University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees" section of this bulletin. For University coterminal degree program rules and University application forms, see http://studentaffairs.stanford.edu/registrar/publications#Coterm.

Requirements for the coterminal master's degree are outlined in the "Master of Arts in Latin American Studies" section of this bulletin.

MASTER OF ARTS IN LATIN AMERICAN STUDIES

The Master of Arts in Latin American Studies is an interdisciplinary program. The curriculum consists of a core set of courses surveying the history, politics, society, ecology, and culture of the Latin American region; advanced language training; and in-depth course work. In consultation with a faculty adviser, students select a course of study suited to their individual interests.

JOINT DEGREE PROGRAM IN LATIN AMERICAN STUDIES AND LAW

The joint degree program in Latin American Studies and Law allows students to pursue the M.A. degree in Latin American Studies concurrently with the Doctor of Jurisprudence (J.D.) degree, with a significant number of courses that may apply to both degrees. It is designed to train students interested in a career in teaching, research, or the practice of law related to Latin American legal affairs. Students must apply separately to the Latin American Studies M.A. program and to the Stanford School of Law and be accepted by both. Completing this combined course of study requires approximately four academic years, depending on the student's background and level of language training. For more information, see the "Joint Degree Programs" section of this bulletin and consult with the program offices for the two programs.

DUAL MASTER'S DEGREE WITH MEDICINE OR BUSINESS

Stanford offers dual degree programs that grant an M.A. degree in Latin American Studies and a Master of Business Administration degree or a Medical Doctor degree. Students must apply separately to and be accepted by both the Latin American Studies M.A. program and the Graduate School of Business or School of Medicine.

DEGREE REQUIREMENTS

University requirements for the master's degree are described in the "Graduate Degrees General Requirements" section of this bulletin.

The program requires completion of a minimum of 45 graduate units. Each student is assigned a faculty adviser who works with the student to develop a customized program of study. All courses for the M.A. degree must be at the 100-level or higher, with at least half being at the 200-level or higher.

Candidates to the M.A. in Latin American Studies must complete the following:

1. *Core courses* (15 units): one core 5-unit course in each of three fields of specialization:
   a. Culture and Society: HISTORY 371, Graduate Colloquium: Explorations in Latin American Social History (Autumn)
   b. Political Economy: POLISCI 248S, Latin American Politics (Winter)
   c. Environment and Ecology: ANTHRO 162/262, Indigenous Peoples and Environmental Problems (Spring)
2. *Cognate courses* (15 units): three courses (5 units each), one from each of the three fields of specialization listed in '1' above. For approved courses, see the "Latin American Studies Cognate Courses" section of the Bulletin.
3. *Elective courses* (10-15 units): three elective courses (3-5 units each) in one of the three fields of specialization (see '1' above) from across the University's offerings, selected with guidance and approval from the faculty adviser.
4. *Language requirement:* at least 3 units of course work on a second Latin American language. Students proficient in both Spanish and Portuguese must take an advanced third-year language course in either Spanish or Portuguese; students proficient in only Spanish or only Portuguese must take a basic course in the language in which they are not already proficient. Up to 6 units of foreign language coursework may be applied toward the MA degree. All foreign language coursework must be taken at the 100-level or higher.
5. *Seminar requirement:* 3 units (1 per quarter) of LATINAM 200, Contemporary Issues in Latin American Studies.
6. *Thesis option:* students may elect to write a master's thesis; they may register for LATINAM 398 for up to 10 units of thesis research under the guidance of an Academic Council faculty member. Thesis units may be counted toward the elective field unit requirements (requirement number 3, above).
7. *Grade requirements:* All courses to be counted toward the MA (with the only exception being LATINAM 200) must be taken for a letter grade and earn a B- or better. M.A. candidates must maintain a cumulative GPA of 3.0 or higher.

LATIN AMERICAN STUDIES COGNATE COURSES

The following courses may be used to satisfy requirements for the M.A degree, honors certification, or minor in Latin American Studies. Consult the *Stanford Bulletin's* Explore Courses web site for full course descriptions and class schedules.

When selecting courses from this list, please be aware of the following:

1. Overseas Studies courses, denoted by the subject codes OSPMADRD or OSPSANTG, apply only to the undergraduate minor or honors programs and are not options for M.A. students.
2. Courses with numbers ending in the letter N or Q are Introductory Seminars for undergraduates and are not options for M.A. students. Courses ending in N give preference to freshmen; courses ending in Q give preference to sophomores.
3. All courses to be counted toward the M.A., minor, or honors in Latin American Studies must be taken at the 100-level or higher, with the exception of Overseas Studies courses included on this list (see also note 1, above).
4. All courses to be counted toward the M.A., minor, or honors in Latin American Studies must be taken for a letter grade.
5. For the M.A. degree, cognate courses must be taken for 5 units each. M.A. elective courses may be taken for 3-5 units each.
6. Some courses have prerequisites or special enrollment requirements. Students are responsible for making sure they have completed any prerequisites and/or secured an instructor's permission, as needed.

CULTURE AND SOCIETY

- ANTHRO 100C. Chavín de Huántar Research Seminar
- ANTHRO 101. Aztecs and their Ancestors: Intro to Mesoamerican Archaeology
- ANTHRO 105/205. Ancient Cities in the New World
- ANTHRO 106/206A. Incas and their Ancestors: Peruvian Archaeology

- ANTHRO 122B/222B. Research in Maya Hieroglyphic Writing
- ANTHRO 164B. Anthropology of Tourism
- ARTHIST 293. Latin American Avant Garde
- ARTHIST 396. African Visual Art and Graphic Communication in the Americas
- COMPLIT 121. Poems, Poetry, Worlds: An Introductory Course
- COMPLIT 134. The Poetry of History in the Americas
- COMPLIT 142. The Literature of the Americas (same as ENGLISH 172E)
- COMPLIT 242. The Global South: Faulkner, García Márquez, Morrison, and Cisneros
- EDUC 177/277. Education of Immigrant Students: Psychological Perspectives
- HISTORY 106B. Global Human Geography: Europe and the Americas
- HISTORY 170. Colonial Latin America *(minor/honors survey course)*
- HISTORY 306G. Colonial Law
- HISTORY 370. Graduate Colloquium on Colonial Latin American History
- HISTORY 371. Graduate Colloquium: Explorations in Latin American Social History *(M.A. core course and honors core course)*
- HISTORY 406. Graduate Research Seminar on Colonial Law
- HISTORY 470A. Graduate Research Seminar: Latin American Social History
- ILAC 114N. Lyric Poetry
- ILAC 117N. Film, Nation, Latinidad
- ILAC 131. Cultural Perspectives in the Luso-Hispanic Americas
- ILAC 141. The Spanish American Short Story as Cultural and Political Artifact
- ILAC 142. Modernismo and the World Interior
- ILAC 161. Survey of Modern Latin American Literature
- ILAC 193Q. Spaces and Voices of Brazil through Films (same as PORTLANG 193Q)
- ILAC 194E. Black Brazil
- ILAC 211. The Poetry of Pablo Neruda
- ILAC 241. Fiction Workshop in Spanish
- ILAC 256. Drug Wars: Narcos in Media and Literature
- ILAC 260. The Mexican Revolution of 1910 in the Cinema
- ILAC 265. Museums and Novels in Argentina
- ILAC 273. Brazilian Resonances: Poems, Lyrics, Songs
- ILAC 278A. Senior Seminar: Amazonia-Manhattan: Visions of El Dorado
- ILAC 280. Latina/o Literature
- ILAC 343. García Márquez
- ILAC 357. Juan Carlos Onetti: The Creation of Urban Narratives
- ILAC 365. Anthropological Fictions in Latin America: Alejo Carpentier and Guimarães Rosa
- ILAC 380E. Critical Concepts in Chicana/o Literature
- INTNLREL 141A. Camera as Witness: International Human Rights Documentaries
- LAW 455. Law and Society in International Perspective
- OSPMADRD 40. Introduction to Literary and Cultural Analysis in the Spanish World
- OSPMADRD 50. Flirting with Spanish Metafiction: Cervantes, Velázquez, Fuentes, Almodóvar
- OSPSANTG 10. Borges and Argentina
- OSPSANTG 14. Women Writers of Latin America in the 20th Century
- OSPSANTG 66. Latin American Current Affairs
- OSPSANTG 67. 21st Century Chilean Literature
- OSPSANTG 68. Emergence of Nations in Latin America
- OSPSANTG 104X. Modernization and Culture in Latin America
- OSPSANTG 118X. Artistic Expression in Latin America
- OSPSANTG 141X. Politics and Culture in Chile
- SOC 164/264. Immigration and the Changing United States

ENVIRONMENT AND ECOLOGY

- ANTHRO 162/262. Indigenous Peoples and Environmental Problems *(M.A. core course)*
- ANTHRO 166/266. Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness
- ANTHRO 177/277. Environmental Change and Emerging Infectious Diseases (same as HUMBIO 114)
- BIO 175. Tropical Ecology and Conservation
- CEE 265A. Sustainable Water Resources Development
- CEE 265D. Water & Sanitation in Developing Countries
- EARTHSYS 132/232. Energy and Climate Cooperation in the Western Hemisphere (same as IPS 263, INTNLREL 146A)
- HRP 240. Rethinking International Health (same as MED 230)
- HUMBIO 119C. Demography and Measurement of the Effects of Armed Conflict
- OSPSANTG 58. Living Chile: A Land of Extremes
- OSPSANTG 85. Marine Ecology of Chile and the South Pacific
- PEDS 220. Latin America's Millennium Development Goals and Children's Health

POLITICAL ECONOMY

- ANTHRO 166/266. Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness
- EARTHSYS 132/232. Energy and Climate Cooperation in the Western Hemisphere (same as IPS 263/INTNLREL 146A)
- ECON 127. Economics of Health Improvement in Developing Countries (same as MED 262)
- EDUC 306A. Economics of Education in the Global Economy
- INTNLREL 147. The Political Economy of the Southern Cone of South America
- INTNLREL 148. Economic Integration of the Americas
- OSPSANTG 68. Emergence of Nations in Latin America
- OSPSANTG 116X. Modernization and its Discontents: Chilean Politics at the Turn of the Century
- OSPSANTG 119X. The Chilean Economy: History, International Relations, and Development Strategies
- OSPSANTG 129X. Latin America in the International System
- OSPSANTG 130X. The Chilean Economy in Comparative Perspective
- OSPSANTG 141X. Politics and Culture in Chile
- OSPSANTG 221X. Political Transition and Democratic Consolidation: Chile in Comparative Perspective
- POLISCI 125S. Chicano/Latino Politics
- POLISCI 240. The Politics of Wealth Redistribution
- POLISCI 240P. Trials, Truth, and Mentality
- POLISCI 242D. Political Economy of Property Rights (same as HISTORY 278A)
- POLISCI 248S. Latin American Politics *(M.A. core course)*

OVERSEAS STUDIES COURSES IN LATIN AMERICAN STUDIES

For course descriptions and additional offerings, see the listings in the *Stanford Bulletin's* ExploreCourses web site (http://explorecourses.stanford.edu) or the Bing Overseas Studies web site (http://bosp.stanford.edu). Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

AUTUMN QUARTER

MADRID

- OSPMADRD 40. Introduction to Literary and Cultural Analysis in the Spanish World. 4-5 units, Santiago Tejerina-Canal, GER:DB:Hum
- Santiago
- OSPSANTG 14. Women Writers of Latin America in the 20th Century. 4-5 units, Sergio Missana, GER:DB:Hum, EC:Gender
- OSPSANTG 58. Living Chile: A Land of Extremes. 5 units, Marcela A. Bustamante, GER:DB:EngrAppSci
- OSPSANTG 66. Latin American Current Affairs. 3-5 units, Héctor Hoyos
- OSPSANTG 68. The Emergence of Nations in Latin America. 4-5 units, Ivan Jaksic, GER:DB:SocSci
- OSPSANTG 104X. Modernization and Culture in Latin America. 5 units, Bernardo Subercaseaux, GER:DB:SocSci, EC:GlobalCom
- OSPSANTG 221X. Political Transition and Democratic Consolidation: Chile in Comparative Perspective. 5 units, Sergio Micco, GER:DB:SocSci

WINTER QUARTER

SANTIAGO

- OSPSANTG 14. Women Writers of Latin America in the 20th Century. 4-5 units, Sergio Missana, GER:DB:Hum, EC:Gender
- OSPSANTG 58. Living Chile: A Land of Extremes. 5 units, Marcela A. Bustamante, GER:DB:EngrAppSci
- OSPSANTG 62. Topics in Chilean History. 4-5 units, Ivan Jaksic
- OSPSANTG 118X. Artistic Expression in Latin America. 5 units, César Albornoz, GER:DB:SocSci, EC:GlobalCom
- OSPSANTG 129X. Latin America in the International System. 4-5 units, Claudio Fuentes, GER:DB:SocSci

SPRING QUARTER

MADRID

- OSPMADRD 50. Flirting with Spanish Metafiction: Cervantes, Velázquez, Fuentes, Almódovar. 4-5 units, Santiago Tejerina-Canal, GER:DB:Hum

SANTIAGO

- OSPSANTG 10. Borges and Argentina. 4-5 units, Sergio Missana, GER:DB:Hum
- OSPSANTG 68. The Emergence of Nations in Latin America. 4-5 units, Ivan Jaksic, GER:DB:SocSci
- OSPSANTG 85. Marine Ecology of Chile and the South Pacific. 5 units, Alvaro Palma, GER:DB:NatSci
- OSPSANTG 116X. Modernization and its Discontents: Chilean Politics at the Turn of the Century. 5 units, Gerrman Correa, GER:DB:SocSci
- OSPSANTG 141X. Politics and Culture in Chile. 5 units, Bernardo Subercaseaux, GER:DB:Hum, EC:GlobalCom

LINGUISTICS

Emeriti: (Professors) Joan Bresnan, Clara N. Bush, Shirley Brice Heath, William R. Leben, Stanley Peters, Elizabeth C. Traugott
Chair: Beth Levin
Professors: Eve V. Clark, Penelope Eckert, Daniel Jurafsky, Martin Kay, Paul Kiparsky, Beth Levin, John R. Rickford, Ivan A. Sag, Thomas A. Wasow (on leave)
Associate Professors: Arto Anttila, Christopher Manning (on leave), Christopher Potts (on leave Spring)
Assistant Professors: Vera Gribanova, Meghan Sumner
Courtesy Professors: Herbert H. Clark, Kenji Hakuta, James McClelland, Orrin W. Robinson III, Chao Fen Sun
Courtesy Associate Professors: H. Samy Alim, James A. Fox, Miyako Inoue, Yoshiko Matsumoto
Courtesy Assistant Professor: Michael C. Frank
Senior Lecturer: Philip L. Hubbard
Visiting Professors: Philip Baldi, Arnold Zwicky
Visiting Associate Professor: Gerald Penn
Lecturers: Asya Pereltsvaig (Autumn and Spring), Kathryn Potts
Consulting Professors: Ronald Kaplan, Lauri Karttunen, Annie Zaenen
Consulting Associate Professors: Jared Bernstein, Cleo Condoravdi
Department Offices: Margaret Jacks Hall, Building 460
Mail Code: 94305-2150
Phone: (650) 723-4284
Email: linguistics@lists.stanford.edu
Web site: http://linguistics.stanford.edu

Courses offered by the Department of Linguistics are listed under the subject code LINGUIST on the *Stanford Bulletin's* ExploreCourses web site.

Linguistics concerns itself with the fundamental questions of what language is and how it is related to the other human faculties. In answering these questions, linguists consider language as a cultural, social, and psychological phenomenon and seek to determine what is unique in languages, what is universal, how language is acquired, and how it changes. Linguistics is, therefore, one of the cognitive sciences; it provides a link between the humanities and the social sciences, as well as education, and hearing and speech sciences.

The department offers courses at the undergraduate and graduate levels in the areas central to linguistic theory and analysis. Many of them deal with the analysis of structural patterns in the different components that make up language, including sounds (phonetics and phonology), meanings (semantics and pragmatics), words (morphology), sentences (syntax), and the way they vary and change over time. Other courses integrate the analysis of linguistic structure with phenomena that directly concern other disciplines. These include courses in computational linguistics, language acquisition, the philosophy of language, psycholinguistics, and sociolinguistics.

A variety of open forums provide for the discussion of linguistic issues, including colloquia and regularly scheduled workshops in child language, computational linguistics, phonology, psycholinguistics, semantics, sociolinguistics, and syntax.

MISSION OF THE UNDERGRADUATE PROGRAM IN LINGUISTICS

The mission of the undergraduate program in Linguistics is to provide students with the skills necessary to analyze the structure of human languages including sounds (phonetics and phonology), meanings (semantics and pragmatics), words (morphology), sentences (syntax), and the way in which these structural patterns vary and change over time. Courses in the major also integrate the analysis of linguistic structure with phenomena that directly concern other disciplines including computer science, psychology, cognitive science, communication, anthropology, and foreign language. The program provides students with excellent preparation for further study in graduate or professional schools as well as careers in business, social services, government agencies, and teaching.

LEARNING OUTCOMES

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. the ability to formulate theoretically interesting and tractable research questions.
2. the ability to identify sources of data relevant to answering their research questions.
3. facility with methods of collecting data relevant to their research questions.
4. knowledge of analytical methods to apply to the data they have collected.
5. the ability to bring the results of their data analysis to bear on their research questions.

GRADUATE PROGRAMS IN LINGUISTICS

The department offers an M.A., Ph.D., and Ph.D. minor in Linguistics.

COGNITIVE SCIENCE

Linguistics is participating with the departments of Computer Science, Philosophy, and Psychology in an interdisciplinary program in Cognitive Science for doctoral students. The program is intended to provide an interdisciplinary education as well as a deeper concentration in linguistics. Students who complete the Linguistics and Cognitive Science requirements receive a special designation in Cognitive Science along with the Ph.D. in Linguistics. To receive this field designation, students must complete 30 units of approved courses, to be determined in consultation with the graduate studies adviser.

LINGUISTICS COURSE CATALOG NUMBERING SYSTEM

Courses numbered under 100 are designed primarily for pre-majors. Courses with 100-level numbers are designed for majors, minors, and M.A. and Ph.D. minor candidates in Linguistics. Those with numbers 200 and above are primarily for graduate students, but with consent of instructor some of them may be taken for credit by qualified undergraduates. At all levels, the course numberings indicate a special area, as follows:

00-04	General
05-09	Phonetics
10-14	Phonology
15-19	Morphology
20-29	Syntax
30-39	Semantics, Pragmatics, Discourse
40-49	Language Acquisition, Psycholinguistics
50-61	Sociolinguistics, Language Variation, Change
62-73	Language and Culture, Structure of a Language
74-79	Methods, Mathematical Linguistics, Statistics
80-89	Computational Linguistics
90-93	Applied Linguistics
94-99	Directed Work, Theses, Dissertations

BACHELOR OF ARTS IN LINGUISTICS

The undergraduate major stresses the study of language both as a fundamental human faculty and as a changing social institution. At the core of the program is a set of departmental courses on the nature of human language; the major also draws on courses offered by other departments and programs.

The Linguistics major cuts across the humanities and the social and physical sciences. It provides a solid general education as a background for advanced studies in such disciplines as anthropology, cognitive science, communication, computer science, education (language, literacy, and culture), hearing and speech sciences, languages, law, linguistics, philosophy, and psychology.

REQUIREMENTS

Requirements for the B.A. include at least 50 units of course work in Linguistics and approved courses in related fields. Of the 50 units required for the major, no more than 12 may be below the 100 level. No more than two courses, neither of which can be a core course, may be taken on a credit/no credit basis. Students must receive a 'C-' or better in courses used towards the requirements.

Core Courses—The core courses are:
LINGUIST 1. Introduction to Linguistics
LINGUIST 110. Introduction to Phonetics and Phonology
LINGUIST 120. Introduction to Syntax
LINGUIST 130A. Introduction to Linguistic Meaning
or LINGUIST 130B. Introduction to Lexical Semantics
LINGUIST 150. Language in Society, which fulfills the Writing in the Major requirement (WIM)
LINGUIST 160. Introduction to Language Change, *or*, in advance consultation with the Linguistics undergraduate studies adviser, a course in historical linguistics or the history of a language.

All majors must complete at least five core courses, including LINGUIST 150, Language and Society.

Other Courses—Other courses counting toward the unit requirement should form a coherent program with emphases from among the areas of concentration listed below. Students should consult with the Linguistics undergraduate studies adviser when declaring the major, and maintain regular contact during the remainder of their Stanford career. Each student's major program must be approved by the Linguistics undergraduate studies adviser, or approved department adviser.

Students in the major must also take:

1. At least two 200-level Linguistics courses, typically in their area of concentration.
2. LINGUIST 197, Undergraduate Research Seminar, in the junior year. Special arrangements can be made for transfer students and others who start the major late.

Other Requirements—

1. *Foreign language:* majors must have competence in at least one language other than English as part of their understanding of the field of linguistics and its study. This is usually demonstrated by the completion of six quarters of language study at Stanford or equivalent; level of proficiency is determined by the Language Center or the relevant language department. Students may petition to be exempted from the Language Requirement if they have grown up speaking a language other than English and can use it for everyday purposes and for linguistic analysis.
2. *Junior research paper:* this requirement is typically fulfilled by providing an additional stage of revision on a research paper previously submitted in a Linguistics course. It must be approved by both the instructor of the course and the Linguistics undergraduate studies adviser by the end of the junior year.

AREAS OF CONCENTRATION

Students select one of the following areas of concentration or develop one themselves in advance consultation with the Linguistics undergraduate studies adviser. These areas of concentration are not declared on Axess, and they do not appear on the transcript or diploma.

General Linguistics—This concentration provides a broad education in Linguistics and is advisable for students interested in advanced degrees in Linguistics. All six core courses are required.

Language and Society—This concentration focuses on the social dimensions of language.

Language Structures—This concentration focuses on the cognitive aspects of language.

Language Specialization—This concentration focuses on linguistics as it pertains to a particular language. To date, Chinese, Japanese, and Spanish language specializations have been pre-approved. Other language specializations can be arranged on an ad hoc basis if appropriate courses are available in the relevant departments.

HONORS PROGRAM

Students who wish to undertake a more intensive program of study, including independent research, should pursue departmental honors. Students should apply for honors by the end of Winter

Quarter of their junior year. As part of the application, the student must write a research proposal describing the honors project which must be approved by the faculty adviser. Approval is given only to students who have maintained a grade point average (GPA) of 3.3 (B+) or better in the courses required for the major.

Honors students complete a total of 60 units including the 50 units for the major, plus 10 additional units of independent study and Honors Research. In addition, they must complete an honors thesis based on research conducted with a principal adviser who must be a member of the Linguistics faculty, and a secondary faculty adviser who may, with the approval of the Undergraduate Studies Committee, be a member of another department. In the Autumn Quarter of the senior year, honors students enroll in LINGUIST 199, Independent Study, to work closely with one of their advisers on the research project. In Winter and Spring quarters, honors students enroll in LINGUIST 198, Honors Research, with the student's principal adviser for close supervision of the honors thesis. The thesis must be submitted in final, acceptable, form by May 15. The thesis topic is presented orally at a department Honors Colloquium late in Spring Quarter.

MINOR IN LINGUISTICS

Requirements for the minor include at least 28 units of course work (typically seven courses) in Linguistics and related fields, approved in advance by the Linguistics undergraduate studies adviser. No more than two courses, neither of which can be a core course, may be taken on a credit/no credit basis. The courses counting towards the minor must be incremental units beyond those needed to satisfy the student's major course of study. The minor consists of:

1. LINGUIST 1. Introduction to Linguistics
2. Two out of the following Linguistics core courses:
   LINGUIST 110. Introduction to Phonetics and Phonology
   LINGUIST 120. Introduction to Syntax
   LINGUIST 130A. Introduction to Linguistic Meaning
   or LINGUIST 160. Introduction to Language Change
   or, in advance consultation with the Linguistics undergraduate studies adviser, a course in historical linguistics or the history of a language.
3. At least four other courses determined in advance consultation with the Linguistics undergraduate studies adviser. Students are encouraged to take at least one 200-level Linguistics course. Students may also choose to do independent work with a faculty member of their choice.

COTERMINAL BACHELOR'S AND MASTER'S DEGREE PROGRAM IN LINGUISTICS

The Department of Linguistics admits a limited number of undergraduates to the coterminal degree program. Students are required to submit to the department a complete application, which includes a statement of purpose identifying a thesis topic, a Stanford transcript, three letters of recommendation (at least one of which must be from a faculty member in Linguistics), and a proposed course of study (worked out in advance with a Linguistics adviser). Applicants for the coterminal degree may apply as early as their eighth quarter and no later than early in the eleventh quarter of undergraduate study. Decisions on admission to the coterminal degree program rest with the Graduate Admissions Committee of the Department of Linguistics. For further application information, see the department's web pages.

For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.htm#Coterm.

MASTER OF ARTS IN LINGUISTICS

The University's basic requirements for the master's degree are discussed in the "Graduate Degrees" section of this bulletin. The following are additional departmental requirements. Candidates should review the department's *Guidelines for the M.A. Degree in Linguistics* for further particulars concerning these requirements.

1. *Courses:* candidates must complete 45 units of graduate work in Linguistics, including at least four courses in the student's area of specialization. No more than two courses should be at the 100 level.
   Individual programs should be worked out in advance with an adviser to ascertain that the necessary courses in the area of specialization are offered over the course of the year of anticipated enrollment. The overall grade point average (GPA) must be at least 3.0 (B) for all degree program coursework.
2. *Language:* reading knowledge of a non-native language in which a substantial linguistic literature is written, with sufficient facility to understand and interpret linguistic research published in that language, or in-depth research on the structure of a non-native language.
3. *Thesis or Thesis Project:* a research paper supervised by a committee of three faculty (normally fulfilled by up to 6 units of LINGUIST 398, Directed Research).

DOCTOR OF PHILOSOPHY IN LINGUISTICS

The following requirements are in addition to the basic University requirements for the degree sought; see the "Graduate Degrees" section of this bulletin. Candidates should review the department's *Guidelines for the Degree of Ph.D. in Linguistics*, downloadable at http://www-linguistics.stanford.edu/graduate/phd-guidelines.pdf, for further particulars concerning these requirements.

1. *Language*—candidates must demonstrate the ability to read at least one foreign language in which a substantial linguistic literature is written, with sufficient facility to understand and to interpret linguistic research published in that language. (Particular areas of specialization may require additional research languages.)
   In addition, each candidate must demonstrate an explicit in-depth knowledge of the structure of at least one language (normally neither the candidate's native language nor the language used for the reading exam). This requirement is fulfilled by writing an original research paper on a language.
2. *Courses*—a minimum of 135 units of graduate work beyond the bachelor's degree, or 90 units beyond the master's degree. The course requirements detailed in the *Guidelines for the Degree of Ph.D. in Linguistics* guarantee that each student covers a sufficient set of subareas within the field.
   Candidates must maintain a satisfactory record in the number and distribution of units completed. The overall course work GPA must be at least 3.0 (B), and all of the basic courses should be completed with at least a 'B.'
3. *Research*—the prospective Ph.D. candidate is expected to complete two substantial qualifying papers. The deadline for completion of the first qualifying paper is the end of Autumn Quarter of the second year; the deadline for completion of the second qualifying paper is the end of Autumn Quarter of the third year. The subject matter of the two papers, although it may be related (for example, same language), must be clearly distinct. The requirement is fulfilled by two quarters of LINGUIST 395, Research Workshop (1-2 units each), and by oral discussion with a committee of at least three faculty members selected by the student and the faculty.
4. *Candidacy*—students must complete a prescribed portion of the basic course requirement (see item 2 above), one foreign language requirement (see item 1 above), and one qualifying paper (see item 3 above) by the end of their second year.
5. *Teaching*—at least three quarters serving as a teaching assistant in Linguistics courses.
6. *Colloquia*—two oral presentations exclusive of the public portion of the University oral (see item 7b below). This requirement is satisfied by class presentations, conference papers, or

colloquium talks. Normally, both should be given during the first four years of study.

7. *Dissertation*—
   a. appointment of a dissertation committee.
   b. an approved written dissertation proposal is required by the end of Autumn Quarter of the fourth year.
   c. oral discussion of the dissertation proposal with an augmented dissertation committee.
   d. passing a University oral examination on the dissertation and related areas which includes a public presentation of the dissertation research.
   e. dissertation (up to 15 units of LINGUIST 399).

PH.D. MINOR IN LINGUISTICS

1. *Courses:* the candidate must complete 30 units of course work in linguistics. The University requires that at least 20 of these units be at the 200 level or above; the remaining 10 units must be at the 100 level or above. The course work for the minor must include LINGUIST 110, 120, and either 130A or 130B or 200-level introductory courses in the same areas and at least three courses related to the area of specialization. Courses submitted for the minor must be incremental units beyond those used to satisfy the major. Individual programs should be worked out in advance with the student's Ph.D. minor adviser in Linguistics.
2. *Research Project* (optional): the candidate may elect to present a paper which integrates the subject matter of linguistics into the field of specialization of the candidate.
3. The Linguistics minor adviser or designee serves on the candidate's University oral examination committee and may request that up to one-third of the examination be devoted to the minor subject.

OVERSEAS STUDIES COURSES IN LINGUISTICS

For course descriptions and additional offerings, see the listings in the *Stanford Bulletin's* ExploreCourses web site (http://explorecourses.stanford.edu) or the Bing Overseas Studies web site (http://bosp.stanford.edu). Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

WINTER QUARTER

PARIS

- OSPPARIS 37. Gesture. 3 units, Eve Clark, GER:DB:SocSci
- OSPPARIS 38. First Language Acquisition, with Emphasis on French. 4 units, Eve Clark

DIVISION OF LITERATURES, CULTURES, AND LANGUAGES

Division Chair: Gabriella Safran
Division Offices: Building 260, Rooms 114-119
Mail Code: 94305-2005
Phone: (650) 724-1333; Fax: (650) 725-9306
Email: dlcl@stanford.edu
Web Site: http://dlcl.stanford.edu

Courses offered by the Division of Literatures, Cultures, and Languages are listed under the subject code DLCL on the *Stanford Bulletin's* ExploreCourses web site.

The Division of Literatures, Cultures, and Languages consists of five academic departments (Comparative Literature, French and Italian, German Studies, Iberian and Latin American Cultures, and Slavic Languages and Literatures), five focal groups (Humanities Education, Performance, Philosophy and Literature, Poetics, and Renaissances) as well as the Language Center, which oversees language instruction at Stanford. All the departments of the division offer academic programs leading to B.A., M.A., and Ph.D. degrees. The division brings together scholars and teachers dedicated to the study of literatures, cultures, and languages from humanistic and interdisciplinary perspectives. The departments in the division are distinguished by the quality and versatility of their faculty, a wide variety of approaches to cultural traditions and expressions, and the intense focus on the mastery of languages. This wealth of academic resources, together with small classes and the emphasis on individual advising, creates a superior opportunity for students who wish to be introduced to or develop a deeper understanding of non-English speaking cultures.

The division's departments and the Language Center offer instruction at all levels, including introductory and general courses that do not require knowledge of a language other than English. These courses satisfy a variety of undergraduate requirements and can serve as a basis for developing a minor or a major program in the member departments. The more advanced and specialized courses requiring skills in a particular language are listed under the relevant departments, as are descriptions of the minor and major programs.

The DLCL itself offers two undergraduate minor programs, an undergraduate multimedia laboratory course, and several graduate courses focused on the teaching of second languages, the teaching of literature, and academic professionalization.

MINOR IN LITERATURES, CULTURES, AND LANGUAGES

The Division of Literatures, Cultures, and Languages offers two undergraduate minors that draw upon courses in literature and language within the division's departments and elsewhere in the University.

Course work in these minors may not duplicate work counted toward other majors or minors. Advanced Placement credit and transfer credit do not apply to the minors. All courses must be taken for a letter grade. By University policy, no more than 36 units may be awarded in these minors.

Prospective minors should obtain a Minor Declaration form from the DLCL office of undergraduate student services.

MINOR IN LITERATURE

The minor in Literature allows students from any major to develop skills in the interpretation and criticism of literature, while acquiring a familiarity with types of literature from different national traditions and periods. Students must complete 30 units of course work on literature or literary theory. Courses may be in the original language or in translation.

The courses must include a minimum of:

1. One course on literary theory or the history of criticism.
2. One course on literature prior to the eighteenth century.
3. One course on literature reflecting perspectives outside of the European traditions.
4. One course from each of three distinct national or linguistic traditions from among Arabic, Chinese, English (including Anglophone literatures broadly conceived), French, German, Greek, Hebrew, Italian, Japanese, Korean, Latin, Persian, Portuguese, Russian, Spanish, Yiddish, and other national or linguistic traditions when appropriate courses are available. The pre-eighteenth-century course and the non-European course may be counted toward fulfilling this requirement.
5. Courses from two different genres such as poetry, drama, and prose fiction. Theory does not count as a genre.
6. One course requiring a research paper.

Students must consult with the minor adviser for approval of courses to meet these requirements. Second-year foreign language courses are not normally counted unless the syllabus reflects a primary emphasis on the reading of literature. Students are encouraged to acquire second-language skills and to explore courses in related disciplines; such courses, however, are not counted toward the 30 units required for the minor in Literature.

Course work in the minor may not duplicate work counted toward specific language majors or minors. Neither Advanced Placement credit nor transfer credit may be applied to the minor. All courses applied to the minor must be Stanford courses. At least 25 units of the course work must be taken for a letter grade.

The DLCL office of undergraduate student services verifies course work for the minor. The minor in Literature must be approved by a divisional faculty member designated by the DLCL.

MINOR IN MODERN LANGUAGES

The minor in Modern Languages is offered to students who want to supplement the course work in their major with course work in modern languages and literatures. The minor must be approved by the chairs of undergraduate studies of the respective language departments. Students in any field qualify for the minor by meeting the following requirements:

1. A minimum of 20 units at the intermediate level (second year), not including conversation, or beyond in two languages other than English offered by the DLCL..
2. At least one additional course, at the 100 level or above, whose subject code ends in -LIT or -GEN in each modern language in '1' above. These courses should be taught by Academic Council members or other senior members of the faculty.

Students are recommended to study, work, or intern abroad for at least eight weeks at a location where one of the languages is spoken.

FOCAL GROUPS

While the five departments in the Division of Literatures, Cultures, and Languages serve common interests in literary and cultural traditions and their languages, the DLCL's focal groups bring together faculty members and graduate students who share topics and approaches that range across languages and national literatures. These groups are designed to respond directly to the research interests of the faculty as a community, and reflect long-term commitments by the participants. They are conceived as portals that open from the Division outward to the wider community of literary and humanities scholars at Stanford. The membership may include any member of the Stanford faculty or any Ph.D. student with an interest in the topic. Most Focal Groups include participants from several humanities departments outside the DLCL.

Thus the DLCL is characterized by two axes of intellectual inquiry:

- the departmental axis, which is organized by language, nation, and culture
- the focal axis, which may be organized by genre, period, methodology, or other criteria.

The convergence of the two axes, departments and focal groups, locates faculty members and graduate students in at least two intersecting communities. The DLCL believes that this convergence gives institutional form to the intellectual conditions under which many scholars of literature and culture presently work.

Each focal group maintains a standing research workshop at which both faculty and graduate student members discuss their work. Some focal groups offer formal courses; and all groups are responsible for overseeing research-oriented activities and extracurricular events in the relevant area, including sponsoring conferences, publications, podcasts, and other activities that disseminate the outcomes of their research.

HUMANITIES EDUCATION

Chairs: Jenny Bergeron (Institutional Research and Decision Support), Russell A. Berman (Comparative Literature, German Studies)

Faculty Members: Elizabeth Bernhardt (German Studies, Language Center), Eamonn Callan (School of Education), Adrian Daub (German Studies), Marisa Galvez (French and Italian), Orrin Robinson (German Studies), Gabriella Safran (Slavic Languages and Literatures), Mitchell Stevens (School of Education), Jennifer Summit (English), Guadalupe Valdés (School of Education)

Web Site: http://dlcl.stanford.edu/groups/humanities-education

The focal group on Humanities Education explores issues concerning teaching and learning in the humanities, including research on student learning, innovation in pedagogy, the role of new technologies in humanities instruction, and professional issues for humanities teachers at all educational levels.

PERFORMANCE

Chairs: Monika Greenleaf (Comparative Literature, Slavic Languages and Literatures), Peggy Phelan (Drama, English)

Faculty Members: Julie Draskoczy (Slavic Languages and Literatures), Indra Levy (East Asian Literature and Culture), Marília Librandi Rocha (Iberian and Latin American Cultures), Gabriella Safran (Slavic Languages and Literatures), Lisa Surwillo (Iberian and Latin American Cultures)

Web Site: http://dlcl.stanford.edu/groups/performance

The Performance group brings together departments of the DLCL with other disciplines, such as Drama, to achieve a cross-pollination and to reinvigorate performance theory through consciously re-mediated research interests, methodologies, and forms of scholarly expression. Each year of a three-year program focuses on a distinct goal:

1. Discussion of seminal texts and topics with key guests, extended through a blog on Arcade.
2. A writing colloquium culminating in a conference and guest performances by invited artists at the Bing Concert Hall opening (2012).
3. Joint publication.

PHILOSOPHY AND LITERATURE

Chairs: R. Lanier Anderson (Philosophy), Joshua Landy (French and Italian)

Faculty Members: Russell Berman (Comparative Literature, German Studies), Alexis Burgess (Philosophy), Martón Dornbach (German Studies), Jean-Pierre Dupuy (French and Italian), Amir Eshel (Comparative Literature, German Studies), Gregory Freidin (Slavic Languages and Literatures), Robert Harrison (French and Italian), David Hills (Philosophy), Héctor Hoyos (Iberian and Latin American Cultures), Michelle Karnes (English), Marília Librandi Rocha (Iberian and Latin American Cultures), Joan Ramon Resina (Iberian and Latin American Cultures), Nariman Skakov (Slavic Languages and Literatures), Blakey Vermeule (English), Laura Wittman (French and Italian), Lee Yearley (Religious Studies)

Web Site: http://dlcl.stanford.edu/groups/philosophy-literature

The focal group on Philosophy and Literature brings together faculty and students from eight departments to investigate questions in aesthetics and literary theory, philosophically-inflected literary texts, and the form of philosophical writings. Fields of interest include both continental and analytic philosophy, as well as cognitive science, political philosophy, rational choice theory, and related fields.

The group offers undergraduate major tracks within nine programs, a graduate workshop, and a lecture series.

WORKSHOP IN POETICS

Chairs: Roland Greene (Comparative Literature, English), Nicholas Jenkins (English)

Faculty Members: Marisa Galvez (French and Italian), Michael Predmore (Iberian and Latin American Cultures)

Web Site: http://dlcl.stanford.edu/groups/workshop-poetics

The Workshop in Poetics focal group is concerned with the theoretical and practical dimensions of the reading and criticism of poetry. During the three years of its existence, the Workshop has become a central venue at Stanford enabling participants to share their individual projects in a general conversation outside of disciplinary and national confinements. The two dimensions that the workshop sees as urgent are:

- poetics in its specificity as an arena for theory and interpretive practice.
- historical poetics as a particular set of challenges for the reader and scholar.

The core mission is to offer Stanford graduate students a space to develop and critique their current projects.

RENAISSANCES

Chairs: Cécile Alduy (French and Italian), Vincent Barletta (Iberian and Latin American Cultures), Roland Greene (Comparative Literature, English), Carolyn Springer (French and Italian)

Faculty Members: Shahzad Bashir (Religious Studies), Paula Findlen (History), Tamar Herzog (History), Bissera Pentcheva (Art and Art History), Morten Steen Hansen (Art and Art History), Jennifer Summit (English)

Web Site: http://dlcl.stanford.edu/groups/renaissances

The Renaissances focal group discusses work in progress, draws different fields of literature into conversation, and considers the present and future of early modern studies. In addition to sponsored lectures and seminars, the group convenes monthly as a research workshop.

MATHEMATICAL AND COMPUTATIONAL SCIENCE

Co-Directors: Bradley Efron, Susan Holmes

Committee in Charge: Takeshi Amemiya (Economics), Emmanuel Candes (Mathematics and Statistics), Gunnar Carlsson (Mathematics), Richard Cottle (Management Science and Engineering), Thomas M. Cover (Electrical Engineering, Statistics), Bradley Efron (Statistics), J. Michael Harrison (Graduate School of Business), Susan Holmes (Statistics), Parviz Moin (Engineering), George Papanicolaou (Mathematics), Eric Roberts (Computer Science), David Rogosa (Education), Tim Roughgarden (Computer Science), Amin Saberi (Management Science and Engineering), David Siegmund (Statistics), Jonathan Taylor (Statistics), Arthur F. Veinott, Jr. (Management Science and Engineering), Brian White (Mathematics), Nancy R. Zhang (Statistics)

Program Offices: Sequoia Hall, 390 Serra Mall
Mail Code: 94305-4065
Phone: (650) 723-2620
Email: helen@stat.stanford.edu
Web Site: http://stanford.edu/group/mathcompsci

Courses offered by the Program in Mathematical and Computational Science are listed under the subject code MCS on the *Stanford Bulletin's* ExploreCourses web site.

This interdepartmental interschool undergraduate program provides a major for students interested in the mathematical and computational sciences, or in the use of mathematical ideas and analysis in problems in the social or management sciences. It provides a core of mathematics basic to all the mathematical sciences and an introduction to concepts and techniques of computation, optimal decision making, probabilistic modeling, and statistical inference. It also provides an opportunity for elective work in any of Stanford's mathematical science disciplines.

The program uses the faculty and courses of the departments of Computer Science, Management Science and Engineering, Mathematics, and Statistics. It prepares students for graduate study or employment in the mathematical and computational sciences or in those areas of applied mathematics which center around the use of computers and are concerned with the problems of the social and management sciences.

A biology option is offered for students interested in applications of mathematics, statistics, and computer science to the biological sciences (bioinformatics, computational biology, statistical genetics, neurosciences); and in a similar spirit, an engineering option.

UNDERGRADUATE MISSION STATEMENT FOR MATHEMATICAL AND COMPUTATIONAL SCIENCE

The mission of the Mathematical and Computational Science Program is to provide students with a core of mathematics basic to all the mathematical sciences and an introduction to concepts and techniques of computation, optimal decision making, probabilistic modeling and statistical inference. The program is interdisciplinary in its focus, and students are required to complete course work in mathematics, computer science, statistics, and management science and engineering. A computational biology track is available for students interested in biomedical applications. The program prepares students for careers in academic, financial and government settings as well as for study in graduate or professional schools.

LEARNING OUTCOMES

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to be able to demonstrate:

1. understanding of principles and tools of statistics.
2. command of optimization and its applications and to be able to analyze and interpret problems from various disciplines.
3. an understanding of computer applications emphasizing modern software engineering principles.
4. an understanding of multivariate calculus, linear algebra, and agebraic and geometric proofs.

BACHELOR OF SCIENCE IN MATHEMATICAL AND COMPUTATIONAL SCIENCE

The requirement for the bachelor's degree, beyond the University's basic requirements, is an approved course program of 72-77 units, distributed as follows:

Mathematics (MATH): 29-31 units

	Qtr. and Units	
MATH 41. Calculus	A	5
and MATH 42. Calculus	A,W	5
MATH 51. Linear Algebra and Differential Calculus of Several Variables	A,W,S	5
or MATH 51H. Honors Advanced Calculus	A	5
MATH 52. Integral Calculus of Several Variables	A,W,S	5
or MATH 52H. Honors Advanced Calculus	W	5
MATH 53. Ordinary Differential Equations with Linear Algebra	A,W,S	5
or MATH 53H. Honors Advanced Calculus	S	5
MATH 109. Applied Group Theory (WIM)	W	3
or MATH 110. Applied Number Theory and Field Theory (WIM)	S	3
or MATH 120. Modern Algebra (WIM)	A,S	3
or MATH 171. Fundamental Concepts of Analysis (WIM)	A,S	3
MATH 104. Applied Matrix Theory	A,W	3
or MATH 113. Linear Algebra and Matrix Theory	W,S	3

Computer Science (CS): 16-18 units

CS 103. Mathematical Foundations of Computing	A,S	5
CS 106X. Programming Methodology and Abstractions (Accel)	A,W	3-5
or CS 106A. Programming Methodology	A,W,S	3-5
and CS 106B. Programming Abstractions	A,W,S	3-5
And two of the following (CS or CME):		
CME 108. Introduction to Scientific Computing	W	3-4
CS 107. Programming Paradigms	A,S	3-5
CS 154. Introduction to Automata and Complexity Theory	W,S	3-4
CS 161. Design and Analysis of Algorithms	A,W	3-4
CS 181. Computers, Ethics and Public Policy (WIM)	W,S	3-4

Management Science and Engineering (MS&E): 8-9 units
Both:

MS&E 211. Linear and Nonlinear Optimization	A	4
and	W	3
MS&E 221. Stochastic Modeling		
Or 3 of the following:		
MS&E 111. Introduction to Optimization (same as ENGR 62)	A,S	4
	S	3
MS&E 121. Introduction to Stochastic Modeling	A	4
MS&E 211. Linear and Nonlinear Optimization	W	3
MS&E 212. Mathematical Programming and Combinatorial Optimization	W	3
MS&E 221. Stochastic Modeling		3
MS&E 251. Stochastic Decision Models (not given 2010-11)		

Statistics (STATS): (11 units)

STATS 116. Theory of Probability	A,S	3-5
STATS 191. Introduction to Applied Statistics	W	3-4
or STATS 203. Introduction to Regression Models and Analysis of Variance	W	3
STATS 200. Introduction to Statistical Inference	W	3

HONORS PROGRAM

The honors program is designed to encourage a more intensive study of mathematical sciences than the B.S. program. In addition to meeting all requirements for the B.S., the student must:

1. Maintain an average letter grade equivalent in mathematical sciences courses of at least a 3.4.
2. Complete at least 15 units in mathematical sciences in addition to the requirements for the major listed above. These courses should form a sustained effort in one area and constitute a program approved by the committee in charge of the Mathematical and Computational Science Program.
3. Include in the above 15 units at least one of the following:
   a. an approved higher-level graduate course
   b. participation in a small group seminar
   c. at least 3 units of directed reading.

Students interested in doing honors work should consult with their advisers by the last quarter of the junior year to prepare a program of study. Honors work may be concentrated in fields outside the Mathematical and Computational Science programs such as biological sciences, medicine, physics.

MATHEMATICAL AND COMPUTATIONAL SCIENCE ELECTIVES (9 UNITS)

Three courses in mathematical and computational science, 100-level or above, at least 3 units each. At least one must be chosen from the following:

	Qtr. and Units	
ECON 102C. Advanced Topics in Econometrics	S	5
ECON 140. Introduction to Financial Economics	W,S	5
ECON 160. Game Theory and Economic Applications (prerequisite ECON 51)	S	5
ECON 179. Experimental Economics	W	5
EE 261. The Fourier Transform and its Applications	A,W	3
EE 263. Introduction to Linear Dynamical Systems	A,S	3
EE 278. An Introduction to Statistical and Signal Processing	A,W	3
MS&E 211. Linear and Nonlinear Optimization	A,S	3-4
MS&E 212. Mathematical Programming and Combinatorial Optimization	W	3
MS&E 221. Stochastic Modeling	W	3
MS&E 251. Stochastic Decision Models (not given 2010-11)		3
MCS 100. Mathematics of Sports (same as STATS 50) (not given 2010-11)		3
MATH 104. Applied Matrix Theory	A, W	3
MATH 106. Functions of a Complex Variable	S	3
MATH 108. Introduction to Combinatorics and its Applications	A	3
MATH 113. Linear Algebra & Matrix Theory	W,S	3
MATH 115. Functions of a Real Variable	A,S	3
MATH 116. Complex Analysis	W	3
MATH 131. Partial Differential Equations I	A,W	3
MATH 132. Partial Differential Equations II	S	3
MATH 136. Stochastic Processes		3
MATH 171. Fundamental Concepts of Analysis	A,S	3
MATH 172. Lebesgue Integration and Fourier Analysis	S	3
PHIL 151. First-Order Logic	W	4
STATS 202. Data Mining and Analysis	A	3
STATS 208. Introduction to the Bootstrap	W	3
STATS 215. Statistical Models in Biology	W	3
STATS 217. Introduction to Stochastic Processes	W	3

For Computer Science (CS), electives can include courses not taken as units under the CS list above and the following:

CME 302. Numerical Linear Algebra	A	3
CS 108. Object-Oriented Systems Design	A,W	3-4
CS 110. Principles of Computer Systems	W,S	5
CS 140. Operating Systems and Systems Programming	W,S	3-4
CS 143. Compilers	A	3-4
CS 157. Logic and Automated Reasoning	A	3-4
CS 161. Design and Analysis of Algorithms	A,W	3-4
CS 164. Computing with Physical Objects (not given 2010-11)		3
CS 194. Software Project (prerequisite CS 108)	S	3
CS 221. Artificial Intelligence: Principles and Techniques	A	3-4
CS 223A. Introduction to Robotics	W	3
CS 223B. Introduction to Computer Vision	W	3
CS 225A. Experimental Robotics	S	3
CS 228. Probabilistic Models in Artificial Intelligence	W	3
CS 229. Machine Learning	A	3
CS 243. Advanced Compiling Techniques	W	3-4
EE 282. Computer Systems Architecture	S	3

With the adviser's approval, courses other than those offered by the sponsoring departments may be used to fulfill part of the elective requirement. These may be in fields such as biology, economics, electrical engineering, industrial engineering, and medicine, that might be relevant to a mathematical sciences major, depending on a student's interests.

- At least three quarters before graduation, majors must file with their advisers a plan for completing degree requirements.
- All courses used to fulfill major requirements must be taken for a letter grade with the exception of courses offered satisfactory/no credit only.
- A course used to fulfill the requirements of one section of the program may not be applied toward the fulfillment of the requirements of another section.
- The student must have a grade point average (GPA) of 2.0 or better in all course work used to fulfill the major requirement.

MATHEMATICAL AND COMPUTATIONAL SCIENCE BIOLOGY OPTION

Replace MATH 109/110 with:

	Qtr. and Units	
Replace STATS 191/203 with		
STATS/BIO 141. Biostatistics	A	3-5
Take at least 2 courses from the Biology core:		
BIO 41. Genetics and Biochemistry	A	5
BIO 42. Cell Biology and Animal Physiology	W	5
BIO 43. Plant Biology, Evolution, and Ecology	S	5
Take a third course either from the core or		
STATS 166. Statistical Methods in Computational Genetics (WIM)	A	3
BIO 102. Population Biology (not given 2010-11)		3
BIO 136. Evolutionary Paleobiology	W	4
BIO 143/243. Evolution	A	4
BIO 144. Conservation Biology	W	3-4
BIO 160A. Developmental Biology I	A	4
BIO 160B. Developmental Biology II	W	4
BIO 183. Theoretical Population Genetics (not given 2010-11)		3
BIO 203. Advanced Genetics	A	4
BIO 230. Molecular and Cellular Immunology	A	4-5
Honors students should take 3 of the following:		
STATS 166. Statistical Methods in Computational Genetics (WIM)	A	3

ANTHRO 178. Introduction to Anthropological Genetics	W	5
ANTHRO 187. The Genetic Structure of Populations (not given 2010-11)		5
ANTHRO 188. Research in Anthropological Genetics (not given 2010-11)		5
BIO 113. Fundamentals of Molecular Evolution	S	4
BIO 146. Population Studies	W	1

MATHEMATICAL AND COMPUTATIONAL SCIENCE ENGINEERING OPTION

Students in the Engineering option take the introductory courses for the Mathematics and Computational Sciences major with the following allowable substitutions.

The MATH 51-53 series may be replaced by:

	Qtr.	*and Units*
CME 100/ENGR 154. Vector Calculus for Engineers	A	5
CME 102/ENGR 155A. Ordinary Differential Equations for Engineers	W	5
CME 104/ENGR 155B. Linear Algebra and Partial Differential Equations for Engineers	S	5
MATH 115. Functions of a Real Variable	A,S	3

STATS 116 may be replaced by either one of the following:

STATS 110. Statistical Methods in Engineering and Physical Sciences	A	4-5
or CME 106/ENGR 155C. Introduction to Probability and Statistics for Engineers	W	3-4

STATS 191/STATS 203 may be replaced by:

STATS 202. Data Analysis	A	3

Electives—

Take at least one course from the following list:

MATH 106. Introduction to Theory of Functions of a Complex Variable	A	3
MATH 108. Introduction to Combinatorics Applications	A	3
MATH 116. Complex Analysis	W	3
MATH 132. Partial Differential Equations II	S	3
PHIL 151. First-Order Logic	W	4

Take at least two courses from the following list:

ENGR 15. Dynamics	A,S	3
ENGR 20. Introduction to Chemical Engineering	S	3
ENGR 25. Biotechnology	W,S	3
ENGR 30. Engineering Thermodynamics	A,W	3
ENGR 40. Introductory Electronics	A, S	5
ENGR 50. Introductory Science Materials	W, S	4
ENGR 105. Feedback Control Design		3

MINOR IN MATHEMATICAL AND COMPUTATIONAL SCIENCE

The minor in Mathematical and Computational Science is intended to provide an experience of the four constituent areas: Computer Science, Mathematics, Management Science and Engineering, and Statistics. Five basic courses are required:

CS 106X. Programming Methodology and Abstractions (Accelerated)
or CS 106A,B. Programming Methodology
MATH 51. Linear Algebra and Differential Calculus of Several Variables
or MATH 104. Applied Matrix Theory
ENGR 62/MS&E 111. Introduction to Optimization
or MS&E 121. Introduction to Stochastic Modeling
STATS 116. Theory of Probability, *and either*
STATS 191. Introduction to Applied Statistics
or STATS 200. Introduction to Statistical Inference

In addition to the above, the minor requires three courses from the following, two of which must be in different departments:

CME 108. Introduction to Scientific Computing
CS 103. Mathematical Foundations of Computing
CS 107. Programming Paradigms
CS 154. Introduction to Automata and Complexity Theory
CS 161. Design and Analysis of Algorithms
EE 261. The Fourier Transform and its Applications
ECON 102C. Advanced Topics in Econometrics
ECON 160. Game Theory and Economic Applications (prerequisite ECON 51)
ECON 181. Optimization and Economic Analysis
MS&E 121. Introduction to Stochastic Modeling
MS&E 211. Linear and Nonlinear Optimization
MS&E 212. Mathematical Programming and Combinatorial Optimization
MS&E 221. Stochastic Modeling
MS&E 251. Stochastic Decision Models
MATH 104. Applied Matrix Theory
MATH 106. Functions of a Complex Variable
MATH 108. Introduction to Combinatorics and its Applications
MATH 109. Applied Group Theory
MATH 110. Applied Number Theory and Field Theory
MATH 115. Functions of a Real Variable
MATH 131. Partial Differential Equations I
MATH 132. Partial Differential Equations II
MATH 171. Fundamental Concepts of Analysis
PHIL 151. First-Order Logic
STATS 191. Introduction to Applied Statistics
STATS 200. Introduction to Statistical Inference
STATS 202. Data Analysis
STATS 203. Introduction to Regression Models and Analysis of Variance
STATS 217. Introduction to Stochastic Processes

Other upper-division courses appropriate to the program major may be substituted with consent of the program director. Undergraduate majors in the constituent programs may not count courses in their own departments.

MATHEMATICS

Emeriti: Solomon Feferman, Robert Finn, Joseph Keller, Georg Kreisel, Harold Levine, Tai-Ping Liu, R. James Milgram, Donald Ornstein, Robert Osserman
Chair: Rafe Mazzeo
Professors: Simon Brendle, Gregory Brumfiel, Daniel Bump, Emmanuel Candes, Gunnar Carlsson, Ralph L. Cohen, Brian Conrad, Amir Dembo, Persi Diaconis, Yakov Eliashberg, Eleny Ionel, Yitzhak Katznelson, Steven Kerckhoff, Jun Li, Rafe Mazzeo, Maryam Mirzakhani, George Papanicolaou, Lenya Ryzhik, Richard Schoen, Leon Simon, Kannan Soundararajan, Ravi Vakil, Andras Vasy, Akshay Venkatesh, Brian White
Associate Professor: Soren Galatius
Szegö Assistant Professors: Fei Han, Pierre Garapon, Vladislav Kargin, Joan Licata, Antoine Toussaint, Denis Trotabas, Leo Tzou, Melanie Wood
Lecturers: Eric Bahuaud, Mark Lucianovic, Laurence Nedelec, Wojciech Wieczorek
Courtesy Professors: Renata Kallosh, Grigori Mints
Consulting Professors: Brian Conrey, Keith Devlin, David Hoffman, Wu-chung Hsiang
Samelson Fellows: Matthew Kahle, Anthony Licata, Samuel Lisi, Catherine Williams
Web site: http://math.stanford.edu

Courses offered by the Department of Mathematics are listed under the subject code MATH on the *Stanford Bulletin's* ExploreCourses web site.

The Department of Mathematics offers programs leading to the degrees of Bachelor of Science, Master of Science, and Doctor of Philosophy in Mathematics, and participates in the program leading to the B.S. in Mathematical and Computational Science. The department also participates in the M.S. and Ph.D. degree programs in Scientific Computing and Computational Mathematics and the M.S. degree program in Financial Mathematics.

MISSION OF THE UNDERGRADUATE PROGRAM IN MATHEMATICS

The mission of the undergraduate program in Mathematics is to provide students with a broad understanding of mathematics encompassing logical reasoning, generalization, abstraction, and formal proof. Courses in the program teach students to create, analyze, and interpret mathematical models and to communicate sound arguments based on mathematical reasoning and careful data analysis. The mathematics degree prepares students for careers in the corporate sector and government agencies, and for graduate programs in mathematics.

LEARNING OUTCOMES

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. the ability to comprehend mathematical arguments.
2. problem solving skills.
3. the ability to formulate proofs and to structure mathematical arguments.
4. the ability to communicate mathematical ideas.

ADVANCED PLACEMENT IN MATHEMATICS FOR FRESHMEN

Students of unusual ability in mathematics often take one or more semesters of college-equivalent courses in mathematics while they are still in high school. Under certain circumstances, it is possible for such students to secure both advanced placement and credit toward the bachelor's degree. A decision as to placement and credit is made by the department after consideration of the student's performance on the Advanced Placement Examination in Mathematics (forms AB or BC) of the College Entrance Examination Board, and also after consideration of transfer credit in mathematics from other colleges and universities.

The department does not give its own advanced placement examination. Students can receive either 5 or 10 units of advanced placement credit, depending on their scores on the CEEB Advanced Placement Examination. Entering students who have credit for two quarters of single variable calculus (10 units) are encouraged to enroll in MATH 51-53 in multivariable mathematics, or the honors version 51H-53H. These three-course sequences, which can be completed during the freshman year, supply the necessary mathematics background for most majors in science and engineering. They also serve as excellent background for the major or minor in Mathematics, or in Mathematical and Computational Science. Students who have credit for one quarter of single variable calculus (5 units) should take MATH 42 in Autumn Quarter and 51 in Winter Quarter. Options available in Spring Quarter include MATH 52, or 53. For proper placement, contact the Department of Mathematics.

BACHELOR OF SCIENCE IN MATHEMATICAL AND COMPUTATIONAL SCIENCE

The Department of Mathematics participates with the departments of Computer Science, Management Science and Engineering, and Statistics in a program leading to a B.S. in Mathematical and Computational Science. See the "Mathematical and Computational Science" section of this bulletin.

INTRODUCTORY AND UNDERGRADUATE COURSES

The department offers two sequences of introductory courses in single variable calculus.

1. MATH 41, 42 present single variable calculus. Differential calculus is covered in the first quarter, integral calculus in the second.
2. MATH 19, 20, 21 cover the material in 41, 42 in three quarters instead of two.

There are options for studying multivariable mathematics:

1. MATH 51, 52, 53 cover differential and integral calculus in several variables, linear algebra, and ordinary differential equations. These topics are taught in an integrated fashion and emphasize application. MATH 51 covers differential calculus in several variables and introduces matrix theory and linear algebra; 52 covers integral calculus in several variables and vector analysis; 53 studies further topics in linear algebra and applies them to the study of ordinary differential equations. This sequence is strongly recommended for incoming freshmen with 10 units of advanced placement credit.
2. MATH 51H, 52H, 53H cover the same material as 51, 52, 53, but with more emphasis on theory and rigor.

The department offers three classes on linear algebra: 51 (or 51H), 104, and 113.

GRADUATE PROGRAMS IN MATHEMATICS

TEACHING CREDENTIALS

For information concerning the requirements for teaching credentials, see the "School of Education" section of this bulletin or address inquiries to Credential Secretary, School of Education.

BACHELOR OF SCIENCE IN MATHEMATICS

The following department requirements are in addition to the University's basic requirements for the bachelor's degree:

Students wishing to major in Mathematics must satisfy the following requirements:

1. Department of Mathematics courses (other than MATH 100) totaling at least 49 units credit; such courses must be taken for a letter grade. For the purposes of this requirement, STATS 116, PHIL 151, and PHIL 152 count as Department of Mathematics courses.
2. Additional courses taken from Department of Mathematics courses numbered 101 and above or from approved courses in other disciplines with significant mathematical content, totaling at least 15 units credit. At least 9 of these units must be taken for a letter grade.
3. A Department of Mathematics adviser must be selected, and the courses selected under items '1' and '2' above must be approved by the department's director of undergraduate study, acting under guidelines laid down by the department's Committee for Undergraduate Affairs. The Department of Mathematics adviser can be any member of the department's faculty.
4. To receive the department's recommendation for graduation, a student must have been enrolled as a major in the Department of Mathematics for a minimum of two full quarters, including the quarter immediately before graduation. Students are encouraged to declare as early as possible, preferably by the end of the sophomore year.

Students are normally expected to complete either the sequence 19, 20, 21 or the sequence 41, 42 (but not both). Students with an Advanced Placement score of at least 4 in BC math or 5 in AB math may receive 10 units credit and fulfill requirement '1' by taking at least 39 units of Department of Mathematics courses numbered 51 and above. Students with an Advanced Placement score of at least 3 in BC math or at least 4 in AB math may receive 5 units credit and fulfill requirement '1' by taking at least 44 units of Department of Mathematics courses numbered 42 and above.

Sophomore seminar courses may be counted among the choice of courses under item '1'. Other variations of the course requirements laid down above (under items '1' and '2') may, in some circumstances, be allowed. For example, students transferring from other universities may be allowed credit for some courses completed before their arrival at Stanford. However, at least 24 units of the 49 units under item '1' above and 9 of the units under item '2'

above must be taken at Stanford. In all cases, approval for variations in the degree requirements must be obtained from the department's Committee for Undergraduate Affairs. Application for such approval should be made through the department's director of undergraduate studies. The policy of the Mathematics Department is that no courses other than the MATH 50 series and below may be double-counted toward any other University major or minor.

It is to be emphasized that the above regulations are minimum requirements for the major; students contemplating graduate work in mathematics are strongly encouraged to include the courses 116, 120, 121, 147 or 148, and 171 in their selection of courses, and in addition, take at least three Department of Mathematics courses over and above the minimum requirements laid out under items '1' and '2' above, including at least one 200-level course. Such students are also encouraged to consider the possibility of taking the honors program, discussed below.

To help develop a sense of the type of course selection (under items '1' and '2' above) that would be recommended for math majors with various backgrounds and interests, see the following examples. These represent only a few of a very large number of possible combinations of courses that could be taken in fulfillment of the Mathematics major requirements:

Example 1—A general program (a balanced program of both pure and applied components, without any particular emphasis on any one field of mathematics or applications) as follows:

A. either MATH 19, 20, and 21, or 41 and 42 (or satisfactory Advanced Placement credit); 51, 52, 53; 104 or 113; 106; 109; 110; 115;
B. plus any selection of at least eight of the following courses, including three Department of Mathematics courses: MATH 108, 131, 132, 143, 146, 147, 148, 152, 161; CS 137; ECON 50; PHYSICS 41, 43, 45; STATS 116. These courses from other departments are only meant as examples; there are many suitable courses in several departments that can be taken to fulfill part or all of requirement '2.'

Example 2—A theoretical program recommended for those contemplating possible later graduate work providing an introduction to the main areas of mathematics both broader and deeper than the general program outlined above:

A. either MATH 19, 20 and 21, or 41 and 42 (or satisfactory Advanced Placement credit)
B. either the sequence 51, 52, 53, or the sequence 51H, 52H, 53H; 106 or 116; 113; 120; 171
C. plus nine or more 3-unit math courses numbered 121 or higher (the logic courses PHIL 151 and PHIL 152 are considered to be such courses), including at least one algebra course, one analysis course, and one geometry/topology course. (See the description of the honors program below.)

In addition, those contemplating eventual graduate work in Mathematics should consider including at least one graduate-level math course such as MATH 205A, 210A, or 215A or B. Such students should also consider the possibility of entering the honors program.

*Example 3**—An applied mathematics program:

A. either MATH 19, 20, and 21; or 41 and 42 (or satisfactory Advanced Placement credit); 51, 52, 53; 104; 106; 108; 109; 110; 115; 131; 132; STATS 116
B. plus at least 15 units of additional courses in Applied Mathematics, including, for example, suitable courses from the departments of Physics, Computer Science, Economics, Engineering, and Statistics.

* Students with interests in applied mathematics, but desiring a broader-based program than the type of program suggested in Example 3, including significant computational and/or financial and/or statistical components, are encouraged to also consider the Mathematics and Computational Science program.

HONORS PROGRAM

The honors program is intended for students who have strong theoretical interests and abilities in mathematics. The goal of the program is to give students a thorough introduction to the main branches of mathematics, especially analysis, algebra, and geometry. Through the honors thesis, students may be introduced to a current or recent research topic, although occasionally more classical projects are encouraged. The program provides an excellent background with which to enter a master's or Ph.D. program in Mathematics. Students completing the program are awarded a B.S. in Mathematics with Honors.

It is recommended that the sequence 51H, 52H, 53H be taken in the freshman year. To graduate with a B.S. in Mathematics with Honors, the following conditions apply in addition to the usual requirements for math majors:

1. The selection of courses under items '1' and '2' above must contain MATH 106 or 116, MATH 120, and MATH 171 and must also include seven additional 3-unit Math courses numbered 121 or higher. (The logic courses PHIL 151 and 152 can also be used.) These seven courses must include at least one algebra course (121, 122, 152, 154, or 155), one analysis course (131P, 132, 136, 151, 172, 173, or 175), and one geometry/topology course (143, 145, 146, 147, or 148).
2. Students in the honors program must write a senior thesis. In order to facilitate this, the student must, by the end of the junior year, choose an undergraduate thesis adviser from the Department of Mathematics faculty, and map out a concentrated reading program under the direction and guidance of the adviser. During the senior year, the student must enroll in MATH 197 for a total of 6 units (typically spread over two quarters), and work toward completion of the thesis under the direction and guidance of the thesis adviser. The thesis may contain original material, or be a synthesis of work in current or recent research literature. The 6 units of credit for MATH 197 are required in addition to the course requirements laid out under items '1' and '2' above and in addition to all other requirements for math majors.

In addition to the minimum requirements laid out above, it is strongly recommended that students take at least one graduate-level course (that is, at least one course in the 200 plus range). MATH 205A, 210A, and 215A or B are especially recommended in this context.

Students with questions about the honors program should see the director of undergraduate advising.

MINOR IN MATHEMATICS

To qualify for the minor in Mathematics, a student should complete, for a letter grade, at least six Department of Mathematics courses (other than MATH 100) numbered 51 or higher, totaling a minimum of 24 units. It is recommended that these courses include either the sequence 51, 52, 53 or the sequence 51H, 52H, 53H. At least 12 of the units applied toward the minor in Mathematics must be taken at Stanford. The policy of the Mathematics Department is that no courses other than the MATH 50 series and below may be double-counted toward any other University major or minor.

MASTER OF SCIENCE IN MATHEMATICS

The University's basic requirements for the master's degree are discussed in the "Graduate Degrees" section of this bulletin. Students should pay particular attention to the University's course requirements for graduate degrees. The following are specific departmental requirements:

Candidates must complete an approved course program of 45 units of courses beyond the department requirements for the B.S. degree, of which at least 36 units must be Mathematics Department courses, taken for a letter grade. The Mathematics courses must include at least 18 units numbered 200 or above. The candidate must have a grade point average (GPA) of 3.0 (B) over all course work taken in Mathematics, and a GPA of 3.0 (B) in the 200-level courses considered separately. Course work for the M.S. degree must be approved during the first quarter of enrollment in the program by the department's Director of Graduate Studies.

For the M.S. degree in Financial Mathematics, see the "Financial Mathematics" section of this bulletin.

DOCTOR OF PHILOSOPHY IN MATHEMATICS

The University's basic requirements for the doctorate (residence, dissertation, examinations, etc.) are discussed in the "Graduate Degrees" section of this bulletin. The following are specific departmental requirements.

To be admitted to candidacy, the student must have successfully completed 27 units of graduate courses (that is, courses numbered 200 and above). In addition, the student must pass qualifying examinations given by the department.

Beyond the requirements for candidacy, the student must complete a course of study approved by the Graduate Affairs Committee of the Department of Mathematics and submit an acceptable dissertation. In accordance with University requirements, Ph.D. students must complete a total of 135 course units beyond the bachelor's degree. These courses should be Department of Mathematics courses or approved courses from other departments. The course program should display substantial breadth in mathematics outside the student's field of application. The student must receive a grade point average (GPA) of 3.0 (B) or better in courses used to satisfy the Ph.D. requirement. In addition, the student must pass the Department area examination and the University oral examination.

Experience in teaching is emphasized in the Ph.D. program. Each student is required to complete nine quarters of such experience. The nature of the teaching assignment for each of those quarters is determined by the department in consultation with the student. Typical assignments include teaching or assisting in teaching an undergraduate course or lecturing in an advanced seminar.

For further information concerning degree programs, fellowships, and assistantships, inquire of the academic associate of the department.

PH.D. MINOR IN MATHEMATICS

The student should complete both of the following:*

1. MATH 106 *or* 116, 131, 132
2. MATH 113, 114, 120 *or* 152

These courses may have been completed during undergraduate study, and their equivalents from other universities are acceptable.

In addition, the student should complete 21 units of 200-level courses in Mathematics. These must be taken at Stanford and approved by the Department of Mathematics Ph.D. minor adviser.

* A third coherent sequence designed by the student, subject to the approval of the graduate committee, may be considered as a substitute for items '1' or '2'.

MEDIEVAL STUDIES

Co-Directors: Paula Findlen, Jennifer Summit
Associate Director: Michael Wyatt
Committee in Charge: Philippe Buc, Hester Gelber, Hans Ulrich Gumbrecht, Robert P. Harrison, Nancy S. Kollman, Seth Lerer, William Mahrt, Bissera Pentcheva, Jennifer Summit, Rega Wood
Affiliated Faculty: Cecile Alduy (French and Italian), Theodore Andersson (German Studies), Vincent Barletta (Iberian and Latin American Cultures), Shahzad Bashir (Religious Studies), Carl Bielefeldt (Religious Studies), George H. Brown (English), Philippe Buc (History), Steven Carter (Asian Languages), Charlotte Fonrobert (Religious Studies), Hester Gelber (Religious Studies), Avner Greif (Economics), Hans Ulrich Gumbrecht (French and Italian), Robert Harrison (French and Italian), Michelle Karnes (English), Nancy S. Kollmann (History), Seth Lerer (English, Comparative Literature), Mark E. Lewis (History), William Mahrt (Music), David Malkiel (Religious Studies), Michael Markham (Music), Kathryn Miller (History), Patricia Parker (Comparative Literature), Bissera Pentcheva (Art and Art History), Orrin W. Robinson (German Studies), Jesse Rodin (Music), Behnam Sadeki (Religious Studies), Stuart Sargent (Asian Languages), Jeffrey Schnapp (French and Italian) Carolyn Springer (French and Italian), Edward Steidle (English), Jennifer Summit (English), Rega Wood (Philosophy)
Program Offices: Pigott Hall 205
Mail Code: 94305-2087
Department Phone: (650) 721-4099
Email: ganymede@stanford.edu
Web Site: http://stanford.edu/dept/medieval

Courses offered by the Program in Medieval Studies are listed under the subject code MEDVLST on the *Stanford Bulletin's* ExploreCourses web site.

The Program in Medieval Studies draws together a wide range of disciplines: art and architecture; literature and languages; music; philosophy; religious studies; and economic, social, and political history. Faculty interests bridge Western, Islamic, and Asian cultures, and encompass both traditional and innovative materials and methods.

The Medieval Studies Program is administered through the Center for Medieval and Early Modern Studies, but the degree is conferred by the School of Humanities and Sciences. The committee has approved the program as below. Students interested in pursuing a Medieval Studies major or minor should visit the program office in Pigott Hall and consult with one of the co-directors. The major is normally declared by the beginning of the student's junior year.

The major combines interdisciplinary breadth with a disciplinary focus. The interdisciplinary emphasis is provided by MEDVLST 165, Crusades: Interdisciplinary Approaches, by upper-division interdisciplinary colloquia, and by the requirement that students take courses in three different areas. Depth is ensured by the requirement that students take at least four courses in one area. A faculty adviser helps each student choose courses that integrate the requirements of breadth and depth. To that end, the following guidelines are provided.

The student should take a minimum of 60 units of course work from the list of Medieval Studies courses or appropriate alternatives approved by the co-directors, including ten courses as follows:

1. the introductory course, MEDVLST 165, Crusades: Interdisciplinary Approaches (given alternate years).
2. two upper-division courses, ideally with an interdisciplinary component, in any field dealing with the Middle Ages.
3. four courses in one of the following categories:
   a. Literature: English, French, German and Scandinavian, Italian, Latin, Slavic, Spanish
   b. History
   c. Art History, Drama, Music
   d. Humanities, Philosophy, Religious Studies. Certain humanities courses may fulfill requirements within other categories.
4. two courses in a second category from the above list
5. one courses in a third category from the above list.

Students doing the Medieval Studies concentration for the Humanities major should use these requirements as guidelines for developing their program of study.

In addition to the ten courses, a language proficiency equal to two years of college-level study is suggested in Latin or one of the following: French, German, Italian, or Spanish.

The Medieval Studies Writing in the Major (WIM) requirement can be fulfilled in one of three ways:

1. through a course designated as WIM by a department contributing to the Medieval Studies major
2. through a paper in a Medieval Studies course
3. through an independent paper with a member of the Medieval Studies faculty

Check with the program office regarding requirements for each of these options.

Courses used to satisfy Medieval Studies major requirements must be taken for a letter grade.

OPTIONAL COURSES

Students may choose courses from the following list to complete the 60-unit major requirement:

ARTHIST 105/305. Introduction to Medieval Art
ARTHIST 106A. Art of Pilgrimage and Crusade
ARTHIST 206. Virginity and Power: Mary in the Middle Ages
ECON 228. Institutions and Organizations in Historical Perspectives
ENGLISH 104C. Arthurian Literature and Medieval Romance
ENGLISH 184C. Texts in History: Medieval to Early Modern
FRENGEN 204. Songs of Love and War: Gender Crusade, Politics
FRENGEN 233. Afterlife of the Middle Ages
FRENLIT 130. Authorship, Book Culture, and National Identity in Medieval and Renaissance France
GERGEN 38A/138. Introduction to Germanic Languages
GERGEN 50N. Charlemagne's Germany
GERLIT 257. Gothic
HISTORY 14N. Crusades
HISTORY 110A Europe from Late Antiquity to 1500
HISTORY 133A. Yorkist and Tudor England
HISTORY 135/335. History of European Law, Medieval to Contemporary
HISTORY 182. Medieval Islamic History, 600-1500 (not given 2009-10)
HISTORY 182C. From Prophet to Empire: The Making of the Muslim Middle East, 600-1500
HISTORY 211/311. Body, Gender, and Society in Medieval Europe
HISTORY 211B. Jews under Islam and Christianity in the Middle Ages
HISTORY 212/312. Holy Wars: Medieval Perspectives (not given 2009-10)
HISTORY 217A/317A. Poverty and Charity in Medieval Christianity, Judaism, and Islam
HISTORY 217B/317B. Land of Three Religions: Medieval Spain
HISTORY 218A. Barcelona to Berlin: Muslim Minorities in History
ITALLIT 127. Inventing Italian Literature: Dante, Boccaccio and Petrarca
LAW 586. Classical Islamic Law (same as RELIGST 201/301; not given 2009-10)
MUSIC 40. Music History to 1600
MUSIC 140/240. Studies in Medieval Music (not given 2009-10)
MUSIC 301A. Analysis of Music: Modal
PHIL 101. Introduction to Medieval Philosophy
PHIL 115/215. Problems of Medieval Philosophy
RELIGST 27. Exploring Islam
RELIGST 84. Mystics, Pilgrims, Monks, and Scholars: Religious Devotion in Medieval Christianity (not given 2009-10)
RELIGST 101. Who Is Allah?
RELIGST 172. Sex, Body, and Gender in Medieval Religion (not given 2009-10)
RELIGST 222. Literature and Society in Medieval Islam (not given 2009-10)
RELIGST 222B. Sufism
RELIGST 224B. Unveiling the Sacred: Explorations in Islamic Religious Imagination
RELIGST 227/327. *The Qur'ân* (not given 2009-10)
RELIGST 226/326. Philosophy and Kabbalah in Jewish Society: Middle Ages and Early Modern Period (not given 2009-10)
RELIGST 258/358. Japanese Buddhist Texts
SPANLIT 157. Introduction to Medieval and Early Modern Iberian Literatures (Same as PORTLIT 157)

MINOR IN MEDIEVAL STUDIES

An undergraduate minor in Medieval Studies is available through the program. Students interested in completing the minor should inquire about enrollment procedures at the program office.

Requirements are as follows:

1. *Language:* in addition to the University foreign language requirement, at least a one quarter course in a classical and/or medieval vernacular language is recommended, which may count as one of the five required courses for the minor listed under item 2b.
2. The minor consists of six courses, which include:
   a. MEDVLST 165, Crusades: Interdisciplinary Approaches (core course). If 165 is not offered in a given year, students may petition to take a substitute course if necessary. Petitions should be directed to the Director of Medieval Studies.
   b. an additional five courses dealing directly with the Middle Ages. If the student's major department or program offers medieval courses, he/she should take two of them for the Medieval Studies minor, but those courses may not also count for the major. At least three courses must be taken outside the student's major, selected from two or more of the following categories:
      1. Language and Literature
      2. History
      3. Art History, Drama, Music
      4. Humanities, Philosophy, Religious Studies
      5. From among the Medieval Studies faculty, the student chooses an adviser who assists in the selection of courses and the design of the program.

Courses applied to the minor in Medieval Studies must be taken for a letter grade. Courses applied to the minor cannot also be applied to a student's major or another minor.

MODERN THOUGHT AND LITERATURE

Director: Ursula K. Heise
Committee in Charge: Ursula K. Heise (Chair), Scott Bukatman, Joshua Cohen, Shelley Fisher Fishkin, Hans U. Gumbrecht , Sean Hanretta (on leave), Andrea A. Lunsford, Saikat Majumdar, Robert McGinn, Helen Stacy, Fred Turner
Affiliated Faculty: Lanier Anderson (Philosophy), Shahzad Bashir (Religious Studies), Scott Bukatman (Art and Art History), Eamonn Callan (Education), Joshua Cohen (Political Science, Philosophy, Law), Jean-Pierre Dupuy (French and Italian), Paulla Ebron (Anthropology), Dan Edelstein (French and Italian), Harry Elam (Drama), Michele Elam (English), Amir Eshel (German Studies), Shelley Fisher Fishkin (English), James Ferguson (Anthropology), Gregory Freidin (Slavic Languages and Literatures), Theodore Glasser (Communication), Roland Greene (English, Comparative Literature), Hans U. Gumbrecht (French and Italian, Comparative Literature), Sean Hanretta (History), Ursula K. Heise (English), Matthew Kohrman (Anthropology), Joshua Landy (French and Italian), Helen Longino (Philosophy), Andrea A. Lunsford (English), Saikat Majumdar (English), Liisa Malkki (Anthropology), Barbaro Martinez-Ruiz (Art and Art History), Robert McGinn (Management Science and Engineering; Science, Technology, and Society), Franco Moretti (English, Comparative Literature), Paula Moya (English), Elisabeth Mudimbe-Boyi (French and Italian), David Palumbo-Liu (Comparative Literature), Richard Roberts (History), Ramón Saldívar (English, Comparative Literature), Priya Satia (History), Debra Satz (Philosophy), Londa Schiebinger (History), Stephen Sohn (English), Helen Stacy (Law), Fred Turner (Communication), Richard White (History), Bryan Wolf (Art and Art History), Alex Woloch (English), Sylvia Yanagisako (Anthropology), Yvonne Yarbro-Bejarano (Iberian and Latin American Cultures)
Program Offices: Building 460, Room 219
Mail Code: 94305-2022
Phone: (650) 723-3413
Email: monica.moore@stanford.edu

Web Site: http://www.stanford.edu/dept/MTL

Courses offered by the Program in Modern Thought and Literature are listed under the subject code MTL on the *Stanford Bulletin's* ExploreCourses web site.

The program in Modern Thought and Literature admits students for the Ph.D. and a limited number for a coterminal B.A./M.A. Program.

UNDERGRADUATE PROGRAMS IN MODERN THOUGHT AND LITERATURE

Although Modern Thought and Literature has no formal undergraduate degree granting program, undergraduates interested in completing a major in this field may do so through the Individually Designed Majors Program. Students interested in this option should consult the Director of the Program in Modern Thought and Literature, in addition to the Dean's Office in the School of Humanities and Sciences, which administers the IDM Programs.

GRADUATE PROGRAMS IN MODERN THOUGHT AND LITERATURE

Modern Thought and Literature (MTL) is an interdisciplinary graduate program advancing the study of critical issues in the modern world. Since 1971, MTL students have helped to redefine the cutting edge of many interdisciplinary fields and to reshape the ways in which disciplinary scholarship is understood and practiced. MTL graduates are leaders in fields such as American studies, ethnic studies, film studies, social and cultural studies, and women's studies, as well as disciplines such as English, cultural anthropology, and comparative literature.

The program trains students to understand the histories and methods of disciplines and to test their assumptions. It considers how disciplines shape knowledge and, most importantly, how interdisciplinary methods reshape objects of study. MTL students produce innovative analyses of diverse texts, forms, and practices, including those of literature, history, philosophy, anthropology, law, and science; film, visual arts, popular culture, and performance; and material culture and technology.

Each student constructs a unique program of study suited to his or her research. Students have focused on such areas as gender and sexuality; race and ethnicity; science, technology, and medicine; media and performance; legal studies; and critical and social theory. The program's faculty is drawn from fields in the humanities and social sciences, as well as from education, law, and medicine. As interdisciplinary study is impossible without an understanding of the disciplines under consideration, each student is expected to master the methods of one discipline and to gain a foundation in a second field.

MASTER OF ARTS

The Master of Arts is available to students who are admitted to the doctoral program. Students are not admitted into the program for the purpose of earning a terminal Master of Arts degree. Candidates for the Ph.D. who satisfy the committee of their progress and satisfactorily complete 45 units of course work forming a coherent program of study, may apply for an M.A. in Modern Thought and Literature.

COTERMINAL BACHELOR'S AND MASTER'S PROGRAM IN MODERN THOUGHT AND LITERATURE

Each year, one or two undergraduates who are exceptionally well prepared in literature and at least one foreign language and whose undergraduate course work includes a strong interdisciplinary component, may petition to be admitted to the program for the purpose of completing a coterminal M.A. degree. Admission to this program is granted only on condition that in the course of working on their master's degrees they do not apply to enter the Ph.D. program in Modern Thought and Literature. The deadline for application is early February.

To apply, applicants submit:

1. An unofficial grade transcript from Axess.
2. A Petition for Admission to the Coterminal Program from the Registrar's Office.
3. A statement giving the reasons the student wishes to pursue this program and its place in his or her future plans. This statement should pay particular attention to the reasons why the student could not pursue the studies he or she desires in some other way.
4. A plan of study listing, quarter by quarter, each course by name, units, and instructor, to be taken in order to fulfill the requirements for the degree for a total of 45 units, including at least 20 units of advanced work in one literature, and at least 20 units in a coherent interdisciplinary program of courses taken in non-literature departments.
5. A writing sample of critical or analytical prose.
6. Two letters of recommendation from members of the faculty who know the applicant well and who can speak directly to the question of his or her ability to do graduate-level work.

University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees" section of this bulletin. For University coterminal degree program rules and University application forms, see http://studentaffairs.stanford.edu/registrar/publications#Coterm.

REQUIREMENTS

The candidate for the M.A. must complete at least 45 units of graduate work, to be divided in the following manner:

1. One of the two introductory seminars, MTL 334A, Concepts of Modernity 1, or 334B, Concepts of Modernity 2, 5 units.
2. At least 20 units of advanced course work in literature, to be approved by the director.
3. At least 20 units of course work in a coherent and individually arranged interdisciplinary program, to be approved by the director.

By the end of the course of study, each candidate must also demonstrate a reading knowledge of at least one foreign language.

DOCTOR OF PHILOSOPHY IN MODERN THOUGHT AND LITERATURE

University requirements for the Ph.D. are discussed in the "Graduate Degrees" section of this bulletin.

A candidate for the Ph.D. degree in Modern Thought and Literature must complete three years (nine quarters) of full-time work, or the equivalent, in graduate study beyond the B.A. degree. He or she is expected to complete at least 18 courses of graduate work in addition to the dissertation. Students may spend one year of graduate study abroad.

Requirements for the Ph.D. in Modern Thought and Literature are:

1. MTL 334A,B. Concepts of Modernity 1 and 2 (5 units each).
2. MTL 299. Edgework: New Directions in the Study of Culture (2 units, Spring Quarter), required of all first-year students.
3. A coherent program of eight courses of advanced work in literary studies to be worked out with the adviser, of which at least six must be regularly scheduled courses in literature. Courses in the teaching of composition (ENGLISH 396, 397), ad hoc graduate seminars (MTL 395), research courses (MTL 398), and thesis registration (MTL 802) may not be counted among these six courses; MTL 396L, 397, 399, 802 may not be counted toward these requirements under any circumstances.
4. Eight courses of advanced work in non-literature departments, the core of which is completion of either a departmental minor or an interdepartmental concentration, typically consisting of six courses. Departmental minors are available from the departments of Anthropology, Art and Art History, Communication, History, Philosophy, Political Science, Religious Studies, and Sociology (see the relevant information in those sections of this bulletin). Approved interdepartmental concentrations

have been established in popular culture, ethnic studies, feminist and gender studies, and science and technology studies (specific course requirements are available from the program office). Individually designed concentrations may be approved by petition to the director. In addition to the required six courses in a minor or a concentration, two additional courses from non-literature departments are chosen in consultation with the student's academic adviser. Course restrictions noted above in item 2 also apply.

5. *Qualifying Paper:* This certifies that students are likely to be able to undertake the quality of research, sustained argumentation, and cogent writing demanded in a doctoral dissertation. The qualifying paper must be a substantial revision of a seminar paper written at Stanford during the first year and should embody a substantial amount of independent research, develop an intellectual argument with significant elements of original thinking, and demonstrate the ability to do interdisciplinary work. Each paper is evaluated by two or three readers (designated before the end of the first year of graduate study), one of whom must be a member of the Committee in Charge. Qualifying papers must be submitted to the program office no later than the end of the third week of the fifth quarter of enrollment, normally, Winter Quarter of the second year.
6. *Teaching*, an essential part of the program, is normally undertaken in conjunction with the Department of English. Candidates are required to demonstrate competence in teaching.
7. Students must demonstrate, by the end of the third quarter of the first year, a reading knowledge of one foreign language and, by the beginning of the first quarter of the third year, a reading knowledge of one other foreign language. Reading knowledge means the ability to make a genuine scholarly use of the language: that is, to read prose of ordinary difficulty. Students may not take the University oral examination before completion of the foreign language requirement.
8. *Candidacy:* At the end of the second year, students apply for candidacy. The following qualifications are required before candidacy can be certified: the earlier submission of a satisfactory qualifying paper; demonstration of a reading knowledge of one foreign language; satisfactory progress in course work; a list of courses applicable to the degree, distinguishing between courses appropriate to the literary component and courses appropriate to the non-literary component; designation of a departmental minor or an interdisciplinary concentration; and the submission of a statement outlining the scope and coherence of the interdisciplinary component of the program in relation to the literary component, and noting the relevance of the course work to that program.
9. *Annual Review:* The program and progress of each student must be approved by the Committee in Charge at the end of each academic year.
10. *University Oral Examination:* This examination, covering the student's areas of concentration, is normally taken in the third year of graduate study. It is a two-hour oral examination administered by four faculty members specializing in the student's areas of concentration, and a chair from another department. The exam is based on a substantial reading list prepared by the student in conjunction with the faculty committee and designed to cover the areas of expertise pertinent to the student's dissertation project.
11. *Dissertation Proposal and Colloquium:* Within one quarter after the University oral examination, the student writes up the dissertation proposal: 15-20 pages with a general description of the project and a chapter breakdown plus a bibliography. The proposal is submitted to the program director and the dissertation committee for approval. After completion of the first chapter of the dissertation, the student sets up a meeting with the dissertation committee for one hour to discuss the work accomplished in the first chapter and plans for completing the rest of the dissertation.
12. *Dissertation*: The fourth and fifth years are devoted to the dissertation, which should be a substantial and original contribution acceptable to the Committee in Charge of Modern Thought and Literature. The subject is drawn from the literature of specialization and the area of nonliterary studies. The dissertation project will conclude with a two-hour defense. The first hour is open to the public and includes a brief presentation of the dissertation project on the part of the Ph.D. candidate. The second hour is reserved to the candidate and his/her Dissertation Committee.

PH.D. IN MODERN THOUGHT AND LITERATURE AND HUMANITIES

The department participated in the Graduate Program in Humanities leading to a Ph.D. degree in Modern Thought and LIterature and Humanities. At this time, the option is available only to students already enrolled in the Graduate Program in Humanities; no new students are being accepted. The University remains committed to a broad-based graduate education in the humanities; the courses, colloquium, and symposium continue to be offered, and the Division of Literatures, Cultures, and Languages provides advising for students already enrolled who may contact Denise Winters at 650-724-1333 for further information. Courses are listed under the subject code HUMNTIES and may be viewed on the *Stanford Bulletin's* ExploreCourses web site.

