid sequence. Via Internet.

3 units, not given this year

SBIO 241. Biological Macromolecules

(Same as BIOC 241, BIOPHYS 241) The physical and chemical basis of macromolecular function. Forces that stabilize biopolymers with three-dimensional structures and their functional implications. Thermodynamics, molecular forces, structure and kinetics of enzymatic and diffusional processes, and relationship to their practical application in experimental design and interpretation. Biological function and the level of individual molecular interactions and at the level of complex processes. Case studies in lecture and discussion of classic and current literature. Enrollment limited to 40. Prerequisites: None; background in biochemistry and physical chemistry preferred but material available for those with deficiency; undergraduates with consent of instructor only.

3-5 units, Aut (Herschlag, D; Ferrell, J; Block, S; Weis, W; Garcia, K; Puglisi, J)

SBIO 242. Methods in Molecular Biophysics

(Same as BIOPHYS 242) Experimental methods in molecular biophysics from theoretical and practical standpoints. Emphasis is on X-ray diffraction, nuclear magnetic resonance, and fluorescence spectcroscopy. Prerequisite: physical chemistry or consent of instructor.

3 units, Win (Staff)

SBIO 274. Topics in Nucleic Acid Structure and Function

Principles of nucleic acid structure and function. Methods for investigating nucleic acid structure. Limited to graduate students and postdoctoral fellows in structural biology. Prerequisite: consent of instructor.

2 units, not given this year

SBIO 299. Directed Reading in Structural Biology

Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SBIO 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SBIO 399. Graduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SBIO 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SBIO 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

STRUCTURED LIBERAL EDUCATION (SLE) COURSES

UNDERGRADUATE COURSES IN STRUCTURED LIBERAL EDUCATION

Primarily for undergraduates; graduate students may enroll with consent of adviser.

SLE 91. Structured Liberal Education
Three quarter sequence; restricted to and required of SLE students. Comprehensive study of the intellectual foundations of the western tradition in dialogue with eastern, indigenous, and postcolonial perspectives. The cultural foundations of western civilization in ancient Greece, Rome, and the Middle East, with attention to Buddhist and Hindu counterparts and the questions these traditions address in common. Texts and authors include Homer, Plato, Aristotle, Greek tragedy, Sappho, the Hebrew Bible, the New Testament, Saint Augustine, and texts from Hindu and Buddhist traditions. GER:DB-Hum, IHUM-1
9 units, Aut (Lougee Chappell, C; Watkins, G)

SLE 92. Structured Liberal Education
Three quarter sequence; restricted to and required of SLE students. Comprehensive study of the intellectual foundations of the western tradition in dialogue with eastern, indigenous, and postcolonial perspectives. The foundations of the modern world, from late antiquity through the Middle Ages, the Renaissance, the Enlightenment, and the Scientific Revolution. Authors include Dante, Descartes, Shakespeare, and texts from Chinese and Islamic traditions. GER:DB-Hum, IHUM-2
9 units, Win (Lougee Chappell, C; Watkins, G)

SLE 93. Structured Liberal Education
Three quarter sequence; restricted to and required of SLE students. Comprehensive study of the intellectual foundations of the western tradition in dialogue with eastern, indigenous, and postcolonial perspectives. Modernity as a period in intellectual history and a problem in the human sciences. Authors include Marx, Nietzsche, Freud, Kafka, Woolf, Eliot, and Sartre. GER:DB-Hum, IHUM-3
10 units, Spr (Lougee Chappell, C; Watkins, G)

SLE 199. Teaching SLE
1 unit, Aut (Watkins, G), Win (Watkins, G; Lougee Chappell, C), Spr (Watkins, G; Lougee Chappell, C)

SURGERY (SURG) COURSES

UNDERGRADUATE COURSES IN SURGERY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

SURG 68Q. Current Concepts in Transplantation
(Stanford Introductory Seminar) Preference to sophomores. Biological aspects of cell and organ transplantation, including issues that arise in the media. Diseases for which transplantation is a treatment, the state of the art in human transplantation, transplantation of animal tissue into humans (xenotransplantation), development of new tissue and organs in the laboratory (tissue engineering and cloning), and development of drugs and biological strategies to promote long-term survival of the tissue or organ (tolerance). How to write a scientific abstract, critique scientific literature, and research and present topics in contemporary transplantation.
3 units, Spr (Martinez, O; Krams, S)

SURG 70Q. Surgical Anatomy of the Hand: From Rodin to Reconstruction
(Stanford Introductory Seminar) The surgical anatomy of the hand is extremely complex in terms of structure and function. Exploration of the anatomy of the hand in different contexts: its representation in art forms, the historical development of the study of hand anatomy, current operative techniques for reconstruction, advances in tissue engineering, and the future of hand transplantation.
2 units, Win (Chang, J)

SURG 101. Regional Study of Human Structure
Preference to seniors. Lectures in regional anatomy and dissection of the human cadaver; the anatomy of the trunk and limbs through the dissection process, excluding the head and neck.
5 units, Win (Gosling, J; Whitmore, I)

SURG 111A. Emergency Medical Technician (EMT-1): Training and Application
(Same as SURG 211A) (Graduate students register for 211A.) Basics of life support outside the hospital setting; readiness training for emergencies on- or off-campus. Topics include emergency patient assessments, and cardiac, respiratory, and neurological emergencies. Lectures, practicals, and applications. Upon completion of SURG 111A,B,C or 211A,B,C, students are eligible to sit for the National Registry EMT licensure exam. Prerequisites: CPR certification; application (see http://surg211.stanford.edu), and consent of instructor.
3 units, Aut (Gilbert, G; D'Souza, P)

SURG 111B. Emergency Medical Technician (EMT-1): Training and Application
(Same as SURG 211B) (Graduate students register for 211B.) Continuation of 111A/211A. Approach to traumatic injuries. Topics include head, neck, and trunk injuries, bleeding and shock, burn emergencies, and environmental emergencies. Lectures, practicals, and applications. Upon completion of SURG 111A,B,C or 211A,B,C, students are eligible to sit for the National Registry EMT licensure exam. Prerequisite: 111A/211A and consent of instructor.
3 units, Win (Gilbert, G; D'Souza, P)

SURG 111C. Emergency Medical Technician (EMT-1): Training and Application
(Same as SURG 211C) (Graduate students register for 211C.) Continuation of 111B/211B. Special topics in EMS; topics include pediatric, obstetric, and gynecologic emergencies, EMS operations, mass casualty incidents, and assault. Lectures, practicals, and applications. Upon completion of SURG 111A,B,C or 211A,B,C, students are eligible to sit for the National Registry EMT certification exam. Prerequisite: 111B/211B, CPR-PR certification, and consent of instructor.
3 units, Spr (Gilbert, G; D'Souza, P)

SURG 112A. Advanced Reading and Teaching for the EMT-1
(Same as SURG 212A) Advanced Topics in EMS and training in teaching BLS skills (Graduate students register for 212A.) Topics include advanced airway and stroke management, abdominal emergencies, and prehospital pharmacology. Prerequisites: SURG 111/211 A-C (or equivalent EMT-Basic certification), CPR for the Professional Rescuer certification, and consent of instructor. May be repeated for credit.
2-3 units, Aut (Gilbert, G; D'Souza, P)

SURG 112B. Advanced Reading and Teaching for the EMT-1
(Same as SURG 212B) Advanced Topics in EMS and training in teaching BLS skills. (Graduate students register for 212B.) Topics include advanced assessment and treatment of the undifferentiated trauma patient (including advanced airway management, monitoring, and evaluation) and prehospital care in nontraditional locations. Prerequisites: SURG 111/211 A-C (or equivalent EMT-Basic certification), CPR for the Professional Rescuer certification, and consent of instructor. May be repeated for credit.
2-3 units, Win (Gilbert, G; D'Souza, P; Espinoza, N)

SURG 112C. Advanced Reading and Teaching for the EMT-1
(Same as SURG 212C) Advanced Topics in EMS and training in teaching BLS skills. (Graduate students register for 212C.) Topics include advanced assessment and treatment of patients in difficult and advanced situations - mass casualty incidents, assaults, pediatrics; and advanced emergency skills - ultrasound, suturing. Prerequisites: SURG 111/211 A-C (or equivalent EMT-Basic certification), CPR for the Professional Rescuer certification, and consent of instructor. May be repeated for credit.

2-3 units, Spr (Gilbert, G; D'Souza, P)

SURG 150. Principles and Practice of International Medical Humanitarianism in Surgery
(Same as SURG 250) Open to undergraduate, graduate, and medical students. Focus is on understanding ethical theory behind humanitarianism (utilitarianism, global health equity, and basic human rights), the growing role of surgery in international health, and social innovation and business in the health care sector. Summer internship opportunities for international health service with subsidized travel for top students. Guest speakers include world-renowned physicians, CEOs, and social-medical entrepreneurs.

4 units, Aut (Samagh, S; Samagh, S; Laub, D; Chang, J)

SURG 199. Undergraduate Research
Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN SURGERY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

SURG 201. Basic Cardiac Life Support
All medical students must be certified in Basic Cardiac Life Support before the end of the first (autumn) quarter. Students who provide documentation of certification received within six months prior to the date of matriculation will be exempted from the requirement. The course teaches one- and two-rescuer CPR, management of an obstructed airway, and CPR for infants and children. Upon completion of the course, students receive an American Heart Association certificate in BLS.

1 unit, Aut (Smith-Coggins, R)

SURG 203A. Human Anatomy
Introduction to human structure and function presented from a medical perspective. Introduction to the physical examination and frequently-used medical imaging techniques. Students are required to attend lectures, actively participate in seminar groups, and engage in dissection of the human body in the anatomy laboratory. Surgery 203A presents structure of the thorax, abdomen, pelvis and limbs.

11 units, Aut (Gosling, J; Whitmore, I)

SURG 203B. Human Anatomy
Continues the introduction to human structure and function from a medical perspective, the physical examination, and frequently-used medical imaging techniques. Students are required to attend lectures, actively participate in seminar groups, and engage in dissection of the human body in the anatomy laboratory. Surgery 203B presents structure of the head, neck and back.

4 units, Win (Gosling, J; Whitmore, I)

SURG 204. Introduction to Surgery and Surgical Techniques
Innovative introduction to the various aspects of surgery directed at pre-clinical MD students. Students participate in interactive clinical surgical scenarios animated by attending physicians. Covers the spectrum of surgical specialties. Includes scrubbing techniques, basic instrument handling, and the opportunity to scrub in on operations at Stanford Hospital.

1 unit, Aut (Greco, R; Wasterlain, A)

SURG 205. Advanced Suturing Techniques
Builds upon skills taught in the Surgical Interest Group's introductory suturing workshops. Techniques such as suturing in a hole, suturing different tissues, and hand, instrument and laparoscopic knot tying.

1 unit, Aut (Wehner, M; Visser, B)

SURG 208. Plastic Surgery Tutorial
Diagnosis, theory, and practice of plastic and reconstructive surgery. Limited to two students per faculty member.

2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SURG 209. Plastic Surgery
Students participate in plastic and reconstructive surgery as functioning members of the clinical team. Students are exposed to operative surgery, emergency and trauma care, evaluation of operative candidates in the outpatient setting, and also attend teaching conferences. Limited to four students. Prerequisite: completion of first year or clinical experience.

1-18 units, Aut (Chang, J; Schendel, S; Lorenz, H; Longaker, M; Gurtner, G; Girod, S; Hentz, V; Lee, G), Win (Chang, J; Schendel, S; Lorenz, H; Longaker, M; Gurtner, G; Girod, S; Hentz, V; Lee, G), Spr (Chang, J; Girod, S; Gurtner, G; Hentz, V; Lee, G;

SURG 211A. Emergency Medical Technician (EMT-1): Training and Application
(Same as SURG 111A) (Graduate students register for 211A.) Basics of life support outside the hospital setting; readiness training for emergencies on- or off-campus. Topics include emergency patient assessments, and cardiac, respiratory, and neurological emergencies. Lectures, practicals, and applications. Upon completion of SURG 111A,B,C or 211A,B,C, students are eligible to sit for the National Registry EMT licensure exam. Prerequisites: CPR certification; application (see http://surg211.stanford.edu), and consent of instructor.

3 units, Aut (Gilbert, G; D'Souza, P)

SURG 211B. Emergency Medical Technician (EMT-1): Training and Application
(Same as SURG 111B) (Graduate students register for 211B.) Continuation of 111A/211A. Approach to traumatic injuries. Topics include head, neck, and trunk injuries, bleeding and shock, burn emergencies, and environmental emergencies. Lectures, practicals, and applications. Upon completion of SURG 111A,B,C or 211A,B,C, students are eligible to sit for the National Registry EMT licensure exam. Prerequisite: 111A/211A and consent of instructor.

3 units, Win (Gilbert, G; D'Souza, P)

SURG 211C. Emergency Medical Technician (EMT-1): Training and Application
(Same as SURG 111C) (Graduate students register for 211C.) Continuation of 111B/211B. Special topics in EMS; topics include pediatric, obstetric, and gynecologic emergencies, EMS operations, mass casualty incidents, and assault. Lectures, practicals, and applications. Upon completion of SURG 111A,B,C or 211A,B,C, students are eligible to sit for the National Registry EMT certification exam. Prerequisite: 111B/211B, CPR-PR certification, and consent of instructor.

3 units, Spr (Gilbert, G; D'Souza, P)

SURG 212A. Advanced Reading and Teaching for the EMT-1
(Same as SURG 112A) Advanced Topics in EMS and training in teaching BLS skills (Graduate students register for 212A.) Topics include advanced airway and stroke management, abdominal emergencies, and prehospital pharmacology. Prerequisites: SURG 111/211 A-C (or equivalent EMT-Basic certification), CPR for the Professional Rescuer certification, and consent of instructor. May be repeated for credit.

2-3 units, Aut (Gilbert, G; D'Souza, P)

SURG 212B. Advanced Reading and Teaching for the EMT-1
(Same as SURG 112B) Advanced Topics in EMS and training in teaching BLS skills. (Graduate students register for 212B.) Topics include advanced assessment and treatment of the undifferentiated trauma patient (including advanced airway management, monitoring, and evaluation) and prehospital care in nontraditional locations. Prerequisites: SURG 111/211 A-C (or equivalent EMT-Basic certification), CPR for the Professional Rescuer certification, and consent of instructor. May be repeated for credit.

2-3 units, Win (Gilbert, G; D'Souza, P; Espinoza, N)

SURG 212C. Advanced Reading and Teaching for the EMT-1
(Same as SURG 112C) Advanced Topics in EMS and training in teaching BLS skills. (Graduate students register for 212C.) Topics include advanced assessment and treatment of patients in difficult and advanced situations - mass casualty incidents, assaults, pediatrics; and advanced emergency skills - ultrasound, suturing. Prerequisites: SURG 111/211 A-C (or equivalent EMT-Basic certification), CPR for the Professional Rescuer certification, and consent of instructor. May be repeated for credit.

2-3 units, Spr (Gilbert, G; D'Souza, P)

SURG 220. Emergency Medicine: Introduction
The specialty of emergency medicine and initial care of emergency patients, both in the pre-hospital phase and in the emergency department. Lectures and/or practical sessions cover: patient assessment; the initial management of the multiple trauma patient; and common medical emergencies, such as poisoning, asthma, and chest pain. Students taking the course for 1 unit must have 50% class attendance and pass the final exam; 2 units constitutes 70% class attendance and passing the final exam; 3 units includes participation in emergency department observation shifts; 4 units requires 90% attendance and includes both observation and EMS ride-alongs.

1-4 units, Aut (Mahadevan, S; Ma, J; Chiao, A)

SURG 223. Wilderness Medicine
Open to all students. Wilderness-related illnesses and injuries; a framework for evaluation and treatment of emergencies in the backcountry. Hands-on clinical skills. Topics include high altitude medicine, hypothermia, envenomations, search and rescue, improvisation, and survival medicine. Includes opportunity for certification in Wilderness First Aid (WFA).

4 units, Spr (Lipman, G; Weiss, E)

SURG 225. Transplantation Science
Offers medical students a more in-depth understanding of the field of transplantation. Develops an understanding of transplant immunology, tissue typing, immunopharmacology, and transplant pathology. Includes such topics as heart and heart/lung transplantation, kidney/pancreas transplantation, liver transplantation, bone marrow transplantation, and donor issues. Focus is on the field of transplantation as it relates to preoperative care and management of patients prior to transplantation as well as the long term care and follow-up of patients. Guest speakers. Prerequisites: SURG 218 (Anatomy); BIOC 200 (may be taken concurrently).

1 unit, alternate years, not given this year

SURG 228. Introduction to Vascular Disease and Treatment
Develops basic interventional skills using hands-on endovascular simulation in multiple vascular beds. Designed for students interested in careers in vascular surgery, interventional cardiology, interventional radiology, and vascular medicine. Topics: peripheral vascular disease, angiography, SFA interventions, aortoiliac disease; visceral vascular disease and renal interventions, cerebrovascular disease and carotid intervention lab; frontiers in vascular disease. Prerequisite: completion of first year of medical school.

1 unit, Aut (Lee, J; Lilo, E), Win (Lee, J; Lilo, E)

SURG 229. Advanced Vascular Disease and Treatment
Designed for students interested in careers in vascular surgery and vascular medicine. Expands upon the basic physiology, pathology, and skills learned in SURG 228. Topics: renal disease, cerebrovascular disease and carotid interventions, AAA disease and intervention, DVT disease, the future of vascular surgery. Centered on simulation based learning, student presentations, and discussion. Prerequisite: SURG 228

1 unit, Spr (Lee, J; Lilo, E)

SURG 230. Obesity in America
Prevalence and effects of the obesity epidemic in America and the growing prevalence of associated comorbidities such as diabetes, hypertension, hyperlipidemia, sleep apnea, and joint problems. Risk factors, multi-disciplinary treatment options, the role of food in society, patients' perspectives, and current research in the field. Includes fieldtrips to grocery stores and restaurants.

1 unit, Win (Morton, J; Ahmed, S)

SURG 231. Healthcare in Developing Countries: Haiti and Beyond
Lunchtime lecture series open to all students. Aims to answer the deceptively simple question: How can we improve health in the devoping world? Topics range from water sanitation to supply-side incentivization, from family planning to war zone surgery. Students gain useful skills for experience in international medicine. MD students are eligible to apply for a sub-internship in surgery at Hopital Albert Schweitzer in Dechapelle, Haiti.

1 unit, Spr (Greco, R; Leroux, E)

SURG 250. Principles and Practice of International Medical Humanitarianism in Surgery
(Same as SURG 150) Open to undergraduate, graduate, and medical students. Focus is on understanding ethical theory behind humanitarianism (utilitarianism, global health equity, and basic human rights), the growing role of surgery in international health, and social innovation and business in the health care sector. Summer internship opportunities for international health service with subsidized travel for top students. Guest speakers include world-renowned physicians, CEOs, and social-medical entrepreneurs.

4 units, Aut (Samagh, S; Samagh, S; Laub, D; Chang, J)

SURG 254. Operative Anatomy and Techniques
For preclinical students; provides a background in and integrates knowledge of surgical anatomy and therapy. Surgical or operative anatomy differs from gross anatomy in that the area exposed during surgery may be limited, the dissection may require exposing other seemingly unrelated anatomic structures with unique landmarks, and the procedure may require unusual technical facility. The course provides an opportunity for students to understand the goals of representative surgical procedures (translating pathophysiology to surgical decision making to actual incision). Students learn surgical skills and perform the dissection of a number of commonly performed operations in the cadaver laboratory. The course emphasizes hands-on participation in surgical procedures in the laboratory and is taught by attending physicians in general, cardiothoracic, vascular, plastic, head and neck, urologic, and orthopedic surgery.

1 unit, Win (Fann, J; Johannet, P; Srivastava, S)

SURG 280. Early Clinical Experience in Surgery
Provides an observational experience in a surgery specialty. Prerequisite: consent of instructor.

1-2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SURG 296. Individual Work: Human Anatomy
Carried out under the supervision of one or more members of the staff. Prerequisite: consent of instructor.

1-18 units, Aut (Whitmore, I; Gosling, J), Win (Whitmore, I; Gosling, J), Spr (Whitmore, I; Gosling, J), Sum (Whitmore, I; Gosling, J)

SURG 299. Directed Reading in Surgery
Consists of studies in progress, including cardiovascular and circulatory problems; gastric physiology; hemostatic disorders; homotransplantation; liver disorders; orthopedic pathology; bone growth; radiation injury; immunology, bacteriology, pathology, and physiology of the eye; physiological optics; comparative ophthalmology; neurophysiology of hearing; spatial orientation and disorientation; nasal function; and psychophysics of sensation. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SURG 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SURG 399. Graduate Research
Students undertake investigations sponsored by individual faculty members.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SYMBOLIC SYSTEMS (SYMSYS) COURSES

UNDERGRADUATE COURSES IN SYMBOLIC SYSTEMS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

SYMSYS 100. Introduction to Cognitive and Information Sciences
(Same as LINGUIST 144, PHIL 190, PSYCH 132) The history, foundations, and accomplishments of the cognitive sciences, including presentations by leading Stanford researchers in artificial intelligence, linguistics, philosophy, and psychology. Overview of the issues addressed in the Symbolic Systems major. GER:DB-SocSci

4 units, Spr (McClelland, J; van Benthem, J)

SYMSYS 145. Cognition in Interaction Design
Interactive systems from the standpoint of human cognition. Topics include skill acquisition, complex learning, reasoning, language, perception, methods in usability testing, special computational techniques such as intelligent and adaptive interfaces, and design for people with cognitive disabilities. Students conduct analyses of real world problems of their own choosing and redesign/analyze a project of an interactive system. GER:DB-SocSci
3 units, Win (Shrager, J)

SYMSYS 170. Decision Behavior: Theory and Evidence
(Same as SYMSYS 270) Introduction to the study of judgment and decision making, relating theory and evidence from disciplines such as psychology, economics, statistics, neuroscience, and philosophy. The development and critique of Homo economicus as a model of human behavior, and more recent theories based on empirical findings. Recommended: background in formal reasoning.
3-4 units, not given this year

SYMSYS 190. Senior Honors Tutorial
Under the supervision of their faculty honors adviser, students work on their senior honors project. May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SYMSYS 191. Senior Honors Seminar
Recommended for seniors doing an honors project. Under the leadership of the Symbolic Systems program coordinator, students discuss, and present their honors project.
1 unit, Aut (Davies, T)

SYMSYS 196. Independent Study
Independent work under the supervision of a faculty member. Can be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN SYMBOLIC SYSTEMS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

SYMSYS 200. Symbolic Systems in Practice
Applying a Symbolic Systems education at Stanford and outside. The basics of research and practice. Students develop and present a project, and investigate different career paths, including academic, industrial, professional, and public service, through interviews with alumni.
2-3 units, Aut (Davies, T), Spr (Davies, T)

SYMSYS 201. ICT, Society, and Democracy
The impact of information and communication technologies on social and political life. Interdisciplinary. Classic and contemporary readings focusing on topics such as social networks, virtual versus face-to-face communication, the public sphere, voting technology, and collaborative production.
3 units, not given this year

SYMSYS 206. Topics in the Philosophy of Neuroscience
Preference to Undergraduates. Focus is literature in philosophy and neuroscience whose topics include perception, memory, neurophenomenology, sensorimotor accounts of consciousness, computational models, and eliminativism, among others. Prerequisites: Familiarity with philosophy (Phil 80) or neuroscience.
3 units, Win (Skokowski, P)

SYMSYS 209. Battles Over Bits
The changing nature of information in the Internet age and its relationship to human behavior. Philosophical assumptions underlying practices such as open source software development, file sharing, common carriage, and community wireless networks, contrasted with arguments for protecting private and commercial interests such as software patents, copy protection, copyright infringement lawsuits, and regulatory barriers. Theory and evidence from disciplines including psychology, economics, computer science, law, and political science. Prerequisite: PSYCH 40, 55, 70, or SYMBSYS 202.
3 units, not given this year

SYMSYS 210. Learning Facial Emotions: Art and Psychology
Artistic and psychological learning approaches to emotion recognition from facial expressions. The advantages of learning by drawing from live models when there are cognitive deficits due to aging, autism, or Aspergers. Comparative analysis uses brain studies, learning theory, and human-computer interaction. Psychological and artistic training methods for emotion recognition. Studio component conveys the art drawing approach. Prerequisites: PSYCH 1 or consent of instructor.
3 units, not given this year

SYMSYS 211. Learning Facial Emotions: Art, Psychology, Human-Computer Interaction
Learning to recognize facial emotions by drawing a live model versus the psychology method of using classified images of subtle and micro expressions. Dimensions of analysis include cognitive modeling and neuroscience. The design of human-computer interaction systems for people with cognitive deficits such as autism and Aspergers, which integrate the art and psychology approaches using methods such as robot heads, avatars, and facial recognition software. Prerequisites: PSYCH 1 or consent of instructor.
3 units, not given this year

SYMSYS 270. Decision Behavior: Theory and Evidence
(Same as SYMSYS 170) Introduction to the study of judgment and decision making, relating theory and evidence from disciplines such as psychology, economics, statistics, neuroscience, and philosophy. The development and critique of Homo economicus as a model of human behavior, and more recent theories based on empirical findings. Recommended: background in formal reasoning.
3-4 units, not given this year

SYMSYS 280. Symbolic Systems Research Seminar
A mixture of public lectures of interest to Symbolic Systems students (the Symbolic Systems Forum) and student-led meetings to discuss research in Symbolic Systems. Can be repeated for credit. Required for master's students in Symbolic Systems during each quarter of enrollment, but encouraged for undergraduate majors also.
1 unit, Aut (Davies, T), Win (Davies, T), Spr (Davies, T)

SYMSYS 290. Master's Degree Project
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

SYMSYS 291. Master's Program Seminar
Enrollment limited to students in the Symbolic Systems M.S. degree program. May be repeated for credit.
1 unit, Aut (Davies, T), Win (Davies, T), Spr (Davies, T)

TIBETAN LANGUAGE (TIBETLNG) COURSES

UNDERGRADUATE COURSES IN TIBETAN LANGUAGE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

TIBETLNG 1. First-Year Tibetan, First Quarter
Grammar, reading, and composition. Tibetan culture and the Tibetan view of reality.
3 units, Aut (Clark, R)

TIBETLNG 2. First Year Tibetan, Second Quarter
Continuation of 1.
3 units, Win (Clark, R)

TIBETLNG 3. First Year Tibetan, Third Quarter
Continuation of 2.
3 units, Spr (Clark, R)

TIBETLNG 199. Individual Work
May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

GRADUATE COURSES IN TIBETAN LANGUAGE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

TIBETLNG 395. Graduate Studies in Tibetan
May be repeated for credit. Prerequisite: consent of instructor.
2-5 units, Aut (Staff), Win (Staff), Spr (Staff)

URBAN STUDIES (URBANST) COURSES

UNDERGRADUATE COURSES IN URBAN STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

URBANST 110. Introduction to Urban Studies
The study of cities and urban civilization. History of urbanization and current issues such as suburbanization, racial discrimination, globalization, terrorism, and the environment. Public policies designed to address these issues. GER:DB-SocSci, EC-AmerCul
4 units, Aut (Stout, F), Win (Stout, F), Spr (Kahan, M)

URBANST 111. Urban Politics
(Same as POLISCI 121, PUBLPOL 133) The major actors, institutions, processes, and policies of sub-state government in the U.S., emphasizing city general-purpose governments through a comparative examination of historical and contemporary politics. Issues related to federalism, representation, voting, race, poverty, housing, and finances. Prerequisite: POLISCI 2 or consent of instructor. GER:DB-SocSci
5 units, Aut (Gale, D)

URBANST 112. The Urban Underclass
(Same as SOC 149, SOC 249) (Graduate students register for 249.) Recent research and theory on the urban underclass, including evidence on the concentration of African Americans in urban ghettos, and the debate surrounding the causes of poverty in urban settings. Ethnic/racial conflict, residential segregation, and changes in the family structure of the urban poor. GER:DB-SocSci, EC-AmerCul
5 units, Win (Rosenfeld, M)