MUSIC

Emeriti: (Professors) John M. Chowning, Albert Cohen, George Houle, William H. Ramsey, Leonard G. Ratner, Leland C. Smith; *(Professors, Performance)* Arthur P. Barnes, Marie Gibson; *(Professor, Research)* Max V. Mathews

Chair: Stephen M. Sano

Professors: Jonathan Berger, Karol Berger, Chris Chafe, Brian Ferneyhough, Thomas Grey (on leave Winter, Spring), Stephen Hinton (on leave Winter, Spring), Julius O. Smith (on leave Autumn)

Associate Professors: Mark Applebaum, Heather Hadlock, William P. Mahrt

Assistant Professors: Jaroslaw Kapuscinski, Jesse Rodin, Anna Schultz, Ge Wang

Professors (Teaching): George Barth (Piano), Stephen M. Sano (Director of Choral Studies)

Associate Professor (Performance): Jindong Cai (Director of Orchestral Studies, on leave Autumn)

Courtesy Professor: Paul DeMarinis

Senior Lecturers: Giancarlo Aquilanti (Director of Theory; Wind Ensemble), Talya Berger (Theory), Stephen Harrison (Violoncello), Thomas Schultz (Piano), Gregory A. Wait (Voice; Director of Vocal Studies), Frederick R. Weldy (Piano)

Lecturers: Kumaran Arul (Piano, on leave), Fredrick Berry (Jazz Ensemble), Mark Brandenburg (Clarinet), Marie-Louise Catsalis (Voice), Marjorie Chauvel (Harp), Jonathan Clark (Mariachi), Tony Clements (Tuba), Laura Dahl (Resident Collaborative Pianist), Anthony Doheny (Violin), John Dornenburg (Viola da Gamba), Maria Ezerova (Piano), Charles A. Ferguson (Guitar), Debra Fong (Violin), Claire Giovannetti (Voice), Dawn Harms (Violin, Viola), Alexandra Hawley (Flute), David Henderson (Classical Saxophone), Wendy Hillhouse (Voice), Robert Hubbard (Oboe), Joyce Johnson-Hamilton (Trumpet), Wendy Ju (HCI theory), Jay Kadis (Audio Recording), McDowell Kenley (Trombone), Mary Linduska (Voice, Summer only), Murray Low (Jazz Piano), Janet Maestre (Flute), Anthony Martin (Baroque Violin), James Matheson (Oboe), Seward McCain (Jazz Bass), Charles McCarthy (Jazz Saxophone), Robert Huw Morgan (University Organist, Organ), Bruce Moyer (Contrabass), Herbert Myers (Early Winds), James Nadel (Jazz), Rufus Olivier (Bassoon), Larry S. Ragent (French Horn), Melody Schaefle (Flute), Amy Schneider (Voice, on leave), Robin Sharp (Violin), Jerome Simas (Clarinet), Livia Sohn (Violin), Elaine Thornburgh (Harpsichord), Erik Ulman

(Composition, Theory), Linda Uyechi (Taiko), Rick Vandivier (Jazz Guitar), Mark Veregge (Percussion), Sharon Wei (Viola), John Worley (Jazz Trumpet), Hui (Daisy) You (Guzheng), Timothy Zerlang (University Carillonneur, Piano)

Consulting Professors: Jonathan Abel (CCRMA), David Berners (CCRMA), Marina Bosi-Goldberg (CCRMA), Walter Hewlett (Computer-Assisted Research in the Humanities), Eleanor Selfridge-Field (Computer-Assisted Research in the Humanities), Malcolm Slaney (CCRMA)

Visiting Professor: Thomas Rossing (CCRMA)

Acting Assistant Professor: Charles Kronengold

Artists-in-Residence (St. Lawrence String Quartet): Geoff Nuttall (Violin), Scott St. John (Violin), Lesley Robertson (Viola), Christopher Costanza (Violincello)

Mellon Fellow: Shana Goldin-Perschbacher (Music History)

Department Offices: Braun Music Center, Room 101

Mail Code: 94305-3076

Phone: (650) 723-3811

Email: musicdept@stanford.edu

Web Site: http://music.stanford.edu

Courses offered by the Department of Music are listed under the subject code MUSIC on the *Stanford Bulletin's* ExploreCourses web site.

MISSION OF THE DEPARTMENT OF MUSIC

The Department of Music's aims are to provide specialized training for those who plan careers in music as composers, performers, teachers, and research scholars, and to promote the understanding and enjoyment of music in the University at large through its courses and performance offerings.

LEARNING OUTCOMES

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students in the following concentrations are required to demonstrate the outcomes as described.

PERFORMANCE PRACTICE

1. the ability to select and organize a series of pieces in an effective and nuanced order.
2. appropriate performance skills derived from the progression of works taught in lessons.
3. knowledge of the relevant critical literature appropriate to the repertoire being prepared.
4. analytical writing skills in the preparation of program notes appropriate to the repertoire selected.
5. the artistic execution of their repertoire in a formal concert recital setting.

MUSIC HISTORY

1. the ability to select and outline an appropriate topic area and to select appropriate methodologies.
2. appropriate mastery of the primary source materials.
3. appropriate mastery of the secondary source materials.
4. the analytical writing skills necessary for the execution of the thesis.

COMPOSITION

1. the ability to articulate the scope of works in the portfolio.
2. appropriate understanding of the styles and techniques necessary to accomplish the creation of the portfolio's contents.
3. a compelling artistic vision or voice in the creation of the works in their portfolio.
4. the ability to compose and complete sufficient works in a variety of sizes to demonstrate versatility of the portfolio.
5. the artistic coherence of their portfolio, preferably in a concert recital reading of its contents.

MUSIC, SCIENCE, AND TECHNOLOGY

1. the ability to select and organize a project on an appropriate topic.
2. appropriate skills and techniques derived from the progression of those skills and techniques taught in classes.
3. a mastery of the primary source literature and techniques.
4. a mastery of the secondary source literature and techniques.
5. the result of the project (instrument, code, synthesis) in a public context.

BACHELOR OF ARTS IN MUSIC

The undergraduate major in Music is built around a series of foundation courses in theory, musicianship, and music history, in addition to performance and the proficiency requirements outlined below. Majors must complete a minimum of 66 units within the department. All required courses for the B.A. in any concentration must be taken for a letter grade. Electives may be taken credit/no credit, but any courses taken towards concentration requirements must carry a letter grade.

SUGGESTED PREPARATION FOR THE MAJOR

Because of the sequence of courses, it takes more than two years to complete the requirements for the major. Students are required to meet with the undergraduate student services officer in the department prior to declaring the major. It is recommended that prospective majors schedule this consultation with the undergraduate student services officer as early as possible in their careers in order to plan a program that allows sufficient time for major course work, practice, and University requirements outside the major. Early planning is especially important for students wishing to double-major, for those contemplating overseas study during their undergraduate years, for those wishing to do an in-depth concentration in the Music major, and for those with particular musical talents and interests. It is recommended that music majors complete MUSIC 21, 22, and 23 in the freshman year; the series should be completed by Autumn Quarter of the junior year. It is recommended that music majors complete MUSIC 40, 41, and 42 in the sophomore year; the series should be completed by the end of the junior year.

Suggested Preparatory Course—MUSIC 19. Introduction to Music Theory.

FIELDS OF STUDY OR DEGREE OPTIONS

Concentrations are offered in: performance; conducting; composition; history and theory; or music, science, and technology. Each of these concentration areas is declarable in Axess as a subplan. Specific guidelines and information on the concentration tracks are available from the Department of Music office and students are urged to select this option no later than the middle of their junior year in order to complete all of the requirements in a timely manner.

DEGREE REQUIREMENTS

In conjunction with the undergraduate student services officer, the student is assigned a departmental adviser with whom the student is required to meet at least one time each quarter. Total units and courses required to graduate for each concentration are specified in the relevant section following.

Required Courses—The following courses are required of all majors.

1. *Theory—*
   MUSIC 21. Elements of Music I (4 units)
   MUSIC 22. Elements of Music II (4 units)
   MUSIC 23. Elements of Music III (4 units)
2. *History—*
   MUSIC 40. Music History to 1600 (4 units)
   MUSIC 41. Music History 1600-1830 (4 units)
   MUSIC 42. Music History Since 1830 (4 units)
3. *Analysis—*
   MUSIC 121. Analysis of Tonal Music (4 units)
   and two at the 4-unit level, from:

MUSIC 122A. Renaissance and Baroque Counterpoint
MUSIC 122B. Harmonic Materials of the 19th Century
MUSIC 122C. Introduction to 20th-Century Composition

4. *Writing in the Major (WIM)*—Three (at least two at the 4-unit level) from:
MUSIC 140. Studies in Medieval Music
MUSIC 141. Studies in Renaissance Music
MUSIC 142. Studies in Baroque Music
MUSIC 143. Studies in Classical Music
MUSIC 144. Studies in Romantic Music
MUSIC 145. Studies in Modern Music
MUSIC 146. Music and Urban Film
MUSIC 147. The Soul Tradition in African American Music
MUSIC 148. Musical Shakespeare: Theater, Song, Opera, and Film
MUSIC 149. Reactions to the Record: Early Recordings, Lost Styles, and Music's Future
MUSIC 190H. Sex, Sacrifice, and Civilization: Baroque Opera and Tragedy
MUSIC 251. Psychophysics and Music Cognition
5. *Applied*—
   a. A minimum of five quarters totaling 15 units of private instruction in instrumental and/or vocal performance (MUSIC 172/272-177/277); students who do not qualify for private instruction at the intermediate or advanced level, but who wish to pursue the major may take introductory voice (MUSIC 65 and 73), piano (MUSIC 12 and 72A), or guitar (MUSIC 74C) to reach the minimum proficiency levels required to be accepted into a private studio and then complete their 5 quarters. Requirements for the minimum levels of proficiency in each instrument for private instruction are posted at: http://music.stanford.edu/Academics/Auditions.html.
   b. A minimum of five quarters totaling at least 5 units of work in one or more of the department's organizations or chamber groups. To fulfill the ensemble requirement, Music majors need at least three quarters of participation in the department's traditional large ensembles (MUSIC 159–167), with the exception of students whose primary instrument is harp, keyboard, or guitar, who need to participate at least one quarter in the ensembles above, but who may fulfill the rest of the requirement with chamber music (MUSIC 171). MUSIC 181 and MUSIC 156 may count for up to two of the ensemble-unit requirements for the Music major.
   Note—MUSIC 128, Composition, Coding, and Performance with SLOrk; MUSIC 157, Mariachi Band; MUSIC 158, Soundwire Ensemble; MUSIC 160A, Stanford Philharmonia Orchestra; MUSIC 160B, Stanford New Ensemble; MUSIC 161C, Red Vest Band; and MUSIC 161D, Stanford Brass Ensemble do not satisfy this requirement.
6. *Additional requirements*—
   a. Majors are required to pass a Piano Proficiency examination as part of the music theory core (MUSIC 21, 22, 23). The examination is given in the first two weeks of MUSIC 21. Students who do not pass the Piano Proficiency examination are required to enroll in MUSIC 12 concurrently with the music theory core until they are able to pass the examination. The examination consists of scales and arpeggios, performance of a simple tune to be set by the examiner, sight-reading, and the performance of prepared pieces. Information regarding the proficiency examination may be downloaded at http://music.stanford.edu/private/downloads/PIANO%20PROFICIENCY%20EXAM.doc
   b. Majors must also pass an ear-training proficiency examination, which is one of the requirements to complete MUSIC 23. It may be taken by arrangement and demonstrates a student's ability to hear music accurately and to perform it at sight.
7. *Electives*—

I. *Concentration in Performance*—In addition to degree requirements required of majors listed above, students in the Performance concentration must:
   1. Complete at least 6 additional, graded course units in performance. Acceptable courses are described under "Applied" in the section describing private instruction and ensemble course work above. Additional courses might include, but are not limited to:
   MUSIC 126. Introduction to Thoroughbass
   MUSIC 154. Composition and Performance of Instrumental Music with Electronics
   MUSIC 182. Diction for Singers
   MUSIC 183. Art Song Interpretation
   MUSIC 269. Research in Performance Practices
   1. Register for an independent project (MUSIC 198, 4 units) in the senior year under faculty supervision, leading to a senior recital.

II. *Concentration in Conducting*—In addition to degree requirements required of majors listed above, students in the Conducting concentration must:
   1. Complete at least 6 additional, graded course units in conducting. Additional courses might include, but are not limited to:
   MUSIC 127. Instrumentation and Orchestration
   MUSIC 130. Elementary Conducting
   MUSIC 230. Advanced Orchestral Conducting
   MUSIC 231. Advanced Choral Conducting
   1. Register for an independent project (MUSIC 198, 4 units) in the senior year under faculty supervision, leading to a senior conducting project.

III. *Concentration in Composition*—In addition to degree requirements required of majors listed above, students in the Composition concentration must:
   1. Complete at least 6 additional, graded course units in composition. Additional courses might include, but are not limited to:
   MUSIC 123. Undergraduate Seminar in Composition
   MUSIC 125. Individual Undergraduate Projects in Composition
   MUSIC 127. Instrumentation and Orchestration
   MUSIC 150. Musical Acoustics
   MUSIC 154. Composition and Performance of Instrumental Music with Electronics
   MUSIC 220A, B, or C—any of the series in computer-generated sound, music, and composition
   1. Register for an independent project (MUSIC 198, 4 units) in the senior year under faculty supervision, leading to a composition.

IV. *Concentration in History and Theory*—In addition to degree requirements required of majors listed above, students in the History and Theory concentration must:
   1. Complete at least 6 additional, graded course units in history and theory. Additional courses might include, but are not limited to:
   MUSIC 122A, B, or C—any course not taken in fulfillment of the major requirement
   MUSIC 140-149/240-249, 251—any courses not taken in fulfillment of the major requirement
   MUSIC 221. Topics in the History of Theory
   MUSIC 220A, B, or C—any of the series in computer-generated sound, music, and composition
   1. Register for an independent project (MUSIC 198, 4 units) in the senior year under faculty supervision, leading to a senior research paper.

V. *Concentration in Music, Science, and Technology*—Requires completion of 66 units of course work that differs from that of the major and is delineated below. This field of study is designed for those students interested in the musical ramifications of rapidly evolving computer technology and digital audio, and in the acoustic and psychoacoustic foundations of music. This

program can serve as a complementary major to students in the sciences and engineering. Students in the program are required to include the following courses in their studies:

1. *Theory and Analysis*—

MUSIC 21. Elements of Music I (4 units)
MUSIC 22. Elements of Music II (4 units)
MUSIC 23. Elements of Music III (4 units; includes passing the piano and ear-training proficiency examinations, as described for the major)
MUSIC 121. Analysis of Tonal Music (4 units)
MUSIC 150. Musical Acoustics (3 units)
MUSIC 251. Psychophysics and Music Cognition (WIM) (4 units)
MUSIC 220A. Fundamentals of Computer-Generated Sound (4 units)
MUSIC 220B. Compositional Algorithms, Psychoacoustics, and Spatial Processing (4 units)
MUSIC 220C. Research Seminar in Computer-Generated Music (4 units)
MUSIC 220D. Research in Computer-Generated Music (4 units)
MUSIC 250A. Human-Computer Interface Theory and Practice (4 units)

1. *Applied*—
   a. Individual studies in performance, MUSIC 171/272-177/277, (6 units), *or* MUSIC 192A, Foundations of Sound Recording Technology *and* MUSIC 192B, Advanced Sound-Recording Technology (3 units each).
   b. Ensemble as described above for the major (5 units) *or* MUSIC 192C. Session Recording (5 units).
2. *History*—Two at the 4-unit level from:

MUSIC 40. Music History to 1600
MUSIC 41. Music History 1600–1830
MUSIC 42. Music History Since 1830

1. The program requires a senior research project (4 units) completed under faculty guidance. May be completed in conjunction with enrollment in any of the following: MUSIC 220D; MUSIC 199; MUSIC 198.

HONORS PROGRAM

Honors in Music are awarded by the faculty to concentrators who have produced an independent project of exceptional quality and meet certain departmental standards in musicianship, scholarship, and academic standing. The conferral of honors is done solely through faculty consultation. Students do not petition for honors.

OVERSEAS STUDY OR STUDY ABROAD

Courses in Music are often available at Stanford overseas programs, especially in Berlin, Paris, Florence, and Oxford. See the "Overseas Studies Program" section of this bulletin for this year's listings. Music majors and minors should talk to the Department of Music undergraduate administrator prior to going overseas.

MINOR IN MUSIC

Minors in Music in the concentration areas of performance, conducting, composition and history and theory, as well as in the concentration in music, science, and technology provide the student with a core of essential Music courses in the disciplines that establish both a foundation for informed appreciation of music and a basis for more advanced study, should the student wish to pursue it.

Requirements—Total of 36 units required course work as delineated below. Students in either minor must also pass the piano and ear-training proficiency examinations required of Music majors.

Required Courses for the Minor in Music with concentrations in performance, conducting, composition, and history and theory—

1. *Theory*—
   - MUSIC 21. Elements of Music I (4 units)
   - MUSIC 22. Elements of Music II (4 units)
   - MUSIC 23. Elements of Music III (4 units)
2. *History*—
   - MUSIC 40. Music History to 1600 (4 units)
   - MUSIC 41. Music History 1600–1830 (4 units)
   - MUSIC 42. Music History Since 1830 (4 units)
3. *Applied (two quarters)*—
   - MUSIC 159-171. Ensemble (2 units, total)
   - MUSIC 172-177. Individual Instruction (6 units, total)
4. *Choice of one (WIM)*—
   - MUSIC 140-149, 190H, 251 (4 units)

Required Courses for the Minor in Music with a concentration in music, science, and technology—

1. *Theory*—
   - MUSIC 21. Elements of Music I (4 units)
   - MUSIC 22. Elements of Music II (4 units)
   - MUSIC 23. Elements of Music III (4 units)
   - MUSIC 150. Musical Acoustics (3 units)
   - MUSIC 251. Psychophysics and Music Cognition (WIM) (4 units)
   - MUSIC 220A. Fundamentals of Computer-Generated Sound (4 units)
   - MUSIC 220B. Compositional Algorithms, Psychoacoustics, and Spatial Processing (4 units)
2. *Applied*—
   - MUSIC 192A. Foundations of Sound-Recording Technology (3 units)
   - MUSIC 192B. Advanced Sound-Recording Technology (3 units)
   - MUSIC 192C. Session Recording (two quarters; 3 units total)

MASTER OF ARTS IN MUSIC

University requirements for the M.A. are described in the "Graduate Degrees" section of this bulletin.

None of Stanford's required undergraduate courses may be credited toward an advanced degree unless specifically required for both degrees. Only work that receives a grade of 'A,' 'B,' or 'Satisfactory' (a passing grade in an instructor-mandated credit/no credit course) in Music courses numbered 100 or higher taken as a graduate student is recognized as fulfilling the advanced-degree requirements. Students may need to devote more than the minimum time in residence if preparation for graduate study is inadequate.

ADMISSION

Applicants are required to submit evidence of accomplishment (scores, recordings, and/or research papers) when they complete the application form. Applicants should arrange to take the Graduate Record Examination (GRE) well in advance of the December 14 application deadline. All components of the application are due by December 14. International students whose first language is not English are also required to take the TOEFL exam (with certain exceptions: see http://studentaffairs.stanford.edu/gradadmissions).

FIELDS OF STUDY OR DEGREE OPTIONS

All of the above fields of study are declarable as subplans in Axess:

- Master of Arts degree (M.A.)—in Composition.
- Master of Arts degree (M.A.)—in Music History.
- Master of Arts degree (M.A.)—in Computer-Based Music Theory and Acoustics.
- Master of Arts degree (M.A.)—in Music, Science, and Technology (M.A./M.S.T.) Note: The MA/MST program is the only terminal master's degree; it is one year in duration and consists only of course work.

DEGREE REQUIREMENTS

A minimum of 45 academic units is required for the master's degree in Music. The Department of Music does not accept stu-

dents for study only towards the M.A. degree except in the Music, Science, and Technology program, described below.

Required Courses—

I. *Composition*—Students are not admitted into the M.A. as a terminal degree for composition: rather, students in the D.M.A. program in composition who enter directly from the bachelor's level may, upon completing 45 graduate-level units and advancing to candidacy by passing the qualifying examination, be recommended for the M.A. degree in composition.

II. *Music History*—Students are not admitted into the M.A. as a terminal degree for music history: rather, students in the Ph.D. program in musicology who enter directly from the bachelor's level may, upon completing 45 graduate-level units and advancing to candidacy by passing the qualifying examination, be recommended for the M.A. degree in music history.

III. *Computer-Based Music Theory and Acoustics*—Students are not admitted into the M.A. as a terminal degree for computer-based music theory and acoustics: rather, students in the Ph.D. program in computer-based music theory and acoustics who enter directly from the bachelor's level may, upon completing 45 graduate-level units and advancing to candidacy by passing the qualifying examination, be recommended for the M.A. degree in computer-based music theory and acoustics.

IV. *Music, Science, and Technology (M.S.T.)*—The M.A. in music, science, and technology is the department's only terminal master's degree. This is a one-year program of 45 graduate-level units focusing on the integration of music perception, music-related signal processing and controllers, and synthesis. The program is designed for students who have an undergraduate engineering or science degree or a degree that includes course work in engineering mathematics. Modifications to the required course work listed below may be proposed on a student's behalf by the student's program adviser.

1. Required:
   - MUSIC 154. Composition and Performance of Instrumental Music with Electronics (3 units)
   - MUSIC 192A. Foundations of Sound-Recording Technology (3 units)
   - MUSIC 192B. Advanced Sound-Recording Technology (3 units)
   - MUSIC 220A. Fundamentals of Computer-Generated Sound (4 units)
   - MUSIC 220B. Compositional Algorithms, Psychoacoustics, and Spatial Processing (4 units)
   - MUSIC 220C. Research Seminar in Computer-Generated Music (4 units)
   - MUSIC 250A. Human-Computer Interface Theory and Practice (4 units)
   - MUSIC 320. Introduction to Digital Audio Signal Processing (4 units)
   - MUSIC 420. Signal Processing Models in Musical Acoustics (3 units)
   - MUSIC 421. Audio Applications of the Fast Fourier Transform (3 units)
2. Electives: students are required to complete an additional 10 units of graduate level work that may be taken outside the department.

DOCTOR OF MUSICAL ARTS (D.M.A.) AND DOCTOR OF PHILOSOPHY (PH.D.) IN MUSIC

University requirements for the D.M.A and Ph.D. are described in the "Graduate Degrees" section of this bulletin. The following statements apply to all the graduate degrees described below, unless otherwise indicated.

Department Examinations—All entering doctoral graduate students are required to take: (1) a diagnostic examination testing the student in theory (counterpoint, harmony, and analysis) and (for musicologists only) the history of Western art music; and, (2) a proficiency examination in sight-singing and piano sight-reading. These exams are given at the beginning of study in the department (usually the week before school begins). Teaching Assistant assignments and the funding associated with this portion of a graduate student's financial aid package are determined based upon successful completion of these exams.

None of Stanford's required undergraduate courses may be credited toward an advanced degree unless specifically required for both degrees. Only work that receives a grade of 'A,' 'B,' or 'Satisfactory' (a passing grade in an instructor-mandated credit/no credit course) in music courses numbered 100 or higher taken as a graduate student is recognized as fulfilling the advanced-degree requirements. Students may need to devote more than the minimum time in residence if preparation for graduate study is inadequate.

The following may be taken as electives for graduate credit:

a. any course in another department numbered 100 or over (with adviser's consent)
b. any course in the Music department numbered 100 or over except those required for the B.A. degree. A letter grade of 'A', 'B,' or 'S' (in an instructor-mandated pass/fail course) is required.
c. Music department group instruction: MUSIC 72–77.

ADMISSION

Applicants are required to submit evidence of accomplishment (scores, recordings, and/or research papers, according to the proposed field of concentration) when they complete the application form. Applicants should arrange to take the Graduate Record Examination (GRE) well in advance of the December 14 application deadline. All components of the application are due by December 14. International students whose first language is not English are also required to take the TOEFL exam (with certain exceptions: see http://studentaffairs.stanford.edu/gradadmissions).

FIELDS OF STUDY OR DEGREE OPTIONS

All of the following fields of study are declarable as subplans in Axess:

Doctor of Musical Arts degree (D.M.A.) in Composition—The D.M.A. is offered to a limited number of students who demonstrate substantial training in the field and high promise of attainment as composers. Students may work in traditional and/or electronic forms. Breadth is given through studies in other branches of music and in relevant fields outside music, as desirable. The final project for this degree is a large-scale composition.

Doctor of Philosophy degree (Ph.D.) in Musicology

Doctor of Philosophy degree (Ph.D.) in Computer-Based Music Theory and Acoustics—The Ph.D. is offered in areas of the research of Stanford's graduate faculty: Musicology, including specialties in musical aesthetics, history of music theory, and performance practice; and Computer-Based Music Theory and Acoustics (CBMTA), specializing in research in musical acoustics at the Center for Computer Research in Music and Acoustics (CCRMA). The department seeks students who demonstrate substantial scholarship, high promise of attainment, and the ability to do independent investigation and present the results of such research in a dissertation.

DEGREE REQUIREMENTS

Residence—The candidate must complete a minimum of 135 academic units (see Residency under the "Graduate Degrees" section of this bulletin). Doctoral candidates working on Ph.D. dissertations or Doctor of Musical Arts (D.M.A.) final projects that require consultation with faculty members continue enrollment in the University under Terminal Graduate Registration (TGR), after they have reached the required 135 academic units and have completed their Special Area examinations.

Qualifying Examination—A written and oral examination for admission to candidacy is given just prior to the fourth quarter of residence for D.M.A. students and Ph.D. students in the Computer-Based Music Theory and Acoustics programs; for Ph.D. students in Musicology, the exams are given just prior to the eighth quarter

of residence. This exam tests knowledge of history, theory, repertory, and analysis.

Teaching—All students in the Ph.D. or D.M.A. degree programs, regardless of sources of financial support, are required to complete six quarters of supervised teaching at half time. Music 280 (given in Spring Quarter and taken at the end of the first year) is a required course for Teaching Assistants. Additional quarters of teaching may be required by the department.

Required Courses—

MUSIC 200. Graduate Proseminar (4 units)—required of all composition and computer-based music theory and acoustics students entering directly from the bachelor's degree and of all students in musicology, regardless of entering degree level.

MUSIC 280. TA Training (1 unit)

MUSIC 301A. Analysis of Music: Modal (4 units)

MUSIC 301B. Analysis of Music: Tonal (4 units)

MUSIC 301C. Analysis of Music: Post-Tonal (4 units)

I. *Composition*—The Doctor of Musical Arts (D.M.A.) degree in Composition is given breadth through collateral studies in other branches of music and in relevant studies outside music as seems desirable. In addition to degree requirements required of all doctoral graduate students and listed above, students must complete at least 24 units of:

1. MUSIC 323. Doctoral Seminar in Composition
2. Besides those requirements listed above, candidates are expected to produce a number of works demonstrating their ability to compose in a variety of forms and for the common media: vocal, instrumental, and electronic music. If possible, the works submitted are presented in public performance prepared by the composer. Annual progress is reviewed by the composition faculty with a major portfolio review conducted at the conclusion of the second year.
3. *Foreign Language Requirement*—At the time of advancement to candidacy, all D.M.A. students are required to have demonstrated a reading knowledge of one language other than English and the ability to translate it into idiomatic English.
4. *Special-Area Examination*—A written examination in the candidate's field of concentration, including a final project proposal, is required to be completed during the fourth year of study, no later than the last day of classes in Autumn Quarter of that year.
5. *Final Project Presentation*—Required during the last quarter of residence, the purpose of the presentation is to demonstrate the ability of the candidate to organize and present the topic of the final project for public review. It should be two hours in length, treating aspects of the final project. Details regarding the D.M.A. final project presentation may be found in the *Department of Music Graduate Handbook* available at: http://music.stanford.edu/Academics/gradStudies.html
6. *Final Project*—Candidate's work culminates in a required Final Project. The final project in composition must be a substantial composition, the scope of which shall be agreed upon by the members of the committee. Typically, work on the final project encompasses several quarters. Usually, smaller works, for specific performances, are composed at the same time.
7. *Reading Committee*—The membership of the reading committee is the principal final project adviser and a minimum of two additional members. The notice of appointment of a D.M.A. Final Project Reading Committee should be submitted to the department at the same time as the approved final project proposal and the completion of the special area exam. It is the responsibility of the student, with the advice of his or her adviser, to approach appropriate faculty members and obtain their consent to serve on the reading committee. Obtain the D.M.A. reading committee form from the department office; fill it out; obtain committee members' signatures; return to the department office.

II. *Musicology*—In addition to degree requirements required of all doctoral graduate students and listed above, students must complete at least 42 units of approved courses including:

1. *Required:*

   MUSIC 221. Topics in the History of Theory (3–5 units)

   MUSIC 300A. Medieval Notation (4 units)

   MUSIC 300B. Renaissance Notation (4 units)

   MUSIC 310. Research Seminar in Musicology (24–40 units); the requirement is for eight seminars of 3-5 units each. Students may petition to take up to two graduate seminars in other departments, in consultation with their adviser.
2. *Foreign Language Requirement*—At the time of advancement to candidacy, all Ph.D. students in Musicology must have passed a Ph.D. Language examination in German and in a second language, chosen from French, Italian, or Latin (or, on a case-by-case basis, another language, if it has significant bearing on the candidate's field of study). If one of these languages is the student's native language, the student may be exempted from an examination.
3. *Special-Area Examination*—A written and oral examination testing the student's knowledge of music and research in the student's field of concentration is completed during the fourth year of study, no later than the last day of classes in Autumn Quarter of that year. This includes an oral defense of the dissertation proposal. The examining committee comprises prospective readers of the dissertation.
4. *University Oral Examination*—Taken once the dissertation is substantially under way; an oral presentation is a defense of dissertation research methods and results.
5. *Dissertation*—After the first two years of graduate study, the student concentrates on research and writing of the dissertation. The dissertation demonstrates the student's ability to work systematically and independently to produce an essay of competent scholarship.
6. *Reading Committee*—The minimum membership of the reading committee is 1) the principal dissertation adviser, 2) a second member from the department, and 3) a third member from the major department or another department. If a third member is from another institution, a fourth member must be appointed from the department. The principal dissertation adviser and all other members of the committee must belong to the Academic Council. The notice of appointment of a Reading Committee should be submitted to the department at the same time as the approved dissertation proposal and the completion of the Special-Area Exam. It is the responsibility of the student, with the advice of his or her adviser, to approach appropriate faculty members and obtain their consent to serve on the reading committee.

III. *Computer-Based Music Theory and Acoustics*—In addition to degree requirements required of all doctoral graduate students and listed above, students must complete at least 28 units of approved courses including:

1. *Required:*

   MUSIC 220A. Fundamentals of Computer-Generated Sound (4 units)

   MUSIC 220B. Compositional Algorithms, Psychoacoustics, and Spatial Processing (4 units)

   MUSIC 220C. Research Seminar in Computer-Generated Music (4 units)

   MUSIC 220D. Research in Computer-Generated Music (12 units total)

   MUSIC 320. Introduction to Digital Audio Signal Processing (4 units)
2. *Foreign Language Requirement*—At the time of advancement to candidacy, all Ph.D. students in computer-based music theory and acoustics are required to have demonstrated a reading knowledge of one language other than English and the ability to translate it into idiomatic English.
3. *Special-Area Examination*—A written and oral examination testing the student's knowledge of music and research in the student's field of concentration is completed during the fourth year of study, no later than the last day of classes in Autumn Quarter of that year. This includes an oral defense of the dissertation proposal. The examining committee comprises prospective readers of the dissertation.

4. *University Oral Examination*—Taken once the dissertation is substantially under way; an oral presentation is a defense of dissertation research methods and results.
5. *Dissertation*—After the first two years of graduate study, the student concentrates on research and writing of the dissertation. The dissertation demonstrates the student's ability to work systematically and independently to produce an essay of competent scholarship.
6. *Reading Committee*—The minimum membership of the reading committee is 1) the principal dissertation adviser, 2) a second member from the department, and 3) a third member from the major department or another department. If a third member is from another institution, a fourth member must be appointed from the department. The principal dissertation adviser and all other members of the committee must belong to the Academic Council. The notice of appointment of a Reading Committee should be submitted to the department at the same time as the approved dissertation proposal and the completion of the Special-Area Exam. It is the responsibility of the student, with the advice of his or her adviser, to approach appropriate faculty members and obtain their consent to serve on the reading committee.

IV. *Ph.D. in Music and Humanities*—The department participated in the Graduate Program in Humanities leading to a Ph.D. degree in Music and Humanities. At this time, the option is available only to students already enrolled in the Graduate Program in Humanities; no new students are being accepted. The University remains committed to a broad-based graduate education in the humanities; the courses, colloquium, and symposium continue to be offered, and the Division of Literatures, Cultures, and Languages provides advising for students already enrolled who may contact DLCL Student Affairs at 650-724-1333 or dlcl@stanford.edu for further information. Courses are listed under the subject code HUMNTIES and may be viewed on the *Stanford Bulletin's* ExploreCourses web site.

PHILOSOPHY

Emeriti (Professors): Fred Dretske, Solomon Feferman, Dagfinn Føllesdal, Georg Kreisel, John Perry, David S. Nivison, Patrick Suppes, James O. Urmson; *(Courtesy Professor)* Denis Phillips
Chair: Helen Longino
Director of Graduate Study: Michael Bratman
Director of Undergraduate Study: Chris Bobonich
Professors: Chris Bobonich, Michael Bratman, Joshua Cohen, John Etchemendy, Michael Friedman (on leave), Helen Longino, Grigori Mints, Debra Satz, Brian Skyrms (Spring), Kenneth Taylor, Johan van Benthem (Spring), Thomas Wasow, Allen Wood, Rega Wood (Research)
Associate Professors: Lanier Anderson, Mark Crimmins, Graciela De Pierris, David Hills (Teaching), Nadeem Hussain, Krista Lawlor, Tamar Schapiro
Assistant Professor: Alexis Burgess
Courtesy Professors: Reviel Netz, Josiah Ober, Rob Reich
Lecturers: David Barker-Plummer, Shane Duarte, Daniel Giberman, John Mumma, Thomas Ryckman, Laurel Scotland-Stewart, Richard Sommer
Department Offices: Building 90
Mail Code: 94305-2155
Department Phone: (650) 723-2547
Email: philosophy@stanford.edu
Web Site: http://philosophy.stanford.edu

Courses offered by the Department of Philosophy are listed under the subject code PHIL on the *Stanford Bulletin's* ExploreCourses web site.

Philosophy concerns itself with fundamental problems. Some are abstract and deal with the nature of truth, justice, value, and knowledge; others are more concrete, and their study may help guide conduct or enhance understanding of other subjects. Philosophy also examines the efforts of past thinkers to understand the world and people's experience of it.

Although it may appear to be an assortment of different disciplines, there are features common to all philosophical inquiry. These include an emphasis on methods of reasoning and the way in which judgments are formed, on criticizing and organizing beliefs, and on the nature and role of fundamental concepts.

Students of almost any discipline can find something in philosophy which is relevant to their own specialties. In the sciences, it provides a framework within which the foundations and scope of a scientific theory can be studied, and it may even suggest directions for future development. Since philosophical ideas have had an important influence on human endeavors of all kinds, including artistic, political, and economic, students of the humanities should find their understanding deepened by acquaintance with philosophy.

MISSION OF THE UNDERGRADUATE PROGRAM IN PHILOSOPHY

The mission of the undergraduate program in Philosophy is to train students to think clearly and critically about the deepest and broadest questions concerning being, knowledge, and value and their connections to the full range of human activities and interests. The Philosophy major presents students with paradigms and perspectives of past thinkers and introduces students to a variety of methods of reasoning and the ways in which judgments are formed. Courses in the major equip students with core skills involved in critical reading, analytical thinking, sound argumentation, and the clear and well-organized expression of ideas. Philosophy is an excellent major for those planning a career in law, medicine, or business. It provides analytical skills and a breadth of perspective helpful to those called upon to make decisions about their own conduct and the welfare of others. Philosophy majors who have carefully planned their undergraduate program have an excellent record of admission to professional and graduate schools.

LEARNING OUTCOMES

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. the ability to communicate philosophical ideas effectively orally and in writing.
2. close reading, argument evaluation, and analytical writing.
3. dialectical ability to identify strengths and weaknesses of an argument and devise appropriate and telling responses.
4. the ability to think critically and demonstrate clarity of conceptualization.
5. the ability to differentiate good from unpromising philosophical questions.
6. the ability to sustain an argument of substantial scope, showing control over logical, argumentative, and evidential relations among its parts.

SPECIAL AND JOINT MAJORS

The Special Program in the History and Philosophy of Science enables students to combine interests in science, history, and philosophy. Students interested in this program should see the special adviser.

The joint major in Philosophy and Religious Studies combines courses from both departments into a coherent theoretical pattern.

LIBRARY AND ASSOCIATIONS

The Tanner Memorial Library of Philosophy contains an excellent working library and ideal conditions for study. Graduate students and undergraduate majors in philosophy have formed associations for discussion of philosophical issues and the reading of papers by students, faculty, and visitors.

BACHELOR OF ARTS IN PHILOSOPHY

There are three ways of majoring in Philosophy:

- The General Program
- The Special Program in the History and Philosophy of Science
- The Special Option in Philosophical and Literary Thought.

A student completing any of these receives a B.A. degree in Philosophy. There is also a major program offered jointly with the Department of Religious Studies. To declare a major, a student should consult with the Director of Undergraduate Study and see the undergraduate student services administrator to be assigned an adviser and work out a coherent plan. The department recommends proficiency in at least one foreign language.

GENERAL PROGRAM

1. Course requirements, minimum 55 units:
   a. preparation for the major: an introductory course (under 100) and 80. (PHIL 80 should normally be taken no later than the first quarter after declaring the major.) Students taking both quarters of the Winter/Spring Philosophy Introduction to the Humanities (IHUM) track can count 5 units toward the introductory Philosophy requirement.
   b. the core, 24 additional Philosophy units as follows:
      1. logic: one from 50, 150, 151, 154
      1. philosophy of science: any course from 60, 61, 156, 163-168
      2. moral and political philosophy: one from 170-173
      3. metaphysics and epistemology: one from 180-189
      4. history of philosophy: 100 and 102 are required of each major
   c. one undergraduate philosophy seminar from the 194 series.
   d. electives: courses numbered 10 or above, at least 13 units of which must be in courses numbered above 99.
2. Units for Tutorial, Directed Reading (PHIL 196, 197, 198), *The Dualist* (PHIL 198), Honors Seminar (PHIL 199), or affiliated courses may not be counted in the 55-unit requirement. No more than 10 units completed with grades of 'satisfactory' and/or 'credit' may be counted in the 55-unit requirement.
3. A maximum of 10 transfer units or two courses can be used for the departmental major. In general, transfer courses cannot be used to satisfy the five area requirements or the undergraduate seminar requirement. Students may not substitute transfer units for the PHIL 80 requirement.

SPECIAL PROGRAM IN HISTORY AND PHILOSOPHY OF SCIENCE

Undergraduates may major in Philosophy with a field of study in History and Philosophy of Science. This field of study is declared on Axess. Each participating student is assigned an adviser who approves the course of study. A total of 61 units are required for the sub-major, to be taken according to requirements 1 through 5 below. Substitutions for the listed courses are allowed only by written consent of the undergraduate adviser for History and Philosophy of Science. Students are encouraged to consider doing honors work with an emphasis on the history and philosophy of science. Interested students should see the description of the honors thesis in Philosophy and consult their advisers for further information.

1. Three science courses (for example, biology, chemistry, physics) for 12 units.
2. The following Philosophy (PHIL) core courses must be completed with a letter grade by the end of the junior year:
   a. one from 50, 150, 151, 154
   b. 60 or 61
   c. 80
3. Three history of science courses.
4. Three philosophy of science courses, of which one must be PHIL 164.
5. Three additional courses related to the major, in philosophy or history, to be agreed on by the adviser.
6. At least six courses in the major must be completed at Stanford with a letter grade. Units for Tutorial, Directed Reading, or *The Dualist* (196, 197, 198) may not be counted in the requirement. No more than 10 units completed with grades of 'satisfactory' and/or 'credit' may be counted in the requirement.
7. Transfer units must be approved in writing by the Director of Undergraduate Study at the time of declaring a major. Transfer courses are strictly limited when used to satisfy major requirements.

SPECIAL OPTION IN PHILOSOPHICAL AND LITERARY THOUGHT

Undergraduates may major in Philosophy with a special option in philosophy and literature. This option is declared to the department; it is not declared on Axess, and it does not appear on the transcript or the diploma. Students in this option take courses alongside students from other major departments which also have a specialized option associated with the program for the study of philosophical and literary thought, with administrative staff in the DLCL. Each student in this option is assigned an adviser in Philosophy, and students' schedules and overall course of study must be approved in writing by the adviser, and the Directors of Undergraduate Studies of Philosophy and of the program.

A total of 65 units must be completed for this option, including the following requirements.

1. Core requirements for the major in Philosophy, including:
   a. an introductory course
   b. PHIL 80
   c. the core distribution requirements listed in section 1b of the general program above.
2. Gateway course in philosophy and literature (PHIL 81). This course should be taken as early as possible in the student's career, normally in the sophomore year.
3. Three courses in a single national literature, chosen by the student in consultation with the adviser and the program director of undergraduate studies. This normally involves meeting the language proficiency requirements of the relevant literature department.
4. Electives within Philosophy beyond the core requirements totaling at least 5 units, and drawn from courses numbered 100 or higher.
5. Two upper division courses of special relevance to the study of philosophy and literature, as identified by the committee in charge of the program. A list of approved courses is available from the program director of undergraduate studies.
6. Capstone seminar in the PHIL 194 series.
7. Capstone seminar of relevance to the study of philosophy and literature, as approved by the program committee. In some cases, with approval of the Philosophy Director of Undergraduate Study and the program director of undergraduate studies, the same course may be used to meet requirements 6 and 7 simultaneously. In any case, the student's choice of a capstone seminar must be approved in writing by the Philosophy Director of Undergraduate Study and the program director of undergraduate studies.

Students are encouraged to consider doing honors work in a topic related to philosophy and literature through the Philosophy honors program.

The following rules also apply to the special option:

1. Units for Honors Tutorial, Directed Reading (PHIL 196, 197, 198), *The Dualist* (PHIL 198), Honors Seminar (PHIL 199) may not be counted toward the 65-unit requirement. No more than 10 units with a grade of 'satisfactory' or 'credit' may be counted toward the unit requirement.
2. A maximum of 15 transfer units may be counted toward the major, at most 10 of which may substitute for courses within Philosophy. Transfer credits may not substitute for PHIL 80 or 81, and are approved as substitutes for the five area requirements or PHIL 194 only in exceptional cases.

3. Courses offered in other departments may be counted toward requirements 3, 5 and 7, but such courses, including affiliated courses, do not generally count toward the other requirements. In particular, such courses may not satisfy requirement 4.
4. Units devoted to meeting the language requirement are not counted toward the 65-unit requirement.

HONORS PROGRAM

Students who wish to undertake a more intensive and extensive program of study, including seminars and independent work, are invited to apply for the honors program during Winter Quarter of the junior year. Admission is selective on the basis of demonstrated ability in philosophy, including an average grade of at least 'A-' in a substantial number of philosophy courses and progress towards satisfying the requirements of the major.

With their application, candidates should submit an intended plan of study for the remainder of the junior and the senior years. It should include at least 5 units of Senior Tutorial (196) during Autumn and/or Winter Quarter(s) of the senior year. Students who are applying to Honors College may use the same application for philosophy honors. In the quarter preceding the tutorial, students should submit an essay proposal to the Philosophy undergraduate director and determine an adviser.

Students applying for honors should enroll in Junior Honors Seminar (199) during the Spring Quarter of the junior year.

The length of the honors essay may vary considerably depending on the problem and the approach; usually it falls somewhere between 7,500 and 12,500 words. This essay may use work in previous seminars and courses as a starting point, but it cannot be the same essay that has been used, or is being used, in some other class or seminar. It must be a substantially new and different piece of work reflecting work in the tutorials.

A completed draft of the essay is submitted to the adviser at the end of the Winter Quarter of the senior year. Any further revisions must be finished by the fifth full week of the Spring Quarter, when three copies of the essay are to be given to the undergraduate secretary. The honors essay is graded by the adviser together with a second reader, chosen by the adviser in consultation with the student. The student also provides an oral defense of the thesis at a meeting with the adviser and second reader. The essay must receive a grade of 'A-' or better for the student to receive honors.

Honors tutorials represent units in addition to the 55-unit requirement.

MINOR IN PHILOSOPHY

A minor in Philosophy consists of at least 30 units of Philosophy courses satisfying the following conditions:

1. Students taking both quarters of the Winter/Spring Philosophy Introduction to the Humanities (IHUM) track may count these courses as equivalent to a maximum of 5 units of Philosophy courses under 100.
2. At least 10 units must be from courses numbered 100 or above.
3. The 30 units must include one of:
   a. a history of philosophy course numbered 100 or above
   b. two quarters of IHUM (only 5 of the 10 units can count towards 30-unit requirement)
4. One course from any two of the following three areas (PHIL):
   a. philosophy of science and logic: 60, 61, 156, 163-168; 50, 150, 151, 154
   b. moral and political philosophy: 20, 30, 170-172
   c. metaphysics and epistemology: 10, 80, 180-189
5. Units for tutorials, directed reading, and affiliated courses may not be counted.
6. Transfer units must be approved in writing by the Director of Undergraduate Study at the time of declaring. The number of transfer units is generally limited to a maximum of 10.
7. No more than 6 units completed with grades of 'satisfactory' or 'credit' count towards the 30-unit requirement.

Students must declare their intention to minor in Philosophy in a meeting with the Director of Undergraduate Study. This formal declaration must be made no later than the last day of the quarter two quarters before degree conferral. The Permission to Declare a Philosophy Minor (signed by the Director of Undergraduate Study) lists courses taken and to be taken to fulfill minor requirements. This permission is on file in the department office. Before graduation, a student's record is checked to see that requirements have been fulfilled, and the results are reported to the University Registrar.

JOINT MAJOR IN PHILOSOPHY AND RELIGIOUS STUDIES

The joint undergraduate major in Philosophy and Religious Studies consists of 60 units of course work with approximately one third each in the philosophy core, the religious studies core, and either the general major or the special concentration. Affiliated courses cannot be used to satisfy this requirement.

No courses in either the philosophy or religious studies core may be taken satisfactory/no credit or credit/no credit.

In general, transfer units cannot be used to satisfy the core requirements. Transfer units and substitutions must be approved by the director of undergraduate studies in the appropriate department.

CORE REQUIREMENTS

1. Philosophy (PHIL) courses:
   a. 80
   b. 16 units, including at least one Philosophy course from each of the following areas:
      1. logic and philosophy of science: 50, 60, 61, 150, 151, 154, 156, 162-168
      1. ethics and value theory: 170-173
      2. epistemology, metaphysics, and philosophy of language: 180-189
      3. history of philosophy: 100-103
2. Religious Studies (RELIGST) courses: 20 units, chosen in consultation with the student's adviser, including:
   a. RELIGST 290. Theories of Religion (5 units; Winter Quarter; recommended junior year; fulfills WIM requirement)
   b. at least one course in philosophy of religion, broadly construed: RELIGST 52, 54, 62, 101, 173, 174E, 183, 212, 220, 226, 238, 240, 242, 244, 245, 271A, 271B, 273 274, 275, 278, 279, 280
   c. diversity requirement: Students may not take all their religion courses in one religious tradition.

General Major Requirements—Five additional courses (approximately 20 units) divided between the two departments. No more than five of these units may come from courses numbered under 99 in either department. Each student must also take at least one undergraduate seminar in religious studies and one undergraduate seminar in philosophy.

Special Concentration—With the aid of an adviser, students pursue a specialized form of inquiry in which the combined departments have strength; for example, American philosophy and religious thought, philosophical and religious theories of human nature and action, philosophy of religion. Courses for this concentration must be approved in writing by the adviser.

Directed Reading and Satisfactory/No Credit Units—Units of directed reading for fulfilling requirements of the joint major are allowed only with special permission. No more than 10 units of work with a grade of 'satisfactory' count toward the joint major.

HONORS PROGRAM

Students pursuing a joint major in Philosophy and Religious Studies may also apply for honors by following the procedure for honors in either of the departments.

COTERMINAL BACHELOR'S AND MASTER'S DEGREES IN PHILOSOPHY

It is possible to earn an M.A. in Philosophy while earning a B.A. or B.S. This can usually be done by the end of the fifth undergraduate year, although a student whose degree is not in Philosophy may require an additional year. Standards for admission to, and completion of, this program are the same as for M.A. applicants who already have the bachelor's degree when matriculating. Applicants for the coterminal program are not, however, required to take the Graduate Record Exam.

University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees" section of this bulletin. For University coterminal degree program rules and University application forms, see http://studentaffairs.stanford.edu/registrar/publications#Coterm.

MASTER OF ARTS IN PHILOSOPHY

University requirements for the M.A. are discussed in the "Graduate Degrees" section of this bulletin.

Three programs lead to the M.A. in Philosophy. One is a general program providing a grounding in all branches of the subject. The others provide special training in one branch.

Admissions—All prospective master's students, including those currently enrolled in other Stanford programs, must apply for admission to the program. No fellowships are available. Entering students must meet with the director of the master's program and have their adviser's approval, in writing, of program proposals. The master's program should not be considered a stepping stone to the doctoral program; these two programs are separate and distinct.

Unit Requirements—Each program requires a minimum of 45 units in philosophy. Students in a special program may be allowed or required to replace up to 9 units of philosophy by 9 units in the field of specialization. Although the requirements for the M.A. are designed so that a student with the equivalent of a strong undergraduate philosophy major at Stanford might complete them in one year, most students need longer. Students should also keep in mind that although 45 units is the minimum required by the University, quite often more units are necessary to complete department requirements. Up to 6 units of directed reading in philosophy may be allowed. There is no thesis requirement, but an optional master's thesis or project, upon faculty approval, may count as the equivalent of up to 8 units. A special program may require knowledge of a foreign language. At least 45 units in courses numbered 100 or above must be completed with a grade of 'B-' or better at Stanford. Students are reminded of the University requirements for advanced degrees, and particularly of the fact that for the M.A., students must complete three full quarters as measured by tuition payment.

GENERAL PROGRAM

The General Program requires a minimum of 45 units in Philosophy courses numbered above 99. These courses must be taken for a letter grade, and the student must receive at least a 'B-' in the course. Courses taken to satisfy the undergraduate core or affiliated courses may not be counted in the 45 units. The requirement has three parts:

1. *Undergraduate Core*—
   Students must have when they enter, or complete early in their program, the following undergraduate courses (students entering from other institutions should establish equivalent requirements with a master's adviser upon arrival or earlier):
   a. Logic: 50 (formerly 57), 150 (formerly 159), or 151 (formerly 160A)
   b. Philosophy of science: any course from 60, 61, 163-167
   c. Moral and political philosophy: one from 170-173
   d. Metaphysics and epistemology: one from 80, 180-189
   e. History of philosophy: two history of philosophy courses numbered 100 or above
2. *Graduate Core*—
   Students must take at least one course numbered over 105 from three of the following five areas (courses used to satisfy the undergraduate core cannot also be counted toward satisfaction of the graduate core). Crosslisted and other courses taught outside the Department of Philosophy do not count towards satisfaction of the core.
   a. Logic and semantics
   b. Philosophy of science and history of science
   c. Ethics, value theory, and moral and political philosophy
   d. Metaphysics, epistemology, and philosophy of language
   e. History of philosophy
3. Each master's candidate must take at least two courses numbered above 200; these cannot be graduate sections of undergraduate courses.
4. *Specialization*—
   Students must take at least three courses numbered over 105 in one of the five areas.

SPECIAL PROGRAM IN SYMBOLIC SYSTEMS

Students should have the equivalent of the Stanford undergraduate major in Symbolic Systems. Students who have a strong major in one of the basic SSP disciplines (philosophy, psychology, linguistics, computer science) may be admitted, but are required to do a substantial part of the undergraduate SSP core in each of the other basic SSP fields. This must include the following three philosophy courses or their equivalents: 80; 151 (formerly 160A); and one from 181, 183, 184, 186. This work does not count towards the 45-unit requirement.

COURSE REQUIREMENTS

1. Four courses in philosophy at the graduate level (numbered 200 or above), including courses from three of the following five areas:
   a. Philosophy of language
   b. Logic
   c. Philosophy of mind
   d. Metaphysics and epistemology
   e. Philosophy of science
   At most two of the four courses may be graduate sections of undergraduate courses numbered 100 or higher.
2. Three courses numbered 100 or higher from outside Philosophy, chosen in consultation with an adviser. These courses should be from two of the following four areas:
   a. Psychology
   b. Linguistics
   c. Computer Science
   d. Education
   Remaining courses are chosen in consultation with and approved by an adviser.

SPECIAL PROGRAM IN THE PHILOSOPHY OF LANGUAGE

Admission is limited to students with substantial preparation in philosophy or linguistics. Those whose primary preparation has been in linguistics may be required to satisfy all or part of the undergraduate core requirements as described in the "General Program" subsection above. Those whose preparation is primarily in philosophy may be required to take additional courses in linguistics.

COURSE REQUIREMENTS

1. Philosophy of language: two approved courses in the philosophy of language numbered 180 or higher.
2. Syntactic theory and generative grammar: 384 and LINGUIST 231.
3. Logic: at least two approved courses numbered 151 (formerly 160A) or higher.
4. An approved graduate-level course in mathematical linguistics or automata theory.

DOCTOR OF PHILOSOPHY IN PHILOSOPHY

Prospective graduate students should see http://gradadmissions.stanford.edu for information and application materials. Applicants should take the Graduate Record Examination by October of the year the application is submitted.

The University's basic requirements for the Ph.D. degree including residence, dissertation, and examination are discussed in the "Graduate Degrees" section of this bulletin. The requirements detailed here are department requirements.

Courses used to satisfy any course requirement in Philosophy must be passed with a letter grade of 'B-' or better (no satisfactory/no credit), except in the case of a course/seminar used to satisfy the third-year course/seminar requirement and taken for only 2 units. Such a reduced-unit third-year course/seminar must be taken credit/no credit.

At the end of each year, the department reviews the progress of each student to determine whether the student is making satisfactory progress, and on that basis to make decisions about probationary status and termination from the program where appropriate.

Any student in one of the Ph.D. programs may apply for the M.A. when all University and department requirements have been met.

PROFICIENCY REQUIREMENTS

1. *First-year Ph.D. Proseminar*—A one quarter, topically focused seminar offered in Autumn Quarter, and required of all first-year students.
2. *Distribution requirements during the first six quarters*—
   a. six courses distributed across three areas as follows:
      1. two courses in value theory including ethics, aesthetics, political philosophy, social philosophy, philosophy of law. At least one of the courses satisfying this distribution requirement must be in ethics or political philosophy.
      2. Two courses in language, mind, and action. One course satisfying this requirement must be drawn from the language related courses, and one from mind and action related courses.
      3. two courses in metaphysics and epistemology (including metaphysics, epistemology, philosophy of science). At least one of the courses satisfying this requirement must be drawn from either metaphysics or epistemology.

      • Instructors indicate which courses may satisfy particular requirements. If a course potentially satisfies more than one requirement the student may use it for only one of those area requirements; no units may be double-counted. Students must develop broad competencies in all these areas. Those without strong backgrounds in these areas would normally satisfy these distribution requirements by taking more basic courses rather than highly specialized and focused courses. Students should consult with their adviser in making these course decisions, and be prepared to explain these decisions when reviewed for candidacy; see requirement 6 below.

   b. Logic requirement: PHIL 150 or equivalent.
   c. History/logic requirement. Three of the four courses listed below.
      1. Three approved history courses
      2. PHIL 151

      • To satisfy this history/logic requirement it is necessary to take at least one course in ancient philosophy and one course in the history of modern philosophy.

   d. Students should normally take at least 64 graduate level units at Stanford during their first six quarters (in many cases students would take more units than that) and of those total units, at least 49 units of course work are to be in the Philosophy department. These courses must be numbered above 110, but not including Teaching Methods (PHIL 239) or affiliated courses. Units of Individual Directed Reading are normally not to be counted toward this 49-unit requirement unless there is consent from the student's adviser and the Director of Graduate Studies.
3. *Writing requirement*—A qualifying paper of professional quality and approximately 8000 words. Students must complete a version of the paper, which is itself likely to be a revision of a paper written during the first year of course work, by the beginning of their fourth quarter. The paper is read by a committee of two faculty who make suggestions for additional revision. The final version must be submitted by the first day of the sixth quarter, normally Spring Quarter of the second year.
4. *Teaching Assistancy*—A minimum of five quarters of teaching assistancy are required for the Ph.D. Normally students do not teach in their first year and teach no more than two quarters in their second year. Students are required to take PHIL 239 during Spring Quarter of their first year and during Autumn Quarter of their second year.
5. *Review at the End of the Second Year for Advancement to Candidacy*—By the fourth week of the sixth quarter students must submit a one-page explanation of their first- and second-year course plan and their writing requirement paper. The faculty's review of each student includes a review of the student's record, an assessment of the qualifying paper, and an assessment of the student's preparation for work in her/his intended area of specialization, as well as recommendations of additional preparation, if necessary.
6. *Candidacy*—To continue in the Ph.D. program, each student must be approved for candidacy during the sixth academic quarter, normally the Spring Quarter of the student's second year. Students may be approved for candidacy on a conditional basis if they have only one or two outstanding deficiencies, but are not officially advanced to candidacy until these deficiencies have been removed. Approval for candidacy indicates that, in the department's judgment, the student can complete the Ph.D. In reaching this judgment, the department considers the overall quality of the student's work during the first six quarters and the student's success in fulfilling course and writing requirements.
7. During the Summer Quarter of the second year, students are required to attend a dissertation development seminar given by the department.
8. During the third year of graduate study, and after advancement to candidacy, a Ph.D. student must complete at least three graduate-level courses and/or seminars, at least two of which must be in Philosophy. Courses required for candidacy are not counted toward satisfaction of this requirement. Courses and/or seminars outside Philosophy are determined in consultation with a student's adviser. Except in special circumstances, one of these courses and/or seminars may be taken for reduced units if that option is provided by the faculty teaching the course or seminar. Courses used to satisfy these requirements must be passed with a letter grade of 'B-' or better, except in the case of a course or seminar used to satisfy the third-year course and/or seminar requirement and taken for only 2 units. Such a reduced-unit third-year course or seminar must be taken credit/no credit.
9. *Dissertation Work and Defense*—The third and fourth, and normally fifth, years are devoted to dissertation work. Students should make every effort to conform to the following deadlines.
   a. *Dissertation Proposal*—By Spring Quarter of the third year, students choose a dissertation topic, a reading committee, and a possible thesis relative to that topic. The topic and thesis should be sketched in a proposal of 3-5 pages, along with a detailed, annotated bibliography demonstrating familiarity with the relevant literature. Individual faculty on the committee may impose further requirements on the proposal. The proposal should be approved by the read-

ing committee before the meeting on graduate student progress late in Spring Quarter.

b. *Departmental Oral*—During Autumn Quarter of the fourth year, students take an oral examination, called the departmental oral, based on at least 30 pages of written work, in addition to the proposal. The aim of the exam is to help the student arrive at an acceptable plan for the dissertation and to make sure that student, thesis topic, and adviser make a reasonable fit.

c. *Fourth-Year Colloquium*—No later than Spring Quarter of the fourth year, students present a research paper in a seminar open to the entire department. This paper should be on an aspect of the student's dissertation research.

d. *University Oral Exam*—Ph.D. students must submit a completed draft of the dissertation to the reading committee at least one month before the student expects to defend the thesis in the University oral exam. If the student is given consent to go forward, the University oral take place approximately two weeks later. A portion of the exam consists of a student presentation based on the dissertation and is open to the public. A closed question period follows. If the draft is ready by Autumn Quarter of the fourth year, the student may request that the University oral count as the department oral.

SPECIAL GRADUATE PROGRAMS

The department recognizes that some students may need to spend a large amount of time preparing themselves in some other discipline related to their philosophical goals, or in advanced preparation in some area within philosophy. In such circumstances, the department may be willing to waive some of the Ph.D. requirements. Such an exemption is not automatic; a program must be worked out with an adviser and submitted to the department some time in the student's first year. This proposal must be in writing and must include:

1. The areas to be exempted (see below).
2. A program of additional courses and seminars in the special area, usually at least 12 units.
3. A justification of the program that considers both intellectual coherence and the student's goals.

The department believes there is plenty of room for normal specialization within the program as it stands, and that all students specialize to some extent. In particular, a normal course schedule for the first six quarters would involve graduate units considerably beyond the basic requirement of 49 units in Philosophy. Thus, the intent is not to exempt courses on a one-to-one basis, but only to grant exemptions when a student plans an extensive and intensive study of some relevant area.

Special program students may be exempted from the following:

1. One item from the Proficiency requirement 2.a in the general Ph.D. program.
2. PHIL 150 (formerly 159); but in this case, a student must take PHIL 50. Note that PHIL 50 does not earn graduate credit towards the Proficiency Requirement 2.d.

   If a student's special program involves substantial course work outside of philosophy, the student may, with the approval of the adviser, petition the department to reduce requirement 2.d, the Philosophy unit requirement for the first two years. Normally this requirement is not reduced below 37 units.

INTERDEPARTMENTAL PROGRAMS

PH.D. IN PHILOSOPHY AND HUMANITIES

The department participated in the Graduate Program in Humanities leading to a Ph.D. degree in Philosophy and Humanities. At this time, the option is available only to students already enrolled in the Graduate Program in Humanities; no new students are being accepted. The University remains committed to a broad-based graduate education in the humanities; the courses, colloquium, and symposium continue to be offered, and the Division of Literatures, Cultures, and Languages provides advising for students already enrolled who may contact DLCL Student Affairs at 650-724-1333 or dlcl@stanford.edu for further information. Courses are listed under the subject code HUMNTIES and may be viewed on the *Stanford Bulletin's* ExploreCourses web site.

GRADUATE PROGRAM IN COGNITIVE SCIENCE

Philosophy participates with the departments of Computer Science, Linguistics, and Psychology in an interdisciplinary program in Cognitive Science. It is intended to provide an interdisciplinary education, as well as a deeper concentration in philosophy, and is open to doctoral students. Students who complete the requirements within Philosophy and the Cognitive Science requirements receive a special designation in Cognitive Science along with the Ph.D. in Philosophy. To receive this field designation, students must complete 30 units of approved courses, 18 of which must be taken in two disciplines outside of philosophy. The list of approved courses can be obtained from the Cognitive Science program located in the Department of Psychology.

SPECIAL TRACK IN PHILOSOPHY AND SYMBOLIC SYSTEMS

Students interested in interdisciplinary work relating philosophy to artificial intelligence, cognitive science, computer science, linguistics, or logic may pursue a degree in this program.

Prerequisites—Admitted students should have covered the equivalent of the core of the undergraduate Symbolic Systems Program requirements as described in the "Symbolic Systems" section of this bulletin, including courses in artificial intelligence (AI), cognitive science, linguistics, logic, and philosophy. The graduate program is designed with this background in mind. Students missing part of this background may need additional course work. Aside from the required course work below, the Ph.D. requirements are the same as for the regular program, with the exception that one course in value theory and one course in history may be omitted.

Courses of Study—The program consists of three years of courses and two years of dissertation work. Students are required to take the following courses in the first two years:

1. Philosophy courses:
   a. at least three graduate seminars in the general area of symbolic systems other than logic, such as philosophy of mind and philosophy of language.
   b. two quarters of graduate logic courses from among 350A, 351A, 352A, 353A
2. Five cognitive science and computer science courses:
   a. at least two courses in cognitive psychology
   b. two or three graduate courses in computer science, at least one in AI and one in theory
3. Three linguistics and computational linguistics courses:
   a. graduate courses on natural language that focus on two of the following areas: phonetics and phonology, syntax, semantics, or pragmatics
   b. one graduate course in computational linguistics, typically LINGUIST 288
4. At least two additional graduate seminars at a more advanced level, in the general area of the program, independent of department. These would typically be in the area of the student's proposed dissertation project.

The requirements for the third year and subsequent years are the same as for other third-year graduate students in philosophy: The dissertation committee must include at least one member of the Department of Philosophy and one member of the Program in Symbolic Systems outside the Department of Philosophy.

JOINT PROGRAM IN ANCIENT PHILOSOPHY

This program is jointly administered by the Departments of Classics and Philosophy and is overseen by a joint committee composed of members of both departments. It provides students with the training, specialist skills, and knowledge needed for research and teaching in ancient philosophy while producing scholars who are fully trained as either philosophers with a strong spe-

cialization in ancient languages and philology, or classicists with a concentration in philosophy.

Students are admitted to the program by either department. Graduate students admitted by the Philosophy department receive their Ph.D. from the Philosophy department; those admitted by the Classics department receive their Ph.D. from the Classics department. For Philosophy graduate students, this program provides training in classical languages, literature, culture, and history. For Classics graduate students, this program provides training in the history of philosophy and in contemporary philosophy.

Each student in the program is advised by a committee consisting of one professor in each department.

Requirements for Philosophy Graduate Students—These are the same as the proficiency requirements for the Ph.D. in Philosophy with the following exception: if the student has already taken two courses in modern philosophy, there is no need to take a course in modern philosophy to satisfy proficiency requirement 2.c.

One year of Greek is a requirement for admission to the program. If students have had a year of Latin, they are required to take 3 courses in second- or third-year Greek or Latin, at least one of which must be in Latin. If they have not had a year of Latin, they are then required to complete a year of Latin, and take two courses in second- or third-year Greek or Latin.

Students are also required to take at least three courses in ancient philosophy at the 200 level or above, one of which must be in the Classics department and two of which must be in the Philosophy department.

GRADUATE DEGREES IN HISTORY AND PHILOSOPHY OF SCIENCE AND TECHNOLOGY

See the description in the "History and Philosophy of Science and Technology" section of this bulletin.

PH.D. MINOR IN PHILOSOPHY

To obtain a Ph.D. minor in Philosophy, students must follow these procedures:

1. Consult with the Director of Graduate Study to establish eligibility, and select a suitable adviser.
2. Give to the department academic assistant a signed copy of the program of study (designed with the adviser) which offers:
   a. 30 units of courses in the Department of Philosophy with a letter grade of 'B-' or better in each course. No more than 3 units of directed reading may be counted in the 30-unit requirement.
   b. At least one course or seminar numbered over 99 to be taken in each of these five areas:
      1. Logic
      2. Philosophy of science
      3. Ethics, value theory, and moral and political philosophy
      4. Metaphysics, epistemology, and philosophy of language
      5. History of philosophy
   c. Two additional courses numbered over 199 to be taken in one of those (b) five areas.
3. A faculty member from the Department of Philosophy (usually the student's adviser) serves on the student's doctoral oral examination committee and may request that up to one third of this examination be devoted to the minor subject.
4. Paperwork for the minor must be submitted to the department office before beginning the program.

COGNATE COURSES

The following courses have substantial philosophical content. However, in the absence of special permission these courses cannot generally be used to satisfy requirements for the Philosophy major or graduate degrees in Philosophy.

- CLASSHIS 101. The Greeks
- CLASSGRK 113. Advanced Greek: Thucydides
- CLASSGEN 94. Ethics of Pleasure
- CLASSGEN 208B. Survey of Greek and Latin Literature: Classical Greek
- CLASSGEN 237. Augustine on the Body (Same as COMPLIT 337)
- ETHICSOC 179M. Libertarianism, Egalitarianism, and Public Policy
- GERGEN 246/346. Being at Home in the World: Kant's Critique of the Power of Judgment
- IPS 206A. Politics and Collective Action (same as POLISCI 331S, PUBLPOL 304A)
- MATH 161. Set Theory
- POLISCI 132. Ethics of Political Animals
- POLISCI 332R,S. Greek Political Economy I,II
- RELIGST 278/378. Heidegger: Confronting the Ultimate

PHYSICS

Emeriti: (Professors) Steven Chu, Alexander L. Fetter, Stanley S. Hanna, William A. Little, David M. Ritson, H. Alan Schwettman, Robert V. Wagoner, John Dirk Walecka, Stanley G. Wojcicki*, Mason R. Yearian; *(Professors, Research)* John A. Lipa*, Todd I. Smith*, John P. Turneaure; *(Professors, Courtesy)* Peter A. Sturrock (Applied Physics), Richard Taylor (SLAC National Accelerator Laboratory)

Chair: Steven Kahn

Associate Chair: Giorgio Gratta

Professors: Roger Blandford, Phil Bucksbaum, Patricia Burchat, Blas Cabrera, Savas G. Dimopoulos, Sebastian Doniach, Giorgio Gratta, Shamit Kachru, Steven Kahn, Renata E. Kallosh, Aharon Kapitulnik, Mark Kasevich, Steven A. Kivelson, Robert B. Laughlin, Andrei D. Linde, Peter F. Michelson, Douglas D. Osheroff, Vahé Petrosian, Roger W. Romani, Zhi-Xun Shen, Stephen Shenker, Eva Silverstein, Leonard Susskind, Shoucheng Zhang

Associate Professors: Tom Abel, Steven Allen, Sarah Church, David Goldhaber-Gordon, Hari Manoharan, Kathryn Moler

Assistant Professors: Stefan Funk, Peter Graham, Sean Hartnoll (Effective Autumn 2010), Chao-Lin Kuo, Xiao-liang Qi, Leonardo Senatore, Risa Wechsler

Professor (Research): Phillip H. Scherrer

Courtesy Professors: Rhiju Das, Craig Levin,Stephen Quake, Richard N. Zare

Lecturer: Chaya Nanavati, Rick Pam

Consulting Professors: Ralph Devoe, Gerald Fisher, Barbara Jones, Greg Madejski, Alan Title

Visiting Professors: Edward Witten, Chandra Varma

* Recalled to active duty.

Department Offices: 382 Via Pueblo Mall

Mail Code: 94305-4060

Phone: (650) 723-4344

Web Site: http://stanford.edu/dept/physics

Courses offered by the Department of Physics are listed under the subject code PHYSICS on the *Stanford Bulletin's* ExploreCourses web site.

MISSION OF THE UNDERGRADUATE PROGRAM IN PHYSICS

The mission of the undergraduate program in Physics is to provide students with a sound foundation in both classical and modern physics. Courses in the program include labs in which undergraduates carry out individual experiments which, in advanced courses, may include the conception, design, and fabrication of laboratory equipment. Students are also encouraged to participate in independent research projects. The program prepares students for future careers in medicine, engineering, government, and industry, as well as graduate programs in physics.

LEARNING OUTCOMES

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. the ability to formulate testable scientific hypotheses and to design approaches to obtain data to test the respective hypotheses.
2. the ability to make appropriate, logical measurements and produce quantitative results.
3. the ability to draw appropriate conclusions supported by experimental results, including the ability to methodically determine statistical and systematic errors to report limits (uncertainties) on the accuracy of results.
4. the ability to communicate content understanding and research outcomes effectively (i.e., produce a written product that is well organized and demonstrates understanding of the discipline and its techniques.)

COURSE WORK

Course work is designed to provide students with a sound foundation in both classical and modern physics. Students who wish to specialize in astronomy, astrophysics, or space science should also consult the "Astronomy Program" section of this bulletin.

Three introductory series of courses include labs in which undergraduates carry out individual experiments. The Intermediate Physics Laboratories offer facilities for increasingly complex individual work, including the conception, design, and fabrication of laboratory equipment. Undergraduates are also encouraged to participate in research; most can do this through the senior thesis and/or the summer research program.

The study of physics is undertaken by three principal groups of undergraduates: those including physics as part of a general education; those preparing for careers in professional fields that require a knowledge of physics, such as medicine or engineering; and those preparing for careers in physics or related fields, including teaching and research in colleges and universities, research in federally funded laboratories and industry, and jobs in technical areas. Physics courses numbered below 100 are intended to serve all three of these groups. The courses numbered above 100 mainly meet the needs of the third group, but also of some students majoring in other branches of science and in engineering.

ENTRY-LEVEL SEQUENCES IN PHYSICS

The Department of Physics offers three year-long, entry-level physics sequences, the PHYSICS 20, 40, and 60 series. The first of these is non-calculus-based, and is intended primarily for those who are majoring in biology. Such students with AP Physics credit, particularly those who are considering research careers, may wish to consider taking the PHYSICS 20 or 40 series, rather than using AP placement. These introductory series provide a depth and emphasis on problem solving that is of significant value in biological research, which today involves considerable physics-based technology.

For those intending to major in engineering or the physical sciences, or simply wishing a stronger background in physics, the department offers the PHYSICS 40 and 60 series. Either of these satisfies the entry-level physics requirements of any Stanford major. The 60 series is intended for those who have already taken a Physics course at the level of the 40 series, or at least have a strong background in mechanics, some background in electricity and magnetism, and a strong background in calculus. The PHYSICS 40 series begins with mechanics in Winter Quarter, electricity and magnetism in Spring Quarter, and light and heat in Autumn Quarter. While it is recommended that most students begin the sequence with mechanics (PHYSICS 41) in Winter Quarter, those who have had strong physics preparation in high school (such as a score of at least 4 on the Physics Advanced Placement C exam) may start the sequence with PHYSICS 45 in Autumn Quarter.

Effective academic year 2009-10, all courses for the Physics major must be taken for a letter grade, and a grade of 'C-' or better must be received for all units applied toward the major.

GRADUATE PROGRAMS IN PHYSICS

Graduate students find opportunities for research in the fields of astrophysics, particle astrophysics, cosmology, experimental particle physics, particle theory, string theory, intermediate energy physics, low temperature physics, condensed matter physics, materials research, atomic physics, laser physics, quantum electronics, coherent optical radiation, novel imaging technologies, and biophysics. Faculty advisers are drawn from many departments, including Physics, Applied Physics, Materials Science and Engineering, Electrical Engineering, and Biology. Opportunities for research are also available with the faculty at SLAC in the areas of theoretical and experimental particle physics, particle astrophysics, cosmology, accelerator design, and photon science.

The number of graduate students admitted to the Department of Physics is strictly limited. Students should submit applications by Tuesday, December 14, 2010 for matriculation the following Autumn Quarter. Graduate students may normally enter the department only at the beginning of Autumn Quarter.

FELLOWSHIPS AND ASSISTANTSHIPS

The Department of Physics makes an effort to support all its graduate students through fellowships, teaching assistantships, research assistantships, or a combination of sources. More detailed information is provided with the offer of admission.

TEACHING CREDENTIALS

For information on teaching credentials, consult the "School of Education" section of this bulletin or visit http://susestep.stanford.edu. Also see the section on the Individually Designed Major program in Teaching Physical Science.

MASTER OF SCIENCE

The department does not offer a coterminal degree program, or a separate program for the M.S. degree, but this degree may be awarded for a portion of the Ph.D. degree work.

University requirements for the master's degree, discussed in the "Graduate Degrees" section of this bulletin, include completion of 45 units of unduplicated course work after the bachelor's degree. Among the department requirements are a grade point average (GPA) of at least 3.0 (B) for courses 210 or 211, 212, 220, 221, 230, 231, or their equivalents. Up to 6 of these required units may be waived on petition if a thesis is submitted.

LABORATORIES AND INSTITUTES

The Russell H. Varian Laboratory of Physics, the Physics and Astrophysics Building, the W. W. Hansen Experimental Physics Laboratory (HEPL), the E. L. Ginzton Laboratory, and the Geballe Laboratory for Advanced Materials (GLAM) together house a range of physics activities from general courses through advanced research. Ginzton Lab houses research on optical systems, including quantum electronics, metrology, optical communication and development of advanced lasers. GLAM houses research on novel and nanopatterned materials, from high-temperature superconductors and magnets to organic semiconductors, subwavelength photon waveguides, and quantum dots. GLAM also supports the materials community on campus with a range of characterization tools: it is the site for the Stanford Nanocharacterization Lab (SNL) and the NSF-sponsored Center for Probing the Nanoscale (CPN). The SLAC National Accelerator Laboratory is just a few miles from the Varian Laboratory. SLAC is a national laboratory funded by the Office of Basic Energy Sciences and High Energy Physics of the Department of Energy. Scientists at SLAC conduct research in photon science, accelerator physics, particle physics, astrophysics and cosmology. The laboratory hosts a two-mile-long linear accel-

erator that can accelerate electrons and positrons. Until recently, the PEP-II asymmetric-energy electron-positron storage ring was used to study CP violation in the B meson system. The Stanford Synchrotron Radiation Laboratory (SSRL) uses intense x-ray beams produced with another smaller storage ring on the SLAC site. The Linac Coherent Light Source (LCLS), completed in 2009, is the world's first x-ray free electron laser and has opened new avenues of research in ultra-fast photon science.

The Ginzton Laboratory, HEPL, GLAM, SLAC, and SSRL are listed in the "Academic Programs and Centers, Independent Research Laboratories, Centers, and Institutes" section of this bulletin. Students may also be interested in research and facilities at two other independent labs: the Center for Integrated Systems, focused on electronics and nanofabrication; and the Clark Center, an interdisciplinary biology, medicine, and bioengineering laboratory.

The Kavli Institute for Particle Astrophysics and Cosmology (KIPAC), formed jointly with the SLAC National Accelerator Laboratory, provides a focus for theoretical, computational, observational, and instrumental research programs, including the Fermi Gamma-Ray Space Telescope (FGST, formally known as GLAST), the Large Synoptic Survey Telescope (LSST), the Joint Dark Energy Mission (JDEM) and the Dark Energy Survey (DES). KIPAC members are also involved in several microwave background experiments, new x-ray telescopes, TeV gamma ray astronomy, the Cryogenic Dark Matter Search (CDMS) and the EXO-200 double beta decay experiments. Stanford is a member of the Hobby-Eberly Telescope Consortium, operating an innovative 9.2 meter-equivalent telescope at the McDonald Observatory in Texas. The CDMS experiment is operated in an underground laboratory on the Stanford campus and in the Soudan mine in Minnesota. Stanford is the center of activities for EXO-200, a search for neutrinoless double-beta decay, that is about to start recording data at a deep underground site in New Mexico. The experiment is sensitive to a neutrino mass close to 0.2 eV. Many research opportunities are available for students in the growing fields of particle astrophysics and cosmology.

The Stanford Institute for Theoretical Physics is devoted to the investigation of the basic structure of matter (particle theory, string theory, M-theory, quantum cosmology, condensed matter physics).

PHYSICS COURSE CATALOG NUMBERING SYSTEM

There are four series of beginning courses. One course from the teen series (15, 16, 17, 19) is recommended for the humanities or social science student who wishes to become familiar with the methodology and content of modern physics. The 20 series (21, 22, 23, 24, 25, 26) is recommended for general students and for students preparing for medicine or biology. The 40 series (41, 42, 43, 44, 45, 46) is for students of engineering, chemistry, earth sciences, mathematics, or physics. The advanced freshman series (61, 62, 63, 64, 65, 67) is for students who have had strong preparation in physics and calculus in high school. Students who have had appropriate background and wish to major in physics should take this introductory series.

The 20, 40, and 60 series consist of demonstration lectures on the fundamental principles of physics, problem work on application of these principles to actual cases, and lab experiments correlated with the lectures. Their objectives are not only to give information on particular subjects, but also to provide training in the use of the scientific method. The primary difference between the series of courses is that topics are discussed more thoroughly and treated with greater mathematical rigor in the 40 and 60 series.

Courses beyond 99 are numbered in accordance with a three-digit code. The first digit indicates the approximate level of the course:

100	undergraduate courses
200	first-year graduate courses
300	more advanced courses
400	research, special, or current topics

The second digit indicates the general subject matter:

00	laboratory
10,20,30	general courses
40	nuclear physics, nuclear energy, energy
50	elementary particle physics
60	astrophysics, cosmology, gravitation
70	condensed matter physics
80	optics and atomic physics
90	miscellaneous courses

BACHELOR OF SCIENCE IN PHYSICS

To help in deciding which introductory sequence is most suitable, students considering a major in Physics may contact the Undergraduate Program Coordinator (elva@stanford.edu) to arrange an advising appointment. Although it is possible to complete the Physics major in three years, students who contemplate starting the major during sophomore year should make an advising appointment to map out their schedule. Students who have had previous college-level courses (including EPGY) should make an advising appointment for placement and possible transfer credit. For advanced placement advice, see http://studentaffairs.stanford.edu/registrar/students/ap.

Undergraduates are offered help with physics problems in the Physics Tutoring Center in the Physics and Astrophysics Building, sub-basement, room S-17, which is staffed Monday through Friday. See schedule at http://physicstutor.stanford.edu.

1. Prospective Physics majors are advised to take PHYSICS 59, Current Research Topics, in their freshman or sophomore year.
2. A calculus-based entry-level series is required, either PHYSICS 61, (62), 63, 64, 65, 67, or 41, (42), 43, 44, 45, 46 (or preferably 67 rather than 44). One-unit mechanics lab courses (PHYSICS 42 and 62) are being introduced in 2010-11. The mechanics lab course is recommended for Physics majors taking the PHYSICS 40 or 60 series in 2010-11 and will be required for Physics majors taking either series in 2011-12.
   - Students who take the PHYSICS 40 series take PHYSICS 70, which covers the foundations of modern physics.
   - Students taking the PHYSICS 60 series do not take PHYSICS 70; instead, they must take one advanced Physics elective (100-level or higher).
3. In addition, the following advanced courses are required: PHYSICS 105, 107 (WIM), 108, 110, 120, 121, 130, 131, 170, and 171; MATH 51, 52, 53, 131P (MATH 173 can be taken in place of MATH131P); one additional Mathematics course numbered 101 or higher, or PHYSICS 112 or STATS 116 or EE 261.
   - MATH 51H, 52H, and 53H may substitute for MATH 51, 52, and 53.
4. It is recommended that students intending to complete a Ph.D. in Physics also take PHYSICS 113, 134, and one or more of the following, depending upon their interests:
   - PHYSICS 152A,B, 160, 161, 172, 204 and EE 268.
   - PHYSICS 113 is designed to be taken in parallel with 110.
5. The department advises the study of some computer science such as CS 106A,B or CS 106X.
6. Physics and Mathematics courses taken to satisfy the department's major requirements must be taken for a letter grade, and a grade of 'C-' or better must be received for all units applied toward the major.

REQUIRED COURSES FOR MAJORS

For sample schedules illustrating how to complete the Physics major, see http://physics.stanford.edu/academics/undergrad.html.

INTRODUCTORY SEQUENCE

Students must complete either the 40 or 60 series as follows:

40 Series:	*Qtr. and Units*	
PHYSICS 41. Mechanics	W	4
PHYSICS 42. Mechanics Lab (recommended in 2010/11; required 2011/12)	W	1
PHYSICS 43. Electricity and Magnetism	S	4

PHYSICS 44. Electricity and Magnetism Lab	S	1
PHYSICS 45. Light and Heat	A	4
PHYSICS 46. Light and Heat Lab	A	1
PHYSICS 67. Introduction to Laboratory Physics (recommended for physics majors in place of 44)	S	2
PHYSICS 70. Foundations of Modern Physics	A	4

60 Series: Subject and Catalog Number	*Qtr. and Units*	
PHYSICS 61. Mechanics and Special Relativity	A	4
PHYSICS 62. Mechanics Lab (recommended in 2010/11; required in 2011/12)	A	1
PHYSICS 63. Electricity, Magnetism and Waves	W	4
PHYSICS 64. Electromagnetism Lab	W	1
PHYSICS 65. Thermodynamics and Foundations of Modern Physics	S	4
PHYSICS 67. Introduction to Laboratory Physics	S	2
and		
MATH 51, 52, 53. Linear Algebra, Multivariable Calculus, and Ordinary Differential Equations	A,W,S	15
PHYSICS 59. Current Research Topics (recommended)*	A	1

INTERMEDIATE SEQUENCE

PHYSICS 105. Intermediate Laboratory I: Analog Electronics	A	3
PHYSICS 107. Intermediate Laboratory II: Experimental Techniques and Data Analysis (WIM)	W	4
PHYSICS 108. Intermediate Laboratory III: Project	W or S	3
PHYSICS 110. Intermediate Mechanics	S	4
PHYSICS 112. Math Methods of Physics (recommended)**	W	4
PHYSICS 113. Computational Physics (recommended)*	S	4
PHYSICS 120,121. Intermediate Electricity and Magnetism	W,S	8
and MATH 131P or MATH 173. Partial Differential Equations	A,W	3

ADVANCED SEQUENCE

PHYSICS 130,131. Quantum Mechanics	A,W	8
PHYSICS 134. Advanced Topics in Quantum Mechanics*	S	4
PHYSICS 170,171. Statistical Mechanics	A,W	8
and one advanced Mathematics elective (100 level or higher) *or* PHYSICS 112 or STATS 116 or EE 268.		
One advanced Physics elective (100 level or higher): required only for students who are not required to take PHYSICS 70		

* These courses are not required. PHYSICS 113 is recommended for students planning to work in technical fields. Both PHYSICS 113 and PHYSICS 134 are recommended for students who intend to complete a Ph.D. in Physics.

** Those wishing to pursue theoretical physics in graduate school may wish to take a collection of courses in the Department of Mathematics rather than or in addition to PHYSICS 112.

CONCENTRATIONS IN PHYSICS

The primary purpose of concentrations in the Physics major is to provide consistent and more formal advising to students who want to concentrate in a particular area of physics during their undergraduate education, or prepare for future graduate studies in a particular area of physics. Physics majors are not required to choose a concentration and a concentration does not add any formal requirements to the Physics major. Upon graduation, students receive a certificate of completion of a concentration.

Students seeking further advice on a given concentration should contact the professor whose name appears next to the respective title of each section below.

No more than one of the courses can be taken for CR/NC.

Within the chosen concentration below, complete at least four courses from the list or three courses plus a senior thesis.

A. APPLIED PHYSICS (HARI MANOHARAN)

Solid State—

- PHYSICS 172. Solid State Physics
- APPPHYS 270. Magnetism and Long Range Order in Solids
- MATSCI 195. Waves and Diffraction in Solids

Biophysics—

- APPPHYS 192. Introductory Biophysics

Lasers—

- EE 231. Introduction to Lasers
- EE 232. Laser Dynamics
- EE 268. Introduction to Modern Optics

Lab Methods—

- APPPHYS 207, 208. Laboratory Electronics, Analog and Digital
- APPPHYS 304. Lasers Laboratory

B. ASTROPHYSICS (ROGER ROMANI, SARAH CHURCH)

Requirements—

- PHYSICS 100. Introduction to Observational and Laboratory Astronomy
- PHYSICS 160. Introduction to Stellar and Galactic Astrophysics
- PHYSICS 161. Introduction to Extragalactic Astrophysics and Cosmology

Plus one elective from below or a senior thesis—

- PHYSICS 211. Continuum Mechanics
- PHYSICS 260. Introduction to Astrophysics and Cosmology
- PHYSICS 262. Introduction to Gravitation
- PHYSICS 312. Basic Plasma Physics; prerequisites are PHYSICS 210 and 220

C. BIOPHYSICS (SEB DONIACH)

- APPPHYS 136. Biology by the Numbers
- APPPHYS 192/292. Introductory Biophysics
- BIOC 202. Metabolic Biochemistry
- BIOPHYS 228. Computational Structure Biology
- BIO 141. Biostatistics
- BIO 132/232. Advanced Imaging Lab In Biophysics
- BIO 135/HUMBIO 182. Biological Clocks
- BIO 211. Biophysics of Sensory Transduction
- BIO 217. Neuronal Biophysics
- CS 273A. A Computational Tour of the Human Genome

It is recommended that Physics majors interested in pursuing a career in biophysics consider a minor in Biology.

D. GEOPHYSICS (SIMON KLEMPERER, GEOPHYSICS)

The Geophysics Department has revamped its offerings beginning 2010-11. The following requirements apply to students matriculating 2010-11 or later:

Requirements—

- GEOPHYS 110. Earth on the Edge
- GEOPHYS 120. Ice, Water, Fire
- GEOPHYS 150. Geodynamics

Plus one elective from below or a senior thesis—

- GEOPHYS 130. Introductory Seismology
- GEOPHYS 140. Remote Sensing
- GEOPHYS 170. Global Tectonics
- GEOPHYS 184. Journey to the Center of the Earth
- GEOPHYS 190. Near Surface Geophysics

Physics majors matriculating prior to 2010-11 who wish to complete a Concentration in Geophysics should consult Prof. Klemperer.

E. THEORETICAL PHYSICS (ANDREI LINDE)

- PHYSICS 152A,B. Introduction to Particle Physics
- PHYSICS 204. Seminar in Theoretical Physics
- PHYSICS 212. Statistical Mechanics
- PHYSICS 232. Quantum Mechanics
- PHYSICS 260. Introduction to Astrophysics and Cosmology
- PHYSICS 262. Introduction to Gravitation
- PHYSICS 330,331,332. Quantum Field Theory
- PHYSICS 351. Standard Model of Particle Physics and Beyond

- PHYSICS 362. Advanced Extragalactic Astrophysics and Cosmology
- PHYSICS 364. Advanced Gravitation

Notes to students taking this concentration:

1. Students should discuss the choice of courses with members of the Institute for Theoretical Physics and/or their major adviser.
2. Students may attend 330 after taking 130, 131 and 134. Prior study of special topics in quantum mechanics (232) may be helpful.

INDIVIDUALLY DESIGNED MAJOR PROGRAM IN TEACHING PHYSICAL SCIENCE

This major, a joint effort of the Department of Physics and the Stanford Teacher Education Program (STEP), is designed for students to prepare themselves as high school teachers of physics and general science. Students complete 47-49 units of Physics and related Mathematics courses, 40-43 units of course work in other sciences such as the life sciences, chemistry, and geosciences, and in general issues of science, and 9-15 units of concentration and depth courses. Total program units: 96-107. Students interested in this program should consult Professor Patricia Burchat (burchat@stanford.edu, 725-5771), and Professor Rachel Lotan, Director of the Stanford Teacher Education Program—Secondary in the School of Education (rlotan@stanford.edu).

CORE PHYSICS COURSES

Mechanics:	*Units*
PHYSICS 41. Mechanics	
PHYSICS 42. Mechanics Lab	
or PHYSICS 61. Mechanics and Special Relativity	
PHYSICS 62. Mechanics Lab	5
Heat:	
PHYSICS 45. Light and Heat	
PHYSICS 46. Light and Heat Lab	
or	
PHYSICS 65. Thermodynamics and Foundations of Modern Physics	
PHYSICS 67. Introduction to Laboratory Physics	5-6
Electricity and Magnetism:	
PHYSICS 43. Electricity and Magnetism	
PHYSICS 67. Introduction to Laboratory Physics	
or	
PHYSICS 63. Electricity, Magnetism, and Waves	
PHYSICS 64. Electricity and Magnetism Lab	
and	
PHYSICS 105. Analog Electronics (Lab)	8-9
Wave Motion:	
PHYSICS 107 Intermediate Physics Laboratory II: Experimental Techniques and Data Analysis (WIM)	4
Modern Physics (for students who take 40 series):	
PHYSICS 70. Foundations of Modern Physics	4
Applications:	
PHYSICS 59. Current Research Topics	1
Mathematics (Physics departmental requirement):	
MATH 51,52,53. Linear Algebra, Multivariable Calculus, *and* Ordinary Differential Equations *and* a course in Statistics (choose one):	
STATS 110. Statistical Methods in Engineering and the Physical Sciences	
STATS 116. Theory of Probability	
STATS 141. Biostatistics	
STATS 166. Computational Biology	
STATS 191. Introduction to Applied Statistics	20
Total	47-49

ADDITIONAL SCIENCE BREADTH COURSES

Life Sciences—	
BIO 41. Genetics, Biochemistry, and Molecular Biology	
BIO 42. Cell Biology and Animal Physiology	
BIO 43. Plant Biology, Evolution and Ecology	
or	
HUMBIO 2A,B, 3A,B, 4A,B	15
Chemistry—	
CHEM 31A and B, or 31X. Chemical Principles	
CHEM 33. Structure and Reactivity	8
Geosciences—	
EARTHSYS 10. Introduction to Earth Systems	
PHYSICS 15. The Nature of the Universe	
or PHYSICS 16. Cosmic Horizon	
or PHYSICS 17. Black Holes	8
General Issues of Science—	
STS 101. Science, Technology, and Contemporary Society	
EDUC 180. Directed Reading in History of Science	
ENGR 103. Public Speaking and Presentation Development	9-12
Concentration and Depth Courses—	
3 courses (100 level or above) in a single area of concentration	9-15
Total units for general science	49-58
Total units for the Physical Science program	96-107

This individually designed major program in Physical Science includes all the elements of a Program of Subject Matter Preparation for Secondary Teachers of Physics and General Science that has been approved by the California Commission on Teacher Credentialing (CCTC). Students who complete the program are exempt from taking the CSET examination in Physics and General Science for admission to the Stanford Teacher Education Program (STEP) or any other accredited secondary teacher education program in California. Full details of the CCTC-approved program may be found at http://ed.stanford.edu/suse/programs-degrees/program-coterminal-step.html.

Note: the Stanford individually designed major program in Physical Science requires course work beyond the CCTC-approved program, specifically 9-15 units of depth courses in a field of concentration: Physics, Astrophysics, Biology, Chemistry, Earth Sciences, Human Biology, or Computational Mathematics. See the adviser in the Physics department or the School of Education for more details.

SENIOR THESIS

The department offers students the opportunity to complete a senior thesis:

1. Students must submit a Senior Thesis Application form once they identify a Physics project, either theoretical or experimental, in consultation with individual faculty members. Proposal forms are available from the undergraduate coordinator and must be submitted by November 19 of the academic year in which the student plans to graduate.
2. Credit for the project is assigned by the adviser within the framework of PHYSICS 205. Work completed in the senior thesis program may not be used as a substitute for regular required courses for the Physics major.
3. A written report and a presentation of the work at its completion are required for the senior thesis. By mid-May, the senior thesis candidate is required to present the project at the department's senior thesis presentations. This event is publicized and open to the general public. The expectation is that the student's adviser, second reader, and all other senior thesis candidates attend.

HONORS PROGRAM

A Bachelor of Science in Physics with honors is awared to students who satisfy these requirements:

1. The student completes a senior thesis.
2. The student completes their course work with an overall GPA of 3.30 or higher, and a GPA of 3.50 or higher in courses required for the Physics major.

MINOR IN PHYSICS

A minor is offered in either Physics or Astronomy. Students who take the 20 or 40 series at Stanford in support of their major may count those units towards the minor. Those who have fulfilled

Physics requirements at the 20 or 40 series level by enrollment at another accredited university, or through advanced placement credits, may count credits towards 21/22 and 23/24, or 41 and 43/44, respectively. 25/26, or 45/46 for a technical minor, must be taken at Stanford even if similar material has been covered elsewhere. With the 21/22/23/24 or 41/43/44 exception noted above, all courses for the minor must be taken at Stanford University for a letter grade, and a grade of 'C-' or better must be received for all units applied toward the minor. The minor declaration deadline is three quarters before graduation, typically the beginning of Autumn Quarter if the student is graduating at the end of Spring Quarter.

MINOR IN PHYSICS

An undergraduate minor in Physics requires a minimum of 27 units with the following course work:

Non-Technical—For students whose majors do not require the PHYSICS 40 or 60 series:

Subject and Catalog Number	*Units*
PHYSICS 21, 22, 23, 24, 25, and 26	12
Any combination of PHYSICS courses totaling 15 units or greater	15
Total	27

Technical—For students whose majors require the PHYSICS 40 or 60 series:

	Units
PHYSICS 41/42*, 43/44, 45/46 and PHYSICS 70	19
or	
PHYSICS 61/62*, 63/64, 65/67	16
at least three PHYSICS courses numbered 100 or above	9-12
Total	25-31

* PHYSICS 42 or 62 are required for the technical minor in Physics beginning 2011-12 and recommended in 2010-11.

MINOR IN ASTRONOMY

Students wishing to pursue advanced work in astrophysical sciences should major in physics and concentrate in astrophysics. However, students outside of physics with a general interest in astronomy may organize their studies by completing one of the following minor programs.

An undergraduate minor in astronomy requires the following courses:

Non-Technical—For students whose majors do not require the PHYSICS 40 series:

	Units
PHYSICS 21, 23, 25/26	10
PHYSICS 50 or 100 (Observatory Lab)	3-4
Choose two courses from the following:	
PHYSICS 15, 16, 17	6
Total	19-20 (9-10 in addition to the 20 series)

Technical—For students whose majors require the PHYSICS 40 series:

	Units
PHYSICS 41, 43, 45/46	13
PHYSICS 70	4
PHYSICS 100 (Observatory Lab)	4
Choose two courses from the following:	
PHYSICS 160,* 161,* EE 106*	6
Total	27 (14 in addition to the 40 series)

* With approval of the minor adviser and the chair of the Astronomy Course Program, 3 units of PHYSICS 169, Independent Study in Astrophysics, may be substituted for one course of astronomy (e.g., 160, 161, EE 106). This independent study can either be constituted as a directed reading program or participation in a research project. Students are also strongly encouraged to take the electricity and magnetism/optics lab of the appropriate Physics series (24, 44) for 1 additional unit.

DOCTOR OF PHILOSOPHY IN PHYSICS

The University's basic requirements for the Ph.D. are discussed in the "Graduate Degrees" section of this bulletin.

The minimum department requirements for the Ph.D. degree in Physics consist of completing all courses listed below, plus 290 and 294 and at least one quarter from each of two subject areas outside the student's primary area of research (among biophysics, condensed matter, quantum optics and atomic physics, astrophysics and gravitation, and nuclear and particle physics) chosen from courses with numbers above 232, except 290 and 294. The requirements in the following list may be fulfilled by passing the course at Stanford or passing an equivalent course elsewhere: 210 or 211, 212, 220, 221, 230, 231. A grade point average (GPA) of at least 3.0 (B) is required for courses taken toward the degree.

All Ph.D. candidates must have math proficiency equivalent to the following Stanford MATH courses: 106, 113, 114, 116, 131, 132.

Prior to making an application for candidacy, each student is required to pass a comprehensive qualifying examination on undergraduate physics. This closed book exam is given in the month of January following the student's arrival at Stanford. This is a written examination held over two days, covering particle mechanics, electricity and magnetism, quantum mechanics, statistical mechanics, thermodynamics, special relativity, and general physics. A thesis proposal must be submitted during the third year. In order to assess the direction and progress toward a thesis, an oral report and evaluation are required during the fourth year. After completion of the dissertation, each student must take the University oral examination (defense of dissertation).

Three quarters of teaching (including a demonstrated ability to teach) are a requirement for obtaining the Ph.D. in Physics.

Students interested in applied physics and biophysics research should also take note of the Ph.D. granted independently by the Department of Applied Physics and by the Biophysics Program. Students interested in astronomy, astrophysics, or space science should also consult the "Astronomy Course Program" section of this bulletin.

PH.D. MINOR IN PHYSICS

Minors in Physics must take at least six courses numbered 210 to 232 among the 20 required units. All prospective minors must obtain approval of their Physics course program from the Physics Graduate Study Committee at least one year before award of the Ph.D.

POLITICAL SCIENCE

Emeriti: (Professors) David B. Abernethy, Lucius J. Barker, Richard A. Brody, David Danielski, Charles Drekmeier, John A. Ferejohn, John W. Lewis, John Manley, James March, Hubert R. Marshall, Daniel Okimoto, Robert A. Packenham, Philippe Schmitter, Robert Ward, Hans N. Weiler; (*Senior Lecturer*) Elisabeth Hansot

Chair: Josiah Ober

Professors: David W. Brady, Joshua Cohen, Gary W. Cox, James D. Fearon (on leave), Morris P. Fiorina, Judith L. Goldstein (on leave), Stephen H. Haber, David J. Holloway, Shanto Iyengar, Simon D. Jackman, Terry L. Karl, Stephen D. Krasner, Jon A. Krosnick, David D. Laitin, Michael A. McFaul (on leave), Terry M. Moe, Josiah Ober, Jean C. Oi, Jack N. Rakove, Condoleezza Rice (on leave), Douglas Rivers, Scott D. Sagan, Kenneth A. Schultz, Gary M. Segura, Paul M. Sniderman, Michael R. Tomz, Barry R. Weingast

Associate Professors: Beatriz Magaloni, Rob Reich, Jonathan A. Rodden, Jeremy Weinstein

Assistant Professors: Lisa Blaydes, Justin Grimmer, Karen L. Jusko, Phillip Y. Lipscy, Jonathan Wand

Lecturers: Tammy Frisby, Erica R. Gould, Andrew R. Rutten, Joel Samoff, Bruce Sievers, James Steyer, Kathryn Stoner-Weiss, Patricia Young

Courtesy Professors: David P. Baron, Jonathan B. Bendor, Coit D. Blacker, Gerhard Casper, Martha Crenshaw, Larry Diamond,

Gerald A. Dorfman, Jean-Pierre Dupuy, James Fishkin, Lawrence Friedman, Keith Krehbiel, Debra M. Satz, Stephen J. Stedman

Courtesy Associate Professor: Ken Shotts
Courtesy Assistant Professor: Saumitra Jha
Visiting Professors: Josef Joffe, Abbas Milani
Visiting Associate Professor: Alice Miller
Acting Instructors: Michael Albertus, Roy Elis, Kieran Oberman, Margaret E. Peters
Department Offices: Encina Hall West, room 100
Mail Code: 94305-6044
Phone: (650) 723-1806
Web Site: http://polisci.stanford.edu

Courses offered by the Department of Political Science are listed under the subject code POLISCI on the *Stanford Bulletin's* ExploreCourses web site.

MISSION OF THE UNDERGRADUATE PROGRAM IN POLITICAL SCIENCE

The mission of the undergraduate program in Political Science is to provide students with a solid grasp of the American political system and other political systems within the context of global forces, international conflicts, social movements, ideological systems and diversity. Courses in the major are designed to help students gain competency in the primary subfields of political science including American and comparative politics, international relations, and the theory/philosophy of politics; to introduce students to a variety of research methodologies and analytical frameworks; and to develop students' written and oral communication skills. Students in the program have excellent preparation for further study in graduate or professional schools as well as careers in government, business, and not-for-profit organizations.

LEARNING OUTCOMES

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. an understanding of core knowledge within the discipline of political science.
2. the ability to communicate ideas clearly and persuasively in writing.
3. the ability to analyze a problem and draw correct inferences using qualitative and/or quantitative analysis.
4. the ability to evaluate theory and critique research within the discipline of Political Science.

GRADUATE PROGRAMS IN POLITICAL SCIENCE

Admission—Prospective graduate students should see http://gradadmissions.stanford.edu for application materials. Applicants are required to submit a recent sample of their writing (not to exceed 35 pages) and to take the General Test of the Graduate Record Examination (GRE). Applicants whose native language is not English must take the Test of English as a Foreign Language (TOEFL). The TOEFL requirements are waived for applicants who have recently completed two or more years of study at a university where all instruction is provided in English. For details concerning these tests, see the *Guide to Graduate Admission*, available at http://gradadmissions.stanford.edu. The application deadline is December 7th. Admission is offered for the Autumn Quarter only. The department expects all students to pursue a full-time program except for time devoted to teaching or research assistantships.

BACHELOR OF ARTS IN POLITICAL SCIENCE

To receive a B.A. in Political Science, a student must:

1. Submit an application for the Political Science major to the undergraduate administrator and declare on Axess. Forms are available in Encina Hall West, room 100, or at http://polisci.stanford.edu/bachelors. For additional information, come to the office or phone (650) 723-1608. Students must complete their major declaration no later than the end of Autumn Quarter of their junior year.
2. Complete 70 units including:
   a. 45 Political Science course units in the primary and secondary concentration combined. Each major should declare a primary concentration in one subfield and take at least 30 units in this concentration, including the introductory course for that subfield. The secondary concentration must be completed with at least 15 units, including the introductory course for that subfield. Subfields include:
      - International Relations (1, 110-119, 210-219, 310-319)
      - American Politics (2, 120-129, 220-229, 320-329)
      - Political Theory (3, 130-139, 230-239, 330-339)
      - Comparative Politics (4, 140-149, 240-249, 340-349)
      - Methodology (150-159, 350-359)

   b. A 5-unit methods requirement satisfied by STATS 60, ECON 102A, POLISCI 150A, 150B, 150C, 151A, or 151B.
   c. 20 additional Political Science units and/or cognate course units including no more than 5 units of directed reading. 10 units of ECON 1A and/or ECON 1B may substitute for two 5-unit POLISCI courses.
   d. No more than two 5-unit Stanford Introductory Seminar courses can be applied toward the 70-unit major requirement.
3. Introductory Courses: each student must take two from the following Political Science courses, one of which must be in the primary concentration, the other in the secondary concentration. These courses should be completed by the end of sophomore year.
   - POLISCI 1. Introduction to International Relations
   - POLISCI 2. Introduction to American National Government and Politics
   - POLISCI 3. Introduction to Political Philosophy
   - POLISCI 4. Introduction to Comparing Political Systems
   - POLISCI 151A. Doing Political Science
     - *or* POLISCI 151B. Data Analysis for Political Science
4. Demonstrate the capacity for sustained research and writing in the discipline. This requirement is satisfied by taking a Political Science course designated as a Writing in the Major (WIM) course and may be in any subfield of the major.
5. Take at least one 5-unit, 200 or 300-level undergraduate seminar in Political Science.
6. Students may petition a maximum of ten units towards the major. Transfer students are allowed to petition up to twenty units towards the major. A maximum of 15 units may be applied towards the concentrations and 5 towards other Political Science course units. All Stanford-in-Washington courses and transfer credit from outside of Stanford require petitions which must be reviewed and approved by the Director of Undergraduate Studies. Petitions should be submitted within one quarter of course completion, or within one quarter of declaring the major.
7. Directed reading and Oxford tutorial units also require a petition and may only be applied towards related course work units. These units may not be used in the concentrations, and no more than 10 combined units of directed reading and Oxford tutorial units may count toward the required 70 Political Science units. Cognate courses do not require a petition.
8. All courses for the major must be completed with a letter grade of 'C' or better.

COGNATE COURSES

- AFRICAST 107/207. Community Reconstruction and Development in Post-Apartheid South Africa
- AFRICAST 111/211. Education for All? The Global and Local in Public Policy Making in Africa
- AFRICAST 112/212. AIDS, Literacy, and Land: International Aid and the Problems of Development in Africa
- EASTASN 189K/289K. Comparative Politics Perspective of the Two Koreas since 1945
- ECON 1A,B. Introductory Economics A, B
- EDUC 260X. Understanding Statistical Models and their Social Science Applications (same as HRP 239, STATS 209)
- ETHICSOC 174A. Moral Limits of the Market (same as PHIL 174A, PHIL 274A)
- ETHICSOC 181M. The Ethics of Risk (same as PHIL 79)
- ETHICSOC 185M. Contemporary Moral Problems (same as PHIL 72)
- HISTORY 150A. Colonial and Revolutionary America
- HRP 239. Understanding Statistical Models and their Social Science Applications
- HUMBIO 171. The Death Penalty: Human Biology, Law, and Policy
- HUMBIO 172A,B. Children, Youth, and the Law
- IPS 206B. Organizations (same as PUBLPOL 204B)
- IPS 243. The History, Science, Technology, and Politics of Missile Defense
- INTNLREL140B. Theories of International Law (same as IPS 241A)
- INTNLREL 206. Palestinian Nationalism, Past and Present
- INTNLREL 207. Tribe, State, and Society in the Modern Middle East
- MS&E 193,193W,293. Technology and National Security
- PUBLPOL 102. Organizations and Public Policy (same as PUBLPOL 202)
- PUBLPOL 183. Philanthropy and Social Innovation
- REES 105. Central and East European Politics (same as REES 205)
- REES 320. State and Nation Building in Central Asia
- STATS 60. Introduction to Statistical Methods (same as PSYCH 10 and STATS 160)
- OSPBEIJ 47. Institutional Change in Reform China
- OSPBEIJ 66. Essentials of China's Criminal Justice System
- OSPBER 15. Shifting Alliances? The European Union and the U.S.
- OSPBER 115X. The German Economy: Past and Present
- OSPBER 126X. A People's Union? Money, Markets, and Identity in the EU
- OSPCPTWN 35. Political Economy of AIDS
- OSPFLOR 61. Europe and U.S. Foreign Policy
- OSPFLOR 78. An Extraordinary Experiment: Politics and Policies of the New European Union
- OSPFLOR 97. Human Rights, Justice and Terrorism: Is the World Community Prepared to Prevent a Catastrophe?
- OSPFLOR 106V. Italy: From Agrarian to Post-Industrial Society
- OSPKYOTO 24. Japan in Contemporary International Affairs
- OSPKYOTO 215X. The Political Economy of Japan
- OSPMOSC 72. Space, Politics, and Modernity in Russia
- OSPMOSC 74. Post-Soviet Eurasia and SCO: Society, Politics, Integration
- OSPOXFRD 13. Politics and Economics of the Euro Zone
- OSPOXFRD 18. Making Public Policy: An Introduction to Political Philosophy, Politics, and Economics
- OSPOXFRD 24. British and American Constitutional Systems in Comparative Perspective
- OSPOXFRD 35. Modern UK and European Government and Politics
- OSPOXFRD 62. Heretics to Headscarves
- OSPOXFRD 63. Locke and his Legacy

HONORS PROGRAM

The honors program offers qualified students an opportunity to conduct independent research, write a thesis summarizing their findings, and make presentations of their work. During the process of research, analysis, and drafting, students work closely with a faculty adviser, a graduate student mentor, and their fellow students.

Applicants must have a minimum grade point average (GPA) of 3.5, and an adviser who is a member of the Academic Council. Students interested in pursuing honors should submit a paper application to the undergraduate administrator in Encina Hall West, room 100, by the first Friday of Spring Quarter. Once students are accepted into the program, they will be asked to apply for honors in Political Science on Axess. Applications can be obtained from the department website and from Encina Hall West, room 100.

Students pursuing honors must complete the following by the end of Spring Quarter of their junior year: Methods requirement (STATS 60, ECON 102A, POLISCI 150A,B,C, 151A, or 151B), WIM requirement, and a completed research paper from an advanced undergraduate seminar or directed reading. Students are required to enroll in POLISCI 299Q: Junior Research Seminar, in Spring Quarter of their junior year. This course is designed to help students understand the research process and map out a concrete time line for their thesis work.

Students who are accepted into the program should plan to make the thesis the focus of their senior year. They should enroll in 10-15 units of POLISCI 299A,B,C, which covers research and writing directed by the student's adviser.

To complete the honors program, students must:

1. Complete all requirements for the major.
2. Enroll in POLISCI 299Q during Spring Quarter of the student's junior year.
3. Enroll in at least 10 units of POLISCI 299A, B, or C, Senior Project. Students must take at least two quarters of Senior Project units.
4. Complete a thesis of honors quality, for a grade of 'B+' or better.

Students cannot apply units from the POLISCI 299Q, Junior Research Seminar, toward the 70-unit requirement for the major. However, students can apply up to 10 units from POLISCI 299A,B,C, Senior Project, toward the 70-unit requirement.

PRIZES

There are several annual prizes for undergraduate students: the Arnaud B. Leavelle Memorial Prize for the best paper in the History of Political Thought sequence (POLISCI 130A,B,C), a cash prize for the best thesis written in political theory, the Lindsay Peters, Jr., Memorial Prize for the outstanding student each year in

POLISCI 2, and Cottrell Prizes for outstanding students in POLISCI 1, 3, and 4.

MINOR IN POLITICAL SCIENCE

Students must complete their declaration of the minor on Axess no later than the end of the junior year.

To receive a minor in Political Science, a student must complete a minimum of 30 unduplicated units. All units must be in courses listed or cross-listed in the Department of Political Science, or Political Science cognate courses. A student may petition for a maximum of 5 units to count towards the minor. This includes directed readings and Stanford in Washington courses. Directed readings and Stanford in Washington courses may only count towards the last five related units for the minor.

All courses for the minor must be taken for a letter grade. Students must receive a minimum letter grade of 'C' in all courses for the minor.

Concentration—The student selects a primary subfield in which three courses are taken. One of these courses is the introductory course, the other two are at a more advanced level (numbered above 100). The concentration corresponds to one of the subfields the department already has in place, namely, American politics, comparative politics, international relations, and political theory.

Distribution—Three courses must be in the primary concentration, as specified above, for 15 units. An additional 10 units of intermediate and advanced courses (100 level or above) must be in two additional subfields. The final 5 units may be in any related subfield.

Petitioned courses— Transfer students can petition a maximum of 10 units towards the minor, while non-transfer students can petition a maximum of five units towards the major. All petitioned courses must be individually reviewed and approved by the Director of Undergraduate Studies. Students can download the petition forms from http://polisci/PoliSciMajors/MajorMinorPetition.pdf or pick them up from Encina Hall West, room 100. Students must submit petitions to the undergraduate administrator in Encina Hall West, room 100.

MASTER OF ARTS IN POLITICAL SCIENCE

The Political Science department does not offer a terminal M.A. degree. An M.A. degree may only be pursued in combination with a doctoral degree from another department within the University or with an advanced degree from one of the University's professional schools. Students interested in pursuing the M.A. should discuss the application requirements with the graduate administrator in Political Science.

Students from within the department and from other degree programs who have applied to the M.A. program may elect to take the M.A. degree in Political Science when they have met the following requirements:

1. Completion of at least three quarters of residency as a graduate student with 45 units of credit of which at least 25 units must be taken in Political Science graduate seminars of 300 level and above. Not more than 25 units of the 45-unit requirement may be taken in a single field.
2. At least two graduate seminars in each of two fields and at least one graduate seminar in a third field.
3. The remaining 20 units must come from courses numbered above 100. Of those 20 units, not more than 10 units of work from related departments may be accepted in lieu of a portion of the work in Political Science. Not more than 10 units may be taken as directed reading.
4. Courses must be numbered above 100.
5. A grade point average (GPA) of 2.7 (B-) or better must be attained for directed readings and all course work. No thesis is required.

The department does not offer a coterminal bachelor's and master's degree.

Political Science doctoral candidates may pursue master's degrees from other departments. Recent examples include but are not restricted to master's degrees in Statistics and Economics. Students interested in this option should consult the relevant sections of this Bulletin for both University and department requirements for master's degrees.

DOCTOR OF PHILOSOPHY IN POLITICAL SCIENCE

The University's basic requirements for the Ph.D. degree are discussed in the "Graduate Degrees" section of this bulletin.

Programs of study leading to the Ph.D. degree are designed by the student, in consultation with advisers and the Director of Graduate Studies, to serve his or her particular interests as well as to achieve the general department requirements. A student is recommended to the University Committee on Graduate Studies to receive the Ph.D. degree in Political Science when the following program of study has been completed:

1. The candidate for the Ph.D. degree must offer three of the following concentrations in political science: American politics, comparative politics, international relations, methodology, and political theory. Students concentrate on two of these areas by fulfilling, depending on the concentration, combinations of the following: written qualifying examinations, research papers, research design, or course work. The requirement for the third concentration may be satisfied by taking either a written examination in that area or by offering a minimum of 10 units with a grade point average (GPA) of 3.0 (B) or better in the third concentration from among the formal graduate-level courses in the five divisions of the department. The third concentration cannot be satisfied by courses taken as a requirement for a first or second concentration. A third concentration in theory requires two courses in addition to the five units necessary to fulfill the program requirement. A third concentration in methodology requires two courses in addition to the 10 units necessary to fulfill the program requirement. Completion of special concentrations may require more than 10 units of course work.
2. The Ph.D. candidate is required to demonstrate competence in a language and/or skill that is likely to be relevant to the dissertation research. The level of competence needed for successful completion of the research is determined by the student's adviser. All candidates must complete at least 10 units of statistical methodology or its equivalent. Previous instruction can be counted towards this requirement only if approved by the Director of Graduate Studies.
3. Every Ph.D. candidate must complete at least five units of graduate-level instruction in political theory.
4. By the start of the fourth quarter in residence, each graduate student submits to the student's adviser a statement of purpose. This statement indicates the student's proposed major concentrations of study, the courses taken and those planned to be taken to cover those fields, the student's plan for meeting language and/or skill requirements, plans for scheduling of comprehensive examinations and/or research papers, and, where possible, dissertation ideas or plans. This statement is discussed with, and must be approved by, the student's adviser. In the Autumn Quarter following completion of their first year, students are reviewed at a regular meeting of the department faculty. The main purposes of this procedure are, in order of importance: to advise and assist the student to realize his or her educational goals; to provide an incentive for clarifying goals and for identifying ways to achieve them; and to facilitate assessment of progress toward the degree.
5. Students must take the comprehensive exams in two major fields by the end of their second year in the program. Students are expected to have passed these examinations and to have faculty approval of their research paper by the end of their second year.
6. Upon completion of one research paper and two comprehensive exams in his or her two major concentrations, the student files an Application for Candidacy for the Doctoral Degree

which details program plans and records. The University and the department expect that students be advanced to candidacy by the completion of their sixth quarter as a full-time student. Each second-year student is reviewed and considered for admission to candidacy in a meeting of the faculty that is typically held during the tenth week of Spring Quarter. Since completion of two comprehensive exams and a research paper are prerequisites for admission to candidacy, students should plan their first- and second-year studies so that these requirements are satisfied by the time of the faculty review meeting. In particular, students should submit their research paper to the relevant faculty readers no later than the middle of Winter Quarter, since revisions of the paper are often required prior to obtaining faculty approval.

7. During the third year, a formal dissertation proposal must be submitted to and approved by the student's dissertation adviser and the Director of Graduate Studies. Dissertation proposals must be approved by the end of the third year.
8. A candidate for the Ph.D. in Political Science is required to serve as a teaching assistant (TA) in the department for a minimum of three quarters.
9. Doctoral candidates who apply for the M.A. degree are awarded that degree on completion of the requirements outlined in the description of the M.A. program.
10. The candidate must pass the University oral examination on the area of the dissertation at a time, after the passing of the written comprehensive examinations, suggested by the candidate's dissertation committee.
11. The candidate must complete a dissertation satisfactory to the dissertation reading committee.

PH.D. MINOR IN POLITICAL SCIENCE

Candidates in other departments which accept a minor in Political Science select two concentrations in political science in consultation with the Director of Graduate Studies and submit to her or him a program of study for approval. Written approval for the program must be obtained from the Director of Graduate Studies before application for doctoral candidacy. Students are required to complete at least 20 units in Political Science courses. Courses must be 300 level and above. Grades must be a GPA of 3.0 (B) or better. Candidates may be examined in their concentrations in the general oral examination by a member of the Department of Political Science, chosen in consultation with the Director of Graduate Studies.

OVERSEAS STUDIES COURSES IN POLITICAL SCIENCE

For course descriptions and additional offerings, see the listings in the *Stanford Bulletin's* ExploreCourses web site (http://explorecourses.stanford.edu) or the Bing Overseas Studies web site (http://bosp.stanford.edu). Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

AUTUMN QUARTER

BEIJING

- OSPBEIJ 66. Essentials of China's Criminal Justice System. 5 units, Wang, GER:DB:SocSci, EC:GlobalCom

BERLIN

- OSPBER 115X. German Economy: Past and Present. 4-5 units, Klein, GER:DB:SocSci, EC:GlobalCom

FLORENCE

- OSPFLOR 106V. Italy: From an Agrarian to a Post-industrial Society. 5 units, Mammarella, GER:DB:SocSci, EC:GlobalCom

MOSCOW

- OSPMOSC 72. Space, Politics and Modernity in Russia. 5 units, Medvedev, GER:DB:SocSci, EC:GlobalCom
- OSPMOSC 74. Post-Soviet Eurasia and SCO: Society, Politics, and Integration

OXFORD

- OSPOXFRD 35. Modern UK and European Government and Politics. 4-5 units, Cappocia, GER:DB:SocSci

PARIS

- OSPPARIS 32. Understanding French Politics. 4-5 units, Chamorel, GER:DB: SocSci

SANTIAGO

- OSPSANTG 221X. Political Transition and Democratic Consolidation: Chile in Comparative Perspective. 5 units, Micco, GER:DB:SocSci

WINTER QUARTER

BERLIN

- OSPBER 15. Shifting Alliances? The European Union and the US. 4-5 units, Brückner, GER:DB:SocSci, EC:GlobalCom

OXFORD

- OSPOXFRD 13. Politics and Economics of the Euro Zone. 5 units, Goldstein, GER:DB:SocSci
- OSPOXFRD 18. Making Public Policy: an Introduction to Political Philosophy, Politics and Economics. 4-5 units, McMahon, GER:DB:SocSci

PARIS

- OSPPARIS 57. Human Rights in Comparative Perspective. 4-5 units, Boussaguet, GER:DB:SocSci, EC:GlobalCom

SANTIAGO

- OSPSANTG 129X. Latin America in the International System. 4-5 units, GER:DB:SocSci

SPRING QUARTER

BERLIN

- OSPBER 126X. A People's Union? Money, Markets, and Identity in the EU. 4-5 units, Brückner, GER:DB:SocSci, EC:GlobalCom

FLORENCE

- OSPFLOR 78. An Extraordinary Experiment: Politics and Policies of the New European Union. 5 units, Morlino, GER:DB:SocSci

KYOTO

- OSPKYOTO 215X. Political Economy of Japan. 4-5 units, Hayashi, GER:DB:SocSci

OXFORD

- OSPOXFRD 24. British and American Constitutional Systems in Comparative Perspective. 4-5 units, McMahon, GER:DB:SocSci

PARIS

- OSPPARIS 122X. Challenges of Integration in the European Union. 4-5 units, Strudel, GER:DB:SocSci

SANTIAGO

- OSPSANTG 116X. Modernization and its Discontents: Chilean Politics at the Turn of the Century. 5 units, Correa, GER:DB:SocSci

PSYCHOLOGY

Emeriti: (Professors) Albert Bandura, Gordon H. Bower, Lyn K. Carlsmith, John H. Flavell, Albert H. Hastorf, Leonard M. Horowitz, Eleanor E. Maccoby, Roger N. Shepard, Claude Steele, Barbara Tversky, Philip G. Zimbardo
Chair: James L. McClelland
Professors: Laura L. Carstensen, Herbert H. Clark, Carol Dweck, Ian H. Gotlib, James J. Gross, John D. Krumboltz, Mark R. Lepper, Ellen M. Markman, Hazel R. Markus, James L. McClelland, Dale Miller, Lee D. Ross, Ewart A. C. Thomas, Brian Wandell, Jeffrey J. Wine
Professor (Research): Anthony Norcia
Associate Professors: Jennifer L. Eberhardt, Anne Fernald, Kalanit Grill-Spector, Brian Knutson, Benoit Monin, Jeanne L. Tsai, Anthony Wagner
Associate Professor (Teaching): Catherine Heaney
Assistant Professors: Lera Boroditsky, Michael Frank, Noah Goodman, Samuel M. McClure, Gregory M. Walton
Lecturers: Joseph Brown, Amie Haas, Bridgette Martin-Hard, Adrienne Lomangino
Courtesy Professors: William C. Dement, Gary H. Glover, Jon Krosnick, Tanya Luhrmann, William T. Newsome, Anne C. Petersen
Director, Bing Nursery School: Jennifer Winters
Department Offices: Jordan Hall, Building 420
Mail Code: 94305-2130
Department Phone: (650) 725-2400
Web Site: http://psychology.stanford.edu

Courses offered by the Department of Psychology are listed under the subject code PSYCH on the *Stanford Bulletin's* ExploreCourses web site.

The department, housed in Jordan Hall, maintains shop facilities and many computer-equipped laboratories. Bing Nursery School, located on campus at 850 Escondido Road, provides a laboratory for child observation, training in nursery school teaching, and research. It was constructed with funding from the National Science Foundation and a special grant from Mrs. Anna Bing Arnold and Dr. Peter Bing.

The department provides

- courses designed for the general student
- a major program leading to the degree of Bachelor of Arts, including options for honors and a specialization in one of four content area tracks
- an undergraduate minor program
- a coterminal master's degree program leading to the degree of Master of Arts
- programs of graduate study and research leading to the degree of Doctor of Philosophy
- a Ph.D. minor

Applications are not accepted for the master's degree except as noted below.

MISSION OF THE UNDERGRADUATE PROGRAM IN PSYCHOLOGY

The mission of the undergraduate program in Psychology is to introduce students to the corpus of data on, and explanations of, human nature and behavior. Through the study of abnormal behavior, aging, child development, cognitive processes, decision making, emotion, group behavior, infancy, language, learning and memory, personality, social perception, visual perception, and other related topics, students are introduced to the properties of sensory, cognitive, and affective systems, and of their interrelationships to the reciprocal effects of one person on another and to the effects on behavior of the physical, social, and cultural environment. The major provides student with preparation for professional careers in business, medicine, and counseling as well as for graduate work in psychology.

LEARNING OUTCOMES

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. an understanding of core knowledge within the discipline of Psychology.
2. the ability to communicate ideas clearly and persuasively in writing.
3. the ability to analyze a problem and draw correct inferences using qualitative and/or quantitative analysis.
4. the ability to evaluate theory and critique research within the discipline of Psychology.

BACHELOR OF ARTS IN PSYCHOLOGY

Major Requirements—Students declaring a major in Psychology must complete a minimum of 70 units of course work in Psychology, 60 of which must be taken in the Psychology department. The remaining 10 units can be taken outside of the Psychology department but must be pre-approved by the student services office or faculty adviser. These courses should represent a coherent thematic focus. One way to achieve this focus is through a field of study. Courses taken to satisfy the 70-unit requirement must be taken for a grade of 'C-' or better (except for courses offered only on a satisfactory/no credit basis). Majors must take PSYCH 1, Introduction to Psychology, and PSYCH 10, Introduction to Statistical Methods. Advanced placement (AP) credit may no longer be used toward the Psychology major requirements. Beyond these two required courses, students must complete at least five of the following eleven core Psychology courses, with a minimum of two from each area A and B:

Area A Courses—

- BIO 20. Introduction to Brain and Behavior
- PSYCH 30. Introduction to Perception
- PSYCH 45. Introduction to Learning and Memory
- PSYCH 50. Introduction to Cognitive Neuroscience
- PSYCH 55. Introduction to Cognition and the Brain

Area B Courses—

- PSYCH 60. Introduction to Developmental Psychology
- PSYCH 70. Introduction to Social Psychology
- PSYCH 75. Introduction to Cultural Psychology
- PSYCH 80. Introduction to Introduction to Personality and Affective Science
- PSYCH 90. Introduction to Clinical Psychology
- PSYCH 95. Introduction to Abnormal Psychology

Students who declared a major in Psychology prior to the 2005-06 academic year may choose to adhere to the 55-unit major requirement, taking PSYCH 1 and 10, five core courses, and elective courses, totaling 55 units.

Students must take one Writing in the Major (WIM) course in Psychology, and should check the *Stanford Bulletin* yearly as these courses may change. The department also strongly recommends that all majors take at least one advanced seminar.

Students may count up to 10 units of research, independent study, and practica (including but not limited to PSYCH 194, 195, 281) toward the Psychology major. Students who are teaching assistants for a Psychology course or are enrolled in the senior honors program are allowed up to 15 units in independent study and research. Any units beyond the limit of 10 or 15 may be counted toward the 180 units required for graduation.

Students who are double majoring or completing a minor degree in another department may not overlap (double-count) courses, unless the overlapping courses constitute introductory skill requirements, such as PSYCH 10, Introduction to Statistical Methods. In this instance, while the course requirement would be satisfied, the units for the course can only be applied to one program of study, not both. Consult the student services office for further clarification.

Summer Quarter Psychology courses are not equivalent to courses given during the regular academic year and, while applicable toward the 70 units needed for the major, may not be used to fulfill the statistics requirement or a core course requirement. Additionally, a course taken during the Summer Quarter cannot be used to replace the grade of a non-Summer Quarter course, even if the title and units of the two courses are the same.

Beyond the Minimal Requirements—The following recommendations may be helpful to students who wish to plan a program which goes beyond the minimal requirements listed above:

1. Within the general major, the student may take advanced undergraduate or graduate courses, including seminars. The student may also take advantage of widespread opportunities for directed research, working closely with individual faculty and graduate students.
2. The student may apply to the senior honors program, described below.
3. The student may elect to pursue one of four fields of study: Cognitive Sciences; Health and Development; Mind, Culture, and Society; or Neuroscience, described below.

The training obtained from the pursuit of any of these options is valuable not only for students considering graduate work in psychology, but also for those thinking of professional careers outside of psychology in fields such as business, counseling, education, law, or medicine.

CREDIT FROM OUTSIDE THE DEPARTMENT

Psychology majors must complete at least 60 units of course work toward their major at Stanford within the Psychology department. Psychology minors may count no more than a total of 10 units credit from outside the department toward the minor. Both majors and minors, under extenuating circumstances, may use one course from outside the department to fulfill core course requirements. Additional courses may be used to fulfill the 70-unit major requirement, but may not be counted as core courses. Please see the student services office for further clarification.

Petition for transfer of credit is rarely granted. In cases where petitioning is necessary, there are two types of credit from outside the department: external transfer credit for courses taken at institutions other than Stanford and credit for courses in other Stanford departments. A student must have already declared Psychology as a major or minor in order to submit a petition for transfer credit. Stanford credit for courses completed at other institutions must have been granted by the External Credit Evaluation section of the Registrar's Office; those units may be applied toward the 180 units required for graduation. To have credit from outside the department evaluated to fulfill requirements toward the Psychology major or minor, students must complete an Undergraduate Petition form, available from the student services office, and submit it with a course syllabus. Students requesting external transfer credit must also submit a copy of the signed transcript from the External Credit Evaluation section of the Registrar's Office showing the number of Stanford units granted for the course. The Psychology department then evaluates external credit courses and courses from other Stanford departments to determine if they can be applied toward Psychology major or minor requirements.

FIELDS OF STUDY

Students in the major program, including those in the senior honors program, may elect to specialize in one of four fields of study: Cognitive Sciences; Health and Development; Mind, Culture, and Society; or Neuroscience. Fields of study consist of a coherent set of courses leading to advanced undergraduate or even graduate-level courses in an area. In the ideal case, the student who specializes would acquire an understanding of a range of psychological processes, as well as an appreciation of the significance of these processes in the chosen area of application. In this way, specialization could facilitate the student's preparation for a professional career in, for example, medicine, business, or counseling, as well as for graduate work in Psychology.

Specialization in a field of study is optional, although students who do not wish to complete all the requirements for a track may still want to use the track as a guideline for an integrated program in Psychology. Students who choose to complete a field of study must meet the requirements for the major plus the additional requirements designated for the field of study. Typically the courses required for a field of study include one or two required courses, four to six recommended courses in Psychology, one or two advanced seminars, and three or four courses in related disciplines. Psychology courses completed for the field of study count toward satisfying the major requirements. Courses from other departments listed for the field of study may count toward the 10 outside units for the major requirement, but must be pre-approved by the student services office or faculty adviser.

HONORS PROGRAM

The senior honors program is designed for exceptionally able Psychology majors who wish to pursue a year of intensive supervised independent research. Admission to the program is made at the end of the student's junior year on the basis of:

- excellent academic performance,
- previous research experience
- two letters of recommendations by faculty and/or graduate students

Applications are available late Spring Quarter and are to be turned in to the student services office with a current transcript and recommendations prior to the student's senior year.

Students interested in the program should involve themselves in research as early as possible and should acquire a broad general background in Psychology, including statistics, and a deep background in their chosen area. The honors program is particularly appropriate for students planning to go to graduate school in Psychology or in other social sciences, as well as in computer science, business, law, and medicine.

During Autumn Quarter of their senior year, honors program students participate in a weekly seminar and meet with their advisers to develop their experimental program and begin data collection. Winter and Spring quarters are devoted to completing the research, analyzing the data, and writing the thesis, which is submitted mid-May. Students give oral presentations of their projects at the annual Honors Convention. This convention is attended by undergraduates, graduate students, and faculty.

MINOR IN PSYCHOLOGY

Declaration—Students who wish to declare a minor field of concentration in Psychology must do so no later than the deadline for their application to graduate.

Requirements—Completion of a minimum of 35 units in Psychology is required for the minor, including PSYCH 1, Introduction to Psychology, and PSYCH 10, Introduction to Statistical Methods, or a comparable statistics course. Advanced placement (AP) credit may no longer be used towards the Psychology minor. The minor must include three of eleven core courses, with a minimum of one from each of two areas (A: BIO 20; PSYCH 30, 45, 50, 55; and B: 60, 70, 75, 80, 90, 95) and elective Psychology courses of at least three units each, totaling 35 units. Students who declared a Psychology minor prior to the 2002-03 academic year may choose any three of the eleven core courses. Students who declared a Psychology minor prior to the 2005-06 academic year may choose to complete seven total courses: PSYCH 1 and 10, three core courses, and two elective courses. Independent study, research, and practica cannot be counted toward the minor. Summer Quarter Psychology courses are not applicable toward the 35 units needed for the minor. All courses used to fulfill the requirements of the minor must be passed with a grade of 'C-' or better, except for courses offered only on a satisfactory/no credit basis. No more than 10 units of transfer credit may be counted toward the Psychology minor.

MASTER OF ARTS IN PSYCHOLOGY

The Department of Psychology offers a Master of Arts degree only to students concurrently enrolled in its Ph.D. program or to students currently pursuing Stanford B.A. or M.A. degrees. In exceptional cases, students concurrently enrolled in another doctoral or professional program at Stanford may also apply for the M.A. degree. Such applicants should consult with the student services office.

All applicants must satisfy University residency requirements for the degree and are responsible for consulting with their primary departments or the Financial Aid Office about the effects of the proposed program on their current funding. General University requirements for the master's degree are described in the "Graduate Degrees" section of this bulletin.

Coterminal Program—Stanford undergraduates who would like advanced training in Psychology may apply for a coterminal M.A. degree in Psychology. To do so, students should consult with the student services office. Along with a coterminal program application, applicants must submit:

1. a statement of purpose
2. a preliminary program plan specifying the courses in which they intend to enroll to fulfill degree requirements
3. at least two letters of recommendation from Stanford faculty members familiar with their academic work
4. a current Stanford undergraduate transcript
5. a written nomination by a member of the Psychology faculty willing to serve as the student's master's degree adviser

This program is limited in size and admission is selective. Applicants must have earned a minimum of 120 units towards graduation as shown on the undergraduate transcript. The department's deadline for the submission of an application to the coterminal program is traditionally in January.

University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees" section of this bulletin. For University coterminal degree program rules and University application forms, see http://studentaffairs.stanford.edu/registrar/publications#Coterm.

REQUIREMENTS

Students must complete at least 45 units of Psychology courses for the degree. (For coterminal degree students, course work for the master's degree may not duplicate courses taken for the undergraduate degree.) Of these 45 units, at least 27 must be in Psychology courses numbered 200 or above. Units from research, teaching, practica, independent study, and lab courses, such as PSYCH 258, 269, 275, 281, 282, and 297, may not be counted toward these 27 units. Two of the graduate courses of at least 3 units each (one from Area A and one from Area B below) are required. In addition, at least one upper division statistics course is required. The course must be approved by the student's adviser. It is recommended that all coterminal students enroll in PSYCH 196, Contemporary Psychology.

Courses to be counted toward the master's degree must be passed with a grade of 'B-' or better, unless the course is offered only on a satisfactory/no credit basis. Units from research, teaching, practica, independent study, and lab courses, such as PSYCH 258, 269, 275, 281, 282, and 297, may be counted toward the remaining required 18 units. Psychology courses numbered in the 100-level and courses from other Stanford departments may be used to satisfy the remaining 18 units. Courses specifically for undergraduates, such as undergraduate honors courses, and courses offered in the Summer Quarter may not be counted toward the master's program unit requirements.

Demonstration of competence in the design and execution of psychological research is also required for receipt of the master's degree. This demonstration entails completion of a master's thesis containing original research. If the student is currently doing a senior honors thesis, this honors thesis may be accepted as proof of research competence provided the honors thesis is judged to be master's level research by the student's adviser and the department's graduate program committee. If the student has completed an honors thesis in Psychology in the prior year, the student would be expected to continue independent research during the coterminal year and to submit this research in a written report which, together with the completed honors thesis, would constitute the master's thesis. All students are required to make an oral presentation of their research during the Spring Quarter, and to present their thesis or written report in June.

Applicants to the coterminal program must have an adviser in the department who agrees to supervise the student's research. Students in the program may be terminated if they do not have an adviser, or if they are not making satisfactory progress in research or course work.

Area A Courses—
PSYCH 202. Cognitive Neuroscience
PSYCH 205. Foundations of Cognition
PSYCH 210. Foundations of Memory
PSYCH 221. Applied Vision and Image Systems
PSYCH 228. Ion Transport
PSYCH 251. Affective Neuroscience
PSYCH 261. Emotion
PSYCH 261A. Learning and Cognition in Activity

Area B Courses—
PSYCH 211. Developmental Psychology
PSYCH 212. Social Psychology
PSYCH 213. Affective Science
PSYCH 215. Mind, Culture, and Society
PSYCH 217. Topics and Methods in Cultural Psychology
PSYCH 259. Emotions: History, Theories, Research
PSYCH 271. Applications of Social Psychology

DOCTOR OF PHILOSOPHY IN PSYCHOLOGY

There are no specific course requirements for admission to the doctoral program. However, an applicant should have research experience as an undergraduate, as well as the equivalent of an undergraduate major in Psychology. The major focus of the doctoral program is on research training, and admission is highly selective.

Applicants for admission must submit their scores on the general Graduate Record Examination as part of the application. GRE subject scores are recommended.

General University requirements for the Ph.D. are described in the "Graduate Degrees" section of this bulletin.

In addition to fulfilling Stanford University requirements for the degree, the following departmental requirements are stipulated.

First-Year Course Requirements—During the first year of graduate study, the student must take PSYCH 207, Proseminar for First-Year Ph.D. Graduate Students, at least one approved graduate statistics course, and at least two core courses from the following list:

- PSYCH 202. Neuroscience
- PSYCH 205. Foundations of Cognition
- PSYCH 211. Developmental Psychology
- PSYCH 212. Social Psychology
  - *or* PSYCH 215. Mind, Culture, and Society
- PSYCH 213. Affective Science

Students in each area may be required to take up to two additional non-core graduate courses in their area of specialization.

The student is expected to spend at least half of the time in research from the beginning of the first year of graduate study to the completion of the Ph.D., taking no more than 10 units of course work each quarter. At the end of the first year of graduate study, the student must file with the department a written report of the first-year research activities.

Second Year Course Requirements—By the end of the second year of graduate study, the student should complete the core courses listed above and take a second approved graduate course in statistics.

Third-Year and Beyond—Students are expected to form a research committee, which must include the dissertation reading committee, before the initiation of the dissertation research. The research committee includes the dissertation adviser and consists of at least three faculty members, at least two of whom should be in the Psychology department. For University guidelines for the composition of the dissertation reading committee, see the "Graduate Degrees" section of this bulletin.

The research committee should meet no later than the last day of classes of Spring Quarter of the third year, and determines the timeline for further development of the dissertation research project. Subsequent meetings are triggered by the completion of one of two documents: a dissertation proposal (DP) or a conceptual analysis of the dissertation area (CADA). The timing and sequencing of the DP and CADA are developed by the student in consultation with the committee. As a general guide, one of the two preliminary elements (CADA or DP) should be completed by the end of the third Summer Quarter and the second should be completed by the end of the fourth Spring Quarter. Students are free to alter the membership of the committee at any time during the process, subject to consultation with the adviser.

The DP should be a description of the proposed research. The CADA provides a framework for the research topic of the dissertation, addresses the central issues within the specialty area, and reviews the pertinent literature.

Advanced Course or Minor Requirements—The candidate must complete 12 units of advanced graduate course work or a Ph.D. minor in another department. If a student waives the minor requirement in favor of the 12 advanced units, the student must fulfill the advanced course requirement by taking (a) non-core graduate courses required by a particular area, *or* (b) graduate-level courses in other departments comparable in quality to Psychology's graduate courses. If there is any question about comparability, the student should consult the adviser, student services, and, in some cases, the graduate program committee chair before taking the course.

Orals—The candidate must pass the University oral examination, which also serves as a dissertation defense. A committee is formed to review the oral examination, including the dissertation reading committee, an additional faculty member, and one oral examination committee chair from outside the Psychology department. The oral examination consists of a 40-45-minute presentation to the department of the completed dissertation research. Parents and friends are welcome to attend. Following the presentation, the student and the committee convene for a discussion of the dissertation and the presentation.

Dissertation Requirements—The candidate must complete a dissertation satisfactory to the dissertation reading committee prior to the oral examination. Minor revisions to formatting may be made after the oral examination.

Ph.D. candidacy expires five years after admission to candidacy at the end of the second year of study. Reapplication requires department reexamination.

STUDENT EVALUATIONS

First-Year Evaluation—It is the department's policy to evaluate the progress of each graduate student at the end of the first year of graduate study. As part of the procedure, each student is required to file with the department a report of the first-year research activities.

Students should discuss this report and the evaluation procedures with their adviser as early as possible in their first year. If the student fulfills the academic promise displayed upon entrance, he or she is invited to continue working towards the doctorate.

The first-year evaluation is primarily based on three factors:

1. quality of research carried out in the first year
2. performance in courses (especially required courses)
3. recommendations of the adviser (including a commitment on the part of that adviser to continue in that role).

Second-Year and Beyond Evaluation—A similar evaluation is conducted at the end of each year of graduate training involving the same criteria as the first year; however, the student is not required to submit a paper. Students who are not making satisfactory progress may be dropped from the program.

THE DOCTORAL TRAINING PROGRAM

As indicated by the requirements described above, a student concentrates in any one of several areas within psychology. Regardless of area, however, the training program places emphasis on the development of research competence, and students are encouraged to develop those skills and attitudes that are appropriate to a career of continuing research productivity.

Two kinds of experience are necessary for this purpose. One is the learning of substantial amounts of technical information. A number of courses and seminars are provided to assist in this learning, and a student is expected to work out a program, with his or her adviser, to attain this knowledge in the most stimulating and economical fashion.

A second aspect of training is one that cannot be gained from the courses or seminars. This is firsthand knowledge of, and practical experience with, the methods of psychological investigation and study. These methods include ways of behaving with the subjects being studied. Students are provided with whatever opportunities they need to reach those levels of competence representative of doctoral standing. Continuing research programs, sponsored by members of the faculty, offer direct opportunities for experience in fields represented by the faculty's many research interests.

Each student achieves competence in unique ways and at different rates. Each student and adviser share in planning a program leading to the objectives discussed. The student is expected to spend half of his or her time on research and takes no more than 10 units of course work per quarter. For further information please contact the student services office and the department graduate guide.

TEACHING REQUIREMENT

The department views experience in supervised teaching as an integral part of its graduate program. Regardless of the source of financial support, all students serve as teaching assistants for at least five Psychology courses during their graduate study. Of the courses, two must be PSYCH 1, Introduction to Psychology, or PSYCH 10, 252 or 253, Statistical Methods. Students are discouraged from participating in teaching during the first year of graduate study. Students typically progress from closely supervised teaching to more independent work. Some students may be invited to offer a supervised, but essentially independent, seminar during their final year of graduate study.

PSYCHOLOGY COLLOQUIUM

The Psychology Colloquium meets on most Wednesday afternoons at 3:45 p.m. Speakers from Stanford and other institutions present topics of current interest. Graduate students are expected to attend. Additional announcements may be found at http://www.stanford.edu/dept/psychology/colloquium.

PH.D. MINOR IN PSYCHOLOGY

Candidates for the Ph.D. degree in other departments may elect a minor in Psychology. To obtain a minor, the student must complete 20 units of course work at the graduate level in the Department of Psychology, excluding PSYCH 275 (graduate-level research). Crosslisted graduate courses can be used to satisfy this requirement. All courses counting toward the Ph.D. minor must be passed with a grade of 'B-' or better, unless the course is offered only on a credit/no credit basis.

PUBLIC POLICY

Director: Bruce M. Owen (Stanford Institute for Economic Policy Research)

Deputy Director: Gregory L. Rosston (Stanford Institute for Economic Policy Research)

Associate Director and Senior Lecturer: Geoffrey Rothwell (Economics, Public Policy)

Director of Undergraduate Capstone and Senior Lecturer: Mary Sprague (Public Policy)

Director of Graduate Practicum and Lecturer: Joe Nation (Public Policy)

Executive Committee: Laurence Baker (Medicine), Jonathan Bendor (Graduate School of Business), David Brady (Political Science, Hoover Institution, Graduate School of Business, SIEPR), Samuel Chiu (Management Science and Engineering), Joshua Cohen (Political Science, Philosophy, Law), Morris Fiorina (Political Science, Hoover Institution), David Kennedy (History, emeritus), Lawrence Goulder (Economics, SIEPR), David Grusky (Sociology), Stephen Haber (Political Science, Hoover Institution), Eric A. Hanushek (Hoover Institution, SIEPR), Deborah Hensler (Law), Sunil Kumar (Graduate School of Business), Roger Noll (Economics, emeritus, SIEPR), Leonard Ortolano (Civil and Environmental Engineering), Bruce Owen (SIEPR), Sean Reardon (Education), Lee Ross (Psychology), Gregory Rosston (SIEPR), Debra Satz (Philosophy), John B. Shoven (SIEPR, Economics)

Affiliated Faculty: Jonathan Bendor (Graduate School of Business), Jayanta Bhattacharya (Medicine), Coit Blacker (Freeman Spogli Institute for International Studies), Michael J. Boskin (Economics, Hoover Institution), Paul Brest (Law, emeritus), Jeremy Bulow (Graduate School of Business), Eamonn Callan (Education), Martin Carnoy (Education), John Cogan (Hoover Institution), Joshua Cohen (Political Science, Philosophy, Law), Christophe Crombez (Freeman Spogli Institute for International Studies), Larry Diamond (Freeman Spogli Institute for International Studies, Hoover Institution), Walter Falcon (Freeman Spogli Institute for International Studies, emeritus), Lawrence Friedman (Law), Lawrence Goulder (Economics, Freeman Spogli Institute for International Studies), Deborah Hensler (Law), Pamela Hinds (Management Science and Engineering), Daniel Ho (Law), Nicholas Hope (Stanford Center for International Development), Caroline Hoxby (Economics, Hoover Institution, SIEPR), Jakub Kastl (Economics), Daniel Kessler (Law, Hoover Institution, Graduate School of Business), Pete Klenow (Economics), Stephen Krasner (Political Science, Freeman Spogli Institute for International Studies, Hoover Institution), Jon A. Krosnick (Communication), Claire Lim (Graduate School of Business), Thomas MaCurdy (Economics, Hoover Institution), Robert McGinn (Management Science and Engineering; Science, Technology and Society), Milbrey McLaughlin (Education), Terry Moe (Political Science, Hoover Institution), Norman Nie (Political Science), Jean Oi (Freeman Spogli Institute for International Studies), Joan Petersilia (Law), James Phills (Graduate School of Business), A. Mitchell Polinsky (Law), Walter Powell (Education), Robert Reich (Political Science), Lee Ross (Psychology), Ken Shotts (Graduate School of Business), Samuel So (Medicine), Jeff Strnad (Law), Barton Thompson (Law, Woods Institute, Freeman Spogli Institute for International Studies), Michael Tomz (Political Science, SIEPR), Greg Walton (Psychology), Jonathan Wand (Political Science), Barry Weingast (Political Science, Hoover Institution), Robert M. White (Materials Science and Engineering), Frank Wolak (Economics, Freeman Spogli Institute for International Studies)

Lecturers: Laura Arrillaga (Graduate School of Business), Frank Benest (Public Policy), Ward Hanson (SIEPR), Tammy Frisby (Hoover Institution, Political Science), Dennis Gale (Urban Studies), Jonathan D. Greenberg (Law), Russell Hancock (Public Policy), Adrienne Jamieson (Bing Stanford in Washington), Anjini Kochar (SIEPR), Camille Landais (SIEPR, Economics), Jeffrey Lax (Hoover Institution), Eva Meyersson Milgrom (SIEPR, Sociology), Alyssa O'Brien (Program in Writing and Rhetoric), Nick Sanders (SIEPR), Mark Tendall (Economics), Patrick Windham (Public Policy)

Program Office: First Floor, SIEPR Gunn Building

Mail Code: 94305-6050

Program Phone: (650) 725-0109

Web Site: http://publicpolicy.stanford.edu

Email: publicpolicy@stanford.edu

Courses offered by the Public Policy Program are listed under the subject code PUBLPOL on the *Stanford Bulletin's* ExploreCourses web site.

MISSION OF THE UNDERGRADUATE PROGRAM IN PUBLIC POLICY

The mission of the undergraduate program in Public Policy is to expose students to the concepts and tools used in evaluating public policy options and outcomes, and to prepare students for entry-level positions in organizations concerned with such analysis. The focus is chiefly on domestic policy issues, applicable anywhere in the world. Courses in the major provide students with background in economics and qualitative methods, political science, law, philosophy, ethics, organizational behavior, and social psychology. Economics and quantitative analyses are central to but not sufficient for modern public policy analysis; political science, law, philosophy, organizational behavior, and psychology are among other necessary disciplinary perspectives. Political philosophy and ethics form the foundations of public policy. Political science offers insights to the decision making process and information needs of a democracy. Organizational behavior focuses on the decisions made outside the market environment in hierarchies, bureaucracies, and teams. Nearly all public policy is formulated as law, and economic analysis of legal rules and institutions is key to effective implementation of policy decisions. Seniors have a research capstone requirement consisting either of an honors thesis or participation in a team practicum, conducting applied policy research for an outside client, typically a local or regional agency. Students majoring in Public Policy are prepared for careers in business, law, and governmental agencies, or for further study in graduate or professional schools.

The Public Policy Program offers a Bachelor of Arts, an honors program, and a minor for undergraduates, as well as a coterminal M.A. in Public Policy.

LEARNING OUTCOMES

The program expects its undergraduate majors to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the Program in Public Policy. Students are expected to demonstrate:

1. knowledge and understanding of Public Policy content material.
2. ability to communicate their ideas clearly and persuasively in written and oral forms.
3. ability to evaluate applied theoretical and empirical work in the discipline.
4. ability to apply skills and knowledge acquired in the curriculum to analyze policy issues and make policy recommendations.

GRADUATE PROGRAMS IN PUBLIC POLICY

University requirements for the master's degree are described in the "Graduate Degrees" section of this Bulletin.

Courses in the graduate program in Public Policy offer advanced skills necessary to assess the performance of alternative approaches to policy making and implementation, evaluating program effectiveness, understanding the political constraints faced by policy makers, and appreciating the conflicts in fundamental hu-

man values that often animate policy debate. After completing the graduate core curriculum, students apply these skills by focusing their studies in a two quarter, 10-unit practicum for the M.P.P., or a 5-unit master's thesis for the M.A. Students in the M.P.P. program also complete at least one concentration tailored to the student's primary degree program or the student's interests and skills.

The Graduate Program in Public Policy offers two master's degrees:

- Master of Public Policy (M.P.P.), a two-year program leading to a professional degree
- Master of Arts (M.A.), a one-year program not intended as a professional degree

The following joint degree programs, permitting students to complete requirements for two degrees with a reduced number of total residency units, are also offered:

- Juris Doctor with a Master of Public Policy (J.D./M.P.P)
- Juris Doctor with an M.A. of Public Policy (J.D./M.A.)
- Doctor of Philosophy in Economics, Education, Management Science and Engineering, Psychology, or Sociology with a Master of Public Policy (Ph.D./M.P.P)
- Master of Business Administration with a Master of Public Policy (M.B.A./M.P.P.)
- Master of Arts in International Policy Studies with a Master of Public Policy (M.A./M.P.P.)
- Master of Science in Management Science and Engineering with a Master of Public Policy (M.S./M.P.P.)

Requirements for the joint degrees differ from completing the two degrees separately. See the "Master's Degrees in Public Policy" section for more details.

BACHELOR OF ARTS IN PUBLIC POLICY

The core courses in the Public Policy Program develop the skills necessary to assess the performance of alternative approaches to policy implementation, evaluate the effectiveness of policies, understand the political objectives and constraints faced by policy makers, and appreciate the conflicts in fundamental human values that often animate the policy debate. After completing the core, students apply these skills by focusing their studies in one of several areas of concentration. The areas of concentration address specific fields of public policy, types of institutions, or a deeper development of the tools of policy analysis. Students design their own concentrations with the help of their faculty advisers and the approval of the program director. Students must submit a list of their proposed concentration course work and a brief written defense of its coherence in advance of taking concentration courses. Areas of concentration are not declared on Axess. They do not appear on the transcript or diploma.

Recent areas of concentration include, but are not limited to:

- Advanced Methods of Policy Analysis
- Design of Public Institutions
- Development and Growth Policies
- Education
- Environment, Resources, and Population
- Health Care
- International Policies
- Law and the Legal System
- Social Policy: Discrimination, Crime, Poverty

Completion of the Bachelor of Arts degree in Public Policy requires a minimum of 87 units of course work.

1. *Preparatory courses (44 units)*—POLISCI 2 or equivalent; ECON 1A, 1B, 50, 51, 102A, 102B; MATH 51; MS&E 180 or PSYCH 138. The U.S. Government and politics requirement can be fulfilled by taking POLISCI 2, by passing a diagnostic exam offered by the Public Policy program, or by receiving a score of at least 4 on the Advanced Placement exam in U.S. government and politics (which appears on the student's Stanford transcript). ECON 50, 51 and MATH 51 must be taken for a letter grade. A maximum of 10 units of the other preparatory courses may be taken as credit/no credit.
2. *Core courses*—A 25-unit sequence of 5-unit PUBLPOL courses (101, 102, 103B, C, or D, 104, and 106), which students should plan to complete by the end of junior year. All core courses must be completed for a letter grade.
3. *Concentration*—Majors must complete at least 15 units of course work in an area of concentration. This post-core course work must be approved by a faculty adviser and the director. Concentration courses must be completed for a letter grade.
4. *Capstone research requirement*—Seniors are required to demonstrate competency in applied policy research. This requirement is fulfilled either by an honors thesis or by participation in a team research project (Practicum) in which small student teams analyze real world policy problems faced by Bay Area agencies and produce a report for use by the client. A seminar for honors students is offered autumn quarter (PUBLPOL 200A, 3 units). The Practicum is offered both Winter and Spring quarters (PUBLPOL 200B and C, 5 units). The Capstone research requirement must be completed for a letter grade.
5. Students must complete the Public Policy core, concentration and the senior capstone requirement with an overall grade point average (GPA) of 2.3 (C+) or higher.
6. It is recommended that the major be declared by the end of sophomore year but no later than the end of Autumn Quarter of the junior year. Major declaration forms are available in the Public Policy Program office and on the web site.

The Public Policy Program encourages students to attend the Bing Stanford in Washington Program and to participate in appropriate Stanford internship programs, especially those available through the Haas Center for Public Service.

HONORS PROGRAM

The Public Policy Program offers students the opportunity to pursue honors work during the senior year. To graduate with honors in Public Policy, a student must:

1. Apply for admission to the honors program no later than the end of Spring Quarter of the junior year.
2. Complete the requirements for the B.A. in Public Policy and achieve an overall grade point average (GPA) of 3.5 in the following courses: the Public Policy core; concentration; Senior Capstone; PUBLPOL 199, Senior Research; and a course in applied econometrics (ECON 102C, ECON 103, ECON 104, STATS 202, PUBLPOL 303C, or POLISCI 150B). Students are encouraged to complete the applied econometrics course by the end of Spring Quarter of the junior year and take PUBLPOL 200A during Autumn Quarter. Courses not taken at Stanford are not included in calculating the GPA.
3. During Senior year, enroll in at least 8 but no more than 15 units of PUBLPOL 199, Senior Research, with the thesis adviser. Students need to contact the program office to have their thesis adviser listed as a 199 instructor. The honors thesis must demonstrate mastery of relevant analytical tools and address a policy issue. All PUBLPOL 199 units must receive a final grade of at least a 'B+.'
4. The honors thesis must be submitted to both the thesis adviser and the Public Policy Program office. In order to be considered for University and department awards, the final thesis must be submitted to the program office no later than the third Wednesday in May in both printed and electronic forms. All other theses must be submitted by the last Friday in May in both printed and electronic forms.

Students who intend to pursue honors work should plan their academic schedules so that most of the core courses are completed before the beginning of the senior year, and all of the core and concentration courses are completed by the end of Winter Quarter of senior year. This scheduling gives students both the time and the necessary course background to complete their honors thesis during Spring Quarter. In addition, prospective honors students are encouraged to enroll in PUBLPOL 197, Junior Honors Seminar,

during Winter or Spring Quarter; this course focuses on developing a research plan and the research skills necessary to complete an honors thesis.

To apply for honors, a student must submit a completed application to the Public Policy Program office with a brief description of the thesis. Applications are found online (http://publicpolicy.stanford.edu/undergraduate/honors) or in the program office. The student must obtain the sponsorship of a faculty member who approves the thesis description and agrees to serve as a thesis adviser. Students intending to write a thesis involving more than one discipline may wish to have two advisers, at least one of whom is affiliated with the Public Policy Program.

Graduation with honors requires that the thesis be approved by both the adviser and the program director. The role of the director is to assure that the thesis deals with an issue of public policy and satisfies the standards of excellence of the program. However, the grade for the honors thesis (PUBLPOL 199 units) is determined solely by the adviser.

Members of the affiliated faculty in Public Policy are available to provide assistance in selecting a thesis topic and adviser.

COTERMINAL M.A. IN PUBLIC POLICY

The coterminal M.A. in Public Policy is a structured program designed to impart the basic analytical tools of public policy analysis, or to permit public policy majors to specialize in an applied field of policy analysis. Most students will complete their M.A. in a fifth year at Stanford; occasionally students may be able to complete their B.A. and coterminal M.A. in the fourth year.

APPLICATION AND ADMISSION

There are three application deadlines for the 2010-11 academic year: November 16, 2010; February 22, 2011; and April 26, 2011. Seniors wishing to apply to the coterminal program must apply by the November or February deadlines.

To apply for admission to the Public Policy coterminal M.A. program, students should submit the following materials directly to the Public Policy office:

1. the coterminal application
2. 1-2 page statement of purpose
3. one page resume
4. a preliminary program proposal
5. a current unofficial undergraduate transcript
6. two confidential letters of recommendation from Stanford faculty members familiar with the student's academic work.

All applicants should have completed, or be currently enrolled in, required preparatory course work (MATH 51, POLISCI 2, ECON 1A, 1B, 50, 51, 52, 102A and 102B) prior to application.

University regulations govern both the coterminal M.A. degree application process and the requirements for the degree. Undergraduates with strong academic records may apply for admission upon completion of 120 units, but no later than the quarter prior to the expected completion of the undergraduate degree. The University requires that units for a given course may not be counted to meet the requirements of more than one degree; that is, no units may be double-counted. No courses taken more than two quarters prior to admission to the coterminal master's program may be used to meet the 45-unit University minimum requirement for the master's degree.

The University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees" section of this Bulletin. For University coterminal degree program rules and University application forms, also see http://studentaffairs.stanford.edu/registrar/publications#Coterm.

REQUIREMENTS

To graduate with a coterminal M.A. in Public Policy, students must:

1. Take all courses applied to the coterminal master's degree for a letter grade (with the exception of PUBLPOL 311, which is only offered C/NC). No units are counted for courses in which a student earns a grade less than B-. Courses offered only for C/NC or other non-letter grade system may be applied upon approval of a petition to the program director.
2. Achieve a cumulative grade point average (GPA) of 3.0 (B) or better for all courses taken towards the M.A.
3. Comply with all relevant University and program deadlines and policies.
4. Students seeking the coterminal M.A. in Public Policy follow one of two tracks (A or B) through the program, as described below.

TRACK A

For students who have completed, or will complete, the Public Policy core course curriculum. Track A consists of at least 45 units of course work:

1. 27 or more units in an area of concentration. There are five concentrations:
   - Health Policy
   - Education Policy
   - International Policy
   - Regulatory Policy
   - Environmental Policy

   Each concentration consists of a set of required core courses and a variety of electives. Students must present a coherent written study plan to support concentration course choices, designed in consultation with a faculty adviser and approved by the program director.
2. 4 or 5 units of applied econometrics (ECON 102C, ECON 103, ECON 104, STATS 202, PUBLPOL 303C, or POLISCI 150B)
3. PUBLPOL 302A. Introduction to American Law
4. Year-long attendance and participation in PUBLPOL 311. Colloquium. Students enroll in one quarter of their choosing.
5. Completion of a 10-unit practicum or a faculty-supervised internship
6. All 45 units must be taken in upper division (100-level) courses, and at least 25 of those units must be at the graduate level (200-level and above).
7. Track A students must also complete ECON 52, which does not count toward the 45 units.

TRACK B

For students who will not complete the Public Policy core curriculum. Track B consists of at least 45 units of core subjects in the analysis of public policy.

1. The following preparatory courses are required, but do not count toward the 45-units:
   - ECON 1A, 1B, 50, 51, 52, 102A, 102B
   - MATH 51
   - POLISCI 2 or equivalent
2. The following core courses are required and do count toward the required 45 units:
   - PUBLPOL 201. Politics and Public Policy *or* PUBLPOL 304A. Politics and Collective Action *or* PUBLPOL 214. Collective Choice
   - PUBLPOL 301A. Microeconomics
   - PUBLPOL 202. Organizations and Public Policy *or* MS&E 180. Organizations: Theory and Management *or* PUBLPOL 317. Comparing Institutional Forms
   - PUBLPOL 307. Justice
   - PUBLPOL 301B. Cost-Benefit Analysis and Evaluation
   - PUBLPOL 302A. Introduction to American Law
   - ECON 102C, ECON 103, ECON 104, STATS 202, PUBLPOL 303C, *or* POLISCI 150B
   - PUBLPOL 206. Economics of Legal Rules and Institutions *or* 302B. Introduction to Economic Analysis of Law *and* 302C. Advanced Topics in Law and Economics
   - PUBLPOL 305A. Judgment and Decision Making *or* PUBLPOL 305B. Public Policy and Social Psychology
3. Year-long attendance and participation in PUBLPOL 311, Colloquium. Students enroll in one quarter of their choosing.
4. Students should petition additional advanced policy skills courses to meet the 45-unit degree requirement. All 45 units

must be taken in upper division (100+ level) courses and at least 23 of those units must be taken at the graduate level (200-level and above).

ADVISING

Coterminal M.A. students must meet with their faculty adviser upon acceptance to the program. Advisers must confirm that the courses proposed are likely to be taught during the applicable period, or that appropriate substitute courses are available. Public Policy student services will verify scheduling of courses.

FINANCIAL AID

The Public Policy Program does not provide financial assistance to coterminal M.A. students. For information on student loans and other sources of support, please consult the Stanford Financial Aid Office. Students who enter public service employment with local, state, or federal agencies, schools, or certain non-for-profit organizations may obtain forgiveness for educational loans, based on years of public service employment.

MASTER'S DEGREES IN PUBLIC POLICY

The program offers two master's programs in Public Policy. The Master in Public Policy (M.P.P.) is a two-year professional degree and the Master of Arts in Public Policy (M.A.) is a one-year non-professional degree.

At this time, only currently-enrolled students in other Stanford graduate programs or applicants to those programs may apply for either of the Public Policy master's programs. All Public Policy master's programs require at least one year of study at Stanford beyond the requirements for the other joint or dual degree.

1. Public Policy Joint Degrees. Students enrolled in or applying to the Law, Education, Business, or Humanities/Social Science schools or departments are eligible to apply for Public Policy joint degrees.
   - Juris Doctor and Master of Public Policy (J.D./M.P.P.)
   - Juris Doctor and Master of Arts of Public Policy (J.D./M.A.)
   - Doctor of Philosophy in Education and Master of Public Policy (Ph.D./M.P.P.)
   - Doctor of Philosophy in Economics and Master of Public Policy (Ph.D./M.P.P.)
   - Doctor of Philosophy in Management Science & Engineering and Master of Public Policy (Ph.D./M.P.P.)
   - Doctor of Philosophy in Psychology and Master of Public Policy (Ph.D./M.P.P.)
   - Doctor of Philosophy in Sociology and Master of Public Policy (Ph.D./M.P.P.)
   - Master of Business Administration and Master of Public Policy (M.B.A./M.P.P.)
   - Master of Arts in International Policy Studies and Master of Public Policy (M.A./M.P.P.)
   - Master of Science in Management Science & Engineering and Master of Public Policy (M.S./M.P.P.)

   For further information, see the "Joint Degree Programs" section of this bulletin and the University Registrar's site.
2. Master of Public Policy (M.P.P.) and Master of Arts in Public Policy (M.A.) Dual Degrees

   Any other Stanford graduate student (i.e., not covered in '1' above) is eligible to apply for a dual degree, either the M.P.P. or the M.A. in Public Policy, in addition to the degree program in which they are currently enrolled.

PREREQUISITES

Graduate students in Public Policy are expected to be literate in mathematics and economics at the Stanford equivalent of MATH 51 and ECON 50 before beginning the curriculum. A no-credit refresher course in mathematics and economics is offered in the two weeks preceding the start of Autumn Quarter.

ADMISSIONS

Applications for graduate study in Public Policy are accepted only from students currently enrolled in any Stanford graduate degree program or from external applicants seeking a joint degree. External applicants for joint degrees must apply to the department or school offering the other graduate degree (i.e., Ph.D., M.A., M.S., M.B.A., or J.D.), indicating an interest in the joint degree program; applicants admitted to the other degree program are then evaluated for admission to the M.P.P. or M.A. program. Students currently enrolled in any Stanford graduate program may, with the consent of that program, apply either for the applicable joint degree program or for the dual M.P.P. or M.A. degree. Applications are reviewed and accepted on a rolling basis but must be received by the Public Policy Program office no later than April 15, 2011.

REQUIREMENTS

1. *Core Curriculum—*
   All core courses must be taken for a letter grade and must be completed with an overall grade point average (GPA) of 3.0 or better.
   - PUBLPOL 301A. Microeconomics
   - PUBLPOL 301B. Cost-Benefit Analysis and Evaluation
   - PUBLPOL 302A. Introduction to American Law
   - PUBLPOL 302B. Introduction to Economic Analysis of Law
   - PUBLPOL 302C. Advanced Topics in Law and Economics
   - PUBLPOL 303A. Foundations of Statistical Inference
   - PUBLPOL 303B. Econometrics
   - PUBLPOL 304A. Politics and Collective Action *or* PUBLPOL 214. The Logic of Collective Choice
   - PUBLPOL 202. Organizations and Public Policy *or* PUBLPOL 317. Comparing Institutional Forms
   - PUBLPOL 305A. Judgment and Decision Making
   - PUBLPOL 305B. Public Policy and Social Psychology
   - PUBLPOL 306. Writing and Rhetoric for Policy Audiences (M.P.P. students only)
   - PUBLPOL 307. Justice
2. *Colloquium*—Year-long participation in the weekly colloquium (PUBLPOL 311) is required for all first-year M.P.P. and M.A. students, and strongly encouraged for second-year students. One unit of credit is given, for which students may register in any quarter.
3. *Practicum (M.P.P. students only)*—Completion of the two quarter practicum course, PUBLPOL 309 (10 units, Autumn and Winter quarters), and presentation of a report in which interdisciplinary student teams analyze real world policy issues for an outside client.
4. *Concentration (M.P.P. students only)*—Advanced course work in a specialized field, chosen from the approved list of concentration courses with the prior approval of the student's faculty adviser and the program director.
5. *Master's Thesis (M.A. students only)*—All M.A. students must submit a 5-unit master's thesis, written under the guidance of an adviser who is a member of the Public Policy affiliated faculty on a topic approved in advance by the program director. Students give the program office the name of their thesis adviser during Autumn Quarter and enroll in PUBLPOL 310 during a quarter of their choosing. The 5 units may be spread over multiple quarters, and an 'N' (continuing course) grade is given during any quarters prior to Spring. The thesis must be submitted to the Public Policy Program office in both electronic and printed form no later than the last Friday in May. The final grade for PUBLPOL 310 is the M.A. thesis grade, which is determined solely by the thesis adviser.

M.P.P. AND M.A. DEGREE REQUIREMENTS

1. All graduate degree candidates must submit a Master's Degree Program Proposal to the Public Policy office by the end of Au-

Autumn Quarter and must amend this proposal formally if plans for meeting the degree requirements change.
2. Public Policy students are never required to repeat a course which duplicates material they have already mastered. Students may, by petition, substitute a different course for a core requirement whose material would be duplicative. This flexibility does not reduce the unit requirements for any degree.
3. M.P.P. degree students are not permitted to enroll in PUBLPOL 309. Practicum without having completed the following Core Courses: PUBLPOL 301A, 301B, 302B, 302C, 303A, 303B, 306.

PUBLIC POLICY JOINT DEGREE REQUIREMENTS

1. A joint degree is regarded by the University as distinct from either of its component degrees, and requirements for the joint degree generally differ from the sum of the requirements for the individual degrees.
2. Up to a maximum of 45 units, or one year, of the University residency requirement can be credited toward both degree programs (i.e., the joint degree requirements may contain up to 45 units less than the sum of the individual degree unit requirements). For example, a J.D./M.P.P. has a four-year residency requirement, one year less than the sum of the requirements for the separate degrees. This recognizes that there is a subject matter overlap between the fields comprising the joint degree.
3. The Public Policy Program strives to encourage an intellectual, professional, and social community among its students. For this reason, joint degree students are expected to devote one year of full-time study at Stanford (usually the second) entirely to the Public Policy Program, rather than spacing Public Policy courses throughout their graduate careers. Unavoidable scheduling conflicts involving joint degree students may be mitigated by substitution of equivalent courses approved in advance by petition.
4. Joint degree students are expected to have and to consult regularly with an academic adviser. The adviser is generally a member of the faculty of both of degree programs. The program director is available to make adviser recommendations.
5. In order to take advantage of the reduced residency requirement, joint M.P.P. students must define their area of concentration from among courses offered in their non-Public Policy program.

MINORS IN PUBLIC POLICY

The Public Policy Program offers a minor that is intended to provide students with interdisciplinary training in applied social sciences. Students who pursue the minor are required to take the courses listed below for a total of 35 units in Public Policy and its supporting disciplinary departments. Because University rules prohibit double-counting courses, the requirements for a minor differ according to the student's major requirements. Courses for the minor must be completed for a letter grade.

For students whose major department or program requires no courses in economics and political science, the requirements for a Public Policy minor are:

Subject and Catalog Number	*Units*
ECON 1A,B, 50, 51	20
POLISCI 2*	5
PUBLPOL 101	5
PUBLPOL 104	5

For students who are Economics majors or who satisfy a major requirement by taking ECON 50, but have taken no courses in political science, the requirements for a Public Policy minor are:

ECON 51	5
POLISCI 2*	5
PUBLPOL 101	5
PUBLPOL 102	5
PUBLPOL 103B, C *or* D	5
PUBLPOL 104	5
PUBLPOL 106	5

* The U.S. government and politics requirement can be fulfilled by taking POLISCI 2, passing a diagnostic exam offered by the Public Policy program, or by receiving a score of at least 4 on the Advanced Placement exam in U.S. government and politics (which appears on the Stanford transcript).

For students who are Political Science majors or who satisfy a major requirement by taking POLISCI 2 but no courses in Economics, the requirements for a Public Policy minor are:

ECON 1A,B, 50, 51, 102A	25
PUBLPOL 104	5
PUBLPOL 106	5

For Sociology majors, the requirements for a Public Policy minor are:

ECON 1A,B, 50, 51, 102A	25
PUBLPOL 103B, C *or* D	5
PUBLPOL 104	5

For students who major in another interdepartmental program such as International Relations and who satisfy major requirements by taking ECON 50, POLISCI 2, and an introductory course in statistics such as ECON 102A or STATS 60, the requirements for a Public Policy minor are:

ECON 51, 102B	10
PUBLPOL 101	5
PUBLPOL 102	5
PUBLPOL 103B, C *or* D	5
PUBLPOL 104	5
PUBLPOL 106	5

OVERSEAS STUDIES COURSES IN PUBLIC POLICY

For course descriptions and additional offerings, see the listings in the *Stanford Bulletin's* ExploreCourses web site (http://explorecourses.stanford.edu) or the Bing Overseas Studies web site (http://bosp.stanford.edu). Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

AUTUMN QUARTER

BEIJING

- OSPBEIJ 024. China's Economic Development. 5 units, Rozelle, GER:DB:SocSci

PARIS

- OSPPARIS 124X. Building the European Economy: Economic Policies and the Challenges Ahead. 5 units, Jacques Le Cacheux, GER:DB:SocSci
- OSPPARIS 153X. Health Systems and Health Insurance: France and the U.S. -- a Comparison. 4-5 units, Fessler, GER:DB:SocSci, EC:GlobCom

WINTER QUARTER

MADRID

- OSPMADRID 32. Health Care Systems Design: Spain, Europe, and the United States. 4 units, Baker, GER:DB:HUM

OXFORD

- OSPOXFRD 18. Making Public Policy: An Introduction to Political Philosophy, Politics and Economics. 4-5 units, Robert McMahon, GER:DB:SocSci

SPRING QUARTER

CAPETOWN

- OSPCPTWN 40. Education in the Post-Apartheid City. 4 units, Bardroodien, Aslam Fataar

FLORENCE

- OSPFLOR 24. Economics in the European Setting. 3 units, Eric Bettinger

- OSPFLOR 78. An Extraordinary Experiment: Politics and Policies of the "New" European Union. 5 units, Morlino, GER:DB:SocSci

PARIS

- OSPPARIS 33. The Economics of Climate Change: Policies in Theory and in Practice in the EU and the US. 5 units, Christian de Perthuis, Benoit Leguet, GER:DB:SocSci, EC:GlobalCom

SANTIAGO

- OSPSANTG 119X. The Chilean Economy: History, International Relations, and Development Strategies. 5 units, Staff, GER:DB:SocSci

RELIGIOUS STUDIES

Emeriti: (Professors) Arnold Eisen, Bernard Faure, René Girard, Edwin M. Good, Robert C. Gregg, Van Harvey, David S. Nivison
Chair: Hester G. Gelber
Professors: Carl W. Bielefeldt (on leave), Hester G. Gelber, Paul Harrison, Thomas Sheehan, Steven Weitzman, Lee Yearley
Associate Professors: Shahzad Bashir, Charlotte Fonrobert, Brent Sockness
Assistant Professor: Behnam Sadeghi (on leave)
Senior Lecturers: Linda Hess, Barbara Pitkin
Lecturers: Zachary Baker, Kirsti Copeland, Sarah Horton, David Kangas, Irene Lin, Azim Nanji, Yuhan S.-D. Vevaina, Candace West
Visiting Professors: Stephen R. Bokenkamp, Paul Crowley, Griffith Foulk
Affiliated Faculty: Vincent Barletta (Iberian and Latin American Cultures), Jean-Pierre Dupuy (French and Italian)
Department Offices: Building 70
Mail Code: 94305-2165
Phone: (650) 723-3322
Web Site: http://stanford.edu/dept/relstud

Courses offered by the Department of Religious Studies are listed under the subject code RELIGST on the *Stanford Bulletin's* ExploreCourses web site.

MISSION OF THE DEPARTMENT

The field of Religious Studies brings a variety of disciplinary perspectives to bear on the phenomena of religion for the purpose of understanding and interpreting the history, literature, thought, social structures, and practices of the religious traditions of the world. Comprised of a dozen regular faculty with particular strengths in the study of Buddhism, Christianity, Islam, and Judaism, it enrolls about thirty graduate students (mostly doctoral) and roughly as many undergraduate majors, minors, and joint majors.

Religious Studies works closely with several related programs at Stanford: the Department of Philosophy, with which it offers a joint undergraduate major; the Ho Center for Buddhist Studies; the Taube Center for Jewish Studies; the Abbasi Program in Islamic Studies; the McCoy Center for Ethics in Society; and the Program in Medieval Studies.

While some undergraduates continue their study of religion in a graduate or professional program, most pursue meaningful and successful careers in business, government, the nonprofit sector, and medicine. In this respect, Religious Studies is an ideal interdisciplinary major in the liberal arts. Graduates of the department's doctoral program generally pursue academic careers and are routinely placed in the best universities and colleges in the country.

LEARNING OUTCOMES

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. understanding of the subject matter of and methods used in the study of religion.
2. skill in reading and interpreting religious texts critically.
3. ability to conduct and present research within the discipline.

These learning outcomes are used both to evaluate students and to assess the department's undergraduate program.

UNDERGRADUATE PROGRAMS IN RELIGIOUS STUDIES

The department offers a Bachelor of Arts major, minor, and honors program in Religious Studies, and a joint major with the Philosophy Department in Religious Studies and Philosophy. Undergraduate courses in Religious Studies are designed to engage students existentially and to assist them in thinking about intellectual, ethical, and sociopolitical issues in the world's religions. The department's faculty seek to provide tools for understanding the complex encounters among religious ideas, practices, and communities, and the past and present cultures that have shaped and been shaped by religion. Courses therefore expose students to: leading concepts in the field of religious studies such as god(s), sacrifice, ritual, scripture, prophecy, and priesthood; approaches developed over the past century, including the anthropological, historical, psychological, philosophical, and phenomenological, that open religion to closer inspection and analysis; and major questions, themes, developments, features, and figures in the world's religious traditions. The department encourages and supports the acquisition of languages needed for engagement with sacred texts and interpretive traditions as well as study abroad at Stanford's overseas centers where religions can be observed and experienced in the culture of their origin.

GRADUATE PROGRAMS IN RELIGIOUS STUDIES

The graduate mission of the department is to provide students with an interdisciplinary setting of study within which to focus on their respective areas of specialization. The department offers an M.A. and a Ph.D. degree in Religious Studies.

BACHELOR OF ARTS IN RELIGIOUS STUDIES

SUGGESTED PREPARATION FOR THE MAJOR

There is no prescribed route or prerequisite to the major; students typically find themselves majoring after taking courses in the department and becoming acquainted with department faculty. Students contemplating the major or joint major are invited to consult with the Director of Undergraduate Studies. The undergraduate student services associate in Building 70 can also field questions regarding the declaration procedure within the department.

DEGREE REQUIREMENTS

The curriculum for majors is designed to move students sequentially from foundational courses, through deeper investigations, culminating in integrative research courses. Thus, the introductory sequence is designed to lead to courses which build on this foundation with topics including: particular traditions such as Judaism or Buddhism; comparative studies such as nonviolence in Hinduism and Buddhism, or Muslim and Christian interpretations of scripture; specific topics such as mysticism, gender and religion, or theodicy; and distinctive approaches such as the philosophy of religion or ritual studies. Majors complete their careers with integrative courses that afford opportunity for research and consolidation of the knowledge and skills gained earlier.

A Bachelor of Arts in Religious Studies requires 60 units of course work. At least 44 units are to be taken in courses numbered

above 100. Ten units out of the 60 may be taken for the grade of C/NC.

REQUIRED COURSES

1. At least 8 of the 60 units must be courses at the introductory level. Students may satisfy this requirement by taking either:
   a. IHUM 68A,B. Ultimate Meanings (Winter/Spring sequence), or
   b. one course in each of the following categories: introduction to religious traditions (courses numbered 11-50) and introductory topics in the study of religion (courses numbered 51-99). In consultation with the Undergraduate Director, one Stanford Introductory Seminar in Religious Studies may be applied to this introductory requirement.
2. At least 29 units are to be taken in intermediate lecture and seminar courses numbered 100-289. Of these, at least two seminars are required from courses numbered above 200. With approval of the Undergraduate Director, language courses related to the student's program of study (such as Arabic, Biblical Hebrew, New Testament Greek, Chinese, or Japanese), but not counted towards the University language requirement, may be counted among these 29 units.
3. 15 units in integrative courses:
   a. Majors' Seminar: RELIGST 290. Theories of Religion (5 units; Winter Quarter of junior year; fulfills WIM requirement; letter grade only)
   b. Senior Essay or Honors Thesis Research: RELIGST 297 (3-5 units; minimum 5 units; up to 10 units over two quarters; graded 'N' until completion of essay or thesis)
   c. Senior Majors' Colloquium: RELIGST 298 (5 units; Spring Quarter; grading option S/NC)
   d. completion of either a senior essay or honors thesis. See below concerning the difference between these options.
4. Each student, in consultation with his/her adviser, works out a focus of study centering either on a particular religious tradition or on a theme or problem that cuts across traditions such as ritual, ethics, scripture, or gender.
5. Students focusing on one religious tradition must take at least 8 units in one or more religious traditions outside their concentration.