URBANST 113. Introduction to Urban Design: Contemporary Urban Design in Theory and Practice
Comparative studies in neighborhood conservation, inner city regeneration, and growth policies for metropolitan regions. Lect-disc and research focusing on case studies from North America and abroad, team urban design projects. Two class workshops in San Francisco Sat Jan 15 and Jan 29. Terms: Win | Units: 5 | UG Reqs: GER:DBSocSci | Grading: Letter (ABCD/NP) Instructors: Gast, G. GER:DB-SocSci
5 units, Win (Gast, G)

URBANST 114. Cities in Comparative Perspective
(Same as ANTHRO 126) Core course for Urban Studies majors. The city as interdisciplinary object. Discourses about cities such as the projects, practices, plans, representations, and sensibilities that combine to create what people know about urban spaces. Local, national, and transnational spatial scales. Conversations across regional boundaries; geographies of difference. Case studies. GER:DB-SocSci
5 units, Aut (Ebron, P; Roque, A)

URBANST 115. Urban Sustainability: Long-Term Archaeological Perspectives
(Same as CLASSGEN 123, CLASSGEN 223) Comparative and archaeological view of urban design and sustainability. How fast changing cities challenge human relationships with nature. Innovation and change, growth, industrial development, the consumption of goods and materials. Five millennia of city life including Near Eastern city states, Graeco-Roman antiquity, the Indus Valley, and the Americas.
3-5 units, Spr (Shanks, M)

URBANST 123. Approaching Research and the Community
Comparative perspective on research with communities and basic overview of research methodologies, with an emphasis on the principles and practices of doing community-based research as a collaborative enterprise between academic researchers and community members. How academic scholarship can be made useful to communities. How service experiences and interests can be used to develop research questions in collaboration with communities and serve as a starting point for developing senior theses or other independent research projects.
2 units, Aut (Visconti, V), Spr (Visconti, V)

URBANST 126. Spirituality and Nonviolent Urban and Social Transformation
(Same as RELIGST 162) A life of engagement in social transformation is often built on a foundation of spiritual and religious commitments. Case studies of nonviolent social change agents including Rosa Parks in the civil rights movement, César Chávez in the labor movement, and WIlliam Sloane Coffin in the peace movement; the religious and spiritual underpinnings of their commitments. Theory and principles of nonviolence. Films and readings. Service learning component includes placements in organizations engaged in social transformation. Service Learning Course (certified by Haas Center). GER:DB-Hum
5 units, not given this year

URBANST 127. Community Planning Workshop
Students work in teams to conduct research, analyze and evaluate alternatives, and make recommendations for possible solutions to local community development issues. Students work with community partners to blend theory and practice to accomplish a community based project.
4-5 units, not given next year

URBANST 127. COMMUNITY PLANNING WORKSHOP
4-5 units, not given this year

URBANST 128. Community Mapping Practicum
Students will use mapping techniques to explore community planning and policy issues in Redwood City. Focusing on building other skills including teamwork, writing, and oral communication. GIS is not a prerequisite.
4 units, not given this year

URBANST 131. Social Innovation and the Social Entrepreneur
Invited lecture series. Perspectives and endeavors of thought leaders and entrepreneurs who address social needs in the U.S. and internationally through private for-profit and nonprofit organizations, nongovernmental organizations, or public institutions.
1 unit, Aut (Edwards, M)

URBANST 132. Concepts and Analytic Skills for the Social Sector
How to create and grow innovative, non-profit and for-profit ventures which have the primary goal of solving social and environmental problems. Topics include organizational mission, strategy, marketing, financing and evaluation. Opportunities and limits of methods from the for-profit sector to meet social goals. Perspectives from the field of social entrepreneurship. Focus is on integrating theory with practical applications. Enrollment limited to 20. Prerequisite:consent of instructor. GER:DB-SocSci
4 units, Win (Litvak, L)

URBANST 133. Social Entrepreneurship Collaboratory
Interdisciplinary student teams create and develop U.S. and international social entrepreneurship initiatives. Proposed initiatives may be new entities, or innovative projects, partnerships, and/or strategies impacting existing organizations and social issues in the U.S. and internationally. Focus is on each team¿s research and on planning documents to further project development. Project development varies with the quarter and the skill set of each team, but should include: issue and needs identification; market research; design and development of an innovative and feasible solution; and drafting of planning documents. In advanced cases, solicitation of funding and implementation of a pilot project. Enrollment limited to 30. May be repeated for credit. Prerequisites: 131 and 132, or consent of instructor.
4 units, Aut (Edwards, M), Spr (Scher, L)

URBANST 137. Innovations in Microcredit and Development Finance
The role of innovative financial institutions in supporting economic development, the alleviation of rural and urban poverty, and gender equity. Analysis of the strengths and limits of commercial banks, public development banks, credit unions, and microcredit organizations both in the U.S. and internationally. Readings include academic journal articles, formal case studies, evaluations, and annual reports. Priority to students who have taken any portion of the social innovation series: URBANST 131, 132, or 133. Recommended: ECON 1A or 1B.
4 units, Spr (Kieschnick, M)

URBANST 161. U.S. Urban History since 1920
The end of European immigration and its impact on cities; the Depression and cities; WW II and the martial metropolis; de-

industrialization; suburbanization; African American migration; urban renewal; riots, race, and the narrative of urban crisis; the impact of immigration from Asia, Latin America, and Africa; homelessness; the rise of the Sunbelt cities; gentrification; globalization and cities. Final project is history of a San Francisco neighborhood, based on primary sources and site visit. GER:DB-SocSci, EC-AmerCul

5 units, not given this year

URBANST 162. Managing Local Governments

In-the-trenches approach. Issues in leading and managing local governments in an era of accelerating and discontinuous change. Focus is on practical strategies related to financing, public services impacted by increasing demand and revenue constraints, the politics of urban planning, private-public partnerships, public sector marketing, entrepreneurial problem solving, promoting a learning and risk-taking organizational culture, and developing careers in local government. Enrollment limited to 25; preference to Urban Studies majors. GER:DB-SocSci

4 units, Win (Staff)

URBANST 163. Land Use Control

Methods of land use control related to the pattern and scale of development and the protection of land and water resources. Emphasis is on the relationship between the desired land use goal and geographical landscape, physical externalities, land use law, and regulatory agencies. Topics include the historical roots of modern land use controls; urban reforms of the 19th century; private ownership of land; zoning; local, state, and federal land use regulation; and land trusts preservation. Smart growth, environmental impact consideration, private property rights, and special purpose agencies are related to current issues. GER:DB-SocSci

4 units, Spr (Hall, R)

URBANST 164. Sustainable Cities

Focus is on the prospects for urban sustainability, including social, economic and environmental dimensions. Course examines the main problems facing urban areas, how they are assessed, and the policies and programs that try to address them. Topics include sustainability indicators, demographic trends and migration, income distribution, green building, urban sprawl, ecological footprint, air and water quality, climate change, and sustainable energy and transportation policies.

4-5 units, Spr (Boudet, H)

URBANST 165. Sustainable Urban and Regional Transportation Planning

Environmental, economic, and equity aspects of urban transportation in 21st-century U.S. Expanded choices in urban and regional mobility that do not diminish resources for future generations. Implications for the global environment and the livability of communities. GER:DB-SocSci

4-5 units, not given this year

URBANST 171. Urban Design Studio

The practical application of urban design theory. Projects focus on designing neighborhood and downtown regions to balance livability, revitalization, population growth, and historic preservation.

5 units, not given this year

URBANST 190. Urban Professions Seminar

Workshop. Contemporary practice of urban design and planning, community development, urban education, public service law, and related fields. Topics depend partly on student interests. Bay Area professionals lecture and respond to questions concerning their day-to-day work, impressions of their field, and the academic background recommended for their work.

1 unit, Win (Kahan, M)

URBANST 194. Internship in Urban Studies

For Urban Studies majors only. Students organize an internship in an office of a government agency, a community organization, or a private firm directly relevant to the major. Reading supplements internship. Paper summarizes internship experience and related readings.

2-4 units, Aut (Staff), Win (Staff), Spr (Staff)

URBANST 195. Special Projects in Urban Studies

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

URBANST 197. Directed Reading

1-5 units, Aut (Kahan, M), Win (Kahan, M), Spr (Kahan, M)

URBANST 198. Senior Research in Public Service

Limited to seniors approved by their departments for honors thesis and admitted to the year-round Public Service Scholars Program sponsored by the Haas Center for Public Service. What standards in addition to those expected by the academy apply to research conducted as a form of public service? How can communities benefit from research? Theory and practice of research as a form of public service readings, thesis workshops, and public presentation of completed research. May be repeated for credit. Corequisite: 199.

1-3 units, Aut (Visconti, V), Win (Visconti, V), Spr (Visconti, V)

URBANST 199. Senior Honors Thesis

1-10 units, Aut (Staff), Win (Staff), Spr (Staff)

URBANST 201. Preparation for Senior Project

(Same as SOC 201) First part of capstone experience for Urban Studies majors pursuing an internship-based research project or honors thesis. Assignments culminate in a research proposal, which may be submitted for funding. Students also identify and prepare for a related internship, normally to begin in Spring Quarter in URBANST 201B or in Summer. Research proposed in the final assignment may be carried out in Spring or Summer Quarter; consent required for Autumn Quarter research. Service Learning Course (certified by Haas Center).

5 units, Win (Kahan, M)

URBANST 201A. Capstone Internship in Urban Studies

Restricted to Urban Studies majors. Students work at least 80 hours with a supervisor, establish learning goals, and create products demonstrating progress. Reflection on service and integration of internship with senior research plans. Must be completed by start of Winter Quarter senior year. May continue for additional quarter as 194. Service Learning Course (certified by Haas Center). Corequisite: URBANST 201 or consent of instructor.

3 units, Aut (Kahan, M), Win (Kahan, M), Spr (Kahan, M)

URBANST 201B. Capstone Internship Seminar

Students carry out an internship of at least 80 hours with a community organization or government agency. Class meets weekly to discuss related issues, including ethics of service, combining service and research, navigating organizational dynamics, and setting and accomplishing internship goals. Students submit internship agreement and internship-related deliverables, and give in-class presentations.

3-4 units, Spr (Kahan, M)

URBANST 202. Preparation for Honors Thesis

(Same as SOC 202) Primarily for juniors in Sociology; sophomores who plan to be off-campus Winter Quarter of their junior year may register with consent of instructor. Students write a research prospectus and grant proposal, which may be submitted for funding. Research proposal in final assignment may be carried out in Spring or Summer Quarter; consent required for Autumn Quarter research.

5 units, Win (McAdam, D)

URBANST 203. Senior Seminar

Conclusion of capstone sequence. Students write a substantial paper based on the research project developed in 201 or 202. Students in the honors program may incorporate paper into their thesis. Guest scholar chosen by students. WIM

5 units, Aut (Kahan, M)

WRITING AND RHETORIC, PROGRAM IN (PWR) COURSES

UNDERGRADUATE COURSES IN WRITING AND RHETORIC, PROGRAM IN

Primarily for undergraduates; graduate students may enroll with consent of adviser.

PWR 1AH. Writing & Rhetoric 1: The Rhetoric of American Multicultural Experience

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of multicultural experience and cultural as-

similation, focusing on the theme of social acceptance. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Heredia, A)

PWR 1AO. Writing & Rhetoric 1: Visual Rhetoric Across the Globe: Capturing Culture in Images
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of styles of leadership across the globe and communication strategies used to bring about change. Exploration of how global leaders learn cross-cultural rhetoric skills to adapt to dynamic and unfamiliar situations. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, Aut (O'Brien, A), Spr (O'Brien, A)

PWR 1CA. Writing & Rhetoric 1: The Rhetoric of Gaming
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include how gameplay in a variety of genres operates as argument about cultural values and how games function as sites of community building, social networking, and learning. Students produce research-based arguments on these issues and merge practice and production in storyboarding rhetorically persuasive games. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, Aut (Alfano, C), Spr (Alfano, C)

PWR 1CR. Writing & Rhetoric 1: Writing Nature: Discourses in Ecology, Culture, and Technology
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Inquiry into human relationships with nature and how these influence ethical choices and social justice. Service Learning Course (certified by Haas Center). See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Aut (Ross, C)

PWR 1D. Writing Well: An Introduction to College Writing
Offered only to participants in the Summer College for High School Students. Writing 1D develops critical reading, writing, and research skills applicable to any area of study. Emphases include close reading, analysis of varied texts, development of strong theses, revision strategies, and introduction to research-based argument. Classes are small, encouraging extensive interaction between students and instructors. Classes feature discussions of readings, peer work, and individual conferences with instructors. Each section of Writing 1D will have a thematic emphasis developed by the instructor; students choose sections based on their individual interests. (Writing 1D does not meet the Stanford first-year writing requirement.)
3 units, Sum (Brawn, S)

PWR 1DC. Writing & Rhetoric 1: Is This What a Feminist Looks Like? Race/Gender in the Obama Age
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of the coverage of and activism in a post-racial U.S., including evaluation of the debate over the intersections of racial activism and feminist activism in U.S. politics. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 1DCA. Writing & Rhetoric 1: Tell Me a Story: Rhetoric of Narrative & Knowledge from fMRIs to Fiction
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Inquiry into the nature of storytelling and its uses in the work of biologists, lawyers, philosophers, and historians. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Carluccio, D), Spr (Carluccio, D)

PWR 1DH. Writing & Rhetoric 1: The Virtue of Vice and the Vice of Virtue: The Rhetoric of Criminality
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Students investigate language and images that construct criminals, analyzing how these representations shape personal and cultural beliefs. Analysis of the costs and benefits of retributive, restorative, and transformative justice systems. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, Aut (Hunter, D)

PWR 1DW. Writing & Rhetoric 1: Gangsters, Glamor Girls, Golddiggers: Dialectic of U.S. Culture and Hollywood
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of American film and its conversation with American culture. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Aut (Walter, D), Win (Walter, D), Spr (Walter, D)

PWR 1GAC. Writing & Rhetoric 1: Protest Art!: The Rhetoric of Art as Social Activism
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of art in drawing our attention to social issues such as racism, poverty, sexism, and homophobia and in moving us to social action. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 1GAF. Writing & Rhetoric 1: Little Boxes: The Rhetoric of the American Suburb
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of the suburbs as a site of cultural debate through investigation of the ways that authors and artists imagine the physical landscape of the suburb and the inner lives of suburbanites. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 1GAJ. Writing & Rhetoric 1: The Rhetoric of Adrienne Johnson
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Johnson, A), Spr (Johnson, A)

PWR 1GAT. Writing & Rhetoric 2: The Rhetoric of Amir Tevel
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Tevel, A), Spr (Tevel, A)

PWR 1GAW. Writing & Rhetoric 1: Global Exchange: Rhetoric in a World Context
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. The American cultural apparatus, its limitations, and development of other world views. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Watters, A), Spr (Watters, A)

PWR 1GAZ. Writing & Rhetoric 1: From Cradle to Grave: The Rhetoric of Age and Aging
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include the history of aging in America; developments in reproductive science; the proverbial mid-life crisis; and how people cope with the ultimate horizon of death. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, not given this year

PWR 1GBJ. Writing & Rhetoric 1: Rhetoric of Brian Johnsrud
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with in-

structor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Johnsrud, B), Spr (Johnsrud, B)

PWR 1GBW. Writing & Rhetoric 1: The Rhetoric of Benjamin Wiebracht
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Wiebracht, B), Spr (Wiebracht, B)

PWR 1GCJ. Writing & Rhetoric 1: El Otro Lado / The Other Side: The rhetoric of real and imagined borders
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. The physical border between the United States and Mexico is the focus of the examination of the artistic, scholarly, and political rhetoric of real and imagined borders. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 1GCX. Writing & Rhetoric 1: "I Do": The Rhetoric of Consent
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of the idea of consent and the underlying principles of free will and autonomy in the fields of law, intellectual property, marriage contracts, political philosophy, medical ethics, and sex. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 1GCZ. Writing & Rhetoric 1: The Rhetoric of Connie Zhu
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Zhu, X), Spr (Zhu, X)

PWR 1GDM. Writing & Rhetoric 1: Whose Streets? Our Streets!: The Rhetoric of Protest
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. History of protest and analysis of protest as a rhetorical device meant to draw attention to injustice. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 1GER. Writing & Rhetoric 1: The Rhetoric of Social Media
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of the multifaceted and hypertextual rhetoric of social media, the intersection between rhetoric and social media, and how new types of online media have heightened participation, openness, and a sense of community. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 1GGH. Writing & Rhetoric 1: Understanding American Political Speeches of the 20th and 21st Centuries
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Rhetorical analyses of speeches by a range of 20th-century American political figures and the political rhetoric of the present day. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 1GHJ. Writing & Rhetoric 1: The Rhetoric of The Economist
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the strategies that produce The Economist magazine¿s rhetorically effective yet anonymous voice. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Aut (Janiszewska, H)

PWR 1GIF. Writing & Rhetoric 1: Dark Humor: A Rhetoric of Social Taboos
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of dark humor as it deals with the most delicate subject matter, topics we designate as sacred and beyond criticism: violence and bodily damage, illness, aging and death, race and ethnicity, and gender and sexuality. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Aut (Fernandez, I)

PWR 1GJE. Writing & Rhetoric 1: Gay Ghettoes, Queer Hoods: The Rhetoric of Race and Urban Sexual Subcultures
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of the rhetoric of urban sexual subcultures, and how the rhetoric in medical science, journalism, and popular entertainment defines queers of color in intellectual thought and pop culture. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 1GJM. Writing & Rhetoric 1: The Rhetoric of Joshua Mann
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Mann, J), Spr (Mann, J)

PWR 1GJS. Writing & Rhetoric 1: The Rhetoric of Jonathan Sensenbaugh
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Sensenbaugh, J), Spr (Sensenbaugh, J)

PWR 1GJW. Writing & Rhetoric 1: Rhetoric of Jessica Weare
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Weare, J), Spr (Weare, J)

PWR 1GLA. Writing & Rhetoric 1: The Rhetoric of Lucy
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Alford, L), Spr (Alford, L)

PWR 1GLD. Writing & Rhetoric 1: The Cyborg Body: The Rhetoric of Disability
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of ¿disability,¿ using the analogy of the cyborg, in an era when the human body has become plastic, digitized and surgically manipulated. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 1GLL. Writing & Rhetoric 1: Wow, that's so postcard: The Rhetoric of Tourism
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of tourism as a way of seeing and representing the rest of the world and oneself, touching on some of the most pressing political, economic, and cultural questions facing an in-

creasingly globalized world. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 1GM. Writing & Rhetoric 1: Anywhere That Is Wild: The Making and Unmaking of Rhetoric
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of the tension between reverence and science, language and feeling, natural and unnatural in the interrelationship of rhetoric and nature. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Moyer, G)

PWR 1GMR. Writing & Rhetoric 1: Fearful Symmetry: The Rhetoric of the Double
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of the fictions of the double and the philosophies of personal identity, and how both anticipate and condition contemporary responses to the twin issues of human cloning and intellectual property. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Aut (Reid, M), Win (Reid, M), Spr (Reid, M)

PWR 1GMV. Writing & Rhetoric 1: Don't Take it Personally!: The Rhetoric of The Insult
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of how insults function rhetorically in specific situations and how they have catalyzed prolonged confrontations around race, education, politics, sexual orientation, and national standing. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 1GMW. Writing & Rhetoric 1: The Rhetoric of Meredith Wallis
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Wallis, M), Spr (Wallis, M)

PWR 1GMX. Writing & Rhetoric 1: "Too Much Information?": The Rhetoric of Social Networking & Online Privacy
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Critical analysis of the ways in which online life intersects with real life around issues including privacy, authorship, and morality. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Aut (Vega, M), Win (Vega, M), Spr (Vega, M)

PWR 1GNL. Writing & Rhetoric 1: The Rhetoric of Nathaniel Landry
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Landry, N), Spr (Landry, N)

PWR 1GRA. Writing & Rhetoric 1: Millions Like Us: The Rhetoric of Crowds
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include symbolic meaning of rock, sports, and political events; virtual crowds online; and use of crowds to shape ideology. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, not given this year

PWR 1GRH. Writing & Rhetoric 1: 2012 & the Rhetoric of Apocalypse
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of apocalypse as a cultural phenomenon. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 1GRL. Writing & Rhetoric 1: The Rhetoric of Rhiannon Lewis
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Lewis, R), Spr (Lewis, R)

PWR 1GRN. Writing & Rhetoric 1: Lasting Only One Day: The Rhetoric of Ephemera and Other Discarded Things
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of ephemera and how they argue for their meaning as they collect and preserve the past while reflecting humantransience. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 1GRY. Writing & Rhetoric 1: Rhetoric of Ryan Haas
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Haas, R), Spr (Haas, R)

PWR 1GSA. Writing & Rhetoric 1: The Rhetoric of Sami
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Amad, Y), Spr (Amad, Y)

PWR 1GSD. Writing & Rhetoric 1: Masters of Style - The Rhetoric of Sophistication
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of how style is mastered and deployed in a range of genres. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Aut (Dippold, S)

PWR 1GTM. Writing & Rhetoric 1: The Rhetoric of Taste
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of the rhetoric of taste as the luxurious product of a sophisticated society and as tedious, stultifying, snobby, or outright offensive. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 1GTX. Writing & Rhetoric 1: 'Making My Way Downtown': The Rhetoric of the City
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Through historic, literary, journalistic, and film portrayals of city life, we will analyze the idea of 'the city' as constructed through media and in the imaginations of its residents, and the way life in cities is really lived. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 1GVC. Writing & Rhetoric 1: The Rhetoric of Vanessa
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Chang, V), Spr (Chang, V)

PWR 1HR. Writing & Rhetoric 1: Fake News and the Rhetoric of "Truthiness"
Development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Critical analysis of the fake news phenomenon, considering its impact on the political process and how we discuss important issues of the day. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Aut (Rytkonen, H)

PWR 1JB. Writing & Rhetoric 1: From Mad Cow to Mad Corn: The Rhetoric of Food Science and Politics
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include how activists, nutritionists, food scientists, chemical companies, and legislative bodies articulate their concerns and argue their positions and how agribusiness and government respond to consumer concerns about food produced with the aid of chemicals. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, Aut (Bleakney, J), Spr (Bleakney, J)

PWR 1JH. Writing & Rhetoric 1: Lies and the Lying Liars Who Tell Them: Rhetoric and Deception
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of untruth, misrepresentation, and deception in journalistic and scientific rhetoric. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 1JL. Writing & Rhetoric 1: Rhetoric and Humanitarian Intervention
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of how media representations of world crises are crafted to persuade us to action, appealing to our senses of justice, pragmatism, outrage, and compassion. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Spr (Lee, J)

PWR 1JP. Writing & Rhetoric 1: The Rhetoric of Consumer Culture
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Students explore what consumerism says about the larger culture and the segmented groups within it, analyzing popular and scholarly texts as well as current trends in pop culture, to research how the activities of consumerism shape culture. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, Aut (Peterson, J), Win (Peterson, J)

PWR 1JT. PWR 1: RHETORIC HEALTH CARE
4 units, not given this year

PWR 1KB. Writing & Rhetoric 1: Authentic Experience: The Rhetoric of Tourism
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Aut (Staff), Win (Staff), Spr (Staff)

PWR 1KD. Writing & Rhetoric 1: Writing About Crisis: Feature Article Essays
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. How various feature article writers argue the issues of soaring energy and food prices, serious market volatility, climate change, an ongoing war in the Middle East, and how terms like ¿crisis¿ or ¿change¿ impact the discussion. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Spr (DiPirro, K)

PWR 1KE. Writing & Rhetoric 1: The Science of Sports
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include sports at the level of cells and psychology, the science of sports equipment and sports spaces, the ethics of performance enhancement, and sports-related research projects on the Stanford campus. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, Spr (Myers, K)

PWR 1KM. Writing & Rhetoric 1: If These Walls Could Talk: The Rhetoric of Places and Spaces
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Explores the ¿language¿ of man-made environments such as universities, theme parks, monuments, shopping malls, museums, and public buildings. Students analyze space through physical exploration and critical inquiry and discover the applications of rhetoric not only to traditional texts but to physical structures and spaces as well. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, Spr (Moekle, K)

PWR 1KMA. Writing & Rhetoric 1: Metaphor and Motion: The Rhetoric of Sacred Space
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 1KS. Writing & Rhetoric 1: Imagining Others: 21st Century Cosmopolitanism
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of cosmopolitanism, questions related to globalization, nationalism, citizenship, cultural values, aesthetics, and identity. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Savelson, K)

PWR 1LK. Writing & Rhetoric 1: The Rhetoric and Politics of Satire
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Explores the ways that satirists use irony, exaggeration, and humor--among other rhetorical techniques--to make serious statements about the world. Juxtaposes historical and recent satirical writing to illuminate intellectual problems that are thousands of years old and sharply contemporary. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, not given this year

PWR 1LKA. Writing & Rhetoric 1: Rhetoric, Social Media, and Virtual Worlds
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of the effects of social media and how we shape our identities and develop new habits of mind when we enter virtual worlds. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Aut (Konstantinou, L), Win (Konstantinou, L), Spr (Konstantinou, L)

PWR 1MF. Writing & Rhetoric 1: The Rhetoric of Urban Life
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Feldman, M)

PWR 1MJ. Writing & Rhetoric 1: Rock 'n' Rhetoric
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include rhetorical strategies and meaning of the lyrics of songs with multiple interpretations and how rock musicians construct arguments in their songs. Analysis of how sur-

rounding cultural and historical contexts influence the significance and meaning of rock songs. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.

4 units, Aut (Ford, M), Win (Ford, M)

PWR 1PB. Writing & Rhetoric 1: Supreme Court Rhetoric

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of Supreme Court opinions, ¿amicus curiae¿ briefs, editorials about Court opinions, and pertinent lower court decisions. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.

4 units, Win (Bator, P)

PWR 1PH. Writing & Rhetoric 1: He Said, She Said: The Rhetoric of Gender Politics

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include the ways in which news articles, movie clips, magazine advertisements, television commercials, and other texts present gender roles, and how the roles and bodies of both sexes are presented as objects open to scrutiny, critique, exploitation, abuse, and awe. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.

4 units, Win (Hanlon-Baker, P)

PWR 1RT. Writing & Rhetoric 1: The War Between Wars: the "isms" of modernism

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of modernism in art, literature, and thought between the two world wars. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.

4 units, Aut (Taylor, R)

PWR 1SB. Writing & Rhetoric 1: Machine Dreams: The Rhetoric of Technology

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include the arguments we make about technology, the arguments various technologies produce about us, and the ways in which rhetoric itself might be productively viewed as a technology for producing arguments. Students explore the social, economic, political, and psychological consequences of rapidly developing technologies. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.

4 units, Spr (Brawn, S)

PWR 1SH. Writing & Rhetoric 1: Strange Art, Stranger Politics: Absurdism and the Rhetoric of Social Action

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include the benefits and drawbacks of deploying strange art as artistic and political protest, how breaking the aesthetic rules sometimes serves to argue for social change, and how absurdist protests succeed or fail to gain social traction. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.

4 units, not given this year

PWR 1SL. Writing & Rhetoric 1: New Media Rhetoric and Web 2.0

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Students define new media and debate the ideas of web 2.0; the virtue of Web 2.0 in digital game modifications and the potential subversive effects of web 2.0 on advertising restrictions; and look into the possibilities and limitations of democracy 2.0. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.

4 units, not given this year

PWR 1SLA. Writing & Rhetoric 1: "Advertising R Us": The Rhetoric of Advertising

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.

4 units, Aut (Lee, S)

PWR 1SM. Writing & Rhetoric 1: The Elephant, the Tiger, and the Cellphone: Rhetoric of India and Indian Film

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of the rhetoric of the India of the new millennium, including issues of gender, caste, class, religion, sexuality, nationalism, diaspora, outsourcing, and globalization. Service Learning Course (certified by Haas Center). See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.

4 units, Spr (Mediratta, S)

PWR 1SMA. Writing & Rhetoric 1: Humans and Things: The Rhetoric of Commodities and Commodification

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.

4 units, not given this year

PWR 1SMB. Writing & Rhetoric 1: The Jewel in the Crown: The Rhetoric of (Post)Colonialism

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.