SENIOR ESSAY

A 25-30 page essay on a topic chosen by the student and approved by the adviser upon receipt of a student's proposal by the end of the third quarter prior to expected graduation. The character and content of the essay, which is meant to allow the student to call into play knowledge and skills learned in the course of the major, may take several forms. For example, a student may return to a subject studied earlier but now pursued in more depth or from a new perspective, research a recent or new topic of interest in the field, or offer a carefully framed critical assessment of what has been learned in the major based on review of influential sources, theories, and methods of studying religion. The senior essay is read and graded by the student's adviser and one other member of the Religious Studies faculty.

HONORS THESIS

A 40-80 page research paper on a topic chosen by the student and approved by the adviser upon receipt of a proposal in the fourth quarter prior to expected graduation. The paper, supported by mastery of primary and secondary scholarship, advances a well-reasoned, supportable thesis. Writers of honors theses must have a grade point average (GPA) of 3.5 in Religious Studies courses, and at least 3.2 overall, and are expected to have already demonstrated success in writing research papers. The honors thesis is read and graded by the student's adviser and one other member of the Religious Studies faculty. Theses earning a grade of 'B+' or above receive honors.

COGNATE COURSES

The following courses in other departments/programs have been approved by the Chair as fulfilling requirement 2 above.

CLASSGEN 18. Greek Mythology
POLISCI 149S. Islam and the West

MAJOR IN RELIGIOUS STUDIES AND PHILOSOPHY

The departments of Religious Studies and Philosophy jointly nominate for the B.A. in Religious Studies and Philosophy those students who have completed a major in the two disciplines. See a description of this joint major in the "Philosophy" section of this bulletin, or in the guidelines available from the undergraduate director of either department.

MINOR IN RELIGIOUS STUDIES

A Religious Studies minor is a complement to many majors throughout the University. Students contemplating the minor are invited to consult with the Director of Undergraduate Studies. The undergraduate student services associate in Bldg. 70 can also field questions regarding the declaration procedure within the department.

Requirements—A minor in Religious Studies requires a minimum of 30 graded units. Students are encouraged to focus their program of study either in a religious tradition or in a theme that cuts across traditions. In consultation with their advisers, students may design the minor in Religious Studies to complement their major. The minor must be declared no later than the last day of the quarter, two quarters before degree conferral.

Required Courses for the Minor—

1. Two introductory courses. To satisfy this requirement, students take either:
   a. IHUM 68A,B. Ultimate Meanings (Winter/Spring sequence), or
   b. one course in each of the following categories: introduction to religious traditions (courses numbered 11-50) and introductory topics in the study of religion (courses numbered 51-99). In consultation with the Undergraduate Director, one Stanford Introductory Seminar in Religious Studies may be applied to this introductory requirement.
2. At least 22 units in courses at the intermediate and advanced level (above 100), including at least one 200-level seminar.
3. Diversity requirement: Students may not take all courses in one religious tradition.
4. One course in directed reading (RELIGST 199) may count towards the minor.
5. With approval of the Undergraduate Director, one language course related to the student's program of study (such as Arabic, Biblical Hebrew, New Testament Greek, Chinese, or Japanese), but not counted towards the University language requirement, may be counted toward the minor.
6. Courses from other departments may not count towards the minor. (*Exception:* language courses covered by point 5.)

MASTER OF ARTS IN RELIGIOUS STUDIES

University requirements for the M.A. are described in the "Graduate Degrees" section of this bulletin. The department offers a one-year terminal M.A. program. Students can also earn their M.A. degree as part of their coterminal degree program. The M.A. program serves two groups of students: a) those who wish to prepare for a doctoral program in religious studies and b) those who wish to further deepen their knowledge in an area in which they have acquired some expertise during their undergraduate work.

DEGREE REQUIREMENTS

The following requirements are in addition to the University's basic requirements.

The student completes at least 45 units of graduate work at Stanford beyond the B.A. degree, including either RELIGST 290, Majors Seminar, or, with consent of instructor, RELIGST 304A or B, Theories and Methods. Residence may be completed by three quarters of full-time work or the equivalent.

The student's plan of courses is subject to approval by the Graduate Director. No field of specialization is expected, but students may focus work in particular areas. Advanced and graduate courses in other departments may be taken (see below). No thesis is required; a thesis, if elected, may count for as many as 9 units.

Each student demonstrates reading knowledge of at least one foreign language.

DOCTOR OF PHILOSOPHY IN RELIGIOUS STUDIES

University requirements for the Ph.D. are described in the "Graduate Degrees" section of this bulletin. The Ph.D. in Religious Studies signifies special knowledge of an interdisciplinary field of study and potential mastery of an area of specialization within it. The faculty of the department have established certain fields of study in which the department's strengths and those of other Stanford departments cohere. They are: Buddhist studies, Islamic studies, Jewish studies, and modern religious thought, ethics, and philosophy. Students who wish to specialize in other fields must obtain early approval by the faculty. Each of these areas of specialization follows a shared structure of study.

DEGREE REQUIREMENTS

The following requirements are in addition to the University's basic requirements.

1. *Residence*—Each student completes three years (nine quarters) of full-time study, or the equivalent, in graduate work beyond the B.A. degree, and a minimum of 135 units of graduate course work (excluding the dissertation).
2. *Required Courses*—The 135 units of graduate course work must include the following:
   RELIGST 304A. Theories and Methods
   RELIGST 304B. Theories and Methods
   RELIGST 391. Pedagogy
   RELIGST 399. Recent Works in Religious Studies
   The remainder of the course work is individually designed, in consultation with the adviser.
3. *Languages*—Each student demonstrates a reading knowledge of two foreign languages, including French or German. One of those language requirements should be fulfilled by the time of advancing to candidacy at the end of the second year. Competence in the second language must be demonstrated at the time of the qualifying examination. Each student also demonstrates reading knowledge of other ancient or modern languages necessary for the field of study, area of specialization, and dissertation topic.
4. *Candidacy*—At the end of each academic year, the department's faculty recommend second-year students for candidacy on the basis of all relevant information, and especially on the student's candidacy dossier that includes the approved declaration of an area of specialization, certification for one foreign language, and two substantial papers written for courses during the previous two years. Students are required to take RELIGST 391 and RELIGST 399 prior to candidacy.
5. *Paper-in-Field*—During the third year, under the supervision of their advisers, students prepare a paper suitable for submission to an academic journal in their field. The paper is read and approved by at least two faculty members in the department. Students are encouraged to register for RELIGST 392 while working on the paper.
6. *Teaching Internship*—At least one teaching internship under the supervision of faculty members is undertaken at a time negotiated with the Graduate Director. Students receive academic credit for the required internship, which is a part of academic training and not of employment.
7. *Qualifying Examination*—To qualify for writing a dissertation, the student must pass a comprehensive examination in the chosen field and the area of specialization, typically during the first quarter of their fourth year. The student must complete the second language requirement before taking the qualifying examination. The qualifying examination is normally conducted by a committee of at least three Academic Council members of the department, one of whom is the adviser. One faculty member may be from outside the department with permission of the Director of Graduate Studies.
8. *Dissertation*—The dissertation contributes to the humanistic study of religion and is written under the direction of the candidate's dissertation adviser and at least two other members of the Academic Council. The University Oral examination is a defense of a completed draft of the dissertation.
   a. *Dissertation Proposal*—Candidates submit their dissertation proposal in consultation with their advisers. It is read by a committee of at least three faculty, of whom one is the adviser (as chair) and the two others are members of the Academic Council. One non-departmental faculty member may be included.
   b. *Dissertation Committee*—The dissertation committee is formed after acceptance of the dissertation proposal. It is normally composed of the dissertation adviser and at least two Academic Council members of the Religious Studies department. One non-departmental faculty member may serve as a reader when approved by the Director of Graduate Studies.
9. *University Oral Examination*—This examination, required by the University of Ph.D. students, is a defense of a completed draft of the dissertation. The composition of the examination committee is set by University regulation: five or more faculty, normally all of whom are members of the Academic Council, one of whom must be outside the department to serve as chair of the committee. Normally, the examining committee includes all qualified members of the dissertation committee.

PH.D. IN RELIGIOUS STUDIES AND HUMANITIES

The department participated in the Graduate Program in Humanities leading to a Ph.D. degree in Religious Studies and Humanities. AAt this time, the option is available only to students already enrolled in the Graduate Program in Humanities; no new students are being accepted. The University remains committed to a broad-based graduate education in the humanities; the courses, colloquium, and symposium continue to be offered, and the Division of Literatures, Cultures, and Languages provides advising for students already enrolled who may contact DLCL Student Affairs at 650-724-1333 or dlcl@stanford.edu for further information. Courses are listed under the subject code HUMNTIES and may be viewed on the *Stanford Bulletin's* ExploreCourses web site.

PH.D. MINOR IN RELIGIOUS STUDIES

Candidates for the Ph.D. in other departments may select a Ph.D. minor in Religious Studies.

*Requirements—T*he minor requires at least 24 units in Religious Studies at the 200 level or above. Four of the 24 units should be in RELIGST 304 A,B, Theories and Methods.

Required Courses for the Minor—
RELIGST 304A *or* B. Theories and Methods

Optional Courses for the Minor—
The student should choose any of the courses offered in the department at the 200 level or above, for the equivalent of at least 24 units. Other courses can be chosen in consultation with the Graduate Director.

OVERSEAS STUDIES COURSES IN RELIGIOUS STUDIES

For course descriptions and additional offerings, see the listings in the *Stanford Bulletin's* ExploreCourses web site (http://explorecourses.stanford.edu) or the Bing Overseas Studies web site (http://bosp.stanford.edu). Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

SPRING QUARTER

BERLIN

- OSPBER 68. Protestant Reformation. 4 units, Barbara Pitkin; GER:DB:Hum.
- OSPBER 69. Theology in Dark Times: The Churches Under Hitler. 4 units, Brent Sockness; GER:DB:Hum.

KYOTO

- OSPKYOTO 17R. Religion and Japanese Culture. 4-5 units, Catherine Ludvik, GER:DB:Hum, EC:GlobalCom

MADRID

- OSPMADRD 38. Spanish Catholicism: Religion, Mysticism, Architecture, Art. 3 units, Thomas Sheehan.
- OSPMADRD 51. The Meaning of Life: Art, Poetry, Philosophy. 3 units, Thomas Sheehan.

RUSSIAN, EAST EUROPEAN AND EURASIAN STUDIES

Director: Robert Crews (History)
Professors: Lazar Fleishman (Slavic Languages and Literatures), Gregory D. Freidin (Slavic Languages and Literatures), David J. Holloway (History, Political Science), Nancy S. Kollmann (History), Michael A. McFaul (Political Science, on leave), Norman Naimark (History, on leave), Aron Rodrigue (History), Gabriella Safran (Slavic Languages and Literatures), Nancy B. Tuma (Sociology), Steven J. Zipperstein (History)
Associate Professors: Shahzad Bashir (Religious Studies), Robert Crews (History), Monika Greenleaf (Slavic Languages and Literatures), Amir Weiner (History)
Assistant Professors: Vera Gribanova (Linguistics), Branislav Jakovljevic (Drama), Pavle Levi (Film Studies), Bissera Pentcheva (Art History), Edith Sheffer (History), Nariman Skakov (Slavic Languages and Literatures)
Senior Lecturers: Rima Greenhill (Slavic Languages and Literatures), Katherine Jolluck (History)
Lecturers: Jelena Batrinic (History), Julie Draskoczy (Slavic Languages and LIteratures), Eugenia Khassina (Slavic Languages and Literatures), Jack Kollmann (Center for Russian, East European and Eurasian Studies), Gail Lapidus (Center for Russian, East European and Eurasian Studies), Alma Kunanbaeva (Anthropology), Asya Perelstvaig (Linguistics), Kathryn Stoner-Weiss (Political Science, and Senior Fellow at FSI), Patricia Young (Political Science)
Courtesy Professor: Coit Blacker (Political Science)
Visiting Professors: Alan Timberlake (Slavic Languages and Literatures), Viktor Zhivov (Slavic Languages and Literatures)
Visiting Associate Professor: Ewa Domanska (Anthropology)
Affiliates: Michael B. Bernstam (Hoover Institution), Lera Boroditsky (Psychology), Margaret Brandeau (School of Engineering), Chaim Braun (Freeman Spogli Institute for International Studies), Martin Carnoy (School of Education), Robert Conquest (Hoover Institution), John B. Dunlop (Hoover Institution), Timothy Garton Ash (Hoover Institution), Paul Gregory (Hoover Institution), Siegfried S. Hecker (School of Engineering), Kenneth Jowitt (Hoover Institution), Terry L. Karl (Political Science), David Laitin (Political Science), Douglas Owens (School of Medicine), Bertrand Patenaude (Hoover Institution), William J. Perry (School of Engineering), Dmitri Petrov (Biology), Pavel Podvig (Freeman Spogli Institute for International Studies), Condoleezza Rice (Political Science), Jeffrey Richardson (Freeman Spogli Institute for International Studies), Karen Rondestvedt (Stanford Libraries), Geoffrey Rothwell (Economics), Nancy Ruttenburg (English), Anatol Shmelev (Hoover Institution), Maciej Siekierski (Hoover Institution), Mitchell Stevens (School of Education and Sociology), Ilya Strebulaev (Graduate School of Business), Allen S. Weiner (School of Law)
Center Offices: Encina West, Room 203
Mail Code: 94305-6045
Phone: (650) 723-3562
Web Site: http://CREEES.stanford.edu

Courses offered by the Center for Russian, East European and Eurasian Studies are listed under the subject code REES on the *Stanford Bulletin's* ExploreCourses web site.

The Center for Russian, East European and Eurasian Studies (CREEES) coordinates the University's teaching, research, and extracurricular activities related to the former Soviet Union and Eastern Europe, and administers a one-year interdisciplinary M.A. graduate degree program. Information on the center's degree programs and other activities is available at http://CREEES.stanford.edu. CREEES and its degree programs are directed by the CREEES Steering Committee, composed of faculty members associated with the Center. The program draws on the strengths of nationally recognized area faculty and research affiliates and significant library and archival collections at Stanford. The Center is a U.S. Department of Education Title VI National Resource Center for Russia, East Europe, and Eurasia.

UNDERGRADUATE PROGRAMS IN RUSSIAN, EAST EUROPEAN AND EURASIAN STUDIES

The Center for Russian, East European and Eurasian Studies no longer offers an undergraduate minor.

Students interested in a minor should consult the Director of Undergraduate Studies in the Department of Slavic Languages and Literatures which offers the following relevant minors:

- Russian, East European and Eurasian Studies
- Russian Language
- Russian Language, Literature and Culture
- Russian Culture

Slavic Theme House — Slavianskii Dom (SlavDom), at 650 Mayfield Ave., is an undergraduate residence which houses 50 students and offers a wide variety of opportunities to expand knowledge, understanding and appreciation of Russia and the nations of East Europe, the Caucasus and Central Asia.

Overseas Studies Programs — Undergraduates interested in the study of languages, history, culture and social organization of the countries of Russia, Eurasia and East Europe may apply to study at the Stanford centers in Moscow and Berlin. Information about these programs is available at the Bing Overseas Studies Program at http://bosp.stanford.edu.

GRADUATE PROGRAMS IN RUSSIAN, EAST EUROPEAN AND EURASIAN STUDIES

The center offers an M.A. in Russian, East European and Eurasian Studies. The center also offers a coterminal M.A. in Russian, East European and Eurasian Studies.

Financial Aid—Subject to funding, CREEES may have a limited number of Foreign Language and Area Studies (FLAS) fellowships for U.S. citizens or permanent residents. Additional financial aid may also be available from CREEES. Applicants to the M.A. program have priority in the annual FLAS competition; in recent years CREEES has also awarded FLAS fellowships to students enrolled in the School of Education and the School of Law. Consult the CREEES associate director for further information about the application and award process. Applications for FLAS fellowships can be obtained at http://CREEES.stanford.edu/grants/.

Doctoral Progams—Since the University does not offer a Ph.D. in Russian, East European and Eurasian Studies, students wishing to pursue a REEES-related doctoral program must apply to one of the departments offering a Ph.D. with an emphasis on Russia, Eurasia, or Eastern Europe, such as the departments of History, Political Science, or Slavic Languages and Literatures.

MINOR IN RUSSIAN, EAST EUROPEAN, AND EURASIAN STUDIES

UNDERGRADUATE MINOR IN RUSSIAN, EAST EUROPEAN, AND EURASIAN STUDIES

The Center for Russian, East European and Eurasian Studies no longer offers an undergraduate minor.

Students interested in a minor should consult the "Minors in Slavic Languages and Literatures" section of this bulletin which describes the following relevant minors:

- Russian, East European, and Eurasian Studies
- Russian Language
- Russian Language, Literature, and Culture
- Russian Culture

MASTER OF ARTS IN RUSSIAN, EAST EUROPEAN AND EURASIAN STUDIES

CREEES offers a one-year interdisciplinary master's degree program in Russian, East European and Eurasian Studies for students with a strong prior language and area studies background. The program structure allows students the flexibility to pursue their particular academic interests, while providing intellectual cohesion through a required core curriculum that addresses historical and contemporary processes of change in the Russian Federation, Eastern Europe, the Caucasus, and Central Asia. This core curriculum consists of three core courses and REES 200, Core Seminar Series. The program may be taken separately or coterminally with a B.A. degree program. The interdisciplinary M.A. program typically serves three types of students:

1. Those who intend to pursue careers and/or advanced degrees in such fields as business, education, government, journalism, or law, and who wish to establish competence in Russian, East European and Eurasian studies.
2. Those who intend to apply to a Ph.D. program involving Russian, East European and Eurasian studies and who need to enhance their academic skills and credentials.
3. Those who are as yet undecided on a career but who wish to continue an interest in Russian, East European and Eurasian studies.

ADVISING

The advising structure is two-tiered: each M.A. candidate works with the CREEES associate director who advises on the program of course work and monitors the student's progress toward completing the degree. Candidates are also assigned a faculty adviser from the Academic Council faculty, who provides intellectual and academic guidance.

ADMISSION

Applicants apply electronically; see http://gradadmissions. stanford. edu for a link to the electronic application and general information regarding graduate admission. In addition, prospective applicants may consult with the CREEES associate director regarding the application process.

To qualify for admission to the program, the following apply:

1. Applicants must have earned a B.A. or B.S. degree, or the equivalent.
2. Applicants must have completed at least three years of college-level Russian language study or the equivalent prior to beginning the program. Other languages of Eastern Europe, Central Asia, and the Caucasus may be accepted on a case-by-case basis.
3. Applicants whose native language is not English are ordinarily expected to take the Test of English as a Foreign Language (TOEFL) and have the results sent to Graduate Admissions, Office of the University Registrar.
4. All applicants must take the General Test of the Graduate Record Examination and have the results sent to Graduate Admissions, Office of the University Registrar.
5. Applicants must submit a writing sample in English on a topic in Russian, East European, or Eurasian studies.

The deadline for submission of applications for admission and for financial aid is January 11, 2011. Admission is normally granted for Autumn Quarter, but requests for exceptions are considered.

The successful applicant generally demonstrates the following strengths: requisite foreign language study, significant course work in Russian, East European and Eurasian studies in multiple disciplines, outstanding grades in previous academic work, strong writing skills, high GRE scores (particularly verbal and analytical writing), study or work experience in the region, strong letters of recommendation, and a persuasive statement of purpose explaining why and how the program fits the applicant's academic and career goals.

DEGREE REQUIREMENTS

Candidates for the M.A. degree must meet University requirements for an M.A. degree as described in the "Graduate Degrees" section of this bulletin.

The M.A. program in REEES can ordinarily be completed in one academic year by a well-prepared student; longer periods of study are permitted.

Requirements to complete the interdisciplinary M.A. degree are principally ones of distribution, with the exception of three required core courses and a core seminar, as described below. Each student, with the advice of the CREEES associate director, selects courses according to the student's interests, needs, and goals.

All students in the M.A. REEES program must complete a minimum of 48 academic credit units within the following guidelines.

1. *Core courses:* students must complete three core courses. Each year, four to six courses, typically from the History, Political Science, and Slavic Languages and Literatures departments, are designated as M.A. core courses; students may select three of these to meet the core course requirement. Courses selected as core courses examine subject areas of fundamental importance within modern Russian, East European and Eurasian Studies, and address questions of research, methodology, and current scholarship.
2. *Core seminar:* REES 200, Current Issues in Russian, East European and Eurasian Studies, is required of all students in the M.A. program for a total of three academic quarters. The goal of this course is to survey current methodological and substantive issues in Russian, East European and Eurasian studies, acquaint students with Stanford resources and faculty, and present professional development and career options.
3. *Interdisciplinary course work:* a minimum of five graduate courses in Russian, East European and Eurasian studies must be completed and distributed among at least three disciplines. All course work applied to the 48-unit minimum must deal primarily with Russian, Eurasian, or East European studies.
4. *Language study*: students in the program are expected to study Russian or another language of Eastern Europe, Central Asia or the Caucasus. Credit towards the 48-unit minimum (maximum 3 units per quarter, 9 units total) is allowed for advanced language work; in the case of Russian, advanced is defined as third-year Russian language instruction and above. Similar standards apply for other languages.
5. All course work qualifying for the 48-unit minimum (except REES 200) must have a letter grade of 'B' or higher. ('B-' does not count for degree credit, nor does 'S' or 'CR'.)
6. All courses counting towards the 48-unit minimum must be approved by the CREEES associate director, who ensures that planned course work satisfies requirements towards the degree. The CREEES director and steering committee determine the requirements.

Core Courses for 2010-11—

ARTHIST 107A/307A. St. Petersburg: A Cultural Biography (History, Architecture, Urban Planning and the Arts)

HISTORY 204E/307E. Origins of Totalitarianism
HISTORY 322. Early Modern Russia in European Context
REES 320. State and Nation Building in Central Asia
SLAVGEN 166/266. Transcending (Meta)Physical Borders: Russian Cinema since 1964
SLAVGEN 195/295. Russian Theater

Pre-approved courses which may be counted for the M.A. degree in 2010-11—
ANTHRO 147A. Folklore, Mythology, and Islam in Central Asia
ANTHRO 148A/248A. Nomads of Eurasia: Culture in Transition
ARTHIST 106. Byzantine Art and Architecture, 300-1453 C.E.
ARTHIST 208. Hagia Sophia
COMPLIT 219. Dostoevsky and His Time
HISTORY 125. 20th-Century Eastern Europe
HISTORY 137/337. The Holocaust
HISTORY 138A. Germany and the World Wars
HISTORY 185B. Jews in the Modern World
HISTORY 224A/424A. Soviet Civilization
HISTORY 224B/324B. Modern Afghanistan
HISTORY 227/327. East European Women and War in the 20th Century
HISTORY 236A/336A. Nations and Nationalism in East-Central Europe
HISTORY 236D/336D. Cold War Europe
HISTORY 238K/328K. Resistance and Collaboration in Hitler's Europe During World War II
POLISCI 140C. The Comparative Political Economy of Post-Communist Transitions
POLISCI 241L. Democracy and the Market in Eastern Europe
RELIGST 125. Authority of the Past in Islamic Thought
SLAVGEN 145/245. Age of Experiment: From Pushkin to Gogol
SLAVGEN 146/246. The Age of the Great Russian Novel: History and Other Theories of Time
SLAVGEN 147/247. The Age of War and Revolution: A Survey of Russian Literature and Culture, 1900-1950s
SLAVGEN 148/248. Dissent and Disenchantment: A Survey of Literature and Culture, 1953 to Present
SLAVGEN 169/269. Slavic Folklore and Folklore Theory
SLAVLIT 179/279. Literature from Old Rus' and Medieval Russian
SLAVLIT 188/288. Russian Poetry
SLAVLIT 203. Academic Russian
SLAVLIT 211. Introduction to Old Church Slavic
SLAVLIT 224. The Russian Postmodern Novel
SLAVLIT 232. Formalism/Semiotics/Bakhtin: Key Texts
SLAVLIT 272. Osip Mandelstam and the Modernist Paradigm

Additional 2010-11 courses which may be counted for the M.A. degree (with approval) —
ANTRHO 338A. Biohumanities: Continental Philosophy and the Human and Social Sciences
ARTHIST 411. Animacy, Performance, Presence in Medieval Art
COMPLIT 122. Literature as Performance
DRAMA 167/267. Avant Garde Theater
DRAMA 300A. Critical Styles I
FILMSTUD 102. Theories of the Moving Image
FILMSTUD 116/316. International Documentary
FILMSTUD 137/337. European New Wave Cinemas
HISTORY 284/384. The Ottoman Turks in Comparative Perspective: The Inner Life of a Eurasian Empire
HISTORY 299X. Design and Methodology for International Field Research
INTNLREL 122A. The Political Economy of the European Union
IPS 211. The Transition from War to Peace: Peacebuilding Strategies
IPS 219. Intelligence and National Security
IPS 221 International Organizations and Institutions
IPS 241. International Security in a Changing World (Same as POLISCI 114S)
IPS 280. Transitional Justice, International Criminal Tribunals, and the International Criminal Court
LINGUIST 167. Languages of the World
MS&E 193/293. Technology and National Security
POLISCI 141. The Global Politics of Human Rights
POLISCI 210R. International Conflict: Management and Resolution (Same as IPS 250)
POLISCI 214R/314R. Challenges and Dilemmas in American Foreign Policy
POLISCI 242P. The Comparative Politics of Corruption
POLISCI 314D. Democracy, Development, and the Rule of Law (Same as IPS 230)
POLISCI 314S. Decision Making in U.S. Foreign Policy (Same as IPS 314S)
POLISCI 337S. Seminar on Liberation Technologies
RELIGST 222B. Sufism Seminar
RELIGST 224B/324B. Unveiling the Sacred: Explorations in Islamic Religious Imagination
RELIGST 236/336. European Reformations
SOC 109/209. The Sociology of Terrorism
SOC 341W. Workshop: Inequality

Other courses may be counted towards the M.A. by special arrangement with the instructor and the CREEES associate director.

A description of the M.A. program is also available on the web at http://CREEES.stanford.edu/academic/graduate-masters.html and by request from the Center for Russian, East European and Eurasian Studies.

COTERMINAL MASTER'S PROGRAM IN RUSSIAN, EAST EUROPEAN, AND EURASIAN STUDIES

University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees" section of this bulletin. For University coterminal degree program rules and University application forms, see http://studentaffairs.stanford.edu/registrar/publications#Coterm.

To qualify for a coterminal M.A. degree in Russian, East European, and Eurasian Studies, besides completing University requirements for the B.A. degree, a student must:

1. Submit a coterminal application for admission to the program no later than the quarter prior to the expected completion of the undergraduate degree, normally Winter Quarter prior to Spring Quarter graduation. Students with advanced placement and transfer credit must apply at least four quarters before the expected master's degree conferral date. The deadline for all coterminal applications to the M.A. program in Russian, East European, and Eurasian Studies is January 11, 2011.
2. Include in the application a program which outlines, by quarter, the schedule of courses the student plans to complete toward the M.A. degree. The student should seek the advice of the CREEES associate director in drafting this schedule. The application also should include:
   a. a current Stanford transcript
   b. a one-page statement of purpose
   c. two letters of recommendation from Stanford professors
   d. a writing sample
3. Applicants must have a grade point average (GPA) of at least 3.0 (B). Coterminal applicants must take the general test of the Graduate Record Examination and have the results sent to Graduate Admissions, Office of the University Registrar.
4. Complete 15 full-time quarters or the equivalent, or three quarters in full-time residence after completing 180 units; and complete, in addition to the 180 units required for the bachelor's degree, a minimum of 48 units for the master's degree.

The same courses may not be counted to meet both undergraduate and graduate requirements, and no courses taken before the junior year may be used to meet the course requirements for the master's degree.

For M.A. degree requirements, see the "Master of Arts in Russian, East European, and Eurasian Studies" section of this bulletin.

SCIENCE, TECHNOLOGY, AND SOCIETY

Emeriti: James Adams (Management Science and Engineering, Mechanical Engineering), Alex Inkeles (Sociology), Walter Vincenti (Aeronautics and Astronautics)

Director: Robert McGinn (Management Science and Engineering; Science, Technology and Society)

Program Committee: Stephen Barley (Management Science and Engineering), Mark Granovetter (Sociology), Hank Greely (Law), Ursula K. Heise (English), Brad Osgood (Electrical Engineering), Eric Roberts (Computer Science), Scott Sagan (Political Science), Rebecca Slayton (Science, Technology and Society), Fred Turner (Communication), John Willinsky (Education)

Lecturers: John Downer, Rebecca Slayton

Affiliated Faculty and Staff: Stephen Barley (Management Science and Engineering), Barton Bernstein (History), Scott Bukatman (Art and Art History), Thomas Byers (Management Science and Engineering), Jean-Pierre Dupuy (French), Hank Greely (Law), Ursula K. Heise (English), Martin Hellman (Electrical Engineering, Emeritus), Sarah Jain (Anthropology), Clifford Nass (Communication), Brad Osgood (Electrical Engineering), Jessica Riskin (History, on leave), Eric Roberts (Computer Science), Scott Sagan (Political Science), Michael Shanks (Classics, Anthropology), Fred Turner (Communication), John Willinsky (Education), Gavin Wright (Economics)

Mail Code: 94305-2120

Phone: (650) 723-2565

Web Site: http://sts.stanford.edu

Courses offered by the Program in Science, Technology, and Society are listed under the subject code STS on the *Stanford Bulletin's* ExploreCourses web site.

Technology and science are activities of central importance in contemporary life, intimately bound up with society's evolving character, problems, and potentials. If scientific and technological pursuits are to further enhance human well-being, they and their effects on society and the individual must be better understood by non-technical professionals and ordinary citizens as well as by engineers and scientists. Issues of professional ethics and social responsibility confront technical practitioners. At the same time, lawyers, public officials, civil servants, and business people are increasingly called upon to make decisions requiring a basic understanding of science and technology and their ethical, social, and environmental consequences. Ordinary citizens, moreover, are being asked with increasing frequency to pass judgment on controversial matters of public policy related to science and technology in society. These circumstances require education befitting the complex sociotechnical character of the contemporary era.

Science, Technology, and Society (STS) is a program devoted to understanding the natures, consequences, origins, and shaping of technological and scientific activities in modern and contemporary societies. Students in STS courses study science and technology in society from a variety of perspectives in the humanities and social sciences. To provide a basic understanding of technology and science, STS majors are also required to achieve either literacy (B.A.) or a solid grasp of fundamentals (B.S.) in some area of engineering or science.

STS courses may be used, individually or in groups, for purposes such as:

1. To satisfy University General Education Requirements (GER)
2. To satisfy the Technology in Society Requirement of the School of Engineering
3. To comprise parts of student-designed concentrations required for majors in fields such as Human Biology and Public Policy
4. To satisfy the requirements of the STS honors program complementing any major
5. To satisfy requirements for majors in STS
6. To satisfy requirements for a minor in STS

STS courses are particularly valuable for undergraduates planning further study in graduate professional schools (for example, in business, education, engineering, law, journalism, or medicine) and for students wishing to relate the specialized knowledge of their major fields to broad technology and science-related aspects of modern society and culture.

UNDERGRADUATE MISSION STATEMENT

The mission of the Science, Technology and Society (STS) Program is to provide Stanford undergraduates with intellectually stimulating education that will prepare them for life in the contemporary era, one in which science and technology are pervasive and potent forces for transformative social change. To that end, STS courses explore the evolving natures and interrelationship of science and technology, influences of science and technology on different kinds of societies, how societies manage and otherwise shape their scientific and technological endeavors and products, and ethical, social, cultural, and policy issues raised by scientific and technological innovations in contemporary societies. STS faculty believe that probing study of this vital subject matter provides an innovative form of liberal arts and pre-professional education, one that helps STS students fulfill their future civic and professional roles in an informed, responsible manner.

STS is an interdisciplinary and multidisciplinary program. STS students learn to critically analyze the interplay of science and technology with human values and world views, political and economic forces, and cultural and environmental systems. To a set of core STS courses promoting such learning, Program majors add structured sets of pertinent disciplinary courses in the humanities, social sciences, natural sciences, and engineering. Every STS major completes a capstone project in her or his final year, either an Honors Thesis or a Senior Paper. The capstone project is an integrative research endeavor incorporating prior STS coursework. The Program prepares its majors for successful careers in business, law, medicine, education, engineering, public policy, and public service, for masters-level work in selected humanistic, social scientific, and engineering disciplines, and for doctoral work in STS and related academic areas.

LEARNING OUTCOMES

The program expects undergraduate majors to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. These outcomes are evaluated through course work and by assessing each student's senior paper, a 20-to-30-page research product that uses STS concepts and primary evidence to analyze an STS-relevant question, reach a conclusion, and discuss the limitations and significance of the research. Students are expected to demonstrate:

1. knowledge of core concepts, approaches, and issues of the STS field.
2. ability to use STS intellectual resources to analyze and illuminate issues of science and technology in society.
3. ability to critically evaluate and effectively utilize scholarship and empirical evidence in the field of STS.
4. ability to clearly and persuasively communicate about STS issues to a general audience, orally and in writing.

UNDERGRADUATE PROGRAMS IN SCIENCE, TECHNOLOGY, AND SOCIETY

Degree programs in STS are curricula devoted to understanding the nature and significance of technology and science in modern society. Majors analyze phenomena of science and technology in society from ethical, aesthetic, historical, economic, and sociological perspectives. In addition, students pursuing the B.A. degree study a technical field in sufficient depth to obtain a grasp of basic concepts and methods, and complete a structured concentration on a theme, issue, problem, or area of personal interest related to science and technology in society. Those seeking the B.S. degree

complete at least 50 structured units in technology, science, and/or mathematics. The particular technical courses chosen reflect the student's special interest in issue areas of science and technology in society.

BACHELOR OF ARTS IN SCIENCE, TECHNOLOGY, AND SOCIETY

REQUIREMENTS

1. *STS Core* (eight courses)—
   a. Interdisciplinary Foundational course: STS 101 or 101Q
   b. Disciplinary Analyses (five courses with at least one in each category):
      1. Philosophical/Ethical/Aesthetic Perspectives: STS 110, 112, 114; COMM 131; ENGLISH 176
      1. Historical Perspectives: STS 128; CLASSGEN 123, 133; ECON 116; HISTORY 31/131, 41A/141A, 140A, 208A; POLISCI 116
      2. Social Science Perspectives: ANTHRO 82, 180; COMM 120, 169; ECON 113; MS&E 181, 185, 193; POLISCI 114S, 116; SOC 114
   c. Advanced courses (one course in each category):
      1. Disciplinary Analysis: STS 210; CS 181; COMM 168/268; ECON 224, 225, 226; FRENGEN 265; EDUC 358X; HISTORY 243G; ME 214/314; SOC 115
      2. STS 200. Senior Colloquium
2. *Technical Literacy* (five courses)—
   a. CS 105 or 106A or equivalent; and
   b. A four-course sequence (minimum of 12 units) in a field of engineering or science (sample sequences available in the STS office); *or*
   c. Four of the following Engineering Fundamentals courses: ENGR 10, 14, 15, 20, 25, 30, 31, 40, 50, 50M, 60, 62, 70A (see course descriptions in the "School of Engineering" section of this bulletin).
3. *Thematic Concentration* (minimum of 20 units, at least five courses, one each from among those designated on the appropriate concentration course list as foundational and advanced). Thematic concentrations are organized around an STS-related problem or area. The following themes have been pre-certified as declarable fields of concentration on Axess:
   - Interactions of Technology and Science with Aesthetics
   - Development
   - History and Philosophy
   - Information and Society
   - Public Policy
   - Social Change
   - Work and Organizations.

   These concentration themes appear on the transcript but not on the diploma.

   Course lists for these thematic concentrations areas are available in the STS office. A student choosing one of the certified topics may include one or more courses not on the corresponding course list if they are germane to the concentration, meet the student's special interests, and are approved by the STS director and thematic concentration adviser.

   Alternatively, subject to program approval, the student may choose to design a unique thematic concentration topic and course package. A self-designed thematic concentration is not declared on Axess.

   Each thematic concentration, certified or self-designed, requires the signature of an appropriate faculty adviser. See the program director or student services specialist for details.
4. STS majors not writing an honors thesis must produce an original, 20-25 page senior paper on an STS topic of personal interest. Intended as a capstone experience, each student's senior paper is evaluated by an STS faculty committee and placed in the student's permanent STS major file.

HONORS PROGRAM

STS offers students an opportunity to achieve honors through in-depth study of the interaction of science and technology with society. The honors program is open to students majoring in any field, including STS. Students accepted for this program carry out an honors research project, typically beginning in the Winter or Spring Quarter of junior year and finishing by May of senior year. Students who want their projects to be considered for University awards must complete their theses by early May. STS projects usually involve researching and writing an original scholarly essay, although occasionally students have chosen to produce a technical artifact or carry out some other work that itself represents original, creative thinking. When an honors project results in a work other than an essay, the student must also submit an accompanying scholarly exegesis of the work in question. Past honors projects are on file in the STS office library.

ADMISSION

Application for admission to the STS honors program is typically made during the last quarter of the student's junior year. By the end of that quarter, interested students must have a plan for completing all courses required to satisfy honors requirements 1-3 listed below. Students requiring a major research grant should enroll in STS 190, Junior Honors Seminar, in Winter Quarter of the junior year. Work done in STS 190 will enable submission of a research grant proposal that meets the University deadline in early April. Each student seeking admission to the honors program must submit a research proposal to the Honors Director, Rebecca Slayton (rslayton@stanford.edu), including the name of at least one potential thesis adviser. For proposal parameters, see the document *STS Honors Program*, available in the STS office and on the STS web site. Students are also encouraged to apply to join the STS contingent at the Bing Honors College in early September to get a running start on their theses. See http://ual.stanford.edu/OO/honors/BingHonors.html for further details.

REQUIREMENTS

1. *Course Work*—Non-STS majors must complete requirements 1 and 2 of the STS minor and either STS 190 and/or the Bing Honors College. STS majors must complete the STS core. Students pursuing STS honors must also sign up for STS 290 A,B,C, Senior Honors Seminar, in each quarter of the senior year for which the students are on campus. STS majors pursuing honors are not required to enroll in STS 200, Senior Colloquium, or to write a separate senior paper. The minimum GPA for courses taken to meet these requirements is 3.4.
2. *The Honors Project*—An original critical essay or investigative project with accompanying explanatory essay on an STS topic of general importance. To earn honors, students must earn at least a 'B' on the completed thesis.
3. *STS Honors Day*—All students present their research projects at a special public event in early June of the senior year.

If all these requirements are met, the designation "Honors Program in Science, Technology, and Society" is affixed to the student's permanent record and appears in the Commencement program.

COGNATE COURSES

The following cognate courses offered by other departments may be used to fulfill STS major, minor, and honors requirements:

1. *Disciplinary Analysis: Philosophical/Ethical/Aesthetic Perspectives*—
   - COMM 131: Media Ethics and Responsibility
   - ENGLISH 176: Science Fiction
2. *Disciplinary Analysis: Historical Perspectives*—
   - CLASSGEN 123. Urban Sustainability
   - CLASSGEN 133. Invention of Science
   - ECON 116. American Economic History
   - HISTORY 31/131: Science, Technology and Art: The Worlds of Leonardo

- HISTORY 41A/141A. Emergence of Medicine
- HISTORY 140A. The Scientific Revolution
- HISTORY 208A. Science and Law in History
- POLISCI 116. History of Nuclear Weapons

3. *Disciplinary Analysis: Social Science Perspectives*—
   - ANTHRO 82. Medical Anthropology
   - ANTHRO 180. Science, Technology, and Gender
   - COMM 120. Digital Media in Society
   - COMM 169. Computers and Interfaces
   - ECON 113. Economics of Innovation
   - ENGR 145. Technology Entrepreneurship
   - MS&E 181. Issues in Technology and Work for a Post-Industrial Economy
   - MS&E 185. Global Work
   - MS&E 193/193W. Technology and National Security
   - POLISCI 114S. International Security in a Changing World
   - POLISCI 116. History of Nuclear Weapons
   - PUBLPOL 194. Technology Policy
   - SOC 114. Economic Sociology
4. *Disciplinary Analysis, Level II Courses*—
   - CS 181. Computers, Ethics, and Public Policy
   - COMM 168/268. Experimental Research in Advanced User Interfaces
   - ECON 224. Science, Technology, and Economic Growth
   - ECON 225. Economics of Technology and Innovation
   - ECON 226. U.S. Economic History
   - EDUC 358X. Developments in Access to Knowledge and Scholarly Communication
   - FRENGEN 265. The Problem of Evil in Literature, Film, and Philosophy.
   - HISTORY 243G.Tobacco and Health in World History
   - ME 214/314. Good Products, Bad Products
   - SOC 115. Topics in Economic Sociology

BACHELOR OF SCIENCE IN SCIENCE, TECHNOLOGY, AND SOCIETY

The student pursuing the B.S. degree must complete the STS Core (see requirement 1 in "Bachelor of Arts in Science, Technology, and Society" above) and a structured package of at least 50 units of technical courses intended to enable students to understand socially significant technical phenomena in some field of engineering or science. Introductory courses in mathematics or physics (for example, MATH 19 or PHYSICS 19) are not normally counted as parts of this technical depth component.

The B.S. candidate follows one of two models in fulfilling the minimum 50-unit technical depth requirement:

1. *Focused Depth*—at least seven courses amounting to at least 25 units in a single field of science or engineering, with the remaining units (except for at most two stand-alone courses) grouped in sequences of at least three courses each in other fields of science or engineering. For example, a focused depth package might contain eight mechanical engineering, three physics, three mathematics, and three computer science courses, and one course each in electrical engineering and chemistry. At least four of the seven courses in the focused depth area must be advanced, that is, not normally taken in the first year of study in that field.
2. *Clustered Depth*—two or more clusters of at least five courses and 15 units each in different fields of science or engineering, with at most two stand-alone courses, and remaining courses, if any, in sequences of three or more courses. For example, a clustered depth package might contain five-course clusters in computer science, electrical engineering, and physics, three courses in civil engineering, and one course each in biology and chemical engineering. At least two courses in each cluster area must be advanced.

   It is recommended that B.S. majors complete CS 106A or equivalent.
3. Each STS major not writing an honors thesis must produce an original, 20-25 page senior paper on an STS topic of personal interest. Intended as a capstone experience, each student's senior essay is evaluated by an STS faculty committee and placed in the student's permanent STS major file.

COGNATE COURSES

For a list of cognate courses offered by other departments that can be used to satisfy requirements for the B.S. in Science, Technology, and Society, see the "Bachelor of Arts in Science, Technology, and Society" section of this bulletin.

MINOR IN SCIENCE, TECHNOLOGY, AND SOCIETY

Students planning careers in many technical and non-technical fields, including business, education, engineering, science, law, medicine, and public affairs, are faced with important STS issues in their professional practice. Therefore, a minor in STS is likely to prove practically valuable as well as intellectually stimulating.

Requirements—The STS minor requires completion of six courses satisfying the following requirements:

1. *Foundational Course:* STS 101 or 101Q
2. One disciplinary analysis course from each of the following categories:
   a. Philosophical/Ethical Perspectives: STS 110, 112, 114, 115; COMM 131; ENGLISH 176
   b. Historical Perspectives: STS 128; CLASSGEN 123, 133; ECON 116; HISTORY 31/131, 41A/141A, 140A, 208A; POLISCI 116
   c. Social Science Perspectives: ANTHRO 82, 180; COMM 120, 169; ENGR 145; MS&E 181, 185, 193; POLISCI 114S, 116; PUBLPOL 194; SOC 114
3. Two advanced courses, from one or two of the following categories and building on courses taken under requirements 1 and 2:
   a. Philosophical/Ethical/Aesthetic Perspectives: STS 210; CS 181; ME 214/314
   b. Historical Perspectives: ECON 224, 226; HISTORY 243G
   c. Social Science Perspectives: COMM 168/268; ECON 224, 226; EDUC 358X; SOC 115
4. At least one of the courses taken under requirements 1 to 3 should incorporate a weekly small-group discussion.
5. With at most one exception, all courses taken to satisfy STS minor requirements must be taken for a letter grade where available. The exception cannot be STS 101 or STS 101Q.
6. The six courses taken under requirements 1-3 should be chosen so as to realize a measure of intellectual coherence and interrelatedness.

Note—Students wishing to use a course not listed above to satisfy one of the requirements for a minor in STS may petition to do so. For details, inquire at the STS office, Building 200, Room 19.

COGNATE COURSES

For a list of cognate courses offered by other departments that can be used to satisfy requirements for the minor in Science, Technology, and Society, see the "Bachelor of Arts in Science, Technology, and Society" section of this bulletin.

OVERSEAS STUDIES COURSES IN SCIENCE, TECHNOLOGY, AND SOCIETY

For course descriptions and additional offerings, see the listings in the *Stanford Bulletin's* ExploreCourses web site (http://explorecourses.stanford.edu) or the Bing Overseas Studies web site (http://bosp.stanford.edu). Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

AUTUMN QUARTER

BERLIN

- OSPBER 34. Science and Technology in Nazi Germany. 5 units, David Holloway, GER:DB: SocSci

FLORENCE

- OSPFLOR 38. Water Resources Engineering in Italy: An Historical Perspective. 4-5 units, Leonard Ortolano, GER:DB:EngrAppSci
- OSPFLOR 134F. Modernist Italian Cinema. 5 units, Ermelinda Campani, GER:DB:Hum

WINTER QUARTER

FLORENCE

- OSPFLOR 45. Harmony: Ancient Science in the Italian Renaissance. 3-5 units, Reviel Netz. GER:DB: Hum

SLAVIC LANGUAGES AND LITERATURES

Emeriti: (Professors) Joseph Frank, Richard D. Schupbach, Joseph A. Van Campen
Director: Gabriella Safran
Chair of Graduate Studies: Monika Greenleaf
Chair of Undergraduate Studies: Nariman Skakov
Professors: Lazar Fleishman, Gregory Freidin, Gabriella Safran
Associate Professor: Monika Greenleaf
Assistant Professor: Nariman Skakov
Courtesy Professor: Nancy Ruttenberg
Senior Lecturer: Rima Greenhill
Lecturer: Eugenia Khassina
Department Offices: Building 240, Room 102
Mail Code: 94305- 2006
Phone: (650) 723-4438
Email: slavic@stanford.edu
Web Site: http://slavic.stanford.edu

Courses offered by the Department of Slavic Languages and Literatures are listed on the *Stanford Bulletin's* ExploreCourses web site under the subject codes SLAVGEN (Slavic General), SLAVLANG (Slavic Language), and SLAVLIT (Slavic Literature).

The department supports coordinated study of Russian language, literature, literary and cultural history, theory, and criticism. The department's programs may also be combined with the programs in Russian, East European and Eurasian Studies, Jewish Studies, Film Studies (Russian and East-European film), modern Russian theater, International Relations, Stanford's Overseas Studies, Special Languages Program, and the Honors Program in Interdisciplinary Studies in Humanities (now administered through the Individually Designed Majors Program in the Dean's Office of Humanities and Sciences).

A full undergraduate program provides a choice of several tracks leading to a B.A. (with a major or a minor) or to a B.A. with honors. The department offers a full graduate program leading to an M.A. in Russian and a Ph.D. in Slavic Languages and Literatures. Stanford undergraduates are eligible to apply to the department for a coterminal B.A./M.A. degree. Students in the department's Ph.D. program are required to choose among minor programs in other national literatures, linguistics, Russian, East European, and Eurasian Studies, Jewish Studies, art and music history, theater, or film studies; they may design their own minor, choose the related field option, or participate in the Graduate Program in Humanities leading to the joint Ph.D. degree in Slavic Languages and Literatures and Humanities. Students already enrolled in the joint program with ISH are permitted to complete that degree program; no new students are being accepted.

The department runs a colloquium series, which brings distinguished speakers to Stanford, and organizes international conferences and symposia; and since 1987 maintains, a continuing publication series, *Stanford Slavic Studies*. Along with the Center for Russian, East European and Eurasian Studies, the department offers qualified undergraduates summer grants (on a competitive basis) for intensive Russian language instruction in accredited programs in Russia and the U.S.

Improving cultural understanding is a critical part of the department's mission, and the department offers a full range of courses at all levels, including Freshman and Sophomore Seminars devoted to Russian literature, music and visual arts that do not require specialized knowledge, and advanced research seminars for graduate students. The Slavic theme house, Slavianskii Dom, serves as an undergraduate residence for many students in the program and often hosts program-related activities. Undergraduates may also choose to study in Moscow through the Stanford Overseas Studies Program. The undergraduate program has attracted students seeking careers in journalism, business, international relations, law, and human rights, as well as academia. Russian is still the lingua franca over the vast territory of the former Soviet Union, and a good command of this language offers a gateway to Eurasia's diverse cultures, ethnicities, economies, and religions, including Buddhism, Judaism, and Islam.

Stanford students are in a privileged position in relation to Russian and, more broadly, East European and Eurasian Studies, because of Stanford's faculty resources that are without peer in the U.S. Green Library and the Hoover Institution libraries and archives hold the premier Russian and East European collections, which undergraduates and graduate students use in their research. Department students master a difficult language and a rich and challenging literature, and are rewarded by gaining entry into a unique, powerful, and diverse civilization that defined major trends in the past century and plays an increasingly significant role in the world today.

MISSION OF THE UNDERGRADUATE PROGRAM IN SLAVIC LANGUAGES AND LITERATURES

The mission of the undergraduate program in Slavic Language and Literatures is to expose students to a variety of perspectives in Russian language, history, culture, literature, and philosophical thought. The program offers three tracks. Courses in the Russian Language and Literature track focus on the linguistic and philological study of literature, as well as the history of Russian literature. The Russian Language, Culture, and History track guides students through a comprehensive interdisciplinary study of Russian literature and culture in a historic context. The Russian and Philosophy track provides students with a background in the Russian language and literary tradition with emphasis on philosophical thought. The Slavic Language and Literature major prepares students for future careers in business, government agencies, teaching, and graduate school programs and professional schools.

LEARNING OUTCOMES

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. the ability to develop effective and nuanced lines of interpretation.
2. critical thinking skills using Russian literary materials.
3. analytical writing skills and close reading skills.
4. skills in active listening and productive communication.
5. a language proficiency in Russian or another Slavic language.

SLAVIC THEME HOUSE

Slavianskii Dom, at 650 Mayfield Avenue, is an undergraduate residence that offers opportunities for students to expand their

knowledge, understanding, and appreciation of Russia, Eastern Europe, and Eurasia.

BACHELOR OF ARTS IN SLAVIC LANGUAGES AND LITERATURES

The department offers two fields of study for undergraduate majors: Russian Language and Literature; and Russian Language, Culture, and History. These fields of study are declared on Axess and appear on the transcript but not on the diploma. The department also offers a degree option in Russian and Philosophy. This option is not declared on Axess and does not appear on the transcript or the diploma.

Writing in the Major—Undergraduates are required by the University to pass at least one writing-intensive course in their field of concentration in order to graduate. Majors in any Slavic track may satisfy the writing requirement by passing SLAVGEN 145 or SLAVGEN 146.

RUSSIAN LANGUAGE AND LITERATURE

The Russian Language and Literature field of study is designed for those students who wish to gain command of the Russian language and to study the nation's literary tradition. Emphasis is placed on the linguistic and philological study of literature, as well as the history of Russian literature and related media in the broader context of Russian culture. Students may explore historically related literary traditions (for example, English, French, German), as well as other related fields. The Russian Language and Literature field of study also welcomes students with an interest in Russian and Slavic linguistics.

Majors who concentrate in Russian Language and Literature must earn a grade point average (GPA) of 2.0 (C) or better in order to receive credit toward the major.

Prerequisites—Completion of SLAVLANG 1, 2, 3, or the equivalent, as determined by the results of the department placement examination.

Requirements—Candidates for the B.A. degree with a Russian Language and Literature field of study must complete an additional 56 units according to the following distribution:

Russian Language—A minimum of 12 units from: SLAVLANG 111, 112, 113, 177, 178, 179, 181, 182, 183. Russian majors' language skills will be evaluated by their language teachers or the Chair of Undergraduate Studies (CUS) at the end of their final quarter of language study.

Russian Literature—The 20-unit core literature sequence consisting of:

- SLAVGEN 145. Age of Experiment
- SLAVGEN 146. The Great Russian Novel
- SLAVGEN 147. The Age of Revolution
- SLAVGEN 148. Dissent and Disenchantment
- SLAVLIT 188. Russian Poetry, or another poetry course offered by the Slavic Department

Electives—Students must take 24 units of electives embracing at least two of the following categories. These courses are chosen in consultation with the department's director of undergraduate studies. With department consent, work in related academic fields may be applied toward the degree requirements. Students who have completed IHUM 28A,B, Poetic Justice: Order and Imagination in Russian Culture, with a grade of 'B' or better may count these 10 units towards elective courses required for the major.

1. Russian language or linguistics; courses for 2010-11 include:
   - SLAVLIT 179/279. Old Russian
   - SLAVLIT 203. Academic Russian
   - SLAVLIT 211. Old Church Slavic
2. Russian literature; courses for 2010-11 include:
   - SLAVLIT 188. Russian Poetry
   - SLAVLIT 224. Russian Postmodern Novel
3. Historically related literatures

Capstone—Students must designate a 200-level course taken in their junior or senior year as a capstone course. Before graduation, skills in writing, textual analysis, and discussion will be evaluated by the CUS based on work submitted for the capstone course.

RUSSIAN LANGUAGE, CULTURE, AND HISTORY

The Russian Language, Culture, and History field of study is for students who want to obtain command of the Russian language and to pursue a broad, interdisciplinary study of Russian literature and culture in an historical context. Emphasis is on the relation of the Russian literary tradition to other arts, including film, as well as the disciplines that have enriched the historical understanding of Russian literature: history, anthropology, communications, art history, political science, and sociology. Majors in the Russian Language, Culture, and History field of study must earn a GPA of 2.0 (C) or better in order to receive credit toward the major.

Prerequisites—Completion of SLAVLANG 1, 2, 3, or the equivalent, as determined by the results of the department placement examination.

Requirements—Candidates for the B.A. degree with a Russian Language, Culture, and History field of study must complete an additional 56 units according to the following distribution.

Russian Language—A minimum of 12 units from: SLAVLANG 111, 112, 113, 177, 178, 179, 181, 182, 183. Russian majors' language skills will be evaluated by their language teachers or the CUS at the end of their final quarter of language study.

19th-Century Russian Literature and History—A minimum of 12 units chosen from the following courses or the equivalent; students must choose one course from Slavic and one course from History:

- SLAVGEN 145, 146
- A pre-revolutionary Russian history course

20th-Century Russian Literature and History—A minimum of 12 units chosen from the following or the equivalent; students must choose one course from Slavic and one course from History.

- SLAVGEN 147 or 148
- A post-revolutionary Russian history course
- History 22N, 20Q, 120-129, or 220-229 will satisfy the history requirements. Contact the Director of Undergraduate Studies with questions.

Electives—In order to complete the basic degree requirements, students must take 24 additional units of course work embracing at least two of the following categories. These courses are chosen in consultation with the undergraduate director. With department consent, work in related academic fields (for example, anthropology, communications, political science, religion, sociology) may apply toward the degree requirements. Students who have completed IHUM 28A, B, Poetic Justice: Order and Imagination in Russian Culture, with a grade of 'B' or better may count these 10 units towards elective courses required for the major.

1. Russian language or linguistics; courses for 2010-11 include:
   - SLAVLIT 179/279. Old Russian
   - SLAVLIT 203. Academic Russian
   - SLAVLIT 211. Old Church Slavic
2. Russian literature; courses for 2010-11 include:
   - SLAVLIT 188. Russian Poetry
   - SLAVLIT 224. Russian Postmodern Novel
3. Russian history

Capstone—Students must designate a 200-level course taken in their junior or senior year as a capstone course. Before graduation, skills in writing, textual analysis, and discussion will be evaluated by the CUS based on work submitted for the capstone course.

COGNATE COURSES

Units earned for completion of the following cognate courses may be applied to unit requirements for the departmental major. Other courses may also be applied toward unit requirements, with the approval of the department.

- ANTHRO 148A/248A. Nomads of Eurasia
- HISTORY 20A/120A. Russian Civilization from Beginnings to the Enlightenment
- HISTORY 20Q. Russia in the Early Modern European Imagination
- HISTORY 22N. Crime, Punishment and Rebellion in Early Modern Russia
- HISTORY 24S. The Soviet Union through Western Eyes: Workers' Paradise and Evil Empire
- HISTORY 123. Reform and Revolution in Modern Russia, 1856-2009
- HISTORY 125. 20th-Century Eastern Europe
- HISTORY 221A. Men, Women, and Power in Early Modern Russia, 1500-1800
- HISTORY 221B. The Woman Question in Modern Russia
- HISTORY 223F/323F. The Nationality Question in the Russian Empire and the Soviet Union
- HISTORY 227/327. East European Women and War in the 20th Century
- HISTORY 229/329. Poles and Jews
- HISTORY 321A. Classics of Russian Historiography
- POLISCI 140C. The Comparative Political Economy of Post-Communist Transitions
- REES 200. Current Issues in Russian, East European, and Eurasian Studies
- SOC 15N. The Transformation of Socialist Societies

RUSSIAN AND PHILOSOPHY

The Russian and Philosophy option offers students the opportunity to gain a command of the Russian language and literary tradition, while gaining a background in philosophical thought, broadly construed. They take courses alongside students in other departments participating in the program in Philosophical and Literary Thought, with administrative staff in the DLCL. This option is not declared on Axess. Majors who concentrate in Russian and Philosophy must earn a grade point average (GPA) of 2.0 (C) or better in order to receive credit toward the major. Courses in other departments may not, in general, be counted toward the Russian language, Russian literature, and elective requirements, but may be counted toward the other requirements.

Prerequisites—Completion of SLAVLANG 1, 2, 3, or the equivalent, as determined by the results of the department placement examination.

Requirements—Candidates for the B.A. degree with a concentration in Russian and Philosophy must complete an additional 67 units according to the following distribution:

Russian Language—A minimum of 12 units selected from: SLAVLANG 111, 112, 113, 177, 178, 179, 181, 182, 183.

Russian Literature—A minimum of 16 units of Russian literature, including the following:

- SLAVGEN 145 *and* 146
- SLAVGEN 147 *or* 148
- SLAVLIT 187 *or* 188

Electives—At least 12 units of electives in Russian language and literature, chosen in consultation with the undergraduate director.

Philosophy and Literature Gateway Course (4 units)—SLAVGEN 181 (same as PHIL 81).

Philosophy Writing in the Major (5 units)—PHIL 80; prerequisite: introductory philosophy course.

Philosophy Core—12 units, including the following:

- Value Theory: a course in the PHIL 170 series
- Theories of Mind, Language, Action: a course in the PHIL 180 series
- History of Philosophy: a course from the PHIL 100-139 series

Related Course—An upper-division course of special relevance to philosophy and literature. A list of approved courses is available from the program director.

Capstone Seminar— One capstone seminar must be taken in the student's senior year. This year's capstone seminars are:

- COMPLIT 154/GERLIT 154. Heidegger on Hölderlin
- PHIL 173A. Aesthetics: Metaphor across the Arts

HONORS PROGRAM

Majors in any track or option with a grade point average (GPA) of 3.3 (B+) or better in their major courses are eligible to participate in the department's honors program. Prospective honors students must choose a senior thesis tutor from among the department's regular faculty in their junior year and may enroll for 2 units of credit in SLAVLIT 189B in Spring Quarter of the junior year to conduct preliminary research and draft an honors proposal under the guidance of their tutor. In addition to the program requirements above, students must also complete the following:

1. Majors who propose a senior project in literature must take a course in literary or cultural theory, such as SLAVLIT 200 (Proseminar in Literary Theory and Study of Russian Literature); this requirement may also be fulfilled by enrollment in DLCL 189 or, with approval of the thesis adviser, in an advanced course related to the area of the student's expected research. Students concentrating in Russian Language, Culture, and History, and pursuing a project in cultural history, must take a course in literary or cultural theory, a graduate seminar in the area of their topic, or DLCL 189, a 5-unit seminar that focuses on researching and writing the honors thesis. DLCL 189 is taken in Autumn Quarter of the senior year. Students concentrating in Russian Language and Literature who propose a senior project in Russian language select their course in consultation with the Director of Undergraduate Studies.
2. SLAVLIT 189A, taken for 5 units of credit while composing the thesis during Winter Quarter. Students who did not enroll in a 189B course in the junior year may enroll in SLAVLIT 189B in Spring Quarter of the senior year while revising the thesis, if approved by the thesis adviser.
3. To qualify for honors, the candidate must receive a grade of 'B' or better on the thesis or project completed during this period. A total of 10-12 units may be awarded for completion of honors course work, independent study, and the finished thesis.

OVERSEAS STUDIES

The department encourages interested students to consider studying abroad at the Stanford Center in Moscow. Some of the courses offered in Moscow taken there may be applied toward the major. For more information on the Moscow program see the "Overseas Studies" section of this bulletin or contact the Overseas Studies office, Sweet Hall, Ground Floor.

MINORS IN SLAVIC LANGUAGES AND LITERATURES

The Department of Slavic Languages and Literatures offers four undergraduate minor options in Slavic Languages and Literature.

The minor is designed for students who, while pursuing a major in another program, seek a comprehensive introduction to Russian culture through Russian language courses, or a combination of minimal proficiency in Russian and courses in the history of Russian culture, or courses on Russian literature in translation and, depending on the student's interest, other forms of the country's cultural expression and social institutions. Students seeking a Slavic minor are encouraged to take advantage of the Bing Overseas Studies Program in Moscow. Students who have chosen one of the minor programs in Russian may use 5 units of IHUM 28A,B credit towards their electives.

MINOR IN RUSSIAN LANGUAGE

Prerequisites—The minor option in Russian Language requires completion of SLAVLANG 51, 52, 53, or a demonstrated equivalent competence, as determined by the departmental Russian language placement examination.

Requirements—Candidates for the B.A. degree with a minor option in Russian Language must complete 24 units of Russian language and literature courses according to the following distribution: 12 to 15 units selected from SLAVLANG 111, 112, 113, 177, 178, 179, 181, 182, 183; the remaining 9-12 units should be chosen from SLAVGEN 145, 146, 147, 148; SLAVLIT 187, 188; other monograph courses offered by the department, or, with the approval of the department's undergraduate adviser, courses in history, politics, linguistics, or other relevant programs.

MINOR IN RUSSIAN LANGUAGE, LITERATURE, AND CULTURE

Prerequisites—The minor option in Russian Language, Literature, and Culture requires completion of SLAVLANG 1, 2, 3, or the equivalent, as determined by the departmental Russian language placement examination.

Requirements—Candidates for the B.A. degree with the minor option in Russian Language, Literature, and Culture must complete 28 units according to the following distribution:

A minimum of 16 units of courses on literature and culture including two from the SLAVGEN 145, 146, 147, 148 sequence (Russian Literature in English Translation), or one from the SLAVGEN 145, 146, 147, 148 sequence and one from the SLAVLIT 187, 188 sequence; and at least one monograph course focusing on a single author.

12 units of elective courses either in the Department of Slavic Languages and Literatures or, with the approval of the Slavic department's undergraduate adviser, in other relevant programs dealing with Russian culture, politics, society, and history.

MINOR IN RUSSIAN, EAST EUROPEAN, AND EURASIAN STUDIES

The Slavic department's undergraduate minor in Russian, East European and Eurasian Studies offers students the opportunity to choose courses offered by the Center for Russian, East European and Eurasian Studies (subject code REES) in various departments for their minor.

Requirements—Candidates for the B.A. degree with the minor option in Russian, East European, and Eurasian Studies must complete 28 units according to the following distribution:

1. Two core courses: one on Russia and one on Eastern Europe or Eurasia, to be chosen by the student from an annual list of qualifying courses issued by CREEES for their M.A. students.
2. At least four additional REES courses, totaling at least 20 units.
3. The student's core and additiona courses must include 9units of course work in the Slavic Department, either literature courses or Russian language in the third year or above. Courses must be distributed among at least three disciplines, such as Slavic, History, Political Science, Anthropology, Art and Art History, Economics, Religious Studies, and Sociology. The Slavic Chair of Undergraduate Studies (CUS) determines which courses qualify for the minor.
4. A capstone experience in CREEES, including, but not limited to, one of the following:
   a. a departmental seminar course for advanced undergraduates.
   b. directed reading and research with a Stanford faculty member or a CREEES-approved resident or visiting scholar.
   c. participation in the Stanford Overseas Studies Program in Moscow or Berlin.

Foreign Language—The Slavic/REEES minor has no language requirement, but students are strongly encouraged to attain working competence in Russian or another relevant language. Courses at the third-year level or above in Russian or another language of Central Asia, the Caucasus, or Eastern Europe may be counted towards the Slavic/REEES minor, up to a maximum of 3 units per academic quarter, 9 units total.

Additional Information—Courses counting towards the Slavic/REEES minor may not be counted towards the student's major. Courses taken at Stanford overseas campuses in Moscow and Berlin may count towards the REEES minor, with the approval of the Slavic CUS; at least three courses for the minor must be taken in residence at Stanford.

Approval of Slavic CUS—Students interested in pursuing the Slavic/REEES minor should consult the Slavic Chair of Undergraduate Studies. The minor is declared online using the Axess system. Students declaring the Slavic/REEES minor must do so no later than three quarters prior to their intended quarter of degree conferral. Approval of minor declarations and certification of requirements are made by the Slavic Chair of Undergraduate Studies.

MINOR IN RUSSIAN CULTURE

Candidates for the B.A. degree with the minor option in Russian Culture must complete 36 units according to the following distribution: a minimum of 20 units of courses on literature and culture selected from the SLAVGEN 145, 146, 147, 148 sequence (Russian Literature in English Translation), and two courses focusing on a single author. In addition, one course in Russian history. HISTORY 22N, 20Q, 120-129, or 220-229 satisfy the requirements. No knowledge of Russian is required.

Electives—11 units of elective courses either in the Department of Slavic Languages and Literatures or, with the approval of the Slavic department's undergraduate adviser, in other relevant programs dealing with Russian history, politics, society, and culture.

The deadline for minor declarations in all options is no later than the last day of the third quarter before degree conferral.

MINOR IN LITERATURE AND MINOR IN MODERN LANGUAGES

The Division of Literatures, Cultures, and Languages offers two undergraduate minor programs, the minor in Literature and the minor in Modern Languages. These minors draw on literature and language courses offered in this and other literature departments. See the "Literatures, Cultures, and Languages" section of this bulletin for further details about these minors and their requirements.

COTERMINAL BACHELOR'S AND MASTER'S PROGRAM IN SLAVIC LANGUAGES AND LITERATURES

The department allows a limited number of undergraduates to work for coterminal B.A. and M.A. degrees in Slavic Languages and Literatures with a concentration in Russian. In addition to University requirements for the B.A. degree, the student must:

1. Submit an application for admission by January 31 of the senior year. Applicants must meet the same general standards as those seeking admission to the M.A. program. Applicants must submit: an application for admission; a written statement of purpose; a transcript; and three letters of recommendation, at least two of which should be from members of the Department of Slavic Languages and Literatures faculty.
2. Meet all requirements for both the B.A. and M.A. degrees. Applicants must complete 15 full-time quarters (or the equivalent), or three full-time quarters after completing 180 units, for a total of 225 units. During the senior year they may, with the consent of the instructors, register for as many as two graduate courses. In the final year of study, they must complete at least three graduate-level courses.

University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees" section of this bulletin. For University coterminal degree program rules and Uni-

versity application forms, see http://studentaffairs.stanford.edu/registrar/publications#Coterm.

MASTER OF ARTS IN SLAVIC LANGUAGES AND LITERATURES

University requirements for the M.A. degree are discussed in the "Graduate Degrees" section of this bulletin.

Admission—The requirements for admission to the master's degree program in Russian are:

1. A B.A. (or its equivalent) from an accredited college or university.
2. A command of the Russian language sufficient to permit the student to do satisfactory graduate work in an area of specialization.
3. A familiarity with Russian literature sufficient to permit the student to perform adequately in courses at the graduate level.

The applicant's previous academic training in Russian language and literature normally serves as an indication of competence. Accordingly, the department does not ordinarily consider applications from students who have not had at least three years of college Russian and some undergraduate training in Russian literature of the 19th and 20th centuries. Before registering for the first quarter's work in the department, entering graduate students are required to take placement examinations in Russian. Students who fail to perform satisfactorily on such examinations must register for remedial courses in the areas in which they are deficient. Course work in third-year Russian and below carries no credit toward either the M.A. or the Ph.D. degree.

Course Requirements—Candidates for the M.A. who are not also candidates for the Ph.D. should plan course work that ensures adequate preparation for the M.A. final examination at the end of the third quarter of work. Ph.D. candidates should attempt to include as many of the department's basic course offerings as possible in the first-year program to ensure sufficient time to complete the M.A. thesis during the fifth quarter of registration. In any case, course work should be planned in consultation with the graduate adviser, whose approval of the overall course load is required.

Candidates for the M.A. must complete a program of 45 units, of which 36 units must be selected from courses given by the department. The other 9 units may, with approval of the candidate's adviser, be selected from courses in related fields. Of the 36 units in the department, a minimum of 9 may be in language and a minimum of 9 in literature. The remaining 18 units may be distributed in accordance with the needs and interests of the student, and with the advice and approval of the department adviser.

No credit toward the M.A. degree is allowed for first- or second-year courses in non-Slavic languages required for the Ph.D. degree.

The M.A. Thesis—A requirement for candidates for a Ph.D., the M.A. thesis represents a complete article-length research paper (6-9,000 words) that, in both form and substance, qualifies for submission to English-language professional publications in the Slavic field. The M.A. thesis must be submitted to the thesis adviser no later than the fifth quarter and approved no later than the sixth quarter of registration.

Final Examination—Students not enrolled in the Ph.D. program may either submit an M.A. thesis or take a final examination. In the latter case, regardless of the area of specialization, the student must demonstrate in a written examination: (1) command of the phonology, morphology, syntax, and lexicology of contemporary Standard Russian sufficient to teach beginning and intermediate courses at the college level; (2) an ability to read contemporary Standard Russian sufficient to assist students studying contemporary Russian poetry or literary prose; and (3) sufficient familiarity with Russian literature of either the 19th or 20th century to successfully handle survey courses dealing with the chosen period of specialization. The examination should be taken at the end of the final quarter of required course work.

DOCTOR OF PHILOSOPHY IN SLAVIC LANGUAGES AND LITERATURES

University requirements for the Ph.D. are discussed in the "Graduate Degrees" section of this bulletin.

Students enrolled in the Ph.D. program in Slavic Languages and Literatures are expected to fulfill the following requirements while meeting the program's deadlines in the course of their progress towards the degree:

1. *Minor or Related Fields*—During the course of study, students must develop substantial expertise in a field contiguous to the area of specialization. A candidate may elect to present a full minor or, in consultation with the graduate adviser, develop a special program in a related field, preferably no later than the second quarter of enrollment.
   a. *Related Field*—A student is required to complete a sequence of basic courses (12 units) in a chosen discipline outside the Department of Slavic Languages and Literatures. The choice of patterns is one of the following:
      1. a sequence of three courses in one West European literature, selected in consultation with the adviser, *or*
      1. three basic courses in comparative literature chosen in consultation with the Director of Graduate Studies (DGS), *or*
      2. a sequence of three courses in another department, selected in consultation with the DGS.
   b. *Minor*—Students electing a minor should take a minimum of 20 units in graduate-level courses in the minor department or fulfill the minor requirements established by that department. Students considering minors should consult with their adviser, the Director of Graduate Studies, the chair of Slavic Languages and Literatures, and the chair of the minor department.
   c. Students who have already enrolled in the Graduate Program in the Humanities to fulfill the department's "minor or related field" requirement may continue in this program (see "Interdisciplinary Program in Humanities" in this bulletin under the DLCL).
2. *Admission to Candidacy*—Candidates should read carefully the general regulations governing the degree, as described in the "Graduate Degrees" section of this bulletin. The department faculty make the decision to advance students to candidacy on the basis of the student's overall progress and promise in the sixth quarter of registration. The candidate by that time must have demonstrated commitment to graduate studies by completing a minimum of 21 content courses (not counting Summer Quarter) with a grade point average (GPA) of 3.3 or better. These must include 14 seminars in the Slavic Department. The candidate must submit a complete draft of an M.A. thesis approved by the thesis adviser and two readers selected by the candidate from among the department's faculty. The M.A. thesis represents a complete article-length research paper (6,000-9,000 words) that qualifies in both form and substance for submission to an English language professional publication in the Slavic field. The deadline for the M.A. thesis approval is the second week of the sixth quarter of registration. Failure to meet these requirements results in termination of enrollment for the Ph.D. Following such termination, the student who has fulfilled all of the M.A. requirements may be given the opportunity to take the M.A. written examination in the history of Russian literature. If successful, the student is then awarded the M.A. degree In exceptional cases, the written examination requirement may be waived at the discretion of the DGS and the chair of the department.
3. *Proficiency Test*—Administered for all entering graduate students, this test determines whether the student's knowledge of Russian language and literature falls below the department's standard. Students who fail to meet the standard in this test are asked to complete appropriate courses in the first year of graduate study.

4. *Course Requirements*—In consultation with the chair of graduate studies, students are expected to take 18 units of credit each quarter of their first year, 10 units each funded summer, and 10 units each quarter thereafter. They are expected to reach 135 units and attain TGR status in the winter of their fourth year. Entering graduate students must enroll in SLAVLIT 200.
5. *Foreign Languages*—A candidate must demonstrate reading knowledge of French or German, plus another language useful for the student's area of concentration, by passing written examinations, or receiving a grade of 'A-' or better in a qualifying class with the consent of the DGS.
6. *Examinations*—A candidate must pass the departmental general qualifying examinations, which has written and oral parts. These must be scheduled early in the seventh quarter of enrollment (preferably a day or two before the beginning of academic instruction). The written part covers the history of Russian literature from the medieval period through the twentieth century. The departmental oral qualifying examination follows no later than two weeks after completion of the written exams. The oral examination committee consists of four faculty members and may include one member representing the student's "minor or related field." (The rest must be drawn from among the Slavic Department faculty.) The student makes a 20-minute presentation, following an academic conference format, and based possibly on the student's M.A. thesis. Each examiner questions the student on the presentation and related topics in the history of Russian literature and the minor or related field. Following the departmental examinations, a candidate must pass a University oral examination, consisting of a defense of a doctoral dissertation prospectus covering content relevant to the area of study, rationale for the proposed investigation, and strategy to be employed in the dissertation research. The prospectus defense is expected to be scheduled at the end of the ninth and in any case, no later than the beginning of the tenth quarter of registration. Note: Ph.D. examinations are scheduled by the graduate student in consultation with the DGS.

Continuation—Continuation in the Ph.D. program is contingent on fulfilling the following criteria: for first-year students, a high quality of performance in course work (decided by department evaluation); for second-year students, satisfactory academic progress, including an M.A. thesis, which should be completed and approved by the second week of the sixth quarter of registration.

Course Work, Breadth Requirements, and Overall Scheduling—

The principal conditions for continued registration of a graduate student are the timely and satisfactory completion of the university, department, and program requirements for the degree, and fulfillment of minimum progress requirements. Failure to meet these requirements will result in corrective measures which may include a written warning, academic probation, and/or the possible release from the program.

1. Candidates for the Ph.D. degree are free to select course work to suit their individual program of study. However, candidates must do so in consultation with their advisor (DGS or principal dissertation advisor) and are held responsible for all of the areas covered by the general examinations, regardless of whether they have registered for the department's offerings in a given field. For this reason, it is strongly recommended that before taking Ph.D. examinations, students complete seminar-level work directly related to the following broad areas:
   a. Russian poetry
   b. the Russian novel
   c. 20th-century Russian literature
   d. 19th-century Russian literature (the Age of Pushkin and after)
   e. 18th-century Russian literature (the early 1700s to the Age of Pushkin)
   f. medieval Russian literature
   g. a monograph course on a major Russian author
   h. theory of literature relevant to the major field

   The department's general qualifying examinations must be taken early in the first quarter of the third year of study; they may be taken during the second year if the student and the adviser feel this is appropriate. During the two quarters following the departmental general qualifying examinations (the departmental oral examination must be scheduled no later than two weeks after the written part of the exam), the student should be concerned primarily with preparation for the University oral examination (dissertation and prospectus defense), which should take place at the end of the third quarter of the third year or, at the latest, early in the tenth quarter of registration. The fourth and fifth years should be devoted to research, including on-site research in Russia or other relevant area, and writing leading to completion of the Ph.D. dissertation.
2. Students possessing the equivalent of the Stanford M.A. are normally expected to adhere to the schedule for the second, third, and fourth years of work outlined under item 1 above.
3. Students in the Ph.D. program are required to do five quarters of teaching within the funding period, including three quarters of first-year Russian and one quarter as a teaching assistant of literature for a faculty member, usually for one of the survey courses in translation: SLAVGEN 145, 146, 147, 148. Students are required to take a one quarter TA training course, DLCL 201, during their second year.

Non-Slavic Language Requirements—Credit toward either the M.A. or the Ph.D. degrees is not given for first-year courses in languages. It is assumed that, on entering the program, the student has a reading knowledge of either German or French. The reading examination in German or French must be passed by the end of the first year of study. The reading examination in the second language of choice must be passed by the end of the second year of study. Both language examinations must be passed before the candidate takes the University oral examination, that is, before the end of the third year.

PH.D. IN SLAVIC LANGUAGES AND LITERATURES AND HUMANITIES

The department participated in the Graduate Program in Humanities leading to a Ph.D. degree in Slavic Languages and Literatures and Humanities. At this time, the option is available only to students already enrolled in the Graduate Program in Humanities; no new students are being accepted. The University remains committed to a broad-based graduate education in the humanities; the courses, colloquium, and symposium continue to be offered, and the Division of Literatures, Cultures, and Languages provides advising for students already enrolled who may contact DLCL Student Affairs at 650-724-1333 or dlcl@stanford.edu for further information. Courses are listed under the subject code HUMNTIES and may be viewed on the *Stanford Bulletin's* ExploreCourses web site.

SOCIOLOGY

Emeriti: (Professors) Joseph Berger, Bernard P. Cohen, Sanford M. Dornbusch, Alex Inkeles, Seymour M. Lipset, James G. March, John W. Meyer, W. Richard Scott, Nancy B. Tuma, Morris Zelditch Jr.
Chair: Andrew Walder
Professors: Karen Cook, Paula England, Mark Granovetter, David Grusky, Michael T. Hannan, Douglas McAdam, Susan Olzak, Cecilia Ridgeway, Gi-Wook Shin, C. Matthew Snipp, Andrew Walder, Xueguang Zhou
Associate Professors: Shelley Correll, Michael Rosenfeld
Assistant Professors: Corey Fields, Tomás Jiménez, Monica McDermott, Paolo Parigi, Cristobal Young
Acting Assistant Professor: Rebecca L. Sandefur
Courtesy Professors: Glenn Carroll, Michele Landis Dauber, Larry Diamond, Clifford J. Nass, Walter Powell, Francisco Ramirez
Courtesy Associate Professors: Prudence Carter, Daniel McFarland, Sean Reardon, Jesper Sorensen, Mitchell Stevens
Courtesy Assistant Professor: Christine Min Wotipka
Lecturers: Patricia Chang, Annemette Sorensen, Szonja Szelenyi
Consulting Professor: Ruth Cronkite
Visiting Associate Professors: Eva-Maria Meyersson Milgrom, Patricia Thornton
Department Offices: Building 120, Room 160

Web Site: http://sociology.stanford.edu

Courses offered by the Department of Sociology are listed under the subject code SOC on the *Stanford Bulletin*'s ExploreCourses web site.

Sociology seeks to understand all aspects of human social behavior, including the behavior of individuals as well as the social dynamics of small groups, large organizations, communities, institutions, and entire societies. Sociologists are typically motivated both by the desire to better understand the principles of social life and by the conviction that understanding these principles may aid in the formulation of enlightened and effective social policy. Sociology provides an intellectual background for students considering careers in the professions or business. Students may pursue degrees in sociology at the bachelor's, master's, or doctoral levels. The department organizes its courses by areas of study to assist students in tailoring their education and research to their academic interests and career goals.

MISSION OF THE UNDERGRADUATE PROGRAM IN SOCIOLOGY

The mission of the undergraduate program in Sociology is to provide students with the skills necessary to understand and address social problems and inequalities in global, institutional, and interpersonal social relations. At its core, the curriculum in the major is rooted in social theory and the scientific method. Sociology majors are given opportunities to develop a broad understanding of core sociological theories and the methodological skills used to evaluate human behavior and social organizations. Sociology provides an intellectual background for students considering careers in business, social services, public policy, government service, international nongovernmental organizations, foundations, or academia.

The Sociology major consists of a core curriculum plus elective courses intended to provide breadth of exposure to the variety of areas encompassed by sociology.

LEARNING OUTCOMES

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. an understanding of core knowledge within the discipline of sociology.
2. the ability to communicate ideas clearly and persuasively in writing.
3. the ability to analyze a problem and draw correct inferences using qualitative and/or quantitative analysis.
4. the ability to evaluate theory and critique research within the discipline of sociology.

GRADUATE PROGRAMS IN SOCIOLOGY

The Department of Sociology offers three types of advanced degrees:

- the Doctor of Philosophy
- the coterminal Master of Arts in Sociology which is restricted to currently enrolled Stanford undergraduates
- the Master of Arts in Sociology which is available to Stanford students who are currently enrolled in other advanced degree programs

The department does not have a terminal M.A. program for external applicants.

AREAS OF STUDY

The Department of Sociology specializes in four areas of study, allowing students to tailor their education and research to their academic interests and career goals. The four areas of study supported by the department are:

ORGANIZATIONS, BUSINESS, AND THE ECONOMY

Focus is on the arrangements which societies construct for the provision of material goods or services. A formal organization which provides goods or services for profit and sells them through a market is called a business, and the economic system is capitalism. Social needs are also met through government and not-for-profit organizations, such as garden clubs, hospitals, prisons, and the Red Cross; some private and social needs are met outside of organizations, such as health care provided by family members and exchange of favors among friends. Courses stress the factors that determine whether needs that people define are met through markets or non-market allocation, through organizations, or by other means. They also investigate the environmental and technical factors that shape organization structure, the determinants of how efficiently organizations operate, and the interpersonal processes that shape individual behavior within organizations. Careers related to this field include management and administration in business or public settings, management consulting and analysis, and legal studies related to corporations, organizations, and business.

SOCIAL MOVEMENTS, COMPARATIVE POLITICS, AND SOCIAL CHANGE

Focus is on the emergence, reproduction, and change of political systems and institutions, especially on why and how different political systems and social movements appear in different times and places, and how differences in political regimes and economic systems influence attempts to change these systems. The origins and significance of national and transnational social movements, transition to democracy, including revolution, nationalism, and other forms of collective action, in creating and sustaining these changes analyzed across countries and over time. Careers that are relevant to this field include law, public policy, government service, nonprofit and international nongovernmental organizations, business organizations (especially those with international interests), consulting, and managerial jobs.

SOCIAL PSYCHOLOGY AND INTERPERSONAL PROCESSES

Focus is on the social organization of individual identity, beliefs, and behavior, and upon social structures and processes which emerge in and define interpersonal interactions. Processes studied include social acceptance and competition for prestige and status, the generation of power differences, the development of intimacy bonds, the formation of expectation states which govern perform-

ance in task oriented groups, and social pressures to constrain deviance. Foundation courses emphasize the effect of social processes on individual behavior and the analysis of group processes. This field provides training for careers with a significant interpersonal component, including advertising and marketing, business, education, law, management, medicine and health, or social work.

SOCIAL INEQUALITY

Focus is on forms of social inequality, including fields such as: the shape and nature of social inequalities; competition for power; allocation of privilege; production and reproduction of social cleavages; and consequences of class, race, and gender for outcomes such as attitudes, political behavior, and life styles. Many courses emphasize changes in the structure of social inequalities over time, and the processes which produce similarities or differences in stratification across nations. Topics include educational inequality, employment history, gender differences, income distributions, poverty, race, and ethnic relations, social mobility, and status attainment. Careers related to this field include administration, advertising, education, foreign service, journalism, industrial relations, law, management consulting, market research, public policy, and social service.

BACHELOR OF ARTS IN SOCIOLOGY

To declare a major in Sociology, students must email the Sociology student services office once they have declared in Axess; see http://www.stanford.edu/dept/soc/contact/index.html for contact information. It is recommended that new majors schedule a meeting with their assigned faculty adviser promptly after declaring the major.

Major Requirements—To graduate with a B.A. in Sociology, students must complete a minimum of 60 units of course work in the major. Units applied to the major must be taken for a letter grade (except for independent study or directed reading), and a grade point average (GPA) of 2.0 (C) or better must be achieved. Related course work from other departments may fulfill part of this requirement; such work must be pre-approved by the Sociology student services office and a faculty adviser and may not exceed 15 units.

CORE CURRICULUM FOR ALL SOCIOLOGY MAJORS

Students are required to complete a minimum of 40 units of core and foundation course work as detailed below.

CORE COURSES REQUIRED FOR THE MAJOR

The following core courses (25 units) are required of majors. It is recommended that students complete SOC 181B, SOC 180A, and SOC 180B in this order.

1. SOC 170. Classics of Modern Social Theory
2. SOC 181B. Sociological Methods: Statistics, or another introductory statistics course such as STATS 60, PSYCH 10, or equivalent
3. SOC 180A. Foundations of Social Research
4. SOC 180B. Evaluation of Evidence
5. SOC 200. Junior/Senior Seminar for Majors. It is recommended that students take this course in Spring Quarter of the junior year or Autumn Quarter of the senior year. This course fulfills the Writing in the Major (WIM) requirement. Students considering honors are encouraged to enroll in SOC 202, Preparation for Honors Thesis, in the junior year; see "Honors Program" below.

FOUNDATION COURSES REQUIRED FOR THE MAJOR

In addition to core courses, students pursuing the B.A. in Sociology must complete at least three foundation courses (15 units). To ensure breadth of course work, each foundation course must represent a different area of study. For detailed information about Sociology concentration areas, see section on areas of study. Foundation courses, classified by area of study, are as follows:

Organizations, Business, and the Economy

SOC 114. Economic Sociology
SOC 160. Formal Organizations

Social Movements, Comparative Politics, and Social Change—

SOC 110. Politics and Society
SOC 118. Social Movements and Collective Action
SOC 130. Education and Society

Social Psychology and Interpersonal Processes—

SOC 120. Interpersonal Relations
SOC 121. The Individual in Social Structure: Foundations in Sociological Social Psychology

Social Inequality—

SOC 140. Introduction to Social Stratification
SOC 149. The Urban Underclass

In addition to the 40 units required in core and foundation course work, students pursuing the Sociology major must complete 20 elective units of Sociology course work. Students may choose their elective courses according to personal interest; however, students are encouraged to complete some course work at the 200-level. Sociology majors are encouraged to participate in directed research or undertake independent research with Sociology faculty. Students who wish to engage in more in-depth study in a specific area may do so by focusing on course work within an area of study.

HONORS PROGRAM

Sociology majors who wish to complete an independent scholarly project under the direction of a faculty member are encouraged to apply for admission to the department's honors program. Admission to the program requires a grade point average (GPA) of 3.5 or higher in courses taken within the major, and an overall GPA of 3.3 (B+) or higher in all undergraduate course work. Applicants are required to identify a Sociology faculty member to advise on the research and writing of the essay. With the approval of the director of the undergraduate studies committee, students may work with faculty advisers in other departments.

The honors project is typically initiated when a student enrolls in SOC 202, Preparation for Honors Thesis, or SOC 200, Junior/Senior Seminar. Students undertaking an honors project are encouraged to enroll in SOC 202 or 200 in the junior year. Students begin designing their honors project in connection with this seminar and in consultation with the seminar leader. If the student is admitted to the program, the honors project is completed during the senior year.

To apply to the honors program, students must complete the application form available from the Sociology student services office or from the department's web site. This form requires the faculty adviser's endorsement, a brief description of the proposed project, and a copy of the student's unofficial undergraduate transcript. Applicants must submit the completed application to the Sociology student services office no later than the fourth quarter before graduation, typically Spring Quarter of the junior year.

Honors students may earn up to 12 independent study units for work leading to completion of the required honors thesis, excluding units associated with the Junior/Senior Seminar. Completion of honors in Sociology requires: (1) completion of all requirements for the major; and (2) completion of a thesis of honors quality (a grade of 'A-' or higher). The thesis is due on or before the beginning of the End-Quarter period in the student's final quarter before graduating. If the thesis adviser is a faculty member outside the department, the thesis must be submitted to both that sponsor and to the Sociology student services office, who coordinates appointment of a departmental reader to evaluate the paper. Both the honors adviser and the reader must agree that the paper merits honors. In every case, two copies of the final paper must be submitted; one is retained by the department and becomes a part of the department's permanent collection. If a grade of 'A-' is not earned, the thesis credit counts toward meeting the standard major requirements.

MINOR IN SOCIOLOGY

Students must complete a minimum of 35 units in Sociology for the minor. Courses must be taken for a letter grade, and a minimum grade point average (GPA) of 2.0 (C) must be achieved. Students are encouraged to complete a course in sociological theory, such as SOC 170, and to obtain exposure to one of the areas of study. Students who wish to declare a minor in Sociology must do so no later than the deadline for their application to graduate. Related course work from other departments may fulfill a minor requirement. All course substitutions must be pre-approved by the Sociology student services office and the Undergraduate Program Director; a student may not exceed 5 substitution units for the minor.

Course requirements for a minor in Sociology are as follows:

	Units
SOC 1. Introduction to Sociology	5
SOC 180A. Foundations of Social Research, and/or SOC 180B. Evaluation of Evidence	5
Two foundation courses; see foundation courses required for the major above	10
Additional course work in the department (100- or 200-level courses)	15
Total course work required	35

COTERMINAL MASTER OF ARTS IN SOCIOLOGY

Stanford undergraduates, regardless of undergraduate major, who wish to pursue an M.A. in Sociology may apply for the coterminal master's program. The coterminal M.A. in Sociology is a flexible, self-designed program. Most students complete their M.A. in a fifth year at Stanford; occasionally students are able to complete their B.A. and coterminal M.A. in the fourth year.