4 units, not given this year

PWR 1SS. Writing & Rhetoric 1: Soap Operas and Soapboxes: The Rhetoric of Performance

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Students explore identity as a social, political, and cultural performance; how different situations call for particular styles of rhetorical performance; and how people evaluate and analyze different types of performances, including artistic and political performances, as well as the performances of everyday life. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.

4 units, not given this year

PWR 1SSA. Writing & Rhetoric 1: Real and Imagined Lives: Narrative, Rhetoric, and Identity

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of identity as constructed in a range of narrative forms including fiction, memoirs, political campaigns, and social media. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.

4 units, Aut (Schuyler, S)

PWR 1SU. Writing & Rhetoric 1: The World According to Bollywood: Indian Cinema and its Representations

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of representations of India¿s culture through Indian film and how such representations have coincided with India¿s economic success overthe last two decades of the twentieth century, giving rise to a new trend in global popular culture. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.

4 units, not given this year

PWR 1SUA. Writing & Rhetoric 1: Such a Long Journey: South Asian Diaspora in the World

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.

4 units, Win (Chakravarty, S)

PWR 1SW. Writing & Rhetoric 1: Scandals, Private Lives, and Public Faces: The Rhetoric of Stanford
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of the early history and rhetoric of the ¿public face¿ of Stanford University, from the post-Gold Rush and Big Four railroad era to the building of the University See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Spr (Wyle, S)

PWR 1WG. Writing & Rhetoric 1: Reading Minds: The Rhetoric of Consciousness
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of states of mind ranging from the radical self-possession cultivated through practice to altered states induced through drugs and trauma, illness, and religion. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Goldberg, W), Spr (Goldberg, W)

PWR 2AH. Writing & Rhetoric 2: Ethnic Narratives and the Rhetoric of American Identity
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of how race and ethnicity in America have become subjects of personal negotiations and public perception. Addresses various topics such as biracial and bicultural identity, acculturation, and stereotyping. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, Aut (Heredia, A), Spr (Heredia, A)

PWR 2AO. Writing & Rhetoric 2: Rhetoric and Global Leadership
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of styles of leadership across the globe and communication strategies used to bring about change. Exploration of how global leaders learn cross-cultural rhetoric skills to adapt to dynamic and unfamiliar situations. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Aut (O'Brien, A), Win (O'Brien, A), Spr (O'Brien, A)

PWR 2CA. Writing & Rhetoric 2: Networked Rhetoric: Social Networks, Participatory Media and the Future of Wr
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of the issues surrounding participatory media and social networking in contemporary digital culture from the perspective of both theory and practice. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Staff)

PWR 2CR. Writing & Rhetoric 2: Revolutions in Environmental Rhetoric
Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Examination of the motivations and appeals of environmental arguments, considering underlying assumptions and contexts of time, culture, audience, purpose, and mode of delivery. Participation in Community Writing Project, working with local nonprofit environmental organizations to produce real-world writing, multimedia, and/or speaking projects on these organizations' behalf. Work in the community will form the basis of the major research project. Service Learning Course (certified by Haas Center). Prerequisite: PWR 1. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, Win (Ross, C), Spr (Ross, C)

PWR 2CRA. Writing & Rhetoric 2: The State of California: Rhetoric of a Dream
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Service Learning Course (certified by Haas Center). See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 2DC. Writing & Rhetoric 2: The Popular Science of Sex
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of the intersection between social debate and scientific research about sex and gender; how social debates draw on, represent, respond to, and influence scientific studies; and how the process shapes our knowledge and beliefs about sex and gender. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, not given this year

PWR 2DCA. Writing & Rhetoric 2: Race/Gender in the "Obama Age"
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of perceptions of race and gender seen through the political lens of the 2008 presidential campaign. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units

PWR 2DH. Writing & Rhetoric 2: Me and My iPod: The Rhetoric of Identity
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of the message, performance, and construction of identity, electronic renditions of the self, and the constant or changing nature of identity. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Hunter, D)

PWR 2DHA. Writing & Rhetoric 2: Scholar Activists Fix the World? The Rhetoric of Scholarship and Activism
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. ¿. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Spr (Hunter, D)

PWR 2GAW. Writing & Rhetoric 2: Rhetoric in a World Context
Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. ¿ See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Staff)

PWR 2GM. Writing & Rhetoric 2: Unpredictable Dialogue: Art of the Essay, Art of the Interview
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of the rhetorical craft of the interview, exploring structure, language, timing, and development in a range of forums, including documentaries, radio, transcription, campus conversations, and television. Research of a Stanford professor¿s work, including interview. Presentation of findings from research and interview to the class. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, Aut (Moyer, G), Spr (Moyer, G)

PWR 2HR. Writing & Rhetoric 2: What's So Funny? Humor, Race, Class and Gender
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of cartoons and jokes about and by feminists, LGBTs, ethnic minorities, and rednecks. Discussion of how jokes reflect important moral values about race, sex, gender, and religion. Exploration of how satire works as social criticism. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, Win (Rytkonen, H), Spr (Rytkonen, H)

PWR 2JB. Writing & Rhetoric 2: Rhetoric of Ethics in Research and Technology
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of the rhetoric of ethical discourse, including the ethical standards guiding research at Stanford and examples of ethical misconduct. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Bleakney, J)

PWR 2JH. Writing & Rhetoric 2: Cred: Rhetoric and Credibility in Research, Politics, and Everyday Life
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Work on making students more effective researchers and communicators in their areas of interest, with a focus on gaining and projecting credibility. Exploration of how speakers and writers gain and lose credibility, how people evaluate the credibility of others, and how the rules of credibility are different in politics, in scholarship, and in popular culture. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, not given this year

PWR 2JL. Writing & Rhetoric 2: Doomsday Rhetoric
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Investigation of how the doomsday epic expresses real concerns emerging from fields like technology, environmental studies, pathobiology, and politics. Consideration of apocalypticism as a mode of argument. Examination of how belief in the imminent destruction of the present world order influences our political decisions and personal behavior. Topics in religious eschatology and apocalypticism illuminate the genre¿s origins. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, not given this year

PWR 2JLA. Writing & Rhetoric 2: Speaking About Art: Narrating the Collections of the Cantor Art Center
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration and theory of successful strategies of oral communication, considering how words and images (in this case works of art) work together to create meaning, culminating in creation of an audio guide for the Cantor Arts Center. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 2JLB. Writing & Rhetoric 2: Rhetoric and Education Reform
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of social, ideological, and pedagogical perspectives on education reform. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Aut (Lee, J), Win (Lee, J)

PWR 2JP. Writing & Rhetoric 2: Marketing Imagination: The Rhetoric of Creativity and Commerce
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Examination of unspoken rules regarding the separation of creativity and commerce and arguments about how consumer culture influences the work of the artist. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Spr (Peterson, J)

PWR 2JT. PWR 2: RHETORIC OF MEDICINE
4 units, Spr (Staff)

PWR 2KD. Writing & Rhetoric 2: Performing Writing: Drama and the New Media
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of how the application of performance techniques makes academic or professional presentations more compelling. Scripting and delivering of group research projects. Research in new forms of media, analysis of how the conventions of a particular medium affect the content of the message. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, Aut (DiPirro, K), Win (DiPirro, K)

PWR 2KE. Writing & Rhetoric 2: Olympic Rhetoric: Studying the Spirit of the Games
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of Olympic media, looking specifically at race and gender in Olympic coverage; technological innovation and ethics in the Games; and Olympic history. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 2KEA. Writing & Rhetoric 2:Competitive Women: Opportunity, Exposure, and Resistance in the World of Sports
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Examination of women in sports, looking specifically at issues of opportunity, exposure, and resistance; arguments made by, for, and against women playing sports; and the fight for equality in sports. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Myers, K)

PWR 2KEB. Writing & Rhetoric 2: Sports Appeal: Packaging and Promoting Stanford Athletics
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. ¿. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Aut (Myers, K)

PWR 2KM. Writing & Rhetoric 2: A Planet on Edge: The Rhetoric of Sustainable Energy
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Focus on the rhetoric and ethics of ¿sustainable energy,¿ investigating both the alarmism and optimism which fuel this debate. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Aut (Moekle, K), Win (Moekle, K)

PWR 2KMA. Writing & Rhetoric 2: Natural Enemies: The Rhetoric of Invasion Biology
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of the use of metaphors and argument in the context of invasion biology and species conservation, especially the effects those metaphors and claims have on practice and policy outcomes. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html
4 units, not given this year

PWR 2KS. Writing & Rhetoric 2: Happy Now? The Anatomy of Happiness
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. How the emerging field of happiness studies involves psychologists, economists and policy-makers in defining what happiness is and determining how society might create the conditions in which it can flourish. Exploration of how happiness studies can uncover happiness at the heart of arguments about democracy, religion, and personal lifestyles, exploring what makes people happy across cultural, social, and national contexts. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, Aut (Savelson, K), Spr (Savelson, K)

PWR 2LK. Writing & Rhetoric 2: Rhetoric in Crisis!
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. ¿. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Spr (Konstantinou, L)

PWR 2MF. Writing & Rhetoric 2: Speaking About Art: Narrating the Cantor's Collections
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of strategies for developing museum audio guides, including analysis of existing guides and behind-the-scenes work in the Cantor Arts Center. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Aut (Feldman, M)

PWR 2MFA. Writing & Rhetoric 2: Searching for San Jose: Urban Studies Audio Walking Tours
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. ¿. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Spr (Feldman, M)

PWR 2MR. Writing & Rhetoric 2: Sex Appeals: the Rhetoric of Lust
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. . See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Spr (Reid, M)

PWR 2PB. Writing & Rhetoric 2: The Power of Political Photography
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Topics include the role of photographers and photo-journalists in helping viewers see the world differently and the political implications of fashion photography, environmental photography, music photography, and fashion photography. Traditional readings as well as archival and field research. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, Aut (Bator, P), Spr (Bator, P)

PWR 2PH. Writing & Rhetoric 2: Equal Treatment: The Rhetoric of Public Health
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of how public health discourses influence policymaking, practitioners, and community members, how the public understands the rhetoric of public health, and how that understanding affects public and government support of health-related research. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 2PHA. Writing & Rhetoric 2: You Go Girl: The Rhetoric of Gender Equality
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. ¿. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Aut (Hanlon-Baker, P)

PWR 2RT. Writing & Rhetoric 2: Stepping Out of the Shadows: Music, Bass Guitar, and the Rhetoric of Revoluti
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of how the emergence of the electric bass in the fifties helped usher in a revolution that challenged commonplace assumptions concerning nationality, race, gender, and sexuality. Exploration of the history of the electric bass as a case study of musical revolutions, focusing on how music revolutions reflect emerging ideologies in any given culture. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, Spr (Taylor, R)

PWR 2RTA. Writing & Rhetoric 2: Postmodernism and the Rhetoric of Uncertainty
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Inquiry into major theories of the postmodern and analysis of postmodernism's effect on culture. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Taylor, R)

PWR 2SB. Writing & Rhetoric 2: Writing the Future: The Rhetoric of Popular Science and Science Fiction
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of science fiction and popular writing about science and technology as arguments about where we are headed, where we are, who we are, and what we value. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Aut (Brawn, S), Win (Brawn, S), Spr (Brawn, S)

PWR 2SH. Writing & Rhetoric 2: The Ugly American: Tourism and the Rhetoric of Power
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of the Ugly American in aesthetics and culture, in films and novels, tourist locations and business conferences, to illuminate America¿s complex role in the world. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 2SL. Writing & Rhetoric 2: Got Ads: Visual Design in Print Advertising
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Introduction to the rhetorical interplay of visuals, text, and design layout in print advertising, and narrative, classificatory, and dynamic patterns in print advertisement campaigns. Culminates in design and presentation of an original ad campaign. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Lee, S), Spr (Lee, S)

PWR 2SM. Writing & Rhetoric 2: Dirty, Pretty Things: The Rhetoric of Objects and Objectification
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of objects and objectification, from the relationships shared by cultures, objects, and people to how human beings have been objectified through colonialism, enslavement, sex-trafficking, and organ trade. Material objects discussed in terms of staging, collecting, design, location, inheritance, and cultural meaning. Service Learning Course (certified by Haas Center). See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, Win (Mediratta, S)

PWR 2SMA. Writing & Rhetoric 2: Love and Longing in Bombay: Romance and Rebellion in Indian Film
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. ¿. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 2SS. Writing & Rhetoric 2: The Rhetoric of Mass Audiences
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of how the ability to reproduce a work for increasingly large audiences has fundamentally changed the nature of art and its effect on culture. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, Win (Schuyler, S), Spr (Schuyler, S)

PWR 2SSA. Writing & Rhetoric 2: Rhetoric of Reality Culture
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. ¿. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.
4 units, not given this year

PWR 2SU. Writing & Rhetoric 2: Hollywood Bollywood: Rhetoric of India in Global Cinema
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of how the rhetoric of India is constructed for an international audience through films and how such representations have coincided with India¿s recent economic success to give rise to a new trend in global popular culture. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.
4 units, Aut (Chakravarty, S), Spr (Chakravarty, S)

PWR 2SW. Writing & Rhetoric 2: The Rhetoric of World War II: Strategies of Persuasion in War Time
Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Through work with the Hoover Archives, exploration of how written, visual, and film sources were used by a variety of countries to influence their citizens during WWII. Topics include the rhetoric of eugenics, politi-

cal speeches, war posters, and how advertising during WWII pursued clear agendas to support government goals. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.

4 units, Aut (Wyle, S), Win (Wyle, S)

PWR 2WG. Writing & Rhetoric 2: All That Jazz: The Rhetoric of American Musical Theater

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of the conventions and strategies that define the genre of American musical theater. Analysis of how contemporary musicals mirror, revise, and even subvert traditional rules while addressing a range of current issues. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.

4 units, Aut (Goldberg, W), Win (Goldberg, W), Spr (Goldberg, W)

PWR 4. Directed Writing

Further work on developing writing. Analysis and research-based argument, writing for a range of audiences and in varied disciplinary contexts. Workshops and individual conferences. May be repeated for credit. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

3-4 units, not given this year

PWR 5. Independent Writing

Individual writing project under the guidance of a PWR instructor. May be repeated for credit. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

1-5 units, Aut (Diogenes, M), Win (Diogenes, M), Spr (Diogenes, M), Sum (Staff)

PWR 6. Writing Workshop

1-2 units, Aut (Diogenes, M), Win (Staff), Spr (Staff)

PWR 91. Intermediate Writing

For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

3 units, Spr (Staff)

PWR 191. Advanced Writing

Open to undergraduates and graduate students. Crafting nonfiction prose in a range of genres. Focus is on the relationship of genre and form; attention to developing stylistic versatility. Individual conferences with instructor. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

3 units, not given this year

PWR 192. Projects in Research, Writing, and Rhetoric

Advanced work on research projects, early drafts of theses, proposals. Shared work, discussions, and examination of methods, rhetorics, and styles in all disciplines. May be repeated for credit. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

1-5 units, not given this year

PWR 193. Writing the Honors Thesis

For students from all majors in the process of writing an honors thesis. Review of key elements of thesis process, including literature reviews, structure, argumentation, style, and documentation. Group and individual workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

1-5 units, not given this year

PWR 194. Topics in Writing and Rhetoric: Law and the Rhetorical Tradition

(Same as LAW 304.) Interdisciplinary seminar. The rhetorical underpinnings of legal argument. Goal is understanding rhetoric as readers and interpreters of legal texts and to develop skills as writers and speakers. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

4 units, Win (Staff)

PWR 195. Writing Center Peer Tutor Seminar

(Same as ENGLISH 195W) For students selected to serve as peer writing tutors in the Stanford Writing Center and/or at other campus sites. Readings on and reflection about writing processes, the dynamics of writing and tutoring situations, tutoring techniques, learning styles, diversity, and ethics. Observation of tutoring sessions, written responses to readings, and other written work.

3 units, Spr (Lunsford, A)

CENTERS, LABORATORIES, AND INSTITUTES

Independent research laboratories, centers, and institutes perform multidisciplinary research that extends beyond the scope of any one of the University's organized schools. Consult the links below for full information on these units.

Information on academic programs for undergraduates is provided by following the links on the right.

OFFICE OF VICE PROVOST AND DEAN OF RESEARCH

Vice Provost and Dean of Research and Dean of the Independent Laboratories, Centers, and Institutes: Ann M. Arvin
Offices: 450 Serra Mall, Main Quadrangle, Building 60
Mail Code: 94305-2064
Office Phone: 650-723-8789
Office Fax: 650-723-0662
Web Site: http://stanford.edu/dept/DoR

The following independent Laboratories, Centers, and Institutes report to the Vice Provost and Dean of Research:

BIOLOGICAL AND LIFE SCIENCES

- Bio-X, the interdisciplinary program related to bioengineering, biomedicine, and biosciences, http://biox.stanford.edu
- Spectrum (formerly the Stanford Center for Clinical and Translational Education and Research), http://spectrum.stanford.edu

ENVIRONMENTAL SCIENCES

- Precourt Institute for Energy, http://pie.stanford.edu/
  - Precourt Energy Efficiency Center, http://peec.stanford.edu
  - Global Climate and Energy Project (G-CEP), http://gcep.stanford.edu
- Woods Institute for the Environment, http://woods.stanford.edu

HUMANITIES AND SOCIAL SCIENCES

- Center for Advanced Study in the Behavioral Sciences (CASBS), http://www.casbs.org
- Center for the Study of Language And Information (CSLI), http://www-csli.stanford.edu
- Freeman Spogli Institute for International Studies (FSI), http://fsi.stanford.edu
  - Center on Democracy, Development, and the Rule of Law (CDDRL), http://cddrl.stanford.edu
  - Stanford Health Policy (Center for Health Policy/Center for Primary Care and Outcomes Research), http://healthpolicy.stanford.edu
  - Center for International Security and Cooperation (CISAC) http://cisac.stanford.edu
  - Walter H. Shorenstein Asia-Pacific Research Center (Shorenstein APARC), http://aparc.stanford.edu
  - The Europe Center, http://fce.stanford.edu
  - Program on Food Security and the Environment, http://fse.stanford.edu
  - Inter-University Center for Japanese Language Studies (IUC), http://www.stanford.edu/dept/IUC
  - Program on Energy and Sustainable Development (PESD), http://pesd.stanford.edu

CENTER FOR SPACE SCIENCE AND ASTROPHYSICS

Emeriti: (Professors) Robert Cannon, I-Dee Chang, Daniel B. DeBra, W.Gary Ernst, Von R. Eshleman, Robert A. Helliwell, Bruce B. Lusignan, Ronald J. P. Lyon, Laurence A. Manning, Bradford W. Parkinson, J. David Powell, Peter A. Sturrock, G. Leonard Tyler, Robert V. Wagoner; *(Professors, Research)* Donald L. Carpenter, Aldo V. daRosa, Antony Fraser-Smith

Director: Roger W. Romani

Associate Directors: Umran S. Inan, Philip H. Scherrer

Professors: Roger Blandford (Physics, SLAC), Elliot Bloom (SLAC), Lambertus Hesselink (Electrical Engineering), Umran S. Inan (Electrical Engineering), Steven Kahn (Physics, SLAC), Tune Kame (SLAC), Peter F. Michelson (Physics), Vahé Petrosian (Physics), Roger W. Romani (Physics), Norman H. Sleep (Geophysics), Howard Zebker (Electrical Engineering, Geophysics)

Associate Professors: Tom Abel (Physics, SLAC), Steve Allen (Physics, SLAC), Sarah Church (Physics), Guenther Walther (Statistics)

Assistant Professors: Stefan Funk (Physics, SLAC), Chao-Lin Kuo (Physics, SLAC), Risa Wechler (Physics, SLAC)

Professors (Research): C-W. Francis Everitt (HEPL), Philip H. Scherrer (Physics)

Consulting Professor: Martin Walt (Electrical Engineering)

SLAC Staff Physicist: Grzegorz Madejski

Center Offices: Varian, Room 316

Mail Code: 94305-4060

Phone: (650) 723-1439

Email: danav@stanford.edu

Web Site: http://www.stanford.edu/group/CSSA

The Center for Space Science and Astrophysics is an interdepartmental organization coordinating research in space science and astrophysics. Its members are drawn from the Department of Geological and Environmental Sciences in the School of Earth Sciences; the departments of Aeronautics and Astronautics, Electrical Engineering, and Mechanical Engineering in the School of Engineering; the departments of Applied Physics, Physics, and Statistics in the School of Humanities and Sciences; the W. W. Hansen Experimental Physics Laboratory; and the SLAC National Accelerator Laboratory. Its membership also includes all faculty and appropriate staff at the Kavli Institute for Particle Astrophysics and Cosmology, located at SLAC and the Physics department.

The facilities of the center are available to any interested and qualified student, who must be admitted by and registered in a department. The departments of Aeronautics and Astronautics, Applied Physics, Electrical Engineering, Mechanical Engineering, and Physics offer opportunities leading to an M.S. or Ph.D. degree for work in space science or astrophysics. The center also offers opportunities to undergraduates who may, for instance, participate in research projects in their junior or senior years, on a part-time basis during the school year or on a full-time basis during the summer. The Astronomy Course Program operates a small student observatory where students may gain practical experience in astronomical observing.

FREEMAN SPOGLI INSTITUTE FOR INTERNATIONAL STUDIES (FSI)

The Freeman Spogli Institute for International Studies (FSI) provides opportunities for undergraduate research through the CISAC Interschool Honors Program in International Security Studies and the CDDRL Undergraduate Honors Program. For information on the institute that manages student fellowship programs, see http://fsi.stanford.edu/fellowships/.

INTERSCHOOL HONORS PROGRAM IN INTERNATIONAL SECURITY STUDIES

Co-Directors: Martha Crenshaw, Coit D. Blacker

The Center for International Security and Cooperation (CISAC) coordinates a University-wide Interschool Honors Program in International Security Studies. Students chosen for the honors program intern with a security-related organization, attend the program's honors college in Washington, D.C., in September, attend a year-long core seminar on international security research, and produce an honors thesis with policy implications. Upon fulfilling individual department course requirements and completing the honors program, students graduate in their major with a certificate in Honors in International Security Studies. To be considered for the program, students must demonstrate sufficient depth and breadth of international security course work. Successful applicants to the program are expected to have taken: POLISCI 114S, International Security in a Changing World; MS&E 193, Technology in National Security; and at least one related course such as ECON 150/PUBLPOL 104, Economic Policy Analysis; STS 110/MS&E 197/PUBLPOL 103B, Ethics and Public Policy; SOC 160, Formal Organizations; PUBLPOL 102/SOC 166, Organizations and Public Policy; POLISCI 110B, Strategy, War, and Politics; POLISCI 110D, War and Peace in American Foreign Policy; POLISCI 123/PUBLPOL 101, Politics and Public Policy; or POLISCI 114T, Major Issues in International Conflict Management.

Students in the program enroll in IIS 199, Interschool Honors Program in International Security Studies, in Autumn, Winter, and Spring quarters.

Information about and applications to this program may be obtained from the Center for International Security and Cooperation, C206-8 Encina Hall Central, telephone (650) 724-8055 or http://cisac.stanford.edu.

CENTER ON DEMOCRACY, DEVELOPMENT, AND THE RULE OF LAW (CDDRL) HONORS PROGRAM

The Center on Democracy, Development, and the Rule of Law (CDDRL) Honors Program provides students majoring in any Stanford academic department the opportunity to conduct an independent research project focused on issues of democracy, development, and the rule of law under CDDRL faculty guidance. Students interested in the program consult with their prospective honors advisers in their junior year and must submit their honors thesis proposal in the Spring Quarter of that year. Honors students present a formal defense of their theses in mid-May of the senior year. Prerequisites for the program are a 3.5 grade-point average, a strong overall academic record, and demonstrated skills in writing and conducting independent research.

Required course work includes INTNLREL 199, an honors research seminar that focuses on democracy, development, and the rule of law in developing countries, as well as INTNLREL/POLISCI 114D, CDDRL's flagship undergraduate lecture course taught every Autumn Quarter. Honors students meet weekly with faculty and their peers to present project theses and receive feedback during Autumn and Winter quarters of their senior year. Students must attend honors college in Washington D.C. with the program in September before Autumn Quarter classes begin.

For more information, contact the Center on Democracy, Development, and the Rule of Law, Encina Hall C100, phone (650) 724-7197; or see http://cddrl.stanford.edu.

WOODS INSTITUTE FOR THE ENVIRONMENT: GOLDMAN INTERSCHOOL HONORS PROGRAM IN ENVIRONMENTAL SCIENCE, TECHNOLOGY, AND POLICY

The Woods Institute for the Environment coordinates a University-wide interschool honors program in environmental science, technology, and policy. Undergraduates planning to participate in the honors program are required to pursue studies in environmental sciences, technology, and policy, with a concentration in a single discipline. After completion of the prerequisite units, students join small group honors seminars to work with faculty members in the environmental field on an honors thesis that incorporates both scientific principles and policy aspects of environmental issues.

Courses in environmental studies appear under the course listings of the schools of Earth Sciences, Engineering, and Humanities and Sciences. Information about and applications to this program may be obtained by phoning (650) 723-5697 and at http://woods.stanford.edu/education/goldman.

The Woods Institute provides support for student group projects focusing on the environment and sustainability. For details, see http://woods.stanford.edu/students/projects.html.

The Woods Institute also sponsors a weekly series of talks on a broad range of energy topics under the rubric of CEE/ENERGY 301, Energy Seminar. For more information, see http://woods.stanford.edu/cgi-bin/energyseminar.php.

LIBRARIES AND COMPUTING RESOURCES

STANFORD UNIVERSITY LIBRARIES AND ACADEMIC INFORMATION RESOURCES

University Librarian and Director of Academic Information Resources: Michael A. Keller
Web Site: http://library.stanford.edu

Stanford University Libraries and Academic Information Resources (SULAIR) includes more than 30 libraries and programs supporting research, teaching, and learning at Stanford University. SULAIR acquires and delivers library collections in all formats, establishes policies and standards to guide the use of academic information resources, develops training and support programs for academic uses of computers, and maintains a broad array of electronic information resources, including the online library catalog and several hundred article and indexing databases and electronic journal subscriptions.

In each library unit, knowledgeable professional staff provide assistance in locating and using print and online information resources. Subject specialists and reference librarians are available for individual consultation, group classes, demonstrations, and special workshops by request.

Libraries throughout campus provide group and individual study spaces, public computers, personal laptop connections, photocopy machines, and digital scanners for use by Stanford faculty, staff, and students.

For information about library hours, see http://libraryhours.stanford.edu.

In support of the University's academic mission, Academic Computing Services provides technology expertise, resources and services to students and faculty. Academic Computing Services supports the use of technology in teaching, learning, research, and community; operates and manages technology-enabled teaching and learning environments including classrooms and public study spaces, the Multimedia Studio in Meyer Library, the Digital Language Lab, and computer clusters in Green Library, Tresidder Union, and the student residences; provides technology education, consulting support, and multimedia services at Meyer and in the residences; provides faculty-specific computing resources through the Academic Technology Specialist Program and Academic Technology Lab; and provides technology support to Stanford University Libraries' services.

Information about the library collections, facilities, services, and policies is available at http://library.stanford.edu.

Further information about library services and resources is available from the Information Center staff in Cecil H. Green Library at http://infocenter.stanford.edu, and from reference staff in all University libraries.

CENTRAL CAMPUS LIBRARIES

The Cecil H. Green Library (East and Bing Wings) maintains research collections in the humanities, social sciences, area studies, and interdisciplinary areas. These collections number approximately 2.8 million volumes. Major services in Green Library include: the Information Center, the Media Microtext Center, the Jonsson Reading Room, the Lane Reading Room, the Bender Room, Loan Desk and Privileges, Interlibrary Services, course reserves, the Department of Special Collections, and the University Archives.

The J. Henry Meyer Memorial Library houses the East Asia Library as well as the Academic Computing Services group of SULAIR and provides study, multimedia, consulting, and instructional support services. In addition, Meyer Library houses the University's Digital Language Lab, technology enabled study spaces and classrooms, the Academic Technology Lab, and the central offices of Student Computing and Academic Computing Services.