Application and admission—Undergraduates must be admitted to the program and enrolled as a graduate student for at least one quarter prior to their B.A. conferral. A cumulative GPA of at least 3.5 in previous undergraduate work is required for admission; GRE test scores are required. It is highly recommended that applicants have completed at least one Sociology course at the 100 level with a grade of 'B' or better. The department accepts applications once a year; the application deadline is February 15th for admission in the Spring quarter immediately following. There are no exceptions to this deadline. All application materials are submitted directly to the Sociology graduate student services office. To apply for admission to the Sociology coterminal M.A. program, students must submit the coterminal application and the following: (1) a 2-5 page statement of purpose; (2) a preliminary program proposal that specifies at least 45 units of course work relevant to the degree program with at least 40 units in Sociology; (3) a current unofficial undergraduate transcript; (4) two letters of recommendation from Stanford faculty familiar with the student's academic work; and (5) GRE scores. The department does not fund coterminal M.A. students.

Program requirements—Coterminal M.A. students are required to take 45 units of course work during their graduate career; 40 of these units must be in Sociology courses. Students who wish to engage in more in-depth study in a specific area may do so by focusing on course work within an area of study. All units for the coterminal M.A. must be taken at or above the 100 level; advanced-level course work is encouraged and a minimum of 20 units must be taken at the 200 level. Students who wish to take courses outside the department must seek prior approval from the Sociology student services office; coterminal master's students are limited to 5 units from outside of the department; outside courses must be taken in other Social Science departments. Students may transfer a maximum of 10 units from their undergraduate career; to be eligible for transfer, courses must have been taken in the two quarters preceding admission to the M.A. program. All units applied to the coterminal master's degree must be taken for a letter grade and an overall grade point average (GPA) of 3.0 (B) or better is required for the degree. Because research methods are an important component of graduate training in the social sciences, coterminal students are encouraged to take SOC 180A, Foundations of Social Research, and 180B, Evaluation of Evidence, in sequence when possible. These methods courses provide skills for research opportunities within the department and in academic or professional careers. Coterminal M.A. students should meet with their assigned faculty adviser upon acceptance to the program.

For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/pdf/CotermApplic.pdf. For detailed information regarding the Sociology coterminal M.A. and how to apply, see http://www.stanford.edu/dept/soc/coterminal/index.html.

MASTER OF ARTS FOR CURRENT GRADUATE STUDENTS IN SOCIOLOGY

The M.A. degree in Sociology is available to current Ph.D. candidates in Sociology and to students in advanced degree programs (Ph.D., J.D., M.D.) from other Stanford departments and schools.

For the M.A. degree, students must complete a minimum of 45 units of Sociology course work with a grade point average (GPA) of 3.0 (B) or better. All 45 units must be taken in courses taught by Sociology faculty. Students must enroll in SOC course offerings; crosslisted offerings are not accepted. All courses must be taken for a letter grade if possible. Workshop, research, directed reading, and independent study units do not count towards the M.A.

University regulations pertaining to the M.A. are listed in the "Graduate Degrees" section of this bulletin.

Students who wish to engage in more in-depth study in a specific area may do so by focusing on course work within an area of study.

No thesis is required.

While formal application to the M.A. program is not required, applicants from outside of the Sociology department must submit to the Sociology student services office:

1. a completed Graduate Authorization Petition form, available electronically through Axess for submission to the Office of the University Registrar
2. a completed Program Proposal for an M.A. form
3. a short statement of purpose

Sociology Ph.D.s typically receive their M.A. in their second or third year of graduate study. Interested students from other degree programs should visit the department's web site here at http://www.stanford.edu/dept/soc/doctoral/magrads.html.

DOCTOR OF PHILOSOPHY IN SOCIOLOGY

The Ph.D. curriculum and degree requirements are designed to provide students with the knowledge and skills to become proficient scholars and teachers. Doctoral students in the department must take required courses for a letter grade if available and are expected to earn a grade of 'B+' or better in each course. Any grade of 'B' or below is considered to be less than satisfactory. Grades of 'B' or below are reviewed by faculty and the following actions may take place: the grade stands and the student's academic performance is monitored to ensure that satisfactory progress is being made; the grade stands and the student is required to revise and resubmit the work associated with that course; or the student may be required to retake the course. The following program requirements apply to students who entered the Ph.D program in 2010-11; students admitted prior to 2010 should consult the department or the Bulletin from their year of admission for requirements specific to their cohort.

Students must complete the following department requirements for the Ph.D. degree in Sociology:

1. Students must enroll in SOC 305, Graduate Proseminar, in Autumn Quarter of the first year; the course provides an introduction and orientation to the field of sociology, and to the de-

partment and faculty. One unit of credit is given for this course; grading is on a satisfactory/no credit basis.

2. Students are required to complete 45 units of course work in Sociology in the first academic year, then 15 units of Sociology course work in the second academic year. Course work excludes workshop, independent study, and directed reading units.
3. Students must take two sociological theory courses. One course should be in sociological theory (SOC 370A or 370B or equivalent), and the second course should be on the development of theory and research design (SOC 372 or equivalent).
4. Each student must complete a series of required courses in methodology as well as one elective from a list of approved courses. Students with little background in statistics are encouraged to take SOC 281B or an equivalent statistics course such as STATS 60 or PSYCH 10.
5. Students must complete four broad survey courses to demonstrate command of a range of sociological literatures. Each year the department specifies which courses meet this requirement, and will undertake to ensure that an adequate selection of such courses is offered. A list of courses that generally fulfill this requirement is listed in the requirements section below. Students should consult with their advisor to ensure that the combination of courses selected to meet this requirement exhibits sufficient breadth. This requirement is normally completed by the end of the second year of residency and must be met by the end of the third year of residency.
6. Beginning in year two, doctoral students are required to enroll in at least one workshop each quarter. Sociology workshops are offered for 1-2 units on a credit/non-credit basis only and attendance is required to receive course credit. The Graduate Studies Director may approve a student's petition to attend a workshop when enrollment is prohibited by unit constraints; such attendance is not noted on the transcript. A list of approved workshops that fulfill this requirement is listed in the requirements section below.
7. There are two qualifying examinations. The first examination is taken immediately before the Fall Quarter of the second year of residence. The examination will cover two fields of the student's choosing, and will be based on standard faculty-generated reading lists for each field. Students will write one essay on each subject area, and will have one week to write and submit their essays. The second examination is a longer critical essay that focuses on a reading list devised by the student jointly with their faculty advisor, due by May 15 of the second year in residence. Students may petition to submit a research paper in lieu of the critical essay. Both examinations will be graded by two faculty members, and the grades on these qualifying exams are an important component of the decision to advance a student to candidacy.
8. Students must complete three quarters of teaching apprenticeship in departmental courses, or in other courses by approval. Work as either a teaching assistant (TA) under the supervision of a faculty member or as a teaching fellow (TF) fulfills this requirement. Students are required to take SOC 300, Workshop: Teaching Development, in Spring Quarter of the first year. In addition, students are encouraged to take advantage of department and University teacher training programs. Students for whom English is a second language are expected to acquire sufficient facility in English to be an effective teacher.
9. As partial preparation for becoming an accomplished researcher, each student must complete three quarters of research experience, working under the supervision of one or more faculty members, including regular, emeritus, and affiliated faculty. The experience may involve paid (or unpaid) work as a Research Assistant (RA). With the approval of the Director of Graduate Studies, research experience may be acquired by involvement in research projects outside the department. It is recommended that students complete their research requirements early in their graduate program; the requirement must be completed by the end of the fourth year of residency.
10. In preparation for a career of writing scholarly papers, each student must complete a research paper in the third year of residency. This third-year paper may be on any sociological topic, and may address theoretical, empirical, or methodological issues. The paper is expected to reflect original work and be of publishable quality. A two-person committee that includes the primary advisor evaluates the paper. Although the reading committee is usually comprised of two regular faculty members in the department, emeritus and other faculty outside of the department may serve as a committee member with prior approval. The two readers of the third-year paper committee will provide a review that speaks to (1) whether the paper is publishable and whether the student should therefore invest in attempting to publish it, and (2) what types of revisions, insofar as the paper is publishable, that the student should be pursuing to ready the paper for publication. These comments will be reported to the Director of Graduate Studies. Additionally, the committee should set up a meeting with the student to discuss these reviews before the end of the Spring Quarter. To ensure that students are making adequate progress on their paper, students are required to provide a first draft of the paper to readers by April 1st. The final deadline for paper submission is May 15th.
11. Students are required to present at least two papers at a major professional meeting (e.g., ASA) in their first five years of graduate study.
12. Each student must complete and defend a doctoral dissertation. At the choice of the student (and in consultation with her or his advisor), the dissertation requirement may be met either by (1) submitting the usual book-length document of the sort now required, or (2) submitting three independent papers. The papers may address the same topic, but should be written as stand-alone, single-authored papers in standard journal format (i.e., AJS or ASR). None of these papers may overlap substantially with one another, and none of them may be co-authored. (The main criterion in judging "substantial overlap" is whether any standard journal, such as AJS, would regard the papers as too similar to publish both.) The dissertation must be submitted to all committee members at least 30 days in advance of the defense date. The dissertation defense serves as the Oral Examination required by the University. Assessment of satisfactory completion is determined by the student's doctoral committee members. All students are invited to present their dissertation findings at an informal department colloquium.

The faculty are responsible for providing students with timely and constructive feedback on their progress toward the Ph.D. In order to evaluate student progress and to identify potential problem areas, the department's faculty reviews the academic progress of each first-year student at the beginning of Winter and Spring quarters and again at the end of the academic year. The first two reviews are primarily intended to identify developing problems that could impede progress. In most cases, students are simply given constructive feedback, but if more serious concerns warrant, a student may be placed on probation with specific guidelines for addressing the problems detected. The review at the end of Spring Quarter is more thorough; each student's performance during the first year is reviewed and discussed. Possible outcomes of the spring review include: (1) continuation of the student in good standing, or (2) placing the student on probation, with specific guidelines for the period of probation and the steps to be taken in order to be returned to good standing. For students on probation at this point (or at any other subsequent points), possible outcomes of a review include: (1) restoration to good standing; (2) continued probation, again with guidelines for necessary remedial steps; or (3) termination from the program. Students leaving the program at the end of the first year are usually allowed to complete the requirements to receive an M.A. degree, if this does not involve additional residence or financial support. All students are given feedback from their advisers at the end of their first year of graduate work, helping them to identify areas of strengths and potential weakness.

At the end of the second year of residency, students who are performing well, as indicated by their coursework, performance on qualifying examinations, and teaching and research assistantship performance, are advanced to candidacy. This step implies that the student has demonstrated the relevant qualities required for successful completion of the Ph.D. Future evaluations are based on the satisfactory completion of specific remaining department and University requirements. Students who are not advanced to candidacy will normally be terminated from the program and awarded an M.A. degree. In some cases, the department may require that a student complete outstanding work or complete unmet requirements before admission to candidacy. The university requires that all students must be admitted to candidacy by the beginning of the third year in residence in order to continue in the Ph.D. program. Therefore all requirements stipulated by the department must be met before registration for the fall quarter of the student's third year.

At any point during the degree program, evidence that a student is performing at a less than satisfactory level may be cause for a formal academic review of that student.

REQUIREMENTS

SURVEY COURSES

Students must complete four courses from an approved list. This list is updated and circulated to students at the start of each academic year. *Note:* class offerings rotate; not all approved survey courses are offered every year. The following courses typically fulfill the survey course requirement:

- 310. Political Sociology
- 314. Economic Sociology
- 316. Historical and Comparative Sociology
- 318. Social Movements and Collective Action
- 320. Foundations of Social Psychology
- 322. Social Interaction, Social Structure, and Social Exchange
- 323. Sociology of the Family
- 336. Sociology of Law
- 339. Gender Meanings and Processes
- 340. Social Stratification
- 342B. Gender and Social Structure
- 345. Comparative Race and Ethnic Relations
- 347. Race and Ethnicity in Social Institutions
- 357. Immigration and Assimilation
- 358. Sociology of Immigration
- 360. Foundations of Organizational Sociology
- 363A. Seminar on Organizational Theory

RESEARCH METHODS

Students are also expected to complete one elective from a list of approved courses that is updated and circulated at the start of each academic year. Students are required to enroll in 384, Sociology Methodology IV: New Models and Methods, in their first or second year of the program.

- 281B. Statistics (not required but recommended for students with little statistical background)
- 381. Sociological Methodology I: Introduction
- 382. Sociological Methodology II: Multivariate Regression
- 383. Sociological Methodology III: Models for Discrete Outcomes
- 384. Sociology Methodology IV: New Models and Methods
- 385A. Research Practicum I
- 385B. Research Practicum II

The following course requirements apply to students who entered the Ph.D program in 2004-05 or earlier.

- 281B. Statistics (recommended for students with little statistical background)
- 381A. Sociological Methodology I: Computer Assisted Data Analysis
- 382. Sociological Methodology II: The General Linear Model
- 383. Sociological Methodology III: Advanced Models for Discrete Outcomes
- 388. Advanced Models for Analysis of Tabular Arrays
  - *or* 389. Mixed Method Research Design

THEORY

- 370A. Sociological Theory: Social Structure, Inequality, and Conflict
  - *or* 370B. Sociological Theory: Social Interaction and Group Processes
- 372. Theoretical Analysis and Design

WORKSHOPS

- 311A,B,C. Workshop: Comparative Studies of Educational and Political Systems
- 312W. Workshop: Political Sociology, Social Movements, and Collective Action
- 315W. Workshop: Economic Sociology and Organizations
- 317W. Workshop: Social Networks
- 321W. Workshop: Social Psychology and Social Structure
- 338W. Workshop: Sociology of Law
- 341W. Workshop: Inequality
- 350W. Workshop: Migration, Race, Ethnicity and Nation
- 361W. Workshop: Networks and Organizations
- 368W. Workshop: China Social Science
- 374A,B,C. Research Workshop: Philanthropy and Civil Society

PH.D. MINOR IN SOCIOLOGY

Sociology offers a minor for currently enrolled doctoral students in other Stanford departments and schools. Students must complete a minimum of 30 graduate-level units with a grade point average (GPA) of 3.0 (B) or better. All 30 units for the minor are to be in courses taught by Sociology faculty. Students must enroll in the SOC course offerings (not cross-listed sections). There is one exception: 5 units may be taken in a statistics or methods course taught in another department. All units must be taken for a letter grade. Workshop, research, directed reading, or independent study units do not count towards the Ph.D. Minor. The program must be approved by a Sociology adviser and filed with the Sociology student services office. While there is not a formal application process, candidates must submit a short statement of purpose (2 pages), and a completed Application for Ph.D. Minor to the Sociology student services office. The Application for Ph.D. Minor must have all Sociology or other courses to be applied to the minor listed, including course number, units, and final grades.

JOINT PROGRAMS IN SOCIOLOGY WITH THE SCHOOL OF LAW

The School of Law and Department of Sociology conduct joint programs leading to either a combined J.D. degree with an M.A. degree in Sociology or to a combined J.D. degree with a Ph.D. in Sociology.

Law students interested in pursuing an M.A. in Sociology apply for admission to the Department of Sociology during the first year of Law school. Once admitted to the Department of Sociology, the student must complete standard departmental master's degree requirements as specified in this bulletin. Applications for the joint J.D./M.A. degree program must be approved by both the department and the Law school. Faculty advisers from each program participate in the planning and supervising of the student's academic program.

The J.D./Ph.D. degree program is designed for students who wish to prepare themselves for research or teaching careers in areas relating to both legal and sociological concerns. Students interested in the joint degree program must be admitted to both the School of Law and the Department of Sociology. Interest in the joint degree program must be noted on each of the student's applications. Alternatively, an enrolled student in either the Law School

or the Sociology department may apply to the other program, preferably during their first year of study.

Upon admission, students are assigned a joint program faculty adviser who assists the student in planning an appropriate program and ensuring that all requirements for both degrees are satisfied. The faculty adviser serves in this capacity during the student's course of study regardless of whether the student is enrolled in the School of Law or the Sociology department.

J.D./Ph.D. students may elect to begin their course of study in either the School of Law or the Department of Sociology. Students must be enrolled full-time in the Law school for the first year of Law school, and must enroll full time in the graduate school for the first year of the sociology program. After that time, enrollment may be in the graduate school or the Law school, and students may choose courses from either program regardless of where enrolled. Students must satisfy the requirements for both the J.D. and the Ph.D. degrees. Up to 81 quarter (54 semester) hours of approved courses may be counted toward both degrees, but no more than 36 quarter (24 semester) hours of courses that originate outside the Law school may count toward the Law degree. To the extent that courses under this joint degree program originate outside of the Law school but count toward the Law degree, the Law school credits permitted under Section 17(1) of the Law School Regulations for cross-registration in other schools or departments of Stanford University are reduced on a unit-per-unit basis, but not below zero. Students must complete the equivalent of 183 quarter units to complete both degrees. Tuition and financial aid arrangements normally are through the school in which the student is currently enrolled.

For more information, see the Sociology web site at http://sociology.stanford.edu, and the Law School web site on the J.D./Ph.D. at http://www.law.stanford.edu/program/degrees/joint/sociology.

OVERSEAS STUDIES COURSES IN SOCIOLOGY

For course descriptions and additional offerings, see the listings in the *Stanford Bulletin's* ExploreCourses web site (http://explorecourses.stanford.edu) or the Bing Overseas Studies web site (http://bosp.stanford.edu). Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

AUTUMN QUARTER

MADRID

- OSPMADRD 61. Society and Cultural Change: The Case of Spain. 5 units, Antonio Muñoz

OXFORD

- OSPOXFRD 59. Soccer and English Society. 5 units, Robert Sinclair

WINTER QUARTER

BERLIN

- OSPBER 66. Theory from the Bleachers: Reading German Sports and Culture. 3 units, Wolf Junghanns

CAPETOWN

- OSPCPTWN 32. Adult Learning, Development and Social Change: Service-Learning in the Contemporary South African Context. 4-5 units, Janice McMillan

FLORENCE

- OSPFLOR 79. Migrations and Migrants: The Sociology of a New Phenomenon. 5 units, Khaled Fouad Allam, GER:DB:SocSci, EC:GlobalCom

OXFORD

- OSPOXFRD 117W. Gender and Social Change in Modern Britain. 4-5 units, Amanda Palmer, GER:DB:SocSci, EC:Gender

SPRING QUARTER

BEIJING

- OSPBEIJ 19. Population and Society in East Asia. 4 units, Yun Zhou, GER:DB:SocSci, EC:GlobalCom
- OSPBEIJ 41. Chinese Society and Business Culture. 4 units, Bobai Li, GER:DB:SocSci, EC:GlobalCom

CAPETOWN

- OSPCPTWN 32. Adult Learning, Development and Social Change: Service-Learning in the Contemporary South African Context. 4-5 units, Janice McMillan

STATISTICS

Emeriti: Theodore W. Anderson, Jerome H. Friedman, Ingram Olkin, Charles Stein, Paul Switzer
Chair: Wing H. Wong
Professors: Emmanuel Candes, Thomas M. Cover, Amir Dembo, Persi Diaconis, David L. Donoho, Bradley Efron, Trevor J. Hastie, Iain M. Johnstone, Tze L. Lai, Art Owen, Joseph P. Romano, David O. Siegmund, Robert J. Tibshirani, Guenther Walther, Wing H. Wong
Associate Professor: Jonathan Taylor
Assistant Professors: Andrea Montanari, Balakanapathy Rajaratnam, Nancy Zhang
Professor (Teaching): Susan Holmes
Courtesy Professors: Philip W. Lavori, Richard A. Olshen, Hua Tang
C*ourtesy Associate Professors:* Simon Jackman, David Rogosa, Chiara Sabatti
Consulting Professors: John Chambers, Charles Chui
Mail Code: 94305-4065
Phone: (650) 723-2620
Web Site: http://stat.stanford.edu

Courses offered by the Department of Statistics are listed under the subject code STATS on the *Stanford Bulletin's* ExploreCourses web site.

The department's goals are to acquaint students with the role played in science and technology by probabilistic and statistical ideas and methods, to provide instruction in the theory and application of techniques that have been found to be commonly useful, and to train research workers in probability and statistics. There are courses for general students as well as those who plan careers in statistics in business, government, industry, and teaching.

The requirements for a degree in Statistics are flexible, depending on the needs and interests of the students. Some students may be interested in the theory of statistics and/or probability, whereas other students may wish to apply statistical and probabilistic methods to a substantive area. The department has long recognized the relation of statistical theory to applications. It has fostered this by encouraging a liaison with other departments in the form of joint and courtesy faculty appointments: Economics (Anderson), Education (Olkin, Rogosa), Electrical Engineering (Cover), Geological and Environmental Sciences (Switzer), Health Research and Policy (Efron, Hastie, Johnstone, Lavori, Olshen, Tibshirani, Wong), Mathematics (Dembo, Diaconis), Political Science (Jackman), and the SLAC National Accelerator Laboratory (Friedman). The research activities of the department reflect an interest in applied and theoretical statistics and probability. There are workshops in biology/medicine and in environmental factors in health.

In addition to courses for Statistics majors, the department offers a number of service courses designed for students in other

departments. These tend to emphasize the application of statistical techniques rather than their theoretical development.

The Department of Statistics is well equipped for statistical applications and research in computational statistics. Computer facilities include several networked Unix servers and a PC lab for general research and teaching use. The Mathematical Sciences Library serves the department jointly with the departments of Mathematics and Computer Science.

The department has always drawn visitors from other countries and universities. As a consequence, there is usually a wide range of seminars offered by both the visitors and the department's own faculty.

UNDERGRADUATE PROGRAMS IN STATISTICS

MAJORING IN STATISTICS

Students wishing to build a concentration in probability and statistics are encouraged to consider declaring a major in Mathematical and Computational Science. This interdepartmental program is administered in the Department of Statistics and provides core training in computing, mathematics, operations research, and statistics, with opportunities for further elective work and specialization. See the "Mathematical and Computational Science" section of this bulletin.

GRADUATE PROGRAMS IN STATISTICS

University requirements for the M.S. and Ph.D. degrees are discussed in the "Graduate Degrees" section of this bulletin.

MINOR IN STATISTICS

The undergraduate minor in Statistics is designed to complement major degree programs primarily in the social and natural sciences. Students with an undergraduate Statistics minor should find broadened possibilities for employment. The Statistics minor provides valued preparation for professional degree studies in postgraduate academic programs.

The minor consists of a minimum of six courses with a total of at least 20 units. There are two required courses (8 units) and four qualifying or elective courses (12 or more units). All courses for the minor must be letter graded. An overall 2.75 grade point average (GPA) is required for courses fulfilling the minor.

1. *Required Courses*—STATS 116 and 200.
2. *Qualifying Courses*—at most, one of these two courses may be counted toward the six course requirement for the minor: MATH 52; STATS 191.
3. *Elective Courses*—at least one of the elective courses should be a STATS 200-level course. The remaining two elective courses may also be 200-level courses. Alternatively, one or two elective courses may be approved courses in other departments. Special topics courses and seminars for undergraduates are offered from time to time by the department and these may be counted toward the course requirement. Students may not count any Statistics courses below the 100 level toward the minor. Examples of elective course sequences are:
   STATS 202, 203, 204, emphasizing data analysis and applied statistics
   STATS 205, 206, 207, emphasizing statistical methodology
   STATS 206, ECON 160, 181, emphasizing economic optimization
   STATS 206, PSYCH 156, 160, emphasizing psychology modeling and experiments
   STATS 207, EE 264, 279, emphasizing signal processing
   STATS 217, BIO 283, emphasizing genetic and ecologic modeling
   STATS 217, 218, emphasizing probability and its applications
   STATS 240, 250, emphasizing mathematical finance

The Statistics Department Chair must approve any exceptions to the list of electives.

MASTER OF SCIENCE IN STATISTICS

The department requires that the student take 45 units of work from offerings in the Department of Statistics or from authorized courses in other departments. Ordinarily, four or five quarters are needed to complete all requirements.

Students must fulfill the following requirements for the M.S. degree:

1. STATS 116, 191, 200, and 217. All must be taken for a letter grade. Courses previously taken may be waived by the adviser, in which case they must be replaced by other graduate courses offered by the department.
2. One of MATH 104, 113, 115, 171; and one of CS 106A, 106X, 137, 138, 140-181. Substitution of other courses in Mathematics and Computer Science may be made with consent of the adviser.
3. At least four additional Statistics courses from graduate offerings in the department (202-399). All must be taken for a letter grade. Consent of the adviser is required in order to take more than six units of STATS 260A,B,C, 298, 299, 390, or 399.
4. Additional elective units to complete the requirements may be chosen from the list available from the department web site. Other graduate courses (200 or above) may be authorized by the adviser if they provide skills relevant to statistics or deal primarily with an application of statistics or probability and do not overlap courses in the student's program. There is sufficient flexibility to accommodate students with interests in applications to business, computing, economics, engineering, health, operations research, and biological and social sciences.
5. Courses below 200 level are generally not acceptable, with the following exceptions: STATS 116, 191; MATH 103, 113, 115, 171, 180; CS 106A, 106B, 106X, 137, 138, 140-181. At most, one of these two courses may be counted: (1) MATH 151 *or* STATS 116, (2) MATH 103 *or* MATH 113.

Students with a strong mathematical background who may wish to go on to a Ph.D. in Statistics should consider applying to the Ph.D. program.

The eight Statistics courses required for the M.S. degree must be taken for letter grades. Courses other than the eight required statistics courses may be taken for a letter grade or Credit/No Credit. There is no thesis requirement. An overall 2.75 grade point average (GPA) is required.

DOCTOR OF PHILOSOPHY IN STATISTICS

The department looks for students who wish to prepare for research careers in statistics or probability, either applied or theoretical. Advanced undergraduate or master's level work in mathematics and statistics provides a good background for the doctoral program. Quantitatively oriented students with degrees in other scientific fields are also encouraged to apply for admission. In particular, the department is expanding its research and educational activities towards computational biology, mathematical finance and information science, via a VIGRE program. The program normally takes four years to complete.

Program Summary—STATS 300A,B,C, 305, 306A,B, and 310A,B,C (first-year core program); pass two of three parts of the qualifying examinations (end of first year); breadth requirement (second or third year); successfully complete the thesis proposal meeting (before end of third year); pass the University oral examination (fourth year); dissertation (fourth year).

In addition, students are required to take 9 units of advanced topics courses offered by the department (including at least two of the following: 314, 317, 318, 315A, or 315B, but not including literature, research, or consulting), and 3 units of 390 statistical consulting. All students who have passed the qualifying exams but have not yet passed the University oral examination must take 319 at least once per year.

First-Year Core Courses—STATS 300 systematically surveys the ideas of estimation and of hypothesis testing for parametric and nonparametric models involving small and large samples. 305 is

concerned with linear regression and the analysis of variance. 306 surveys a large number of modeling techniques, related to but going beyond the linear models of 305. 310 is a measure-theoretic course in probability theory, beginning with basic concepts of the law of large numbers and martingale theory. Students who do not have enough mathematics background can take 310 after their first year but need to have their first-year program approved by the Ph.D. program adviser.

Qualifying Examinations—These are intended to test the student's level of knowledge when the first-year program, common to all students, has been completed. There are separate examinations in the three core subjects of statistical theory and methods, applied statistics, and probability theory, and all are typically taken during the summer between the student's first and second years. Students may take two or three of these examinations and are expected to show acceptable performance in two examinations.

Breadth Requirement—Students are advised to choose an area of concentration in a specific scientific field of statistical applications; this can be realized by taking at least 15 units of course work approved by the Ph.D. program adviser.

Current areas with suggested course options include:

Computational Biology and Statistical Genomics—Students are expected to take 9 units of graduate courses in genetics or neurosciences (imaging), such as GENE 203/BIO 203, as well as 9 units of classes in Statistical Genetics or Bioinformatics, GENE 344A,B, STATS 345, STATS 366, STATS 367.

Machine Learning—Courses can be chosen from the following list:
Statistical Learning: STATS 315A and 315B
Data Bases: CS 245, 346, 347
Probabilistic Methods in AI: CS 221, 354
Statistical Learning Theory and Pattern Classification: CS 229

Applied Probability—Students are expected to take 15 units of graduate courses in some of the following areas:
Control and Stochastic Calculus: MS&E 322, 351, MATH 237, EE 363
Finance: STATS 250, FINANCE 622, MATH 236
Information Theory: EE 376A, 376B
Monte Carlo: STATS 318, 345, 362, MS&E 323
Queuing Theory: GSB 661, 663, MS&E 335
Stochastic Processes: STATS 317, MATH 234

Earth Science Statistics—Students are expected to take:
STATS 317, 318, 352
and three courses from the GES or Geophysics departments, such as GES 144 or GEOPHYS 210.

Social and Behavioral Sciences—Students are expected to take three advanced courses from the department with an applied orientation such as:
STATS 261/262, 324, 343, 354
and three advanced quantitative courses from departments such as Anthropology, Economics, Political Science, Psychology, and Sociology, and the schools of Education, Business, or Medicine.

Thesis Proposal Meeting and University Oral Examinations—The thesis proposal meeting is intended to demonstrate students' depth in some areas of statistics, and to examine the general plan for their research. In the meeting, the student gives a short presentation and discusses his/her ideas for completing a Ph.D. thesis, with a committee consisting of their adviser and thesis committee (a total of three members). The meeting must be completed before the end of the third year. If the student does not pass, the exam must be repeated. Repeated failure can lead to a loss of financial support.

The oral examination consists of a 40-minute presentation on the thesis topic, followed by a question period. The questions relate both to the student's presentation and also explore the student's familiarity with broader statistical topics related to the thesis research. The oral examination is normally completed within the last few months of the student's Ph.D. period. The examining committee usually consists of four faculty members from the Statistics Department and a fifth faculty member from outside the department. Four out of five passing votes are required and no grades are given. Nearly all students can expect to pass this examination, although it is common for specific recommendations to be made regarding completion of the thesis.

A reading committee must also read and approve the thesis. The reading committee is typically the same as the thesis committee from the thesis proposal meeting.

Transition policy—The policy above took effect in Autumn Quarter 2009-10. Students beginning their first year in 2008-09 or later must follow this new policy. Other students can choose either the old or new system; students in this category who choose the new scheme and have already finished their third year can have the thesis proposal meeting as soon as they are ready.

For further information on University oral examinations and committees, see the Graduate Academic Policies and Procedures (GAP) Handbook, section 4.7 or the "University Oral Examination" section of this bulletin.

Financial Support—Students accepted to the Ph.D. program are offered financial support. All tuition expenses are paid and there is a fixed monthly stipend determined to be sufficient to pay living expenses. Financial support can be continued for five years, department resources permitting, for students in good standing. The resources for student financial support derive from funds made available for student teaching and research assistantships. Students receive both a teaching and research assignment each quarter which, together, do not exceed 20 hours. Students are encouraged to apply for outside scholarships, fellowships, and other forms of financial support.

PH.D. MINOR IN STATISTICS

Students must complete 30 total units for the Ph.D. minor. 20 units must be from Statistics courses numbered 300 and above and taken for letter grades. The remaining 10 units can be from Statistics courses numbered 200 and above, or courses from other departments that are on the approved list for the M.S. degree. The selection of courses must be approved by one of the M.S. advisers. The Application for the Ph.D. Minor form must be approved by both the student's Ph.D. department and the Statistics department.

SYMBOLIC SYSTEMS

Director: Kenneth Taylor
Director of Graduate Studies: Christopher Manning
Associate Director: Todd Davies
Program Committee: Lera Boroditsky, Herbert Clark, Todd Davies, Daniel Jurafsky, Scott Klemmer, Daphne Koller, Krista Lawlor, Christopher Manning, James McClelland, Clifford Nass, Stanley Peters, Christopher Potts, Eric Roberts, Ivan A. Sag, Kenneth A. Taylor, Johan van Benthem, Thomas A. Wasow, Terry Winograd

Program Faculty:

Art and Art History: Scott Bukatman (Associate Professor)
Applied Physics: Bernardo Huberman (Consulting Professor)
Classics: Reviel Netz (Professor)
Civil and Environmental Engineering: John Kunz (Lecturer)
Communication: Jeremy Bailenson (Associate Professor), Clifford J. Nass (Professor), Byron Reeves (Professor), Frederick Turner (Associate Professor)
Computer Science: David Dill (Professor), Michael Genesereth (Associate Professor), Jeffrey Heer (Assistant Professor), Oussama Khatib (Professor), Scott Klemmer (Assistant Professor), Daphne Koller (Professor), Jean-Claude Latombe (Professor), Marc Levoy (Professor), Christopher Manning (Associate Professor), John McCarthy (Professor, emeritus), Andrew Ng (Associate Professor), Nils Nilsson (Professor, emeritus), Vaughan Pratt (Professor, emeritus), Eric Roberts (Professor, Teaching), Tim Roughgarden (Assistant Professor), Mehran Sahami (Associate Professor, Teaching), Sebastian Thrun (Professor), Terry Winograd (Professor)
Economics: Muriel Niederle (Associate Professor)
Education: Raymond P. McDermott (Professor), Roy Pea (Professor), Daniel Schwartz (Professor)
Electrical Engineering: Krishna Shenoy (Associate Professor)
French and Italian: Jean-Pierre Dupuy (Professor)
Genetics: Russ B. Altman (Professor)
Graduate School of Business: Baba Shiv (Professor)

Web Site: http://symsys.stanford.edu

Courses offered by the Program in Symbolic Systems are listed under the subject code SYMSYS on the *Stanford Bulletin's* ExploreCourses web site.

The observation that both human beings and computers can manipulate symbols lies at the heart of Symbolic Systems, an interdisciplinary program focusing on the relationship between natural and artificial systems that represent, process, and act on information. Computer programs, natural languages, the human mind, and the Internet embody concepts whose study forms the core of the Symbolic Systems curriculum, such as computation, representation, communication, and intelligence. A body of knowledge and theory has developed around these notions, from disciplines such as philosophy, computer science, linguistics, psychology, statistics, neurobiology, and communication. Since the invention of computers, researchers have been working across these disciplines to study questions such as: in what ways are computers and computer languages like human beings and their languages; how can the interaction between people and computers be made easier and more beneficial?

The core requirements of the Symbolic Systems Program (SSP) include courses in symbolic logic, the philosophy of mind, formal linguistics, cognitive psychology, programming, the mathematics of computation, statistical theory, artificial intelligence, and interdisciplinary approaches to cognitive science. These courses prepare students with the vocabulary, theoretical background, and technical skills needed for study and research at the advanced undergraduate and graduate levels. Most of the courses in SSP are drawn from affiliated departments. Courses designed specifically for the program are aimed at integrating and supplementing topics covered by the department-based offerings. The curriculum includes humanistic approaches to questions about language and intelligence, as well as training in science and engineering.

SSP offers B.S. and M.S. degree programs. Both programs require students to master a common core of required courses and to choose an area of specialization.

MISSION OF THE UNDERGRADUATE PROGRAM IN SYMBOLIC SYSTEMS

The undergraduate program in Symbolic Systems is an interdisciplinary program focusing on the relationship between natural and artificial systems that represent, process, and act on information. The mission of the program is to prepare majors with the vocabulary, theoretical background, and technical skills necessary to research questions about language, information, and intelligence, both human and machine. The curriculum offers a combination of traditional humanistic approaches to these questions as well as a training and familiarity with contemporary developments in the science and technology of computation. Students in the major take courses in cognitive science, computer programming, computational theory, probability, cognitive psychology, linguistics, and artificial intelligence. The program prepares student for careers in corporate and private sectors as well as for further study in graduate school.

LEARNING OUTCOMES

The program expects its undergraduate majors to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the Symbolic Systems Program . Students are expected to demonstrate:

1. understanding of important concepts from the undergraduate core requirements.
2. ability to apply core concepts to an advanced problem area.
3. ability to apply concepts and methods from more than one discipline to a particular issue.
4. ability to think critically about advanced reading material.
5. ability to present a cogent, coherent, evidence-backed argument.

BACHELOR OF SCIENCE IN SYMBOLIC SYSTEMS

The program leading to a B.S. in Symbolic Systems provides students with a core of concepts and techniques, drawing on faculty and courses from various departments. The curriculum prepares students for advanced training in the interdisciplinary study of language and information, or for postgraduate study in any of the main contributing disciplines. It is also excellent preparation for employment immediately after graduation.

Symbolic Systems majors must complete a core of required courses plus a field of study consisting of six additional courses. All major courses are to be taken for letter grades unless an approved course is offered satisfactory/no credit only. All core courses must be passed with a grade of 'C-' or better. Students who receive a grade lower than this in a core course must alert the program of this fact so that a decision can be made about whether the student should continue in the major.

CORE REQUIREMENTS

In order to graduate with a B.S. in Symbolic Systems, a student must complete the following requirements. Some of these courses have other courses as prerequisites; students are responsible for completing each course's prerequisites before they take it.

1. *Cognitive Science*: SYMSYS 100. Introduction to Cognitive and Information Sciences
2. *Computer Programming:*
   a. CS 106A. Programming Methodology *and* 106B. Programming Abstractions; *or* 106X. Programming Methodology and Abstractions (Accelerated); *and*
   b. CS 107. Computer Organization and Systems
3. *Logic*:
   a. PHIL 150. Basic Concepts in Mathematical Logic
   b. PHIL 151. First-Order Logic
4. *Computational Theory:*
   a. CS 103. Mathematical Foundations of Computing
5. *Probability*: one of the following:
   CS 109. Introduction to Probability for Computer Scientists
   CME 106/ENGR 155C. Introduction to Probability and Statistics for Engineers
   EE 178. Probabilistic Systems Analysis
   MATH 151. Introduction to Probability Theory
   MS&E 120. Probabilistic Analysis
   STATS 110. Statistical Methods in Engineering and the Physical Sciences
   STATS 116. Theory of Probability
6. *Philosophical Foundations:*
   a. an introductory course in Philosophy must be taken prior to the required PHIL 80, from among the following:
   PHIL 10. God, Self, and World: An Introduction to Philosophy
   PHIL 20. Introduction to Moral Philosophy
   PHIL 30. Introduction to Political Philosophy
   PHIL 60. Introduction to Philosophy of Science
   PHIL 102. Modern Philosophy, Descartes to Kant
   IHUM 23A,B. The Fate of Reason
   and
   a. PHIL 80. Mind, Matter, and Meaning (WIM)
7. *Cognitive Psychology*: PSYCH 55. Introduction to Cognition and the Brain
8. *Language and Mind:* one of the following:
   LINGUIST 1. Introduction to Linguistics
   LINGUIST 140. Language Acquisition I
   PHIL 181. Philosophy of Language
   PSYCH 131. Language and Thought
   PSYCH 137. Birds to Words: Cognition, Communication, and Language
9. *Linguistic Theory*: one of the following:
   LINGUIST 120. Introduction to Syntax
   LINGUIST 130A. Introduction to Linguistic Meaning
   LINGUIST 180. From Languages to Information
   LINGUIST 230A. Introduction to Semantics and Pragmatics
10. *Artificial Intelligence*: CS 121. Introduction to Artificial Intelligence, *or* 221. Artificial Intelligence: Principles and Techniques
11. *Advanced Small Seminar:** an upper-division, limited-enrollment seminar drawing on material from other courses in the core. Courses listed under Symbolic Systems Program offerings with numbers from SYMSYS 200 through 209 are acceptable, as are other courses which are announced at the beginning of each academic year.

* A course taken to fulfill one of these requirements can also be counted toward another requirement, as part of either the core or a student's concentration (see below), but not both.

FIELDS OF STUDY

In addition to the core requirements listed above, the Symbolic Systems major requires each student to complete a field of study consisting of six courses that are thematically related to each other. Students select concentrations from the list below or design others in consultation with their advisers. The field of study is declared on Axess; it appears on the transcript but not on the diploma.

Applied Logic
Artificial Intelligence
Cognitive Science
Computer Music
Decision Making and Rationality
Human-Computer Interaction
Learning
Natural Language
Neurosciences
Philosophical Foundations

UNDERGRADUATE RESEARCH

The program strongly encourages all SSP majors to gain experience in directed research by participating in faculty research projects or by pursuing independent study. In addition to the Symbolic Systems Honors Program (see below), the following avenues are offered.

1. *Summer Internships:* students work on SSP-related faculty research projects. Application procedures are announced in the winter quarter for SSP majors.
2. *Research Assistantships:* other opportunities to work on faculty research projects are typically announced to SSP majors as they arise during the academic year.
3. *Independent Study*: under faculty supervision. For course credit, students should enroll in SYMSYS 196.

Contact SSP for more information on any of these possibilities, or see http://symsys.stanford.edu. In addition, the Undergraduate Advising and Research office offers grants and scholarships supporting student research projects at all levels; see http://ual.stanford.edu/OO/research_opps/Grants
http://ual.stanford.edu/OO/research_opps/Grants.

HONORS PROGRAM

Seniors in SSP may apply for admission to the Symbolic Systems honors program prior to the beginning of their final year of study. Students who are accepted into the honors program can graduate with honors by completing an honors thesis under the

supervision of a faculty member. Course credit for the honors project may be obtained by registering for SYMSYS 190, Honors Tutorial, for any quarters while a student is working on an honors project. Juniors who are interested in doing an honors project during their senior year are advised to take SYMSYS 200, Symbolic Systems in Practice. SYMSYS 191, Senior Honors Seminar, is recommended for honors students during the senior year. Contact SSP or visit the program's web site for more information on the honors program, including deadlines and policies.

COGNATE COURSES

The following is a list of cognate courses that may be applied to the B.S. in Symbolic Systems. See respective department listings for course descriptions and General Education Requirements (GER) information.

BIO 20. Introduction to Brain and Behavior (Same as HUMBIO 21)
BIO 150/250. Human Behavioral Biology (Same as HUMBIO 160)
BIO 153. Cellular Neuroscience: Cell Signaling and Behavior
CME 106. Introduction to Probability and Statistics for Engineers (Same as ENGR 155C)
COMM 106/206. Communication Research Methods
COMM 169/269. Computers and Interfaces
COMM 172/272. Media Psychology
CS 21N. Can Machines Know? Can Machines Feel?
CS 26N. Motion Planning for Robots, Digital Actors, and Other Moving Objects
CS 47N. Computers and the Open Society
CS 51N. Visionaries in Computer Science
CS 74N. Digital Dilemmas
CS 103. Mathematical Foundations of Computing
CS 103A. Discrete Mathematics for Computer Science
CS 103B. Discrete Structures
CS 103X. Discrete Structures (Accelerated)
CS 106A. Programming Methodology (Same as ENGR 70A)
CS 106B. Programming Abstractions (Same as ENGR 70B)
CS 106X. Programming Abstractions (Accelerated) (Same as ENGR 70X)
CS 107. Computer Organization and Systems
CS 108. Object-Oriented Systems Design
CS 109. Introduction to Probability for Computer Scientists
CS 110. Principles of Computer Systems
CS 121. Introduction to Artificial Intelligence
CS 124. From Languages to Information (Same as LINGUIST 180/280)
CS 142. Web Applications
CS 147. Introduction to Human-Computer Interaction Design
CS 148. Introductory Computer Graphics and Imaging
CS 154. Introduction to Automata and Complexity Theory
CS 157. Logic and Automated Reasoning
CS 161. Design and Analysis of Algorithms
CS 170. Composition, Coding, and Performance with SLOrc (Same as MUSIC 128)
CS 181. Computers, Ethics, and Public Policy
CS 193D. Professional Software Development with C++
CS 193S. Scalable Web 2.0 Programming
CS 204. Computational Law
CS 205A. Mathematical Methods for Robotics, Vision, and Graphics
CS 207. The Economics of Software
CS 208. The Canon of Computer Science
CS 221. Artificial Intelligence: Principles and Techniques
CS 222. Rational Agency and Intelligent Interaction (Same as PHIL 358)
CS 223A. Introduction to Robotics
CS 223B. Introduction to Computer Vision
CS 224M. Multi-Agent Systems
CS 224N. Natural Language Processing (Same as LINGUIST 284)
CS 224S. Speech Recognition and Synthesis (Same as LINGUIST 285)
CS 224U. Natural Language Understanding (Same as LINGUIST 188/288)
CS 227. Reasoning Methods in Artificial Intelligence
CS 228. Structured Probabilistic Models: Principles and Techniques
CS 228T. Structured Probabilistic Models: Theoretical Foundations
CS 229. Machine Learning
CS 247. Human-Computer Interaction Design Studio
CS 249A. Object-Oriented Programming from a Modeling and Simulation Perspective
CS 276. Information Retrieval and Web Search (Same as LINGUIST 286)
CS 303. Designing Computer Science Experiments
CS 376. Research Topics in Human-Computer Interaction
CS 377. Topic in Human-Computer Interaction
CS 377L. Learning in a Networked World (Same as EDUC 298)
CS 378. Phenomenological Foundations of Cognition, Language, and Computation
CS 547. Human-Computer Interaction Seminar
ECON 51. Economic Analysis II
ECON 137. Information and Incentives
ECON 160. Game Theory and Economic Applications
EDUC 218. Topics in Cognition and Learning: Play
EDUC 298. Learning in a Networked World (Same as CS 377L)
EE 178. Probabilistic Systems Analysis
EE 376A. Information Theory
ENGR 62. Introduction to Optimization (Same as MS&E 111)
ENGR 155C. Introduction to Probability and Statistics for Engineers (Same as CME 106)
ETHICSOC 20. Introduction to Moral Philosophy (Same as PHIL 20)
ETHICSOC 30. Introduction to Political Philosophy (Same as PHIL 30, PUBLPOL 103A)
HPS 60. Introduction to Philosophy of Science (Same as PHIL 60)
HUMBIO 21. Introduction to Brain and Behavior (Same as BIO 20)
HUMBIO 145. Birds to Words: Cognition, Communication, and Language (Same as PSYCH 137/239A)
HUMBIO 160. Human Behavioral Biology (Same as BIO 15/250)
LINGUIST 1. Introduction to Linguistics
LINGUIST 83N. Translation
LINGUIST 105/205A. Phonetics
LINGUIST 110. Introduction to Phonetics and Phonology
LINGUIST 120. Introduction to Syntax
LINGUIST 124A/224A. Introduction to Formal Universal Grammar
LINGUIST 130A. Introduction to Linguistic Meaning
LINGUIST 130B. Introduction to Lexical Semantics
LINGUIST 140/240. Language Acquisition I
LINGUIST 180/280. From Languages to Information (Same as CS 124)
LINGUIST 181/281. Grammar Engineering
LINGUIST 182/282. Computational Theories of Syntax
LINGUIST 188/288. Natural Language Understanding (Same as CS 224U)
LINGUIST 210A. Phonology
LINGUIST 210B. Advanced Phonology
LINGUIST 221A. Foundations of English Grammar
LINGUIST 221B. Studies in Universal Grammar
LINGUIST 222A. Foundations of Syntactic Theory I
LINGUIST 230A. Introduction to Semantics and Pragmatics
LINGUIST 230B. Semantics and Pragmatics
LINGUIST 232A. Lexical Semantics
LINGUIST 235. Semantic Fieldwork
LINGUIST 241. Language Acquisition II
LINGUIST 247. Seminar in Psycholinguistics (Same as PSYCH 227)
LINGUIST 278. Programming for Linguists
LINGUIST 284. Natural Language Processing (Same as CS 224N)

LINGUIST 285. Speech Recognition and Synthesis (Same as CS 224S)
LINGUIST 286. Information Retrieval and Web Search (Same as CS 276)
LINGUIST 289. Quantitative, Probabilistic, and Optimization-Based Explanation in Linguistics
MATH 113. Linear Algebra and Matrix Theory
MATH 151. Introduction to Probability Theory
MATH 162. Philosophy of Mathematics (Same as PHIL 162)
ME 115B. Product Design Methods
MS&E 120. Probabilistic Analysis
MS&E 121. Introduction to Stochastic Modeling
MS&E 201. Dynamic Systems
MS&E 430. Tools for Experience Design
MUSIC 151. Psychophysics and Cognitive Psychology for Musicians
MUSIC 128. Composition, Coding, and Performance with SLOrc (Same as CS 170)
MUSIC 220A. Fundamentals of Computer-Generated Sound
MUSIC 220B. Compositional Algorithms, Psychoacoustics, and Spatial Processing
MUSIC 250A. HCI Theory and Practice
MUSIC 251. Music, the Brain, and Human Behavior
MUSIC 253. Musical Information: An Introduction
MUSIC 254. Applications of Musical Information: Query, Analysis, and Style Simulation
NBIO 206. The Nervous System
NBIO 218. Neural Basis of Behavior
PHIL 9N. Philosophical Classics of the 20th Century
PHIL 10. God, Self, and World: An Introduction to Philosophy
PHIL 14N. Belief
PHIL 80. Mind, Matter, and Meaning
PHIL 102. Modern Philosophy, Descartes to Kant
PHIL 143/243. Quine
PHIL 150. Basic Concepts in Mathematical Logic
PHIL 151. First-Order Logic
PHIL 152. Computability and Logic
PHIL 154. Modal Logic
PHIL 155. General Interest Topics in Mathematical Logic
PHIL 157. Topics in Philosophy of Logic
PHIL 164. Central Topics in the Philosophy of Science: Theory and Evidence
PHIL 166. Probability: Ten Great Ideas About Chance
PHIL 167B. Philosophy, Biology, and Behavior
PHIL 180A/280A. Realism, Anti-Realism, Irrealism, Quasi-Realism
PHIL 181. Philosophy of Language
PHIL 184. Theory of Knowledge
PHIL 184B. Philosophy of the Body
PHIL 184P. Probability and Epistemology
PHIL 186. Philosophy of Mind
PHIL 187. Philosophy of Action
PHIL 188. Personal Identity
PHIL 189/289. Examples of Free Will
PHIL 194C. Time and Free Will
PHIL 194P. Naming and Necessity
PHIL 194R. Epistemic Paradoxes
PHIL 279. Collectivities
PHIL 350A. Model Theory
PHIL 351A. Recursion Theory
PHIL 354. Topics in Logic
PHIL 366. Evolution and Communication
PHIL 382A. Pragmatics and Reference
PHIL 387. Practical Rationality
PHIL 387C. Consistency and Coherence
PSYCH 1. Introduction to Psychology
PSYCH 7Q. Language Understanding by Children and Adults
PSYCH 23N. Aping: Imitation, Control, and the Development of the Human Mind
PSYCH 30. Introduction to Perception
PSYCH 45. Introduction to Learning and Memory
PSYCH 50. Introduction to Cognitive Neuroscience
PSYCH 55. Introduction to Cognition and the Brain
PSYCH 70. Introduction to Social Psychology
PSYCH 75. Introduction to Cultural Psychology
PSYCH 104. Uniquely Human
PSYCH 122S. Introduction to Cognitive and Comparative Neuroscience
PSYCH 131/262. Language and Thought
PSYCH 133. Human Cognitive Abilities
PSYCH 134. Seminar on Language and Deception
PSYCH 141. Cognitive Development
PSYCH 143. Developmental Anomalies
PSYCH 154. Judgement and Decision-Making
PSYCH 159. Psychology of Attitude Change and Social Influence
PSYCH 202. Cognitive Neuroscience
PSYCH 204A. Human Neuroimaging Methods
PSYCH 209/209A. The Neural Basis of Cognition: A Parallel Distributed Processing Approach
PSYCH 209B. Applications of Parallel Distributed Processing Models to Cognition and Cognitive Neuroscience
PSYCH 226. Models and Mechanisms of Memory
PSYCH 227. Seminar in Psycholinguistics (Same as LINGUIST 247)
PSYCH 232. Brain and Decision Making
PSYCH 246. Cognitive and Neuroscience Friday Seminar
PSYCH 250. High-level Vision
PSYCH 251. Affective Neuroscience
PSYCH 252. Statistical Methods for Behavioral and Social Sciences
PSYCH 253. Statistical Theory, Models, and Methodology
PSYCH 272. Special Topics in Psycholinguistics
SOC 126/226. Introduction to Social Networks
STATS 110. Statistical Methods in Engineering and the Physical Sciences
STATS 116. Theory of Probability
STATS 191. Introduction to Applied Statistics
STATS 200. Introduction to Statistical Inference

MINOR IN SYMBOLIC SYSTEMS

Students may minor in Symbolic Systems by completing either item 1 or item 2 below.

1. One course in each of the following core areas (please note that several of these courses have prerequisites):
   a. *Cognition*: SYMSYS 100* *or* PSYCH 55
   b. *Logic and Computation*: PHIL 150 *or* 151, *or* CS 103 *or* 154
   c. *Computer Programming*: CS 106B, 106X, *or* 107
   d. *Philosophical Foundations:* SYMSYS 100* *or* PHIL 80
   e. *Formal Linguistics*: LINGUIST 120, 130A, *or* 180
   f. *Artificial Intelligence:* CS 121 *or* 221
2. SYMSYS 100, plus an interdisciplinary SSP concentration listed on the SSP web site at http://symsys.stanford.edu. To qualify, the selection of courses used for the minor must be interdisciplinary; it must either include courses from at least three departments, or include more than one course from each of two departments.

* SYMSYS 100 may not be counted for both areas 'a' and 'd'.

COTERMINAL BACHELOR'S AND MASTER'S DEGREES IN SYMBOLIC SYSTEMS

Many SSP majors also complete coterminal M.S. or M.A. degrees in affiliated departments. In addition to the Symbolic Systems M.S. program (see below), the Department of Philosophy offers a Special Program in Symbolic Systems track for interdisciplinary graduate level work leading to the Master of Arts in Philosophy.

University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees" section of this bulletin. For University coterminal degree program rules and Uni-

versity application forms, see http://studentaffairs.stanford.edu/registrar/publications#Coterm.

MASTER OF SCIENCE IN SYMBOLIC SYSTEMS

The University's basic requirements for the M.S. degree is discussed in the "Graduate Degrees" section of this bulletin.

The M.S. degree in Symbolic Systems is designed to be completed in the equivalent of one academic year by coterminal students or returning students who already have a B.S. degree in Symbolic Systems, and in two years or less by other students depending upon level of preparation. Admission is competitive, providing a limited number of students with the opportunity to pursue course and project work in consultation with a faculty adviser who is affiliated with the Symbolic Systems Program. The faculty adviser may impose requirements beyond those described here.

Admission to the program as a coterminal student is subject to the policies and deadlines described in the "Undergraduate Degrees and Programs" section of this bulletin (see "Coterminal Bachelor's and Master's Degrees"). Applicants to the M.S. program are reviewed each Winter Quarter. Information on deadlines, procedures for applying, and degree requirements are available from the program's student services coordinator in the Linguistics Department office (460-127E) and at http://symsys.stanford.edu/ssp_static?page=masters.html.

REQUIREMENTS

A candidate for the M.S. degree in Symbolic Systems must complete a program of 45 units. At least 36 of these must be graded units, passed with an average grade of 3.0 (B) or better, and any course taken to fulfill requirements A, B, or C below must be taken for a letter grade unless the course is offered S/NC only. The 45 units may include no more than 21 units of courses from those listed below under Requirements A and B. Furthermore, none of the 45 units to be counted toward the M.S. degree may include units counted toward an undergraduate degree at Stanford or elsewhere. Course requirements are waived only if evidence is provided that similar or more advanced courses have been taken, either at Stanford or another institution. Courses that are waived rather than taken may not be counted toward the M.S. degree.

Each candidate for the M.S. degree must fulfill the following requirements:

REQUIREMENT A

Demonstrated competence in the core requirements for the B.S. degree in Symbolic Systems. Candidates who have gone through the Symbolic Systems undergraduate program satisfy this requirement in the course of the B.S. degree in Symbolic Systems. Other students admitted as candidates for a Symbolic Systems M.S. degree must complete or show evidence of having passed equivalent courses covering all the Symbolic Systems undergraduate core requirements, with the exception of the advanced small seminar requirement.

REQUIREMENT B

1. Submission to and approval by the Symbolic Systems Program office of these pre-project research documents:
   a. project area statement, endorsed with a commitment from the student's prospective project adviser due no later than May 1 of the academic year prior to the expected graduation year; and
   b. qualifying research paper due no later than the end of the Summer Quarter prior to the expected graduation year.
2. Completion of two additional skill requirements:
   a. *Computer Programming:* CS 108. Object-Oriented Systems Design; *or* CS 110. Principles of Computer Systems; *or* CS 249A. Object-Oriented Design from a Modeling and Simulation Perspective
   b. *Empirical Methods:* one of the following:
   COMM 206. Communication Research Methods
   COMM 239. Questionnaire Design for Surveys and Laboratory Experiments: Social and Cognitive Perspectives
   COMM 268. Experimental Research in Advanced User Interfaces
   LINGUIST 284. Natural Language Processing (Same as CS 224N)
   PSYCH 110. Research Methods and Experimental Design
   PSYCH 252. Statistical Methods for Behavioral and Social Science (for 3 or more units)
   PSYCH 253. Statistical Theory, Models, and Methodology (for 3 units)
   STATS 191. Introduction to Applied Statistics
   STATS 200. Introduction to Statistical Inference
   a Statistics course numbered higher than 200
3. Completion of three quarters of the Symbolic Systems Program M.S. Seminar (SYMSYS 291).

REQUIREMENT C

Completion of an approved specialization track. All tracks of the Symbolic Systems M.S. program require students to do a substantial project. The course requirements for each track are designed to prepare a student to undertake such a project. The nature of the project depends on the student's focus, but it should be academic in nature (contributing to generalizable knowledge) and it should relate to the subject matter of symbolic systems more or equally appropriately as it does to other master's degree programs at Stanford. In all cases, a written thesis or paper describing the project is required. The project normally takes three quarters, and work on the project may account for up to 15 units of a student's program. The thesis must be read and approved for the master's degree in Symbolic Systems by two qualified readers approved by the program, at least one of whom must be a member of the Academic Council. Each track of the Symbolic Systems M.S. program has its own core requirements, as well as unit requirements from a set of elective courses. The tracks and their requirements are as follows.

The Human-Computer Interaction (HCI) Track—The HCI Core: a course in Computer Science numbered 141-179 (excluding 147), *or* CS 241-279 (excluding 247), *or* CS 295, Software Engineering; *and* CS 147, Introduction to Human-Computer Interaction Design; *and* CS 247, Human-Computer Interaction: Interaction Design Studio*; and* CS 376, Research Topics in Human-Computer Interaction *or* COMM 269, Computers and Interfaces.

For HCI electives, at least 9 additional units of HCI courses, chosen in consultation with the student's adviser. The following are examples of themes around which an elective program might be built: animation, business systems, computer-aided design, computer graphics, data interfaces, decision systems, design for disabilities, design principles, dialogue systems, digital art, digital media, education technology, game design, history of computers, information retrieval, intelligent interfaces, interaction design, internet design, medical informatics, multimedia design, object-oriented design, philosophy of computation, social aspects of computing, usability analysis, virtual reality, and workplace computing.

The Natural Language Technology (NLT) Track—For the NLT core, in addition to the courses below, students must complete LINGUIST 284/CS 224N, Natural Language Processing, which can be used as the empirical methods course for Requirement B above.

1. An in-depth theory of English grammar course such as LINGUIST 221A, Foundations of English Grammar
2. A graduate-level semantics course (if not already taken as part of Requirement A) such as LINGUIST 232A, Lexical Semantics, or 230B, Semantics and Pragmatics
3. A two-course sequence in Computational Linguistics:
   a. LINGUIST 280. From Languages to Information, *and*
   b. LINGUIST 282. Computational Theories of Syntax

For NLT electives, at least 9 additional units of natural language technology courses, chosen in consultation with the student's adviser.

The Individually Designed Option—Students wishing to design their own M.S. curriculum in Symbolic Systems must present a project plan as part of their application. This plan must be endorsed by the student's adviser prior to admission to the Symbolic Systems M.S. program. The application must also specify at least 20 units of course work that the student plans tof take in support of the project.

Students are admitted under this option only if they present well-developed plans whose interdisciplinary character makes them inappropriate for any departmental master's program, but appropriate for Symbolic Systems.

COGNATE COURSES

The following is a list of cognate courses that may be applied to the M.S. in Symbolic Systems. See respective department listings for course descriptions and General Education Requirements (GER) information.

BIO 20. Introduction to Brain and Behavior (Same as HUMBIO 21)
BIO 150/250. Human Behavioral Biology (Same as HUMBIO 160)
BIO 153. Cellular Neuroscience: Cell Signaling and Behavior
CME 106. Introduction to Probability and Statistics for Engineers (Same as ENGR 155C)
COMM 106/206. Communication Research Methods
COMM 169/269. Computers and Interfaces
COMM 172/272. Media Psychology
CS 103. Mathematical Foundations of Computing
CS 103A. Discrete Mathematics for Computer Science
CS 103B. Discrete Structures
CS 103X. Discrete Structures (Accelerated)
CS 106A. Programming Methodology (Same as ENGR 70A)
CS 106B. Programming Abstractions (Same as ENGR 70B)
CS 106X. Programming Abstractions (Accelerated) (Same as ENGR 70X)
CS 107. Computer Organization and Systems
CS 108. Object-Oriented Systems Design
CS 109. Introduction to Probability for Computer Scientists
CS 110. Principles of Computer Systems
CS 121. Introduction to Artificial Intelligence
CS 124. From Languages to Information (Same as LINGUIST 180/280)
CS 142. Web Applications
CS 147. Introduction to Human-Computer Interaction Design
CS 148. Introductory Computer Graphics and Imaging
CS 154. Introduction to Automata and Complexity Theory
CS 157. Logic and Automated Reasoning
CS 161. Design and Analysis of Algorithms
CS 170. Composition, Coding, and Performance with SLOrc (Same as MUSIC 128)
CS 181. Computers, Ethics, and Public Policy
CS 193D. Professional Software Development with C++
CS 193S. Scalable Web 2.0 Programming
CS 204. Computational Law
CS 205A. Mathematical Methods for Robotics, Vision, and Graphics
CS 207. The Economics of Software
CS 208. The Canon of Computer Science
CS 221. Artificial Intelligence: Principles and Techniques
CS 222. Rational Agency and Intelligent Interaction (Same as PHIL 358)
CS 223A. Introduction to Robotics
CS 223B. Introduction to Computer Vision
CS 224M. Multi-Agent Systems
CS 224N. Natural Language Processing (Same as LINGUIST 284)
CS 224S. Speech Recognition and Synthesis (Same as LINGUIST 285)
CS 224U. Natural Language Understanding (Same as LINGUIST 188/288)
CS 227. Reasoning Methods in Artificial Intelligence
CS 228. Structured Probabilistic Models: Principles and Techniques
CS 228T. Structured Probabilistic Models: Theoretical Foundations
CS 229. Machine Learning
CS 247. Human-Computer Interaction Design Studio
CS 249A. Object-Oriented Programming from a Modeling and Simulation Perspective
CS 276. Information Retrieval and Web Search (Same as LINGUIST 286)
CS 303. Designing Computer Science Experiments
CS 376. Research Topics in Human-Computer Interaction
CS 377. Topic in Human-Computer Interaction
CS 377L. Learning in a Networked World (Same as EDUC 298)
CS 378. Phenomenological Foundations of Cognition, Language, and Computation
CS 547. Human-Computer Interaction Seminar
ECON 51. Economic Analysis II
ECON 137. Information and Incentives
ECON 160. Game Theory and Economic Applications
EDUC 218. Topics in Cognition and Learning: Play
EDUC 298. Learning in a Networked World (Same as CS 377L)
EE 178. Probabilistic Systems Analysis
EE 376A. Information Theory
ENGR 62. Introduction to Optimization (Same as MS&E 111)

URBAN STUDIES

Director: Doug McAdam (Sociology)
Associate Director: Michael Kahan (Lecturer, Urban Studies)
Executive Committee: Albert Camarillo (History), Prudence Carter (Education), Zephyr Frank (History), Michael Rosenfeld (Sociology), Walter Scheidel (Classics), Jeff Wachtel (President's Office)
Affiliated Faculty: Eric Bettinger (Education), Scott Bukatman (Art and Art History), Albert Camarillo (History), Prudence Carter (Education), Samuel Chiu (Management Science and Engineering), Karen Cook (Sociology), Paulla Ebron (Anthropology), Paula Findlen (History), James Fishkin (Communication), Shelley Fisher Fishkin (English), Charlotte Fonrobert (Religious Studies), Richard Ford (Law), Zephyr Frank (History), Leah Gordon (Education), David Grusky (Sociology), Ian Hodder (Anthropology), Miyako Inoue (Anthropology), Sarah Jain (Anthropology),Tomás Jiménez (Sociology), David Labaree (Education), Raymond Levitt (Civil and Environmental Engineering), Carolyn Lougee Chappell (History), Monica McDermott (Sociology), Raymond McDermott (Education), Daniel McFarland (Education), Milbrey McLaughlin (Education), William McLennan (Office of Religious Life), Ian Morris (Classics), Josiah Ober (Classics, Political Science), Susan Olzak (Sociology), Leonard Ortolano (Civil and Environmental Engineering), Sean Reardon (Education), Rob Reich (Political Science), Ian Robertson (Anthropology), Michael Rosenfeld (Sociology), Rebecca Sandefur (Sociology), Walter Scheidel (Classics), Gary Segura (Political Science), Michael Shanks (Classics), Jennifer Trimble (Classics), Nancy Brandon Tuma (Sociology, Hoover Institution), Fred Turner (Communication), Paul Turner (Art and Art History), Guadalupe Valdes (Education), Barbara Voss (Anthropology)
Lecturers: David Boesch, Hilary Schafer Boudet, Melanie Edwards, Dennis Gale, Radford Hall, Michael Kahan, Michael Kieschnick, Lawrence Litvak, Laura Scher, Frederic Stout, Virginia Visconti
Visiting Associate Professor: Gerald Gast
Department Offices: Building 120, Room 160
Mail Code: 94305-2048
Phone: (650) 723-3956
Email: urbanstudies@stanford.edu
Web Site: http://urbanstudies.stanford.edu

Courses offered by the Urban Studies Program are listed under the subject code URBANST on the *Stanford Bulletin's* ExploreCourses web site.

The Urban Studies program treats urbanism as an interdisciplinary field; it brings together students, faculty, and outside specialists concerned with cities, and the impacts of cities on society and people's lives. The Urban Studies major encourages students to inquire deeply into the nature of cities and the techniques used to modify urban environments. It prepares students to address urbanization, and gives students a knowledge base and theoretical, analytical, and practical skills to understand urban social systems and effect social change.

MISSION OF THE UNDERGRADUATE PROGRAM IN URBAN STUDIES

The mission of the undergraduate program in Urban Studies is to develop students' understanding of the nature of cities and their impacts on both the individual and society at large. The program is interdisciplinary in nature drawing from fields in the social sciences, history, and education. Courses in the program focus on issues in contemporary urban society, and on the tools and concepts that can bring about change to improve urban life. Courses also address how cities have changed over time and how they continue to change today in societies around the world. Through a comprehensive program that includes course work, an internship, and independent research, a major in Urban Studies prepares students for careers and advanced academic pursuits in fields including architecture, community service, education, environmental planning, real estate development, urban design, and urban planning; many alumni have obtained graduate degrees in architecture, business, law, public policy, urban design, and urban planning from major universities across the country. Information on careers and graduate programs pursued by Urban Studies alumni is available from the Urban Studies program office.

LEARNING OUTCOMES

The program expects its undergraduate majors to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the Program in Urban Studies. Students are expected to demonstrate ability:

1. to formulate a research question and assess its significance in relation to one or more relevant scholarly literatures and, where relevant, to theoretical writings.
2. to collect data to answer proposed research question.
3. to analyze a problem and draw correct inferences using qualitative and/or quantitative analysis.
4. to write clearly and persuasively.

BACHELOR OF ARTS IN URBAN STUDIES

The Urban Studies major requires students to complete four types of courses totaling at least 73 units: 19 units in the core; at least 8 units of skills courses; at least 25 units in an area of concentration; and 13 units in the capstone sequence. If units in these categories total less then 73, the remaining units may be fulfilled by courses in other concentrations or in Urban Studies courses numbered 100 or higher (except URBANST 198 and 199). Majors must also complete two prerequisites: ECON 1A, Introductory Economics A; and ECON 1B, Introductory Economics B; these prerequisite courses may be taken S/NC, as the units for these courses do not count toward the 73 units required for the major. URBANST 198, URBANST 199, and prerequisites for required courses and for electives also do not count towards the 73-unit minimum.

Urban Studies students interested in graduate school in business or urban planning are advised to obtain basic quantitative skills by completing MATH 19, 20, and 21, or MATH 41 and 42, preferably before the junior year. A course in statistical methods, such as STATS 60, ECON 102A, POLISCI 150A or 151B, or SOC 181B, is recommended for students interested in business or urban planning.

Urban Studies students carry out an internship in an urban organization in the public or private sector, typically by enrolling in URBANST 201B during Spring Quarter of the junior year. This internship, or an appropriate substitution where necessary, should be arranged no later than Winter Quarter of the junior year, in consultation with the Urban Studies internship coordinator. Urban Studies majors who wish to receive academic credit for additional internship work may enroll once in URBANST 194. Students may not count more than 7 units of internship, including URBANST 194 and 201A/B, toward their major. Students can consult the Haas Center for Public Service for other courses with internship placements at community organizations.

Urban Studies students are encouraged to spend at least one quarter studying overseas to learn how cities vary across societies. Some Urban Studies concentration courses, as well as electives, can be satisfied at Stanford overseas campuses. Courses offered overseas vary from year to year, and students should check in advance with Overseas Studies and Urban Studies concerning which courses meet Urban Studies requirements. Students may arrange to fulfill the internship requirement through a placement at one of Stanford's overseas locations.

Courses counted toward the 73-unit graduation requirement for the major must be taken for a letter grade, and a minimum grade of 'C' is required. The only exceptions are Urban Studies courses numbered 100 and higher that are offered only on an S/NC basis, such as URBANST 201A and 201B. Students may count up to 3 non-Stanford courses, for a maximum of 15 units, toward the major. These units must first be approved by the Office of Transfer Credit in the Registrar's Office and subsequently approved by the Urban Studies program. Transfer credit is not awarded for internship. Students may not count more than 5 units of URBANST 197, Directed Reading, toward the major without permission of the Director. Qualified students may write a senior honors thesis and graduate with honors; see details in "Honors Program" below. Students interested in declaring Urban Studies as a major are required to meet first with the student services administrator and one of the program's advisers; they then declare the Urban Studies major on Axess.

URBAN STUDIES CORE

Urban Studies majors should complete URBANST 110, Introduction to Urban Studies, before Spring Quarter of the junior year. The following courses, totaling 19 units, are required:
URBANST 110. Introduction to Urban Studies
URBANST 112. The Urban Underclass
URBANST 113. Introduction to Urban Design
URBANST 114. Cities in Comparative Perspective

SKILLS

A minimum of 8 units are required. The following courses may be used to fulfill the skills requirement; consult an adviser to determine if additional courses may be available:
ANTHRO 130D. Spatial Approaches to Social Science
SOC 180A. Foundations of Social Research

CONCENTRATIONS

Students must complete at least 25 units in one of the following concentrations. Courses may not be double counted. Students should consult an adviser to develop a program that meets their intellectual goals; relevant courses not listed here, including research methods courses taken in preparation for the capstone project, may be counted toward the concentration with the prior consent of an adviser.

These concentrations are declared to the department; they are not declared on Axess, and they do not appear on the transcript or the diploma.

CITIES IN COMPARATIVE AND HISTORICAL PERSPECTIVE

Focus is on how cities have evolved over time, and how they are continuing to change today in societies around the world, drawing on disciplinary approaches including anthropology, archaeology, art history, geography, and history. By placing urban issues

in perspective, students improve their comprehension of the present as well as the past.

Students in this concentration are encouraged to study off campus, and preferably overseas, for at least one quarter. Many courses offered through the Overseas Studies Program can be counted toward the concentration. Similarly, internships offered at many of Stanford's overseas locations can be used to fulfill the Urban Studies internship requirement. One of the following courses is required for the cities in comparative and historical perspective concentration:

ANTHRO 103. The Archaeology of Modern Urbanism
CLASSART 112. Ancient Urbanism

The following courses may be counted toward the cities in comparative and historical perspective concentration:

AMELANG 177. Middle Eastern Cities in Literature and FIlm
AMSTUD 184. Cityscapes of the Imaginary: The Urban World in Literature and Film
ANTHRO 105. Ancient Cities in the New World
ANTHRO 127. City and Sounds
ARTHIST 3. Introduction to the History of Architecture
ARTHIST 141. The Invention of Modern Architecture
ARTHIST 143A. History of American Architecture
ARTHIST 283A. Paris and Shanghai, 1880-1940: Mediating the City
CLASSART 42. Pompeii
CLASSART 112. Ancient Urbanism
CLASSGEN 60. The Life and Death of a Roman City: Pompeii
CLASSHIS 60. The Romans
CLASSHIS 101. The Greeks
HISTORY 31. Science, Technology, and Art: The Worlds of Leonardo da Vinci
HISTORY 106A. Global Human Geography: Asia and Africa

OSPCPTWN 40. Education in the Post-Apartheid City
OSPCPTWN 42. Race, Class, and Status: Cape Town in Comparative Perspective
OSPCPTWN 44. Negotiating Home, Citizenship, and the South African City
OSPCPTWN 65. Western Cape Sites of Memory
OSPFLOR 58. Space as History: Urban Change and Social Vision: Florence 1059-2008
OSPFLOR 115Y. The Duomo and the Piazza della Signoria: Symbols of a Civilization
OSPKYOTO 48. City and Sounds in Kyoto
OSPMADRD 21. Built Environmental History of Spain
OSPMADRD 60. Integration into Spanish Society: Service Learning and Professional Opportunities
OSPOXFRD 66. Oxford: The Culture of the City
OSPPARIS 92. Building Paris: Its History, Architecture, and Urban Design
POLISCI 110A. Sovereignty and Globalization
POLISCI 110C. America and the World Economy
RELIGST 237. Jewish and Christian Rome in the 1st to 6th Centuries
SOC 143. Poverty in Brazil: From Empirical Evidence to Anti-Poverty Policies
URBANST 115. Urban Sustainability: Long-Term Archaeological Perspectives
URBANST 161. American Urban History since 1920

URBAN EDUCATION

The purpose of this concentration is to prepare students for a career in educational policy and practice in diverse settings. This concentration is a useful basis for graduate study in educational policy, law, or business, and for students who have been admitted by the School of Education to pursue a coterminal master's degree in the Stanford Teacher Education Program (STEP) or the Policy, Organization, and Leadership Studies Program (POLS). Students planning to pursue a coterminal master's should take one of the three practica: EDUC 103A, B, and C (for the STEP elementary coterm); EDUC 101X (for the STEP secondary coterm); or EDUC 270A (for the POLS coterm). Application and admission to a coterminal degree in these programs occurs during the Autumn Quarter of the junior year and is handled by the School of Education.

Opportunities to obtain teaching and advising experience are available in nearby schools through Upward Bound and other programs administered by the Haas Center for Public Service and through courses offered by the School of Education.

Students who choose this concentration may be eligible for the undergraduate honors program of the School of Education, in which case they should enroll in EDUC 199A, B, or C during their senior year.

The following course is required for the urban education concentration:

EDUC 112X. Urban Education

The following courses may be counted toward the urban education concentration:

AFRICAST 111. Education for All? The Global and Local in Public Policy Making in Africa
EDUC 101. Undergraduate Teaching Practicum
EDUC 103A. Tutoring: Seeing a Child through Literacy (Same as SOC 103A)
EDUC 103B. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices
EDUC 103C. Educational Policy, Diversity, and English Learners
EDUC 104X. Conduct of Research with and in Communities
EDUC 115Q. Identities, Race, and Culture in Urban Schools
EDUC 116X. Service Learning as an Approach to Teaching
EDUC 144. Child Development in and Beyond Schools
EDUC 148X. Critical Perspectives on Teaching and Tutoring English Language Learners
EDUC 149. Theory and Issues in the Study of Bilingualism
EDUC 177. Education of Immigrant Students: Psychological Perspectives
EDUC 178X. Latino Families, Languages, and Schools
EDUC 179. Urban Youth and Their Institutions: Research and Practice
EDUC 198X. Tutoring with Adolescents: Ravenswood Writes
EDUC 201. History of Education in the United States
EDUC 201B. Education for Liberation
EDUC 202. Introduction to Comparative and International Education
EDUC 204. Introduction to the Philosophy of Education
EDUC 207X. School: What Is It Good For?
EDUC 216X. Education, Race, and Inequality in African American History, 1880-1990
EDUC 220A. Introduction to the Economics of Education
EDUC 220B. Introduction to the Politics of Education

EDUC 220C. Education and Society
EDUC 220D. History of School Reform: Origins, Policies, Outcomes, and Explanations
EDUC 221A. Policy Analysis in Education
EDUC 233A, B. Adolescent Development and Mentoring in the Urban Context
HUMBIO 142. Adolescent Development
or PSYCH 60. Introduction to Developmental Psychology
OSPCPTWN 40. Education in the Post-Apartheid City
SOC 132. Sociology of Education: The Social Organization of Schools

URBAN SOCIETY AND SOCIAL CHANGE

Focus is on issues in contemporary urban society and the tools and concepts that planners, policy makers, and citizens use to address those issues. Topics include environmental challenges, racial and class inequality, and the provision of adequate urban infrastructure. Students learn how community action, urban planning and design, and organizations in nonprofit, for-profit, and government sectors address urban social and environmental problems. This concentration prepares students to enter graduate programs concerned with urban affairs, community service, and public policy, and to work with local governmental agencies and for-profit and nonprofit organizations engaged in community service and development.

The following course is required for the urban society and social change concentration:
POLISCI 133. Ethics and Politics of Public Service

The following courses may be counted toward the urban society and social change concentration:
ANTHRO 32. Theories in Race and Ethnicity
ASNAMST 146S. Asian American Culture Community
CEE 64. Air Pollution: From Urban Smog to Global Change
CEE 100. Managing Sustainable Building Projects
CEE 115. Goals and Methods of Sustainable Building Projects
CEE 124. Sustainable Development Studio
CEE 129. Engineering and Policy Responses to Climate Change Impacts on Seaports
CEE 131. Architectural Design Process
CEE 141A. Infrastructure Project Development
CEE 142A. Creating Sustainable Development
CEE 171. Environmental Planning Methods
CEE 172. Air Quality Management
COMM 120. Digital Media in Society
EARTHSYS 124. Environmental Justice: Local, National, and International Dimensions
EARTHSYS 133. California Climate Change Law and Policy
EARTHSYS 181. Concepts of Urban Agriculture
ECON 150. Economic Policy Analysis
ECON 155. Environmental Economics and Policy
EDUC 270A. Learning to Lead in Public Service Organizations
ENGR 150. Social Innovation and Entrepreneurship
HISTORY 105. Gandhi, King and Non-Violence
HISTORY 255. Martin Luther King, Jr.: The Social Gospel and the Struggle for Justice
HISTORY 259A,B. Poverty and Homelessness in America
HISTORY 260. California's Minority-Majority Cities
HUMBIO 122S. Social Class, Race, Ethnicity, Health
HUMBIO 127A,B. Community Health: Assessment and Planning
HUMBIO 128. Community Health Psychology
OSPCPTWN 20. Supervised Service Learning
OSPCPTWN 22. Preparation for Community-Based Research in Community Health and Development
OSPCPTWN 24. Targeted Research: Project in Community Health and Development
OSPCPTWN 42. Race, Class, and Status: Cape Town in Comparative Perspective
OSPMOSC 57. Social Inequality in Socialist and Post-Socialist Societies
POLISCI 221F. Race and American Politics
POLISCI 236. Theories of Civil Society, Philanthropy, and the Nonprofit Sector
PUBLPOL 135. Regional Politics and Decision Making in Silicon Valley
PUBLPOL 183. Philanthropy and Social Innovation
SOC 118. Social Movements and Collective Action
SOC 119. Understanding Large-Scale Societal Change: The Case of the 1960's
SOC 135. Poverty, Inequality, and Social Policy in the United States
SOC 137. Inequality and Access to Justice
SOC 140. Introduction to Social Stratification
SOC 141. Controversies About Inequality
SOC 143. Prejudice, Racism, and Social Change
SOC 145. Race and Ethnic Relations
SOC 160. Formal Organizations
or MS&E 180. Organizations: Theory and Management
SOC 161. The Social Science of Entrepreneurship
SOC 164. Immigration and the Changing United States
SOC 166. Mexicans, Mexican Americans, and Chicanos in American Society
URBANST 111. Urban Politics
URBANST 115. Urban Sustainability: Long-Term Archaeological Perspectives
URBANST 123. Approaching Research and the Community
URBANST 126. Spirituality and Nonviolent Urban and Social Transformation

URBANST 132. Concepts and Analytic Skills for the Social Sector
URBANST 133. Social Entrepreneurship Collaboratory
URBANST 137. Innovations in Microcredit and Development Finance
URBANST 162. Managing Local Governments
URBANST 163. Land Use Control
URBANST 165. Sustainable Urban and Regional Transportation Planning
URBANST 171. Urban Design Studio

SELF-DESIGNED

Students who wish to concentrate in an area of urban studies other than one of the above concentrations must complete the Urban Studies core, skills, and capstone requirement, and design additional units to bring the total to at least 73 units. The self-designed portion of the major should concentrate on a particular area of urban study, such as urban health care or urban environmental management. Additional units must be approved by both the Director of Urban Studies and an academic adviser who is a member of the Academic Council and has expertise in the particular area of interest to the student. Proposals for courses in the self-designed portion of the concentration should include a list of courses and a description of how each course meets the student's educational objectives. A proposal for a self-designed concentration must be accompanied by a letter to the Director of Urban Studies indicating that the academic adviser has examined and approved the student's plan.

Students pursuing a self-designed concentration must submit proposals for approval by the Director of Urban Studies by the beginning of the third quarter of the student's sophomore year. Applications received after that deadline are not considered. Students interested in designing their own concentration are strongly encouraged to meet with the Director of Urban Studies before the end of their sophomore year.

CAPSTONE

All majors are required to complete an internship and a sequence of two seminars, totaling 13 units, in which students participate in the work of an urban organization related to their area of interest, design a senior project, and write the results of their project. The capstone seminars can be used to satisfy the Writing in

the Major requirement and to complete some work on an honors thesis. URBANST 201A or B, and 201 or 202, should be taken in the junior year, and URBANST 203 in the senior year. Students who plan to be away during Winter Quarter of their junior year are advised to take URBANST 201 or 202 in the Winter Quarter of their sophomore year.

URBANST 201. Preparation for Senior Project

or URBANST 202. Preparation for Honors Thesis

URBANST 201A. Capstone Internship in Urban Studies

or URBANST 201B, Capstone Internship Seminar

URBANST 203. Senior Seminar (WIM)

HONORS PROGRAM

The honors program offers qualified students an opportunity to conduct independent research and to write a thesis summarizing the results. Before being accepted to the honors program in Urban Studies, a student must

1. declare a major in Urban Studies and complete at least 30 of the 73 required units including all prerequisites and core classes
2. complete URBANST 201 or 202 (offered Winter Quarter)
3. have an overall GPA of 3.3 and a GPA of at least 3.5 in Urban Studies
4. submit an application, including a one-page abstract and the signatures of an adviser and, if applicable, a second reader. If the adviser is not a member of Stanford's Academic Council, the student must have a second reader who is an Academic Council member. The application must be submitted to the program office no later than April 30 of the junior year, and it must then be approved by the Director of the Urban Studies honors program.

Honors students are expected to complete a portion of their honors work in URBANST 203, Senior Seminar, in Autumn Quarter. Additionally, they must register for 5-10 units total in URBANST 199, Senior Honors Thesis, over the course of their senior year. The units of URBANST 199 are in addition to the 73-units required for the major. Honors students are required to present their theses at the Senior Colloquium in Spring Quarter of senior year.

To graduate with honors, students must receive a grade of at least 'A-' in the honors work and have a GPA of at least 3.5 in courses for the Urban Studies major at the time of graduation.

MINOR IN URBAN STUDIES

The minor in Urban Studies is designed to introduce students to several disciplinary approaches to the study of cities, and provides the opportunity to explore one of three specialized options:

- Cities in comparative and historical perspective
- Urban education
- Urban society and social change

The minor in Urban Studies requires completion of seven courses for a letter grade, including the four core courses, the required course in the student's chosen concentration area, and two additional courses in that option as listed in the "Bachelor of Arts in Urban Studies" section of this bulletin.

COTERMINAL PROGRAMS IN URBAN STUDIES

Undergraduates in Urban Studies may enter coterminal master's degree programs in a number of departments and schools in the University. In recent years, Urban Studies majors have developed coterminal programs with the departments of Civil and Environmental Engineering, Communication, and Sociology, and with the School of Education. Information and applications for coterminal degree programs are available at Undergraduate Advising and Research. Students should discuss the coterminal program with a program director during their junior year.

For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/shared/publications.htm#Coterm.

OVERSEAS STUDIES COURSES IN URBAN STUDIES

For course descriptions and additional offerings, see the listings in the *Stanford Bulletin's* ExploreCourses web site (http://explorecourses.stanford.edu) or the Bing Overseas Studies web site (http://bosp.stanford.edu). Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

PARIS

- OSPPARIS 92. Building Paris: Its History, Architecture, and Urban Design. 4 units, Estelle Halevi, GER:DB:Hum

STANFORD IN WASHINGTON

Director: Adrienne Jamieson

The Bing Stanford in Washington program provides highly-qualified undergraduates with an opportunity to work and study in the nation's capital. In addition to providing students with an understanding of public policy making, the program offers an opportunity to take advantage of the city's unique cultural resources.

Central in the student's educational experience is a full-time internship. Students serve as interns at such institutions and agencies as the Senate, the House of Representatives, the Office of Management and Budget, the White House, the National Institutes of Health, the Smithsonian Institution, CNN, World Bank, the departments of State, Justice, Treasury, Education, and Health and Human Services.

In addition to the internship, students also complete an academic course of study consisting of small courses taught by policy experts, and weekly seminars taught by Stanford faculty members. Seminars are generally 3-5 units. Past topics have included congressional oversight and the press; economic growth and development patterns, policies, and prospects; critical health issues in the U.S. and abroad; policy making in the Washington community; and criminal justice policy. Speakers from the Washington policy community frequently join students and faculty for discussions. Students often write a major paper related to their internship for 3-5 units of credit. Course and seminar topics vary according to student and faculty interest.

The Bing Stanford in Washington program offers stretch quarters in the Autumn and Spring (early September to mid-December, and late March to the end of June) and a regular quarter in Winter, which focuses on environmental and health policy. The program is designed for students in their junior year or during the first or second quarter of their senior year. Applications must be completed two quarters in advance, and three quarters in advance if a student is overseas or otherwise not on campus during the qualifying quarter.

Students interested in the program should contact the campus office of the Bing Stanford in Washington program in Room 105 of the SIEPR Gunn Building; see http://bsiw.stanford.edu; or email bsiwinfo_ca@stanford.edu.

SCHOOL OF LAW

Emeriti: (Professors) Barbara Allen Babcock, Wayne G. Barnett, Paul Brest, Gerhard Casper, William Cohen, Lance E. Dickson, Marc A. Franklin, Jack H. Friedenthal, Robert A. Girard, William B. Gould IV, Thomas C. Grey, Thomas C. Heller, Miguel A. Méndez, John Henry Merryman, Margaret Jane Radin, David Rosenhan, Kenneth E. Scott, Byron D. Sher, William H. Simon, Michael S. Wald

Dean: Larry D. Kramer

Vice Dean: Mark G. Kelman

Associate Dean for Curriculum: Jane Schacter

Associate Dean for Executive Education and Special Programs: F. Daniel Siciliano

Associate Dean for Graduate Studies: Deborah R. Hensler

Associate Dean for Public Interest and Clinical Education: Lawrence C. Marshall

Senior Associate Dean and Chief Financial Officer: Frank Brucato

Associate Deans: Diane Chin, Faye Deal, Catherine Glaze, Sabrina Johnson, Susan Robinson, Scott Showalter

Professors: Janet Cooper Alexander, Joseph Bankman, R. Richard Banks, Joshua Cohen, G. Marcus Cole, Richard Craswell, Mariano-Florentino (Tino) Cuéllar, Robert M. Daines, Michele Landis Dauber, John J. Donohue III, George Fisher (on leave autumn), Richard T. Ford, Barbara H. Fried (on leave autumn), Lawrence M. Friedman, Ronald J. Gilson (on leave autumn), Paul Goldstein, Henry T. Greely, Joseph A. Grundfest, Deborah R. Hensler, Daniel E. Ho, Pamela S. Karlan, Mark G. Kelman, Amalia D. Kessler, Daniel P. Kessler, Michael Klausner, Larry D. Kramer, Mark A. Lemley, Lawrence C. Marshall, Jenny S. Martinez (on leave winter/spring), Michael W. McConnell, Joan Petersilia, A. Mitchell Polinsky, Robert L. Rabin, Deborah L. Rhode , Jane Schacter, Norman W. Spaulding (on leave autumn), James F. Strnad II , Kathleen M. Sullivan (on leave), Alan O. Sykes, Barton H.Thompson, Jr., Robert Weisberg

Associate Professors: Alison D. Morantz, Barbara van Schewick

Assistant Professors: David Freeman Engstrom, Nora Freeman Engstrom, Michael W. Wara

Professors (Teaching): Juliet M. Brodie, William S. Koski, Deborah A. Sivas, Jayashri Srikantiah

Associate Professors (Teaching): Jeffrey L. Fisher, Jay Mitchell

Professor of the Practice of Law: David W. Mills

Senior Lecturers: Margaret R. Caldwell (on leave), Janet Martinez, F. Daniel Siciliano, Allen S. Weiner

Professors (by courtesy): Paul C. Pfleiderer, Madhav Rajan, Jack Rakove, Rebecca Sandefur

Visiting Professors: Michael Asimow, Siegfried Fina, P. (Deep) Gulasekaram, Daniel Hulsebosch, Donald Lewis, Mark McKenna, Bernadette Meyler, David Patton, Rogelio Perez-Perdomo, William Simon

Legal Research and Writing Instructors: Jeanne Merino, Elizabeth Pollman, Briana Rosenbaum, Andrea Roth, Shirin Sinnar, Deepa Varadarajan

Lecturers: Alvin Attles, Daniel L. Barton, Dimitry Bam, Marilyn Bautista, Jeanine Becker, Samuel Bray, Viola Canales, Diane Chin, John Crawford, Betsy de la Vega, Lother Determann, Michael E. Dickstein, Bonnie Eskanazi, Anthony Falzone, Randee G. Fenner, Bertram Fields, Jeremy Fogel, David Forst, Laurence Franklin, Michelle Galloway, Mei Gechlik, Thomas C. Goldstein, Richard Goldstone, Jonathan Greenberg, Timothy H. Hallahan, Brad Handler, Brooke Heymach, Amy Howe, John Huhs, Ivan Humphreys, Erik Jensen, David Johnson, Danielle Jones, Steve Juelsgaard, Kathleen A. Kelly, Julie Matlof Kennedy, Jason Kipnis, Suzanne McKechnie Klahr, Jeffery W. Kobrick, Charles Koob, Philip J. Levine, Paul Lomio, Brian Love, Beth McLellan, Jeanne Merino, Roberta J. Morris, Linda Netsch, Thomas J. Nolan, Jessica Notini, Ralph M. Pais, Moira Paz, B. Howard Pearson, Lisa M. Pearson, Pamela Phan, Joe W. (Chip)

Pitts III, Duane Quaini, Stephan Ray, Claudio N. Rechden, Michael Romano, Andrew Roper, Stephen Rosenbaum, Matthew Rossiter, Kevin Russell, Ticien Sassoubre, Rachelle Silverberg, Smita Singh, Stephanie Smith, Kimberly Summe, Peter Thiel, Jean Thomas, Dan Torres, Erika V. Wayne, Dana Weintraub, Robert Wexler, George D. Wilson, Katherine C. Wright

Affiliated Faculty: Kyle Bagwell (Economics/SIEPR), Alexandria B. Boehm (Civil and Environmental Engineering), Tamar Herzog (History), David Holloway (FSI), Brian Lowery (GSB), Lee Ross (Psychology), Frank Wolak (Economics/PESD)

Courses offered by the School of Law are listed on the *Stanford Bulletin's* ExploreCourses web site under the subject codes LAW and LAWGEN.