BRANCH LIBRARIES

Humanities and Social Sciences Branch Libraries include the Art and Architecture Library, Cubberley Education Library, East Asia Library, Music Library, and Archive of Recorded Sound.

Science Branch Libraries include the Branner Earth Sciences Library, Engineering Library, Falconer Biology Library, Mathematical and Computer Sciences Library, Harold A. Miller Library at the Hopkins Marine Station, Physics Library, and Swain Library of Chemistry and Chemical Engineering.

For a complete list of campus libraries, see: http://libraries.stanford.edu.

COORDINATE LIBRARIES

J. Hugh Jackson Library, Graduate School of Business
Director: Kathy Long
Lane Medical Library
Director: Debra Ketchell
Crown Law Library
Director: Paul Lomio
SLAC National Accelerator Laboratory Library
Director of Technical Information Services: Patricia Kreitz

HOOVER INSTITUTION ON WAR, REVOLUTION AND PEACE

Director: John Raisian
Web Site: http://www.hoover.org

Since its founding by Herbert Hoover in 1919 as a special collection dealing with the causes and consequences of World War I, the Hoover Institution has become an international center for documentation, research, and publication on political, economic, social, and educational change in the 20th and 21st centuries.

The Hoover Library and Archives include one of the largest private archives in the world and contain outstanding area collections on Africa, East Asia, Eastern Europe, Russia and the former Soviet Union, Latin America, the Middle East, North America, and Western Europe.

Holdings include government documents, files of newspapers and serials, manuscripts, memoirs, diaries, and personal papers of men and women who have played significant roles in the events of these centuries, the publications of societies and of resistance and underground movements, the publications and records of national and international bodies, both official and unofficial, and books and pamphlets, many of them rare and irreplaceable. The materials are open to all Stanford students, faculty, and staff, to scholars from outside the University, and to the public at large.

INFORMATION TECHNOLOGY SERVICES (IT SERVICES)

Web Site: http://it-services.stanford.edu

IT Services manages the University's central information technology infrastructure and provides hundreds of services and applications for use in academic and business activities. Support is provided in four layers:

- Participation and client-focused leadership in institutional IT planning, including strategies for data center expansion, centrally managed storage and backup, and business continuity and disaster recovery.
- Applications and services for departments and end-users including email, calendaring, wireless connectivity, web authentication, and Windows and Linux server hosting. These services are supported by a help desk, contract-support consultants, online self-help, and training.
- Applications and services that support other campus service providers, including the help desk, change management, and network registration systems.
- A communications and collaboration infrastructure robust enough to support advanced network, voice, and web-based services.

To learn about the variety of information technology resources available at Stanford, see http://computing.stanford.edu. For assistance with technology services at Stanford, contact the Stanford IT Help Desk at (650) 725-HELP (5-4357) or submit a request through http://helpsu.stanford.edu.

THE CONTINUING STUDIES PROGRAM

Dean and Associate Provost: Charles Junkerman
Associate Dean and Director: Dan Colman
Program Offices: 482 Galvez Mall
Mail Code: 94305-6079
Phone: (650) 725-2650; Fax: (650) 725-4248
Email: continuingstudies@stanford.edu
Web Site: http://continuingstudies.stanford.edu

The Continuing Studies Program provides adults from Stanford and surrounding communities the opportunity to take classes on a part-time basis for intellectual enrichment, both personal and professional. Courses and events are offered in all four academic quarters, with over 350 courses planned throughout the year.

The faculty are primarily drawn from the ranks of the University's professoriate. The program presents a wide variety of courses, with a central concentration in the liberal arts, including literature, history, art and architecture, and music.

Tuition discounts are available to University employees, Stanford students and faculty, Stanford Alumni Association members, educators, and those over age 65.

For a course catalogue, contact the Continuing Studies Program by mail, phone, or email as above.

The Continuing Studies Program also administers the Master of Liberal Arts Program and Summer Session.

MASTER OF LIBERAL ARTS PROGRAM

Associate Dean and Director: Linda Paulson
Participating Faculty: Russell Berman (Comparative Literature, German Studies), Marc Bertrand (French and Italian, emeritus), Jay Bhattacharya (Medicine), Eamonn Callan (Education), Gerry Dorfman (Hoover Institution, Political Science), Michele Elam (English), Martin Evans (English), Paula Findlen (History), Larry Friedlander (English), Kenneth Fields (English), Hester Gelber (Religious Studies), Albert Gelpi (English, emeritus), Barbara Gelpi (English, emerita), Robert Gregg (Religious Studies, emeritus), Tom Grey (Music), Hans Ulrich Gumbrecht (French and Italian), Van Harvey (Religious Studies, emeritus), Gavin Jones (English), Charles Junkerman (Continuing Studies Program), Nancy Kollmann (History), Marsh McCall (Classics, emeritus), Mark Mancall (History, emeritus), Scotty McLennan (Religious Life), David Palumbo-Liu (Comparative Literature), Linda Paulson (English), Denis Phillips (Education, emeritus), Ronald Rebholz (English, emeritus), Rush Rehm (Drama, Classics), John Rick (Anthropology), John Rickford (Linguistics), Paul Robinson (History, emeritus), Ramón Saldívar (English), Paul Seaver (History, emeritus), Thomas Sheehan (Religious Studies), Robert Siegel (Microbiology and Immunology), Peter Stansky (History, emeritus), Stephen Stedman (Freeman Spogli Institute for International Studies), Thomas Wasow (Linguistics), Ernlé Young (Medicine, emeritus), Steven Zipperstein (Jewish Culture and History)
Program Offices: 482 Galvez Mall
Mail Code: 94305-6079
Phone: (650) 725-0061
Email: mlaprogram@stanford.edu
Web Site: http://mla.stanford.edu

Courses offered by the Master of Liberal Arts Program are listed under the subject code MLA on the *Stanford Bulletin's* ExploreCourses web site.

Program Description—The Master of Liberal Arts (MLA) program aims to provide a flexible, interdisciplinary program for returning adult students who seek a broad education in the liberal arts. The underlying premise of the MLA program is that knowledge gained through an interdisciplinary course of study leads to intellectual independence and satisfaction not always found in discipline-based programs of study. The goals of the MLA program are to develop advanced critical thinking, to foster intellectual range and flexibility, and to cultivate an individual's ability to find the connections among different areas of human thought: art, history, literature, music, philosophy, political science, science, and theology.

The program is designed with part-time students in mind: seminars meet in the evening, and students complete the degree in 4-5 years. All master's seminars are taught by members of the Stanford faculty. Seminar size is limited to 20 students.

Degree Requirements—Candidates for the MLA degree must complete a minimum of 50 units of course work with at least a grade point average of 3.3 (B+). These units must include a three-quarter foundation course (equal to 12 units total), one 4-unit core introductory seminar for second-year students, at least seven 4-unit MLA seminars, and a 6-unit master's thesis. Students must also fulfill distribution requirements in each of the following areas: humanities; social science or social policy; and science, engineering, or medicine.

Foundation Course—During the Autumn, Winter, and Spring following admission to the program, a three-quarter foundation course is required of all students. The purpose of this course is to lay the groundwork for the interdisciplinary, intercultural studies the student will shortly undertake. The foundation course will introduce students to the broad framework of history, literature, philosophy, political science, and art.

Core Seminar—During the first quarter of the second year, students take the core introductory seminar, MLA 102, An Introduction to Interdisciplinary Graduate Study. This seminar prepares students for interdisciplinary graduate work at Stanford. Students concentrate on writing a critical graduate paper, conducting library research, presenting the results of their research, and productively participating in a collaborative seminar.

MLA Seminars—Students are required to take at least seven MLA seminars of four units each. Each year, at least nine seminars are offered in the MLA program. Each MLA course requires a substantial seminar paper. Students are encouraged to use these papers as a way to investigate new fields of interest, as well as a way to develop different perspectives on issues in which they have an ongoing interest.

Master's Thesis—The MLA program culminates in the master's thesis. Students approaching the end of the program write a thesis, approximately 75-100 pages in length, that evolves out of work they have pursued during their MLA studies. The thesis is undertaken with the prior approval of the MLA program, and under the supervision of a Stanford faculty member. During the process of writing the thesis, students are members of a work-in-progress group, which meets regularly to provide peer critiques, motivation, and advice. Each student presents the penultimate draft of the thesis to a colloquium of MLA faculty and students, in preparation for revising and submitting the final draft to the adviser and to the MLA program.

Enrollment Requirements—MLA students must enroll for each academic year from the time of original matriculation until conferral of the degree. To remain active, students must either: (a) complete a minimum of two courses (eight units) in one academic year, defined as from the beginning of Autumn Quarter through the end of the following Summer Quarter; or (b) be actively working on their thesis and regularly attend a minimum of three quarters of the work-in-progress meetings from the time the student enrolls in work-in-progress through graduation.

Timeline for Completion—All requirements for the Master of Liberal Arts degree must be completed within five years after the student's first term of enrollment in the program. If extraordinary circumstances prevent completion within five years, a student may

submit a written petition for a maximum one-year extension to the Associate Dean and Director. This petition is reviewed by a committee which makes a recommendation to the Director; the final decision is at the discretion of the Director. To be considered, the petition must be submitted on or before May 1 of the student's fifth year in the program.

Registration—Master of Liberal Arts students enroll in courses through Stanford's Axess system.

SUMMER SESSION

Associate Dean: Patricia Brandt
Assistant Dean of Summer College: Jim Sirianni
Program Offices: 482 Galvez Mall
Mail Code: 94305-6079
Phone: (650) 723-3109; Fax: (650) 725-6080
Email: summersession@stanford.edu
Web Site: http://summer.stanford.edu

Students attending Stanford Summer Session are enrolled in either a regular degree program, the Summer Visitor Program, or the Summer College program for High School Students.

The regular degree program is for students who are candidates for a Stanford degree and who are continuing their academic work in Summer Quarter. Degree-seeking Stanford students should indicate on Axess during Spring Quarter that they intend to register for Summer Quarter. Separate application is not required.

The Summer Visitor Program is for students who are not presently candidates for a Stanford degree. It is open to students who are currently enrolled in or have graduated from another college or university. Qualified high school students who have completed at least their sophomore year may apply to the Summer College program.

Students in Summer Session, in general, enjoy the privileges of students in the regular degree programs except that work completed cannot be applied toward a Stanford degree or credential until the student has been admitted to regular standing. Admission as a summer visitor does not imply later admission to matriculated status. However, should the visitor matriculate at a later date through normal admission procedures, the summer work may be applied toward the requirements for a Stanford degree or credential at the discretion of the University or academic department.

Students in the Summer Program are not matriculated Stanford University students, and not all University student policies apply to Summer Program students. The University reserves the right, at its discretion, to withhold registration from, or require withdrawal from the program of, any student or applicant.

Consistent with its obligations under the law, Stanford prohibits discrimination against applicants or students on the basis of sex, race, age, color, disability, religion, sexual orientation, gender identity, national and ethnic origin, and any other characteristic protected by applicable law in the administration of its educational policies, admissions policies, and other University-administration.

For more information, contact Summer Session by email, mail, phone, or fax using the listings above. Information is updated annually in January and may also be found online at http://summer.stanford.edu.

STUDENT AFFAIRS

Vice Provost for Student Affairs: Greg Boardman
Associate Vice Provost and Dean of Student Life: Chris Griffith
Associate Vice Provost and Dean of Educational Resources: Sally Dickson
Associate Vice Provost and Director of Vaden Health Center: Ira Friedman
Associate Vice Provost and University Registrar: Thomas C. Black
Associate Vice Provost and Dean of Residential Education: Deborah Golder
Web Site: http://studentaffairs.stanford.edu/

Student Affairs provides services and programs to undergraduates and graduate students in support of the University's academic mission.

The division encompasses programs and services for undergraduates and graduate students which include the Office of Residential Education, University Registrar, Vaden Health Center, Career Development Center, Office of Accessible Education, Graduate Life Office, Haas Center for Public Service, Judicial Affairs, Bechtel International Center, Asian American Activities Center, Black Community Services Center, El Centro Chicano, LGBT Community Resources Center, Native American Cultural Center, Women's Community Center, and Office of Student Activities.

The Vice Provost for Student Affairs reports directly to the Provost and is responsible for providing leadership, policy direction, administrative support for budget, personnel, facilities, and development, as well as oversight of the efficiency and effectiveness of each of the division's units. The Vice Provost interacts with the President, the Provost, the University Cabinet, faculty, schools, department representatives, students, and parents. The Vice Provost also serves as an ex officio member of the Senate of the Academic Council.

STUDENT SERVICES CENTER

Office: Tresidder Memorial Union, 2nd floor
Contact via HelpSU: https://remedyweb.stanford.edu/helpsu/helpsu?pcat=StuAcct&dtag=10772
Phone: (650) 723-7772 or (866) 993-7772 (toll-free)
Web Site: http://studentservicescenter.stanford.edu
The AskJane Online Answers Resource: http://askjane.stanford.edu

The Student Services Center (SSC) is committed to providing a single point of friendly, professional service for answers to questions concerning administrative and financial issues. The center strives to resolve 90% of students' issues upon first contact. The SSC represents Student Financial Services, the Office of the University Registrar, the University Cashier's Office, the Financial Aid Office, and Stanford ID Card Services, and is able to assist students with questions including those related to University billing, financial aid disbursements, refunds, payroll deductions, payment plan, enrollment, Stanford degree policies and procedures, Stanford ID card, and forms pickup and submission.

DEAN OF STUDENT LIFE

Dean of Student Life: Chris Griffith
Office: Old Union
Phone: (650) 723-2733
Web Site: http://stanford.edu/dept/vpsa

The Dean of Student Life has responsibility for overseeing the development, implementation, and monitoring of comprehensive student life programs. The unit consists of the Graduate Life Office, Office of Student Activities, Judicial Affairs, Organizational Conduct Board, Old Union and 5-SURE. The Dean reports to the Vice Provost for Student Affairs and is a member of his executive group.

DEAN OF EDUCATIONAL RESOURCES

Dean of Educational Resources: Sally Dickson
Office: Old Union
Phone: (650) 721-4037
Web Site: http://stanford.edu/dept/vpsa

The Dean of Educational Resources is responsible for overseeing the development, implementation, and monitoring of comprehensive programs relating to ethnic, gender, career, and learning needs and interests of student groups. The unit is comprised of the Asian American Activities Center, Black Community Services Center, El Centro Chicano, LGBT Community Resources Center, Native American Cultural Center, Women's Community Center, Bechtel International Center, Career Development Center, and the Office of Accessible Education. The Dean also has oversight responsibility for the Haas Center for Public Service, as well as responsibility for the Acts of Intolerance Protocol. The Dean reports to the Vice Provost for Student Affairs and serves as a member of his executive group.

OFFICE OF ACCESSIBLE EDUCATION (OAE)

Offices: 563 Salvatierra Walk
Phone: (650) 723-1066; TDD (650) 723-1067
Web Site: http://studentaffairs.stanford.edu/oae

The Office of Accessible Education (OAE) is the campus office designated to work with students, faculty, and staff to put in place appropriate accommodations for all Stanford students with disabilities, at both the undergraduate and graduate levels (including the professional schools). The OAE provides a wide array of support services, accommodations, and programs to remove barriers to full participation in the life of the University.

In reaching its determinations about appropriate accommodations, the OAE considers factors such as the documentation from professionals specializing in the area of the student's diagnosed disability, the student's functional limitations, and the student's input and accommodation history in regard to particular needs and limitations. The OAE then works with the student and relevant faculty and staff through an interactive process designed to achieve an accommodation that meets the needs of all parties.

CAREER DEVELOPMENT CENTER

Center Office: 563 Salvatierra Walk
Web Site: http://cardinalcareers.stanford.edu

Counseling Services—Monday through Friday, 9 a.m. to 12 noon, 1 p.m. to 5 p.m.; (650) 725-1789.

Employment Services—Monday through Friday, 8:15 a.m. to 4:30 p.m.; (650) 723-9014.

Reference File Services—Monday through Friday, 10 a.m. to 12 noon, 1 p.m. to 4 p.m.; (650) 723-1548.

The Career Development Center (CDC) offers services such as counseling, workshops, presentations, on-campus recruiting, job/internship databases, reference file services, library resources, and alumni networking, to help students make informed decisions and to plan for life after Stanford.

Services are available to undergraduate and graduate students, and all students are encouraged to visit in person or via the web. Programs and services are free to students; limited services are available to alumni and student spouses/domestic partners.

The following suggestions may assist students in getting the most out of the CDC:

- Visit early in a Stanford career.
- Register with the CDC's Cardinal Career online system to access internships, part-time and full-time.
- Gather general career information through the career resource library, jobs and internship database, handouts, and alumni network.
- Inquire about individual counseling for all stages of career planning and development.
- Participate in workshops and other programs to clarify career goals.
- Use the Reference File Service to ease the management of applications for graduate school or employment.

COMMUNITY CENTERS

There are six ethnic and community centers that support students who seek services associated with a particular group or community. Each center has its own site and professional staff who advise and counsel students. In addition, the centers sponsor programs throughout the year that foster intellectual, personal, and cultural growth. Detailed information is available on the following web sites:

- Asian American Activities Center: http://stanford.edu/group/a3c
- Black Community Services Center: http://stanford.edu/dept/BCSC
- El Centro Chicano: http://stanford.edu/dept/elcentro
- LGBT Community Resources Center: http://lgbt.stanford.edu
- Native American Cultural Center: http://stanford.edu/dept/nacc
- Women's Community Center: http://womenscntr.stanford.edu

GRADUATE LIFE OFFICE

Graduate Life Office: Escondido Village Office, 859 Comstock Circle
Graduate Life Office, Graduate Community Center: 750 Escondido Road
Phone: (650) 736-7078
Email: graduatelife@stanford.edu
Web Site: http://glo.stanford.edu

The Graduate Life Office (GLO) works with students on and off campus and with student groups, including Community Associates (student residence staff), the Graduate Student Programming Board, and the Graduate Student Council, to create an inclusive environment through programs in the residences and campus-wide. The Graduate Community Center (GCC) serves as a focal point for meetings and activities in the graduate community.

The GLO staff also works with individual students who need information and support or who may be experiencing personal difficulties. Staff members are knowledgeable about and have access to support and resources available throughout the University. Staff work closely with student services administrators in academic departments to provide consultation and services to students in need.

GRADUATE STUDENT RESIDENCE PROGRAM

The University's philosophy of graduate student housing is based on the premise that supporting high quality graduate scholarship and research is central to the mission of the University. By providing affordable housing in proximity to academic resources, the University creates an environment conducive to research and intellectual dialogue among students, their peers, and faculty members. The Community Associate (CA) program in the residences serves as a supportive resource for residents and to connect student neighbors through social events and activities to build a sense of community in the residences.

HAAS CENTER FOR PUBLIC SERVICE

Center Offices: 562 Salvatierra Walk
Mail Code: 8620
Phone: (650) 723-0992
Web Site: http://haas.stanford.edu

The Haas Center for Public Service connects academic study with public service to strengthen communities and develop effective public leaders. The center aspires to develop aware, engaged, and thoughtful citizens who contribute to the realization of a more just and humane world.

To accomplish these objectives, the center collaborates with associated units at Stanford to implement programs in the following areas of work.

- Through the center's fellowship programs, undergraduates perform summer internships in nonprofit organizations, foundations, and government agencies locally, nationally, and internationally. Postgraduate fellowships allow graduating seniors to work with a mentor in a nonprofit or public agency for a year.
- The Public Service Leadership Fellows Program provides an opportunity for students who want to be intentional about their leadership development. Center staff also provides leadership development through training, advising, and resources to Stanford in Government, Alternative Spring Break, and other student groups engaged in service.
- With support from the center, Stanford faculty members have created service-learning courses that involve Stanford students in providing direct service and community-based research efforts in collaboration with local schools and other partner agencies. The center's Public Service Scholars Program supports seniors writing honors theses that combine academic research with service to communities.
- Faculty from Stanford's School of Education collaborate with center staff to provide curriculum guidance and training for tutors and mentors at nearby schools. Another program trains Stanford students to bring results of scientific research to neighborhood programs. The federally supported Community Service Work-Study program, administered in conjunction with the University's Financial Aid Office, allows students to satisfy work-study obligations year-round by working in community organizations and public agencies.
- The postgraduate and alumni programs help students, particularly graduating seniors, identify opportunities to assist in launching their public service careers in nonprofit and government agencies, and in the private sector in service-related positions. The Haas Center houses the Center on Philanthropy and Civil Society, a program of the Institute for Research in the Social Sciences (IRiSS).

Students interested in public service fellowships, service-learning courses, community-based research, public and community service internships for youth and education, or service organization leadership development should contact the center.

BECHTEL INTERNATIONAL CENTER

Web Site: http://icenter.stanford.edu

The Bechtel International Center (I-Center) is a meeting place for students and senior research scholars at Stanford from throughout the world and for internationally oriented U.S. students, faculty, and short-term visitors on the campus. Through a variety of social, cultural, and educational programs, I-Center facilities are utilized to acquaint students and scholars with the life of the University and the community, and to bring them together in activities of mutual interest.

The Center believes that international educational exchange nurtures a lifelong global perspective, and plays a key role in supporting Stanford's standing as a truly international university in the following ways:

- Provides information about and assistance with obtaining and maintaining legal status in the U.S. to foreign students, scholars, and Stanford departments.
- Advises U.S. students who are pursuing scholarships for study and research abroad.
- Enables foreign students, scholars, and their family members at Stanford to receive maximum academic, cultural, and personal benefit from their stays in the U.S.
- Contributes to international activities at Stanford by helping to create a welcoming and supportive environment that is responsive to the needs of the international community.
- Facilitates professional meetings between visiting international delegations and their Stanford counterparts.
- Provides opportunities for Stanford students, faculty, staff, and members of the local community to broaden their horizons by interacting with people from different cultures through programs to increase international awareness and understanding.

JUDICIAL AFFAIRS AND STUDENT CONDUCT

Office: Tresidder Memorial Union, 2nd floor
Mailing Address: 459 Lagunita Drive, Suite 9
Mail Code: 94305-3010
Phone: (650) 725-2485
Fax: (650) 736-0247
Web Site: http://judicialaffairs.stanford.edu
Email: judicial.affairs@stanford.edu

The primary codes of conduct for students are the Fundamental Standard and Honor Code. The Student Judicial Charter of 1997 was approved by the Associated Students of Stanford University, the Senate of the Academic Council, and the President of the University during Spring Quarter 1996-97 and Autumn Quarter 1997-98, replacing the earlier charter and becoming effective in January 1998. Cases of alleged violations of the University's Honor Code, Fundamental Standard, and other student conduct policies now proceed through an established student judicial process based upon the Student Judicial Charter of 1997, which can be found in its entirety at the University's Office of Judicial Affairs web site at http://judicialaffairs.stanford.edu. The web site also contains the policies, rules, and interpretations, as well as the University's Student Conduct Penalty Code, applicable to those students found responsible for violating the Honor Code, the Fundamental Standard, or other University policy or rule.

When a violation of the Fundamental Standard, Honor Code, or other University policy or rule governing student conduct is alleged, or whenever a member of the University community believes such a violation has occurred, he or she should contact the Office of Judicial Affairs.

THE FUNDAMENTAL STANDARD

Students at Stanford are expected to know, understand, and abide by the Fundamental Standard, which is the University's basic statement on behavioral expectations articulated in 1896 by Stanford's first President, David Starr Jordan, as follows:

"Students are expected to show both within and without the University such respect for order, morality, personal honor, and the rights of others as is demanded of good citizens. Failure to do this will be sufficient cause for removal from the University."

Actions that have been found to be in violation of the Fundamental Standard include:

- Physical assault
- Property damage
- Forgery
- Theft
- Sexual harassment or other sexual misconduct
- Misrepresentation in seeking financial aid, University housing, University meals, or other University benefits
- Driving on campus while under the influence of alcohol
- Misuse of computer equipment or email
- Sending threatening or obscene messages

There is no standard penalty which applies to violations of the Fundamental Standard. Penalties range from a formal warning to expulsion. Each case is fact specific; considerations include the nature and seriousness of the offense, the motivation underlying the offense, and precedent in similar cases.

THE HONOR CODE

The Honor Code is the University's statement on academic integrity. It is essentially the application of the Fundamental Standard to academic matters. Provisions of the Honor Code date from 1921, when the honor system was established by the Academic Council of the University Faculty at the request of the student body and with the approval of the President. The Honor Code reads:

A. The Honor Code is an undertaking of the students, individually and collectively:
   1. that they will not give or receive aid in examinations; that they will not give or receive unpermitted aid in class work, in the preparation of reports, or in any other work that is to be used by the instructor as the basis of grading;
   2. that they will do their share and take an active part in seeing to it that others as well as themselves uphold the spirit and letter of the Honor Code.

B. The faculty on its part manifests its confidence in the honor of its students by refraining from proctoring examinations and from taking unusual and unreasonable precautions to prevent the forms of dishonesty mentioned above. The faculty will also avoid, as far as practicable, academic procedures that create temptations to violate the Honor Code.

C. While the faculty alone has the right and obligation to set academic requirements, the students and faculty will work together to establish optimal conditions for honorable academic work.

Examples of conduct that has been found to be in violation of the Honor Code include:

- Copying from another's examination paper or allowing another to copy from one's own paper
- Unpermitted collaboration
- Plagiarism
- Revising and resubmitting a quiz or exam for regrading without the instructor's knowledge and consent
- Representing as one's own work the work of another
- Giving or receiving aid on an academic assignment under circumstances in which a reasonable person should have known that such aid was not permitted

For more information, see the Interpretations and Applications of the Honor Code at http://stanford.edu/dept/vpsa/judicialaffairs/guiding/honorcode. The standard penalty for a first offense is a one quarter suspension from the University and 40 hours of community service. In addition, many faculty members issue a 'No Pass' for the course in which the violation occurred.

OLD UNION

Stanford's student union, known as the Old Union, serves as a hub for student activities on campus. The central structure in a three-building complex, the Old Union has administrative offices for ASSU, Office of Student Activities (OSA), Dean of Student Life, and Dean of Educational Resources. It also houses a multi-faith center known as CIRCLE (Center for Inter-Religious Community, Learning, and Experiences), meeting rooms for student use, and the Axe and Palm which offers casual dining. Adjoining the Old Union, the Nitery houses a black-box theater and El Centro Chicano, and the Clubhouse is home to the Asian American Activities Center and the Native American Cultural Center.

OFFICE OF RESIDENTIAL EDUCATION

Web Site: http://www.stanford.edu/dept/resed/

The Office of Residential Education is responsible for developing the policies, programs, and staffing which support the intellectual, educational, and community-building activities in student residences. The conviction behind the Stanford residence program is that formal teaching, informal learning, and personal support in residences play an important role in a Stanford education.

RESIDENTIAL EDUCATION PROGRAM

The Residential Education program provides Stanford undergraduates with a small community experience within a large research university. Residential Education programs extend the classroom into the residences and complement the academic curriculum with activities and experiences that contribute to students' preparation for a life of leadership, intellectual engagement, citizenship, and service. An extensive network of staff, including many who live in the residence halls, supports students during their undergraduate careers.

RESIDENCE DEANS

Residence Deans provide assistance to on- and off-campus undergraduate students. They can advise students about personal matters, occasionally intervene directly in behavioral problems or mental health concerns, and assist with personal emergencies. Advice is also available on issues of academic probation or suspension, leaves of absence, special concerns of students, and administrative matters. Residence Deans work closely with the Dean of Student Life and other University offices. They are assigned to specific residences and to off-campus students. For further information, undergraduates should call Residential Education at (650) 725-2800. For assistance, graduate students can consult Assistant Deans in the Graduate Life Office at (650) 736-7078.

OFFICE OF STUDENT ACTIVITIES

Web Site: http://www.stanford.edu/dept/OSA

The Office of Student Activities, located in Old Union, supports student activities, over 600 student organizations and the ASSU through publications, workshops, one-on-one consultation, advising and major event planning support. The OSA also provides fundraising expertise for student groups and leadership opportunities for students.