The School of Law, established 1893, provides a legal education for students who are fitted by their maturity and academic training to pursue professional study under University methods of instruction. The curriculum leading to the first professional degree in law, the Doctor of Jurisprudence (J.D.), constitutes an adequate preparation for the practice of law in any English-speaking jurisdiction. Graduate work leading to the degrees of Master of Laws (L.L.M.), Master of the Science of Law (J.S.M.), and Doctor of the Science of Law (J.S.D.), and a non-professional degree, Master of Legal Studies (M.L.S.), is also offered. For the full curriculum, see http://lawreg.stanford.edu/stanford. Stanford Law School offers joint or dual degree options in combination with other Stanford graduate departments and universities across the country; see the "Joint and Dual Degrees in Law" section of this bulletin.

The school is on a three-term academic calendar: Autumn Quarter classes begin for first-year students on August 30, 2010 and on September 20, 2010 for all other students: the quarter ends on December 1, 2010. Winter Quarter classes begin on January 3, 2011, and the quarter ends on March 7, 2011. Spring Quarter classes begin on March 28, 2011 and the quarter ends on May 27, 2011. For a complete list of academic dates see the 2010-11 Academic Calendar on the Law School web site at http://www.law.stanford.edu/calendar.

For further information about admission, programs, curriculum, and faculty, see http://www.law.stanford.edu.

JOINT AND DUAL DEGREES IN LAW

Formal admission to both the Law School and to the other cooperating school or department in accordance with the established admission standards of each school or department is required. In addition to the formal joint degree programs offered, the school considers requests for a dual program on an individually designed basis. For additional information on Law School joint or dual degree programs, see http://www.law.stanford.edu/program/degrees. See relevant web sites or department sections of this bulletin for degree requirements.

Formal joint degree programs at Stanford:

School of Business—See http://www.gsb.stanford.edu/mba.

J.D./M.B.A. Master of Business Administration

School of Earth Sciences—

J.D./M.S. Emmett Interdisciplinary Program in Environment and Resources (E-IPER)

J.D./Ph.D. Emmett Interdisciplinary Program in Environment and Resources (E-IPER)

School of Education—

J.D./M.A. Education

School of Engineering—

J.D./M.S. Bioengineering

J.D./Ph.D. Bioengineering

J.D./M.S. Computer Science

J.D./M.S. Electrical Engineering

J.D./M.S. Management Science and Engineering (MS&E)

J.D./Ph.D. Management Science and Engineering (MS&E)

School of Humanities and Sciences—

J.D./M.A. Economics

J.D./Ph.D. Economics

J.D./M.A. History

J.D./Ph.D. History

J.D./M.A. in degree granting programs in the Division of International Comparative and Area Studies (ICA): African Studies, East Asian Studies, International Policy Studies, Latin American Studies, and Russian, East European and Eurasian Studies

J.D./Ph.D. Philosophy

J.D./Ph.D. Political Science

J.D./Ph.D. Psychology

J.D./M.P.P. Public Policy

J.D./Ph.D. Sociology

School of Medicine—

J.D./M.S. Health Research and Policy (HRP)

Formal joint degree programs with other universities—

J.D./M.P.A. with the Woodrow Wilson School of Public and International Affairs at Princeton University

J.D./M.A. with the Paul H. Nitze School of Advanced International Studies at Johns Hopkins University

COURSES IN LAW

Detailed course descriptions are posted on the Stanford Law School, Office of the Registrar web site at http://lawreg.stanford.edu/stanford. Some law courses have special enrollment instructions and restrictions, but many law courses are open to qualified graduate students in other departments of Stanford University with instructor consent. Non-law students may not enroll in courses that are part of the required first-year JD curriculum. Stanford non-Law students intending to enroll in any course with a LAW subject code must consult the Office of the Law School Registrar in the Stanford Law School Administration Building, room 100, or see http://www.law.stanford.edu/school/offices/registrar.

SCHOOL OF MEDICINE

Dean: Philip Pizzo
Senior Associate Dean for Graduate Education and Postdoctoral Affairs: John Pringle
Senior Associate Dean for Medical Education: Charles Prober

The School of Medicine offers courses of study leading to the M.S., Ph.D., and M.D. degrees.

UNDERGRADUATE PROGRAMS IN THE SCHOOL OF MEDICINE

At the undergraduate level, a number of the school's courses are open to any registered Stanford student who has fulfilled the prerequisites, subject to the usual limits of course enrollment and faculty approval. In the classroom, the school offers courses targeted to undergraduates as well as graduate-level courses where advanced undergraduates with a background in the life sciences are welcome. Among these offerings are Stanford Introductory Seminars for freshmen and sophomores; interested students are encouraged to see the "Stanford Introductory Studies" section of this bulletin or at http://ual.stanford.edu/OO/intro_seminars/IntroSemsOverview.

M.S. AND PH.D. PROGRAMS IN THE SCHOOL OF MEDICINE

The School of Medicine is home to graduate programs covering a broad range of disciplines within biomedicine leading to Ph.D. or M.S. degrees. These programs focus on interdisciplinary training with in-depth investigation of an original problem of fundamental importance to the biosciences. Each degree program sets its own curriculum, but many courses are taught by groups of faculty from multiple programs and departments. Flexibility is a priority to ensure that all students obtain the best possible training for pursuing careers in their areas of interest. The school is dedicated to training students from diverse backgrounds, and to the promotion of diversity in graduate education. Admission is through one of about 15 home programs. These home programs enable students to carry out dissertation research and training with School of Medicine faculty, as well as investigators in the departments of Biology and Biophysics in the School of Humanities and Sciences. Detailed information on School of Medicine M.S. and Ph.D. programs, curricula, and research can be found at http://med.stanford.edu/ms and http://med.stanford.edu/phd. Application information can be found at http://gradadmissions.stanford.edu.

M.D. PROGRAM IN THE SCHOOL OF MEDICINE

The School of Medicine seeks to attract students who are passionate about scholarship and wish to improve the health of the world's people through research, innovation, and leadership. The Stanford M.D. curriculum provides education in biomedical and clinical sciences along with study and independent research through scholarly concentrations. Emphasis is placed on interdisciplinary learning, with streamlined content and melding of basic science and clinical instruction across the curriculum. Blocks of unscheduled time allow for individual or group study, participation in elective courses, research, and reflection. Alternative pathways through the curriculum include an option of a fifth or sixth year of study as well as opportunities for pursuing a second degree, such as an M.P.H., M.B.A., Master's of Science in Epidemiology or Health Services Research, or a Ph.D.

Broad clinical science education occurs throughout the curriculum with exposure to patient care and the practice of medicine beginning on the first day of medical school. Students may begin clinical clerkships as early as May of the second year. A population health course combines classroom and experiential learning to provide understanding of the socioeconomic determinants of the health of patients and communities.

Scholarly concentrations offer opportunities for developing skills that enhance basic science and clinical training in areas such as bioengineering, biomedical ethics and medical humanities, biomedical informatics, clinical research, community health, health services and policy research, and the molecular basis of medicine. Through the scholarly concentration program, these skills may be applied in clinical areas housed within centers at Stanford such as the Comprehensive Cancer Center, the Cardiovascular Institute, the Neuroscience Institute, the Institute of Immunity, Transplantation, and Infection, and Women's Health at Stanford. Study in a scholarly concentration typically includes course work and research activities. Research for scholarly concentrations is supported through the Medical Scholars program, which funds student research projects at Stanford and overseas.

Students with interests in medical research as a career are encouraged to investigate opportunities available through the Medical Scientist Training Program (MSTP). Stanford also collaborates with the University of California, Berkeley, to offer students opportunities for M.D./M.P.H. training. Details about these programs may be found at http://med.stanford.edu/combined_degree.

Stanford is committed to representing the diversity of the U.S. and California populations by seeking a diverse body of students who are interested in the intellectual substance of medicine and committed to advancing the field of health care, broadly defined. Provided an applicant to the school has completed basic courses in physics, chemistry, and biology, the choice of an undergraduate major may reflect other interests, including the arts and humanities. Course work in advanced biology such as biochemistry, molecular biology, or genetics and the behavioral sciences is recommended because of their importance in understanding health care. Breadth of interests and depth of experiences play an important role in the selection of students from among those applicants having superior academic records.

The M.D. degree requires 13 quarters of registration at full Med-MD tuition; the joint M.D./Ph.D. degree requires 16 quarters. Completion of the M.D. degree must be achieved within six years, unless a petition is granted to extend this time frame. For further details on the M.D. degree, including admission requirements, see http://med.stanford.edu/md.

MULTIPLE-DEGREE PROGRAMS IN THE SCHOOL OF MEDICINE

MEDICAL SCIENTIST TRAINING PROGRAM

The Medical Science Training Program (MSTP) provides medical students with an opportunity to pursue an individualized program of research and course work leading to both the M.D. and Ph.D. degrees. It is designed to equip students for careers in academic investigative medicine, and emphasizes flexibility of curricular and research programs for each trainee. Training for a combined M.D./Ph.D. includes the same content encountered by students who pursue each degree separately, but the total training time is less than the sum of the time normally required for each degree. The flexible curriculum at Stanford's School of Medicine allows each student, in consultation with a preceptor and other advisers, to pursue a plan of study that satisfies the requirements for the M.D.

degree and allows performance of doctoral-level research leading to the Ph.D. Students interested in joining the MSTP are considered for admission at the time of their application to the School of Medicine M.D. program and are asked to provide supplemental information relevant to their research background. Current Stanford M.D. students may also apply for admission to the MSTP. Further information regarding admission may be obtained from the MSTP administrator; details about the MSTP may be found at http://mstp.stanford.edu.

MASTER OF SCIENCE IN MEDICINE PROGRAM

The Master of Science in Medicine program admits current Stanford Ph.D. students who have a commitment to translational research, but are not interested in becoming clinicians. The goal of the program is to train researchers in human biology and disease to be better equipped to translate new scientific discoveries into useful medical advances. Students offered admission into any Ph.D. program at Stanford may apply for admission to the master's program. During their first five quarters, students take basic biomedical science courses with Stanford M.D. students. The School of Medicine M.D. curriculum is presented in a succinct format that allows time for students to concurrently complete their Ph.D. course requirements and lab rotations. By early in their second year, students choose a lab for their Ph.D. thesis research and complete their medical course work. They also elect a clinical comentor to discuss translational research needs and help to arrange a short clinical experience. Upon completion of the Program., participating students receive an M.S. in Medicine. Details about the program can be found at http://msm.stanford.edu.

BIOCHEMISTRY

Emeriti: (Professors) Robert L. Baldwin, Paul Berg, Douglas L. Brutlag, David S. Hogness, A. Dale Kaiser, I. Robert Lehman
Chair: Mark A. Krasnow
Professors: Patrick O. Brown, Gilbert Chu, Ronald W. Davis, James E. Ferrell, Jr., Daniel Herschlag, Mark A. Krasnow, Suzanne R. Pfeffer, James A. Spudich
Associate Professors: Pehr A. B. Harbury, Julie A. Theriot
Assistant Professors: Rhiju Das, Aaron F. Straight
Courtesy Professors: Kerwyn C. Huang, Chaitan S. Khosla, Sharon Long, Rajat Rohatgi
Department Offices: Beckman Center, B400
Mail Code: 94305-5307
Phone: (650) 723-6161
Web Site: http://biochemistry.stanford.edu

Courses offered by the Department of Biochemistry are listed under the subject code BIOC on the *Stanford Bulletin's* ExploreCourses web site.

Biochemistry is a department within the School of Medicine, with offices and labs located in the Beckman Center for Molecular and Genetic Medicine at the Stanford Medical Center. Courses offered by the department may be taken by undergraduates as well as graduate and medical school students.

Advanced courses offered in more specialized areas emphasize recent developments in biochemistry, cell biology, and molecular biology. These courses include the physical and chemical principles of biochemistry, enzyme reaction mechanisms, membrane trafficking and biochemistry, molecular motors and the cytoskeleton, mechanisms and regulation of nucleic acid replication and recombination, the biochemistry of bacterial and animal viruses, the molecular basis of morphogenesis, the molecular and cell biology of yeast, and the structure and function of both eukaryotic and prokaryotic chromosomes.

Opportunities exist for directed reading and research in biochemistry and molecular biology, using the most advanced research facilities, including those for light and electron microscopy, chromatography and electrophoresis, protein and nucleic acid purification, rapid kinetic analysis, synthesis and analysis, single molecule analyses using laser light traps, microarray generation and analysis, and computer graphic workstation facilities for protein and nucleic acid structural analysis. Ongoing research uses a variety of organisms from bacteria to animal cells.

DOCTOR OF PHILOSOPHY IN BIOCHEMISTRY

Requirements for the M.S. and Ph.D. degrees are described in the "Graduate Degrees" section of this bulletin. The department does not offer undergraduate degrees.

The Department of Biochemistry offers a Ph.D. program which begins in the Autumn Quarter of each year. The program of study is designed to prepare students for productive careers in biochemistry; its emphasis is training in research, and each student works closely with members of the faculty. In addition to the requirement for a Ph.D. dissertation based on original research, students are required to complete six advanced courses in biochemistry and related areas among the 135 total units required for the Ph.D. Selection of these courses is tailored to fit the background and interests of each student. A second requirement involves the submission of two research proposals which are presented by the student to a small committee of departmental faculty members who are also responsible for monitoring the progress of student curricular and research programs, and a journal club presentation. All Ph.D. students are expected to participate actively in the department's seminar program, and students are encouraged to attend and to present papers at regional and national meetings in cellular biochemistry and molecular biology. Teaching experience is an integral part of the Ph.D. curriculum and is required for the degree.

The Department of Biochemistry offers an M.S. degree only to students already enrolled in the Ph.D. program. Students should contact the Graduate Studies adviser for more details.

Those applying for graduate study should have at least a baccalaureate degree and should have completed work in cell and developmental biology, basic biochemistry and molecular biology, and genetics. Also required are: at least one year of university physics; differential and integral calculus; and organic, inorganic, and physical chemistry. The department is especially interested in those applicants who have research experience in biology or chemistry. Students must submit an application, including transcripts and letters of recommendation, by December (see web site) for admission in the following Autumn Quarter.

Applications should be submitted at http://gradadmissions.stanford.edu. Applicants are notified by March 31 of decisions on their applications. Stanford University requires scores from the Graduate Record Examination (GRE) (verbal, quantitative, and analytical), and applicants are encouraged to submit scores from the GRE Subject Test in biochemistry, biology, or chemistry. Applicants should take the October GRE exam.

All applicants are urged to compete for non-Stanford fellowships or scholarships, and U.S. citizens should complete an application for a National Science Foundation Predoctoral Traineeship. Students are provided with financial support to cover normal living expenses; Stanford tuition costs are paid. Applicants for admission to the department are considered without regard to race, color, creed, religion, sex, age, national origin, or marital status.

Postdoctoral research training is available to graduates who hold a Ph.D. or an M.D. degree. Qualified individuals may write to individual faculty members for further information.

At present, the primary research interests of the department are the structure and function of proteins and nucleic acids, the biochemistry and control of development processes, molecular motors and the cytoskeleton, the trafficking of proteins between membrane-bound organelles, the control and regulation of gene expression, bioinformatics/protein structure design, and the application of microarrays to problems in human health and disease.

CENTER FOR BIOMEDICAL ETHICS

Director: David C. Magnus
Director Emeritus: Thomas A. Raffin
Associate Director: Mildred K. Cho
Participating Faculty and Staff: Clarence H. Braddock, Julie A. Collier, LaVera M. Crawley, Maren Grainger-Monsen, Henry Greely, Katrina A. Karkazis, Sandra S. Lee, Jose R. Maldonado, Kelly E. Ormond, Laura W. Roberts, Christopher T. Scott, Audrey Shafer, Sara L. Tobin, Abraham C. Verghese, Lawrence I. Zaroff
Center Offices: 1215 Welch Road, Modular A
Mail Code: 94305-5417
*Phone: (*650) 723-5760
Web Site: http://bioethics.stanford.edu

The Stanford University Center for Biomedical Ethics (SCBE) is dedicated to interdisciplinary research and education, and provides clinical and research ethics consultation. SCBE serves as a scholarly resource on emerging ethical issues raised by medicine and biomedical research.

SCBE offers a scholarly concentration in Biomedical Ethics and Medical Humanities (BEMH) to medical students. This program allows medical students to study in depth the moral, social, and humanistic dimensions of medicine and biomedical science. Using cross-disciplinary methods such as those from philosophy, social science, film, literature, art, and law, students examine the meaning and implications of medicine and medical research.

Requirements—Students who pursue Biomedical Ethics and Medical Humanities in conjunction with an application area, such as Immunology, are required to complete 6 units including:

INDE 212. The Human Condition: Medicine, Arts, and Humanities (2 units)

MED 250A. Medical Ethics I (2 units)

Students may select the other two core BEMH units from a wide variety of University, Medical School, and Law School courses, and students interested in completing all 12 units in the BEMH scholarly area may do the same. Students are encouraged to go through the various offerings and devise a course plan to present to the director, David Magnus, and Audrey Shafer. Additional information on requirements for the scholarly concentration, is available at http://bioethics.stanford.edu/education/bemh.

BIOMEDICAL INFORMATICS

Committee: Russ B. Altman *(Chair and Program Director)*; Lawrence M. Fagan, Mark A. Musen *(Co-Directors)*; Betty Cheng *(Associate Director)*; Atul Butte, Amar K. Das, Teri Klein, David Paik, Daniel L. Rubin

PARTICIPATING FACULTY AND STAFF BY DEPARTMENT*

Biochemistry: Douglas L. Brutlag (Professor, emeritus), Rhiju Das (Assistant Professor), Ronald Davis (Professor), James Ferrell (Professor), Hunter Fraser (Assistant Professor), Julie Theriot (Associate Professor)

Bioengineering: Russ B. Altman (Professor), Kwabena Boahen (Associate Professor), Markus Covert (Assistant Professor), Scott Delp (Professor), Charles A. Taylor (Associate Professor)

Biology: Markus Feldman (Professor), Dmitri Petrov (Associate Professor)

Chemistry: Vijay Pande (Associate Professor)

Chemical and Systems Biology: Joshua Elias (Assistant Professor), James Ferrell (Professor)

Computer Science: Serafim Batzoglou (Associate Professor), Gill Bejerano (Assistant Professor), David Dill (Professor), Leo Guibas (Professor), Daphne Koller (Associate Professor), Jean-Claude Latombe (Professor), Chris Manning (Associate Professor), Teresa Meng (Professor), Terry Winograd (Professor)

Developmental Biology: Gill Bejerano (Assistant Professor), Harley McAdams (Professor, Research)

Electrical Engineering: Teresa Meng (Professor)

Genetics: Russ B. Altman (Professor), Mike Cherry (Associate Professor, Research), Stanley N. Cohen (Professor), Ronald Davis (Professor), Teri E. Klein (Senior Research Scientist), Gavin Sherlock (Assistant Professor), Michael P. Snyder (Professor), Hua Tang (Associate Professor)

Health Research and Policy: Mark A. Hlatky (Professor), Richard A. Olshen (Professor), Robert Tibshirani (Professor)

Management Science and Engineering: Margaret Brandeau (Professor), Ross D. Shachter (Associate Professor)

Medicine: Russ B. Altman (Professor), Euan Ashley (Assistant Professor), Jayanta Bhattacharya (Assistant Professor), Atul Butte (Assistant Professor), Robert W. Carlson (Professor), Betty Cheng (Associate Director), Amar K. Das (Assistant Professor), Lawrence M. Fagan (Co-Director), Alan M. Garber (Professor), Mary Goldstein (Professor), Peter D. Karp (Consulting Assistant Professor), Henry Lowe (Associate Professor, Research; Senior Associate Dean for Information Resources and Technology), Mark A. Musen (Professor), Douglas K. Owens (Associate Professor), Robert W. Shafer (Assistant Professor, Research), Samson Tu (Senior Research Scientist), P.J. Utz (Associate Professor), Michael G. Walker ((Consulting Associate Professor)

Microbiology and Immunology: Karla Kirkegaard (Professor), Garry Nolan (Professor), Julie Theriot (Associate Professor)

Pediatrics: Atul Butte (Assistant Professor), Chris Longhurst (Clinical Assistant Professor)

Psychiatry and Behavioral Sciences: Amar K. Das (Assistant Professor), Vinod Menon (Associate Professor)

Radiation Oncology: Lei Xing (Professor)

Radiology: Sam Gambhir (Professor), Gary H. Glover (Professor), Sandy A. Napel (Professor), David Paik (Assistant Professor), Norbert J. Pelc (Professor), Sylvia Plevritis (Associate Professor), Daniel L. Rubin (Assistant Professor), Geoffrey D. Rubin (Professor)

Structural Biology: Michael Levitt (Professor)

Statistics: Trevor J. Hastie (Professor), Susan Holmes (Professor), Art Owen (Professor), Robert Tibshirani (Professor), Michael G. Walker (Consulting Associate Professor), Nancy Zhang (Assistant Professor)

Surgery: Thomas Krummel (Professor), Charles A. Taylor (Associate Professor, Research)

* Research opportunities are not limited to faculty and departments listed.

Program Offices: Medical School Office Building (MSOB), room X- 215, 251 Campus Drive
Mail Code: 94305-5479
Phone: (650) 723-1398
Fax: (650) 725-7944
Web Site: http://bmi.stanford.edu

Courses offered by the Program in Biomedical Informatics are listed under the subject code BIOMEDIN on the *Stanford Bulletin's* ExploreCourses web site.

The program in Biomedical Informatics emphasizes research to develop novel computational methods that can advance biomedicine. Students receive training in the investigation of new approaches to conceptual modeling and to development of new algorithms that address challenging problems in the biological sciences and clinical medicine. Students with a primary interest in developing new informatics methods and knowledge are best suited for this program. Students with a primary interest in the biological or medical application of existing informatics techniques may be better suited for training in the application areas themselves.

GRADUATE PROGRAMS IN BIOMEDICAL INFORMATICS

The Biomedical Informatics Program is interdepartmental and offers instruction and research opportunities leading to M.S. and Ph.D. degrees in Biomedical Informatics. All students are required to complete the core curriculum requirements, and also to elect additional courses to complement both their technical interests and their goals in applying informatics methods to clinical settings, biology, or imaging. Candidates must maintain a 3.0 GPA in each of the five core areas, and an overall GPA of 3.0. If the candidate's GPA does not meet the minimum requirement, the Biomedical Informatics Executive Committee may require corrective courses of action. In addition, prior to being formally admitted to candidacy for the Ph.D. degree, the student must demonstrate knowledge of biomedical informatics fundamentals and a potential for research by passing a qualifying exam.

The core curriculum is common to all degrees offered by the program but is adapted or augmented depending on the interests and experience of the student. Deviations from the core curriculum must be justified in writing and approved by the student's Biomedical Informatics academic adviser and the chair of the Biomedical Informatics Executive Committee. It should be noted, however, that the program is intended to provide flexibility and to complement other opportunities in applied medical research that exist at Stanford. Although most students are expected to comply with the basic program of study outlined here, special arrangements can be made for those with unusual needs or those simultaneously enrolled in other degree programs within the University. Similarly, students with prior relevant training may have the curriculum adjusted to eliminate requirements met as part of prior training.

CORE CURRICULUM AND PROGRAM REQUIREMENTS IN BIOMEDICAL INFORMATICS

CORE CURRICULUM IN BIOMEDICAL INFORMATICS

Students are expected to participate regularly in the Biomedical Informatics Student Seminar (BIOMEDIN 201) and a research Colloquium, such as BIOMEDIN 200 or BIOMEDIN 205. In addition, all students are expected to fulfill requirements in the following five categories:

1. *Core Biomedical Informatics* (17 units): students are expected to understand current applications of computers in biology and medicine and to develop a broad appreciation for research in the management of biomedical information. Required courses are: BIOMEDIN 210, 211, 212, 214, and 217, all of which should be taken during the first and second year in the program.
2. *Computer Science* (9 units): the student is expected to acquire a knowledge of the use of computers, computer organization, programming, and symbolic systems. It is assumed that prior to matriculation students have computing experience at least equivalent to a course introducing the fundamentals of data structures and algorithms, such as CS 103A,B, 103X, 106A,B, 106X, or other courses approved by academic adviser or executive committee. Students are required to take a minimum of 9 units of courses in the Department of Computer Science. If similar courses have not been taken previously, these units must include CS 161, a class in artificial intelligence or learning (for example, CS 121, CS 228, CS 229, STATS 315A, STATS 315B), and a course that requires significant programming and knowledge of machine architectures (for example, CS 108). For those who have taken such courses previously, replacement units may be taken from any other course in CS chosen by the student and approved by the academic adviser. A course in databases is especially recommended. With the exception of CS 108 and 121, all other CS courses applied to the degree requirements must be numbered 137 or higher.
3. *Probability, Statistics, and Decision Science* (9 units): students are required to take at least three courses chosen from the following five topics: basic probability theory, Bayesian statistics, decision analysis, machine learning, and experimental-design techniques. Prior courses in statistics at least equivalent to STATS 60 and calculus equivalent to MATH 42 are prerequisites. A prior course in linear algebra equivalent to MATH 103 or 113 is recommended. For the probability requirements, students may, for example, take MS&E 220, STATS 116, or MS&E 221. For the statistics requirements, students should take STATS 141 or STATS 212, if they have not had an equivalent class prior to entry to the program. Otherwise, sequences (taken after STATS 116) may include STATS 200 followed by a course in stochastic modeling, machine learning or data mining, such as STATS 202 or 315A,B, or CS 228 or 229. Options for decision analysis include MS&E 152 or 252, or cost effectiveness analysis (BIOMEDIN 432). Also recommended is a course in the psychology of human problem solving. Specific courses should be chosen in consultation with the student's academic adviser.
4. *Biomedical Domain Knowledge* (6 units): students are expected to acquire an understanding of pertinent life sciences and how to analyze a domain of application interest. Prior courses in biology at least equivalent to BIO 41 and 42 are prerequisites. All students must have completed a course in basic biochemistry, molecular biology, or genetics. Other areas of basic biology may be an acceptable alternative. Exposure to laboratory methods in biology is encouraged. All students without formal health care training are encouraged to take IMMUNOL 230 (formerly BIOMEDIN 207).
5. *Social and Ethical Issues* (4 units): candidates are expected to be familiar with issues regarding ethics, public policy, financing, organizational behavior, management, and pertinent legal topics. Students are required to take MED 255, The Responsible Conduct of Research, or the equivalent. Students may choose at least 3 units from suitable courses, including BIOMEDIN 432; CS 201; MS&E 284, 197; HRP 391, 392; or any other advanced course in policy and social issues proposed by the student and approved by the Biomedical Informatics academic adviser.

The core curriculum generally entails a minimum of 45 units of course work for master's students and 54 units of course work for Ph.D. students, but can require substantially more or less depending upon the courses chosen and the previous training of the student. All courses must be taken for a letter grade. Students may request an elective course be taken for a grade of credit/no credit by submitting a petition to the BMI executive committee. BIOMEDIN 299, 801, and 802 may be taken for satisfactory/no credit (S/NC). The varying backgrounds of students are well recognized and no one is required to take courses in an area in which he or she has already been adequately trained; under such circumstances, students are permitted to skip courses or substitute more advanced work. Students design appropriate programs for their interests with the assistance and approval of their Biomedical Informatics academic adviser. At least 27 units of formal course work are expected.

PROGRAM REQUIREMENTS FOR THE ACADEMIC M.S., PROFESSIONAL M.S., AND COTERMINAL DEGREES

Students enrolled in any of the M.S degrees must complete the program requirements in order to graduate. Programs of at least 45 units that meet the following guidelines are normally approved:

1. Completion of the core curriculum.
2. Masters candidates who are able to attend classes on campus should sign up at least once for BIOMEDIN 201, Student Seminar, plus a Research Colloquium in their field of research, such as BIOMEDIN 200 or BIOMEDIN 205. Regardless of their registration status, students should participate in the Student Seminar and Research Colloquium every quarter.

3. Electives: additional courses to bring the total to 45 or more units as necessary.
4. Masters candidates should sign up for BIOMEDIN 801 for their project units.

The University requirements for the M.S. degree are described in the "Graduate Degrees" section of this bulletin.

MASTER OF SCIENCE IN BIOMEDICAL INFORMATICS (ACADEMIC)

This degree is designed for individuals who wish to undertake in-depth study of biomedical informatics with research on a full-time basis. Normally, a student spends two years in the program and implements and documents a substantial project during the second year. The first year involves acquiring the fundamental concepts and tools through course work and research project involvement. All first- and second-year students are expected to devote 50 percent or more of their time participating in research projects. Research rotations are not required, but can be done with approval of the academic adviser or training program director. Graduates of this program are prepared to contribute creatively to basic or applied projects in biomedical informatics. This degree requires a written research paper to be approved by two faculty members.

MASTER OF SCIENCE IN BIOMEDICAL INFORMATICS (PROFESSIONAL/HONORS COOPERATIVE PROGRAM)

This degree is designed primarily for the working professional who already has advanced training in one discipline and wishes to acquire interdisciplinary skills. All classes necessary for the degree are available online. The professional M.S. is offered in conjunction with Stanford Center for Professional Development (SCPD), which establishes the rates of tuition and fees. The program uses the honors cooperative model (HCP), which assumes that the student is working in a corporate setting and is enrolled in the M.S. on a part-time basis. The student has up to five years to complete the program. Research projects are optional and the student must make arrangements with program faculty. Graduates of this program are prepared to contribute creatively to basic or applied projects in biomedical informatics.

MASTER OF SCIENCE IN BIOMEDICAL INFORMATICS (COTERMINAL)

The coterminal degree program allows Stanford University undergraduates to study for a master's degree while completing their bachelor's degree(s) in the same or a different department. Please refer to the "Coterminal Bachelor's and Master's Degrees" section under "Undergraduate Degrees and Programs" in this bulletin for additional information.

The coterminal Master of Science program follows the same program requirements as the Master of Science (Professional), except for the requirement to be employed in a corporate setting. The coterminal degree is available only to current Stanford undergraduates. Coterminal students are enrolled full-time and courses are taken on campus. Research projects are optional and the student must make arrangements with program faculty. Graduates of this program are prepared to contribute creatively to basic or applied projects in biomedical informatics.

For University coterminal degree program rules and University application forms, see http://registrar.stanford.edu/pdf/CotermAppRules.pdf

DOCTOR OF PHILOSOPHY IN BIOMEDICAL INFORMATICS

The University's basic requirements for the doctorate (residence, dissertation, examination, and so on) are discussed in the "Graduate Degrees" section of this bulletin.

Individuals wishing to prepare themselves for careers as independent researchers in biomedical informatics, with applications experience in bioinformatics, clinical informatics, or imaging informatics, should apply for admission to the doctoral program. The following are additional requirements imposed by the Biomedical Informatics Executive Committee:

1. A student plans and completes a coherent program of study including the core curriculum and additional requirements as for the master's program. In addition, doctoral candidates are expected to take at least nine more units of advanced courses to bring the total to 54 units. Recommended classes include: Computer Sciences courses numbered 135 or higher, courses in Management Science and Engineering or Statistics numbered 200 or higher, PSYCH 256 or 225, or relevant courses in other departments approved by the student's academic adviser. In the first year, two or three research rotations are encouraged. The master's requirements should be completed by the end of the second year in the program (six quarters of study, excluding summers). Doctoral students are generally advanced to Ph.D. candidacy after passing the qualifying exam, which takes place during the end of the second year of training. A student's academic adviser has primary responsibility for the adequacy of the program, which is regularly reviewed by the Biomedical Informatics Executive Committee.
2. To remain in the Ph.D. program, each student must attain a grade point average (GPA) of 3.0 (B) in each of the five core areas and an overall GPA of 3.0 for the required courses. The student must fulfill these requirements and apply for admission to candidacy for the Ph.D. by the end of six quarters of study (excluding summers). In addition, reasonable progress in the student's research activities is expected of all doctoral candidates.
3. During the third year of training, generally in Winter Quarter, each doctoral student is required to give a preproposal seminar that describes evolving research plans and allows program faculty to assure that the student is making good progress toward the definition of a doctoral dissertation topic.
4. By the end of nine quarters (excluding summers), each student must orally present a written thesis proposal for the written dissertation and must orally defend the proposal before a dissertation committee that generally includes at least one member of the Biomedical Informatics Executive Committee. The committee determines whether the student's general knowledge of the field and the details of the planned thesis are sufficient to justify proceeding with the dissertation.
5. After application for Terminal Graduate Registration (TGR) status, the Ph.D. candidate should register each quarter for BIOMEDIN 802 so their research effort may be counted toward the degree.
6. As part of the training for the Ph.D., each student is required to be a teaching assistant for two courses approved by the Biomedical Informatics Executive Committee; one should be completed in the first two years of study.
7. The most important requirement for the Ph.D. degree is the dissertation. Prior to the oral dissertation proposal and defense, each student must secure the agreement of a member of the program faculty to act as dissertation adviser. The principal adviser need not be an active member of the Biomedical Informatics program faculty, but all committees should include at least one participating BMI faculty member.
8. At the completion of training, while still matriculated and shortly prior to deposit of the dissertation, the student gives a final talk describing his or her results. No official additional oral examination is required upon completion of the written dissertation. The oral defense of the dissertation proposal satisfies the University oral examination requirement.
9. The student is expected to demonstrate an ability to present scholarly material and research in a lecture at a formal seminar.
10. The student is expected to demonstrate an ability to present scholarly material in concise written form. Each student is re-

quired to write a paper suitable for publication, usually discussing his or her doctoral research project. This paper must be approved by the student's academic adviser as suitable for submission to a refereed journal before the doctoral degree is conferred.

11. The dissertation must be accepted by a reading committee composed of the principal dissertation adviser, a member of the program faculty, and a third faculty member chosen from anywhere within the University.

PH.D. MINOR IN BIOMEDICAL INFORMATICS

For a Ph.D. minor in Biomedical Informatics (BMI), a candidate must complete a minimum of 20 unduplicated units of Biomedical Informatics course work, including 12 units in BMI core courses from BIOMEDIN 210, 211, 212, 214, and 217.

The candidate must complete the one-unit MED 255, Responsible Conduct of Research, or an approved substitute.

The remaining units must be courses that would count towards the BMI master's degree, taken from any of these three areas:

- Computer Science
- Probability, Statistics, Machine Learning, and Experimental Design
- Biomedicine

Courses used for the BMI Ph.D. minor may not be double-counted to meet the requirements of a master's or Ph.D. degree.

All courses used for the BMI Ph.D. minor, except MED 255, must be taken for a letter grade and passed with an overall GPA of 3.0 or better.

This degree offering is effective in Autumn Quarter 2010-11. Courses taken prior to that date may be counted towards the BMI Ph.D. minor degree.

CANCER BIOLOGY

Program Director: Amato Giaccia (Radiation Oncology)

Committee on Cancer Biology: Nicholas Denko (Radiation Oncology), Howard Chang (Dermatology), Jeffrey Axelrod (Pathology), Katrin Chua (Medicine, Endocrinology), Julien Sage (Pediatrics), Alexandro Sweet-Cordero (Pediatrics), Timothy Stearns (Biology, Genetics), Jonathan Pollack (Pathology)

Participating Departments and Faculty:

Biochemistry: Patrick O. Brown (Professor)

Bioengineering: Jennifer Cochran (Assistant Professor)

Biology (School of Humanities and Sciences): William Burkholder (Assistant Professor), Martha Cyert (Professor), Guowei Fang (Assistant Professor), Judith Frydman (Associate Professor), Or Gozani (Assistant Professor), W. James Nelson (Professor), Virginia Walbot (Professor), Tim Stearns (Professor)

Chemical And Systems Biology: James K. Chen (Assistant Professor), Karlene Cimprich (Associate Professor), James E. Ferrell (Professor)

Dermatology: Howard Y. Chang (Associate Professor), Paul A. Khavari (Professor), M. Peter Marinkovich (Associate Professor), Anthony Oro (Associate Professor)

Developmental Biology: Roeland Nusse (Professor), Matthew Scott (Professor)

Genetics: Anne Brunet (Assistant Professor), Michele Calos (Professor), Stanley Cohen (Professor)

Medicine/Cardiovascular Medicine: Ching-pin Chang (Assistant Professor)

Medicine/Endocrinology/Geronotology/Metabolism: Katrin Chua (Assistant Professor), Andrew R. Hoffman (Professor)

Medicine/Gastroenterology and Hepatology: Christine Cartwright (Professor), Anson Lowe (Assistant Professor)

Medicine/Hematology: Steven Artandi (Associate Professor), Calvin Kuo (Associate Professor), Ravindra Majeti (Assistant Professor)

Medicine/Oncology: Gilbert Chu (Professor), Dean Felsher (Associate Professor), James Ford (Associate Professor), Ronald Levy (Professor), Beverly S. Mitchell (Professor; Director, Stanford Cancer Center)

Medicine/Pulmonary and Critical Care Medicine: Glenn Rosen (Associate Professor)

Microbiology and Immunology: Helen M. Blau (Professor)

Neurology and Neurological Sciences: Thomas Rando (Professor)

Neurosurgery: Albert J. Wong (Professor)

Obstetrics and Gynecology: Renee A. Reijo Pera (Professor)

Otolaryngology: John Sunwoo (Assistant Professor)

Pathology: Jeff Axelrod (Associate Professor), Matthew Bogyo (Associate Professor), Michael Cleary (Professor), Gerald Crabtree (Professor), Edgar Engleman (Professor), Andrew Fire (Professor), Isabella Graef (Assistant Professor), Joseph Lipsick (Professor), Bingwei Lu (Assistant Professor), Jonathan Pollack (Associate Professor), Irving Weissman (Professor; Director, Stanford University School of Medicine Institute of Stem Cell Biology and Regenerative Medicine), Marius Wernig (Assistant Professor)

Pediatrics/Cancer Biology: Julien Sage (Assistant Professor), Alejandro Sweet-Cordero (Assistant Professor)

Pediatrics/Cardiology: Marlene Rabinovitch (Professor)

Pediatrics/Endocrinology: Brian Feldman (Assistant Professor)

Radiation Oncology/Radiation Biology: Laura Attardi (Associate Professor), J. Martin Brown (Professor), Nicholas Denko (Assistant Professor), Amato Giaccia (Professor; Director, Stanford University Cancer Biology Program)

Radiation Oncology/Radiation Physics: Edward Graves (Assistant Professor)

Radiation Oncology/Radiation Therapy: Susan Knox (Associate Professor), Albert Koong (Assistant Professor), Quynh-Thu Le (Professor), Max Diehn (Assistant Professor)

Radiation Oncology/Stem C

Radiology/Diagnostic Radiology: Samira Guccione (Assistant Professor, Research), Jianghong Rao (Assistant Professor)

Structural Biology: William Weis (Professor)

Urology: Donna Peehl (Professor, Research), Zijie Sun (Associate Professor)

Program Office: 251 Campus Drive, MSOB X234
Mail Code: 94305-5421
Phone: (650) 723-6198
Email: gracebk@stanford.edu
Web Site: http://stanford.edu/group/cancerbio

Courses offered by the Cancer Biology Program are listed under the subject code CBIO on the *Stanford Bulletin's* ExploreCourses web site.

The Cancer Biology Program at Stanford University is an interdisciplinary program leading to the Ph.D. degree. During the past three decades, understanding of cancer has increased with the discovery of oncogenes, tumor suppressor genes, pathways of DNA damage and repair, chromatin remodeling, cell cycle regulation, angiogenesis and responses to hypoxia, and recent glimpses into the molecular basis of metastasis and cancer stem cell biology. In addition, methods of parallel analysis including gene expression arrays, protein arrays, and tissue arrays have begun to refine and redefine the taxonomy of cancer diagnosis. This explosion of basic and clinical science has resulted in the first successful cancer chemotherapies and immunotherapies based on the knowledge of specific molecular targets. Stanford presents a unique environment to pursue interdisciplinary cancer research because the schools of Medicine, Humanities and Sciences, and Engineering are located on a single campus

The goal of the Cancer Biology Ph.D. program is to provide students with education and training that enables them to make significant contributions to this field. Course work during the first year is designed to provide a broad understanding of the molecular, genetic, cell biological, and pathobiological aspects of cancer. Students also learn about the current state of the epidemiology, clinical diagnosis, treatment, and prevention of human cancers. Equally important during the first year is a series of three rotations

in research laboratories chosen by each student. By the beginning of the second year, each student chooses a research adviser and begins work on the dissertation project. A qualifying examination must be completed by the end of the second year. An annual Cancer Biology conference at Asilomar on the Pacific Ocean provides students with an opportunity to present their research to one another and to faculty. The expected time to degree is four to five years.

Students are not limited to a single department in choosing their research adviser. The Cancer Biology Ph.D. program currently has approximately 60 graduate students located in basic science and clinical departments throughout the School of Medicine and the School of Humanities and Sciences.

GRADUATE PROGRAMS IN CANCER BIOLOGY

The program offers a Ph.D. in Cancer Biology.

DOCTOR OF PHILOSOPHY IN CANCER BIOLOGY

University requirements for the Ph.D. are described under the "Graduate Degrees" section of this bulletin.

A small number of applicants are admitted to the program each year. Applicants should have completed an undergraduate major in the biological sciences; applicants with undergraduate majors in physics, chemistry, or mathematics may be admitted if they complete background training in biology during the first two years of study. During the first year, each student is required to complete a minimum of three, one quarter laboratory rotations. Students must choose a dissertation adviser prior to the end of Summer Quarter, first year, but not before the end of Spring Quarter, first year.

The requirements for the Ph.D. degree are as follows:

1. Training in biology equivalent to that of an undergraduate biology major at Stanford.
2. Completion of the following courses:
   a. CBIO 241. Molecular, Cellular, and Genetic Basis of Cancer
   b. GENE 203. Advanced Genetics
   c. BIO 214. Cell Biology of Physiological Processes
   d. CSB 210. Signal Transduction Pathways and Networks. Students can take GENE 211, Genomics, or SBIO 214, Biological Macromolecules, in lieu of CSB 210.
   e. CBIO 280. Cancer Biology Journal Club; required for first- and second-year graduate students in Autumn, Winter, and Spring quarters.
   f. MED 255. Responsible Conduct in Research; with consent, may be audited.
3. At least 6 units of additional cancer biology-related, graduate-level courses. Course work taken is determined in consultation with the student's adviser and/or the Program Director.
4. Presentation of research results at the annual Cancer Biology Conference on at least three occasions, at least one being an oral presentation.
5. Completion of a qualifying examination in Cancer Biology is required for admission to Ph.D. candidacy. The exam consists of an NIH-style written grant proposal not to exceed ten pages (excluding references), and an oral examination. The examining committee consists of three faculty members from the Cancer Biology Program and does not include the student's dissertation adviser. The composition of this committee is chosen by the student and dissertation adviser and must be submitted to and approved by the program director prior to the end of Autumn Quarter, second year. The qualifying examination must be taken prior to the end of Spring Quarter, second year. If necessary, one retake is permitted prior to the end of Summer Quarter, second year. After the qualifying examination has been completed, the student is required to form a dissertation reading committee that includes the student's adviser and three other members of the Academic Council with appropriate expertise. Each student is required to arrange annual meetings (more frequently, if necessary) of the dissertation reading committee, at which time oral presentations of progress during the past year and a plan of study for the coming year are presented and discussed. Completion of each annual committee meeting must be communicated in writing to the program director by the adviser by the end of Spring Quarter each year.

The major accomplishment of each successful Ph.D. student is the presentation of a written dissertation resulting from independent investigation that contributes to knowledge in the area of cancer biology. An oral examination is also required for the Ph.D. degree. In the Cancer Biology Program, a public seminar (one hour) is presented by the Ph.D. candidate, followed by a closed-door oral examination. The oral examination committee consists of at least four examiners (the members of the doctoral dissertation reading committee) and a chair. The oral examination chair may not have a full or joint appointment in the adviser's or student's home department. However, a courtesy appointment does not affect eligibility. The oral examination chair may be from the same department as any other member(s) of the examination committee. All members of the oral examination committee are normally members of the Academic Council, as the oral examination chair must be. With the prior approval of the program director or school dean, one of the examiners may be a person who is not a member of the Academic Council if that individual contributes expertise not otherwise available. Official responsibility for selecting the oral examination chair rests with the program. Cancer Biology delegates this to the student and dissertation adviser.

CHEMICAL AND SYSTEMS BIOLOGY

Emeriti: (Professors) Robert H. Dreisbach, Avram Goldstein, Dora B. Goldstein, Tag E. Mansour, Oleg Jardetzky, Richard A. Roth, James P. Whitlock

Chair: James E. Ferrell, Jr.

Professors: James E. Ferrell, Jr., Tobias Meyer, Daria Mochly-Rosen

Associate Professors: James K. Chen, Karlene A. Cimprich, Thomas J. Wandless

Assistant Professors: Joshua Elias, Joanna K. Wysocka

Courtesy Professors: Stuart Kim, Beverly S. Mitchell, Paul A. Wender

Courtesy Associate Professors: Calvin J. Kuo, Matthew Bogyo

Courtesy Assistant Professors: Ajay Chawla, Markus Willard Covert, Jan M. Skotheim

Web Site: http://casb.stanford.edu

Courses offered by the Department of Chemical and Systems Biology are listed under the subject code CSB on the *Stanford Bulletin's* ExploreCourses web site.

The department emphasizes individualized training at the interface of physical science and biomedical science. The program encourages students to draw upon a variety of modern scientific techniques, ranging from recent advances in molecular biology and protein biochemistry to synthetic organic chemistry and single cell imaging. Graduate students in the department take courses in signal transduction networks, chemical biology, and other areas of importance to their research goals.

MASTER OF SCIENCE IN CHEMICAL AND SYSTEMS BIOLOGY

Students in the Ph.D. program may apply for an M.S. degree after having satisfactorily completed the course and laboratory requirements of the first two years. The degree also requires a written thesis based on literature or laboratory research. Postdoctoral research training is available to graduates having the Ph.D. or M.D. degree.

DOCTOR OF PHILOSOPHY IN CHEMICAL AND SYSTEMS BIOLOGY

University requirements for the Ph.D. are described in the "Graduate Degrees" section of this bulletin.

The Department of Chemical and Systems Biology offers interdisciplinary training to prepare students for independent careers in biomedical science. The main focus of the program is cell signaling, chemical biology, and systems biology.

The program leading to the Ph.D. degree includes formal and informal study in chemical biology, systems biology, drug discovery, biochemistry, and other areas of relevance to the interests of particular students. First-year students spend one quarter in each of three different laboratories, working closely with other graduate students, a professor, and postdoctoral fellows on various research projects. During the fourth quarter, the student chooses a faculty mentor with whom to undertake thesis research, based on available positions and the student's interest. During or before the eighth quarter of study, students must pass a qualifying exam which consists of an oral exam on general knowledge and a defense of a research proposal. Course requirements are fulfilled during the first two years of study; the later years of the four- to six-year program are devoted to full-time dissertation research. Close tutorial contact between students and faculty is stressed throughout the program.

Research opportunities also exist for medical students and undergraduates. The limited size of the labs in the department allows for close tutorial contact between students, postdoctoral fellows, and faculty.

The department participates in the four quarter Health and Human Disease and Practice of Medicine sequence which provides medical students with a comprehensive, systems-based education in physiology, pathology, microbiology, and pharmacology.

COMPARATIVE MEDICINE

Chair: Sherril Green
Professors: Donna M. Bouley, Linda C. Cork, Sherril Green
Associate Professors: Paul Buckmaster, Corinna Darian-Smith, Shaul Hestrin
Assistant Professors: Megan Albertelli, Stephen Felt, Claude Nagamine

Department Offices: Edwards Building, Room R321
Mail Code: 94305-5342
Phone: (650) 498-5080
Web Site: http://med.stanford.edu/compmed

Courses offered by the Department of Comparative Medicine are listed under the subject code COMPMED on the *Stanford Bulletin's* ExploreCourses web site.

The Department of Comparative Medicine is a clinical department that offers residency training in laboratory animal medicine for veterinarians. Its faculty offer courses at the undergraduate and graduate levels. Clinical faculty and basic science faculty in the Department of Comparative Medicine accept students to participate in research projects.

The discipline of Comparative Medicine studies the differences and similarities among species to elucidate biological and disease mechanisms.The research interests of faculty include neuroscience, infectious diseases, neuropathology, cancer, molecular genetics, and laboratory animal science.

DEVELOPMENTAL BIOLOGY

Emeriti: (Professors) David S. Hogness, A. Dale Kaiser
Chair: Roeland Nusse
Associate Chair: Lucy Shapiro
Professors: Ben Barres, Philip Beachy, Gerald Crabtree, Margaret Fuller, Stuart Kim, David Kingsley, Roeland Nusse, Matthew Scott, Lucy Shapiro, James Spudich, William Talbot, Anne Villeneuve, Irving Weissman
Associate Professor: Seung Kim
Assistant Professors: Gill Bejerano, Joanna Wysocka
Professor (Teaching): Ellen Porzig
Professor (Research): Harley McAdams

Courses offered by the Department of Development Biology are listed under the subject code DBIO on the *Stanford Bulletin's* ExploreCourses web site.

A fundamental problem in biology is how the complex set of multicellular structures that characterize an adult animal is generated from the fertilized egg. Recent advances at the molecular level, particularly with respect to the genetic control of development, have been explosive. These advances represent the beginning of a major movement in the biological sciences toward the understanding of the molecular mechanisms underlying developmental decisions and the resulting morphogenetic processes. This new thrust in developmental biology derives from the extraordinary methodological advances of the past decade in molecular genetics, immunology, and biochemistry. However, it also derives from groundwork laid by the classical developmental studies, the rapid advances in cell biology and animal virology, and from models borrowed from prokaryotic systems. Increasingly, the work is directly related to human diseases, including oncogene function and inherited genetic disease.

The Department of Developmental Biology includes a critical mass of scientists who are leading the thrust in developmental biology and who can train new leaders in the attack on the fundamental problems of development. Department labs work on a wide variety of organisms from microbes to worms, flies, and mice. The dramatic evolutionary conservation of genes that regulate development makes the comparative approach of the research particularly effective. Scientists in the department labs have a very high level of interaction and collaboration. The discipline of developmental biology draws on biochemistry, cell biology, genetics, molecular biology, and genomics. People in the department have a major interest in regenerative medicine and stem cell biology.

The department is located in the Beckman Center for Molecular and Genetic Medicine within the Stanford University Medical Center.

MASTER OF SCIENCE IN DEVELOPMENTAL BIOLOGY

University requirements for the M.S. are described in the "Graduate Degrees" section of this bulletin.

Students in the Ph.D. program in Developmental Biology may apply for an M.S. degree, assuming completion of their course requirements and preparation of a written proposal. The master's degree awarded by the Department of Developmental Biology does not include the possibility of minors for graduate students enrolled in other departments or programs.

Students are required to take, and satisfactorily complete, at least three lecture courses offered by the department, including 210, Developmental Biology. In addition, students are required to take three courses outside the department. Students are also expected to attend Developmental Biology seminars and journal clubs. In addition, the candidate must complete a research paper proposing a specific experimental approach and background in an area of science relative to developmental biology.

DOCTOR OF PHILOSOPHY IN DEVELOPMENTAL BIOLOGY

University requirements for the Ph.D. are described in the "Graduate Degrees" section of this bulletin.

The graduate program in Developmental Biology leads to the Ph.D. degree. The department also participates in the Medical Scientists Training Program (MSTP) in which individuals are candidates for both the M.D. and Ph.D. degrees.

Students are required to complete at least six courses, including Developmental Biology (210); Advanced Genetics (203); Frontiers in Biological Sciences (215); and an advanced molecular biology, biochemistry, or biophysics course. Students are expected to attend Developmental Biology seminars and journal clubs.

Completion of a qualifying examination is required for admission to Ph.D. candidacy. The examination consists of two parts. One proposal is on a subject different from the dissertation research and the other proposal is on the planned subject of the thesis. The final requirements of the program include presentation of a Ph.D. dissertation as the result of independent investigation and constituting a contribution to knowledge in the area of developmental biology. The student must pass the University oral examination, taken only after the student has substantially completed research. The examination is preceded by a public seminar in which the research is presented by the candidate. The oral examination is conducted by a dissertation reading committee.

GENETICS

Emeritus: (Professor) Leonard Herzenberg
Chair: Michael Snyder
Professors: Russ Altman, Gregory Barsh, Carlos Bustamante, Michele Calos, Stanley Cohen, Ronald Davis, Andrew Fire, Uta Francke, Margaret Fuller, Mark Kay, Stuart Kim, Joseph Lipsick, John Pringle, Matthew Scott, Tim Stearns
Associate Professors: Laura Attardi, Julie Baker, James Ford, Arend Sidow, Zijie Sun, Hua Tang, Anne Villeneuve, Douglas Vollrath
Assistant Professors: Anne Brunet, Julien Sage
Professor (Research): Leonore Herzenberg
Associate Professor (Research): J. Michael Cherry
Associate Professor (Teaching): Kelly Ormond
Assistant Professor (Research): Gavin Sherlock
Courtesy Professor: Hank Greely
Consulting Associate Professor: Man-Wah Tan
Lecturer: Andrea Kwan
Mail Code: 94305-5120
Phone: (650) 723-3335
Email: genetics-info@genome.stanford.edu
Web Site: http://genetics.stanford.edu

Courses offered by the Department of Genetics are listed under the subject code GENE on the *Stanford Bulletin's* ExploreCourses web site.

MASTER OF SCIENCE IN HUMAN GENETICS AND GENETIC COUNSELING

The University requirements for the M.S. are described in the "Graduate Degrees" section of this bulletin.

The Department of Genetics offers an M.S. in Human Genetics and Genetic Counseling, which is accredited by the American Board of Genetic Counseling. This program prepares students to practice in the healthcare profession of genetic counseling. The program is a full time two-year program, and accepts students to begin the program only in Autumn Quarter. Students must be admitted directly into this program, and cannot automatically transfer from the Ph.D. programs within the department, or vice versa. While courses are oriented primarily towards genetic counseling students, they may also be taken by medical students, other graduate students, residents or post-doctoral fellows, and (with permission) undergraduates.

The degree requires the completion of clinical rotations and an approved research project. Students must also complete required course work (GENE 271-286), several additional required courses (bioethics, research ethics and developmental biology), and are encouraged to take 2-4 elective courses of their choice, including a research methods elective. Faculty members include members of the Stanford faculty from Genetics, Pediatrics, Obstetrics, Pathology, Developmental Biology, Biomedical Ethics, Law, and Psychology, and practicing genetic counselors and clinical geneticists in various medical centers across the Bay Area.

Applications are due in December (see web site) for admission in the following Autumn Quarter. Applicants should demonstrate a combination of academic preparation, exposure to genetic counseling, and counseling and/or laboratory experiences. Exposure to persons with disabilities or chronic illness is also helpful. Additional information about the program is available at http://www.med.stanford.edu/genetic-counseling.

DOCTOR OF PHILOSOPHY IN GENETICS

University requirements for the Ph.D. degree are described in the "Graduate Degrees" section of this bulletin.

The Ph.D. program in the Department of Genetics offers graduate students the opportunity to pursue a discipline that encompasses both a set of tools and a coherent way of thinking about biology and medicine. All major areas of genetics are represented in the department, including human genetics (molecular identification of Mendelian traits and the pathophysiology of genetic disease, gene therapy, genetic epidemiology, analysis of complex traits, and human evolution), and application of model organisms such as bacteria, yeast, flies, worms, or mice to basic questions in biomedical research. The department is especially strong in genomic and bioinformatic approaches to genome biology and evolution, and includes several genome-scale databases such as the Saccharomyces Genome Database (SGD), the Stanford Microarray Database (SMD), and the Pharmacogenetics and Pharmacogenomics Knowledge Base (PharmGKB) and, administered through the Department of Biochemistry, the Stanford Genome Technology Center (SGTC).

Exposure to the intellectual scope of the department is provided by laboratory rotations, dissertation research, advanced courses in genetics and other areas of biomedical science, seminar series, journal clubs, and an annual three-day retreat of faculty, students, postdoctoral fellows, and staff scientists. Emphasis is placed on interactions and collaborations among students, postdoctoral students, and faculty within the department and throughout the campus.

During their first year, graduate students in the department take graduate courses and sample areas of research by doing rotations in three or four laboratories. At the end of the first three quarters, students may select a laboratory in which to do their dissertation research. While the dissertation research is generally performed in one laboratory, collaborative projects with more than one faculty member are encouraged. In addition to interacting with their faculty preceptor, graduate students receive advice regularly from other faculty members who serve as members of their dissertation committee. Study for the Ph.D. generally requires between four and five years of graduate work, most of which is focused on dissertation research.

Students are generally enrolled in the program to receive the Ph.D. degree, although a limited number of M.D. candidates can combine research training in genetics with their medical studies. Ph.D. candidates who have passed the qualifying exam in the second year can opt to receive the M.S. as a terminal degree.

There are opportunities for graduate students to teach in graduate-level and professional-school courses. In addition, students have the opportunity to participate in educational outreach activities coordinated by the department, which include opportunities to interact with secondary school students and teachers, lay groups, and local science museums.

Students who have recently received a bachelor's, master's, M.D., or Ph.D. degree in related fields may apply for graduate study. Prospective students must have a background in biology, mathematics, physics, and chemistry. Decisions for admission are based on comparison of the relative merits of all the candidates' academic abilities and potential for research and the department's interest in promoting a diverse learning environment. Interviews take place in late February or early March and successful applicants are offered admission by early spring. Students who wish to

pursue a combined M.D./Ph.D. degree are considered for admission into the graduate program in the department after they have been admitted to the M.D. program in the School of Medicine.

Students begin graduate studies in Autumn Quarter. Prospective students are encouraged to start the application process early to ensure that they are able to submit a complete application by the December deadline. All students accepted into the Ph.D. program in the Department of Genetics are provided with full tuition and a stipend. Two training grants from the National Institutes of Health provide major support for the graduate training program in the department. Other student support is provided by departmental funds and from research grants, both federal and private, of the faculty. In addition, a number of graduate students are funded by fellowships, including those from the National Science Foundation and the Stanford Graduate Fellows program.

HEALTH RESEARCH AND POLICY

Emeriti: (Professors) Dan Bloch, John Farquhar, Victor R. Fuchs
Chair: Phil Lavori
Co-Chair: Robert Tibshirani
Professors: Laurence Baker, Bradley Efron, Trevor Hastie, Victor W. Henderson, Mark Hlatky, Iain M. Johnstone, Abby C. King, Philip W. Lavori, Ying Lu, Richard A. Olshen, Julie Parsonnet, Robert Tibshirani, Alice S. Whittemore, Dee W. West, Wing Wong
Associate Professor: Lorene M. Nelson, Chiara Sabatti
Assistant Professors: M. Kate Bundorf, Marc Coram, Allison Kurian, Mei-Chiung Shih, Weiva Sieh, Lu Tian
Assistant Professors (Clinical): Rita Popat, Kristin Sainani
Courtesy Professors: Stephen P. Fortmann, Alan M. Garber, Mary Goldstein, Daniel Kessler, Alex Macario, Yvonne Maldonado, Douglas Owens, Paul Wise
Courtesy Associate Professors: Jay Bhattacharya, Michael K. Gould, Paul Heidenreich, David R. Rogosa
Courtesy Assistant Professors: Grant Miller
Senior Lecturer: Irene Corso
Lecturers: Raymond Balise, Scarlett Gomez, Laurel Habel, De Kun Li, David Lilienfeld, Cynthia O'Malley, Caroline Tanner, Stephen Van Den Eeden
Consulting Professors: Gary Friedman, Elizabeth Holly, Marion Lee, George Lundberg, Peggy Reynolds, Joseph Selby
Consulting Associate Professors: Paul Barnett, Sally Glaser, Pamela Horn-Ross, Esther John, Ciaran Phibbs
Consulting Assistant Professors: Ellen Chang, Christina Clarke-Dur, Theresa Keegan, Bang Nguyen, Ingrid Oakley-Girvan, Rudy Rull, Todd Wagner
Mail Code: 94305-5405
Phone: (650) 723-5456
Web Site: http://hrp.stanford.edu

Courses offered by the Department of Health Research and Policy are listed under the subject code HRP on the *Stanford Bulletin's* ExploreCourses web site.

The Department of Health Research and Policy has three principal areas of scholarly interest:

1. Biostatistics deals with scientific methodology in the medical sciences, emphasizing the use of statistical techniques.
2. Epidemiology is the study of the distribution and determinants of illness and impairment in human populations. Epidemiology training provides analytic tools for clinical and translational research, including studies of disease etiology, prevention, and therapy.
3. Health Services Research is concerned with many aspects of health policy analysis in the public and private sectors

GRADUATE PROGRAMS IN HEALTH RESEARCH POLICY

The Program in Epidemiology and the Program in Health Services Research are housed in the Department of Health Research and Policy. These programs offer M.S. degrees in Epidemiology and in Health Services Research. Students with an interest in pursuing advanced degrees with an emphasis on biostatistics can do so through programs offered by the Department of Statistics. Division of Biostatistics faculty participate in these programs.

For additional information, address inquiries to the Educational Coordinator, Department of Health Research and Policy, Stanford University School of Medicine, HRP Redwood Building, Room T138C, Stanford, California 94305-5405.

HEALTH SERVICES RESEARCH

Director: Mark Hlatky (Professor, Health Research and Policy, and Medicine)
Executive Committee: Laurence Baker (Professor, Health Research and Policy), M. Kate Bundorf (Assistant Professor, Health Research and Policy), Alan Garber (Professor, Medicine), Mary Goldstein (Professor, Medicine), Mark Hlatky (Professor, Health Research and Policy, and Medicine), Douglas Owens (Professor, Medicine)
Participating Faculty and Staff by Department:
Anesthesia: Alex Macario (Professor)
Business: Alain Enthoven (Professor, emeritus), Daniel Kessler (Professor)
Health Research and Policy: Laurence Baker (Professor), Paul Barnett (Consulting Associate Professor), M. Kate Bundorf (Assistant Professor), Victor Fuchs (Professor, emeritus), Trevor Hastie (Professor), Mark Hlatky (Professor), Philip Lavori (Professor), Richard Olshen (Professor), Ciaran Phibbs (Consulting Associate Professor), Joseph Selby (Consulting Professor), Robert Tibshirani (Professor)
Law: Henry Greely (Professor)
Management Science and Engineering: Margaret Brandeau (Professor)
Medicine: Jay Bhattacharya (Assistant Professor), Jeremy Goldhaber-Fiebert (Assistant Professor), Alan Garber (Professor), Mary Goldstein (Professor), Michael Gould (Associate Professor), Paul Heidenreich (Associate Professor), Mark Hlatky (Professor), Grant Miller (Assistant Professor), Douglas Owens (Professor)
Pediatrics: Paul Wise (Professor)
Psychiatry: Rudolph Moos (Professor)
Sociology: Richard Scott (Professor, emeritus)
Program Offices: HRP Redwood Building, Room T138C
Mail Code: 94305-5405
Phone: (650) 723-5456

MASTER OF SCIENCE IN HEALTH SERVICES RESEARCH

The master's degree program in Health Services Research seeks to train students in the quantitative analysis of issues in health and medical care. The program emphasizes an individually designed program of course work and completion of a master's project under the mentorship of a faculty member. The typical student in the program is either a physician who has completed residency training and is preparing for a research career, or a student with a strong background in policy analysis who wishes to focus on problems in health or medical care. Faculty interests include outcomes research, health economics, health care organization, health care access, quality of care, decision analysis, clinical guidelines, and assessment of patient preferences and quality of life.

To receive the degree, students are expected to demonstrate knowledge of issues in health services research and the quantitative skills necessary for research in this area. Students must take at least 45 units of course work (9 of the units may be double-counted to meet other degree requirements) and write a University thesis. The course work requirements are:

1. At least 8 units from the following group of Health Research and Policy (HRP) core courses: HRP 256, Economics of Health and Medical Care; HRP 391, Health Care Regulation; HRP 392, Analysis of Costs, Risks, and Benefits in Health Care.
2. At least 6 units of graduate-level statistics courses. The sequence of HRP 261, Intermediate Biostatistics: Analysis of Discrete Data; and HRP 262, Intermediate Biostatistics: Regression, Prediction, Survival Analysis, is strongly recommended.
3. At least 3 units of HRP 283, Health Services Research Core Seminar.
4. At least 15 units of HRP research credit from HRP 299, Directed Reading, or HRP 399, Research.
5. An additional set of approved elective courses to complete the program total of at least 45 units.

For additional information, address inquiries to the Educational Coordinator, Department of Health Research and Policy, Stanford University School of Medicine, HRP Redwood Building, Room T138C, Stanford, California 94305-5405.

EPIDEMIOLOGY

Director: Victor W. Henderson (Professor, Health Research and Policy, and Neurology and Neurological Sciences)

Core Faculty and Academic Teaching Staff: Raymond R. Balise (Lecturer, Health Research and Policy), Gary D. Friedman (Consulting Professor, Health Research and Policy), Victor W. Henderson (Professor, Health Research and Policy, and Neurology and Neurological Sciences), Abby C. King (Professor, Health Research and Policy, and Medicine), Allison Kurian (Assistant Professor, Medicine, and Health Research and Policy), Philip Lavori (Professor, Health Research and Policy), Yvonne A. Maldonado (Professor, Pediatrics), Lorene M. Nelson (Associate Professor, Health Research and Policy), Julie Parsonnet (Professor, Medicine, and Health Research and Policy), Rita A. Popat (Clinical Assistant Professor, Health Research and Policy), Kristin L. Sainani (Clinical Assistant Professor, Health Research and Policy), Weiva Sieh (Assistant Professor, Health Research and Policy), Dee W. West (Professor, Health Research and Policy), Alice S. Whittemore (Professor, Health Research and Policy)

Program Offices: HRP Redwood Building, Room T138C
Mail Code: 94305-5405
Phone: (650) 723-5456
Email: epiprogram@med.stanford.edu
Web Site: http://www.stanford.edu/dept/HRP/epidemiology

MASTER OF SCIENCE IN EPIDEMIOLOGY

The Graduate Program in Epidemiology offers instruction and interdisciplinary research opportunities leading to the M.S. degree in Epidemiology. Epidemiology is the study of the distribution and determinants of illness and impairment in human populations. It is important in its own right, and epidemiologic methods are used by clinical investigators and by other scientists who conduct observational and experimental research on the identification, prevention, and treatment of human disorders.

Core and affiliated faculty come from the Department of Health Research and Policy; other Stanford University departments, and notable Bay Area research facilities. The Program has particular strengths in cancer epidemiology, cardiovascular disease epidemiology, infectious disease epidemiology, musculoskeletal disease epidemiology, neuroepidemiology, and aspects of epidemiologic methods, genetic epidemiology, and reproductive epidemiology and women's health.

The mission of the Stanford University School of Medicine is to be a premier research-intensive medical school that improves health through leadership and collaborative discoveries and innovation in patient care, education and research. With support from a NIH Clinical and Translational Science Award, the graduate program in Epidemiology fosters this mission through the training of physician investigators in techniques of clinical research. The department also considers students from other disciplines who would benefit from formal training in epidemiologic methods.

A typical student has the M.D. degree and is in the fellowship stage of his or her postgraduate training, or in an early stage of faculty development. Other students may not have prior clinical training. These may include behavioral, social, and life scientists; law students; and students with the baccalaureate degree. They may wish to bring an epidemiologic orientation to their research or practice, or they may be considering careers in epidemiology or a related discipline.

To receive the M.S. degree, students are expected to obtain a grounding in epidemiologic methods and applied biostatistics and to demonstrate research skills through the completion of a thesis. Students must complete at least 45 units of course work:

1. Epidemiologic methods: HRP 225, Design and Conduct of Clinical and Epidemiologic Studies; HRP 226, Advanced Epidemiologic and Clinical Research Methods; HRP 251, Design and Conduct of Clinical Trials.
2. Biostatistics: HRP 259, Introduction to Probability and Statistics for Epidemiology; HRP 261, Intermediate Biostatistics: Analysis of Discrete Data; HRP 262, Intermediate Biostatistics: Regression, Prediction, Survival Analysis.
3. Research seminars: HRP 236, Epidemiology Research Seminar (at least 3 units).
4. Research: HRP 399, Master thesis (at least 12 units).
5. Research conduct: Students must complete MED 255, Responsible Conduct of Research, and attend a Human Subjects Institutional Review Board meeting.
6. Additional approved selective and elective courses to complete the program total of at least 45 units.

Students are assigned a methodology mentor from the Department of Health Research and Policy, and they also select a research mentor, who may be from another department. For physicians, the research mentor is often an affiliated faculty member from the department of the student's clinical specialty.

University requirements for the M.S. degree are described in the "Graduate Degrees" section of this bulletin. Other programmatic requirements are in *Graduate Program in Epidemiology, Information and Guidelines*, available from the educational coordinator in the Department of Health Research and Policy.

IMMUNOLOGY

Chair, Executive Committee for the Immunology Program: Lawrence Steinman (Professor, Neurology and Neurological Sciences)

Director for Immunology Program: Olivia Martinez (Professor, Research, Surgery, Transplantation)

Director for Clinical Immunology Program: C. Garrison Fathman (Medicine/Immunology and Rheumatology)

Participating Departments and Faculty:

Biology: Patricia P. Jones (Professor)

Chemistry: Harden M. McConnell (Professor, emeritus)*

Genetics: Leonore A. Herzenberg (Professor, Research), Leonard A. Herzenberg (Professor, emeritus), Man-wah Tan (Associate Professor)

Medicine/Bone Marrow Transplantation Program: Robert Negrin (Professor), David Miklos (Assistant Professor), Judith Shizuru (Associate Professor)

Medicine/Cardiovascular Medicine: Joseph Wu (Assistant Professor)

Medicine/Hematology: Calvin Kuo (Associate Professor), Peter Lee (Associate Professor), Ravi Majeti (Assistant Professor)

Medicine/Immunology and Rheumatology: C. Garrison Fathman (Professor), William Robinson (Assistant Professor), Samuel Strober (Professor), Paul J. Utz (Associate Professor), Cornelia Weyand (Professor)

Medicine/Oncology: Gilbert Chu (Professor, and Biochemistry), Dean Felsher (Associate Professor, and Pathology), Ronald Levy (Professor), Shoshana Levy (Professor, Research)
Medicine/Pulmonary and Critical Care Medicine: Mark Nicolls (Associate Professor)
Medicine/Urology: Michael Hsieh (Assistant Professor)
Microbiology and Immunology: John Boothroyd (Professor), Chang-Zheng Chen (Assistant Professor), Yueh-Hsiu Chien (Professor), Mark M. Davis (Professor, and Director, Institute for Immunity, Transplantation and Infection), Hugh McDevitt (Professor,emeritus), Garry P. Nolan (Professor), David Schneider (Associate Professor)
Molecular and Cellular Physiology: K. Christopher Garcia (Professor, and Structural Biology), Richard S. Lewis (Professor)
Neurology and Neurological Sciences: Lawrence Steinman (Professor, and Pediatrics), Tony Wyss-Coray (Associate Professor, Research)
Neurosurgery: Theo Palmer (Associate Professor)
Otolaryngology/Head & Nect Surgery (ENT): John B. Sunwoo (Assistant Professor)
Pathology: Eugene C. Butcher (Professor), Michael Cleary (Professor), Gerald R. Crabtree (Professor, and Developmental Biology), Edgar G. Engleman (Professor, and Medicine/Immunology and Rheumatology), Magali Fontaine (Assistant Professor), Stephen Galli (Professor and Chair), Sara Michie (Professor), Raymond A. Sobel (Professor), Irving Weissman (Professor, and Director, Stem Cell Institute)
Pediatrics: Ann Arvin (Professor, and Microbiology and Immunology), Atul Butte (Assistant Professor), Manish Butte (Assistant Professor), Christopher Contag (Professor, Research, and Microbiology and Immunology, and Radiology), David B. Lewis (Professor), Elizabeth Mellins (Associate Professor), Kari Nadeau (Assistant Professor), Minnie Sarwal (Professor)
Psychiatry and Behavioral Sciences: Firdaus Dhabhar (Associate Professor), Emmanuel Mignot (Professor)
Structural Biology: Peter Parham (Professor, and Microbiology and Immunology)
Surgery: Sheri Krams (Associate Professor, Research), Olivia Martinez (Professor, Research)

* Recalled to active duty

Mail Code: 94305-5421
Phone: (650) 725-5076
Email: mopan@stanford.edu
Web Site: http://immunol.stanford.edu

Courses offered by the Immunology Program are listed under the subject code IMMUNOL on the *Stanford Bulletin's* ExploreCourses web site.

MASTER OF SCIENCE IN IMMUNOLOGY

Students in the Ph.D. program in Immunology may apply for an M.S. degree in Immunology only under special circumstances, assuming completion of appropriate requirements. Students must complete:

1. Three full-tuition quarters of residency as a graduate student at Stanford.
2. At least 45 units of academic work, all of which must be in courses at or above the 100 level, 36 units of which must be at or above the 200 level.
3. 2-3 quarters of graduate research (IMMUNOL 399), consisting of rotations in the labs of three faculty members.
4. Course work in Immunology as follows:
   a. Basic Immunology. For graduate students, BIO 230A, Molecular and Cellular Immunology Literature Review; for medical students, IMMUNOL 205, Immunology in Human Health and Disease or equivalent
   b. Advanced Immunology such as IMMUNOL 201, 202, and 203
   c. IMMUNOL 215. Principles of Biological Technologies
   d. In addition, the student may take one elective course. Some possible electives are:
      - MPHA 210. Signal Transduction Pathways and Networks
      - SBIO 241. Biological Macromolecules
      - CBIO 241. Molecular, Cellular, and Genetic Basis of Cancer
      - DBIO 210. Developmental Biology.
   e. Students have the option to select from two of the following three courses in the first year:
      - GENE 203. Advanced Genetics
      - BIO 214. Advanced Cell Biology
      - MI 210. Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites
5. Graduate-level biochemistry and molecular biology (BIOC 220).
6. Course work in IMMUNOL 311, Seminar in Immunology, and IMMUNOL 311A, Seminar Discussion in Immunology.
7. Participation in the Immunology journal club (IMMUNOL 305), and attendance at the Immunology seminar series and at the annual Stanford Immunology Scientific Conference.
8. The qualifying examination process in Immunology before admission to Ph.D. candidacy has two parts: a comprehensive written exam on many fields in immunology, (qualifying examination process, Part I), in the third week in June, first year; the thesis proposal (qualifying examination process, Part II), before December 17th, second year. In addition, an oral presentation is required on the research of one rotation, early July in the first year.
9. Students must submit a master's thesis paper on one of their rotations. This requirement may be waived under special circumstances.

DOCTOR OF PHILOSOPHY IN IMMUNOLOGY

University requirements for the Ph.D. are described in the "Graduate Degrees" section of this bulletin.

The Immunology Program offers instruction and research opportunities leading to a Ph.D. in Immunology. The goal of the program is to develop investigators who have a solid foundation in Immunology and related sciences to carry out innovative research. The program features a flexible choice of courses and seminars combined with extensive research training in the laboratories of participating Immunology faculty.

Students applying to the program typically have an undergraduate major in biological sciences, but majors in other areas are acceptable if the applicants have had sufficient course work in biology and chemistry. Formal application should be made by December 1st. Applications are evaluated by the Immunology predoctoral committee based upon: GRE scores; grades; evidence of research experience; letters of recommendation, including letters from research sponsor(s); and commitment to a career in biomedical research. Subject tests are not required. Interested Stanford medical students are welcome to apply to the program and should submit a formal application by December 1.

Students admitted to the program are offered financial support covering tuition, a living stipend, insurance coverage, and an allowance for books/travel. Applicants are urged to apply for independent fellowships such as from the National Science Foundation. Fellowship applications are due in November of the year prior to matriculation in the graduate program, but Immunology graduate students may continue to apply for outside fellowships after matriculation. Because of the small number of department-funded slots, students who have been awarded an outside fellowship have an improved chance of acceptance into the program. On matriculation, each student is assisted by a first-year advising committee in selecting courses and lab rotations in the first year and in choosing a lab for the dissertation research. Once a dissertation adviser has been selected, a dissertation committee including the dissertation adviser and two additional Immunology faculty, is constituted to guide the student during the dissertation research. The student must meet with the dissertation committee at least once a year.

Candidates for Ph.D. degrees at Stanford must satisfactorily complete a program of study that includes 135 units of graduate course work and research. At least 3 units must be taken with each of four different Stanford faculty members.

Requirements for the Ph.D. degree in Immunology include—

1. Training in biology and cognate disciplines equivalent to that provided by the undergraduate Biology major at Stanford.
2. Completion of the following courses (or their equivalents from undergraduate work):
   a. Basic Immunology (BIO 230A, Molecular and Cellular Immunology Literature Review)
   b. Advanced Immunology (IMMUNOL 201, 202, 203)
   c. Chemistry of Biological Processes (BIOC 220)
   d. Biostatistics (BIO 141or STATS 141)
   e. Principles of Biological Technologies (IMMUNOL 215)
   f. One elective course; suggested courses include:
      - MPHA 210. Signal Transduction Pathways and Networks
      - SBIO 241. Biological Macromolecules
      - CBIO 241. Cancer Biology
      - DBIO 210. Developmental Biology
   g. MED 255. Responsible Conduct in Science
   h. Students have the option to select from two of the following three courses in the first year:
      - GENE 203. Advanced Genetics
      - BIO 214. Advanced Cell Biology
      - MI 210. Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites
   i. IMMUNOL 305. Immunology Journal Club
3. Prior to enrolling for Autumn Quarter, first-year students are required to read Janeway's *Immunobiology*, 7th edition, in preparation for their graduate studies. First-year students are required to take both the IMMUNOL 311, Seminar in Immunology, and the companion course, IMMUNOL 311A, Seminar Discussion in Immunology, and participate in IMMUNOL 305, Immunology Journal Club.
4. Students in their second year and above must participate in the IMMUNOL 311, Seminar in Immunology and may opt to take the companion course, IMMUNOL 311A.
5. Students who have not yet achieved TGR status must register for 1 unit for IMMUNOL 311. Students attend the Immunology Seminar Series (12:00 p.m., Tuesdays). Students read the papers of visiting seminar speakers and meet to discuss the material in IMMUNOL 311A.
6. Elective courses as agreed upon by the student, adviser, and advisory committee. Electives may be chosen from graduate courses and seminars in any of the biomedical science departments and programs.
7. Part I of the Qualifying Examination process is given in mid-June and consists of five questions on different areas in immunology. After the students submit their written responses, the Predoctoral Committee discusses with each student their written answers. This oral session provides an opportunity for faculty to follow up with students on their answers, and for students to discuss/clarify their answers and respond to faculty comments. Completion in the first year of three one quarter rotations. Medical students who are accepted into the Ph.D. program must do at least three rotations. First year students, including MSTP and M.D./Ph.D. students, present their lab rotation research projects to the predoctoral committee in early July.
8. Teaching assistantship in two Immunology courses (IMMUNOL 290, Teaching in Immunology). A teaching assistantship requirement may be fulfilled by proposing a graduate student-initiated course: IMMUNOL 315, Topics in Immunology. Before fulfilling their teaching assistantships, Immunology graduate students are required to attend a teaching assistantship orientation offered at the beginning of every quarter by the Center for Teaching and Learning. MSTP students may submit one of their medical school TAships as partial fulfillment of the TA requirement for the Ph.D. in Immunology.
9. For admission to Ph.D. candidacy, a comprehensive written examination (qualifying examination process, Part I) in Immunology and related biomedical sciences, and a rotation presentation on one of three lab rotations, must be completed satisfactorily by the middle of Summer Quarter of the first year. Students must prepare and defend a research proposal on their dissertation research (qualifying examination process, Part II) by December 17, the end of Autumn Quarter of their second year, and complete all core course requirements by the end of the second year. Administration and evaluation of these requirements leading to Ph.D. candidacy is the responsibility of the Predoctoral Committee; the student's dissertation committee is responsible for advising the student through the research and other courses as needed towards the completion of the Ph.D. dissertation.
10. Participation (through regular attendance and oral presentation) in the student-run Immunology journal clubs for at least the first three years (IMMUNOL 305), the Tuesday Immunology seminars, and the annual Stanford Immunology Scientific Conference. Students are required to give one poster and one scientific presentation at these annual Stanford Immunology scientific conferences. Fourth-year and above students present their current research to fellow students and faculty in a monthly forum, The Next Generation.
11. Passing the University oral examination on the dissertation research, which is to be taken only after the student has substantially completed the research. The examination is preceded by a public seminar in which the candidate presents his/her research.
12. Completion of a Ph.D. dissertation, resulting from independent investigation and constituting a contribution to knowledge in the area of immunology.

MICROBIOLOGY AND IMMUNOLOGY

Emeriti: (Professors) Stanley Falkow, Hugh O. McDevitt, Edward S. Mocarski, Sidney Raffel, Leon T. Rosenberg
Chair: Karla Kirkegaard
Associate Chair: Stanley Falkow
Professors: Ann Arvin, Helen Blau, John C. Boothroyd, Yueh-Hsiu Chien, Mark M. Davis, Stephen J. Galli, Harry B. Greenberg, Karla Kirkegaard, A. C. Matin, Garry Nolan, Peter Parham, Phillip Pizzo, Charles Prober, David Relman, Peter Sarnow, Gary K. Schoolnik, Lucy S. Tompkins
Associate Professors: Matthew Bogyo, Christopher Contag, David Schneider, Julie Theriot
Assistant Professors: Manuel Amieva, Chang-Zheng Chen, Denise Monack, Upinder Singh, Justin Sonnenburg
Associate Professor (Teaching): Robert D. Siegel
Institute for Immunity, Transplantation and Infection
Director, Human Immune Monitoring Center and Senior Research Scientist: Holden Maecker

Web Site: http://microimmuno.stanford.edu

Courses offered by the Department of Microbiology and Immunology are listed under the subject code MI on the *Stanford Bulletin's* ExploreCourses web site.

GRADUATE PROGRAMS IN MICROBIOLOGY AND IMMUNOLOGY

The Department of Microbiology and Immunology offers a program of training leading to the Ph.D. degree, as well as research

training, courses, and seminars for medical students and postdoctoral fellows. Research interests focus on two broad areas: host/parasite interactions, and the function of the immune system. Laboratories investigate mechanisms of pathogenesis and the physiology of viruses, bacteria, and protozoan parasites, as well as the lymphocyte function in antigen recognition, immune response, and autoimmunity.

MASTER OF SCIENCE

A regular M.S. program is not offered, although this degree is awarded under special circumstances. Candidates for master's degrees are expected to have completed the preliminary requirements for the B.S. degree, or the equivalent. In addition, the candidate is expected to complete 45 quarter units of work related to microbiology; at least 25 of these units should concern research devoted to a thesis. The thesis must be approved by at least two members of the department faculty.

DOCTOR OF PHILOSOPHY IN MICROBIOLOGY AND IMMUNOLOGY

University requirements for the Ph.D. are described in the "Graduate Degrees" section of this bulletin.

Application, Admission, and Financial Aid—Prospective Ph.D. candidates should have completed a bachelor's degree in a discipline of biology or chemistry, including course work in biochemistry, chemistry, genetics, immunology, microbiology, and molecular biology. The deadline for receipt of applications with all supporting materials is December 1.

Applicants must file a report of scores on the general subject tests of the Graduate Record Examination (GRE). It is strongly recommended that the GRE be taken before October so that scores are available when applications are evaluated.

In the absence of independent fellowship support, entering predoctoral students are fully supported with a stipend and tuition award. Highly qualified applicants may be honored by a nomination for a Stanford Graduate Fellowship. Successful applicants have been competitive for predoctoral fellowships such as those from the National Science Foundation.

Program for Graduate Study—The Ph.D. degree requires course work and independent research demonstrating an individual's creative, scholastic, and intellectual abilities. On entering the department, students meet an advisory faculty member; together they design a timetable for completion of the degree requirements. Typically, this consists of first identifying gaps in the student's undergraduate education and determining courses that should be taken. Then, a tentative plan is made for two to four lab rotations (one rotation per quarter). During the first year of graduate study in the department, each student also takes six or seven upper-level (200-series) courses. Three of these courses are requirements of the department: MI 215, Principles of Biological Techniques; MI 230, Medical Microbiology and Infectious Diseases; and MI 210, Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites. Three courses are part of the core curriculum that is required of many graduate students in Stanford Biosciences: BIO 203 /DBIO 203 /GENE 203, Advanced Genetics; BIO 230, Molecular and Cellular Immunology; and BIO 214/BIOC 224, Advanced Cell Biology.

In Autumn Quarter of the second year, a research proposal based on the student's own thesis topic is defended to the thesis committee. In Spring Quarter of the second year, each student defends orally a formal research proposal on a topic outside the intended thesis project. This qualifying examination proposal is due to the graduate program steering committee by May 1. Based on successful performance on this proposal, the student is admitted to candidacy. Teaching experience and training are also part of the graduate curriculum. Graduate students are required to act as teaching assistants for two courses. In addition, first- and second-year graduate students are required to participate in a bi-weekly journal club.

MOLECULAR AND CELLULAR PHYSIOLOGY

Web Site: http://mcp.stanford.edu

Courses offered by the Department of Molecular and Cellular Physiology are listed under the subject code MCP on the *Stanford Bulletin's* ExploreCourses web site.

The Department of Molecular and Cellular Physiology is located in the Beckman Center for Molecular and Genetic Medicine.

A central goal of physiology in the post-genomic era is to understand how thousands of encoded proteins serve to bring about the highly coordinated behavior of cells and tissues. Research in the department approaches this goal at many levels of organization, ranging from single molecules and individual cells to multicellular systems and the whole organism. The faculty share common interests in the molecular mechanisms of cell signaling and behavior, with a special focus on structure/function analysis of ion channels and G-protein coupled receptors, and their roles at the cellular, organ, and whole-organism levels; the molecular basis of sensory transduction, synaptic transmission, plasticity and memory; the role of ion channels and calcium in controlling gene expression in neural and immune cells; and the regulation of vesicle trafficking and targeting, cell polarity, and cell-cell interactions in the nervous system and in epithelia. Research programs employ a wide range of approaches, including molecular and cell biology, biochemistry, genetics, biophysics, x-ray crystallography and solution NMR, electrophysiology, and *in vitro* and *in vivo* imaging with confocal and multi-photon microscopy.

GRADUATE PROGRAMS IN MOLECULAR AND CELLULAR PHYSIOLOGY

The department offers required and elective courses for students in the School of Medicine and is also open to other qualified students with the consent of the instructor. Training of medical, graduate, and postdoctoral students is available. The program offers a course of study leading to the Ph.D. degree. No B.S. is offered, and an M.S. is offered only in the unusual circumstance where a student completes the course work, rotation, and the written section of the qualifying exam, but is unable to complete the requirements for the Ph.D.

DOCTOR OF PHILOSOPHY IN MOLECULAR AND CELLULAR PHYSIOLOGY

Students with undergraduate or master's degrees who have completed a year each of college chemistry (including lectures in organic and physical chemistry), physics, calculus, and biology are considered for admission to graduate study. Applicants submit a report of scores from the Graduate Record Examination (verbal, quantitative, analytical, and an advanced subject test in one of the sciences) as part of the application. Students who do not speak English as their native language must submit scores from TOEFL unless waived by Graduate Admissions.

Study toward the Ph.D. is expected to occupy five years, including summers. A minimum of six quarter-long courses is required. These include four graduate-level courses (200-300 series) and a choice of two out of these three courses: MCP 221, MCP 258, and MCP 256. Students are also required to take the Molecular and Cellular Physiology Seminar/Research In Progress series. Each student presents a talk on research in progress to the department at least every other year, starting their second year. Grades for course work must be a minimum of 'B-', and at least two grades equal to 'A-' or above are necessary but not sufficient for continuation in the program.

Qualifying Examination—At the end of the second year in residence as a graduate student, each Ph.D. candidate presents a written thesis proposal to be defended at an oral comprehensive examination. The examinations may be taken only after all course work has been completed by the required standard. Students undertake individual research studies as early as possible after consultation with their preceptor. Upon passing this exam, the student is advanced to candidacy for the Ph.D.

Dissertation and University Oral Examination—The results of independent, original work by the students are presented in a dissertation. The oral examination is largely a defense of the dissertation.

Advisers and Advisory Committees—A graduate advisory committee, currently professors Lewis and Madison, advises students during the period before the formation of their qualifying committees.

Financial Aid—Students may be funded by their advisers' research grants, by training grants, by department funds, or by extramural funds. Students are encouraged to obtain funding from outside sources such as NIH and NSF.