VOLUNTARY STUDENT ORGANIZATIONS

There are over 600 different Voluntary Student Organizations (VSOs) at Stanford. VSOs are those organizations: (1) in which membership is not mandatory and is nondiscriminatory, (2) in which membership is both open and limited to current Stanford students registered in a degree-granting program, (3) in which students make all organizational decisions, and (4) whose purposes and procedures are consistent with the goals and standards of the University. In order to use University facilities, the Stanford name, or to receive ASSU funding, all voluntary student organizations must register with the University through the Office of Student Activities, Old Union, room 206.

As a condition of registration, each voluntary student organization must file and have approved each of the following:

1. A statement of purpose and organizational constitution.
2. A statement about membership eligibility.
3. Clear procedures for officer elections.
4. Identification of the authorized representatives of the group, who must be a currently registered student, and at least five active members in the organization who are currently registered students.

Each voluntary student organization must renew its registration with the University annually, early in Autumn Quarter, by submitting new registration materials.

If a voluntary student organization that is registered with the University seeks to use University facilities for meetings open to more than its own members and to specifically invited guests, such meetings shall be subject to the regulations of the Committee on Public Events. All organization events held in University facilities must receive event approval from the Office of Student Activities and Stanford Events.

A voluntary student religious organization may hold open meetings in University facilities only with the approval of the Office of the Dean for Religious Life.

A registered voluntary student organization may advocate publicly a position on a public issue, provided the organization clearly identifies itself, and provided such an organization in any public statement makes clear it does not represent or speak for the University or for the Associated Students.

No student group may use University space or facilities or receive other University support for purposes of supporting candidates for public office. Groups may use public places such as White Plaza for tables, speeches, and similar activities; may have intermittent use of on-campus meeting rooms; and may request to reserve auditoriums and similar space for public events including speeches by political candidates as long as all University guidelines are followed.

TRESIDDER MEMORIAL UNION

Tresidder Memorial Union (TMU) is a center of community activity on the Stanford campus. It houses a variety of restaurants and meeting rooms, a ticket office and campus information center, a convenience store, banking and credit union offices with ATMs, a fitness center, FedEx/Kinkos and a hair salon.

TMU is also the home of several administrative offices: Meeting Services, Judicial Affairs, Residential Education, Student Services Center, Stanford Catering, Stanford Dining (Meal Card program), the LAIR computer center and the Office of the Vice Provost for Student Affairs.

VADEN HEALTH CENTER

Center Office: 866 Campus Drive

Web Site: http://vaden.stanford.edu

The Allene G. Vaden Health Center strictly protects the confidentiality of information obtained in medical care and counseling.

MEDICAL SERVICES

Medical Services (650-498-2336, ext. 1) is the first stop for diagnosis and treatment of illness, injury, and ongoing conditions, as well as preventive counseling and education. Services available without additional charge for students who have paid the Campus Health Service fee include:

- Medical appointments in general medicine and sports medicine.
- Medical advice for routine concerns throughout the day. When Medical Services is closed, advice for urgent conditions is available from the on-call physician.
- Referral to specialists, primarily at Stanford Hospital and Clinics and Menlo Medical Clinic.

Additional services (fees apply):

- Allergy injections, immunizations, travel services, physical exams for employment and scholarships, HIV testing, laboratory, X-rays, drug screening (academic year only).
- Pharmacy (650-498-2336, ext. 3) and physical therapy (650-723-3195) are available on site.

COUNSELING AND PSYCHOLOGICAL SERVICES (CAPS)

CAPS (650-723-3785) helps students who experience a wide variety of personal, academic, and relationship concerns. Services available without additional charge for students who have paid the Campus Health Service Fee include:

- Evaluation and brief counseling, including personal, couples and group therapy. Students requesting or requiring longer, ongoing therapy incur fees.
- Workshops and groups that focus on students' social, personal and academic effectiveness.
- Crisis counseling for urgent situations 24 hours a day.
- Consultation and outreach to faculty, staff, and student organizations.

YWCA SEXUAL ASSAULT CENTER AT STANFORD

The YWCA Sexual Assault Center at Stanford assists students, staff, faculty and other Stanford campus affiliates who are victims of sexual assault. Located on the first floor of Vaden Health Center, it is open by appointment or drop-in office hours, Monday through Thursday, 2:00-4:00 PM. The center also can be reached at its 24-hour campus telephone line (650) 725-9955.

HEALTH PROMOTION SERVICES

Health Promotion Services (650-723-0821) educates and supports students to help them make informed, healthy decisions about their lifestyle. Services include:

- Individual preventive counseling and resource referral concerning nutrition, weight management, eating and body image, alcohol, tobacco and other drug use, sexual assault and harassment, relationships, intimacy and gender issues, and sexual health.
- Health education speakers, programs, and events and workshops at student residences, community centers, student organizations, and for new students (such as Real World: Stanford).
- Academic courses and internships.
- Student groups and volunteer opportunities including Peer Health Educators, HIV Peer Anonymous Counseling and Testing (HIV*PACT), Sexual Health Peer Resource Center (SHPRC), and CPR/First Aid classes.

HEALTH INSURANCE

All registered students are required to have health insurance. Call (650) 723-2135 for more information. Cardinal Care, the University-sponsored plan for students, fulfills this requirement. Insured by Aetna Student Health (medical), and ValueOptions (mental health), Cardinal Care features comprehensive, worldwide coverage, services by referral at Stanford University Medical Center and Menlo Medical Clinic, and lowest costs when one initiates care at Vaden Health Center. Stanford does not sponsor a health insurance plan for dependents; for available options, see http://vaden.stanford.edu/insurance/dependent.html. Options for voluntary dental insurance are also offered.

OTHER SERVICES AND PROGRAMS

BOOKSTORE

Web Site: http://stanfordbookstore.com

Organized in 1897, Stanford Bookstore, (650) 329-1217, located at 519 Lasuen Mall (White Plaza), provides a diverse selection of books, course materials, and supplies to the students, faculty, staff, and community in and surrounding Stanford. The bookstore carries over 130,000 titles, including a wide selection of medical books and books written by Stanford authors, making it one of the largest bookstores in the nation. The bookstore also carries medical instruments, Stanford logo apparel, gifts and souvenirs, periodicals, and features a café that provides an enhanced shopping experience. The Computer Store, in the main branch, sells academically priced computer hardware and software. Other services include shipping of purchases, gift cards, book buyback, fax service, postage stamp sales, an ATM, and Enterprise Rent-A-Car hotline. There are four branches in addition to the Stanford Bookstore that also serve the community: the Stanford Athletics Shop (formerly the Track House Sports Shop), (650) 327-8870, underneath the Cobb Track and Angell Field bleachers, is the headquarters for Stanford Athletic Gear; Tresidder Express convenience store, (650) 723-9224 in Tresidder Union; the Stanford Shop, (650) 614-0295, at the Stanford Shopping Center, provides Stanford apparel; and the Bookshop, (650) 725-2775, at the Cantor Center for the Arts, carries books on the arts, fine gifts, apparel, and jewelry.

DIVERSITY AND ACCESS OFFICE

Office: Mariposa House, 585 Capistrano Way
Mail Code: 94305-8230
Phone: (650) 723-0755; TTY: (650) 723-1216
Email: equal.opportunity@stanford.edu, disability.access@stanford.edu
Web Site: http://stanford.edu/dept/diversityaccess

The Diversity and Access Office has two primary missions:

1. To oversee University compliance with nondiscrimination and equal opportunity laws (including but not limited to Title VI, Title VII, and Title IX), as well as the regulations relating to affirmative action. This includes collecting, monitoring, reporting, and analyzing personnel data regarding the hiring, promotion, and retention of women and minorities.
2. To oversee University compliance with federal and state disability-related laws, including (but not limited to) the Americans with Disabilities Act, and Sections 503 and 504 of the Rehabilitation Act. This includes providing certain non-academic services (and accommodations) to students with disabilities, and providing assistance and information to staff and faculty with disabilities needing workplace accommodations. The office also provides auxiliary aids and services to the public visiting Stanford and attending public events. In addition, the office monitors disability access on campus and provides information regarding web accessibility.

STANFORD CONFERENCE SERVICES

Phone: (650) 723-3126
Email: conferenceinquiries@stanford.edu
Web Site: http://conference.stanford.edu

A conference is defined as any student, youth, or adult group that convenes for part of a day (including a luncheon), overnight, or for several days, outside the regular or summer academic sessions for registered students. Policies concerning conferences are the responsibility of the offices of the President and the Provost.

To make arrangements for hosting a new, academically sponsored residential summer conference during the mid-June through late-August time frame, contact Stanford Conference Services by phone or email as listed above. Stanford Conference Services also offers meeting planning services on a year-round basis for academically sponsored conference groups seeking assistance with planning and managing residential and non-residential conferences. In addition, conference organizers seeking to conduct conferences outside of the late August to early June time frame can also contact the non-academic facilities scheduling in the Office of the University Registrar, (650) 723-6755 or reg-events@stanford.edu, or contact Stanford Events, (650) 723-2551 or stanfordevents@stanford.edu.

Academic sponsorship by a Stanford dean or department head is required for first time conferences hosted by University departments or by conferences hosted by external organizations interested in meeting at Stanford. Conferences initiated by University departments or external organizations must demonstrate consistency with the University's academic mission. For summer conferences, the sponsoring department submits its proposal to the Director of Stanford Conference Services for review in terms of available facilities and for the approval of the President's Office. At least half of the participants in any summer conference at Stanford hosted by an external organization must be housed in Stanford's campus residences and participate in daily meal plans provided by Stanford Dining. On-campus residential housing and dining services are normally available from the Sunday following Commencement through late August.

Summer conference groups should contact Stanford Conference Services concerning arrangements for tables, chairs, audio-visual aids, signage, janitorial services, trash pick-up and removal, sprinkler shutoffs, and other conference-related products/services. During the academic year, housing arrangements for University-sponsored visitors can be made through the Stanford Guest House, (650) 926-2800, or at http://guesthouse.stanford.edu.

OMBUDS

Stanford University Ombuds: David Rasch
Ombuds Office: Mariposa House, 585 Capistrano Way, Room 210
Phone: (650) 723-3682
Fax: (650) 725-7288
Mail Code: 94305-8200
Email: rasch@stanford.edu
Web Site: http://stanford.edu/dept/ombuds
School of Medicine Ombuds: http://med.stanford.edu/ombuds

The charge to the Ombuds office at Stanford is: "The Ombudsperson's task is to protect the interests and rights of members of the Stanford community from injustices or abuses of discretion, from gross inefficiency, from unnecessary delay and complication in the administration of University rules and regulations, and from inconsistency, unfairness, unresponsiveness, and prejudice in the individual's experience with University activities. The Ombudsperson's office exists to receive, examine, and channel the complaints and grievances of members of the Stanford community, and to secure expeditious and impartial redress."

Any troublesome matter in the University community may be discussed in confidence with the University Ombuds. Services of the office are available to students, staff, and faculty. Although possessing no decision making authority, the Ombuds has wide powers of inquiry. The Ombuds refers matters to the proper person or office expeditiously and also provides conflict resolution services. For the role of the office of the Ombuds in cases of sexual harassment, see the "Non-Academic Regulations" section of this bulletin.

POLICE SERVICES

Department Office: Corner of Campus Drive and Serra Street
Phone: (650) 723-9633
Web Site: http://police.stanford.edu

The Stanford Department of Public Safety is a full service police department that operates 24 hours a day, 7 days a week. For police, fire, or ambulance response, dial 9-1-1, or 9-9-1-1 from a University phone. Emergency assistance can also be obtained by using one of the nearly 100 Blue Emergency Phone Towers strategically placed around campus.

The department is comprised of the following divisions:

The Field Services Division consists of sworn and non-sworn officers who patrol the campus and respond to calls for service. Sworn officers receive their police powers through the Santa Clara County Sheriff's Office. Sworn officers have the legal authority to stop vehicles, make arrests, and enforce all laws. Non-sworn officers assist the sworn officers with security patrols, evidence collection, crime prevention presentations, and other assigned tasks.

Community Service Division: Community Service Officers (CSOs) enforce the parking rules and regulations on campus, and provide traffic control at special events, construction zones, and accident scenes. CSOs also provide building security during emergency or critical incidents.

The Support Services Division provides logistical, technical, and accounting support to the department. Special events are handled through this division as well. Special Events Personnel (SEPs) provide security at campus events including athletic events, concerts, student-sponsored events, and dignitary visits. SEPs are available for hire by groups needing security at their University events. Contact the special events office at (650) 723-4924, or email event_security@stanford.edu, for more information.

The Administrative Support Division supports the department through training, recruiting, payroll, human resources, and other business functions.

For additional safety information or to view the yearly crime statistics, see the Stanford Safety and Security Almanac, available free from Public Safety, or see http://police.stanford.edu.

OFFICE FOR RELIGIOUS LIFE

Office: Memorial Church
Phone: (650) 723-1762
Web Site: http://religiouslife.stanford.edu

The mission of the Office for Religious Life (ORL) is to guide and enhance spiritual, religious, and ethical life within the Stanford University community. Multifaith exploration and dialogue, central in Stanford's history from its founding, is a vital part of both its ethos and education.

The ORL is committed to welcoming students of all genders and sexual identities, all religious and non-religious traditions, and all cultural backgrounds, striving to ensure that students, faculty, and staff have access to supportive contexts in which to pursue their spiritual journeys on the Stanford campus.

The ORL oversees and provides support for Stanford Associated Religions (SAR), more than thirty religious organizations that offer their spiritual services to the campus, as well as the Center for Inter-Religious Community, Learning, and Experiences (the CIRCLE). Located on the third floor of the remodeled Old Union, the CIRCLE offers an interfaith sanctuary, a seminar room, a common room, a student lounge, a non-lending library, and offices housing many SAR member groups.

STANFORD ALUMNI ASSOCIATION

Web Site: http://stanfordalumni.org
Phone: (800) 786-2586 or (650) 723-2021

The Stanford Alumni Association (SAA) seeks to serve all Stanford alumni and students by offering programs and services such as reunions, regional events, *Stanford Magazine*, online services, volunteer and learning opportunities, and the alumni directory.

The Stanford Alumni Association's alumni and student class outreach department (ASCO) provides undergraduates and graduate students with networking opportunities, celebratory and social events, and programs that enhance their Stanford experience and help connect them to the 200,000 alumni worldwide who make up the Stanford alumni community. ASCO programs bring students and alumni together through Reunion Homecoming Weekend each autumn and Commencement weekend in the spring, along with alumni networking events throughout the year.

For students, SAA sponsors events such as student tailgates, alumni panels, Senior Send-off, Senior Dinner on the Quad, and Class Day. The Alumni Association gives out the J.E. Wallace Sterling Award and the Stanford Award of Excellence annually to honor graduating seniors for exemplary service to the University. For more information on student programs at the Stanford Alumni Association, see http://www.stanfordalumni.org/students/home.html.

STANFORD EVENTS

Stanford Events supports the mission and goals of Stanford University through open engagement of the campus community and the worldwide public. The department has three divisions: Public Events, Stanford Lively Arts, and the Stanford Ticket Office.

Public Events oversees, advises, and produces University events and ceremonies as designated by the President's office such as: Commencement, Baccalaureate, the University President's inaugurations, New Student Orientation Convocation, Community Day/Founders' Celebration, and other high-profile university events. This division also serves in an advisory capacity to the schools, departments, and student groups on campus, and oversees University policy and procedure regarding campus events. The Public Events office has final approval authority of Stanford facility and open space use for non-academic public events on campus. For information about University event planning, policies, procedures, and University facilities,see http://stanfordevents.stanford.edu, or call (650) 723-2551.

Stanford Lively Arts, the University's presenting program, annually brings to campus a full season of music, dance, and theater by world-famous artists and exceptional newcomers. It furthers research and creativity through world premieres, collaborations, and commissions. In addition to on-stage performances, Lively Arts extends and supplements the academic life of the University through master classes, extended residencies, workshops, lectures and demonstrations, and group discussions. Internationally acclaimed artists perform serious work with Stanford students in classrooms as well as in residence halls. Discounts on performances are available for faculty, staff, and students. For tickets and more information, see http://livelyarts.stanford.edu, or call (650) 725-ARTS (2787).

Stanford Ticket Office provides ticketing services for the arts and entertainment events of Stanford University. Tickets for Stanford Lively Arts, Stanford music and drama departments, Stanford Jazz Workshop/Festival, and the ASSU Concert Network are among the event tickets that are available through this office. For more information, see http://tickets.stanford.edu, or call (650) 725-ARTS (2787).

AWARDS AND HONORS

FACULTY AND STAFF AWARDS

KENNETH M. CUTHBERTSON AWARD

The Kenneth M. Cuthbertson Award was established in 1981 to recognize exceptional service to Stanford University. It was established by members of the faculty who wish to remain anonymous. All members of the Stanford community are eligible for the award; the sole criterion is the quality of the contribution that the recipients have made to the University. The award provides a way of honoring members of the staff and faculty for their efforts on behalf of the University.

Ordinarily, one award is made each year. The award was first presented in 1981 to the person for whom it is named. Kenneth M. Cuthbertson was one of the early architects of Stanford's long-term financial planning and fundraising program. His service to Stanford set an enduring standard for those who will come after him. The award is made annually at the University Commencement Ceremony.

LLOYD W. DINKELSPIEL AWARDS

The Lloyd W. Dinkelspiel Awards recognize distinctive and exceptional contributions to undergraduate education at Stanford University. The two principal awards are made to the faculty or staff members adjudged to have made the most distinctive contribution to the development and enrichment of undergraduate education in its broadest sense. Two awards are also made to graduating seniors who combine academic achievement with effective contributions to undergraduate student life. Preference is given to service in the School of Humanities and Sciences in the area of liberal education. The awards are made from an endowment fund established in memory of Lloyd W. Dinkelspiel, a Stanford alumnus and trustee. The awards are made annually at the University Commencement Ceremony.

WALTER J. GORES AWARDS

The Walter J. Gores Faculty Achievement Awards for excellence in teaching were established by bequest of Walter J. Gores, Stanford Alumnus of the Class of 1917 and a professor at the University of Michigan for 30 years. Teaching is understood in its broadest sense and includes, in particular, lecturing, leading discussions, tutoring, and advising at the undergraduate or graduate levels. Any member of the teaching staff of the University is eligible for an award, including all faculty of professorial rank, instructors, lecturers, teaching fellows, and teaching and course assistants. Ordinarily, awards are made to a senior faculty member (associate or full professor) or senior lecturer; a junior faculty member or member of the teaching staff; and a teaching assistant (graduate or undergraduate student). The awards are made annually at the University Commencement Ceremony.

ALLAN COX MEDAL FOR FACULTY EXCELLENCE FOSTERING UNDERGRADUATE RESEARCH

The Allan Cox Medal for Faculty Excellence Fostering Undergraduate Research is awarded annually to a faculty member who has established a record of excellence directing undergraduate research over a number of years. It may also go to a faculty member who has done an especially outstanding job with just one or two undergraduates who have demonstrated superior work. The medal was established in memory of the former professor of Geophysics and Dean of the School of Earth Sciences, a strong supporter of faculty-student research collaboration.

HERBERT HOOVER MEDAL FOR DISTINGUISHED SERVICE

David Starr Jordan's belief that every academic degree should represent work actually done in or under the direction of the institution granting it has meant that, since its founding, Stanford has awarded no honorary degrees. As a means of recognizing extraordinary individuals who deserve special acknowledgment, the Stanford Alumni Association in 1962 voted to establish the Herbert Hoover Medal for Distinguished Service. The name pays tribute to the former President's example of service to his University, to his country, and to the cause of world humanitarianism. Indeed, Mr. Hoover was the first award recipient. The gold medal is presented following selection by an anonymous committee appointed by the Chair of the Board of Directors of the Alumni Association.

STUDENT AWARDS

BOOTHE PRIZE FOR EXCELLENCE IN WRITING

Awarded during the freshman year, the Boothe Prize recognizes excellence in writing. Students are selected for this honor on the basis of essays written for courses fulfilling the Introduction to the Humanities or Writing and Rhetoric requirements. The prize is named for Mr. and Mrs. D. Power Boothe, Jr., whose gifts to the University reflect their interest in the humanities.

PRESIDENT'S AWARD FOR ACADEMIC EXCELLENCE IN THE FRESHMAN YEAR

The President's Award honors students who have exceptionally distinguished academic records that exemplify a strong program of study in the freshman year. Students eligible for the award normally have completed Writing and Rhetoric and Introduction to the Humanities requirements during their first year at Stanford.

DEANS' AWARD FOR ACADEMIC ACHIEVEMENT

The Deans of Earth Sciences, Engineering, and Humanities and Sciences recognize from five to ten undergraduate students each year for their academic endeavors. Honorees are cited for noteworthy accomplishments which represent more than a high grade point average or success in course work. Faculty nominate students who have exceptional tangible achievements in classes or independent research, national academic competitions, a presentation or publication for a regional or national audience, or exceptional performance in the creative arts.

FIRESTONE MEDAL FOR EXCELLENCE IN RESEARCH

The Firestone Medal is awarded to seniors in recognition of excellence in undergraduate research. Departments in the School of Humanities and Sciences nominate students who have completed outstanding honors projects in the social, physical, and natural sciences.

ROBERT M. GOLDEN MEDAL FOR EXCELLENCE IN THE HUMANITIES AND CREATIVE ARTS

The Golden Medal recognizes outstanding achievement in the humanities and the creative arts. Seniors receive these medals upon nomination by their major department.

HOEFER PRIZE FOR EXCELLENCE IN UNDERGRADUATE WRITING

The Hoefer Prize recognizes students and faculty for their work in courses that meet the University Writing Requirement for writ-

ing in the major. Prizes are awarded in each of the five areas of the undergraduate curriculum: humanities, social sciences, natural sciences, engineering, and earth sciences.

FREDERICK EMMONS TERMAN ENGINEERING SCHOLASTIC AWARD

The School of Engineering annually presents the Terman Award to seniors for outstanding academic achievement. The awardees share their award with a high school teacher of their nomination.

PHI BETA KAPPA

Phi Beta Kappa is a nationwide society honoring students for the excellence and breadth of their undergraduate scholarly accomplishments. Membership in the Stanford Chapter (Beta of California) is open to undergraduates of all majors. To be elected to Phi Beta Kappa at Stanford, a student must achieve academic distinction in the major as well as in courses across a broad range of fields.

Approximately a tenth of the members of a graduating class are elected to Phi Beta Kappa. Of this number, about one fifth are chosen in their junior year, the remainder in their senior year.

The chapter's election guidelines define breadth of study as excellence beyond the major field. To be considered for election, a student must have taken at least three courses of 3 units or more at Stanford by the time elections are held early in the Spring Quarter with a letter grade of 'B-' or better in each of the following three major domains of knowledge: humanities; science, engineering, and math; and social sciences. Students who transfer in their junior year must have taken at least two courses at Stanford in two of the major domains and at least one course in the third domain, and must have completed a minimum of 75 units of academic work at Stanford by the end of Winter Quarter. Students who transfer in their sophomore year must have taken at least two courses at Stanford in each of the major domains.

There is no direct correlation between Stanford University General Education Requirements (GERs) and Phi Beta Kappa breadth requirements. The elections committee analyzes the content of individual courses to determine which major domain requirement they may satisfy. IHUM, PWR, and first-year language courses do not satisfy the PBK breadth criterion.

A grade of '+' or 'CR' is not considered a sign of distinction. Minimally satisfying the breadth criterion is not considered a sign of distinction.

The academic records of eligible students are automatically reviewed, so no special action is required for students wishing to be considered for membership. Anonymity in the election process is ensured by removal of the students' names from their academic records before consideration. Students who desire that their records not be made available for consideration by the Stanford chapter of Phi Beta Kappa should inform the Registrar, 630 Serra Street, Suite 120, Stanford, CA 94305-6032.

EXCHANGE PROGRAMS AND CROSS-ENROLLMENT AGREEMENTS

Stanford has exchange programs and cross-enrollment agreements with a number of other colleges and universities. The purpose of these programs and agreements is to offer Stanford students courses and training that are not available in the Stanford curriculum.

EXCHANGE PROGRAMS

UNDERGRADUATE

Stanford has exchange programs with four colleges and universities that allow students to exchange schools for a quarter/semester or for a year, depending on the school. These programs are best suited to students in their junior year, when the major area of study has been determined. Stanford students register for zero units at Stanford during the quarter(s) in which they are attending another college or university and pay the regular Stanford tuition. Courses taken at the other institution are treated as transfer credit back to Stanford. Students should contact the External Credit Evaluation section of the Office of the University Registrar to determine whether the courses taken through an exchange program may qualify for credit toward a Stanford degree. Only the number of units accepted in transfer, not the course titles or the grades received, are recorded on the Stanford transcript.

Exchange programs are currently available at three historically black institutions: Howard University in Washington D.C.; and Morehouse College and Spelman College in Atlanta, Georgia. The exchange program at Dartmouth College in Hanover, New Hampshire, focuses on Native American Studies. Further information is available at the Undergraduate Advising and Research Center.

GRADUATE

The Exchange Scholar Program is open to doctoral students in the fields of humanities, social sciences, and sciences who have completed one full year of study at one of the participating institutions. These students may apply to study at Stanford, and Stanford students may apply to one of these other institutions, for a maximum of one academic year (Autumn, Winter, and Spring quarters) to take advantage of particular educational opportunities not available on the home campus. The participating institutions are Brown University, University of Chicago, Columbia University, Cornell University, Harvard University, Massachusetts Institute of Technology, Princeton University, Stanford University, University of Pennsylvania, and Yale University. Further information on the program may be obtained from the Office of the University Registrar, or the graduate dean's office at participating institutions. Some institutions may place restrictions on specific departments.

Stanford also has separate exchange programs with the University of California, Berkeley, and the University of California, San Francisco. Further information may be obtained at the Office of the University Registrar.

CROSS-ENROLLMENT AGREEMENTS FOR ROTC

Stanford has cross-enrollment agreements for the Reserve Officers' Training Corps (ROTC) with the Navy and Marine Corps ROTC program at the University of California at Berkeley, the Army ROTC program at Santa Clara University, and the Air Force ROTC program at San Jose State University. The purpose of these agreements is to allow Stanford students to engage in military training while working on their degrees from Stanford. Courses taken in ROTC programs are offered by and through UC Berkeley, Santa Clara, and San Jose State. The courses do not qualify to be used towards the 12-unit requirement for full-time registration status or satisfactory academic progress requirements for Stanford undergraduates. Certain ROTC courses may be eligible to be used as transfer credit if they qualify under Stanford's transfer credit practices.

Normally, students who participate in ROTC training complete a four-year course of instruction at the respective institution that consists of two years of basic courses during the freshmen and sophomore years, and an advanced course of instruction during the junior and senior years. Students who accept ROTC scholarships are generally subject to a service obligation, depending on the regulation of the particular service.

Stanford students who are enrolled in ROTC programs under the cross-enrollment agreements are eligible to compete for scholarships to include full tuition and a monthly stipend (Navy and Air

Force), or other varying amounts (Army). Students normally compete for national scholarships as high school seniors, although current Stanford students may be eligible to enroll in ROTC on a non-scholarship basis. Non-scholarship ROTC students are eligible to compete for scholarships, and individual services may offer additional scholarship programs to current qualifying undergraduate and graduate students. Interested students should contact the appropriate military professor at the host institution to obtain information on these programs and to initiate application procedures (see below).

Students who satisfactorily complete an ROTC program and are awarded a Stanford degree qualify for a commission as a Second Lieutenant in the U.S. Army, an Ensign in the U.S. Navy, a Second Lieutenant in the U.S. Marines, or a Second Lieutenant in the U.S. Air Force.

For questions concerning the ROTC programs, Stanford students should consult one of the following: Air Force ROTC, San Jose State University, San Jose, CA 95192-0051, telephone (408) 924-2960; Army ROTC, Department of Military Science, Santa Clara University, Santa Clara, CA 95053, telephone (408) 554-4034; Naval ROTC, 152 Hearst Gym, University of California, Berkeley, CA 94720-3640, telephone (510) 643-6345.

AIR FORCE ROTC

The following are offered by San Jose State University. See also http://info.sjsu.edu/web-dbgen/catalog/departments/AS.html.

AS 001A,B. The Foundation of the United States Air Force
Freshman year. Introduces students to the Air Force and AFROTC. The characteristics, missions, and organization of the Air Force. Officership and professionalism, career opportunities, military customs and courtesies, and communication skills. Required leadership lab.

AS 002A,B. The Evolution of the United States Air And Space Power
Sophomore year. Air and space power through historical study and analysis. The capabilities, function, and doctrinal employment of aerospace forces. Emphasis is on oral and written communication skills. Required leadership lab.

AS 131A,B. Air Force Leadership Studies
Junior year. Leadership, management fundamentals, professional knowledge, Air Force personnel system, ethics, and communication skills. Application-level knowledge of skills required of junior Air Force officer through case studies, practical exercises, and seminar discussion. Required leadership lab. Prerequisites: AS 001A,B, AS 002A,B, or as determined by department chair.

AS 141A. National Security Affairs
Senior year. The national security process, international and regional relations, advanced leadership ethics, and Air Force doctrine with focus on the military as a profession, officership, military justice, civilian control of the military, and current issues affecting military professionalism. Required leadership lab. Pre- or corequisites: AS 131A, or as determined by department chair.

AS 141B. Preparation for Active Duty
Senior year. The role of the Air Force officer in contemporary society emphasizing skills to facilitate a smooth transition from civilian to military life. Required leadership lab. Pre- or corequisites: AS 131A,B, or as determined by department chair.

Leadership Laboratory (LLAB)
Mandatory. Hands-on. Drill and ceremony; Air Force customs and courtesies; leadership and followership skills. Guest speakers.

ARMY ROTC

See also http://scu.edu/rotc.

FRESHMAN YEAR

MILS 11. Leadership and Personal Development
Taught on Stanford campus. Personal challenges and competencies for effective leadership. How life skills such as goal setting, time management, physical fitness, and stress management relate to leadership and officership. Development of a personal fitness program under the guidance of an Army master fitness trainer. Two 60-minute classes per week. Weekly 3-hour leadership labs required. One four-day weekend field exercise away from the University.

MILS 12. Foundations in Leadership I
Taught on Stanford Campus. Leadership fundamentals such as setting direction, problem solving, listening, presenting briefs, providing feedback, and effective writing skills. Leadership dimensions and values. Two 60-minute classes per week. Weekly 3-hour leadership labs required. One evening military formal dinner.

MILS 13. Foundations in Leadership II
Taught on Stanford campus. Leadership framework; practical applications in fundamentals such as problem solving, listening, presenting briefs, and effective writing skills. Values, attributes, skills, and actions in the context of practical and interactive exercises. Two 60-minute classes per week. Weekly 3-hour leadership labs required. One four-day weekend field training exercise away from the University.

SOPHOMORE YEAR

MILS 21. Innovative Leadership
Taught on Stanford campus. Creative and innovative leadership strategies and styles through historical cases and interactive exercises. Personal motivation and team building through team exercises. Focus is on leadership values and attributes through organizational customs and courtesies. Leadership case studies; individual creeds and organizational ethos. Two 60-minute classes per week. Weekly 3-hour labs required. One four-day weekend field training exercise away from the University.

MILS 22. Leadership in Changing Environments
Taught on Stanford campus. The challenges of leading in contemporary operational environments. Crosscultural challenges and applications to leadership tasks and situations. Case studies. Two 60-minute classes per week. Weekly 3-hour labs required. One evening military formal dinner.

MILS 23. Team Leading Procedures
Taught on Stanford campus. Plans and orders that enable small units to complete assigned tasks and the decision making process. Planning techniques to develop orders, briefing plans, and decisions. Two 60-minute classes per week. Five 3-hour labs per quarter. One four-day weekend field training exercise away from the University.

JUNIOR YEAR

MILS 131. Adaptive Team Leadership
Taught at Santa Clara University. Adaptive leadership skills and the demands of the ROTC Leader Development Assessment Course (LDAC). Scenarios related to small-unit tactical operations to develop self awareness and thinking skills. Feedback on student leadership abilities. Two 90-minute classes per week. Weekly 3-hour labs required. One mandatory four-day field training exercise away from the University. Prerequisites: MILS 11, 12, 13, 21, 22, and 23, or consent of department chair.

MILS 132.Situational Leadership I
Taught at Santa Clara University. Skills in leading small units, including decision making, persuading, and motivating team members when under fire. Two 90 minute classes per week. Weekly 3-hour labs required. One evening military formal dinner. Prerequisite: MILS 131, or consent of department chair.

MILS 133. Situational Leadership II
Taught at Santa Clara University. Applications of situational leadership challenges in decision making, persuading, and motivating team members when under fire. Preparation for ROTC Leader Development Assessment Course (LDAC). Two 90-minute classes per week. Weekly 3-hour labs required. One mandatory four-day field training exercise away from the University. Prerequisite: MILS 132, or consent of department chair.

SENIOR YEAR

MILS 141. Developing Adaptive Leaders
Taught at Santa Clara University. Planning, executing, and assessing complex operations, functioning as a member of staff , and providing leadership performance feedback to subordinates. Situational opportunities to assess risk, make ethical decisions, and provide coaching to fellow ROTC students. Responsibilities of key staff. Two 90-minute seminars per week. Weekly 3-hour labs required. One mandatory four-day weekend field training exercise

away from the University. Prerequisite: MILS 133, or consent of department chair.

MILS 142. Leadership in a Complex World I
Taught at Santa Clara University. Differences in customs and courtesies, military law, principles of war, and rules of engagement in the face of international terrorism. Interacting with nongovernmental organizations, civilians on the battlefield, and host nation support. Two 90-minute seminars per week. Weekly 3-hour labs required. One evening military formal dinner. Prerequisite: MILS 141.

MILS 143. Leadership in a Complex World II
Taught at Santa Clara University. Preparation for first unit of assignment and transition to Lieutenant. Case studies, scenarios, and exercises to prepare for complex ethical and practical demands as commissioned officers in the U.S. Army. Two 90-minute seminars per week. Weekly 3-hour labs required. One mandatory four-day weekend field training exercise away from the University. Prerequisite: MILS 142.

MILITARY HISTORY

MILS 199. Dynamics of Leadership in Military History
Taught at Santa Clara University. Dynamics that drive decisions made by history's military leaders and followers. Wars and battles from 1861 to present. Techniques and innovations in military training, weapon systems, political timing, and their effect they have on strategies. Combined arms experiences.

NAVAL ROTC

The Department of Naval Science at UC Berkeley offers programs of instruction for men and women leading to active duty commissions in the U.S. Navy or U.S. Marine Corps.

COURSES

Navy option students enrolled in one of the four-year programs normally complete the following courses during the first two years. Students should consult http://navyrotc.berkeley.edu for more information and changes to course offerings. Click on the Courses link to access course descriptions.

FRESHMAN YEAR

NS 1. Introduction to Naval Science
NS 2. Sea Power

SOPHOMORE YEAR

NS 3. Leadership and Management
NS 10. Naval Ship Systems I: Engineering

Navy option students enrolled in either the four- or two-year program normally complete the following courses during their junior and senior years.

JUNIOR YEAR

NS 12A. Navigation and Naval Operations I
NS 12B. Navigation and Naval Operations II

SENIOR YEAR

NS 401. Naval Ship Systems
NS 412. Leadership and Ethics

In addition to the above courses, Navy option ROTC students are required to participate in weekly professional development laboratories (drill) at UC Berkeley and complete a number of other courses at Stanford including one year of calculus, physics, and English, and one quarter of world cultural studies, and military history or national security policy.

In lieu of NS 401, NS 10, NS 12A and NS 12B, Marine option students participate in Marine Seminars and complete MA 154, History of Littoral Warfare, and MA 20, Evolution of Warfare, or a designated equivalent course. Marine option students also participate in the weekly professional development laboratories.

NONACADEMIC REGULATIONS

NONDISCRIMINATION POLICY

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, it prohibits discrimination, including harassment, against students or applicants for admission, or employees or applicants for employment on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, or any other characteristic protected by applicable law in the administration of its educational policies, admissions policies, scholarships and loan programs, and athletic and other University-administered programs. The following person has been designated to handle inquiries regarding this policy: the Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1216 (TTY), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email).

ADA (AMERICANS WITH DISABILITIES ACT)/SECTION 504 GRIEVANCE PROCEDURE (STUDENT)

For information concerning policies and procedures for students with disabilities, see http://www.stanford.edu/dept/diversityaccess/access/student_grievance.html, or the ADA/Section 504 Compliance Officer, Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford CA, 94305-8230, (650) 723-0755 (voice), (650) 723-1216 (TTY), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email); see also the Office for Accessible Education (OAE) at http://studentaffairs.stanford.edu/oae and the OAE's Grievance Procedure web site at http://studentaffairs.stanford.edu/oae/grievance.

POLICY

The following is quoted from the policy:

I. *Policy*

Stanford University, in compliance with state and federal laws and regulations, including the Americans with Disabilities Act of 1990 (ADA; as amended 2008) and Section 504 of the Rehabilitation Act of 1973 (Section 504), does not discriminate on the basis of disability in administration of its education-related programs and activities, and has an institutional commitment to provide equal educational opportunities for disabled students who are otherwise qualified.

Students who believe they have been subjected to discrimination on the basis of disability, or have been denied access to services or accommodations required by law, have the right to use this grievance procedure.

II. *Applicability*

The grievance procedure set forth below is applicable to undergraduate and graduate students of the University. In general, it is designed to address disputes concerning the following:

1. Disagreements regarding a requested service, accommodation, or modification of a University practice or requirement;
2. Inaccessibility of a program or activity;
3. Harassment or discrimination on the basis of disability;
4. Violation of privacy in the context of disability.

As a general proposition, this grievance procedure supplants the Student Academic Grievance Procedure and the Student Non-Academic Grievance Procedure (both of which are set forth in this bulletin) for disability-related grievances. Questions of applicability will be decided by the Director of the Diversity and Access Office.

III. *Compliance Officers*

Stanford University's Compliance Officers are responsible for administering this grievance procedure as well as ensuring compliance with applicable laws. The Director of the Diversity and Access Office is the designated ADA / Section 504 Compliance Officer. That office is located in the Mariposa House, 585 Capistrano Way, Stanford, CA 94305-8230, 650-725-0326 (Voice), 650-723-1216 (TTY), 650-723-1791 (Fax), email: disability.access@stanford.edu.

Additional Compliance Officers may be designated from time to time by the Provost from those faculty and staff members knowledgeable concerning disability issues and the legal mandates of state and federal disability statutes.

IV. *Informal Resolution*

Prior to initiating the formal complaint procedure set forth below, the student should, in general, first discuss the matter orally or in writing with the individual(s) most directly responsible. If no resolution results, or if direct contact is inappropriate under the circumstances, the student should then consult with the Compliance -Officer at the Diversity and Access Office who will attempt to facilitate a resolution. (The informal resolution process may involve consultation with the Associate Vice Provost for Student Affairs; see Additional Resources below.)

If the Compliance Officer is not successful in quickly achieving a satisfactory resolution (that is, generally within seven calendar days), the Compliance Officer will inform the student of his or her efforts and the student's right to file a formal complaint.

V. *Formal Complaint*

If the procedure set forth above for informal resolution does not yield a successful resolution, then the student may file a formal complaint in the following manner:

A. *When to File Complaint:* Complaints must be filed as soon as possible, but in no event later than 10 days after the end of the quarter in which the concern arose.

B. *What to File*: a complaint must be in writing and include the following:

1. The grievant's name, address, email address and phone number;
2. A full description of the problem;
3. A description of what efforts have been made to resolve the issue informally;
4. A statement of the remedy requested.

C. *Where to File Complaint:* the complaint is to be filed with the Compliance Officer at the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford CA 94305-8230, 650-725-0326 (Voice), 650-723-1216 (TTY), 650-723-1791 (Fax), email: disability.access@stanford.edu.

D. *Notice of Receipt*: upon receipt of the complaint, the Compliance Officer reviews the complaint for timeliness and appropriateness for this grievance procedure, and provides the grievant with written notice acknowledging its receipt.

E. *Investigation*: the Compliance Officer or his or her designee (hereafter collectively referred to as the "grievance officer") will promptly initiate an investigation. In undertaking the investigation, the grievance officer may interview, consult with, and/or request a written response to the issues raised in the grievance from any individual the grievance officer believes to have relevant information, including faculty, staff, and students.

F. *Representation*: the grievant and the party against whom the grievance is directed each have the right to have a representative. The party shall indicate whether he or she is to be assisted by a representative and, if so, the name of that representative. For purposes of this procedure, an attorney is not an appropriate representative.

G. *Findings and Notification:* upon completion of the investigation, the grievance officer will prepare and transmit to the student, and to the party against whom the grievance is directed, a final report containing a summary of the investigation, written findings, and a proposed disposition. This transmission will be expected within 45 calendar days of the filing of the formal complaint. The deadline may be extended by the Compliance Office for good cause (including for reasons relating to breaks in the academic calendar), and will nearly always be extended during summers and the winter closure. The final report may also be provided, where appropriate, to any University officer whose authority will be needed to carry out the proposed disposition or to determine whether any personnel action is appropriate.

H. *Final Disposition:* the disposition proposed by the grievance officer will be put into effect promptly. The grievant or any party against whom the grievance or the proposed disposition is directed may appeal. The appeal to the Provost (as set forth below) will not suspend the implementation of the disposition proposed by the grievance officer, except in those circumstances where the Provost decides that good cause exists making the suspension of implementation appropriate.

VI. *Urgent Matters*

Whenever the application of any of the time deadlines or procedures set forth in this grievance procedure creates a problem due to the nature of the complaint, the urgency of the matter, or the proximity of the upcoming event, the Compliance Officer will, at the request of the grievant, determine whether an appropriate expedited procedure can be fashioned.

VII. *Remedies*

Possible remedies under this grievance procedure include corrective steps, actions to reverse the effects of discrimination or to end harassment, and measures to provide a reasonable accommodation or proper ongoing treatment. As stated above, a copy of the grievance officer's report may, where appropriate, be sent to University officer(s) to determine whether any personnel action should be pursued.

VIII. *Appeal*

Within ten calendar days of the issuance of the final report, the grievant or the party against whom the grievance is directed may appeal to the Provost the grievance officer's determination.

An appeal is taken by filing a written request for review with the Compliance Officer at the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford CA 94305-8230; (650) 723-0755 (Voice), (650) 723-1216 (TTY), (650) 723-1791 (Fax), email: disability.access@stanford.edu.

The written request for review must specify the particular substantive and/or procedural basis for the appeal, and must be made on grounds other than general dissatisfaction with the proposed disposition. Furthermore, the appeal must be directed only to issues raised in the formal complaint as filed or to procedural errors in the conduct of the grievance procedure itself, and not to new issues.

The Compliance Officer willforward the appeal to the Provost, and also provide copies to the other party or parties. If the grievance involves a decision that is being challenged, the review by the Provost or his or her designee usually will be limited to the following considerations:

1. Were the proper facts and criteria brought to bear on the decision? Were improper or extraneous facts or criteria brought to bear that substantially affected the decision to the detriment of the grievant?
2. Were there any procedural irregularities that substantially affected the outcome of the matter to the detriment of the grievant?
3. Given the proper facts, criteria, and procedures, was the decision a reasonable one?

A copy of the Provost's written decision will be expected within 30 calendar days of the filing of the appeal and will be sent to the parties, the Compliance Officer and, if appropriate, to the University officer whose authority will be needed to carry out the disposition. The deadline may be extended by the Provost for good cause (including for reasons relating to breaks in the academic calendar), and will nearly always be extended during summers and the winter closure. The decision of the Provost on the appeal is final.

TITLE IX OF THE EDUCATION AMENDMENTS OF 1972

It is the policy of Stanford University to comply with Title IX of the Education Amendment of 1972 and its regulations, which prohibit discrimination on the basis of sex. The Title IX Compliance Officer is the Director of the Diversity and Access Office, who has been appointed to coordinate the University's efforts to comply with the law. Anyone who believes that, in some respect, Stanford is not in compliance with Title IX and its regulations should contact the Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford, CA 94305-8230, (650) 723-0755 (voice), (650) 723-1216 (TTY), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email). Grievance procedures to address complaints of discrimination on the basis of sex are set forth in the "Student Non-Academic Grievance Procedure". See also Administrative Guide Memo 23 at http://adminguide.stanford.edu/23.pdf.

TITLE VI OF THE CIVIL RIGHTS ACT OF 1964

It is the policy of Stanford University to comply with Title VI of the Civil Rights Act of 1964 and its regulations, which prohibit discrimination on the basis of race, color, and national origin. The Title VI Compliance Officer is the Director of the Diversity and Access Office, who has been appointed to coordinate the University's efforts to comply with the law. Anyone who believes that, in some respect, Stanford is not in compliance with Title VI and its regulations should contact the Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1216 (TTY), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email). Grievance procedures to address complaints of discrimination on the basis of race, color, and national origin are set forth in the "Student Non-Academic Grievance Procedure." See also Administrative Guide Memo 23 at http://adminguide.stanford.edu/23.pdf.

GRIEVANCES

A Stanford undergraduate or graduate student who believes that he or she has been subject to an improper decision on an academic matter may file a grievance pursuant to the Student Academic

Grievance Procedurs (in the "Academic Policies and Statements" section of this bulletin). For other types of grievances, students should review the section that follows on the Student Non-Academic Grievance Procedure, and consult concerning applicable procedures with the Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1216 (TTY), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email).

STUDENT NON-ACADEMIC GRIEVANCE PROCEDURE

POLICY

The following is the policy:

1. *Applicability*
   a. It is perhaps inevitable in any university that some students may at times feel improperly treated, and that concerns about unfairness (including potential discrimination and harassment) may also at times arise.
   In this regard (and although this grievance procedure is not limited to concerns of discrimination), Stanford University's Nondiscrimination Policy provides in part: "Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, it prohibits discrimination, including harassment, against students or applicants for admission, or employees or applicants for employment on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, or any other characteristic protected by applicable law in the administration of its educational policies, admissions policies, scholarships and loan programs, and athletic and other University-administered programs."
   b. At Stanford, there are a number of grievance procedures through which students can raise and seek redress for what they believe to be unfair, improper or discriminatory decisions, actions, or treatment. For example:
      1. If the matter involves an academic decision, the Student Academic Grievance Procedure may be the applicable procedure.
      1. If the matter involves a disability-related concern, the Student ADA/Section 504 Grievance Procedure may be applicable.
      2. If the matter involves a student-athlete and his or her sport, the Student-Athlete Grievance Procedure may be applicable.
   c. The purpose of the Student Non-Academic Grievance Procedure is to provide a process for students to seek resolution of disputes and grievances that may not fall within the scope of one of the other grievance processes, including those which may arise in a student's capacity as a student-employee.
   d. This procedure is available to undergraduates and graduate students at Stanford University. It is designed to address individual decisions or individual actions that affect the grievant personally in his or her capacity as a student, but it does not apply to matters proceeding through the Office of Judicial Affairs or through the involuntary leave policy. This is likewise not a grievance procedure to address the concerns of student groups. Similarly and as a general proposition, dissatisfaction with a departmental, school, or University policy or practice of broad or general application is not grounds for a grievance under this procedure; the Director of the Diversity and Access Office (hereafter "the Director") may, in his or her discretion, entertain such a grievance in exceptional circumstances, such as where (for example) the policy or practice is alleged to be contrary to law. In the same way, the Director may entertain a grievance under this procedure brought by a non-student, in an appropriate case.
   e. The Director is responsible for administering this Student Non-Academic Grievance Procedure.
      1. The Director may be contacted at: Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1216 (TTY), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email), http://www.stanford.edu/dept/ocr.
      2. The Director in his or her sole discretion can decide whether to refer a grievance brought under this procedure to another grievance process. In cases involving allegations of sexual harassment in particular, the Director may wish to consult with the Director of the Sexual Harassment Policy Office as to the most appropriate way to proceed; see Section 5.d below. In cases involving student employment, the Director may wish to consult with the University's Department of Human Resources.
2. *Informal Resolution*
   a. As a general proposition (and although particular circumstances may warrant an exception), the student should first discuss the problem and seek a solution with the individual(s) most directly involved.
   b. If no resolution results (or if circumstances make discussion inappropriate with the person most directly involved), the student should then consult with the individual at the next (higher) administrative level in the department, school, residence or University administrative unit. Serious efforts should be made to resolve the issue locally at an informal level without resort to a formal grievance; such efforts may continue even after the formal process is underway.
3. *Formal Grievance*
   a. If informal means of resolution prove inadequate, the student should set forth in writing the substance of the complaint, the grounds for it and the evidence on which it is based, and the efforts taken to date to resolve the matter. It is at this stage that the complaint becomes a formal grievance.
   b. The grievance document should be submitted to the Director. A grievance should be filed in a timely fashion, i.e., normally within thirty days of the end of the academic quarter in which the action that is the subject of the grievance occurred. Except in extraordinary circumstances, delay in filing a grievance will be grounds for rejection of that grievance.
   c. The Director will promptly initiate a review, which should normally be completed within sixty days. The Director may attempt to resolve the matter informally, and may refer the matter (or any part of it) to a grievance officer or other designee, who will look into and/or address the matter as the Director directs. The Director may also, in appropriate cases, remand the matter to the appropriate administrator (including to the administrative level at which the grievance arose) for further consideration.
   d. In undertaking this review, either the Director, his or her designee, or the grievance officer may request a response to the issues raised in the grievance from any individuals believed to have information the reviewer considers relevant, including faculty, staff and students.
   e. The Director (or his or her designee) will issue his or her decision in writing, and take steps to initiate such corrective action as is called for (if any). Conduct meriting disci-

pline will be brought to the attention of the appropriate disciplinary process.

4. *Appeal*
   a. If the student is dissatisfied with the disposition by the Director (or his or her designee), he or she may appeal to the Provost (Office of the President and Provost, Building 10, Stanford, CA 94305-2061; phone 650-725-4075; fax 650-725-1347). The appeal should be filed in writing with the Provost within ten days of the issuance of the decision by the Director (or his or her designee); a delay in filing the appeal may be grounds for rejection of that appeal.
   b. The Provost may attempt to resolve the matter informally, and may refer the matter (or any part of it) to a grievance appeal officer, who will review the matter at the Provost's direction. The Provost may also, in appropriate cases, remand the matter to the appropriate administrator (including to the administrative level at which the grievance arose) for further consideration.
   c. The Provost should normally complete his or her review of the appeal and issue his or her decision in writing within forty-five days. That decision is final.
5. *General Provisions*
   a. *Time Guidelines*—The time frames set forth herein are guidelines. They may be extended by the Director or Provost, as applicable, in his or her discretion for good cause (including for reasons relating to breaks in the academic calendar), and will nearly always be extended during summers and the winter closure.
   b. *Advisers*—A student initiating or participating in a grievance under this procedure may be accompanied by an adviser in any discussion with the Director, the Provost or their designees, or a grievance or grievance appeal officer under this procedure; any adviser must be a current Stanford faculty, staff member or student.
   c. *Ombuds*—Students should be aware that the University Ombuds (http://www.stanford.edu/dept/ocr/ombuds) is available to discuss and advise on any matters of University concern and frequently help expedite resolution of such matters. Although it has no decision making authority, the Ombuds' Office has wide powers of inquiry.
   d. *Sexual Harassment and Sexual Assault*—For information and resources concerning sexual harassment, students should refer to the web page of the Sexual Harassment Policy Office at http://harass.stanford.edu. For information and resources concerning sexual assault and relationship abuse, students should refer to the web page of the Sexual Violence Advisory Board at http://www.stanford.edu/group/svab/help.shtml.
   e. *No retaliation*—Stanford University prohibits retaliation or reprisals against individuals based on their pursuit in good faith of a grievance under this procedure, or their participation in good faith in the grievance process.
   f. *Standards for Review*—If the grievance involves a decision that is being challenged, the review by the Director, as well as the review by the Provost on appeal, usually will be limited to the following considerations:
      1. Were the proper facts and criteria brought to bear on the decision? Were improper or extraneous facts or criteria brought to bear that substantially affected the decision to the detriment of the grievant?
      2. Were there any procedural irregularities that substantially affected the outcome of the matter to the detriment of the grievant?
      3. Given the proper facts, criteria, and procedures, was the decision one which a person in the position of the decision maker might reasonably have made?

OWNERSHIP AND USE OF STANFORD NAME AND TRADEMARKS

Stanford registered marks, as well as other names, seals, logos, and other symbols and marks that are representative of Stanford, may be used solely with permission of Stanford. Merchandise bearing Stanford's names and marks, such as t-shirts, glassware, and notebooks, must be licensed. For complete text of the currently applicable policy, including the University officers authorized to grant permission to use the Stanford name and marks, see Administrative Guide Memo 15.5, Ownership and Use of Stanford Name and Trademarks at http://adminguide.stanford.edu/15_5.pdf.

COPYRIGHT

Copyright laws protect original works of authorship and give the owners of copyrights the exclusive right to do and to authorize others to do certain things in regard to a copyrighted work, including: make copies, distribute the work, display or perform the work publicly, and create derivative works. Copyright laws apply to nearly all forms of captured content, including traditional works like books, photographs, music, drama and sculpture. The laws also adapt to changes in technologies, and include in their scope modern forms of works like motion pictures, web sites, electronic media, software, multimedia works and some databases. Registration is not required to obtain a copyright, so if in doubt, assume a copyright applies.

Unless an exception to the copyright owner's exclusive rights applies, you must obtain permission from the copyright owner to copy, distribute, display or perform a copyrighted work in any medium for any purpose. Be especially mindful of copyright principles when using the Internet. Just because a work is posted on the Internet does not mean that the owner of the copyright has given you permission to use it. And, you should not be posting material onto the Internet without copyright clearance.

Stanford University Libraries have licenses with many publishers, which permit copying of materials in accordance with the educational, research or administrative functions of the University. In addition, there are four major exceptions to the copyright owner's exclusive rights, which (if applicable) permit limited use without permission. These are: the fair use exception, the library exception, the face-to-face teaching exception, and the distance-learning exception. For a more detailed explanation of these exceptions, the copyright laws and Stanford's copyright policies, please review the University's Copyright Reminder at http://www-sul.stanford.edu/libraries_collections/copyright_reminders/. It is each person's responsibility to be aware of and abide by copyright law; violation may result in civil or criminal liability, and constitutes grounds for University discipline, up to and including discharge, dismissal and expulsion.

PEER-TO-PEER FILE SHARING

The use of file-sharing networks and software to download and share copyrighted works like software, music, movies, television programs, and books can violate copyright laws. Both the person who makes an illegal copy of a copyrighted work available and the person who receives or downloads an illegal copy have violated the law and Stanford policies. Many file-sharing programs have default settings that share copyrighted files, such as music and movies, through the Internet. Before enabling any of these programs students, faculty, or staff must read the fine print, make sure to understand the program itself, and only use such programs lawfully. Under the Digital Millennium Copyright Act (DMCA), cop-

copyright owners are entitled to notify Internet service providers, such as Stanford, that IP addresses linked to the Stanford network are sharing copies of music, movies, or other content without authorization. The law requires the University to respond to such complaints by eliminating access to the infringing materials. Stanford will disconnect students who fail to respond to a DMCA complaint promptly, and Stanford will charge reconnection fees starting at $100 and going up as high as $1,000 for successive DMCA complaints. Furthermore, the University also will suspend or terminate computer access to the Stanford network, including termination of the SUNet ID, to members of the community who continue to violate copyright laws. Finally, the University will take action through the student, employee, or faculty disciplinary processes if necessary. Beyond University consequences, copyright holders may file civil lawsuits against copyright infringers seeking extensive monetary damages. If compelled by a lawful subpoena, Stanford may be required to identify students, faculty, staff, or others who have violated copyright law. For more information about file-sharing, refer to Residential Computing's online resource, File-Sharing and Copyright Law at http://rescomp.stanford.edu/info/dmca.

Except with permission from the Office of Accessible Education or the instructor in question, students may not audio- or video-record lectures. Even with permission, students may only use such recordings for personal use; no posting or further distribution or use is permitted.