NEUROBIOLOGY

Emeritus: Denis Baylor, Uel J. McMahan, Eric Shooter, Lubert Stryer
Chair: Ben Barres
Professors: Eric I. Knudsen, William T. Newsome
Associate Professors: Thomas Clandinin, Jennifer Raymond
Assistant Professors: Stephen Baccus, Ricardo Dolmetsch, Tirin Moore
Department Offices: Fairchild Building, Second Floor
Mail Code: 94305-5125
Web Site: http://neurobiology.stanford.edu

Courses offered by the Department of Neurobiology are listed under the subject code NBIO on the *Stanford Bulletin's* ExploreCourses web site.

GRADUATE PROGRAM IN NEUROBIOLOGY

Graduate students in the Department of Neurobiology obtain the Ph.D. degree through the interdepartmental Neurosciences Ph.D. program. Accepted students receive funding for tuition and a living stipend. Applicants should familiarize themselves with the research interests of the faculty and, if possible, indicate their preference on the application form which is submitted directly to the Neurosciences Program.

Medical students also are encouraged to enroll in the Ph.D. program. The requirements of the Ph.D. program are fitted to the interests and time schedules of the student. Postdoctoral training is available to graduates holding Ph.D. or M.D. degrees, and further information is obtained directly from the faculty member concerned.

Research interests of the department include information processing in vertebrate retina; structure, function, and development of auditory and visual systems; development and regeneration in the central and peripheral nervous system; neural mechanisms mediating higher nervous system functions, including perception, learning, attention and decision making.

NEUROSCIENCES

Director: John R. Huguenard (Professor, Neurology and Neurological Sciences)
Committee: Katrin Andreasson, Thomas Clandinin, Luis de Lecea, Craig Garner, John R. Huguenard, Fei-Fei Li, Merritt Maduke, Samuel McClure, Anthony Ricci, Carla Shatz

Participating Faculty:

Anesthesia: Rona Giffard (Professor), M. Bruce MacIver (Associate Professor, Research), Sean Mackey (Associate Professor), David Yeomans (Associate Professor)
Applied Physics: Mark Schnitzer (Assistant Professor)
Bioengineering: Kwabena Boahen (Associate Professor), Karl Deisseroth (Associate Professor), Scott Delp (Professor), Michael Lin (Assistant Professor), Matthew Scott (Professor)
Biology: Russell D. Fernald (Professor), William F. Gilly (Professor), H. Craig Heller (Professor), Ron Kopito (Professor), Liqun Luo (Professor), Susan McConnell (Professor), Robert M. Sapolsky (Professor), Mark Schnitzer (Assistant Professor), Carla Shatz (Professor), Kang Shen (Assistant Professor), Stuart Thompson (Professor)
Chemical and Systems Biology: Tobias Meyer (Professor), Daria Mochly-Rosen (Professor)
Comparative Medicine: Paul S. Buckmaster (Associate Professor), Corinna Darian-Smith (Associate Professor), Shaul Hestrin (Associate Professor)
Computer Science: Fei-Fei Li (Assistant Professor)
Developmental Biology: Ben Barres (Professor), Seung Kim (Professor), David Kingsley (Professor), Matthew P. Scott (Professor)
Electrical Engineering: Krishna Shenoy (Associate Professor)
Genetics: Anne Brunet (Assistant Professor), Matthew Scott (Professor)
Microbiology and Immunology: Helen Blau (Professor)
Molecular and Cellular Physiology: Axel Brunger (Professor), Miriam B. Goodman (Associate Professor), Brian Kobilka (Professor), Richard S. Lewis (Professor), V. Daniel Madison (Associate Professor), Merritt C. Maduke (Assistant Professor), Stephen Smith (Professor), Thomas Sudhof (Professor), Richard Tsien (Professor)
Neurobiology: Stephen Baccus (Assistant Professor), Ben Barres (Professor), Tom Clandinin (Associate Professor), Ricardo Dolmetsch (Assistant Professor), Eric I. Knudsen (Professor), U. J. McMahan (Professor), Tirin Moore (Assistant Professor), William T. Newsome (Professor), Jennifer Raymond (Associate Professor), Carla Shatz (Professor)
Neurology and Neurological Sciences: Katrin Andreasson (Associate Professor), Ben Barres (Professor), Helen Bronte-Stewart (Associate Professor), Paul Buckmaster (Associate Professor), Robert S. Fisher (Professor), Michael Greicius (Assistant Professor), May Han (Assistant Professor), Ting-Ting Huang (Assistant Professor, Research), John A. Huguenard (Professor), Frank Longo (Professor), William C. Mobley (Professor), Josef Parvizi (Assistant Professor), Kathleen Poston (Assistant Professor), David A. Prince (Professor), Thomas A. Rando (Professor), Lawrence Recht (Professor), Richard Reimer (Assistant Professor), Robert M. Sapolsky (Professor), Lawrence Steinman (Professor), Tony Wyss-Coray (Associate Professor, Research), Yanmin Yang (Associate Professor)
Neurosurgery: Marion Buckwalter (Assistant Professor), Pak H. Chan (Professor), Theo Palmer (Associate Professor), Gary K. Steinberg (Professor)
Ophthalmology: Yaping Joyce Liao (Assistant Professor)
Otolaryngology: Stefan Heller (Associate Professor), Anthony Ricci (Associate Professor)
Pathology: Isabella Graef (Assistant Professor), Bingwei Lu (Assistant Professor), Raymond Sobel (Professor), Marius Wernig (Assistant Professor)

Pediatrics: Heidi Feldman (Professor), Michael Lin (Assistant Professor), Anna Penn (Assistant Professor), Lawrence Steinman (Professor)
Philosophy: Patrick Suppes (Professor, emeritus)
Psychiatry and Behavioral Sciences: Karl Deisseroth (Associate Professor), Luis de Lecea (Associate Professor), Firdaus Dhabhar (Associate Professor), Craig Garner (Professor), Terrence A. Ketter (Professor), Robert C. Malenka (Professor), Vinod Menon (Associate Professor, Research), Emmanuel Mignot (Professor), Karen Parker (Assistant Professor), Natalie Rasgon (Professor), Allan L. Reiss (Professor), Edith Sullivan (Professor, Research), Jamie Zeitzer (Assistant Professor)
Psychology: Lera Boroditsky (Assistant Professor), Ian Gotlib (Professor), Kalanit Grill-Spector (Assistant Professor), James J. Gross (Professor), Brian Knutson (Associate Professor), James McClelland (Professor), Samuel McClure (Assistant Professor), Anthony Wagner (Associate Professor), Brian Wandell (Professor), Jeffrey J. Wine (Professor)
Radiology: Gary H. Glover (Professor)
Structural Biology: U. J. McMahan (Professor)
Program Offices: MSOB x236
Mail Code: 94305-5421
Phone: (650) 723-9855
Web Site: http://neuroscience.stanford.edu/education/phd_program

Courses offered by the Neurosciences Program are listed under the subject code NEPR on the *Stanford Bulletin's* ExploreCourses web site.

DOCTOR OF PHILOSOPHY IN NEUROSCIENCES

University requirements for the Ph.D. are described in the "Graduate Degrees" section of this bulletin.

The interdepartmental Neurosciences Program offers instruction and research opportunities leading to a Ph.D. in Neurosciences. The requirements for a Ph.D. degree follow those of the University and in addition are tailored to fit the background and interests of the student. Accepted students receive an award covering tuition, a basic health plan, and a living stipend. Qualified applicants should, where possible, apply for the predoctoral fellowships in open competition, especially those from the National Science Foundation. December 2 is the deadline for receipt in the Neurosciences Program office of applications with all supporting material.

Applicants should familiarize themselves with the research interests of the faculty and indicate their preferences clearly on the application form.

Since students enter with differing backgrounds, and the labs in which they may elect to work cover several different disciplines, the specific program for each student is developed individually with an advisory committee. All students are required to complete the basic introduction to neurobiology (NBIO 206 or equivalent). Students must also take five advanced courses, four of which must be distributed among four of the following core areas: systems and behavioral neuroscience, molecular and cellular neuroscience, developmental neuroscience, clinical neuroscience, and computational neuroscience. The fifth advanced course is chosen by the student in an area related to the student's research interest, and may be selected from outside the Neurosciences core with prior approval from the program director and the student's adviser.

Students usually rotate through several labs during their first year, although they may choose to begin thesis research on entry. After the first rotation, students may rotate both within and outside the Neurosciences Program. Required course work should be completed by the end of the second year. Passing of a comprehensive oral preliminary examination given by the student's advisory committee is required for admission to Ph.D. candidacy. This examination is usually taken by the end of the second year. The student is required to present a Ph.D. dissertation, which is the result of independent investigation contributing to knowledge in an area of neuroscience, and to defend his or her dissertation in a University oral examination, which includes a public seminar.

Medical students may participate in this program provided they meet the prerequisites and satisfy all the requirements of the graduate program as listed above. The timing of the program may be adjusted to fit their special circumstances.

OBSTETRICS AND GYNECOLOGY

Chair: Jonathan S. Berek

Courses offered by the Department of Obstetrics and Gynecology are listed under the subject code OBGYN on the *Stanford Bulletin's* ExploreCourses web site.

The Department of Obstetrics and Gynecology does not offer degrees; however, qualified medical, graduate, or undergraduate students with an interest in basic research in reproductive biology may apply to arrange individual projects under the supervision of the faculty. The focus for the Division of Reproductive Biology is the study of the molecular and cellular biology of male and female reproductive organs.

PATHOLOGY

Emeriti: *(Professor)* Ronald Dorfman, Richard L. Kempson; *(Professor, Clinical)* Lawrence F. Eng, Luis Fajardo, Heinz Furthmayr, F. Carl Grumet, Jon Kosek; *(Associate Professor)* P. Joanne Cornbleet
Chair: Stephen J. Galli
Professors: Daniel Arber, Ellen Jo Baron, Gerald J. Berry, Eugene C. Butcher, Michael L. Cleary, Gerald R. Crabtree, Edgar G. Engleman, Andrew Fire, Steven Foung, Stephen J. Galli, Lawrence Tim Goodnough, Michael R. Hendrickson, Joseph S. Lipsick, Donald P. Regula, Robert V. Rouse, Richard K. Sibley, Raymond Sobel, Howard H. Sussman, Dolly Tyan, Matt van de Rijn, Hannes Vogel, Teresa S. F. Wang, Roger A. Warnke, Irving L. Weissman, James Zehnder
Associate Professors: Jeffrey D. Axelrod, Matt Bogyo, Athena M. Cherry, Andrew Connolly, Tina Cowan, James D. Faix, Dean Felsher, Susan A. Galel, Sharon M. Geaghan, John P. Higgins, Neeraja Kambham, Christina Kong, Teri A. Longacre, Sara A. Michie, Yasodha Natkunam, Bruce Patterson, Jonathan R. Pollack, Iris Schrijver, Arend Sidow
Assistant Professors: Niaz Banaei, Raffick Bowen, Magali Fontaine, Tracy George, Dita Gratzinger, F. Kim Hazard, Kristin Jensen, Bingwei Lu, Jesse McKenney, Erich Schwartz, Uma Sundram, Marius Wernig, Robert West
Courtesy Professors: Donna Bouley, Bertil Glader, Lucy Tompkins
Courtesy Associate Professor: Robert Shafer
Clinician Educators: Susan Atwater, David Bingham, Barbara Egbert, Christopher Gonzales, Terri Haddix, Jinah Kim, Amy McKenney, Melanie Manning, Reetesh Pai, Run Shi, Brent Tan, Maurene Viele
Instructors: Ching-Cheng Chen, Neng Chen, Franklin Mullins, Chris Park, Adrian Piliponsky
Adjunct Clinical Faculty: Robert Archibald, Jerome S. Burke, Glenn Cockerham, Stephen Shi-Hua Chen, Seth Haber, Maie K. Herrick, Paul W. Herrmann, Anthony Le, Steven Long, Charles Lombard, Judy Melinek, Gregory Moes, Joseph O'Hara, Girish Putcha, Mahendra Ranchod, Thomas W. Rogers, Joshua Sickel
Department Offices: Medical Center, Lane Building, L-235
Mail Code: 94305-5324
Phone: (650) 723-5255
Web Site: http://pathology.stanford.edu

Courses offered by the Department of Pathology are listed under the subject code PATH on the *Stanford Bulletin's* ExploreCourses web site.

PROGRAMS OF STUDY IN PATHOLOGY

The Department of Pathology offers advanced courses in aspects of pathology. The department does not offer advanced degrees in pathology, but qualified graduate students who are admitted to department-based or interdepartmental graduate programs may elect to pursue their thesis requirements in the department's research laboratories. The discipline of pathology has served as a bridge between the preclinical and clinical sciences and is concerned with the application of advances in the basic biological sciences, both to the diagnosis of human disease and the elucidation of the mechanisms of normal molecular, cellular, and organ structure and function that manifest themselves in clinical disease. Accordingly, the department's research interests extend from fundamental molecular biology to clinical-pathological correlations, with an emphasis on experimental oncology.

Investigation in the department includes basic studies in areas using molecular biological, biochemical, and genetic cell biological techniques: DNA replication in yeast and cultured eukaryotic cells, cell cycle control in animal cells and yeast, identification and pathogenetic role of chromosomal aberrations in human malignancies and mechanisms of activation of oncogenes in human and animal cells, lymphocyte and neutrophil-interactions with endothelial cells, cell type specification and signal transduction pathways leading to specific gene expression or modulation of cytoskeletal behavior; cytoskeletal architecture, cell-matrix interaction, developmental biology of hematopoietic stem cells and thymus, regulation of the immune system, mechanisms of immune and other responses in the central nervous system, and neuro-degenerative diseases. Various studies focus on the development of novel diagnostic and immunotherapeutic treatment modalities and techniques for solid tumors, lymphomas, HIV, and genetic diseases. Research training in all of these areas is available for qualified medical and graduate students by individual arrangement with the appropriate faculty member. A summary of the research interests of the department faculty is available at http://pathology.stanford.edu.

RADIATION ONCOLOGY

Emeriti: Malcolm A. Bagshaw, Peter Fessenden, Don R. Goffinet, George M. Hahn, Kendric Smith
Chair: Richard T. Hoppe
Professors: J. Martin Brown, Sarah S. Donaldson, Amato J. Giaccia, Steven L. Hancock, Richard T. Hoppe, Quynh-Thu Le, Daniel S. Kapp, Steven A. Liebel
Associate Professors: Iris C. Gibbs, Paul Keall, Christopher R. King, Susan J. Knox, Gary Luxton, Lei Xing
Assistant Professors: Laura Attardi, Daniel Chang, Nicholas Denko, Edward Graves, Albert C. Koong
Consulting Professor: Robert M. Sutherland

Courses offered by the Department of Radiation Oncology are listed under the subject code RADO on the *Stanford Bulletin's* ExploreCourses web site.

Radiation Oncology focuses on the use of radiation for cancer therapy and research. The department does not offer degrees; however, its faculty teach courses open to medical students, graduate students, and undergraduates. The department also accepts students in other curricula as advisees for study and research. Graduate students in Biophysics and Cancer Biology may perform their thesis research in the department. Undergraduates may arrange individual research projects under supervision of faculty.

STRUCTURAL BIOLOGY

Chair: Joseph D. Puglisi
Associate Chair: Michael Levitt
Professors: Theodore Jardetzky, Roger D. Kornberg, Michael Levitt, Peter Parham, Joseph D. Puglisi, William I. Weis

At the present time, the major areas of basic research investigation in the department include: DNA repair in mammalian cells after ionizing irradiation; studies of the mechanism of tumor hypoxia in animal tumors; development of new anti-cancer drugs to exploit tumor hypoxia; cytogenetic and molecular methods of predicting the sensitivity of individual tumors to cancer therapy; radiolabeled monoclonal antibodies for cancer detection and treatment; studies of oxygen levels in human tumors using polarographic electrodes; clinical trials of a new hypoxic cytotoxic agent (tirapazamine); studies of the late effects of cancer therapy; and techniques of conformal and intensity modulated radiation therapy.

RADIOLOGY

Emeriti: (Professors) Herbert L. Abrams, Malcolm Bagshaw, Ronald Castellino, Barton Lane, Gerald Friedland, David A. Goodwin, Henry H. Jones, William Marshall, I. Ross McDougall, Robert E. Mindelzun, William H. Northway, Bruce R. Parker, Lewis Wexler, Leslie M. Zatz
Chair: Gary M. Glazer
Professors: Scott W. Atlas, Richard A. Barth, Christopher F. Beaulieu, Michale Federle, Sanjiv Sam Gambhir, Gary M. Glazer, Gary H. Glover, Michael L. Goris, Robert J. Herfkens, Dave Hovsepian, Debra M. Ikeda, R. Brooke Jeffrey, Ann Leung, Michael Marks, Michael Moseley, Sandy Napel, Matilde Nino-Murcia, Norbert J. Pelc, Allan Reiss, Geoffrey Rubin, Brian Rutt, George Segall, F. Graham Sommer, Daniel Spielman
Professors (Research): R. Kim Butts-Pauly
Associate Professors: Francis Blankenberg, Frandics P. Chan, Bruce Daniel, Terry Desser, Huy M. Do, Nancy Fischbein, Dominik Fleischmann, Garry E. Gold, Lawrence Hofmann, Beverley Newman, Eric W. Olcott, Kathryn J. Stevens, Daniel Y. Sze
Associate Professors (Research): Roland Bammer, Rebecca Fahrig, Sylvia Plevritis
Assistant Professors: Sandip Biswal, Robert Dodd, Gloria Hwang, Aya Kamaya, Nishita Kothary, William Kuo, Jafi Lipson, Andrew Quon, Jianghong Rao, Daniel Rubin, Lewis Shin, Shreyas Vasanawala, Juergen Willmann, Joseph Wu, Kristen Yeom, Greg Zaharchuk
Assistant Professors (Research): Zhen Cheng, Brian Hargreaves, David Paik, Ramasamy Paulmurugan
Web Site: http://www-radiology.stanford.edu

Courses offered by the Department of Radiology are listed under the subject code RAD on the *Stanford Bulletin's* ExploreCourses web site.

The Department of Radiology does not offer degrees; however, its faculty teach courses open to medical students, graduate students, and undergraduates. The department also accepts students in other curricula as advisees for study and research. Undergraduates may also arrange individual research projects under the supervision of the department's faculty. This discipline focuses on the use of radiation, ultrasound, and magnetic resonance as diagnostic, therapeutic, and research tools. The fundamental and applied research within the department reflects this broad spectrum as it relates to anatomy, pathology, physiology, and interventional procedures. Original research and development of new clinical applications in medical imaging is supported within the Radiological Sciences Laboratory.

Associate Professor: K. Christopher Garcia
Associate Professor (Research): Yahli Lorch
Assistant Professor (Research): Elizabetta Viani Puglisi
Courtesy Professor: Axel Brunger
Courtesy Associate Professor: Vijay Pande
Courtesy Assistant Professor: Zev Bryant
Department Offices: Fairchild Building, D100
Mail Code: 94305- 5126
Phone: (650) 723-7576

Email: structuralbio@med.stanford.edu
Web Site: http://structuralbio.stanford.edu

Courses offered by the Department of Structural Biology are listed under the subject code SBIO on the *Stanford Bulletin's* ExploreCourses web site.

The department offers course work and opportunities for research in structural biology. Courses fall into two categories: (1) a series of one quarter courses that treat topics of current interest in structural biology and biophysics at an advanced level; and (2) INDE 216, Cells to Tissues, a course for medical students that includes lectures on structure-function relationships of mammalian cells and tissues and a lab on medical histology.

The emphasis of research in the department is on understanding fundamental cellular processes in terms of the structure and function of biological macromolecules and their assemblies. Techniques used include standard methods of biochemistry, cell culture, single-molecule fluorescence spectroscopy, genetic engineering, and three dimensional structure determination by x-ray diffraction, nuclear magnetic resonance spectroscopy and electron microscopy, coupled with the development of computational methods.

DOCTOR OF PHILOSOPHY IN STRUCTURAL BIOLOGY

University requirements for the Ph.D. are described in the "Graduate Degrees" section of this bulletin.

The graduate program in Structural Biology leads to the Ph.D. degree. The department also participates in the Medical Scientists Training Program (MSTP) in which individuals are candidates for both Ph.D. and M.D. degrees.

The graduate program is intended to prepare students for careers as independent investigators in cell and molecular biology. The principal requirement of a Ph.D. degree is the completion of research constituting an original and significant contribution to the advancement of knowledge. The requirements and recommendations for the Ph.D. degree include:

1. Training in a major with connections to biophysics (e.g., physics, chemistry, or biology, with a quantitative background equivalent to that of an undergraduate physics or chemistry major at Stanford).
2. Completion of the following background courses or their equivalents at other institutions:
   a. CHEM 131, 171, 173, and 175
   b. BIOC 200, 201
3. Completion of the following courses or their equivalents:
   a. SBIO 241 and 242
   b. At least four additional graduate-level courses in physical or biological science
   c. MED 255
4. Opportunities for teaching are available during the first nine quarters at the discretion of the advising committee.
5. The student must prepare a dissertation proposal defining the research to be undertaken including methods of procedure. This proposal should be submitted by Winter Quarter of the third year, and it must be approved by a committee of at least three members including the principal research adviser and at least one member from the Department of Structural Biology. The candidate must defend the dissertation proposal in an oral examination. The dissertation reading committee normally evolves from the dissertation proposal review committee.
6. The student must present a Ph.D. dissertation as the result of independent investigation and expressing a contribution to knowledge in the field of structural biology.
7. The student must pass the University oral examination, taken only after the student has substantially completed the research. The examination is preceded by a public seminar in which the research is presented by the candidate.

Applicants to the program should have a bachelor's degree and should have completed at least a year of course work in biology, mathematics, organic chemistry, physical chemistry, and physics. Application forms must be received by the department before December 15 for notification by April 15. Application to the National Science Foundation for fellowship support is also encouraged. Remission of fees and a personal stipend are available to graduate students in the department. Prospective applicants should contact the Department of Structural Biology for further information.

Current topics of research in the department lie in the areas of gene expression; theoretical, crystallographic, and genetic analysis of protein structure; and cell-cell interaction. See http://www.med.stanford.edu/school/structuralbio for further information.

COURSES OF INSTRUCTION 2010-11

This listing is based on a static extract of courses performed on August 28, 2010. For latest and correct information, including scheduling, see the Bulletin's ExploreCourses web site at http://explorecourses.stanford.edu.

Courses of instruction are listed in alphabetical order by subject name, and then numerically by catalog number.

Stanford does not have a standard course catalog numbering system. Courses numbered from 1 through 99 are primarily for freshmen and sophomores. Courses numbered from 100 through 199 are primarily for juniors and seniors; some departments, however, offer courses numbered from 200 through 299 for juniors and seniors. Most courses numbered 200 and above are for graduate students; no graduate career course is numbered below 200, and all courses above 300 are for graduate students.

Courses offered for variable units require different amounts of work depending upon the units for which a student enrolls. Students are advised to consult with the department or instructor offering the course to determine the appropriate number of units.

Beginning in Autumn Quarter 2005, a modified and redefined set of undergraduate General Education Requirements, designated in this bulletin as GERs, went into effect. Students who matriculated Autumn Quarter 2004-05 or later are subject to the revised General Education Requirements effective Autumn Quarter 2005-06. Students who matriculated Autumn Quarter 2003-04 or earlier remain on the old General Education Requirements, but may elect to change to the new system. Students interested in electing the revised GER system should contact the Office of the University Registrar. No further changes are allowed once a student has elected to move to the new system.

WIM indicates courses that fulfill the undergraduate departmental Writing in the Major requirement. AU indicates Activity courses that are subject to undergraduate University Activity Unit limitations (8 units maximum).

SUBJECT CODES

Each course is identified by a subject code and a catalog number. Throughout this bulletin, Axess subject codes have been printed wherever relevant.

SUMMER SESSION

This bulletin includes, for the Summer Session, only those courses that can be tentatively scheduled at publication time by each department. For the complete list of courses and faculty, refer to http://summer.stanford.edu, updated in February. Courses added during the academic year are available on the *Stanford Bulletin's* ExploreCourses web site at http://explorecourses.stanford.edu.

OVERSEAS STUDIES

Undergraduate courses taught overseas at Stanford's Bing Overseas Studies Program are listed under the relevant Overseas Studies Center subject code. Courses applicable to an undergraduate major are also listed at the end of many department degree requirement sections above.

SCHEDULE OF CLASSES

Scheduling information is available on the *Stanford Bulletin's* ExploreCourses web site at http://explorecourses.stanford.edu. Students enroll on Axess at http://axess.stanford.edu.

AERONAUTICS AND ASTRONAUTICS (AA) COURSES

UNDERGRADUATE COURSES IN AERONAUTICS AND ASTRONAUTICS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

AA 100. Introduction to Aeronautics and Astronautics
The principles of fluid flow, flight, and propulsion; the creation of lift and drag, aerodynamic performance including takeoff, climb, range, and landing performance, structural concepts, propulsion systems, trajectories, and orbits. The history of aeronautics and astronautics. Prerequisites: MATH 41, 42; elementary physics. GER:DB-EngrAppSci

3 units, Aut (Alonso, J)

AA 113N. Structures: Why Things Don't (and Sometimes Do) Fall Down
(Stanford Introductory Seminar) Preference to freshmen. How structures created by nature or built by human beings keep things up and keep things in. Topics: nature's structures from microorganisms to large vertebrae; buildings from ancient dwellings to modern skyscrapers; spacecraft and airplanes; boats from ancient times to America's Cup sailboats, and how they win or break; sports equipment; and biomedical devices including bone replacements and cardiovascular stents. How composite materials are used to make a structure light and strong. GER:DB-EngrAppSci

3 units, Win (Springer, G)

AA 116N. Electric Automobiles and Aircraft
(Stanford Introductory Seminar) (Same as EE 25Q) Transportation accounts for nearly one-third of American energy use and greenhouse gas emissions and three-quarters of American oil consumption with impacts on climate change, air pollution, resource depletion, and national security. Finding sustainable transportation solutions, covering the past and present of transportation and its impacts. Alternative fuel proposals including the most promising option, battery electric vehicles. Energy requirements of air, ground, and maritime transportation; design of electric motors, power control systems, drive trains, and batteries; and technologies for generating renewable energy. Two opportunities for hands-on experiences with electric cars. Prerequisites: introductory calculus and Physics AP or elementary mechanics.

3 units, Aut (Cox, D; Enge, P)

AA 190. Directed Research and Writing in Aero/Astro
For undergraduates. Experimental or theoretical work under faculty direction, and emphasizing development of research and communication skills. Written report(s) and letter grade required; if this is not appropriate, enroll in 199. Consult faculty in area of interest for appropriate topics, involving one of the graduate research groups or other special projects. May be repeated for credit. Prerequisite: consent of student services manager and instructor. WIM

3-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

AA 199. Independent Study in Aero/Astro
Directed reading, lab, or theoretical work for undergraduate students. Consult faculty in area of interest for appropriate topics involving one of the graduate research groups or other special projects. May be repeated for credit. Prerequisite: consent of instructor.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN AERONAUTICS AND ASTRONAUTICS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

AA 200. Applied Aerodynamics
Analytical and numerical techniques for the aerodynamic analysis of aircraft, focusing on airfoil theory, finite wing theory, far-field and Trefftz-plane analysis, two-dimensional laminar and turbulent boundary layers in airfoil analysis, laminar-to-turbulent transition, compressibility effects, and similarity rules. Biweekly assignments require MATLAB or a suitable programming language. Prerequisite: undergraduate courses in basic fluid mechanics and applied aerodynamics, AA 210A.

3 units, Win (Alonso, J)

AA 201A. Fundamentals of Acoustics
Acoustic equations for a stationary homogeneous fluid; wave equation; plane, spherical, and cylindrical waves; harmonic (monochromatic) waves; simple sound radiators; reflection and transmission of sound at interfaces between different media; multipole analysis of sound radiation; Kirchoff integral representation; scattering and diffraction of sound; propagation through ducts (dispersion, attenuation, group velocity); sound in enclosed regions (reverberation, absorption, and dispersion); radiation from moving sources; propagation in the atmosphere and underwater. Prerequisite: first-year graduate standing in engineering, mathematics, sciences; or consent of instructor.

3 units, not given this year

AA 201B. Topics in Aeroacoustics
Acoustic equations for moving medium, simple sources, Kirchhoff formula, and multipole representation; radiation from moving sources; acoustic analogy approach to sound generation in compact flows; theories of Lighthill, Powell, and Mohring; acoustic radiation from moving surfaces; theories of Curl, Ffowcs Williams, and Hawkings; application of acoustic theories to the noise from propulsive jets, and airframe and rotor noise; computational methods for acoustics. Prerequisite: 201A or consent of instructor.

3 units, Spr (Lele, S)

AA 202. Hypersonic Flow
Principles and equations governing hypersonic flight and high temperature gas dynamics, including chemical and thermal equilibrium and non-equilibrium; statistical thermodynamics; kinetic theory; transport phenomena; radiation; surface heating; and scramjet engines. Prerequisite: understanding of aerodynamics. Recommended: AA 200A.

3 units, Spr (MacCormack, R)

AA 206. Bio-Aerodynamics
Topics: flapping flight, low Reynolds number aerodynamics, wing design, flocks, swarms, and dynamic soaring. Readings from current and historical literature dealing with theoretical and observational studies. Applications in aircraft design, and simulation-based problem sets. Prerequisite: course in aerodynamics such as 100, 200A, or 241A.

3 units, not given this year

AA 208. Aerodynamics of Aircraft Dynamic Response and Stability
Companion to 200A for those interested in control and guidance. Typical vehicles and the technical tradeoffs affecting their design. Equations of motion, stressing applications to dynamic performance, stability, and forced response. Forms and sources for the required aerodynamic data. Response to small disturbances and stability derivatives. Static stability and trim. Review of aerodynamic fundamentals, leading to airload predictions for wings, bodies, and complete aircraft. Paneling and other methods for derivative estimation. Natural motions of the aircraft, and the influence on them of various configuration parameters. Vehicle behavior in maneuvers of small and large amplitudes. Prerequisites: 200A, 210A, or equivalents (may be taken concurrently).

3 units, Spr (Kroo, I)

AA 210A. Fundamentals of Compressible Flow
Topics: development of the three-dimensional, non-steady, field equations for describing the motion of a viscous, compressible fluid; differential and integral forms of the equations; constitutive equations for a compressible fluid; the entropy equation; compressible boundary layers; area-averaged equations for one-dimensional steady flow; shock waves; channel flow with heat addition and friction; flow in nozzles and inlets; oblique shock waves; Prandtl-Meyer expansion; unsteady one-dimensional flow; the shock tube; small disturbance theory; acoustics in one-dimension; steady flow in two-dimensions; potential flow; linearized potential flow; lift and drag of thin airfoils. Prerequisites: undergraduate background in fluid mechanics and thermodynamics.

3 units, Aut (Cantwell, B)

AA 210B. Fundamentals of Compressible Flow
Continuation of 210A with emphasis on more general flow geometry. Use of exact solutions to explore the hypersonic limit. Identification of similarity parameters. Solution methods for the linearized potential equation with applications to wings and bodies in steady flow; their relation to physical acoustics and wave motion in nonsteady flow. Nonlinear solutions for nonsteady constant area flow and introduction to Riemann invariants. Elements of the theory of characteristics; nozzle design; extension to nonisentropic flow. Real gas effects in compressible flow. Flows in various gas dynamic testing facilities. Prerequisite: 210A.

3 units, Spr (Alonso, J)

AA 214A. Introduction to Numerical Methods for Engineering
(Same as CME 206, ME 300C) Numerical methods from a user's point of view. Lagrange interpolation, splines. Integration: trapezoid, Romberg, Gauss, adaptive quadrature; numerical solution of ordinary differential equations: explicit and implicit methods, multistep methods, Runge-Kutta and predictor-corrector methods, boundary value problems, eigenvalue problems; systems of differential equations, stiffness. Emphasis is on analysis of numerical methods for accuracy, stability, and convergence. Introduction to numerical solutions of partial differential equations; Von Neumann stability analysis; alternating direction implicit methods and nonlinear equations. Prerequisites: CME 200/ME 300A, CME 204/ME 300B.

3 units, Spr (Iaccarino, G)

AA 214B. Numerical Computation of Compressible Flow
Numerical methods for solving hyperbolic sets of partial differential equations. Explicit, implicit, flux-split, finite difference, and finite volume procedures for approximating the governing equations and boundary conditions. Numerical solution by direct approximate factorization and iterative Gauss-Seidel line relaxation. Application to Euler equations. Computational problems. Prerequisite: 214A.

3 units, Win (MacCormack, R)

AA 214C. Numerical Computation of Viscous Flow
Numerical methods for solving parabolic sets of partial differential equations. Numerical approximation of the equations describing compressible viscous flow with adiabatic, isothermal, slip, and no-slip wall boundary conditions. Applications to the Navier-Stokes equations in two and three dimensions at high Reynolds number. Computational problems are assigned. Prerequisite: 214B.

3 units, Spr (MacCormack, R)

AA 215A. Advanced Computational Fluid Dynamics
(Same as CME 215A) High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.

3 units, Win (Jameson, A)

AA 215B. Advanced Computational Fluid Dynamics
(Same as CME 215B) High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.

3 units, Spr (Jameson, A)

AA 218. Introduction to Symmetry Analysis
Methods of symmetry analysis and their use in the reduction and simplification of physical problems. Topics: dimensional analysis, phase-space analysis of autonomous systems of ordinary differential equations, use of Lie groups to reduce the order of nonlinear ODEs and to generate integrating factors, use of Lie groups to reduce the dimension of partial differential equations and to generate similarity variables, exact solutions of nonlinear PDEs generated from groups. Mathematica-based software developed by the instructor is used for finding invariant groups of ODEs and PDEs.

3 units, Spr (Cantwell, B)

AA 222. Introduction to Multidisciplinary Design Optimization
Design of aerospace systems within a formal optimization environment. Mathematical formulation of the multidisciplinary design problem (parameterization of design space, choice of objective functions, constraint definition); survey of algorithms for unconstrained and constrained optimization and optimality conditions; description of sensitivity analysis techniques. Hierarchical techniques for decomposition of the multidisciplinary design problem; use of approximation theory. Applications to design problems in aircraft and launch vehicle design. Prerequisites: multivariable calculus; familiarity with a high-level programming language: FORTRAN, C, C++, or MATLAB.

3 units, not given this year

AA 236A. Spacecraft Design
The design of unmanned spacecraft and spacecraft subsystems emphasizing identification of design drivers and current design methods. Topics: spacecraft configuration design, mechanical design, structure and thermal subsystem design, attitude control, electric power, command and telemetry, and design integration and operations.

3-5 units, Aut (Kalman, A)

AA 236B. Spacecraft Design Laboratory
Continuation of 236A. Emphasis is on practical application of systems engineering to the life cycle program of spacecraft design, testing, launching, and operations. Prerequisite: 236A or consent of instructor.

3 units, Win (Kalman, A)

AA 236C. Spacecraft Design Laboratory

3 units, Spr (Kalman, A)

AA 240A. Analysis of Structures
Elements of two-dimensional elasticity theory. Boundary value problems; energy methods; analyses of solid and thin walled section beams, trusses, frames, rings, monocoque and semimonocoque structures. Prerequisite: ENGR 14 or equivalent.

3 units, Aut (Chang, F)

AA 240B. Analysis of Structures
Thin plate analysis. Structural stability. Material behavior: plasticity and fracture. Introduction of finite element analysis; truss, frame, and plate structures. Prerequisite: 240A or consent of instructor.

3 units, Win (Chang, F)

AA 241A. Introduction to Aircraft Design, Synthesis, and Analysis
New aircraft systems emphasizing commercial aircraft. Economic and technological factors that create new aircraft markets. Determining market demands and system mission performance requirements; optimizing configuration to comply with requirements; the interaction of disciplines including aerodynamics, structures, propulsion, guidance, payload, ground support, and parametric studies. Applied aerodynamic and design concepts for use in configuration analysis. Application to a student-selected aeronautical system; applied structural fundamentals emphasizing fatigue and fail-safe considerations; design load determination; weight estimation; propulsion system performance; engine types; environmental problems; performance estimation. Direct/indirect operating costs prediction and interpretation. Aircraft functional systems; avionics; aircraft reliability and maintainability. Prerequisite: 100 or equivalent.

3 units, Aut (Kroo, I)

AA 241B. Introduction to Aircraft Design, Synthesis, and Analysis
New aircraft systems emphasizing commercial aircraft. Economic and technological factors that create new aircraft markets. Determining market demands and system mission performance requirements; optimizing configuration to comply with requirements; the interaction of disciplines including aerodynamics, structures, propulsion, guidance, payload, ground support, and parametric studies. Applied aerodynamic and design concepts for use in configuration analysis. Application to a student-selected aeronautical system; applied structural fundamentals emphasizing fatigue and fail-safe considerations; design load determination; weight estimation;

propulsion system performance; engine types; environmental problems; performance estimation. Direct/indirect operating costs prediction and interpretation. Aircraft functional systems; avionics; aircraft reliability and maintainability. Prerequisite: 100 or equivalent.

3 units, Win (Kroo, I)

AA 241X. Design, Construction, and Testing of Autonomous Aircraft

Students grouped according to their expertise to carry out the multidisciplinary design of a solar-powered autonomous aircraft that must meet a clearly stated set of design requirements. Design and construction of the airframe, integration with existing guidance, navigation, and control systems, and development and operation of the resulting design. Design reviews and reports. Prerequisites: expertise in any of the following disciplines by having satisfied the specified courses or equivalent work elsewhere: conceptual design (241A,B); applied aerodynamics (200A,B); structures (240A); composite manufacturing experience; guidance and control (208/271, ENGR 205).

3 units, Spr (Alonso, J; Kroo, I)

AA 242A. Classical Dynamics

(Same as ME 331A) Accelerating and rotating reference frames. Kinematics of rigid body motion; Euler angles, direction cosines. D'Alembert's principle, equations of motion. Inertia properties of rigid bodies. Dynamics of coupled rigid bodies. Lagrange's equations and their use. Dynamic behavior, stability, and small departures from equilibrium. Prerequisite: ENGR 15 or equivalent.

3 units, Aut (Close, S)

AA 242B. Mechanical Vibrations

For M.S.-level graduate students. Covers the vibrations of discrete systems and continuous structures. Introduction to the computational dynamics of linear engineering systems. Review of analytical dynamics of discrete systems; undamped and damped vibrations of N-degree-of-freedom systems; continuous systems; approximation of continuous systems by displacement methods; solution methods for the Eigenvalue problem; direct time-integration methods. Prerequisites: AA 242A or equivalent (recommended but not required); basic knowledge of linear algebra and ODEs; no prior knowledge of structural dynamics is assumed.

3 units, Spr (Farhat, C)

AA 244. Introduction to Plasma Physics

Physics of space plasmas. Single-particle motions. Drifts. Kinetic theory, including stability and instability. Plasmas as fluids and fluid drifts. Waves in plasmas. Radiation in a plasma. Diffusion and resistivity. Fluid stability and instability. Kinetic stability and instability.

3 units, Win (Close, S)

AA 252. Techniques of Failure Analysis

Introduction to the field of failure analysis, including fire and explosion analysis, large scale catastrophe projects, traffic accident reconstruction, aircraft accident investigation, human factors, biomechanics and accidents, design defect cases, materials failures and metallurgical procedures, and structural failures. Product liability, failure modes and effects analysis, failure prevention, engineering ethics, and the engineer as expert witness.

3 units, Spr (Murray, S)

AA 253. Product and Systems Development

Modern approaches to aerospace design development for life cycle value. Concepts of air and space systems development in a systems context. Stakeholder value issues and requirements through manufacturing and delivery. Processes and practices for functional analysis, concept and architecture development, trades, domain criteria, interfaces, and verification and validation. Reliability, risk, and safety. Value stream analysis, integrated product and process development, key characteristics, and hardware/software integration aimed at information systems. Tools involve quality function deployment, design structure matrices, and decision mechanisms.

3 units, Spr (Weiss, S; Alonso, J)

AA 254. Information Systems in Aerospace Vehicles

Sensors, processors, activators, and operators, and the media and protocols that integrate them for performance and safety.

2 units, not given this year

AA 256. Mechanics of Composites

Fiber reinforced composites. Stress, strain, and strength of composite laminates and honeycomb structures. Failure modes and failure criteria. Environmental effects. Manufacturing processes. Design of composite structures. Individual design project required of each student, resulting in a usable computer software. Prerequisite: ENGR 14 or equivalent.

3 units, Win (Chang, F)

AA 257. Design of Composite Structures

Hands-on design, analysis, and manufacturing in composites. Composite beams, columns, and plates; application of finite element methods to composite structures; failure analysis and damage tolerance design of composite structures; and impact damage, compression after impact, and bolted and bonded composites joints. Class divided into working teams (design, analysis, manufacturing, and tests) to design and build a composite structure to be tested to failure; the structure may enter the national SAMPE composite bridge design contest. Prerequisite: 256 or consent of instructor.

3 units, not given this year

AA 260. Sustainable Aviation

Quantitative assessment of the impact of aviation on the environment including noise, local, and global emissions, and models used to predict it. Current and future technologies that may allow the air transportation system to meet anticipated growth while reducing or minimizing environmental problems. Atmospheric effects of NOx, CO2, particulates, unburned hydrocarbons, and water vapor deposition at high altitudes and metrics for assessing global climate effects. Noise sources, measurement, and mitigation strategies. Fundamentals of aircraft and engine performance needed to assess current and future concepts. Major national and international policy implications of existing and future technology choices. Recommended: AA 241B.

3 units, not given this year

AA 271A. Dynamics and Control of Spacecraft and Aircraft

The dynamic behavior of aircraft and spacecraft, and the design of automatic control systems for them. For aircraft: non-linear and linearized longitudinal and lateral dynamics; linearized aerodynamics; natural modes of motion; autopilot design to enhance stability, control the flight path, and perform automatic landings. For spacecraft in orbit: natural longitudinal and lateral dynamic behavior and the design of attitude control systems. Prerequisites: AA242A, ENGR 105.

3 units, Spr (Rock, S)

AA 272C. Global Positioning Systems

The principles of satellite navigation using GPS. Positioning techniques using code tracking, single and dual frequency, carrier aiding, and use of differential GPS for improved accuracy and integrity. Use of differential carrier techniques for attitude determination and precision position determination. Prerequisite: familiarity with matrix algebra and MatLab (or another mathematical programming language).

3 units, Win (Staff)

AA 272D. Integrated Navigation Systems

Navigation satellites (GPS, GLONASS), GPS receivers, principles of inertial navigation for ships, aircraft, and spacecraft. Kalman Filters to integrate GPS and inertial sensors. Radio navigation aids (VOR, DME, LORAN, ILS). Doppler navigation systems. Prerequisites: 272C; ENGR 15, 105. Recommended: ENGR 205.

3 units, not given this year

AA 278. Optimal Control and Hybrid Systems

Models for continuous-time and discrete-event dynamic systems. Modeling techniques for hybrid systems. Optimization problems for continuous and discrete dynamic systems. Dynamic programming and the Hamilton-Jacobi equation. Differential games. Automatic verification and controller synthesis for hybrid systems. Hybrid systems simulation. Driving examples from flight management system logic, and automated air traffic systems. Prerequisites: EE 263, ENGR 209.

3 units, not given this year

AA 279. Space Mechanics

Orbits of near-earth satellites and interplanetary probes; transfer and rendezvous; decay of satellite orbits; influence of earth's oblateness; sun and moon effects on earth satellites. Prerequisite: ENGR 15 or equivalent, and familiarity with MatLab (or another mathematical programming language).

3 units, Spr (Barrows, A; Close, S)

AA 283. Aircraft and Rocket Propulsion
Introduction to the design and performance of airbreathing and rocket engines. Topics: the physical parameters used to characterize propulsion system performance; gas dynamics of nozzles and inlets; cycle analysis of ramjets, turbojets, turbofans, and turboprops; component matching and the compressor map; introduction to liquid and solid propellant rockets; multistage rockets; hybrid rockets; thermodynamics of reacting gases. Prerequisites: undergraduate background in fluid mechanics and thermodynamics.
3 units, Win (Cantwell, B)

AA 284A. Advanced Rocket Propulsion
The principles of rocket propulsion system design and analysis. Fundamental aspects of the physics and chemistry of rocket propulsion. Focus is on the design and analysis of chemical propulsion systems including liquids, solids, and hybrids. Nonchemical propulsion concepts such as electric and nuclear rockets. Launch vehicle design and optimization issues including trajectory calculations. Limited enrollment. Prerequisites: 283 or consent of instructor.
3 units, Spr (Karabeyoglu, M)

AA 284B. Propulsion System Design Laboratory
Propulsion systems engineering through the design and operation of a sounding rocket. Students work in small teams through a full project cycle including requirements definition, performance analysis, system design, fabrication, ground and flight testing, and evaluation. Prerequisite: 284A and consent of instructor.
3 units, not given this year

AA 284C. Propulsion System Design Laboratory
Continuation of 284A,B. Prerequisite: 284B, and consent of instructor.
3 units, not given this year

AA 290. Problems in Aero/Astro
(Undergraduates register for 190 or 199.) Experimental or theoretical investigation. Students may work in any field of special interest. Register for section belonging to your research supervisor. May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

AA 291. Practical Training
Educational opportunities in high-technology research and development labs in aerospace and related industries. Internship integrated into a student's academic program. Research report outlining work activity, problems investigated, key results, and any follow-on projects. Meets the requirements for Curricular Practical Training for students on F-1 visas. Student is responsible for arranging own employment and should see department student services manager before enrolling. May be repeated for credit.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

AA 294. Case Studies in Aircraft Design
Presentations by researchers and industry professionals. Registration for credit optional. May be repeated for credit.
1 unit, Spr (Jameson, A)

AA 295. Aerospace Structures and Materials
Presentations by researchers and industry professionals in aerospace structures and materials. May be repeated for credit.
1 unit, Spr (Chang, F)

AA 297. Seminar in Guidance, Navigation, and Control
For graduate students with an interest in automatic control applications in flight mechanics, guidance, navigation, and mechanical design of control systems; others invited. Problems in all branches of vehicle control, guidance, and instrumentation presented by researchers on and off campus. Registration for credit optional. May be repeated for credit.
1 unit, not given this year

AA 300. Engineer Thesis
Thesis for degree of Engineer. Students register for section belonging to their thesis adviser.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

AA 301. Ph.D. Dissertation
Prerequisite: completion of Ph.D qualifying exams. Students register for section belonging to their thesis adviser. (Staff)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

AA 801. TGR Engineer Thesis
Engineer's thesis or non-doctoral work for a TGR student.
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

AFRICAN AND AFRICAN AMERICAN STUDIES (AFRICAAM) COURSES

UNDERGRADUATE COURSES IN AFRICAN AND AFRICAN AMERICAN STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

AFRICAAM 43. Introduction to African American Literature
(Same as AMSTUD 143, ENGLISH 43, ENGLISH 143) (English majors and others taking 5 units, register for 143.) African American literature from its earliest manifestations in the spirituals, trickster tales, and slave narratives to recent developments such as black feminist theory, postmodern fiction, and hip hop lyricism. The defining debates and phenomena within African American cultural history, including the status of realist aesthetics in black writing; the contested role of literature in black political struggle; the question of diaspora; the problem of intra-racial racism; and the emergence of black internationalism. Attention to the discourse of the Enlightenment, modernist aesthetics, and the role of Marxism in black political and literary history. GER:DB-Hum, EC-AmerCul
3-5 units, Aut (Rasberry, G)

AFRICAAM 64C. From Freedom to Freedom Now!: African American History, 1865-1965
(Same as HISTORY 64C) (Same as HISTORY 164C. History majors and others taking 5 units, register for 164C.) Explores the working lives, social worlds, political ideologies and cultural expressions of African Americans from emancipation to the early civil rights era. Topics include: the transition from slavery to freedom, family life, work, culture, leisure patterns, resistance, migration and social activism. Draws largely on primary sources including autobiographies, memoirs, letters, personal journals, newspaper articles, pamphlets, speeches, literature, film and music. GER:DB-SocSci, EC-AmerCul
3 units, Spr (Hobbs, A)

AFRICAAM 75. Black Cinema
How filmmakers represent historical and cultural issues in Black cinema.
2 units, not given this year

AFRICAAM 75B. Black Sitcoms
The portrayal of black life on television in the 70s. Critical framework including concepts of identity, race, gender, and class. In-class viewings. Sitcoms in relation to theoretical work including that of Toni Morrison, Marlon Riggs, Hermann Gray, Ann duCille, and Mark Anthony Neal.
2 units, Aut (Barker-Alexander, J), given occasionally

AFRICAAM 105. Introduction to African and African American Studies
(Same as HISTORY 255B) Interdisciplinary. Central themes in African American culture and history related to race as a definitive American phenomenon. African survivals and interpretations of slavery in the New World, contrasting interpretations of the Black family, African American literature, and art. Possible readings: Frederick Douglass, Harriet Jacobs, Booker T. Washington, W.E.B. DuBois, Richard Wright, Maya Angelou, James Baldwin, Malcolm X, Alice Walker, and bell hooks. Focus may vary each year. GER:DB-Hum, EC-AmerCul
5 units, not given this year

AFRICAAM 107C. The Black Mediterranean: Greece, Rome and Antiquity
(Same as CLASSGEN 107, CSRE 107) Explore problems of race and ethnicity as viable criteria in studying ancient societies and consider the question, What is the Mediterranean?, in relation to premodern evidence. Investigate the role of blackness as a marker of ethnicity; the demography of slavery and its roles in forming social identities; and environmental determinism as a factor in ethnic and racial thinking. Consider Greek and Roman perspec-

tives and behavior, and their impact on later theories of race and ethnicity as well as the Mediterranean as a whole. GER:EC-GlobalCom

4-5 units, Aut (Parker, G)

AFRICAAM 121X. Hip Hop, Youth Identities, and the Politics of Language

(Same as AMSTUD 121X, ANTHRO 121A, CSRE 121X, EDUC 121X, LINGUIST 155) Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture.

3-4 units, Spr (Alim, H)

AFRICAAM 123. Great Works of the African American Tradition

Foundational African and African American scholarly figures and their work from the 19th century to the present. Historical, political, and scholarly context. Dialogues distinctive to African American culture. May be repeated for credit.

5 units, not given this year

AFRICAAM 145A. Poetics and Politics of Caribbean Women's Literature

(Same as CSRE 145A) Mid 20th-century to the present. How historical, economic, and political conditions in Haiti, Cuba, Jamaica, Antigua, and Guadeloupe affected women. How Francophone, Anglophone, and Hispanophone women novelists, poets, and short story writers respond to similar issues and pose related questions. Caribbean literary identity within a multicultural and diasporic context; the place of the oral in the written feminine text; family and sexuality; translation of European master texts; history, memory, and myth; and responses to slave history, colonialism, neocolonialism, and globalization. GER:DB-SocSci, DB-SocSci, EC-Gender

5 units, Win (Duffey, C)

AFRICAAM 146. New Possibilities for Writing and Art

Writing workshop to explore conventional as well as innovative approaches to writing, including digital, sound and movement. How different forms of music can inspire poetry. How still art, live performance, interviews or film shape the way one can think about and compose stories. What those stories and poems look and feel like when put to movement. CWriting experiments, museum visits, and performance of students' works. Guest poets, fiction writers, and artists who blur these boundaries. Students submit written pieces each week to be discussed.

5 units, Spr (Staff), given once only

AFRICAAM 152. DuBois and American Culture

(Same as ENGLISH 152D) His life and career. Focus on first half of his life from his Harvard doctoral dissertation to the end of the Harlem Renaissance in which he played a crucial role. Sources include his books on history and sociology, scholarly essays, novels, and journals that he edited. AAAS WIM course. GER:DB-Hum, EC-AmerCul

5 units, not given this year

AFRICAAM 152G. Global Harlem Renaissance

(Same as AMSTUD 152G, ENGLISH 152G) The explosion of African American artistic expression during 20s and 30s New York known as the Harlem Renaissance. Amiri Baraka once referred to the Renaissance as a kind of vicious modernism, as a BangClash, that impacted and was impacted by political, cultural, and aesthetic changes in the U.S., Europe, the Caribbean, and Latin America. Focus is on the literature, graphic arts, and the music of the era in this global context. GER:DB-Hum, EC-AmerCul

5 units, Aut (Elam, M)

AFRICAAM 169A. Cultural Traffic: Race, Performance, and Globalization

(Same as AMSTUD 169, CSRE 169A, DRAMA 169A, DRAMA 303A) The transnational intersections of race and performance. The question of race understood internationally and how do such definitions travel. Critical race theory and constructions of race through the lens of performance. The transnational meanings of such performances. Students read, study, analyze, and possibly stage theoretical and performance texts from inside and outside the U.S.. Course satisfies DRAMA 302/303 requirement.

3-5 units, Aut (George, N)

AFRICAAM 173S. Transcultural and Multiethnic Lives: Contexts, Controversies, and Challenges

(Same as ASNAMST 173S, CSRE 173S) Lived experience of people who dwell in the border world of race and nation where they negotiate transcultural and multiethnic identities and politics. Comparative, historical, and global contexts such as family and class. Controversies, such as representations of mixed race people in media and multicultural communities. What the lives of people like Tiger Woods and Barack Obama reveal about how the marginal is becoming mainstream.

5 units, Spr (Murphy-Shigematsu, S)

AFRICAAM 190. Directed Reading

May be repeated for credit. Prerequisite: consent of instructor.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

AFRICAAM 199. Honors Project

May be repeated for credit. Prerequisite: consent of instructor.

1-5 units, Win (Staff), Spr (Staff)

AFRICAAM 200X. Honors Thesis and Senior Thesis Seminar

Required for seniors. Weekly colloquia with AAAS Director and Associate Director to assist with refinement of research topic, advisor support, literature review, research, and thesis writing. Readings include foundational and cutting-edge scholarship in the interdisciplinary fields of African and African American studies and comparative race studies. Readings assist students situate their individual research interests and project within the larger. Students may also enroll in AFRICAAM 200Y in Winter and AFRICAAM 200Z in Spring for additional research units (up to 10 units total).

3-5 units, Win (Staff)

AFRICAAM 200Y. Honors Thesis and Senior Thesis Research

Winter. Required for students writing an Honors Thesis. Optional for Students writing a Senior Thesis.

3-5 units, Win (Staff)

AFRICAAM 200Z. Honors Thesis and Senior Thesis Research

Spring. Required for students writing an Honors Thesis. Optional for Students writing a Senior Thesis.

3-5 units, Spr (Staff)

AFRICAAM 261E. Mixed Race Literature in the U.S. and South Africa

(Same as AMSTUD 261E, ENGLISH 261E) As scholar Werner Sollors recently suggested, novels, poems, stories about interracial contacts and mixed race constitute an orphan literature belonging to no clear ethnic or national tradition. Yet the theme of mixed race is at the center of many national self-definitions, even in the U.S. post-civil rights and South Africa's post-Apartheid era. Aesthetic engagements with mixed race politics in these trans- and post-national dialogues, beginning in the 1700s and focusing on the 20th and 21st centuries.

5 units, Win (Elam, M; Parker, G)

AFRICAAM 262D. African American Poetics

(Same as AMSTUD 262D, ENGLISH 262D) Examination of African American poetic expressive forms from the 1700s to the 2000s, considering the central role of the genre--from sonnets to spoken word, from blues poetry to new media performance--in defining an evolving literary tradition and cultural identity.

5 units, Win (Elam, M)

GRADUATE COURSES IN AFRICAN AND AFRICAN AMERICAN STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

AFRICAAM 233A. Counseling Theories and Interventions from a Multicultural Perspective
(Same as EDUC 233A) In an era of globalization characterized by widespread migration and cultural contacts, professionals face a challenge: how does one practice successfully when working with clients/students from many different backgrounds? The need to examine, conceptualize, and work with individuals according to the multiple ways in which they identify themselves. Multicultural counseling concepts, issues, and research. Literature on counselor and client characteristics such as social status or race/ethnicity and their effects on the counseling process and outcome. Issues in consultation with culturally and linguistically diverse parents and students and work with migrant children and their families.
3-5 units, Spr (LaFromboise, T)

AFRICAAM 245. Understanding Racial and Ethnic Identity Development
(Same as EDUC 245) African American, Native American, Mexican American, and Asian American racial and ethnic identity development; the influence of social, political and psychological forces in shaping the experience of people of color in the U.S. The importance of race in relationship to social identity variables including gender, class, and occupational, generational, and regional identifications. Bi- and multiracial identity status, and types of white racial consciousness.
3-5 units, Win (LaFromboise, T)

AFRICAN AND MIDDLE EASTERN LANGUAGES (AMELANG) COURSES

UNDERGRADUATE COURSES IN AFRICAN AND MIDDLE EASTERN LANGUAGES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

AMELANG 1A. Beginning Arabic, First Quarter
(Formerly AMELANG 120A.) One-year sequence. Emphasis is on reading and writing standard Arabic (fusha).
5 units, Aut (Obeid, K)

AMELANG 1B. Beginning Arabic, Second Quarter
(Formerly AMELANG 120B.) Continuation of 1A. One-year sequence. Emphasis is on reading and writing standard Arabic (fusha).
5 units, Win (Obeid, K)

AMELANG 1C. Beginning Arabic, Third Quarter
(Formerly AMELANG 120C.) Continuation of 1B. One-year sequence. Emphasis is on reading and writing standard Arabic (fusha).Fulfills the University Foreign Language Requirement.
5 units, Spr (Obeid, K)

AMELANG 11A. Intermediate Arabic, First Quarter
(Formerly AMELANG 121A.) Speaking, listening, reading, and writing, emphasizing Arabic grammar and functional applications.
4-5 units, Aut (Salti, R)

AMELANG 11B. Intermediate Arabic, Second Quarter
(Formerly AMELANG 121B.) Continuation of 11A. Speaking, listening, reading, and writing, emphasizing Arabic grammar and functional applications.
4-5 units, Win (Salti, R)

AMELANG 11C. Intermediate Arabic, Third Quarter
(Formerly AMELANG 121C.) Continuation of 11B. Speaking, listening, reading, and writing, emphasizing Arabic grammar and functional applications.
4-5 units, Spr (Salti, R)

AMELANG 21A. Advanced Arabic, First Quarter
(Formerly AMELANG 122A.) Language proficiency through use of complex and compound sentences. Media Arabic, literary works, the Arabic Internet, films, and cultural productions. Continuation of 11C.
2-4 units, Aut (Aweiss, S)

AMELANG 21B. Advanced Arabic, Second Quarter
(Formerly AMELANG 122B.) Continuation of 21B. Language proficiency through use of complex and compound sentences. Media Arabic, literary works, the Arabic Internet, films, and cultural productions.
2-4 units, Win (Aweiss, S)

AMELANG 21C. Advanced Arabic, Third Quarter
(Formerly AMELANG 122C.) Continuation of 21B. Language proficiency through use of complex and compound sentences. Media Arabic, literary works, the Arabic Internet, films, and cultural productions.
2-4 units, Spr (Aweiss, S)

AMELANG 23A. Reading Arabic, First Quarter
For seniors and graduate students who need advanced ability in Arabic for the PhD or for advanced research in their own field. Prerequisite: three years of Arabic or a demonstrated equivalence.
2-3 units, Aut (Barhoum, K)

AMELANG 23B. Reading Arabic, Second Quarter
(Formerly AMELANG 196B.) Continuation of 23A. For seniors and graduate students who need advanced ability in Arabic for the PhD or for advanced research in their own field. Prerequisite: three years of Arabic or a demonstrated equivalence.
2-3 units, Win (Barhoum, K)

AMELANG 23C. Reading Arabic, Third Quarter
(Formerly AMELANG 196C.) Continuation of 23B. For seniors and graduate students who need advanced ability in Arabic for the PhD or for advanced research in their own field. Prerequisite: three years of Arabic or a demonstrated equivalence.
2-3 units, Spr (Barhoum, K)

AMELANG 24A. Arabic Skills Workshop, First Quarter
Emphasizes the necessary Arabic skills (Reading, Writing, Speaking) needed by graduate students to conduct research in their own respective fields. Prerequisite: four years of Arabic or instructor's permission.
2-3 units, Aut (Staff)

AMELANG 24B. Arabic Skills Workshop, Second Quarter
Continuation of 24A. Emphasizes the necessary Arabic skills (Reading, Writing, Speaking) needed by graduate students to conduct research in their own respective fields. Prerequisite: four years of Arabic or instructor's permission.
2-3 units, Win (Staff)

AMELANG 24C. Arabic Skills Workshop, Third Quarter
Continuation of 24B. Emphasizes the necessary Arabic skills (Reading, Writing, Speaking) needed by graduate students to conduct research in their own respective fields. Prerequisite: four years of Arabic or instructor's permission.
2-3 units, Spr (Staff)

AMELANG 25A. Colloquial Arabic, First Quarter
(Formerly AMELANG 198A.) Sources include authentic videotaped conversations with native speakers, conversations, and texts of these conversations to enhance comprehension and improve aural skills. Prerequisite: 2 years of Arabic.
2-4 units, not given this year

AMELANG 25B. Colloquial Arabic, Second Quarter
(Formerly AMELANG 198B.) Continuation of 25A. Sources include authentic videotaped conversations with native speakers, conversations, and texts of these conversations to enhance comprehension and improve aural skills. Prerequisite: 2 years of Arabic. Prerequisite: 25A.
2-4 units, Win (Staff)

AMELANG 25C. Colloquial Arabic, Third Quarter
(Formerly AMELANG 198C.) Continuation of 25B. Sources include authentic videotaped conversations with native speakers, conversations, and texts of these conversations to enhance comprehension and improve aural skills. Prerequisite: 2 years of Arabic. Prerequisite: 25B
2-4 units, Spr (Staff)

AMELANG 31. The Contemporary Arab World and Culture through Literature
(Formerly AMELANG 161.) Readings from prominent authors dealing with topics such as gender and women, kinship and social concepts, nationalism, and religion. Texts delineating the cultural uniqueness of the Arab world include works by Naguib Mahfouz, Nawal El-Saadawi, Ghassan Kanafani, Tayyeb Salih, Etel Adnan, and short stories and poetry. All texts in English. No knowledge of Arabic required. Limited enrollment. GER:DB-Hum, EC-GlobalCom
4 units, Aut (Barhoum, K)

AMELANG 32. Arab Women Writers and Issues
(Formerly AMELANG 162.) Fiction and non-fiction work. The major cultural factors shaping their feminist attitudes. Readings: Fatima Mernissi, Nawal El-Saadawi, Etel Adnan, Alifa Rifaat, and Sahar Khalifeh. All texts in English. No knowledge of Arabic required; extra unit for readings in Arabic. Limited enrollment. GER:DB-Hum, EC-Gender
4 units, Win (Barhoum, K)

AMELANG 33. The Arab World through Travel Literature
(Formerly AMELANG 163.) Popular colonialist and postcolonialist portrayals of Arab culture and Islam. Recent Western depictions of Arabs and Muslims in travel literature. Readings include Flaubert in Egypt, Guests of the Sheik, Justine, Covering Islam, Nine Parts of Desire, and Motoring with Mohammed. All texts in English. No knowledge of Arabic required; extra unit for readings in Arabic. Limited enrollment. GER:DB-Hum, EC-GlobalCom
4 units, Spr (Staff)

AMELANG 35. The West through Arab Eyes
GER:EC-GlobalCom
4 units, not given this year

AMELANG 36. The Arabic Language and Culture
(Same as LINGUIST 170, LINGUIST 270) Arabic language from historical, social, strategic, and linguistic perspectives. History of the Arabic language and the stability of classical Arabic over the last 15 centuries. Why the functionality of classical Arabic has not changed as Latin, Old English, and Middle English have. Social aspects of the Arabic language, Ferguson¿s notion of diglossia. The main varieties of Arabic, differences among them, and when and where they are spoken. Role of Arabic and culture in current world politics, culture, and economy. Linguistic properties of Arabic such as root-based morphology, lexical ambiguity, and syntactic structure relating it to current linguistic theories.

AMELANG 106A. Beginning Swahili, First Quarter
4 units, Aut (Rutechura, M), Spr (Rutechura, M)

AMELANG 106B. Beginning Swahili, Second Quarter
Continuation of 106A.
4 units, Win (Rutechura, M)

AMELANG 106C. Beginning Swahili, Third Quarter
Continuation of 106B. Fulfills the University foreing language requirement.
4 units, Spr (Rutechura, M)

AMELANG 107A. Intermediate Swahili, First Quarter
Continuation of 106C.
2-4 units, Aut (Rutechura, M)

AMELANG 107B. Intermediate Swahili, Second Quarter
Continuation of 107A.
2-4 units, Win (Rutechura, M)

AMELANG 107C. Intermediate Swahili, Third Quarter
Continuation of 107B.
2-4 units, Spr (Rutechura, M)

AMELANG 108A. Advanced Swahili, First Quarter
Continuation of 107C.
2-4 units, Aut (Rutechura, M)

AMELANG 108B. Advanced Swahili, Second Quarter
Continuation of 108A.
2-4 units, Win (Rutechura, M)

AMELANG 108C. Advanced Swahili, Third Quarter
Continuation of 108B.
2-4 units, Spr (Makana, S)

AMELANG 117A. Beginning Shona, First Quarter
3 units, Aut (Staff)

AMELANG 117B. Beginning Shona, Second Quarter
3 units, Win (Sibanda, G)

AMELANG 117C. Beginning Shona, Third Quarter
3 units, Spr (Staff)

AMELANG 118A. Intermediate Shona, First Quarter
3 units, Aut (Staff)

AMELANG 118B. Intermediate Shona, Second Quarter
(Staff)
3 units, Win (Staff)

AMELANG 118C. Intermediate Shona, Third Quarter
(Staff)
3 units, Spr (Staff)

AMELANG 127. Land and Literature
(Same as JEWISHST 102) Israel has captured the imagination of writers throughout the generations. It has been portrayed as promised land, holy land, homeland, empty land, occupied land, and land of dreams. Ideological views and political events have shaped writers' conception of Israel. Readings include poems, prose, and theoretical texts about place and literature. No knowledge of Hebrew required. GER:DB-Hum, EC-GlobalCom
4 units, Spr (Staff)

AMELANG 128A. Beginning Hebrew, First Quarter
(Same as JEWISHST 101A)
5 units, Aut (Shemtov, V; Greif, E)

AMELANG 128B. Beginning Hebrew, Second Quarter
(Same as JEWISHST 101B)
5 units, Win (Greif, E)

AMELANG 128C. Beginning Hebrew, Third Quarter
(Same as JEWISHST 101C)
5 units, Spr (Porat, G; Greif, E)

AMELANG 129A. Intermediate Hebrew, First Quarter
(Same as JEWISHST 102A)
4 units, Aut (Porat, G)

AMELANG 129B. Intermediate Hebrew, Second Quarter
(Same as JEWISHST 102B)
4 units, Win (Porat, G)

AMELANG 129C. Intermediate Hebrew, Third Quarter
(Same as JEWISHST 102C)
4 units, Spr (Shemtov, V)

AMELANG 136A. Beginning Xhosa, First Quarter
3 units, Aut (Sibanda, G)

AMELANG 136B. Beginning Xhosa, Second Quarter
Continuation of 136A.
3 units, Win (Sibanda, G)

AMELANG 136C. Beginning Xhosa, Third Quarter
Continuation of 136B.
3 units, Spr (Sibanda, G)

AMELANG 137A. Intermediate Xhosa, First Quarter
Continuation of 137C. Fulfills the University foreing language requirement.
3 units, Aut (Staff)

AMELANG 137B. Intermediate Xhosa, Second Quarter
Continuation of 137A.
3 units, Win (Staff)

AMELANG 137C. Intermediate Xhosa, Third Quarter
3 units, Spr (Staff)

AMELANG 140A. Beginning Yiddish, First Quarter
(Same as JEWISHST 104A) Reading, writing, and speaking.
4 units, Aut (Levitow, J)

AMELANG 140B. Beginning Yiddish, Second Quarter
(Same as JEWISHST 104B) Reading, writing, and speaking.
4 units, Win (Levitow, J)

AMELANG 140C. Beginning Yiddish, Third Quarter
(Same as JEWISHST 104C) Reading, writing, and speaking.
4 units, Spr (Levitow, J)

AMELANG 141A. Intermediate Yiddish, First Quarter
4 units, Aut (Levitow, J)

AMELANG 141B. Intermediate Yiddish, Second Quarter
4 units, Win (Staff)

AMELANG 141C. Intermediate Yiddish, Third Quarter
4 units, Spr (Staff)

AMELANG 144A. Beginning Persian, First Quarter
3 units, Aut (Fahimi, S)

AMELANG 144B. Beginning Persian, Second Quarter
Continuation of 144A.
3 units, Win (Fahimi, S)

AMELANG 144C. Beginning Persian, Third Quarter
3 units, Spr (Fahimi, S)

AMELANG 156A. Beginning Zulu, First Quarter
3 units, Aut (Sibanda, G)

AMELANG 156B. Beginning Zulu, Second Quarter
Continuation of 156A.
3 units, Win (Sibanda, G)

AMELANG 156C. Beginning Zulu, Third Quarter
Continuation of 156B.
3 units, Spr (Staff)

AMELANG 157A. Intermediate Zulu, First Quarter
Continuation of 156C. Fulfills the University foreign language requirement.
3 units, Aut (Staff)

AMELANG 157B. Intermediate Zulu, Second Quarter
Continuation of 157A.
3 units, Win (Staff)

AMELANG 157C. intermediate Zulu, Third Quarter
Continuation of 157B.
3 units, Spr (Staff)

AMELANG 170A. Biblical Hebrew, First Quarter
(Same as JEWISHST 107A) The basic lexicon and grammar of Hebrew of the Tanakh or Old Testament.
2-4 units, Aut (Porat, G), Win (Staff)

AMELANG 170B. Biblical Hebrew, Second Quarter
(Same as JEWISHST 107B) Continuation of 170A
2-4 units, Spr (Staff)

AMELANG 170C. Biblical Hebrew, Third Quarter
(Same as JEWISHST 107C) Continuation of 170B.
2-4 units, Spr (Porat, G)

AMELANG 171. The Bible in Modern Hebrew Literature
The role of biblical myths in shaping Israeli identity and the development of a secular Hebrew literature. Readings include modern Hebrew poems and novels which offer new meanings to the stories of Genesis, Exodus, David, and the Song of Songs and make them relevant to the context of modern and postmodern Israeli culture. Readings in Hebrew and English. Prerequisite: intermediate Hebrew. GER:DB-Hum
3-4 units, not given this year

AMELANG 176. Introduction to Ladino: Language, Literature, and Culture
Prerequisite: two quarters of Spanish.
1-4 units, not given this year

AMELANG 177. Middle Eastern Cities in Literature and Film
Sources include short stories, novels, and movies about Beirut, Tel Aviv, Jerusalem, Cairo, and Amman. Focus is on a cultural and intellectual history of each city. Issues such as the role that Middle Eastern cities play in the development of the modern Hebrew and Arabic novels, the city as a center of social and political life, and the city as a space of collective memory. GER:EC-GlobalCom
4-5 units, not given this year

AMELANG 184A. Beginning Turkish, First Quarter
3 units, Aut (Ozisik, N)

Continuation of 184A.
3 units, Win (Ozisik, N)

AMELANG 184C. Beginning Turkish, Third Quarter
3 units, Spr (Ozisik, N)

AMELANG 185A. Intermediate Turkish, First Quarter
Continuarion of 184C. Fulfills the University foreign language requirement.
3 units, Aut (Ozisik, N)

AMELANG 185B. Intermediate Turkish, Second Quarter
Continuation of 185A.
3 units, Win (Ozisik, N)

AMELANG 185C. Intermediate Turkish, Third Quarter
Continuation of 185B.
3 units, Spr (Ozisik, N)

GRADUATE COURSES IN AFRICAN AND MIDDLE EASTERN LANGUAGES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

AMELANG 11G. Intensive Intermediate Arabic, Part A
For Stanford graduate students restricted to 9 units. Speaking, listening, reading, and writing, emphasizing Arabic grammar and functional applications.
3-4 units, not given this year

AMELANG 12G. Intensive Intermediate Arabic, Part B
Continuation of 11G. For Stanford graduate students restricted to 9 units. Speaking, listening, reading, and writing, emphasizing Arabic grammar and functional applications.
3-4 units, not given this year

AMELANG 13G. Intensive Intermediate Arabic, Part C
Continuation of 12G. For Stanford graduate students restricted to 9 units. Speaking, listening, reading, and writing, emphasizing Arabic grammar and functional applications.
3-4 units, not given this year

AMELANG 203A. Beginning Hausa, First Quarter
For grads only.
3 units, Sum (Staff)

AMELANG 203B. Beginning Hausa, Second Quarter
For grads only
3 units, Sum (Staff)

AMELANG 297. Directed Reading in African and Middle Eastern Languages
May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

AMELANG 395. Graduate Studies in African and Middle Eastern Languages
Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

AFRICAN STUDIES (AFRICAST) COURSES

UNDERGRADUATE COURSES IN AFRICAN STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

AFRICAST 111. Education for All? The Global and Local in Public Policy Making in Africa
(Same as AFRICAST 211) Policy making in Africa and the intersection of policy processes and their political and economic dimensions. The failure to implement agreements by international institutions, national governments, and nongovernmental organizations to promote education. Case studies of crowded and poorly equipped schools, overburdened and underprepared teachers, and underfunded education systems. GER:EC-GlobalCom, EC-GlobalCom
5 units, Spr (Samoff, J)

AFRICAST 112. AIDS, Literacy, and Land: Foreign Aid and Development in Africa
(Same as AFRICAST 212) Public policy issues, their roots, and the conflicts they engender. The policy making process: who participates, how, why, and with what results? Innovative approaches to contested policy issues. Foreign roles and their consequences. Case studies such as: a clinic in Uganda that addresses AIDS as a family and community problem; and strategies in Tanzania to increase girls' schooling. GER:EC-GlobalCom
5 units, Win (Samoff, J)

AFRICAST 151. AIDS in Africa
Medical, social, and political aspects of the HIV epidemic in sub-Saharan Africa including: biology, transmission, diagnosis,and

treatment of HIV; mother-to-child transmission and breastfeeding; vaccines; community and activist responses to the HIV epidemic; economics of HIV treatment; governance and health; ethics in research and program implementation.

3 units, not given this year

AFRICAST 151B. Plagues and Politics: Critical Links Between Politics, Economics, and Infectious Diseases in Africa

Infectious diseases have long been associated with regions of poverty and political instability; factors such as international travel, bioterrorism, and global markets may affect the health and security of all nations. Exploration of the complex interactions among politics, economics, and infectious diseases. How do infectious diseases impact the policies and economic growth of a country? How do governmental policies and economic investments influence the proliferation, control, and outcomes of these diseases? Related themes include: the tension between the economic health of a community and the personal health of citizens; the role of the individual versus the government in taking responsibility for health and health-related actions; and the extent to which rich countries can and should help poor countries combat preventable illnesses. Course is part of a collaborative effort among the Stanford Program on International and Crosscultural Education (SPICE), Center for African Studies, Program in Human Biology, School of Education, and School of Medicine to create infectious disease curriculum materials for U.S. high schools. Students contribute to the curriculum development by performing research and developing multimedia projects.

1 unit, Aut (Staff)

AFRICAST 199. Independent Study or Directed Reading

May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

AFRICAST 200. The HIV/AIDS Epidemic in Tanzania: A Pre-Field Seminar

Goal is to prepare students for an HIV/AIDS prevention, service-learning experience in Tanzania. Topics include: history of HIV/AIDS epidemic globally and in Tanzania; social and economic impact of AIDS; national and societal responses; ethical issues in crosscultural service learning; teaching for prevention; biology of HIV transmission, disease progression, and prevention; introduction to Tanzanian history and politics; HIV/AIDS and development; social, cultural, and economic context of HIV risk; and strategies for HIV prevention in Tanzania.

1 unit, Spr (Katzenstein, D)

GRADUATE COURSES IN AFRICAN STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

AFRICAST 211. Education for All? The Global and Local in Public Policy Making in Africa

(Same as AFRICAST 111) Policy making in Africa and the intersection of policy processes and their political and economic dimensions. The failure to implement agreements by international institutions, national governments, and nongovernmental organizations to promote education. Case studies of crowded and poorly equipped schools, overburdened and underprepared teachers, and underfunded education systems.

5 units, Spr (Samoff, J)

AFRICAST 212. AIDS, Literacy, and Land: Foreign Aid and Development in Africa

(Same as AFRICAST 112) Public policy issues, their roots, and the conflicts they engender. The policy making process: who participates, how, why, and with what results? Innovative approaches to contested policy issues. Foreign roles and their consequences. Case studies such as: a clinic in Uganda that addresses AIDS as a family and community problem; and strategies in Tanzania to increase girls' schooling.

5 units, Win (Samoff, J)

AFRICAST 278. Special Topics (Francophone Literature): From Exoticism to a Discourse of Auto-Representation

(Same as COMPLIT 278, FRENLIT 278) Critical analysis of major issues relating to literatures in French language in and outside France. Focus is on exoticism and and self-representation, with an emphasis on the evolution of mentalities, new sensitivities and the role of literature in developing individual or collective identity. Readings include Le Clézio, Memmi, Malouf, Lopes, Schwarz-Bart, Delaygue, Glissant, Todorov, Kane and others. Primary sources, secondary sources and film. Taught in French.

3-5 units, not given this year

AFRICAST 299. Independent Study or Directed Reading

1-10 units, Aut (Staff), Win (Samoff, J), Spr (Staff)

AFRICAST 300. Contemporary Issues in African Studies

Guest scholars present analyses of major African themes and topics. Brief response papers required. May be repeated for credit.

1 unit, Aut (Hubbard, L; Samoff, J), Win (Hubbard, L), Spr (Hubbard, L)

AFRICAST 301A. The Dynamics of Change in Africa

(Same as HISTORY 346) Crossdisciplinary colloquium; required for the M.A. degree in African Studies. Addresses critical issues in African Studies by exploring intersections of the organization of power, structure of the economy, and patterns of social stratification. Interpretive debates on Africa's engagement with the slave trade, impact of colonialism, decolonization, democratization and civil wars, health and society, and Africa's engagement with globalization. The process of knowledge production and its social location, and the current state of knowledge.

4-5 units, Aut (Roberts, R)

AFRICAST 302. Research Workshop

Required for African Studies master's students. Student presentations.

1 unit, Spr (Roberts, R)

AMERICAN STUDIES (AMSTUD) COURSES

UNDERGRADUATE COURSES IN AMERICAN STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

AMSTUD 1B. Media, Culture, and Society

(Same as COMM 1B) The institutions and practices of mass media, including television, film, radio, and digital media, and their role in shaping culture and social life. The media's shifting relationships to politics, commerce, and identity. GER:DB-SocSci

5 units, Win (Turner, F)

AMSTUD 2. Introduction to American National Government and Politics

(Same as POLISCI 2) The role and importance of the ideal of democracy in the evolution of the American political system. American political institutions (the Presidency, Congress, and the Court) and political processes (the formation of political attitudes and voting) are examined against the backdrop of American culture and political history. The major areas of public policy in the current practice of the ideal of democracy. GER:DB-SocSci

5 units, Win (Fiorina, M; Frisby, T)

AMSTUD 35N. A Union of Diversities: Charles Ives and American Musical Traditions

(Stanford Introductory Seminar) (Same as MUSIC 35N) Preference to freshmen. The life and work of Charles Ives, and the polarized reception his compositions received. Music includes Ives' Victorian songs and his symphonic works; his philosophical and political writings, historic recordings, oral and photographic histories, and live performances. Hands-on work with original manuscripts and editions. Recommended: ability to read music. GER:DB-Hum

3 units, Spr (Barth, G)

AMSTUD 101. American Fiction into Film: How Hollywood Scripts and Projects Black and White Relations

Movies and the fiction that inspires them; power dynamics behind production including historical events, artistic vision, politics, and racial stereotypes. What images of black and white does Hollywood produce to forge a national identity? How do films promote equality between the races? What is lost or gained in film adaptations of books? GER:EC-AmerCul

3-5 units, Aut (Mesa, C)

AMSTUD 114N. Visions of the 1960s
(Stanford Introductory Seminar) Preference to sophomores. Introduction to the ideas, sensibility, and, to a lesser degree, the politics of the American 60s. Topics: the early 60s vision of a beloved community; varieties of racial, generational, and feminist dissent; the meaning of the counterculture; and current interpretive perspectives on the 60s. Film, music, and articles and books. GER:DB-Hum, EC-AmerCul

5 units, Aut (Gillam, R)

AMSTUD 120. Digital Media in Society
(Same as COMM 120, COMM 220) (Graduate students register for 220.) Contemporary debates concerning the social and cultural impact of digital media. Topics include the historical origins of digital media, cultural contexts of their development and use, and influence of digital media on conceptions of self, community, and state. Priority to Juniors and Seniors. GER:DB-SocSci

4-5 units, Spr (Turner, F)

AMSTUD 121. Masterpieces of American Literature
(Same as ENGLISH 21, ENGLISH 121) (English majors and others taking 5 units, register for 121.) A survey of some of the definitive texts of American writing, such as Leaves of Grass, Benito Cereno, Adventures of Huckleberry Finn, The Waste Land, The Sun Also Rises, The Golden Apples, and The Crying of Lot 49. GER:DB-Hum

3-5 units, Spr (Rampersad, A)

AMSTUD 121X. Hip Hop, Youth Identities, and the Politics of Language
(Same as AFRICAAM 121X, ANTHRO 121A, CSRE 121X, EDUC 121X, LINGUIST 155) Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture.

3-4 units, Spr (Alim, H)

AMSTUD 123D. American Literature, 1855 to World War I
(Same as ENGLISH 123D) A survey of American writers from Whitman to T.S. Eliot, including Emily Dickinson, Mark Twain, Stephen Crane, Frank Norris, Kate Chopin, Theodore Dreiser, and Henry James. Topics include the tension between romance and realism, the impact of naturalism and modernism, as well as race, gender, and the literary evolution of the American language. GER:DB-Hum

5 units, Aut (Rampersad, A)

AMSTUD 123G. Mark Twain: A Fresh Look at an Icon and Iconoclast, 100 Years after His Death
(Same as ENGLISH 123G) The vitality and versatility of a writer who has been called America's Rabelais, Cervantes, Homer, Tolstoy, and Shakespeare. Journalism, travel books, fiction, drama, and sketches by Mark Twain; how Twain engaged such issues as personal and national identity, satire and social justice, imperialism, race and racism, gender, performance, travel, and technology. What are Twain's legacies in 2010, the centennial of his death, the 175th anniversary of his birth, and the 125th anniversary of his most celebrated novel? Guests include actor Hal Holbrook. GER:DB-Hum, EC-AmerCul

3-5 units, not given this year

AMSTUD 137. The Dialogue of Democracy
(Same as COMM 137, COMM 237, POLISCI 232T, POLISCI 332T) All forms of democracy require some kind of communication so people are aware of issues and make decisions. Competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small-scale discussions or sound bites on television? Or social media? What is the role of technology in changing democratic practices, to mobilize, to persuade, to solve public problems? Readings from political theory about democratic ideals from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. Contemporary examinations of the media and the Internet to see how those practices are changing and how the ideals can or cannot be realized. GER:EC-EthicReas

4-5 units, Win (Fishkin, J)

AMSTUD 140. Stand Up Comedy and the Great American Joke Since 1945
Development of American stand up comedy in the context of social and cultural eruptions after 1945, including the Borscht Belt, the Chitlin' Circuit, the Cold War, censorship battles, and civil rights and other social movements of the 60s. The artistry of stories, monologues, jokes, impersonations, persona, social satire, scatology, obscenity, riffs, rants, shtick, and more by such artists as Lenny Bruce, Dick Gregory, Richard Pryor, George Carlin, Margaret Cho, Sarah Silverman, Jon Stewart, Stephen Colbert, as well as precursors such as Mark Twain, minstrelsy and vaudeville and related films, TV shows, poems and other manifestations of similar sensibilities and techniques.

3-5 units, Aut (Obenzinger, H)

AMSTUD 143. Introduction to African American Literature
(Same as AFRICAAM 43, ENGLISH 43, ENGLISH 143) (English majors and others taking 5 units, register for 143.) African American literature from its earliest manifestations in the spirituals, trickster tales, and slave narratives to recent developments such as black feminist theory, postmodern fiction, and hip hop lyricism. The defining debates and phenomena within African American cultural history, including the status of realist aesthetics in black writing; the contested role of literature in black political struggle; the question of diaspora; the problem of intra-racial racism; and the emergence of black internationalism. Attention to the discourse of the Enlightenment, modernist aesthetics, and the role of Marxism in black political and literary history. GER:DB-Hum, EC-AmerCul

3-5 units, Aut (Rasberry, G)

AMSTUD 146. Asian American Culture and Community
(Same as COMPLIT 146, ASNAMST 146S, CSRE 146S) An examination of the history of Asians in America via one case history: the International Hotel in San Francisco. Background history of Asians in America, and the specifics of the I Hotel case as involving the convergence of global and local economies, urban redevelopment, and housing issues for minorities. Focus on the convergence of community and cultural production. Service learning component involving community work at the Manilatown Heritage Foundation in San Francisco. Service Learning Course (certified by Haas Center). GER:DB-Hum

5 units, Aut (Palumbo-Liu, D)

AMSTUD 150. American Literature and Culture to 1855
(Same as ENGLISH 123) Sources include histories, poetry, autobiography, captivity and slave narratives, drama, and fiction. Authors include Mather, Bradstreet, Rowlandson, Franklin, Brockden Brown, Emerson, Douglass, Hawthorne, and Melville. GER:DB-Hum, EC-AmerCul

5 units, Spr (Richardson, J)

AMSTUD 150A. Colonial and Revolutionary America
(Same as HISTORY 150A) (Same as HISTORY 50A. History majors and others taking 5 units, register for HISTORY 150A.) Survey of the origins of American society and polity in the 17th and 18th centuries. Topics: the migration of Europeans and Africans and the impact on native populations; the emergence of racial slavery and of regional, provincial, Protestant cultures; and the political origins and constitutional consequences of the American Revolution. GER:DB-SocSci, EC-AmerCul

5 units, Aut (Winterer, C)

AMSTUD 150B. 19th-Century America
(Same as HISTORY 150B) (Same as HISTORY 50B. History majors and others taking 5 units, register for 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture. GER:DB-SocSci, EC-AmerCul

5 units, Win (Campbell, J)

AMSTUD 150C. The United States in the Twentieth Century
(Same as HISTORY 150C) (Same as HISTORY 50C. History majors and others taking 5 units, register for 150C.) Major political, economic, social, and diplomatic developments in the U.S. Themes: the economic and social role of government (Progressive, New Deal, Great Society, and Reagan-Bush eras); ethnic and racial minorities in society (mass immigration at the turn of the century and since 1965, the civil rights era of the 50s and 60s); the chang-

ing status of women since WW II; shifting ideological bases, institutional structures, and electoral characteristics of the political system (New Deal and post-Vietnam); determinants of foreign policy in WW I and II, and the Cold War. GER:DB-SocSci, EC-AmerCul

5 units, Spr (McGarry, D)

AMSTUD 152A. Mutually Assured Destruction: American Culture and the Cold War

(Same as ENGLISH 152A) The temperature of the early Cold War years via readings of Soviet and U.S. propaganda; documentary film and film noir; fiction by Bellow, Ellison, O'Connor, and Mailer; social theory by Arendt, the New York Intellectuals, and the Frankfurt School; and political texts such as Kennan's Sources of Soviet Conduct, the Truman Doctrine speech, and the National Security Council Report 68. Major themes include the discourse of totalitarianism, MacCarthyism, strategies of containment, the nuclear threat, the figure of the outsider and the counterculture, and the cultural shift from sociological to psychological idioms. GER:DB-Hum

5 units, Aut (Rasberry, G)

AMSTUD 152G. Global Harlem Renaissance

(Same as AFRICAAM 152G, ENGLISH 152G) The explosion of African American artistic expression during 20s and 30s New York known as the Harlem Renaissance. Amiri Baraka once referred to the Renaissance as a kind of vicious modernism, as a BangClash, that impacted and was impacted by political, cultural, and aesthetic changes in the U.S., Europe, the Caribbean, and Latin America. Focus is on the literature, graphic arts, and the music of the era in this global context. GER:DB-Hum, EC-AmerCul

5 units, Aut (Elam, M)

AMSTUD 156H. Women and Medicine in US History: Women as Patients, Healers and Doctors

Women's bodies in sickness and health, and encounters with lay and professional healers from the 18th century to the present. Historical consttruction of thought about women's bodies and physical limitations; sexuality; birth control and abortion; childbirth; adulthood; and menopause and aging. Women as healers, including midwives, lay physicians, the medical profession, and nursing. GER:EC-Gender

5 units, Aut (Horn, M)

AMSTUD 156H. Women and Medicine in US History: Women as Patients, Healers and Doctors

Women's bodies in sickness and health, and encounters with lay and professional healers from the 18th century to the present. Historical consttruction of thought about women's bodies and physical limitations; sexuality; birth control and abortion; childbirth; adulthood; and menopause and aging. Women as healers, including midwives, lay physicians, the medical profession, and nursing. GER:EC-Gender

5 units, Aut (Horn, M)

AMSTUD 160. Perspectives on American Identity

Required for American Studies majors. Changing interpretations of American identity and Americanness. GER:DB-Hum, EC-AmerCul

5 units, Win (Gillam, R), Spr (Richardson, J)

AMSTUD 161. WOMEN IN MODERN AMERICA

(Same as CSRE 162, HISTORY 161) The transformation from the New Woman of the 1890s to the New Woman of the 1990s; attention to immigrant, black, and white women, both historical analyses and personal accounts. Topics include: workforce participation; family and reproductive labor; educational and professional opportunities; the impact of wars, economic depression, and popular culture; and recurrent feminist movements. GER:DB-SocSci, EC-Gender

4-5 units, Spr (Freedman, E)

AMSTUD 164C. From Freedom to Freedom Now: African American History, 1865-1965

(Same as HISTORY 164C) (Same as HISTORY 64C. History majors and others taking 5 units, register for 164C.) Explores the working lives, social worlds, political ideologies and cultural expressions of African Americans from emancipation to the early civil rights era. Topics include: the transition from slavery to freedom, family life, work, culture, leisure patterns, resistance, migration and social activism. Draws largely on primary sources including autobiographies, memoirs, letters, personal journals, newspaper articles, pamphlets, speeches, literature, film and music. GER:DB-SocSci, EC-AmerCul

5 units, Spr (Hobbs, A)

AMSTUD 165. History of Higher Education in the U.S.