DOMESTIC PARTNERS

In October 1990, Stanford University adopted a domestic partners policy. This policy, which implements the University's nondiscrimination policy, makes services that have historically been available to married students available on an equal basis to students with same-sex or opposite-sex domestic partners. These services include access to student housing, a courtesy card that provides access to University facilities, and the ability to purchase medical care at Vaden Health Service. A domestic partnership is defined as an established long-term partnership with an exclusive mutual commitment in which the partners share the necessities of life and ongoing responsibility for their common welfare.

SEXUAL HARASSMENT AND CONSENSUAL SEXUAL OR ROMANTIC RELATIONSHIPS

For the complete text of the currently applicable version of this policy, see Administrative Guide Memo 23.2, Sexual Harassment, http://adminguide.stanford.edu/23_2.pdf. It is also available from the Sexual Harassment Policy Office homepage, http://harass.stanford.edu.

SUMMARY

Stanford University strives to provide a place of work and study free of sexual harassment, intimidation or exploitation. Where sexual harassment is found to have occurred, the University will act to stop the harassment, prevent its recurrence, and discipline and/or take other appropriate action against those responsible.

POLICY

The following is quoted from the policy:

1. *In General*
   a. *Applicability and Sanctions for Policy Violations*—This policy applies to all students, faculty and staff of Stanford University, as well as to others who participate in Stanford programs and activities. Its application includes Stanford programs and activities both on and off-campus, including overseas programs. Individuals who violate this policy are subject to discipline up to and including discharge, expulsion, and/or other appropriate sanction or action.
   b. *Respect for Each Other*—Stanford University strives to provide a place of work and study free of sexual harassment, intimidation or exploitation. It is expected that students, faculty, staff and other individuals covered by this policy will treat one another with respect.
   c. *Prompt Attention*—Reports of sexual harassment are taken seriously and will be dealt with promptly. The specific action taken in any particular case depends on the nature and gravity of the conduct reported, and may include intervention, mediation, investigation and the initiation of grievance and disciplinary processes as discussed more fully below. Where sexual harassment is found to have occurred, the University will act to stop the harassment, prevent its recurrence, and discipline and/or take other appropriate action against those responsible.
   d. *Confidentiality*—The University recognizes that confidentiality is important. Sexual harassment advisers and others responsible to implement this policy will respect the confidentiality and privacy of individuals reporting or accused of sexual harassment to the extent reasonably possible. Examples of situations where confidentiality cannot be maintained include circumstances when the University is required by law to disclose information (such as in response to legal process) and when disclosure is required by the University's outweighing interest in protecting the rights of others.
   e. *Protection Against Retaliation*—Retaliation and/or reprisals against an individual who in good faith reports or provides information in an investigation about behavior that may violate this policy are against the law and will not be tolerated. Intentionally making a false report or providing false information, however, is grounds for discipline.
   f. *Relationship to Freedom of Expression*—Stanford is committed to the principles of free inquiry and free expression. Vigorous discussion and debate are fundamental to the University, and this policy is not intended to stifle teaching methods or freedom of expression generally, nor will it be permitted to do so. Sexual harassment, however, is neither legally protected expression nor the proper exercise of academic freedom; it compromises the integrity of the University, its tradition of intellectual freedom and the trust placed in its members.
2. *What Is Sexual Harassment?*
   Unwelcome sexual advances, requests for sexual favors, and other visual, verbal or physical conduct of a sexual nature constitute sexual harassment when:
   a. It is implicitly or explicitly suggested that submission to or rejection of the conduct will be a factor in academic or employment decisions or evaluations, or permission to participate in a University activity; *or*
   b. The conduct has the purpose or effect of unreasonably interfering with an individual's academic or work performance or creating an intimidating or hostile academic, work or student living environment.

   Determining what constitutes sexual harassment depends upon the specific facts and the context in which the conduct occurs. Sexual harassment may take many forms—subtle and indirect, or blatant and overt. For example,
   - It may be conduct toward an individual of the opposite sex or the same sex.
   - It may occur between peers or between individuals in a hierarchical relationship.
   - It may be aimed at coercing an individual to participate in an unwanted sexual relationship or it may have the effect of causing an individual to change behavior or work performance.
   - It may consist of repeated actions or may even arise from a single incident if sufficiently egregious.

The University's Policy on Sexual Assault (see Guide Memo 23.3, Sexual Assault, (http://adminguide.stanford.edu/23_3.pdf) may also apply when sexual harassment involves physical contact.

3. *What To Do About Sexual Harassment*
Individuals seeking further information are directed to the following resources:
   - The Sexual Harassment Policy Office (Mariposa House, 585 Capistrano Way, Room 208-209, Stanford University, Stanford, CA, 94305-8230; (650) 723-1583; email: harass@stanford.edu for information, consultation, advice, or to lodge a complaint. Note that anonymous inquiries can be made to the SHPO by phone during business hours.
   - The Sexual Harassment Policy Office web page at http://harass.stanford.edu.
   - Any designated Sexual Harassment Adviser or resource person listed in 3.a or 5.a.

   The following are the primary methods for dealing with sexual harassment at Stanford. They are not required to be followed in any specific order. However, early informal methods are often effective in correcting questionable behavior.

   a. *Consultation*—Consultation about sexual harassment is available from the Sexual Harassment Policy Office, Sexual Harassment Advisers (including residence deans), human resources officers, employee relations specialists, counselors at Counseling and Psychological Services (CAPS) or the Help Center, chaplains at Memorial Church, ombudspersons and others. A current list of Sexual Harassment Advisers is available from the Sexual Harassment Policy Office and at http://harass.stanford.edu/SHadvisers.html. Consultation is available for anyone who wants to discuss issues related to sexual harassment, whether or not "harassment" actually has occurred, and whether the person seeking information is a complainant, a person who believes his or her own actions may be the subject of criticism (even if unwarranted), or a third party.

   Often there is a desire that a consultation be confidential or "off the record." This can usually be achieved when individuals discuss concerns about sexual harassment without identifying the other persons involved, and sometimes even without identifying themselves. Confidential consultations about sexual harassment also may be available from persons who, by law, have special professional status, such as:
      - Counselors at Counseling and Psychological Services (CAPS), http://caps.stanford.edu
      - Counselors at the Help Center, http://www.stanford.edu/dept/helpcenter
      - Chaplains at Memorial Church
      - The University Ombudsperson, http://www.stanford.edu/dept/ombuds

   In these latter cases, the level of confidentiality depends on what legal protections are held by the specific persons receiving the information and should be addressed with them before specific facts are disclosed. For more information see http://harass.stanford.edu/confidential.html.

   For further information on confidentiality, see Section 1(d) above.

   b. *Direct Communication*—An individual may act on concerns about sexual harassment directly, by addressing the other party in person or writing a letter describing the unwelcome behavior and its effect and stating that the behavior must stop. A Sexual Harassment Adviser can help the individual plan what to say or write, and likewise can counsel persons who receive such communications. Reprisals against an individual who in good faith initiates such a communication violate this policy.

   c. *Third Party Intervention*—Depending on the circumstances, third party intervention in the workplace, student residence or academic setting may be attempted. Third party intervenors may be the Sexual Harassment Advisers, human resources professionals, the ombudspersons, other faculty or staff, or sometimes mediators unrelated to the University.
   When third party intervention is used, typically the third party (or third parties) will meet privately with each of the persons involved, try to clarify their perceptions and attempt to develop a mutually acceptable understanding that can insure that the parties are comfortable with their future interactions. Other processes, such as a mediated discussion among the parties or with a supervisor, may also be explored in appropriate cases.
   Possible outcomes of third party intervention include explicit agreements about future conduct, changes in workplace assignments, substitution of one class for another, or other relief, where appropriate.

   d. *Formal Grievance, Appeal, and Disciplinary Processes*—Grievance, appeal, or disciplinary processes may be pursued as applicable.

      1. *Grievances and Appeals*—The applicable procedure depends on the circumstances and the status of the person bringing the charge and the person against whom the charge is brought. Generally, the process consists of the individual's submission of a written statement, a process of fact-finding or investigation by a University representative, followed by a decision and, in some cases, the possibility of one or more appeals, usually to Stanford administrative officers at higher levels. The relevant procedure (see below) should be read carefully, since the procedures vary considerably.

   If the identified University fact-finder or grievance officer has a conflict of interest, an alternate will be arranged, and the Director of the Sexual Harassment Policy Office or the Director of Employee and Labor Relations can help assure that this occurs.

   In most cases, grievances and appeals must be brought within a specified time after the action complained of. While informal resolution efforts will not automatically extend the time limits for filing a grievance or appeal, in appropriate circumstances the complainant and the other relevant parties may mutually agree in writing to extend the time for filing a grievance or appeal.

   A list of the established grievance and appeal procedures is located at http://hrweb.stanford.edu/elr/policies/list_grievance_procedures.html. Copies may also be obtained from the Sexual Harassment Policy Office, http://www.stanford.edu/group/SexHarass.

   Copies of the following may be obtained from Employee and Labor Relations, 651 Serra Street:
   - "Solving Workplace Problems at Stanford: Understanding the Staff Dispute Resolution Policy" (also at http://hrweb.stanford. edu/forms/staffresolution.pdf.)
   - "Solving Workplace Problems at Stanford: Information for Academic Staff – Librarians and Academic Staff – Research Associates"
   - "The Dispute Resolution Process (A User's Guide)"

      1. *Disciplinary Procedures*—In appropriate cases, disciplinary procedures may be initiated. The applicable disciplinary procedure depends on the status of the individual whose conduct is in question. For example, faculty are subject to the Statement on Faculty Discipline http://www.stanford.edu/dept/provost/faculty/policies/handbook/ch4.html#statementonfacultydiscipline, and students to the Fundamental Standard. For additional information related to student judicial affairs, see http://www.stanford.edu/dept/vpsa/judicialaffairs.

The individuals referenced in this section are available to discuss these options and differing methods for dealing with sexual harassment.

4. *Procedural Matters*
   a. *Investigations*—If significant facts are contested, an investigation may be undertaken. The investigation will be conducted in a way that respects, to the extent possible, the privacy of all of the persons involved. In appropriate cases, professional investigators may be asked to assist in the investigation. The results of the investigation may be used in the third party intervention process or in a grievance or disciplinary action.
   b. *Recordkeeping*—The Sexual Harassment Policy Office will track reports of sexual harassment for statistical purposes and report at least annually to the University President concerning their number, nature and disposition.

      The Sexual Harassment Policy Office may keep confidential records of reports of sexual harassment and the actions taken in response to those reports, and use them for purposes such as to identify individuals or departments likely to benefit from training so that training priorities can be established. No identifying information will be retained in cases where the individual accused was not informed that there was a complaint.
   c. *Indemnification and Costs*—The question sometimes arises as to whether the University will defend and indemnify a Stanford employee accused of sexual harassment. California law provides, in part, "An employer shall indemnify [its] employee for all that the employee necessarily expends or loses in direct consequence of the discharge of his [or her] duties as such … ." The issue of indemnification depends on the facts and circumstances of each situation. Individuals who violate this policy, however, should be aware that they and/or their schools, institutes, or other units may be required to pay or contribute to any judgments, costs and expenses incurred as a result of behavior that is wrongful and/or contrary to the discharge of the employee's duties. In general, see Administrative Guide Memo 15.7 (http://adminguide.stanford. edu/15_7.pdf).
5. *Resources for Dealing with Sexual Harassment*
   a. *Advice*—Persons who have concerns about sexual harassment should contact the Sexual Harassment Policy Office, any Sexual Harassment Adviser at http://harass.stanford.edu/SHadvisers.html or one of the other individuals listed below. Reports should be made as soon as possible: the earlier the report, the easier it is to investigate and take appropriate remedial action. When reports are long delayed, the University will try to act to the extent it is reasonable to do so, but it may be impossible to achieve a satisfactory result after much time has passed.

      Likewise, anyone who receives a report or a grievance involving sexual harassment should promptly consult with the Sexual Harassment Policy Office or with a Sexual Harassment Adviser.

      There are a number of individuals specially trained and charged with specific responsibilities in the area of sexual harassment. In brief, they are:
      - *Sexual Harassment Advisers* (http://harass.stanford.edu/SHadvisers.html) serve as resources to individuals who wish to discuss issues of sexual harassment, either because they have been harassed or because they want information about the University's policy and procedures. There is usually at least one Adviser assigned to each of the schools at the University and to each large work unit; most of the residence deans also have been appointed as Sexual Harassment Advisers. Advisers are also authorized to receive complaints.
      - *The Director of the Sexual Harassment Policy Office* is responsible for the implementation of this policy. The Director's Office also provides advice and consultation to individuals when requested; receives complaints and coordinates their handling; supervises the other Advisers; encourages and assists prevention education for students, faculty and staff; keeps records showing the disposition of complaints; and generally coordinates matters arising under this policy. Because education and awareness are the best ways to prevent sexual harassment; developing awareness, education and training programs and publishing informational material are among the most important functions of the Sexual Harassment Policy Office (http://harass.stanford.edu).
      - As stated above, individuals with concerns about sexual harassment may also discuss their concerns informally with psychological counselors (for example through CAPS or the HELP Center), chaplains (through the Memorial Chapel), or the University ombudsperson. For more information, see http://harass.stanford.edu/resources.html.
   b. *External Reporting*—Sexual harassment is prohibited by state and federal law. In addition to the internal resources described above, individuals may pursue complaints directly with the government agencies that deal with unlawful harassment and discrimination claims, e.g., the U.S. Equal Employment Opportunity Commission (EEOC), the Office for Civil Rights (OCR) of the U.S. Department of Education, and the State of California Department of Fair Employment and Housing (DFEH). These agencies are listed in the Government section of the telephone book. A violation of this policy may exist even where the conduct in question does not violate the law.
6. *Consensual Sexual or Romantic Relationships*
   a. *In General*—There are special risks in any sexual or romantic relationship between individuals in inherently unequal positions, and parties in such a relationship assume those risks. In the University context, such positions include (but are not limited to) teacher and student, supervisor and employee, senior faculty and junior faculty, mentor and trainee, adviser and advisee, teaching assistant and student, coach and athlete, and the individuals who supervise the day-to-day student living environment and student residents. Because of the potential for conflict of interest, exploitation, favoritism, and bias, such relationships may undermine the real or perceived integrity of the supervision and evaluation provided, and the trust inherent particularly in the teacher-student context. They may, moreover, be less consensual than the individual whose position confers power or authority believes. The relationship is likely to be perceived in different ways by each of the parties to it, especially in retrospect.

      Moreover, such relationships may harm or injure others in the academic or work environment. Relationships in which one party is in a position to review the work or influence the career of the other may provide grounds for complaint by third parties when that relationship gives undue access or advantage, restricts opportunities, or creates a perception of these problems. Furthermore, circumstances may change, and conduct that was previously welcome may become unwelcome. Even when both parties have consented at the outset to a romantic involvement, this past consent does not remove grounds for a charge based upon subsequent unwelcome conduct.

      Where such a relationship exists, the person in the position of greater authority or power will bear the primary burden of accountability, and must ensure that he or she—and this is particularly important for teachers—does not exercise any supervisory or evaluative function over the other person in the relationship. Where such recusal is required, the recusing party must also notify his or her supervisor, department chair or dean, so that such chair, dean or supervisor can exercise his or her responsibility to evaluate the adequacy of the alternative supervisory or

evaluative arrangements to be put in place. Staff members may notify their local human resources officers. To reiterate, the responsibility for recusal and notification rests with the person in the position of greater authority or power. Failure to comply with these recusal and notification requirements is a violation of this policy, and therefore grounds for discipline. The University has the option to take any action necessary to insure compliance with the spirit of this recusal policy, including transferring either or both employees in order to minimize disruption of the work group. In those extraordinarily rare situations where it is programmatically infeasible to provide alternative supervision or evaluation, the cognizant Dean or Director must approve all evaluative and compensation actions.

b. *With Students*—At a university, the role of the teacher is multi-faceted, including serving as intellectual guide, counselor, mentor and advisor; the teacher's influence and authority extend far beyond the classroom. Consequently and as a general proposition, the University believes that a sexual or romantic relationship between a teacher and a student, even where consensual and whether or not the student would otherwise be subject to supervision or evaluation by the teacher, is inconsistent with the proper role of the teacher, and should be avoided. The University therefore very strongly discourages such relationships.

7. *Policy Review and Evaluation*—This policy went into effect on October 6, 1993, and was amended on November 30, 1995, and on May 30, 2002. It is subject to periodic review, and any comments or suggestions should be forwarded to the Director of the Sexual Harassment Policy Office.

RESOURCES

The following is a summary of resources concerning sexual harassment available to members of the Stanford Community:

A brochure containing the policy, a list of current sexual harassment advisers, confidential resources, and other helpful information is available online at http://harass.stanford.edu, and in printed form from the Sexual Harassment Policy Office at Mariposa House, 585 Capistrano Way, Room 208-209, Stanford University, Stanford, CA, 94305-8230; (650) 723-1583; email: harass@stanford.edu. Copies of the University policy on sexual assault, which complements this sexual harassment policy, as well as all other documents mentioned in this section, are also available at the Sexual Harassment Policy Office.

All faculty, staff, and students who have questions regarding this policy and its enforcement can consult with a Sexual Harassment Adviser or can be directed to the local Personnel Officer or Regional Human Resources Manager. Faculty members should contact their dean or department chair, and students should contact the Director of the Sexual Harassment Policy Office or the Dean of Student Affairs.

Sexual Harassment Policy Office—telephone: (650) 723-1583; email: harass@stanford.edu.

Director: Laraine Zappert (Clinical Professor, Psychiatry and Behavioral Sciences)

Assistant Director: Nanette Andrews

SEXUAL ASSAULT

The University's Policy on Sexual Assault is published in complete form in the Administrative Guide Memo 23.3, available at http://adminguide.stanford.edu/23_3.pdf, and on the Judicial Affairs Office web site at http://www.stanford.edu/dept/vpsa/judicialaffairs/index.html.

SUMMARY

The following summarizes the policy on Sexual Assault and provides information on resources available to members of the Stanford community.

Background—This policy has been enacted by Stanford University in accordance with California State Law, Assembly Bill 3098, Postsecondary Education: Student Safety, July, 1990.

Policy—Sexual assault is unacceptable and will not be tolerated at Stanford University. Any member of the Stanford community who commits sexual assault at or on the grounds of the University, or at any of the University's off-campus facilities or activities, or at the facilities or activities of any affiliated student organization, will face maximal institutional sanctions, in addition to any prosecutions external authorities may undertake. Stanford University is committed to providing information on services, resources, and treatment available to victims of sexual assault. A comprehensive website containing a list of resources can be found at http://www.stanford.edu/group/svab/.

Definition—For purposes of this policy, sexual assault is defined as the commission of an unwanted sexual act, occurring without consent of both individuals, or occurring under threat or coercion. It can occur either forcibly and/or against a person's will, or when a person is incapable of giving consent (if under 18 years of age; if intoxicated by drugs or alcohol; if developmentally disabled; if temporarily or permanently mentally or physically unable to do so). Sexual assault includes but is not limited to rape, forcible sodomy, forcible oral copulation, rape with an object, sexual battery, forcible fondling, and threat of sexual assault.

Notification—With the consent of the victim, charges of sexual assault received by University offices or personnel shall be communicated promptly to the Department of Public Safety, 711 Serra Street, telephone 9-911 for emergency response or (650) 723-9633 during normal business hours, or, in the case of a student, to the sexual assault response team at YWCA Sexual Assault Center at Stanford at Vaden Health Service, 866 Campus Drive, telephone 725-9955.

Legal Reporting Requirements—Health care professionals are expected to fulfill legally mandated reporting requirements.

Emergency Services Available to Victims—Victims of sexual assault are urged to seek immediate attention from emergency police, medical, and counseling services. On the Stanford campus and in the immediate vicinity, the following provide 24-hour response and will arrange for police assistance, medical assistance, emotional support services, and advocacy and support:

"911" Emergency Network: dial 9-911 from University phones or 911 from outside phones

Santa Clara Valley Medical Center, 751 South Bascom Avenue, San Jose, telephone (408) 885-5000

YWCA Sexual Assault Center at Stanford, for students, at the Vaden Health Service, telephone (650) 725-9955

Stanford Hospital and Clinics, 300 Pasteur Drive, Stanford, telephone (650) 723-5111

Non-Emergency Resources—Additional resources for students are available at Vaden Health Service at (650) 723-3785, including short-term counseling, referral to long-term therapy, follow-up pregnancy testing, and testing and treatment for sexually transmitted diseases. Additional services for faculty and staff are available at the University's HELP Center, Galvez House (723-4577), including general counseling, information, support, and referral. The University ombudsperson (723-3682) is available to all in the Stanford community for general counseling, advice, and advocacy.

Ongoing Case Management Procedures—Both informal procedures and formal grievance procedures for case management of sexual assault charges are given in the University's policy on Sexual Harassment appearing as Administrative Guide Memo 23.2 and published annually in this bulletin. Victims are to be kept informed by those responsible for those procedures of the status of any disciplinary proceedings and the results of any disciplinary action or appeal. The office of the Dean of Student Life is available to help student victims deal with academic difficulties that may arise because of the victimization and its impact.

Information Requests and Disclosure—The University offices responding to charges of sexual assault have established protocols for limiting the disclosure of information and for handling inquiries from the press, concerned students, and parents.

Information about Options—The University offices responding to charges of sexual assault will inform victims, at a minimum, of the options of: criminal prosecution, civil prosecution, the disciplinary process, the appropriate grievance procedure, alternative housing assignments, and academic assistance alternatives.

POLITICAL ACTIVITIES

For the complete text of the currently applicable version of this policy, see Administrative Guide Memo 15.1, Political Activities, available at http://adminguide.stanford.edu/15_1.pdf.

SUMMARY

The following summarizes the policy on Political Actvities:

Stanford University, as a charitable entity, is subject to federal, state, and local laws and regulations regarding political activities: campaign activities, lobbying, and the giving of gifts to public officials.

While all members of the University community are naturally free to express their political opinions and engage in political activities to whatever extent they wish, it is very important that they do so only in their individual capacities and avoid even the appearance that they are speaking or acting for the University in political matters.

In the limited circumstances where individuals must speak or act on behalf of the University in the political arena, they must do so in accordance with the provisions of this Guide Memo.

POLICY

The following is quoted from the policy:

1. *Summary of Legal Requirements and Restrictions*
   a. *Campaign Activities:* contributions of money, goods, or services to candidates for political office and in support of or opposition to ballot measure campaigns are subject to a wide variety of political laws. Depending on the jurisdiction and the campaign, political contributions may be prohibited or limited and, in nearly all cases, are subject to a complicated series of disclosure rules. Because of the University's tax-exempt status, the University is legally prohibited from endorsing candidates for political office or making any contribution of money, goods, or services to candidates. It is important, therefore, that no person inadvertently cause the University to make such a contribution.
   b. *Lobbying:* lobbying can generally be described as any attempt to influence the action of any legislative body (for example, Congress, state legislatures, county boards, city councils, and their staffs) or any federal, state, or local government agency. Laws regulating lobbying exist at the federal, state, and local levels but can differ widely in scope, depending on the jurisdiction. Some laws, for example, only regulate lobbying of the legislative branch. Others, however, also cover lobbying of administrative agencies and officers in the executive branch (for example, lobbying for federally-funded grants). To one degree or another, however, most lobbying laws require registration and reporting by individuals engaged in attempts to influence governmental action.

      Tax-exempt organizations are permitted to lobby, and the University engages in lobbying on a limited number of issues, mostly those affecting education, research, and related activities. There is usually some threshold of time or money spent on lobbying that triggers registration and reporting requirements. Regardless of thresholds, however, no University employee—other than the following individuals, on matters under their jurisdiction—may lobby on behalf of the University without specific authorization:
      - President
      - Provost
      - Deans of the Seven Schools
      - Vice Provost and Dean of Research
      - Vice President for Business Affairs and Chief Financial Officer
      - Executive Director of Human Resources
      - Director of the Stanford Linear Accelerator Center
      - Director of the Hoover Institution
      - General Counsel
      - Vice President for Public Affairs

      The Vice Provost and Dean of Research may grant permission to faculty members to lobby on behalf of the University for specific purposes. The Director of Government and Community Relations may grant permission to staff members to lobby on behalf of the University for specific purposes. All lobbying on behalf of the University should be coordinated with the Director of Government and Community Relations.
   c. *Giving of Gifts to Public Officials and Staff:* almost all jurisdictions have strict rules on the extent to which gifts and honoraria may be given to public officials (both elected and non-elected officials and, often, staff). In some cases gifts and honoraria are prohibited; in others they are limited; and in most cases they are subject to detailed disclosure. In addition, in some jurisdictions such as California, gifts to both state and local public officials can result in a public official's disqualification from participation in any governmental action affecting the interests of the donor. Meals, travel, and entertainment are the most common types of gifts, but gift rules can also apply in cases where public officials attend a reception or receive tickets to sporting or other events.

      As a non-profit organization, the University generally does not give gifts to public officials and, in those limited cases where it does give such gifts, it must do so in accordance with all applicable laws and regulations. Therefore, any University employee who, on behalf of the University, wishes to make a gift to a public official must receive prior approval from the Director of Government and Community Relations before making such a gift.
   d. *Reporting of Political Activities:* the University must report most of its political activities above certain thresholds. Therefore, any University employee engaging in such activities on behalf of the University should carefully review the remainder of this Guide Memo and should discuss the relevant activities in advance with the Director of Government and Community Relations.
2. *Prohibited and Restricted Political Activities*
   a. *In General:*
   b. No person may, on behalf of the University, engage in any political activity in support of or opposition to any candidate for elective public office (including giving or receiving funds or endorsements), nor shall any University resources be used for such purpose.
   c. No person may, on behalf of the University, lobby (or use University resources to lobby) any federal, state, or local legislative or administrative official or staff member unless specifically authorized to do so. Any lobbying activity, even when authorized, must be conducted in compliance with this Guide Memo, other applicable University policies, and applicable law.
   d. No person may, on behalf of the University, give a gift (or use any University resources to give a gift) to any federal, state, or local official or staff member, except in compliance with this Guide Memo, other applicable University policies, and applicable law.
   e. No person supporting candidates for public office or engaging in other political activities may use University space or facilities or receive University support, except in the limited ways described in section 3A, below.
   f. No person may use for lobbying activities federally-funded contract or grant money received by the University.

Even the foregoing activities that are only restricted, rather than prohibited, may be subject to limitations imposed by law. Therefore, any person engaging in the activity, or contemplating doing so, should consult with the Director of Government and Community Relations.

g. *Guidelines for Avoiding Prohibited Partisan Political Activities:* the following guidelines should assist in preventing the involvement or apparent involvement of the University in political activities in support of or opposition to any candidate for elective public office, that is, partisan political activities. Except in the limited circumstances set forth in section 3.b., below:
   1. *Use of Name and Seal:* neither the name nor seal of the University or of any of its schools, departments, or institutions should be used on letters or other materials intended for partisan political purposes.
   2. *Use of Address and Telephones:* no University office should be used as a return mailing address for partisan political mailings, and telephone service that is paid by the University, likewise, should not be used for partisan political purposes. (Obviously, a student's dormitory room and telephone service that are personal to the student may be used for these purposes.)
   3. *Use of Title:* the University title of a faculty or staff member or other person should be used only for identification and should be accompanied by a statement that the person is speaking as an individual and not as a representative of the University.
   4. *Use of Services and Equipment:* University services, such as Interdepartmental Mail; equipment, such as duplicating machines, computers, and telephones; and supplies should not be used for partisan political purposes.
   5. *Use of Personnel:* no University employee may, as part of his or her job, be requested to perform tasks in any way related to partisan political purposes.

3. *Permissible Activities*
   a. *In General:* as noted above, the federal, state, and local laws which limit the partisan political activities that can take place in University facilities and with University support in no way inhibit the expression of personal political views by any individual in the University community. Nor do they forbid faculty, students, or staff from joining with others in support of candidates for office or in furtherance of political causes. There is no restriction on discussion of political issues or teaching of political techniques. Academic endeavors which address public policy issues are in no way affected.

      Because the University encourages freedom of expression, political activities which do not reasonably imply University involvement or identification may be undertaken so long as regular University procedures are followed for use of facilities. Examples of permissible activities are:
      1. Use of areas, such as White Plaza, for tables, speeches, and similar activities.
      2. Use of auditoriums for speeches by political candidates, but subject to rules of the Internal Revenue Service, the Federal Election Commission, and the California Fair Political Practices Commission, and other applicable laws. Arrangements must be made with University Events and Services. (See also Guide Memo 82.1, Public Events, for more information.)

      To reiterate, because tax and political compliance laws impose restrictions, and even prohibitions, on certain political activities and on the use of buildings and equipment at a non-profit institution such as the University, any such activities must be in compliance with these legal requirements. Individuals taking political positions for themselves or groups with which they are associated, but not as representatives of the University, should clearly indicate, by words and actions, that their positions are not those of the University and are not being taken in an official capacity on behalf of the University.
   b. *Limited University Political Activities:* limited activities relating to specific federal, state, or local legislation or ballot initiatives are permissible where (1) the subject matter is directly related to core interests of the University's activities; (2) the President has determined that the University should take a position; and (3) the individuals who speak or write on the University's behalf are specifically authorized to do so.

4. *Responsibility for Interpretation:* the Director of Government and Community Relations, in consultation with the General Counsel, is the administrative officer responsible for interpretation and application of the above guidelines. Questions on whether planned student activities are consistent with the University's obligations should be directed to the Dean of Students, who will consult with the Director of Government and Community Relations and/or the General Counsel. All other questions on whether planned activities are consistent with the University's obligations should be addressed directly to the Director of Government and Community Relations or the General Counsel.

CAMPUS DISRUPTIONS

The University's policy on campus disruption applies to students, faculty, and staff. It is published in its complete form on the Judicial Affairs Office web site at http://www.stanford.edu/dept/vpsa/ judicialaffairs/index.html.

POLICY

The following is quoted from the policy:

Because the rights of free speech and peaceable assembly are fundamental to the democratic process, Stanford firmly supports the rights of all members of the University community to express their views or to protest against actions and opinions with which they disagree.

All members of the University also share a concurrent obligation to maintain on the campus an atmosphere conducive to scholarly pursuits, to preserve the dignity and seriousness of University ceremonies and public exercises, and to respect the rights of all individuals.

The following regulations are intended to reconcile these objectives.

It is a violation of University policy for a member of the faculty, staff, or student body to:

1. prevent or disrupt the effective carrying out of a University function or approved activity, such as lectures, meetings, interviews, ceremonies, the conduct of University business in a University office, and public events.
2. obstruct the legitimate movement of any person about the campus or in any University building or facility.

Members of the faculty, staff, and student body have an obligation to leave a University building or facility when asked to do so in the furtherance of the above regulations by a member of the University community acting in an official role and identifying himself or herself as such; members of the faculty, staff, or student body also have an obligation to identify themselves, when requested to do so by such a member of the University community who has reasonable grounds to believe that the person(s) has violated section (1) or (2) of this policy and who has so informed the person(s).

APPLICATION

The following are examples to illustrate the policy:

The policy has been applied to the following actions: refusal to leave a building which has been declared closed; obstructing the passage into or out of buildings by sitting in front of doorways; preventing University employees from entering their workplace;

preventing members of a class from hearing a lecture or taking an examination, or preventing the instructor from giving a lecture, by means of shouts, interruptions, or chants; preventing others from hearing a scheduled speaker by means of shouts, interruptions, or chants; refusing to leave a closed meeting when unauthorized to attend; and intruding upon or refusing to leave a private interview.

It should be understood that while the above are examples of extraordinarily disruptive behavior, the application of the policy also takes situational factors into consideration. Thus, for example, conduct appropriate at a political rally might constitute a violation of the Policy on Campus Disruption if it occurred within a classroom.

There is no "ordinary" penalty which attaches to violations of the Policy on Campus Disruption. Each case is fact-specific; considerations would include: the gravity of the offense, and prior similar misconduct. As a general rule, the more serious the offense, the less it matters that the violation had otherwise not done wrong.

USE OF THE MAIN QUADRANGLE AND MEMORIAL COURT

POLICY

The following is quoted from the policy:

The Main Quadrangle and Memorial Court are part of Stanford University's academic preserve due to their locations at the heart of the campus. To protect and enhance their historic status, University policy limits activities primarily to established or traditional ceremonies and events.

To schedule an event, approval must be obtained in advance from the Office of Stanford Events (see below). Unscheduled events, protests, or activities are prohibited.

Requests for waivers to this policy must be submitted in advance and in writing to the Office of Stanford Events. Exceptions may be granted only in extraordinary cases.

RESOURCES

The following is a summary of resources available:

For instructions on use of the Main Quadrangle/Memorial Court, contact the Office of Special Events and Protocol (OSEP) at (650) 724-1387, http://stanfordevents.stanford.edu.

Note: other venues on campus (such as White Plaza) are made available to Stanford students, faculty, and staff for events other than scheduled "established or traditional ceremonies and events" including those that may involve amplified sound. For further information on the use of such other venues, contact Student Activities and Leadership (SAL) at (650) 723-2733, http://studentaffairs.stanford.edu/sal.

Office of Special Events and Protocol (OSEP)

OVAL POLICY

The Oval is considered to be the initial and official visual entrance to the Stanford University campus. Given this historic and aesthetic status, it is in the best interests of the University community and visiting members of the public to maintain its open and pristine space, to help preserve its natural beauty and environmental integrity. The Oval also presents the formal academic image of the University, leading directly to departments, classrooms and other academic space, and faculty and graduate student offices, and thus is subject to the University's Noise Policy.

The University prohibits formal or informal events of any kind to take place in the Oval. Gatherings of Stanford students, faculty, and staff such as demonstrations, rallies, or dances may take place in White Plaza, which can be reserved through the Office of Student Activities. Weddings also are not allowed in the Oval but are in certain circumstances allowed in Memorial Church (refer to Memorial Church wedding ceremony guidelines).

The Oval is considered a pedestrian zone and appropriate use of its space includes walking, running, reading, relaxing, and other limited recreational use of the lawn area (such as quiet, very small picnics and Frisbee), unless or until such use damages or otherwise harms the property.

Cooking food or use of any grill/barbecue or open flame is strictly prohibited. Fireworks or the use of other incendiary devices represent a safety hazard to the area and are therefore prohibited. Amplified sound from items such as boom boxes, musical instruments, or the use of bullhorns or amplified speakers is also prohibited. Only authorized Stanford service vehicles are permitted inside the Oval areas.

As the official entrance to the University, the Oval offers public access to general parking spaces in the marked areas surrounding the outer perimeter of the Oval; drivers are expected to obey all traffic signs and limitations. Buses are subject to additional restrictions.

For further information regarding this policy, contact the Executive Director of Special Events and Protocol, 724-1387 or see http://osep.stanford.edu/policies/oval.html.

NOISE AND AMPLIFIED SOUND

POLICY

The following is quoted from the policy:

Stanford is not only an academic institution but a residential community as well. It is the responsibility of all faculty, students, and staff to moderate noise especially during an event or activity held on campus. Supporting the mission of the University and respecting those who are studying, researching, or otherwise carrying out academic-related activities is a Stanford priority. The campus must require a conducive atmosphere to ensure these endeavors are accomplished and supported. Disturbing noise in or around a residence or other campus buildings which infringe on the rights of other residents or members of the University community is considered a violation of this policy. As part of the event planning process, the event sponsor must obtain all appropriate approvals regarding the use of amplified sound during an event or activity.

RESOURCES

Information regarding whether and how the use of amplified sound is permitted is available from the following sources, which must be consulted for prior approval:

a. The Office of Student Activities: phone: 723-2733, or see http://studentaffairs.stanford.edu/sal/policies/noise
b. Registrar's Scheduling Office: email reg-events@stanford.edu, or see http://studentaffairs.stanford.edu/registrar/faculty/events.
c. Office of Special Events and Protocol (OSEP) at (650) 724-1387, or see http://stanfordevents.stanford.edu.

PROHIBITION OF THE POSSESSION OF DANGEROUS WEAPONS ON CAMPUS

The University's policy prohibiting weapons on campus is published in its complete form on the Judicial Affairs Office web site http://stanford.edu/dept/vpsa.judicialaffairs/index.html.

POLICY

The following is quoted from the policy:

Except for authorized academic purposes, the knowing possession by any student on any Stanford campus of the following is prohibited: firearms, explosives, or any instrument or weapon of the kind commonly known as blackjack, slingshot, billy club, sandclub, sandbag, or metal knuckles.

Notwithstanding the paragraph above, a student who is a resident of a Stanford campus may store a weapon on such campus if both of the following conditions are met:

1. The student has complied with all state and federal regulations regarding the use and possession of said weapon, or, in the case of a foreign campus, with the laws of the country in which the campus is located.
2. The student stores such weapons with the Stanford Department of Public Safety (SDPS) or, in the case of a foreign campus, in a facility provided by the director of such campus.

Students may remove their weapons from storage only in accordance with regulations established by the SDPS or by the director of the foreign campus at which the weapon is stored. A student who is a resident of a Stanford campus may bring any of the above weapons on campus for purposes of storage only if the student has previously notified the SDPS of the intention to do so, but in no event more than six hours after arrival on the campus. When the student removes the weapon from storage, it must be taken off campus as soon as is practicable, but in no event more than one hour after such removal.

The term "Stanford campus" shall include all the lands and facilities of Leland Stanford Junior University, whether owned or leased, and whether located in the United States or abroad.

CONTROLLED SUBSTANCES AND ALCOHOL

STUDENT CONDUCT

Student conduct is guided by the Fundamental Standard. Implicit in the Standard is the understanding that students are responsible for making their own decisions and accepting the consequences of those decisions.

In order to make informed decisions about alcohol and other drug use, students should educate themselves about the health and safety risks associated with their use, as well as about state and local laws on possessing, serving, and consuming alcohol. It is widely recognized that the misuse and abuse of drugs ("controlled substances")* and the abuse of alcohol are major contributors to serious health problems, as well as to social and civic concerns. Among the health risks associated with the use of illicit drugs and the abuse of alcohol are various deleterious physical and mental consequences including dependency, severe disability, even death. Information concerning the known effects of alcohol and specific drugs is available from the Alcohol and Other Drug Abuse Prevention Program at Vaden Student Health Service.

The goal of this University's policy is to reduce the abuse and illegal use of alcohol and other drugs, and the human and material costs associated with it. The University, as an educational institution, approaches student conduct issues from a perspective that places emphasis on individual responsibility and development. Education about and prevention of alcohol and other drug-related problems will continue to be the primary emphasis and goal. However, the University expects students, as individuals and as members of groups, to conduct themselves in accordance with this and all other University policies governing student conduct.

* Controlled substances are those defined in 21 U.S.C. 812; they include, but are not limited to, such substances as marijuana, heroin, cocaine, and amphetamines.

POLICY

The University's policy on controlled substances and alcohol is published in its complete form in the Administrative Guide as Administrative Guide Memo 23.6, available at http://adminguide.stanford.edu/23_6.pdf, and on the Judicial Affairs Office web site http://stanford.edu/dept/vpsa/judicialaffairs/index.html.

The following is quoted from the policy:

It is the policy of the University to maintain a drug-free workplace and campus. The unlawful manufacture, distribution, dispensation, possession, and/or use of controlled substances or the unlawful possession, use, or distribution of alcohol is prohibited on the Stanford campus, in the workplace, or as part of any of the University's activities. The workplace and campus are presumed to include all Stanford premises where the activities of the University are conducted. Violation of this policy may result in disciplinary sanctions up to and including termination of employment or expulsion of students. Violations may also be referred to the appropriate authorities for prosecution.

This policy will be reviewed at least biennially.

APPLICATIONS

The following are examples to illustrate the policy:

No University funds or funds collected by the University may be used in a way that violates the alcohol policy. In student residences, house funds (funds collected by the Student Financial Services or other University offices) may not by used to buy alcohol because the majority of undergraduates are under the legal drinking age of 21. The decision to use student-collected funds to buy alcohol should be made lawfully, thoughtfully, fairly, and in a way that respects the views of all students. Students must not be required to contribute to a student-collected fund for the purposes of purchasing alcohol. No alcoholic beverages may be served at all-freshman house events in common area spaces (e.g., lounges, hallways, patios/outdoor areas).

Party planners are responsible for planning and carrying out events in compliance with this policy. At least one house or organization officer must assume responsibility for an event's compliance with the policy, and their names must be made available to Stanford's Department of Public Safety and the University upon request.

CONSEQUENCES OF VIOLATION

Educational and rehabilitative measures will be the preferred response to infractions of the Policy unaccompanied by more egregious misconduct. Penalties are calibrated according to the severity of the violation. Misbehavior associated with drug or alcohol use and abuse may result in one or more of the following University consequences:

Individuals who violate the University Residence Agreement may lose their University student housing privileges and/or be reported to the Judicial Affairs Office.

Individuals who violate the University's terms and conditions for student organization recognition as defined in the *Student Organization Handbook* may be subject to expulsion from the student organization.

Student groups which violate the Policy may face suspension of social privileges, as well as the loss of University recognition, meeting space, and housing or other related privileges.

Students should understand that inebriation is never an excuse for misconduct, that the careless or willful reduction, through the use of alcohol or other intoxicants, of their own ability to think clearly, exercise good judgment, and respond to rational intervention may invoke more stringent penalties than otherwise might be levied.

Penalties will be imposed according to the facts and circumstances of each case. They can be imposed singly or in combination by the Office of Residential Education/Graduate Residences, the Office of Student Activities, the Dean of Students Office, and the Office of Judicial Affairs.

CIVIL LIABILITY

While the law regarding civil liability is complex, it is important to know that under some circumstances party hosts, sponsors, bartenders, or others might be held legally liable for the consequences of serving alcohol to underage drinkers or to obviously intoxicated persons. Social hosts or party planners could be sued and found personally responsible for damages to the injured party(ies) including:

Specific damages. These are damages which are measurable. For example, when bodily injury results in medical expenses or lost wages.

General damages. These are damages which cannot not be specifically measured in terms of dollar amount. For example, pain and suffering resulting from bodily injury.

Punitive damages. These are damages which are intended to serve as an example to others and to discourage behavior which is deemed highly undesirable to society.

CRIMINAL LIABILITY

Stanford University is not a sanctuary from the enforcement of state and local laws. Students and others on campus who violate the law may be and have been arrested and prosecuted. Primary responsibility for law enforcement, including that related to alcohol, rests with law enforcement agencies, primarily the Stanford University Department of Public Safety. Uniformed officers who patrol the campus and respond to calls are deputized by the Sheriff of Santa Clara County and are fully empowered and authorized to stop vehicles, make arrests, and enforce all laws. Laws are subject to change; consequently, the following information is illustrative but must not be relied on as a complete and current citing of relevant laws. More information is available at the Stanford Department of Public Safety, 711 Serra Street.

Generally, it is a criminal offense:

1. To provide any alcoholic beverage to a person under 21.
2. To provide any alcoholic beverage to an obviously intoxicated person.
3. For any person under age 21 to purchase alcohol.
4. To be under the influence of alcohol or another drug in a public place and unable to exercise care for one's own safety or that of others.
5. For persons under 21 to possess alcohol in any public place or any place open to the public (for example, public places in student residences).
6. To operate a motor vehicle while under the influence of alcohol or any other drug. Presumed to be driving under the influence (DUI) with a blood alcohol level (BAL) of 0.08% or higher.
7. To ride a bicycle while under the influence of alcohol, drugs, or both.
8. To have an open container of alcohol in a motor vehicle; and, for persons under 21 to drive a vehicle carrying alcohol or to possess alcohol while in a motor vehicle.
9. To have in one's possession, or to use, false evidence of age and identity to purchase alcohol.
10. To possess an open container of alcohol in a public place or any place open to the public. Applies in Palo Alto jurisdiction.
11. To be in possession of an unregistered keg. All kegs sold must be registered at the time of purchase. Identification tags must be placed on all kegs in order to allow kegs to be traced if the contents are used in violation of the law.

WHERE TO GET HELP

In the event of life threatening emergencies call 9-911 from on-campus and 911 from off-campus.

*Campus Resources—(*Area Code 650) Counseling and Psychological Services, 24 hours (723-3785); The Alcohol and Other Drug Abuse Prevention Program (723-3429); Stanford Alcohol and Drug Treatment Center (723-6682); Vaden Health Service's Medical Advice Line, 24 hours (723-4841); The Bridge, 24-hour Peer Counseling (723-3392).

The Alcohol and Other Drug Abuse Prevention Program at Vaden Health Service: provides information and referral, educational training and workshops, and non-clinical consultations for groups and individuals. The program utilizes a harm reduction approach to prevent problems associated with the use of alcohol, tobacco, and other drugs (723-3429).

The Student Activities and Leadership: provides workshops and training, publications, and party planning consultations. Web site: http://studentaffairs.stanford.edu/sal/planning (723-2733).

Community Resources—Alcoholics Anonymous (650) 592-2364, Alanon (650) 873-2356 or (408) 379-1051.

HAZING POLICY

Hazing is not permitted at Stanford University. No individual, recognized student organization, club, team, or any other Stanford-affiliated student group is permitted to plan, engage in, or condone hazing, on or off the Stanford campus.

DEFINITION OF HAZING AT STANFORD UNIVERSITY

Hazing includes any activity done in connection with a student organization, regardless of whether the organization is officially recognized at Stanford, that causes or is reasonably likely to cause another student to suffer bodily danger, physical harm, or significant personal degradation or humiliation, even if no bodily danger, physical harm, or significant degradation or humiliation in fact results. Hazing might occur during initiation or pre-initiation into a student organization, but is not limited to these time frames. Any individual who plans or intentionally assists in hazing activity has engaged in hazing, regardless of whether that individual is present when the hazing activity occurs.

CONSEQUENCES OF A VIOLATION

Stanford University expects its students to conduct themselves in socially responsible and respectful ways. Thus, participation in hazing, either as an individual or as part of any student group, may result in serious individual and organizational consequences including, but not limited to: disciplinary action up to and including expulsion; permanent loss of organizational recognition; and loss of eligibility to remain a member of any club, team, or other Stanford-affiliated student group. Consent, implied or expressed, is not a defense to any complaint or charge alleging a hazing violation.

A number of University offices may take institutional action, including: the Organizational Conduct Board; Judicial Affairs; or other University offices, such as the Vice Provost for Student Affairs or the Department of Athletics.

APPLICATIONS

Stanford's hazing policy is distinct from and broader than California Penal Code section 245.6, which prohibits: "any method of initiation or preinitiation into a student organization or student body, whether or not the organization or body is officially recognized by an educational institution, which is likely to cause serious bodily injury to any former, current, or prospective student of any school, community college, college, university or other educational institution in this state." A violation of Penal Code Section 245.6 that does not result in serious bodily injury is punishable as a misdemeanor, while a violation that results in death or injury is punishable as a felony or a misdemeanor.

Nothing in this hazing policy prevents Stanford from taking institutional action against hazing activity that falls outside the narrower definition of Penal Code section 245.6.

Stanford's hazing policy is not intended to prohibit student recruitment or new or continuing member activities that are positive and educational in nature, designed to instill a group ethos or unity. Its intent is to deter those behaviors that cause or are likely to cause danger, harm or humiliation to another student.

Stanford's hazing policy is not intended to apply to customary athletic events or other similar institutionally-approved contests or competitions.

Questions should be directed to the Office of Student Activities, (650) 723-2733.

SMOKE-FREE ENVIRONMENT

The University's policy on a smoke-free environment is published in its complete form in the Administrative Guide as Administrative Guide Memo 23.4, available at

http://adminguide.stanford.edu/23_4.pdf, and Judicial Affairs Office web site at http://www.stanford.edu/dept/vpsa/judicialaffairs/index.html.

Applicability—This policy applies to all academic and administrative units of Stanford University, including the SLAC National Accelerator Laboratory, and all campus student housing. This policy does not supersede more restrictive policies which may be in force in compliance with federal, state, or local laws or ordinances.

Note also that the School of Medicine has adopted a more restrictive policy; see http://med.stanford.edu/tobaccofree.

POLICY

The following is quoted from the policy:

1. *Policy*
   It is the policy of Stanford University that the smoking of tobacco products in enclosed buildings and facilities and during indoor or outdoor events (and the selling of tobacco products) on the campus is prohibited.
2. *Guidelines*
   a. *Smoking-Prohibited Areas*—Specifically, smoking is prohibited in classrooms and offices, all enclosed buildings and facilities, in covered walkways, in University vehicles, during indoor and outdoor athletic events, and during other University sponsored or designated indoor or outdoor events.
      - Ashtrays will not be provided in any enclosed University building or facility.
      - "Smoking Prohibited" signs will be posted.

   b. *Outdoor Smoking Areas*—Smoking is permitted in outdoor areas, except during organized events. Outdoor smoking areas should be located far enough away from doorways, open windows, covered walkways, and ventilation systems to prevent smoke from entering enclosed buildings and facilities. To accommodate faculty, staff, and students who smoke, Vice Presidents, Vice Provosts, and Deans may designate certain areas of existing courtyards and patios as smoking areas in which case ashtrays must be provided. Costs associated with providing designated smoking areas and ashtrays will be absorbed by the specific academic or administrative unit(s).
3. *Enforcement*—This policy relies on the consideration and cooperation of smokers and non-smokers. It is the responsibility of all members of the University community to observe and follow this policy and its guidelines.
   a. *Smoking Cessation Information*—Smoking cessation programs are available for faculty and staff through the Center for Research in Disease Prevention, and the Health Improvement Program (HIP). Students may contact the Health Promotion Program (HPP) through the Student Health Center for smoking cessation information or programs.
   b. *Repeated Violations*—Faculty, staff, and students repeatedly violating this policy may be subject to appropriate action to correct any violation(s) and prevent future occurrences.
4. *Implementation and Distribution*—Copies of this policy will be disseminated by the Manager of HR Policy/Staff and Labor Relations and the Vice Provost for Student Affairs to all faculty, staff, and students, and to all new members of the University community.

VISITOR POLICY/UNIVERSITY STATEMENT ON PRIVACY

Stanford University has an interest in ensuring that the privacy of its students, faculty, and staff is respected, and that no activities interfere with education, research, or residential life.

The University is private property; however, some areas of the campus typically are open to visitors. These areas include White Plaza, public eating areas (such as those at Tresidder Union), outdoor touring areas, and locations to which the public has been invited by advertised notice (such as for public educational, cultural, or athletic events). Even in these locations, visitors must not interfere with the privacy of students, faculty, and staff, or with educational, research, and residential activities. The University may revoke at any time permission to be present in these, or any other areas. Visitors should not be in academic or residential areas unless they have been invited for appropriate business or social purposes by the responsible faculty member, student, or staff member.

No commercial activity, including taking photos or similar audio or visual recordings that are sold to others or otherwise used for commercial purposes, may occur on the campus without the University's permission. Requests for permission should be submitted to the Director of University Communications or, as appropriate, the Dean of Students, the Department of Athletics, or the Office of Public Events. Recognized student groups and official units of the University will be granted such permission so long as they do not violate privacy or property interests of others; so long as any sale of their products is predominantly on campus to students, faculty, and staff; and so long as they comply with applicable University policies and procedures.

Violaters of this policy may be subject to criminal and/or civil liability, as well as University disciplinary action.

COMPUTER AND NETWORK USAGE

For a complete text of the currently applicable version of this policy, see Administrative Guide Memo 62, Computer and Network Usage Policy, available at http://adminguide.stanford.edu/62.pdf.

POLICY

The following is quoted from the policy:

Users of Stanford network and computer resources have a responsibility not to abuse the network and resources. This policy provides guidelines for the appropriate and inappropriate use of information technologies.

SUMMARY

The following summarizes the policy on Computer and Network Usage:

In particular, the policy provides that users of University information resources must respect software copyrights and licenses, respect the integrity of computer-based information resources, refrain from seeking to gain or permitting others to gain unauthorized access, including by sharing passwords, and respect the rights of other computer users.

This policy covers appropriate use of computers, networks, and information contained therein. As to political, personal and commercial use, the University is a non-profit, tax-exempt organization and, as such, is subject to specific federal, state, and local laws regarding sources of income, political activities, use of property, and similar matters. It also is a contractor with government and other entities, and thus must assure proper use of property under its control and allocation of overhead and similar costs. For these reasons, University information resources must not be used for partisan political activities where prohibited by federal, state, or other applicable laws, and may be used for other political activities only when in compliance with federal, state, and other laws, and in compliance with applicable University policies. Similarly, University information resources should not be used for personal activities not related to appropriate University functions, except in a purely incidental manner. In addition, University information resources should not be used for commercial purposes, except in a purely incidental manner or except as permitted under other written policies of the University or with the written approval of a

University officer having the authority to give such approval. Any such commercial use should be properly related to University activities, take into account proper cost allocations for government and other overhead determinations, and provide for appropriate reimbursement to the University for taxes and other costs the University may incur by reason of the commercial use. Users also are reminded that the .edu domain on the Internet has rules restricting or prohibiting commercial use, and thus activities not appropriately within the .edu domain and which otherwise are permissible within the University computing resources should use one or more other domains, as appropriate.

The University's Information Security Officer is authorized in appropriate circumstances to inspect or monitor private data (including email), such as when there is a reasonable cause to suspect improper use of computer or network resources.

For further information on the topic of peer-to-peer file sharing, see the section above on Copyright.

CHAT ROOMS, BLOGS, AND OTHER FORUMS USING STANFORD DOMAINS OR COMPUTER SERVICES

For a complete text of the currently applicable version of this policy, see Administrative Guide Memo 66, Chat Rooms and Other Forums Using Stanford Domains or Computer Services, available at http://adminguide.stanford.edu/66.pdf.

POLICY

The following is quoted from the policy:

1. *Definition*
   From time to time, University departments, faculty, students and others may host electronic communication forums, such as chat rooms, newsgroups, bulletin boards, blogs, or web sites, whereby various parties may contribute their thoughts on various subjects and where such communication is made available for others to read and comment upon. For purposes of this policy, these sites are collectively referred to as forums.
2. *Establishment of Forums*
   a. *Connection with University Activities*—Forums that either use the Stanford.edu, Stanford.org, or other Stanford domains, or use University computing facilities, should be established only in connection with legitimate activities of the University.
   b. *University Role*—Unless specifically sponsored by an academic administrative unit of the University, the University's role in connection with these forums will be solely as a passive Internet service provider.
   c. *Terms of Use*—In all cases, as a condition to establishing a forum, forum homepages (where they exist) and each individual forum page should contain a header that states: Subject to Terms of Use and all pages should include a link to the page maintained by the University entitled "Terms of Use." The URL is http://www.stanford.edu/home/atoz/terms.html.
3. *Operation of Forums*

All forums shall be operated in compliance with the Terms of Use, as modified from time to time, and the University's various policies regarding computer facilities and services.

PROTECTION OF SENSITIVE DATA

Stanford University maintains sensitive non-public data protected by laws and agreements, including Social Security numbers, financial information, health information, and student records. It is incumbent on every member of the Stanford community with access to such data to be familiar with and abide by Stanford's data classifications requirements provided at http://www.stanford.edu/group/security/securecomputing/dataclass_chart.html. Members of the Stanford community should also familiarize themselves with applicable laws and University policies on privacy as provided by the University, including Administrative Guide Memo 63, Information Security, http://adminguide.stanford.edu/63.pdf, Administrative Guide Memo 64, Identification and Authentication of Systems, http://adminguide.stanford.edu/64.pdf, Administrative Guide Memo 65, Electronic Commerce, http://adminguide.stanford.edu/65.pdf, and Administrative Guide Memo 67, Information Security Incident Response, http://adminguide.stanford. edu/67.pdf. For information on best practices for securing mobile computing devices, see http://www.stanford.edu/group/security/securecomputing/mobile_devices.html.

CAMPUS SAFETY AND CRIMINAL STATISTICS

Stanford University complies with the Jeanne Clery Disclosure of Campus Security Policy and Crime Statistics Act. A copy of Stanford's policies and statistics under this act are posted on the Department of Public Safety web site at http://stanford.edu/group/SUDPS/safety-report.shtml. A paper copy can be obtained by calling the Stanford Department of Public Safety at (650) 723-9633.