(Same as EDUC 165, EDUC 265, HISTORY 158C) Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities. (SSPEP-APA)

3-5 units, Aut (Gordon, L)

AMSTUD 166. Introduction to African American History: The Modern African American Freedom Struggle

(Same as HISTORY 166) Focus is on political thought and protest movements after 1930. Individuals who have shaped and been shaped by modern African American struggles for freedom and justice. Sources include audiovisual materials. Research projects required for fifth unit. GER:DB-SocSci, EC-AmerCul

4-5 units, Win (Carson, C)

AMSTUD 167. The Hollywood Musical

(Same as FILMSTUD 167, FILMSTUD 367) The sense of physical, emotional, aesthetic, and social liberation in this most colorful of film genres. Musicals as a place for the staging of issues of identity, including the impact of African American and Jewish culture, and issues of gay reception and interpretation. Attention to technologies of sound and color, the relation to vaudeville and Broadway, and ethnic and aesthetic diversity. Musicals as the epitome of filmic illusionism and the Hollywood studio system; the implications of their seduction of audiences; the meaning of spectacle, the centrality of performance. Busby Berkeley, Fred Astaire, Judy Garland, Bob Fosse, Stanley Donen, Gene Kelly, Vincente Minnelli.

4 units, Spr (Bukatman, S)

AMSTUD 169. Cultural Traffic: Race, Performance, and Globalization

(Same as AFRICAAM 169A, CSRE 169A, DRAMA 169A, DRAMA 303A) This course will examine the transnational intersections of race and performance. It will consider the question of s race understood internationally and how do such definitions travel. We examine critical race theory and study constructions of race through the lens of performance. The course will interrogate the transnational meanings of such performances. Students in this course will read, study, analyze and potentially even stage theoretical and performance texts from both inside and outside of the United States. Course also satisfies Drama 302/303 requirement.

3-5 units, Aut (George, N)

AMSTUD 179. Introduction to American Law

(Same as LAWGEN 106, POLISCI 122, PUBLPOL 302A) For undergraduates. The structure of the American legal system including the courts; American legal culture; the legal profession and its social role; the scope and reach of the legal system; the background and impact of legal regulation; criminal justice; civil rights and civil liberties; and the relationship between the American legal system and American society in general. GER:DB-SocSci

3-5 units, Aut (Friedman, L)

AMSTUD 183. Border Crossings and American Identities

(Same as CSRE 183) How novelists, filmmakers, and poets perceive racial, ethnic, gender, sexual preference, and class borders in the context of a national discussion about the place of Americans in the world. How Anna Deavere Smith, Sherman Alexie, or Michael Moore consider redrawing such lines so that center and margin, or self and other, do not remain fixed and divided. How linguistic borderlines within multilingual literature by Caribbean, Arab, and Asian Americans function. Can Anzaldúa's conception of borderlands be constructed through the matrix of language, dreams, music, and cultural memories in these American narratives? Course includes examining one's own identity. GER:DB-Hum, EC-AmerCul

5 units, Aut (Duffey, C)

AMSTUD 183C. Feminism and American Literature

(Same as ENGLISH 183C, JEWISHST 153C) How writers have endeavored to enlarge the canvas on which women can paint their lives. Fiction, journalism, and poetry engaging how women come to understand who they might become; women's role in the home and outside the home; motherhood, marriage, work; etc. Writing

by Euro-American, African-American, Asian-American and Latino writers. Particular focus on feminists' use of humor to undercut demeaning assumptions, stereotypes and texts. Readings will include feminist parodies of advice manuals, cookbooks, literary criticism and fairy tales. GER:DB-Hum, EC-Gender

5 units, Spr (Fishkin, S)

AMSTUD 185. American Studies Internship

Restricted to declared majors. Practical experience working in a field related to American Studies for six to ten weeks. Students make internship arrangements with a company or agency, under the guidance of a sponsoring faculty member, and with the consent of the director or a program coordinator of American Studies. Required paper focused on a topic related to the internship and the student's studies. May be repeated for credit.

1-3 units, Aut (Staff), Win (Fishkin, S), Spr (Staff), Sum (Staff)

AMSTUD 186. Tales of Three Cities: New York, Chicago, Los Angeles

(Same as ENGLISH 186) How urban form and experience shape literary texts and how literary texts participate in the creation of place, through the literature of three American cities as they ascended to cultural and iconographical prominence: New York in the early to mid 19th century; Chicago in the late 19th and early 20th centuries; and Los Angeles in the mid to late 20th century. GER:DB-Hum

5 units, Win (Richardson, J)

AMSTUD 195. Individual Work

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

AMSTUD 214. The American 1960s: Thought, Protest, and Culture

The meaning of the American 60s emphasizing ideas, culture, protest, and the new sensibility that emerged. Topics: black protest, the new left, the counterculture, feminism, the new literature and journalism of the 60s, the role of the media in shaping dissent, and the legacy of 60s protest. Interpretive materials from film, music, articles, and books. GER:DB-Hum, EC-AmerCul

5 units, Aut (Gillam, R)

AMSTUD 240. Sister Arts: Image and Text in America

(Same as ARTHIST 240) Seminar focuses equally on painting and literature in American history. Classes meet twice per week: one session devoted to a literary text, and the other to a visual artifact. The course is organized topically, placing text and images into dialogue with each other, asking for example, how Glen Ligon's contemporary reworking of nineteenth century runaway slave posters relates to Toni Morrison's Beloved, or how Melville's story of urban life, Bartleby the Scrivener, alludes to Hudson River School painting.

5 units, Win (Wolf, B)

AMSTUD 240A. Pre-Honors Seminar

Methods, interpretations, and issues pertinent to honors work in American Studies. Open to juniors interested in honors.

2-5 units, Spr (Staff)

AMSTUD 250. Senior Research

Research and writing of senior honors thesis under the supervision of a faculty member. The final grade for the thesis is assigned by the chair based on the evaluations of the primary thesis adviser and a second reader appointed by the program. Prerequisite: consent of chair.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

AMSTUD 251. Topics in Constitutional History

(Same as HISTORY 251G, POLISCI 222S) Ideas of rights in American history emphasizing the problem of defining constitutional rights, the free exercise of religion, freedom of expression, and the contemporary debate over rights talk and the idiom of human rights. GER:DB-SocSci, EC-AmerCul

5 units, Win (Rakove, J)

AMSTUD 251C. The American Enlightenment

(Same as HISTORY 251C) 18th-century America was like a laboratory for exciting new social, political, religious, scientific, and artistic theories that we collectively call the Enlightenment. Readings in original texts and studies of material culture to examine how 18th-century Americans applied Enlightenment thinking to some of the most important problems and questions of their time. What was the best kind of government, and how could this be known? Was the new world of America fundamentally different or the same as Europe, and did animals, plants,and people improve or worsen there? What creatures (children, apes, women, slaves) were considered unreasonable in the Age of Reason, and why? What was the place of religion and passion in the Age of Reason? GER:DB-Hum

5 units, Win (Winterer, C)

AMSTUD 258. Topics in the History of Sexuality: Sexual Violence

(Same as CSRE 192E, HISTORY 258, HISTORY 358) Recent historical interpretations of sexual violence, with particular attention to the intersections of gender and race in the construction of rape, from early settlement through the twentieth century. Topics include the legal prosecution of rape in Early America; the racialization of rape in the U.S.; lynching and anti-lynching in the U.S.; and feminist responses to sexual violence. GER:DB-SocSci, EC-Gender

4-5 units, Win (Freedman, E)

AMSTUD 260G. Century's End: Race, Gender, and Ethnicity at the Turn of the Century

(Same as ENGLISH 260G, JEWISHST 250G) How race, gender and ethnicity were constructed and construed in American culture from 1890 to 1914. Readings include stories, poetry, drama, and journalism by Euro-American, African-American, Asian-American, Jewish-American and Native American writers that illuminate how race, gender and ethnicity inflected such issues as the performance of identity, the purpose of education, the uses of dialect, and the dynamics of violence during this period. GER:EC-AmerCul

5 units, Win (Fishkin, S)

GRADUATE COURSES IN AMERICAN STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

AMSTUD 201. History of Education in the United States

(Same as EDUC 201, HISTORY 158B) How education came to its current forms and functions, from the colonial experience to the present. Focus is on the 19th-century invention of the common school system, 20th-century emergence of progressive education reform, and the developments since WW II. The role of gender and race, the development of the high school and university, and school organization, curriculum, and teaching. (SSPEP)

3-5 units, Win (Gordon, L)

AMSTUD 257. Journalism and Imaginative Writing in America

(Same as COMM 278, ENGLISH 257) Walt Whitman spent twenty-five years as a journalist before publishing his first book of poems. Mark Twain was a journalist for twenty years before publishing his first novel. Topics include examination of how writers¿ backgrounds in journalism shaped the poetry or fiction for which they are best known; study of recent controversies surrounding writers who blurred the line between journalism and fiction. Writers include Whitman, Fanny Fern, Twain, Pauline Hopkins, Theodore Dreiser, Charlotte Perkins Gilman, Ernest Hemingway, Meridel LeSueur.

5 units, Spr (Fishkin, S)

AMSTUD 261A. Geography, Time, and Trauma in Asian American Literature

(Same as ASNAMST 187, ENGLISH 261A) The notion that homes can be stable locations for cultural, racial, ethnic, and similarly situated identity categories. Tthe possibility that there really is no place like home for Asian American subjects. How geography, landscape, and time situate traumas within fictional Asian American narratives.

5 units, Aut (Sohn, S)

AMSTUD 261E. Mixed Race Literature in the U.S. and South Africa

(Same as AFRICAAM 261E, ENGLISH 261E) As scholar Werner Sollors recently suggested, novels, poems, stories about interracial contacts and mixed race constitute an orphan literature belonging to no clear ethnic or national tradition. Yet the theme of mixed race is at the center of many national self-definitions, even in the U.S. post-civil rights and South Africa’s post-Apartheid era. Aesthetic engagements with mixed race politics in these trans- and post-

national dialogues, beginning in the 1700s and focusing on the 20th and 21st centuries.

5 units, Win (Elam, M; Parker, G)

AMSTUD 261F. Gender and Sexuality in Asian American Literature

(Same as ASNAMST 188, ENGLISH 261F) How writers and representations dialogue, challenge, resist, and complicate such formative constructions of gendered/sexual identities. How queer Asian Americans face multiple negations that include potential expulsion from their own families and from various communities. Authors include Bharati Mukherjee, Russell Leong, Suki Kim, Shawn Wong, Louis Chu, Lawrence Chua, Catherine Liu, Jessica Hagedorn, Timothy Liu, Shani Mootoo, David Mura, among others. Secondary readings include literary criticism, and feminist and queer theory.

5 units, Win (Sohn, S)

AMSTUD 262C. African American Literature and the Retreat of Jim Crow

(Same as ENGLISH 262C) After the unprecedented carnage of WWII, the postwar era witnessed the slow decline of the segregated Jim Crow order and the onset of landmark civil rights legislation. What role did African American literature and culture play in this historical process? What does this shift in racial theory and praxis mean for black literary production, a tradition constituted by the experience of slavery and racial oppression? Focus on these questions against the backdrop of contemporaneous developments: the onset of the Cold War, decolonization and the formation of the Third World, and the emergence of the new liberalism.

5 units, Spr (Rasberry, G)

AMSTUD 262D. African American Poetics

(Same as AFRICAAM 262D, ENGLISH 262D) Examination of African American poetic expressive forms from the 1700s to the 2000s, considering the central role of the genre--from sonnets to spoken word, from blues poetry to new media performance--in defining an evolving literary tradition and cultural identity.

5 units, Win (Elam, M)

ANTHROPOLOGY (ANTHRO) COURSES

UNDERGRADUATE COURSES IN ANTHROPOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ANTHRO 1. Introduction to Cultural and Social Anthropology

(Same as ANTHRO 201) Crosscultural anthropological perspectives on human behavior, including cultural transmission, social organization, sex and gender, culture change, technology, war, ritual, and related topics. Case studies illustrating the principles of the cultural process. Films. GER:DB-SocSci, EC-GlobalCom

5 units, Win (Yanagisako, S), Sum (Roque, A)

ANTHRO 3. Introduction to Prehistoric Archeology

(Same as ARCHLGY 1) Aims, methods, and data in the study of human society's development from early hunters through late prehistoric civilizations. Archaeological sites and remains characteristic of the stages of cultural development for selected geographic areas, emphasizing methods of data collection and analysis appropriate to each. GER:DB-SocSci, EC-GlobalCom

3-5 units, Aut (Rick, J)

ANTHRO 4. Language and Culture

Comparative approach, using examples from many languages. Emphasis is on generally non-Western speech communities. Topics include: the structure of language; the theory of signs; vocabulary and culture; grammar, cognition, and culture (linguistic relativism and determinism); encodability of cultural information in language; language adaptiveness to social function; the ethnography of speaking; registers; discourse (conversation, narrative, verbal art); language and power; language survival and extinction; and linguistic ideology (beliefs about language). GER:DB-SocSci

4-5 units, Aut (Fox, J)

ANTHRO 6. Human Origins

(Same as ANTHRO 206, HUMBIO 6) The human fossil record from the first non-human primates in the late Cretaceous or early Paleocene, 80-65 million years ago, to the anatomically modern people in the late Pleistocene, between 100,000 to 50,000 B.C.E. Emphasis is on broad evolutionary trends and the natural selective forces behind them. GER:DB-NatSci

5 units, not given this year

ANTHRO 7. Introduction to Forensic Anthropology

The application of anthropological and archaeological methods to forensics. Topics include the recovery and identification of individuals via skeletal and DNA analysis, reconstruction of premortem and postmortem histories of remains, analysis of mass graves, human rights issues, surveillance tape analysis, analysis of crime scene materials, and expert witness testimony. Legal and ethical dimensions. GER:DB-NatSci

3 units, Spr (Jobin, M)

ANTHRO 12. Anthropology and Art

Modernity. How the concept of art appears timeless and commonsensical in the West, and with what social consequences. Historicizing the emergence of art. Modernist uses of primitive, child art, asylum, and outsider art. GER:DB-Hum

5 units, not given this year

ANTHRO 14. Introduction to Anthropological Genetics

For upper division undergraduates. The extent and pattern of variation among human genomes, the origin of these patterns in human evolution, and the social and medical impact of recent discoveries. Topics include: the Human Genome Project; human origins; ancient DNA; genetic, behavioral, linguistic, cultural, and racial diversity; the role of disease in shaping genetic diversity; DNA forensics; genes and reproductive technology. GER:DB-NatSci

3 units, Win (Jobin, M)

ANTHRO 15. Sex and Gender

Commonality and diversity of gender roles in crosscultural perspective. Cultural, ecological, and evolutionary explanations for such diversity. Theory of the evolution of sex and gender, changing views about men's and women's roles in human evolution, conditions under which gender roles vary in contemporary societies, and issues surrounding gender equality, power, and politics. GER:DB-SocSci, EC-Gender

3 units, Win (Bird, R)

ANTHRO 16. Native Americans in the 21st Century: Encounters, Identity, and Sovereignty in Contemporary America

What does it mean to be a Native American in the 21st century? Beyond traditional portrayals of military conquests, cultural collapse, and assimilation, the relationships between Native Americans and American society. Focus is on three themes leading to in-class moot court trials: colonial encounters and colonizing discourses; frontiers and boundaries; and sovereignty of self and nation. Topics include gender in native communities, American Indian law, readings by native authors, and Indians in film and popular culture. GER:DB-SocSci, EC-AmerCul

5 units, not given this year

ANTHRO 18. Peopling of the Globe: Changing Patterns of Land Use and Consumption over the Last 50,000 Years

(Same as ARCHLGY 12, EARTHSYS 21) Fossil, genetic, and archaeological evidence suggest that modern humans began to disperse out of Africa about 50,000 years ago. Subsequently, humans have colonized every major landmass on earth. The data and issues regarding human dispersal, migration, and colonization of continents and islands around the world. Problems related to the timing and cause of colonizing events, and questions about changing patterns of land use, demography and consumption. Students are introduced to critical relationships between prehistoric population changes and the contemporary environmental crisis. GER:DB-SocSci

3-5 units, Aut (Bird, D)

ANTHRO 22. Archaeology of North America
Why and how people of N. America developed. Issues and processes that dominate or shape developments during particular periods considering the effects of history and interactions with physical and social environment. Topics include the peopling of the New World, explaining subsequent diversity in substance and settlement adaptations, the development of social complexity, and the impact of European contact. GER:DB-SocSci, EC-AmerCul
3-5 units, Win (Truncer, J)

ANTHRO 22N. Ethnographies of North America: An Introduction to Cultural and Social Anthropology
(Stanford Introductory Seminar) Preference to freshmen. Ethnographic look at human behavior, including cultural transmission, social organization, sex and gender, culture change, and related topics in N. America. Films. GER:DB-SocSci
3-4 units, Win (Wilcox, M)

ANTHRO 25N. Contemporary Japanese Popular Culture
(Stanford Introductory Seminar) Preference to freshmen. Focus is on the intersection between politics and popular culture in contemporary Japan. Social and political implications of practices of popular culture. Topics include representations of gender in J-pop, manga, and anime, the otaku culture and its pathologization. Theories of popular culture in general, and a variety of contemporary anthropological studies on Japanese popular culture in particular as well.
1-3 units, Aut (Inoue, M)

ANTHRO 26N. Hauntings, Visions, and Prophecy
(Stanford Introductory Seminar) Preference to freshmen. The conditions under which people have experiences that they identify as supernatural: experiences of something that is not physically present. The cultural and psychological dimensions of this very real phenomenon. The course does not make ontological judgments about whether something which is experienced as externally present is in fact externally present: this is a class about culture and psychology, not about metaphysics. Students perform experimental work, using themselves as subjects to understand who, when and how people have experiences that they deem supernatural.
3-5 units, Win (Luhrmann, T)

ANTHRO 30. Linguistic Field Methods
(Same as LINGUIST 174, LINGUIST 274A) Practical training in the collection and analysis of linguistic data from native speakers of a language largely unknown to the investigator. Documentation of endangered languages. Research goals, field trip preparation, ethics (including human subjects, cooperation with local investigators, and governmental permits), working in the community, technical equipment, and analytical strategies. Emphasis is on the use of recording devices and computers in collection and analysis. Prerequisite: introductory course in linguistics.
3-5 units, not given this year

ANTHRO 31. Ecology, Evolution, and Human Health
Ecology, Evolution, and Human Health Human ecology, environments, adaptation and plasticity, and their relationship to health and well-being considered in the broad comparative context. Topics include human population history, subsistence ecology, demography, reproductive decision making, urbanization, migration, infectious disease, the physiology of stress and the inflammatory response, social capital and social networks, nutrition, nutritional deficiencies, growth, and social inequalities. No prior course work in ecological or medical anthropology required. GER:DB-SocSci
3-5 units, Spr (Jones, J)

ANTHRO 32. Theories in Race and Ethnicity
Concepts and theories of race and ethnicity in the social sciences and cultural studies. U.S. based definitions, ideas, and problems of race and ethnicity are compared to those that have emerged in other areas of the world. GER:DB-SocSci
5 units, not given this year

ANTHRO 60A. Stanford Alpine Archaeology Project 2010
Alpine Archaeology is a discipline that applies traditional archaeology in montane contexts. While survey and excavation are standard methodologies, topography and climate bear on archaeological praxes in different ways. Soil chemistry in alpine contexts' testable by pH and other parameters - usually integrates less organic material and more geological material. Material preservation in alpine contexts factors in cold temperature for up to half a year with resulting lower diffusion for reduced oxidation and inhibited deterioration of organic materials. Because of montane environment, this course incorporates elements of paleoclimatology (including glaciation) and geomorphology (including geological processes of long term orogeny and erosion). Alpine ecology is studied including natural vegetation zones from 1000-3000 meters, along with transhumance, trade patterns, deforestation, constricted seasonal agriculture and anthropogenic change as well as restricted mobility along natural cor
3 units, Aut (Hunt, P), Sum (Staff)

ANTHRO 77. Japanese Society and Culture
(Same as ANTHRO 277) Focus is on power, identity, and the politics of knowledge production. How transnational interactions influence Japanese identity. How anthropological knowledge has contributed to understanding Japanese culture and society. Gender, race and class; contemporary ethnographies. Modernity and globalization. Cultural politics, domestic work, labor management, city planning, ad images, anime, martial art, fashion, theater, leisure, and tourism. GER:DB-SocSci, EC-GlobalCom
5 units, not given this year

ANTHRO 82. Medical Anthropology
(Same as ANTHRO 282) Emphasis is on how health, illness, and healing are understood, experienced, and constructed in social, cultural, and historical contexts. Topics: biopower and body politics, gender and reproductive technologies, illness experiences, medical diversity and social suffering, and the interface between medicine and science. GER:DB-SocSci, EC-GlobalCom
5 units, Aut (Jain, S)

ANTHRO 90A. History of Archaeological Thought
(Same as ARCHLGY 103) Introduction to the history of archaeology and the forms that the discipline takes today, emphasizing developments and debates over the past five decades. Historical overview of culture, historical, processual and post-processual archaeology, and topics that illustrate the differences and similarities in these theoretical approaches.
5 units, Spr (Meskell, L)

ANTHRO 90B. Theory of Cultural and Social Anthropology
Preference to Anthropology majors. Anthropological interpretations of other societies contain assumptions about Western societies. How underlying assumptions and implicit categories have influenced the presentation of data in major anthropological monographs. Emphasis is on Karl Marx, Emile Durkheim, Max Weber, and anthropological analyses of non-Western societies. GER:DB-SocSci
5 units, Win (Ebron, P)

ANTHRO 90C. Theory of Ecological and Environmental Anthropology
(Same as HUMBIO 118) Dynamics of culturally inherited human behavior and its relationship to social and physical environments. Topics include a history of ecological approaches in anthropology, subsistence ecology, sharing, risk management, territoriality, warfare, and resource conservation and management. Case studies from Australia, Melanesia, Africa, and S. America. GER:DB-SocSci, WIM
5 units, Win (Bird, D)

ANTHRO 90D. Social Theory in the Anthropological Sciences
Required of majors. Foundational course in the history of social theory in anthropology from the late 19th century to the present. Major approaches to human culture and society: symbolic, social, material, and psychological. Questions about the role of theory in anthropology and how it can be applied to human issues. (HEF IV) GER:DB-SocSci
5 units, not given this year

ANTHRO 91. Method and Evidence in Anthropology
This course provides a broad introduction to various ways of designing anthropological questions and associated methods for collecting evidence and supporting arguments. We review the inherent links between how a question is framed, the types of evidence that can address the question, and way that data are collected. Research activities such as interviewing, participant observation, quantitative observation, archival investigation, ecological survey, linguistic methodology, tracking extended cases, and demographic methods are reviewed. Various faculty and specialists will be brought in to discuss how they use different types of evidence and methods for supporting arguments in anthropology.
5 units, Win (Fox, J)

ANTHRO 92A. Undergraduate Research Proposal Writing Workshop
Practicum. Students develop independent research projects and write research proposals. How to formulate a research question; how to integrate theory and field site; and step-by-step proposal writing.
2-3 units, Aut (Babul, E)

ANTHRO 92B. Undergraduate Research Proposal Writing Workshop
Practicum. Students develop independent research projects and write research proposals. How to formulate a research question; how to integrate theory and field site; and step-by-step proposal writing.
2-3 units, Win (Babul, E)

ANTHRO 93. Prefield Research Seminar
For Anthropology majors only; non-majors register for 93B. Preparation for anthropological field research in other societies and the U.S. Data collection techniques include participant observation, interviewing, surveys, sampling procedures, life histories, ethnohistory, and the use of documentary materials. Strategies of successful entry into the community, research ethics, interpersonal dynamics, and the reflexive aspects of fieldwork. Prerequisites: two ANTHRO courses or consent of instructor.
5 units, Spr (Inoue, M)

ANTHRO 93B. Prefield Research Seminar: Non-Majors
Preparation for anthropological field research in other societies and the U.S. Data collection techniques include participant observation, interviewing, surveys, sampling procedures, life histories, ethnohistory, and the use of documentary materials. Strategies for successful entry into the community, research ethics, interpersonal dynamics, and the reflexive aspects of fieldwork. Service Learning Course (certified by Haas Center).
5 units, Spr (Coll, K)

ANTHRO 94. Postfield Research Seminar
Goal is to produce an ethnographic report based on original field research gathered during summer fieldwork, emphasizing writing and revising as steps in analysis and composition. Students critique classmates' work and revise their own writing in light of others' comments. Ethical issues in fieldwork and ethnographic writing, setting research write-up concerns within broader contexts.
5 units, Aut (Coll, K)

ANTHRO 95. Research in Anthropology
Independent research conducted under faculty supervision, normally taken junior or senior year in pursuit of a senior paper or an honors project. May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ANTHRO 95B. Senior Paper
Taken in the final quarter before graduation. Independent study and work on senior paper for students admitted to the program. Prerequisite: consent of program adviser and instructor.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ANTHRO 96. Directed Individual Study
Prerequisite: consent of instructor.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ANTHRO 97. Internship in Anthropology
Opportunity for students to pursue their specialization in an institutional setting such as a laboratory, clinic, research institute, or government agency. May be repeated for credit. Service Learning Course (certified by Haas Center).
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ANTHRO 98B. Digital Methods in Archaeology
(Same as ANTHRO 298B) This is a course on digital technologies in archaeology used for documentation, visualization, and analysis of archaeological spaces and objects. Emphasizes hands-on approaches to image manipulation, virtual reality, GIS, CAD, and photogrammetry modeling methods. GER:DB-EngrAppSci
3-5 units, Win (Rick, J)

ANTHRO 98E. Catalhoyuk and Neolithic Archaeology
Catalhoyuk as a case study to understand prehistoric social life during the Neolithic in Anatolia and the Near East. Developments in agriculture, animal domestication, material technology, trade, art, religion, skull cults, architecture, and burial practices. Literature specific to Catalhoyuk and other excavations throughout the Anatolian and Levantine regions to gain a perspective on diversity and variability throughout the Neolithic. The reflexive methodology used to excavate Catalhoyuk, and responsibilities of excavators to engage with larger global audiences of interested persons and stakeholders.
3-5 units, not given this year

ANTHRO 100A. India's Forgotten Empire: The Rise and Fall of Indus Civilization
How and why cities with public baths, long-distance trade, sophisticated technologies, and writing emerged, maintained themselves, and collapsed in the deserts of present-day Pakistan and India from 2500 to 1900 B.C. GER:DB-SocSci, DB-SocSci, EC-GlobalCom
3 units, Spr (Truncer, J)

ANTHRO 100C. Chavin de Huantar Research Seminar
For participants in fieldwork at Chavín de Huantar. Archaeological research techniques, especially as applied at this site. Students work on data from the previous field season to produce synthetic written materials. Maybe repeated for credit.
2-5 units, Aut (Rick, J)

ANTHRO 101. The Aztecs and Their Ancestors: Introduction to Mesoamerican Archaeology
The prehispanic cultures of Mesoamerica through archaeology and ethnohistory, from the archaic period to the Spanish conquest in the 16th century. GER:DB-SocSci, EC-GlobalCom
3-5 units, Win (Robertson, I)

ANTHRO 101A. Archaeology as a Profession
(Same as ARCHLGY 107A) Academic, contract, government, field, laboratory, museum, and heritage aspects of the profession.
5 units, Aut (Williams, B)

ANTHRO 102A. Ancient Civilizations: Complexity and Collapse
(Same as ANTHRO 202A) How archaeology contributes to understanding prehistoric civilizations. How and why complex social institutions arose, and the conditions and processes behind their collapse. The development of monumental architecture, craft specialization, trade and exchange, and social stratification using examples from the archaeological record. (HEF II, III; DA-B) GER:DB-SocSci, EC-GlobalCom
3-5 units, Aut (Truncer, J)

ANTHRO 103. The Archaeology of Modern Urbanism
Seminar. Urbanism as a defining feature of modern life. The perspective of archaeology on the history and development of urban cultures. Case studies are from around the globe; emphasis is on the San Francisco Bay Area megalopolis. Cities as cultural sites where economic, ethnic, and sexual differences are produced and transformed; spatial, material, and consumption practices; and the archaeology of communities and neighborhoods. GER:DB-SocSci
5 units, Spr (Voss, B)

ANTHRO 104. Urban Life and Cultural Imagination in South Asia
This course introduces the history of urban development and urban culture in South Asia. The main bulk of the readings are ethnographic accounts and historical works on conflicts, dynamics, and cultural forms in South Asian cities in the 20th century.
3 units, Spr (Hansen, T)

ANTHRO 105. Ancient Cities in the New World
(Same as ANTHRO 205) Preindustrial urbanism as exemplified by prehispanic New World societies. Case studies: the central and southern highlands of Mesoamerica, and the Maya region. Comparative material from highland S. America.
3-5 units, Win (Robertson, I)

ANTHRO 106. Incas and their Ancestors: Peruvian Archaeology
(Same as ANTHRO 206A, ARCHLGY 102B) The development of high civilizations in Andean S. America from hunter-gatherer origins to the powerful, expansive Inca empire. The contrasting ecologies of coast, sierra, and jungle areas of early Peruvian societies from 12,000 to 2,000 B.C.E. The domestication of indigenous plants which provided the economic foundation for monumental cities, ceramics, and textiles. Cultural evolution, and why and how major transformations occurred. (HEF II, III; DA-B) GER:DB-SocSci, EC-GlobalCom
3-5 units, Win (Rick, J)

ANTHRO 109. Archaeology: World Cultural Heritage
(Same as ANTHRO 209) Focus is on issues dealing with rights to land and the past on a global scale including conflicts and ethnic purges in the Middle East, the Balkans, Afghanistan, India, Australia, and the Americas. How should world cultural heritage be managed? Who defines what past and which sites and monuments should be saved and protected? Are existing international agreements adequate? How can tourism be balanced against indigenous rights and the protection of the past? GER:DB-SocSci

5 units, not given this year

ANTHRO 110A. Neandertals and Modern Humans: Origin, Evolution, Interactions
(Same as ANTHRO 210A) The expansion out of Africa of the human species represents the last step in the course of human evolution. It resulted in the colonization of the whole planet and the replacement of archaic forms of humans in Eurasia. One way to investigate why Homo sapiens has been such a successful species is to compare its evolution with that of its closest relative, the Neandertals. Exploring the biocultural processes at work in the two lineages leads to examininations of some of the main issues in paleoanthropology and the most recent methodological advances in the field.

3 units, Win (Hublin, J)

ANTHRO 111. Archaeology of Sex, Sexuality, and Gender
(Same as ANTHRO 211) How archaeologists study sex, sexuality, and gender through the material remains left behind by past cultures and communities. Theoretical and methodological issues; case studies from prehistoric and historic archaeology.

5 units, not given this year

ANTHRO 113. Faunal Analysis: Animal Remains for the Archaeologist
(Same as ANTHRO 213, BIO 166, BIO 266) The analysis of fossil animal bones and shells to illuminate the behavior and ecology of prehistoric collectors, especially ancient humans. Theoretical and methodoloigcal issues. The identification, counting, and measuring of fossil bones and shells. Labs. Methods of numerical analysis.

5 units, Spr (Klein, R)

ANTHRO 114. Prehistoric Stone Tools: Technology and Analysis
(Same as ANTHRO 214) Archaeologists rely on an understanding of stone tools to trace much of what we know about prehistoric societies. How to make, illustrate, and analyze stone tools, revealing the method and theory intrinsic to these artifacts. GER:DB-SocSci

5 units, Spr (Robertson, I)

ANTHRO 115. Spirituality and Healing
This course considers the puzzle of symbolic healing. How have societies without the resources of modern medicine approached healing? Why do these rituals have common features around the world? Topics include shamanism, spirit possession, prayer, and the role of placebos in modern biomedicine. Students do ethnographic work and practical explorations along with more traditional scholarly approaches to learning.

3-5 units, Spr (Luhrmann, T)

ANTHRO 115A. Environmental Crises and State Collapse: Lessons from the Past
(Same as HUMBIO 115) The effects and consequences of long-term human interaction with the environment. How and why past societies adapted, or failed to adapt, to changing environmental conditions and relevance to current environmental problems. Demographic, archaeological, and environmental data assessed using case studies from around the world since the late Pleistocene. Development of agriculture, societal collapse, sustainability, and policy response. Prerequisite: Human Biology core or equivalent or consent of instructor.

3 units, Aut (Truncer, J)

ANTHRO 116. Quantitative Data Analysis on Archeological and Anthropological Research
(Same as ANTHRO 216) This course allows graduate students and advanced undergraduates in archaeology and anthropology to acquire practical skills in quantitative data analysis. The structure of the course is flexible enough to accommodate a range of student expertise and interests. Topics include: statistics and graphics in R; database design, resampling methods, diversity measures, contingency table analysis, and introductory methods in spatial analysis. Recommended: familiarity with basic statistical methods is useful but not assumed.

5 units, Spr (Robertson, I)

ANTHRO 117A. Environment and Health: An Impact Assessment
(Same as HUMBIO 117) The effects of environment upon human and animal health and vice versa, including impacts of climate change, local environment (urban/rural health issues), land-use change upon health issues such as asthma, cholera, and malaria. Emphasis is on interdisciplinary approaches including medicine, epidemiology, ecology, and environmental science. Health/environment topics from multiple levels, such as from the standpoint of the individual organism to the ecosystem. How such knowledge is applied to policy and public health. Students construct new conceptual models for health/environment case studies.

3 units, Spr (Salkeld, D)

ANTHRO 118. Heritage, Environment, and Sovereignty in Hawaii
(Same as EARTHSYS 118) This course explores the cultural, political economic, and environmental status of contemporary Hawaiians. What sorts of sustainable economic and environmental systems did Hawaiians use in prehistory? How was colonization of the Hawaiian Islands informed and shaped by American economic interests and the nascent imperialism of the early 20th centrury? How was sovereignty and Native Hawaiian identity been shaped by these forces? How has tourism and the leisure industry affected the natural environment? This course uses archaeological methods, ethnohistorical sources, and historical analysis in an exploration of contemporary Hawaiian social economic and political life.

4 units, Aut (Wilcox, M)

ANTHRO 121. Language and Prehistory
(Same as ANTHRO 221) Language classification and its implications for human prehistory. The role of linguistic data in analyzing prehistoric populations, cultures, contact, and migrations. Comparison of linguistic and biological classifications. Reconstruction, proto-vocabularies, and culture. Archaeological decipherment and the origins and evolution of writing. Archaeological and genetic evidence for human migrations. (DA-A; HEF II,III) GER:DB-SocSci, EC-GlobalCom

3-5 units, not given this year

ANTHRO 121A. Hip Hop, Youth Identities, and the Politics of Language
(Same as AFRICAAM 121X, AMSTUD 121X, CSRE 121X, EDUC 121X, LINGUIST 155) Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture.

3-4 units, Spr (Alim, H)

ANTHRO 123. Readings in Linguistic Anthropology
(Same as ANTHRO 223) One or two major related works on language in its cultural context. Works for 2007-08 involve attempts to correlate linguistic and non-linguistic data for analysis of prehistoric human contact and migrations. May be repeated for credit.

2 units, not given this year

ANTHRO 123A. Human Diversity: A Linguistic Perspective
(Same as HUMBIO 187) The diversity and distribution of human language and its implications for the origin and evolution of the human species. The origin of existing languages and the people who speak them. Where did current world languages come from and how can this diversity be used to study human prehistory? Evidence from related fields such as archaeology and human genetics. Topics: the origin of the Indo-European languages, the peopling of the Americas, and evidence that all human languages share a common origin. GER:DB-SocSci, EC-GlobalCom

3 units, Spr (Ruhlen, M)

ANTHRO 124. Maya Mythology and the Popol Vuh
The mythology and folklore of the ancient Maya, emphasizing the relationship between the 16th-century Quiché Maya mythological epic Popol Vuh (Book of the Council) and classic lowland Maya art, architecture, religion, and politics. General Mesoamerican mythology. Anthropological and other theories of mythology.

Class participates in the creation of a web project on the Popol Vuh.

3-5 units, not given this year

ANTHRO 126. Cities in Comparative Perspective

(Same as URBANST 114) Core course for Urban Studies majors. The city as interdisciplinary object. Discourses about cities such as the projects, practices, plans, representations, and sensibilities that combine to create what people know about urban spaces. Local, national, and transnational spatial scales. Conversations across regional boundaries; geographies of difference. Case studies. GER:DB-SocSci

5 units, Aut (Ebron, P; Roque, A)

ANTHRO 127. City and Sounds

How do people experience modern cities and urban public cultures through auditory channels? How does sound mediate and constitute urban space? How to listen to and write about culture through sound. Students carry out narrative interviews and sound fieldwork in the Bay Area. Readings include urban anthropology, semiotics, art history, social studies of science and technology, media studies, and musicology.

5 units, not given this year

ANTHRO 127A. Cities and the Future: Utopias, Dystopias, and Other Urbanisms to Come

Interdisciplinary seminar for graduate students and advanced undergraduates with experience in the social sciences and humanities and an interest in urban studies. What sort of futures are being imagined for the cities of the 21st- century? How the future of cities, and the cities of the future, are being thought about and acted upon in the present. Its primary objective is to develop sophisticated ways of thinking about the future of cities, since doing so has real significance for the kind of city people want to and eventually may inhabit.

3 units, Win (Zeiderman, A)

ANTHRO 130A. Interpreting Space and Place: An Introduction to Mapmaking

How mapmaking, geographical information systems (GIS), and spatial tools can be applied in social research. Qualitative and quantitative approaches in the use of geospatial information. Methodologies and case examples.

5 units, not given this year

ANTHRO 130B. Introduction to GIS in Anthropology

(Same as ANTHRO 230B) How GIS and spatial tools can be applied in social research. Case studies and student projects address questions of social and cultural relevance using real data sets, including the collection of geospatial data and building of spatial evidence. Analytical approaches and how they can shape a social and cultural interpretation of space and place.

5 units, not given this year

ANTHRO 130D. Spatial Approaches to Social Science

(Same as ANTHRO 230D, POLISCI 241S) This multidisciplinary course combines different approaches to how GIS and spatial tools can be applied in social science research. We take a collaborative, project oriented approach to bring together technical expertise and substantive applications from several social science disciplines. The course aims to integrate tools, methods, and current debates in social science research and will enable students to engage in critical spatial research and a multidisciplinary dialogue around geographic space.

5 units, Win (Rodden, J; Engel, C)

ANTHRO 131. The Politics of Humanitarianism

(Same as ANTHRO 231) Anthropological approaches to contemporary practices of humanitarian intervention. How social theory can inform the politics of humanitarianism, charity, and philanthropy. Focus is on Africa from the colonial era to the present. GER:DB-SocSci

5 units, not given this year

ANTHRO 134. Object Lessons

(Same as ANTHRO 234) Human-object relations in the processes of world making. Objectification and materiality through ethnography, archaeology, material culture studies, and cultural studies. Interpretive connotations around and beyond the object, the unstable terrain of interrelationships between sociality and materiality, and the cultural constitution of objects. Sources include: works by Marx, Hegel, and Mauss; classic Pacific ethnographies of exchange, circulation, alienability, and fetishism; and material culture studies.

5 units, Win (Meskell, L)

ANTHRO 135. Cultural Studies

(Same as ANTHRO 235) Identity, community, and culture; their interactions and formation. GER:DB-SocSci

5 units, not given this year

ANTHRO 135H. CSRE House Seminar: Race and Ethnicity at Stanford

(Same as CSRE 135H) Race, ethnicity, gender, and religion using the tools, analytical skills and concepts developed by anthropologists.

1-2 units, Aut (Wilcox, M)

ANTHRO 135I. CSRE House Seminar: Race and Ethnicity at Stanford

(Same as CSRE 135I) Race, ethnicity, gender, and religion using the tools, analytical skills and concepts developed by anthropologists.

1-2 units, Win (Wilcox, M)

ANTHRO 139. Ethnography of Africa

(Same as ANTHRO 239) The politics of producing knowledge in and about Africa through the genre of ethnography, from the colonial era to the present. The politics of writing and the ethics of social imagination. Sources include novels juxtaposed to ethnographies. GER:DB-SocSci

5 units, not given this year

ANTHRO 140A. Ethnographic Archaeologies

(Same as ANTHRO 240A, ARCHLGY 137) How have ethnographic and archaeological methods been combined in anthropological research? What methodological and theoretical implications do these kinds of projects generate? Seminar topics will include ethnoarchaeology, ethnographies of archaeological practice, public archaeology and heritage ethics. Lecture and discussion.

4-5 units, Spr (Staff)

ANTHRO 147. Nature, Culture, Heritage

(Same as ANTHRO 247) Seminar. Shared histories of natural and cultural heritage and their subsequent trajectories into the present. How thought about archaeological sites and natural landscapes have undergone transformations due to factors including indigenous rights, green politics, and international tourism. The development of key ideas including conservation, wilderness, sustainability, indigenous knowledge, non-renewability and diversity. Case studies draw on cultural and natural sites from Africa, the Americas and Australia.

5 units, Win (Staff)

ANTHRO 147A. Folklore, Mythology, and Islam in Central Asia

Central Asian cults, myths, and beliefs from ancient time to modernity. Life crisis rites, magic ceremonies, songs, tales, narratives, taboos associated with childbirth, marriage, folk medicine, and calendrical transitions. The nature and the place of the shaman in the region. Sources include music from the fieldwork of the instructor and the Kyrgyz epoch Manas. The cultural universe of Central Asian peoples as a symbol of their modern outlook. GER:DB-SocSci

3-5 units, Spr (Kunanbaeva, A)

ANTHRO 148. Health, Politics, and Culture of Modern China

(Same as ANTHRO 248) One of the most generative regions for medical anthropology inquiry in recent years has been Asia. This seminar is designed to introduce upper division undergraduates and graduate students to the methodological hurdles, representational challenges, and intellectual rewards of investigating the intersections of health, politics, and culture in contemporary China.

4-5 units, not given this year

ANTHRO 148A. Nomads of Eurasia: Culture in Transition

(Same as ANTHRO 248A) Traditional peoples of Central and Inner Asia; their lifestyles and cultural history. Modern research approaches and recent fieldwork data published mainly in Russian and Central Asian languages. Audio-visual materials.

5 units, Win (Kunanbaeva, A)

ANTHRO 150. Identity and Peoples of China

(Same as ANTHRO 250) Who is Chinese? Perspectives on being Chinese from Han and ethnic minorities in China, in Taiwan, and among overseas Chinese. Emphasis is on distinguishing forces

contributing to identity formation from ideological rhetoric about identity. (HEF I, IV) GER:DB-SocSci, EC-GlobalCom

5 units, not given this year

ANTHRO 151. Women, Fertility, and Work

(Same as ANTHRO 251, HUMBIO 148W) How do choices relating to bearing, nursing, and raising children influence women's participation in the labor force? Cultural, demographic, and evolutionary explanations, using crosscultural case studies. Emphasis is on understanding fertility and work in light of the options available to women at particular times and places. GER:DB-SocSci, EC-Gender

5 units, not given this year

ANTHRO 152A. Urban Poverty and Inequality in Contemporary China

Experiences of poverty and inequality and their relationship to gender, space development, post-socialism, and globalization. How processes of class-making in China's cities are bound up with transformations in the country's sociopolitcal landscape.

5 units, not given this year

ANTHRO 153A. Japan's Postwar Cultural History

(Same as ANTHRO 253A) Cultural and social history of Japan since WWII. Falling birth rates, changing family structure, decreasing and then increasing divorce rates, coping with societal aging, expansion of higher education, solving new educational problems, increasing variability of work situation, introduction of foreign workers. Attention to the legacy of Tokugawa and pre-war Japan as antecedent to postwar developments.

3-5 units, Spr (Befu, H)

ANTHRO 161. Human Behavioral Ecology

(Same as ANTHRO 261) Theory, method, and application in anthropology. How theory in behavioral ecology developed to understand animal behavior is applied to questions about human economic decision making in ecological and evolutionary contexts. Topics include decisions about foraging and subsistence, competition and cooperation, mating, and reproduction and parenting. GER:DB-SocSci

3-5 units, not given this year

ANTHRO 161B. Human Ecology of the Amazon

(Same as ANTHRO 261B, LATINAM 202, LATINAM 302) The ecosystems of the Amazon and their human inhabitants. The biotic and abiotic factors shaping human adaptation to the region. Ethnographic literature used to explore subsistence patterns and the resource use of native Amazonians. Current changes in these economies and lifeways due to acculturation and market forces, and the implications for conservation.

5 units, not given this year

ANTHRO 162. Indigenous Peoples and Environmental Problems

(Same as ANTHRO 262) The social and cultural consequences of contemporary environmental problems. The impact of market economies, development efforts, and conservation projects on indigenous peoples, emphasizing Latin America. The role of indigenous grass roots organizations in combating environmental destruction and degradation of homeland areas. GER:DB-Hum, EC-GlobalCom

3-5 units, Spr (Durham, W; Hunt, C)

ANTHRO 163. Conservation and Evolutionary Ecology

(Same as ANTHRO 263) Environmental degradation resulting from human behavior, and what can be done about it. Patterns of interaction between people and environments, and why they vary over time and space. Topics include adaptation and behavior, resource acquisition and utilization, conflicts of interest, collective action problems, conspicuous consumption, waste, land management, and public policy. GER:DB-SocSci

5 units, not given this year

ANTHRO 164A. Anthropology of Ecotourism

Ecotourism has been touted as a win-win scenario for both biodiversity conservation and the well-being of local residents. In practice, these lofty ideals of ecotourism have proven difficult to implement. The rapid development of ecotourism over the last two decades. Focus is on the scholarly literature relating to ecotourism from both supporting and critical perspectives.

5 units, not given this year

ANTHRO 164B. Anthropology of Tourism

Multidisciplinary seminar. As the largest scale movement of goods, services, and people that humanity has ever seen, tourism is an immense phenomenon and is currently the world's most immense industry, reaching some of the most remote people and places on the planet. Yet scholars have only begun to focus on the topic in recent decades. Focus is on key anthropological and social science literature relating to tourism from both supporting and critical perspectives; however. Topics include emerging sub-types of tourism including sustainable tourism, ecotourism, agritourism, and geotourism.

5 units, Win (Hunt, C)

ANTHRO 165. Parks and Peoples: The Benefits and Costs of Protected Area Conservation

Seminar. Emphasis is on the social impact of parks and reserves. Integrated conservation and development projects (ICDPs) based on protected areas; alternative ways to derive local social benefits from them. Cases include Yellowstone, Manu, Galápagos, Ngorongoro, and Guanacaste.

5 units, not given this year

ANTHRO 165A. People and Parks: Management of Protected Areas

As resources become scarcer, parks increasingly serve as ideological battlegrounds for contested core human values and often put livelihoods at stake. Their historical development and the complex array of present-day issues associated with the formal protection of biodiversity. The ideas behind parks and the evolution of these ideas.

5 units, not given this year

ANTHRO 166. Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness

(Same as ANTHRO 266) Seminar. The state, private sector, development agencies, and NGOs in development and conservation of tropical land use. Focus is on the socioeconomic and political drivers of resource extraction and agricultural production. Case studies used to examine the local-to-global context from many disciplines. Are maps and analyses used for gain, visibility, accountability, or contested terrain? How are power dynamics, land use history, state-private sector collusion, and neoliberal policies valued? What are the local and extra-local responses? Prerequisite: consent of instructor.

3 units, Win (Curran, L)

ANTHRO 167. Signaling Theory

(Same as ANTHRO 267) (Graduate students register for 267.) Why does the peacock have such a large elaborate tail? Why does conspicuous consumption serve to create markers of distinction? How does the pursuit of social capital generate prestige? Answers to these questions from convergent scholarship in social theory, economic theory, and evolutionary theory. The use of signaling theory to explain disparate social and material phenomena. Authors include Veblen, Bourdieu, and Zahavi. Prerequisite for undergraduates: consent of instructor.

3 units, not given this year

ANTHRO 168A. Risky Environments: The Nature of Disaster

(Same as ANTHRO 268A) This seminar explores topics including environmental movements and countercultures, human agency and geoengineering ecotourism, and indigenous perspectives of changing climates to query how humans view `nature¿ in terms of stability, instability, risk and disaster in the 21st century. Case studies draw upon a broad range of geographical regions including the Arctic, Iceland, Australia, and the Americas. Discussions will draw upon film portrayals and interviews with researchers in addition to readings.

5 units, Win (Staff)

ANTHRO 171. The Biology and Evolution of Language

(Same as ANTHRO 271, HUMBIO 145L) Language as an evolutionary adaptation of humans. Comparison of communicative behavior in humans and animals, and the inference of evolutionary stages. Structure, linguistic functions, and the evolution of the vocal tract, ear, and brain, with associated disorders (stuttering, dyslexia, autism, schizophrenia) and therapies. Controversies over language centers in the brain and the innateness of language acquisition. Vision, color terminology, and biological explanation in linguistic theory. GER:DB-NatSci

4-5 units, not given this year

ANTHRO 173. Human Dimensions of Global Environmental Change: Resilence, Vulnerability, and Environmental Justice
(Same as HUMBIO 111) The complexity of social and political issues surrounding global environmental change. Emphasis is on synergies precipitated by human-induced climatic change. Case studies and scenarios to explore the vulnerability and resilience in households, communities, regions, and nationmstates most affected by extreme weather conditions. Their concerns, livelihood changes, and diverse responses of rural smallholders, indigenous communities, the state, and local and regional migrants. Central theme is environmental justice.
3 units, Spr (Curran, L)

ANTHRO 174. Beginnings of Social Complexity
(Same as ANTHRO 274) Models and examples of the social evolution of stratification and political centralization in prehistoric human societies. Inferences from the archaeological record concerning the forces and mechanisms behind the rise and fall of complex societies, particularly in S. America. (HEF II; DA-B)
5 units, not given this year

ANTHRO 177. Environmental Change and Emerging Infectious Diseases
(Same as ANTHRO 277, HUMBIO 114) The changing epidemiological environment. How human-induced environmental changes, such as global warming, deforestation and land-use conversion, urbanization, international commerce, and human migration, are altering the ecology of infectious disease transmission, and promoting their re-emergence as a global public health threat. Case studies of malaria, cholera, hantavirus, plague, and HIV. GER:DB-SocSci
3-5 units, Aut (Durham, W; Jones, J)

ANTHRO 179. Cultures of Disease: Cancer
History, politics, science, and anthropology of cancer; political and economic issues of disease and health care in the U.S., including the ethics and economics of health care provision, the pharmaceutical industry, carcinogen production, and research priorities.
5 units, not given this year

ANTHRO 180. Science, Technology, and Gender
Why is engineering often seen as a masculine profession? What have women's experiences been in entering fields of science and technology? How has gender been defined by scientists? Issues: the struggles of women in science to negotiate misogyny and cultural expectation (marriage, children), reproductive issues (surrogate motherhood, visual representations of the fetus, fetal surgery, breast feeding, childbirth practices), how the household became a site of consumerism and technology, and the cultural issues at stake as women join the ranks of scientists. GER:DB-SocSci, EC-Gender
3-5 units, not given this year

ANTHRO 181. Culture and Madness: Anthropological Approaches to Psychiatric Illness
(Same as ANTHRO 281, HUMBIO 146) Interdisciplinary. Culture and social context on the identification, course, and outcome of psychiatric illness. What is known from psychiatry about the nature of illness as a biomedical process and from anthropology about the life course of illness within particular settings. Prerequisite: Human Biology core or equivalent or consent of instructor.
3-5 units, not given this year

ANTHRO 181A. Gender in the Middle East: Iran, Turkey, and Egypt
This course explores the construction of gender in the Middle East. Drawing on the historical, sociological and anthropological research in the region, the course aims to question the stereotypes about the subordination of Muslim women and to offer students a systematic reading and analytical discussion of the political, economic and cultural structures that inform gender relations and practices in the region. The course starts with an examination of early Islam and religious sources with regard to women¿s status, then moves on to nationalist and modernization movements in the 19th and 20th centuries, and finally explores women¿s and men¿s lives in contemporary Egypt, Turkey and Iran. In this framework, we will pay special attention to Islamist mobilizations, family and sexual relations, as well as women's changing livelihoods and labor.
3 units, Spr (Staff)

ANTHRO 182. An Anthropology of Annihilation: Tobacco at the Turn of the Millenium
The cigarette as the world's greatest weapon of mass destruction: 100 million dead worldwide from cigarettes during the 20th century, one billion expected to die in the 21st century. How to understand this toll, its production, management, politicization, and depoliticization? What can anthropological and allied perspectives disclose? How does the catastrophe challenge key precepts within anthropology and other branches of the academy?
3-5 units, Win (Kohrman, M)

ANTHRO 185A. Race and Biomedicine
(Same as ASNAMST 185A) Race, identity, culture, biology, and political power in biomedicine. Biological theories of racial ordering, sexuality and the medicalization of group difference. Sources include ethnography, film, and biomedical literature. Topics include colonial history and medicine, the politics of racial categorization in biomedical research, the protection of human subjects and research ethics, immigration health and citizenship, race-based models in health disparities research and policy, and recent developments in human genetic variation research.
3-5 units, Aut (Lee, S)

GRADUATE COURSES IN ANTHROPOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

ANTHRO 201. Introduction to Cultural and Social Anthropology
(Same as ANTHRO 1) Crosscultural anthropological perspectives on human behavior, including cultural transmission, social organization, sex and gender, culture change, technology, war, ritual, and related topics. Case studies illustrating the principles of the cultural process. Films.
5 units, Win (Yanagisako, S), Sum (Roque, A)

ANTHRO 202A. Ancient Civilizations: Complexity and Collapse
(Same as ANTHRO 102A) How archaeology contributes to understanding prehistoric civilizations. How and why complex social institutions arose, and the conditions and processes behind their collapse. The development of monumental architecture, craft specialization, trade and exchange, and social stratification using examples from the archaeological record. (HEF II, III; DA-B)
3-5 units, Aut (Truncer, J)

ANTHRO 205. Ancient Cities in the New World
(Same as ANTHRO 105) Preindustrial urbanism as exemplified by prehispanic New World societies. Case studies: the central and southern highlands of Mesoamerica, and the Maya region. Comparative material from highland S. America.
3-5 units, Win (Robertson, I)

ANTHRO 206. Human Origins
(Same as ANTHRO 6, HUMBIO 6) The human fossil record from the first non-human primates in the late Cretaceous or early Paleocene, 80-65 million years ago, to the anatomically modern people in the late Pleistocene, between 100,000 to 50,000 B.C.E. Emphasis is on broad evolutionary trends and the natural selective forces behind them.
5 units, not given this year

ANTHRO 206A. Incas and their Ancestors: Peruvian Archaeology
(Same as ANTHRO 106, ARCHLGY 102B) The development of high civilizations in Andean S. America from hunter-gatherer origins to the powerful, expansive Inca empire. The contrasting ecologies of coast, sierra, and jungle areas of early Peruvian societies from 12,000 to 2,000 B.C.E. The domestication of indigenous plants which provided the economic foundation for monumental cities, ceramics, and textiles. Cultural evolution, and why and how major transformations occurred. (HEF II, III; DA-B)
3-5 units, Win (Rick, J)

ANTHRO 209. Archaeology: World Cultural Heritage
(Same as ANTHRO 109) Focus is on issues dealing with rights to land and the past on a global scale including conflicts and ethnic purges in the Middle East, the Balkans, Afghanistan, India, Australia, and the Americas. How should world cultural heritage be managed? Who defines what past and which sites and monuments

should be saved and protected? Are existing international agreements adequate? How can tourism be balanced against indigenous rights and the protection of the past?

5 units, not given this year

ANTHRO 210. Examining Ethnographies

Eight or nine important ethnographies, including their construction, their impact, and their faults and virtues.

5 units, not given this year

ANTHRO 210A. Neandertals and Modern Humans: Origin, Evolution, Interactions

(Same as ANTHRO 110A) The expansion out of Africa of our species represents the last spectacular step in the course of Human Evolution. It resulted in the colonization of the whole planet and the replacement of archaic forms of humans in Eurasia. One way to investigate why Homo sapiens has been such a successful species is to compare its evolution with that of its closest relative, the Neandertals. Exploring the bio-cultural processes at work in the two lineages leads to examine some of the main issues in Paleoanthropology and the most recent methodological advances in the field.

3 units, Win (Hublin, J)

ANTHRO 211. Archaeology of Sex, Sexuality, and Gender

(Same as ANTHRO 111) How archaeologists study sex, sexuality, and gender through the material remains left behind by past cultures and communities. Theoretical and methodological issues; case studies from prehistoric and historic archaeology.

5 units, not given this year

ANTHRO 213. Faunal Analysis: Animal Remains for the Archaeologist

(Same as ANTHRO 113, BIO 166, BIO 266) The analysis of fossil animal bones and shells to illuminate the behavior and ecology of prehistoric collectors, especially ancient humans. Theoretical and methodoloigcal issues. The identification, counting, and measuring of fossil bones and shells. Labs. Methods of numerical analysis.

5 units, Spr (Klein, R)

ANTHRO 214. Prehistoric Stone Tools: Technology and Analysis

(Same as ANTHRO 114) Archaeologists rely on an understanding of stone tools to trace much of what we know about prehistoric societies. How to make, illustrate, and analyze stone tools, revealing the method and theory intrinsic to these artifacts.

5 units, Spr (Robertson, I)

ANTHRO 216. Quantitative Data Analysis on Archeological and Anthropological Research

(Same as ANTHRO 116) This course allows graduate and advanced undergraduate students in archaeology and anthropology to acquire practical skills in quantitative data analysis. Some familiarity with basic statistical methods is useful but not assumed; the structure of the course will be flexible enough to accommodate a range of student expertise and interests. Topics covered include: statistics and graphics in R; database design, resampling methods, diversity measures, contingency table analysis, and introductory methods in spatial analysis.

5 units, Spr (Robertson, I)

ANTHRO 221. Language and Prehistory

(Same as ANTHRO 121) Language classification and its implications for human prehistory. The role of linguistic data in analyzing prehistoric populations, cultures, contact, and migrations. Comparison of linguistic and biological classifications. Reconstruction, proto-vocabularies, and culture. Archaeological decipherment and the origins and evolution of writing. Archaeological and genetic evidence for human migrations. (DA-A; HEF II,III)

3-5 units, not given this year

ANTHRO 223. Readings in Linguistic Anthropology

(Same as ANTHRO 123) One or two major related works on language in its cultural context. Works for 2007-08 involve attempts to correlate linguistic and non-linguistic data for analysis of prehistoric human contact and migrations. May be repeated for credit.

2 units, not given this year

ANTHRO 230B. Introduction to GIS in Anthropology

(Same as ANTHRO 130B) How GIS and spatial tools can be applied in social research. Case studies and student projects address questions of social and cultural relevance using real data sets, including the collection of geospatial data and building of spatial evidence. Analytical approaches and how they can shape a social and cultural interpretation of space and place.

5 units, not given this year

ANTHRO 230D. Spatial Approaches to Social Science

(Same as ANTHRO 130D, POLISCI 241S) This multidisciplinary course combines different approaches to how GIS and spatial tools can be applied in social science research. We take a collaborative, project oriented approach to bring together technical expertise and substantive applications from several social science disciplines. The course aims to integrate tools, methods, and current debates in social science research and will enable students to engage in critical spatial research and a multidisciplinary dialogue around geographic space.

5 units, Win (Rodden, J; Engel, C)

ANTHRO 231. The Politics of Humanitarianism

(Same as ANTHRO 131) Anthropological approaches to contemporary practices of humanitarian intervention. How social theory can inform the politics of humanitarianism, charity, and philanthropy. Focus is on Africa from the colonial era to the present.

5 units, not given this year

ANTHRO 234. Object Lessons

(Same as ANTHRO 134) Human-object relations in the processes of world making. Objectification and materiality through ethnography, archaeology, material culture studies, and cultural studies. Interpretive connotations around and beyond the object, the unstable terrain of interrelationships between sociality and materiality, and the cultural constitution of objects. Sources include: works by Marx, Hegel, and Mauss; classic Pacific ethnographies of exchange, circulation, alienability, and fetishism; and material culture studies.

5 units, Win (Meskell, L)

ANTHRO 235. Cultural Studies

(Same as ANTHRO 135) Identity, community, and culture; their interactions and formation.

5 units, not given this year

ANTHRO 239. Ethnography of Africa

(Same as ANTHRO 139) The politics of producing knowledge in and about Africa through the genre of ethnography, from the colonial era to the present. The politics of writing and the ethics of social imagination. Sources include novels juxtaposed to ethnographies.

5 units, not given this year

ANTHRO 240A. Ethnographic Archaeologies

(Same as ANTHRO 140A, ARCHLGY 137) How have ethnographic and archaeological methods been combined in anthropological research? What methodological and theoretical implications do these kinds of projects generate? Seminar topics will include ethnoarchaeology, ethnographies of archaeological practice, public archaeology and heritage ethics. Lecture and discussion.

4-5 units, Spr (Staff)

ANTHRO 247. Nature, Culture, Heritage

(Same as ANTHRO 147) Seminar. Shared histories of natural and cultural heritage and their subsequent trajectories into the present. How thought about archaeological sites and natural landscapes have undergone transformations due to factors including indigenous rights, green politics, and international tourism. The development of key ideas including conservation, wilderness, sustainability, indigenous knowledge, non-renewability and diversity. Case studies draw on cultural and natural sites from Africa, the Americas and Australia.

5 units, Win (Staff)

ANTHRO 248. Health, Politics, and Culture of Modern China

(Same as ANTHRO 148) One of the most generative regions for medical anthropology inquiry in recent years has been Asia. This seminar is designed to introduce upper division undergraduates and graduate students to the methodological hurdles, representational challenges, and intellectual rewards of investigating the intersections of health, politics, and culture in contemporary China.

4-5 units, not given this year

ANTHRO 248A. Nomads of Eurasia: Culture in Transition

(Same as ANTHRO 148A) Traditional peoples of Central and Inner Asia; their lifestyles and cultural history. Modern research approaches and recent fieldwork data published mainly in Russian and Central Asian languages. Audio-visual materials.

5 units, Win (Kunanbaeva, A)

ANTHRO 250. Identity and Peoples of China
(Same as ANTHRO 150) Who is Chinese? Perspectives on being Chinese from Han and ethnic minorities in China, in Taiwan, and among overseas Chinese. Emphasis is on distinguishing forces contributing to identity formation from ideological rhetoric about identity. (HEF I, IV)
5 units, not given this year

ANTHRO 251. Women, Fertility, and Work
(Same as ANTHRO 151, HUMBIO 148W) How do choices relating to bearing, nursing, and raising children influence women's participation in the labor force? Cultural, demographic, and evolutionary explanations, using crosscultural case studies. Emphasis is on understanding fertility and work in light of the options available to women at particular times and places.
5 units, not given this year

ANTHRO 253A. Japan's Postwar Cultural History
(Same as ANTHRO 153A) Cultural and social history of Japan since WWII. Falling birth rates, changing family structure, decreasing and then increasing divorce rates, coping with societal aging, expansion of higher education, solving new educational problems, increasing variability of work situation, introduction of foreign workers. Attention to the legacy of Tokugawa and pre-war Japan as antecedent to postwar developments.
3-5 units, Spr (Befu, H)

ANTHRO 261. Human Behavioral Ecology
(Same as ANTHRO 161) Theory, method, and application in anthropology. How theory in behavioral ecology developed to understand animal behavior is applied to questions about human economic decision making in ecological and evolutionary contexts. Topics include decisions about foraging and subsistence, competition and cooperation, mating, and reproduction and parenting.
3-5 units, not given this year

ANTHRO 261B. Human Ecology of the Amazon
(Same as ANTHRO 161B, LATINAM 202, LATINAM 302) The ecosystems of the Amazon and their human inhabitants. The biotic and abiotic factors shaping human adaptation to the region. Ethnographic literature used to explore subsistence patterns and the resource use of native Amazonians. Current changes in these economies and lifeways due to acculturation and market forces, and the implications for conservation.
5 units, not given this year

ANTHRO 262. Indigenous Peoples and Environmental Problems
(Same as ANTHRO 162) The social and cultural consequences of contemporary environmental problems. The impact of market economies, development efforts, and conservation projects on indigenous peoples, emphasizing Latin America. The role of indigenous grass roots organizations in combating environmental destruction and degradation of homeland areas.
3-5 units, Spr (Durham, W; Hunt, C)

ANTHRO 263. Conservation and Evolutionary Ecology
(Same as ANTHRO 163) Environmental degradation resulting from human behavior, and what can be done about it. Patterns of interaction between people and environments, and why they vary over time and space. Topics include adaptation and behavior, resource acquisition and utilization, conflicts of interest, collective action problems, conspicuous consumption, waste, land management, and public policy.
5 units, not given this year

ANTHRO 266. Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness
(Same as ANTHRO 166) Seminar. The state, private sector, development agencies, and NGOs in development and conservation of tropical land use. Focus is on the socioeconomic and political drivers of resource extraction and agricultural production. Case studies used to examine the local-to-global context from many disciplines. Are maps and analyses used for gain, visibility, accountability, or contested terrain? How are power dynamics, land use history, state-private sector collusion, and neoliberal policies valued? What are the local and extra-local responses? Prerequisite: consent of instructor.
3 units, Win (Curran, L)

ANTHRO 267. Signaling Theory
(Same as ANTHRO 167) (Graduate students register for 267.) Why does the peacock have such a large elaborate tail? Why does conspicuous consumption serve to create markers of distinction? How does the pursuit of social capital generate prestige? Answers to these questions from convergent scholarship in social theory, economic theory, and evolutionary theory. The use of signaling theory to explain disparate social and material phenomena. Authors include Veblen, Bourdieu, and Zahavi.
3 units, not given this year

ANTHRO 268A. Risky Environments: The Nature of Disaster
(Same as ANTHRO 168A) This seminar explores topics including environmental movements and countercultures, human agency and geoengineering ecotourism, and indigenous perspectives of changing climates to query how humans view `nature¿ in terms of stability, instability, risk and disaster in the 21st century. Case studies draw upon a broad range of geographical regions including the Arctic, Iceland, Australia, and the Americas. Discussions will draw upon film portrayals and interviews with researchers in addition to readings.
5 units, Win (Staff)

ANTHRO 271. The Biology and Evolution of Language
(Same as ANTHRO 171, HUMBIO 145L) Language as an evolutionary adaptation of humans. Comparison of communicative behavior in humans and animals, and the inference of evolutionary stages. Structure, linguistic functions, and the evolution of the vocal tract, ear, and brain, with associated disorders (stuttering, dyslexia, autism, schizophrenia) and therapies. Controversies over language centers in the brain and the innateness of language acquisition. Vision, color terminology, and biological explanation in linguistic theory.
4-5 units, not given this year

ANTHRO 274. Beginnings of Social Complexity
(Same as ANTHRO 174) Models and examples of the social evolution of stratification and political centralization in prehistoric human societies. Inferences from the archaeological record concerning the forces and mechanisms behind the rise and fall of complex societies, particularly in S. America. (HEF II; DA-B)
5 units, not given this year

ANTHRO 277. Japanese Society and Culture
(Same as ANTHRO 77) Focus is on power, identity, and the politics of knowledge production. How transnational interactions influence Japanese identity. How anthropological knowledge has contributed to understanding Japanese culture and society. Gender, race and class; contemporary ethnographies. Modernity and globalization. Cultural politics, domestic work, labor management, city planning, ad images, anime, martial art, fashion, theater, leisure, and tourism.
5 units, not given this year

ANTHRO 277. Environmental Change and Emerging Infectious Diseases
(Same as ANTHRO 177, HUMBIO 114) The changing epidemiological environment. How human-induced environmental changes, such as global warming, deforestation and land-use conversion, urbanization, international commerce, and human migration, are altering the ecology of infectious disease transmission, and promoting their re-emergence as a global public health threat. Case studies of malaria, cholera, hantavirus, plague, and HIV.
3-5 units, Aut (Durham, W; Jones, J)

ANTHRO 281. Culture and Madness: Anthropological Approaches to Psychiatric Illness
(Same as ANTHRO 181, HUMBIO 146) Interdisciplinary. Culture and social context on the identification, course, and outcome of psychiatric illness. What is known from psychiatry about the nature of illness as a biomedical process and from anthropology about the life course of illness within particular settings. Prerequisite: Human Biology core or equivalent or consent of instructor.
3-5 units, not given this year

ANTHRO 282. Medical Anthropology
(Same as ANTHRO 82) Emphasis is on how health, illness, and healing are understood, experienced, and constructed in social, cultural, and historical contexts. Topics: biopower and body politics, gender and reproductive technologies, illness experiences, medical diversity and social suffering, and the interface between medicine and science.
5 units, Aut (Jain, S)

ANTHRO 290A. Advanced Social Theory in the Anthropological Sciences
Social theories that have influenced anthropology including evolutionism, Marxism, interpretivism, and postmodernism. Implications of debates among theorists for anthropological research.
5 units, not given this year

ANTHRO 293B. Master's Thesis Writing Seminar
May be repeated for credit.
2-4 units, Win (Staff)

ANTHRO 295. Research in Anthropological Sciences
Supervised work with an individual faculty member on the student research project. May be taken for more than one quarter.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ANTHRO 298B. Digital Methods in Archaeology
(Same as ANTHRO 98B) This is a course on digital technologies in archaeology used for documentation, visualization, and analysis of archaeological spaces and objects. Emphasizes hands-on approaches to image manipulation, virtual reality, GIS, CAD, and photogrammetry modeling methods.
3-5 units, Win (Rick, J)

ANTHRO 299. Directed Individual Study
Prerequisite: consent of instructor.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ANTHRO 300. Reading Theory Through Ethnography
Required of and restricted to first-year ANTHRO Ph.D. students. Focus is on contemporary ethnography and related cultural and social theories generated by texts. Topics include agency, resistance, and identity formation, and discourse analysis. Prerequisite: consent of instructor.
5 units, Win (Ebron, P)

ANTHRO 301. History of Anthropological Theory
Required of Anthropology Ph.D. students. The history of cultural and social anthropology in relation to historical and national contexts and key theoretical and methodological issues as these inform contemporary theory and practices of the discipline. Enrollment limited to 15. Prerequisite: consent of instructor.
5 units, Aut (Inoue, M)

ANTHRO 302. Theory and History of Evolution and Ecology
Evolutionary and ecological theory from the 19th century to present. Theory and concepts from evolution and ecology, emphasizing an-thropological applications. Evolutionary theories of human behavior, culture, and societies. Ecological theory behind carrying capacity, sustainable yield, and population growth. Emphasis is on tools of analysis and formulating research questions in anthropology today. Upper division undergrads require consent of instructor.
5 units, Win (Bird, R)

ANTHRO 303. Introduction to Archaeological Theory
The history of archaeological thought emphasizing recent debates. Evolutionary theories, behavioral archaeology, processual and cognitive archaeology, and approaches termed feminist and post-processual archaeology in the context of wider debate in adjacent disciplines. The application and integration of theory on archaeological problems and issues. Prerequisite: consent of instructor.
5 units, Win (Hodder, I)

ANTHRO 304. Data Analysis for Quantitative Research
Univariate, multivariate, and graphical methods used for analyzing quantitative data in anthropological research. Archaeological and paleobiological examples. Recommended: algebra. Prerequisite: consent of instructor.
5 units, Spr (Jones, J)

ANTHRO 306. Anthropological Research Methods
Required of ANTHRO Ph.D. students; open to all graduate students. Research methods and modes of evidence building in ethnographic research. Enrollment limited to 10. Prerequisite: consent of instructor.
5 units, Spr (Yanagisako, S)

ANTHRO 307. Archaeological Methods and Research Design
Methodological aspects of field and laboratory practice from traditional archaeological methods to the latest interdisciplinary analytical techniques. The nature of archaeological data and inference; interpretive potential of these techniques. Prerequisite: consent of instructor.
5 units, Spr (Hodder, I)

ANTHRO 308. Proposal Writing Seminar
Required of second-year Ph.D. students in the culture and society track. The conceptualization of dissertation research problems, the theories behind them, and the methods for exploring them. Participants draft a research prospectus suitable for a dissertation proposal and research grant applications. Limited enrollment. Prerequisite: consent of instructor.
5 units, Spr (Kohrman, M)

ANTHRO 309. Advanced Evolutionary Theory in Anthropological Sciences
History of evolutionary theory from the 19th century to present, emphasizing anthropological applications. Theory and concept in evolutionary biology; evolutionary theories of culture; and interactions of genetic, social, and cultural evolution and their implications. Emphasis is on tools of analysis and the value of evolutionary thinking for formulating research questions in anthropology today. Prerequisite: graduate standing or consent of instructor. (HEF II, III)
5 units, not given this year

ANTHRO 310C. Intersections
Themes of materiality and visuality, aesthetic and other forms of cultural production, and the meanings of creativity and convention. Ethnographic and archaeological material and case studies from worldwide cultural contexts. Prerequisite: consent of instructor.
5 units, not given this year

ANTHRO 310G. Introduction to Graduate Studies
Required graduate seminar. The history of anthropological theory and key theoretical and methodological issues of the discipline. Prerequisite: consent of instructor.
2 units, Aut (Yanagisako, S)

ANTHRO 311. Ethnographic Writing
For graduate students writing or planning to write a dissertation using ethnographic methods. The choices made by the authors of ethnographies in constructing an argument, using data and speaking to an audience of readers. Readings include chapters written by class members currently writing dissertations. Prerequisite: consent of instructor.
3-5 units, not given this year

ANTHRO 311G. Introduction to Culture and Society Graduate Studies in Anthropology
Required graduate seminar for CS track. The history of anthropological theory and key theoretical and methodological issues in cultural anthropology. Prerequistes: for 1st year PhD students in the cultural and society track or by permission of the instructor.
1-3 units, Win (Yanagisako, S), Spr (Ferguson, J)

ANTHRO 320A. Race, Ethnicity, and Language
(Same as EDUC 389X, LINGUIST 253) Seminar. The linguistic construction of race and ethnicity across a wide variety of contexts and communities. The course takes a comparative perspective and highlights how different racial/ethnic formations participate in similar, yet different, ways of doing race though language, interaction and culture. Readings draw heavily from perspectives in linguistic anthropology and sociolinguistics.
3-4 units, Win (Alim, H)

ANTHRO 321. Reading Marx, Reading Weber
Advanced graduate seminar devoted to a critical reading of writings by two 19th-century social theorists who continue to shape anthropology and social analysis more broadly. Enrollment limited to12. No auditing. Prerequisites: graduate standing in Anthropology or consent of the instructor; and graduate level course work in cultural or social anthropology, social theory, or cultural studies.
5 units, Spr (Yanagisako, S)

ANTHRO 322. From Biopolitics to Necropolitics and Beyond
Scholarship produced and informed by Michel Foucault. Focus is on the final period of Foucault's life; how his discussions of biopolitics, subjectification, governmentality, and death have served as touchstones for recent empirical research. Key interventions initially made under these rubrics; how anthropologists and others have applied, challenged, and extended them. Prerequisite: consent of instructor.
5 units, Spr (Staff)

ANTHRO 324. Political Anthropology
An anthropological approach to politics through bringing anthropological ways of thinking and modes of analysis to bear on key

presuppositions of modern Western political thought. Ideas of rights, the individual, society, liberty, democracy, equality, and solidarity; ethnographic accounts used to identify the limits of conventional analytical approaches and to document the forms of politics that such approaches either ignore or misunderstand. Prerequisite: consent of instructor.

5 units, not given this year

ANTHRO 326. Postcolonial and Indigenous Archaeologies
The role of postcolonial and Indigenous archaeologies as emergeant disciplinary activities within contemporary society. Community based archaeologies; the roles of oral history, landscape, and memory; archaeology as political action; and history in archaeological projects. The emergence of Indigenous archaeology within N. America in relation to limitations imposed by processual or new archaeology; and NAGPRA, Kennewick, essentialism, and terminal narratives within this context. Prerequisite: consent of instructor.

5 units, Win (Wilcox, M)

ANTHRO 327. Language and Political Economy
Theories of language: Saussure, Jakobson, Hymes, Marx, Foucault, Butler, and Derrida. The theorization of language in its linkages to power, social relations, and history. Prerequisites: Linguistics or Anthropology course work. Prerequisite: consent of instructor.

5 units, not given this year

ANTHRO 331. The Anthropology of Technology
Iconic discipline-building works of the last three decades; readings that lay out and intervene in contemporary debates. Prerequisite: consent of instructor.

5 units, not given this year

ANTHRO 332. Transformative Design
(Same as ENGR 231) Project-based. How interactive technologies can be designed to encourage behavioral transformation. Topics such as self-efficacy, social support, and mechanism of cultural change in domains such as weight-loss, energy conservation, or safe driving. Lab familiarizes students with hardware and software tools for interaction prototyping. Students teams create functional prototypes for self-selected problem domains. Prerequisite: consent of instructor.

3-5 units, not given this year

ANTHRO 333A. The Cultural Politics of Ambiguity
Contemporary conceptual approaches to understanding the politics and production of certainty, ambiguity, and doubt. The seemingly ambiguous nature of the science of industrial pollution and contamination exonerate corporate and government polluters from rising rates of cancer, while the science of liberal economic models seems to create no alternative to massive economic subsidies of the financial sector. How culpability, exoneration, transformative action, institutional stasis, and political rely on the production of certainty, ambiguity, and doubt. Prerequisite: consent of instructor.

5 units, not given this year

ANTHRO 334. Trauma and Healing
This course considers class and recent work on culture and psychiatry with an emphasis on trauma. We consider work on the main diagnostic categories like depression and schizophrenia, but also the work on dissociation, war combat, PTSD, and psychosis.

5 units, Win (Luhrmann, T)

ANTHRO 336. Anthropology of Rights
Ideas of rights at the center of contemporary politics around the world. An anthropological perspective on how rights are invoked, claimed, and translated into institutional policies in ethnographic cases. The limitations of liberal notions of rights and innovative forms of politics emerging within and against rights talk. Prerequisite: consent of instructor.

5 units, not given this year

ANTHRO 337. The Politics of Humanitarianism
What does it mean to want to help, to organize humanitarian aid, in times of crisis? At first glance, the impulse to help issui generis a good one. Helping is surely preferable to indifference and inaction. This does not mean that humanitarian interventions entail no ethical ot political stakes ¿ or that they are beyond engaged critique. We need to critique precisely that which we value, and to ask some hard questions, among them these: What are the differences among humanitarianism, charity, and philanthropy? What of social obligations and solidarities? How does the neoliberal world order currently create structural inequalities that ensure the reproduction of poverty and violence? How does the current order of things resemble or differ from the colonial world order? This course examines the history of humanitarian sensibilities and the emergence of organized action in the ¿cause of humanity¿. In the early years of humanitarian intervention, political neutrality was a key principle;

5 units, Spr (Malkki, L)

ANTHRO 338A. Biohumanities: Continental Philosophy and the Human and Social Sciences
(Same as FRENGEN 338) This course will consider theoretical topics that arose in post-war continental philosophy (for example, Deleuze's ontology, Foucault's biopolitics, and Latour's collective of humans and non-humans) and which have served as a basis for recent attempts to reconcile the human and social sciences with the natural sciences around big picture questions (ecological crisis, biotechnological progress) and around such bridging concepts as human and non-human agency, assemblage, emergence, force, habitus, and mimicry. Focusing on case studies drawn from archaeology, anthropology, history, literature, film and bio-art, the course tries to indicate what sort of topics, research questions, approaches, theories, and concepts might lead to an integration of these various kinds of knowledges.

5 units, Spr (Domanska, E)

ANTHRO 339. Anthropology of Religion
This course presents classic and contemporary work on the anthropology of religion: Durkheim Elementary Forms of the Religious Life; Levy-Bruhl; Primitive Mentality; Douglas Purity and Danger; Evans Pritchard Nuer Religion; and recent ethnographies/scholarly work by Robbins, Keane, Keller, Boyer, Barrett, and others.

5 units, Aut (Staff)

ANTHRO 340. Topics in Linguistic Anthropology
Reading seminar; restricted to Anthropology graduate students. The anthropology of language and semiotics. Focus is on the limits of textualism, and alternative semiotic and epistemic bases for theorizing language and representation. No linguistic anthropology course work required. Prerequisite: consent of instructor.

5 units, Spr (Fox, J)

ANTHRO 343. Culture as Commodity
Focus is on theories of commodification, interests in tourism, national cultures as marketable objects, and how identities are constituted through production and consumption. The formation of global style and taste. Prerequisite: consent of instructor.

5 units, not given this year

ANTHRO 344. Graphic Medicine
In this course students will study medical cultures through visual communication ranging from x-rays and PET scans to graphic novels. Course will also include literature on visual theory.

5 units, Aut (Jain, S)

ANTHRO 345. New Visions in Medical Anthropology
Recent experimental histories of the field. Emphasis is on how, working within anthropology's classic format, the ethnographic monograph, authors have innovatively responded to the challenges of representing amorphous, unspoken, and often violent relationships between the body and social change. The authors' expository techniques, and how they engage and extend theoretical debate. How to assess works within medical anthropology and its allied fields. Prerequisite: consent of instructor.

5 units, not given this year

ANTHRO 346A. Sexuality Studies in Anthropology
Current research on sexuality from perspectives including paleoanthropology, archaeology, ethnography, and linguistic anthropology. Readings paired with case studies that explore theoretical and methodological issues. Prerequisite: consent of instructor.

5 units, Win (Voss, B)

ANTHRO 349. Anthropology of Capitalism
Issues in cultural theory and methodology through research on people who have greater material and cultural resources than those usually studied by anthropologists. How ideas about ideology, hegemony, identity, power, and practice are altered in studying those considered to be agents of power rather than the subaltern. Topics: global capitalism, masculinity, white racial subjectivity. Enrollment limited to 20. Prerequisite: consent of instructor.

5 units, not given this year

ANTHRO 352. Foucault: The Question of Method
Foucault as methodological exemplar for historical and social research. Emphasis is on his historical studies of clinical medicine, prisons, and sexuality, and on applying his methods to empirical studies of topics such as colonialism, race, and liberal governmental rationality.

5 units, not given this year

ANTHRO 355. Cities in Global Perspective
Interdisciplinary approach to examining global cities. The concept of the global city, and the interdependent processes that help produce urban spaces. Situating the transformation of urban spaces within globalization and its differential effects; current explanatory frameworks that pay attention to multiple scales of spatial and economic articulation. Prerequisite: graduate standing.

5 units, Aut (Ebron, P)

ANTHRO 356. The Anthropology of Development
Multidisciplinary. Topics vary annually. Areas include Africa, S. Asia, and Latin America. Prerequisite: consent of instructor.

5 units, not given this year

ANTHRO 357. Other Minds: Puzzles in Psychiatric and Psychological Anthropology
Problems in the way anthropologists explore other minds anthropologically and the ways in which anthropologists seek to understand the models of other minds held by the people observed. Topics include theory of mind, witchcraft, belief, empathy, psychosis, trauma, Freud, Vygotsky, and cognitive dissonance. Prerequisite: consent of instructor.

5 units, not given this year

ANTHRO 362. Human Spatial Dynamics: Seminar in Communicating Contemporary Science
This seminar is designed to bring together all students and faculty currently working on issues related to human use of land and spatially defined resources. The focus is to provide a forum for reporting on recent results and question development, providing students with vital skills in designing and communicating the results of research. Undergrads require consent of instructor.

5 units, Aut (Bird, R)

ANTHRO 362A. Introduction to Human Evolution, Ecology, Genetics, and Culture
Themes and topics of lasting heuristic value in the anthropological sciences. Combines the lecture content of 2A and 2B with a discussion section for graduate students. Must be taken in the Autumn Quarter of a student's first year in the graduate program.

5 units, not given this year

ANTHRO 363. Demography and Life History Theory
Problems in demography and theoretical population biology applied to human systems. Emphasis is on establishing relationships between models in theoretical population biology and empirical demographic methodology. Topics include philosophy of models and model building, population dynamics, stable population theory, species interactions in human ecology, models of infectious diseases and their control, cultural evolution. Prerequisites: HUMBIO 137 or consent of instructor.

5 units, not given this year

ANTHRO 364. EcoGroup: Current Topics in Ecological, Evolutionary, and Environmental Anthropology
Seminar; restricted to graduate students. Topics vary with instructor. How to ask appropriate questions, how to derive research hypotheses from theory, how to design methodologies for testing hypotheses, and how to present results by reading and critiquing key contemporary papers in the field. Ph.D. students enrolling in this course to fulfill the department review course requirement must enroll in 5 units. Graduate students enrolling in this course to participate in a topical forum may enroll in 2 units. Course may be repeated for 2 units. Prerequisites: by consent of instructor.

5 units, Aut (Bird, R)

ANTHRO 365. The Theory of the Modern Subject
This course traces the emergence of a coherent theory of the modern subject through readings of philosophical works and social theory from 18th century to the 20th centrury.

5 units, Win (Hansen, T)

ANTHRO 366. Paper Works
Seminar. Focus is on the emerging body of literature on the materiality of the production, circulation, and mediation of paperwork as constituitive of modern forms of governance. Genres of paperworks (notes, memos, files, documents, as well as archives and other mnemonic technologies) both as cultural practices and reflexive objects; how they produce modern social epistemologies of accountability, evidence, the fact, and truth in the fields of law, business, and public administration, as well as in civil society generally. Readings include Max Weber, Bruno Latour, Jacques Derrida, Michel Foucault, Cornelia Vismann, Ann Stoler.

5 units, Spr (Inoue, M)

ANTHRO 370. Advanced Theory and Method in Historical Archaeology
Current debates about theory and method. Prerequisite: consent of instructor.

5 units, Aut (Voss, B)

ANTHRO 371. Proposal Writing for Archaeologists
The craft of writing research and grant proposals. Focus is on proposals for archaeological fieldwork and laboratory research. Students prepare their own research proposals. Restricted to and required of second-year doctoral students in the Department of Anthropology, Archaeology concentration. Others require consent of instructor.

5 units, not given this year

ANTHRO 373. Things: An Archaeology of the Relationships Between Humans and Things
This course examines a variety of approaches that claim to explore the relationships between humans and things. Some of the approaches include Marx and material culture studies; Heidegger; cognitive and phenomenological; Actor Network Theory. But there is a need also to examine behavioral and ecological and Darwinian approaches. Many of these approaches do not adequately deal with the physicality of things as objects and there is a need to seek a way to incorporate such aspects of things into social theory.

5 units, Spr (Hodder, I)

ANTHRO 374. Archaeology of Colonialism/Postcolonialisms
Advanced graduate seminar focused on the archaeology of colonial and postcolonial contexts, both prehistoric and historic. Emphasis on intersections between archaeological research and and subaltern, postcolonial, and transnational feminist/queer theory. Prerequisite: consent of instructor.

5 units, not given this year

ANTHRO 375. Archaeology and Globalism
The emergence of archaeology as a discipline in the context of the rise of the nation state. Global economies and other issues have created a new context for archaeology. How are archaeology and heritage responding? The idea of world heritage. The impact of postcolonialism. The commodification of the past: the past as theme park, as travel tourism or nostalgia, as exotic and other. Conflict between uses of the past for identity and as theme park; between heritage and resource or play. The impact of the Goddess, New Age, and other movements. Archaeology and human rights issues including forensic archaeology. Prerequisite: consent of instructor.

4-5 units, not given this year

ANTHRO 380. Practice and Performance: Bourdieu, Butler, Giddens, de Certeau
Poststructuralist theories of iteration and mimesis used by social scientists to negotiate the tension between social structure and social practice: Gidden's structuration theory; Bourdieu's practice theory; Butler's theories of gender performativity; and de Certeau's analysis of tactics and strategies. Ethnographic and archaeological case studies that employ methodologies inspired by these approaches. Intersections and contradictions between these theorists' work; their use in anthropological practice. Issues of gender, sexuality, and ethnicity. Prerequisite: consent of instructor.

5 units, not given this year

ANTHRO 380A. Topics in the Anthropology of China and Taiwan
Topics vary. May be repeated for credit. Prerequisite: consent of instructor.

3-5 units, Aut (Brown, M)

ANTHRO 380B. Gender Bias in the Past and Future of Asia: Kinship & Society
Topics vary. May be repeated for credit. Prerequisite: consent of instructor.

3-5 units, Win (Brown, M)

ANTHRO 380C. Gender Bias in the Past and Future of Asia: Governance
Topics vary. May be repeated for credit. Prerequisite: consent of instructor.
3-5 units, Spr (Brown, M)

ANTHRO 400. Dissertation Writers Seminar
Required of fifth-year Ph.D. students returning from dissertation field research and in the process of writing dissertations and preparing for professional employment.
1-3 units, Aut (Malkki, L), Win (Malkki, L), Spr (Malkki, L)

ANTHRO 401A. Qualifying Paper: Topic
Required of second- and third-year Ph.D. students writing the qualifying paper or the qualifying written examination.
2-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ANTHRO 401B. Qualifying Paper: Area
Required of second- and third-year Ph.D. students writing the qualifying paper or the qualifying written examination. May be repeated for credit one time.
2-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ANTHRO 440. Teaching Assistantship
Supervised experience as assistant in one undergraduate course.
3-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ANTHRO 444. Anthropology Colloquium: Graduate Seminar
Required of first-year graduate students. The use of the scientific method in anthropological research. Published papers from subfields illustrate effective research design, the formulation and testing of hypotheses, and comparative methods. Field exercises in interviewing, observation, and taking and using field notes. The ethics of field research and procedures for maintaining physical and mental health in the field. May be repeated for credit.
1 unit, Aut (Yanagisako, S), Win (Yanagisako, S), Spr (Yanagisako, S)

ANTHRO 445. Anthropology Brown Bag Series
Current topics and trends in cultural and social anthropology, cultural archaeology, and archaeology.
1 unit, Aut (Yanagisako, S), Win (Yanagisako, S), Spr (Yanagisako, S)

ANTHRO 446A. Method of Analysis Program in the Social Sciences
(Same as COMM 310) Colloquium series. Creation and application of new methodological techniques for social science research. Presentations on methodologies of use for social scientists across departments at Stanford by guest speakers from Stanford and elsewhere. See http://mapss.stanford.edu.
1 unit, Aut (Jackman, S; Jones, J), Win (Jackman, S; Jones, J), Spr (Jackman, S; Jones, J)

ANTHRO 450. Research Apprenticeship
Supervised work on a research project with an individual faculty member. May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ANTHRO 451. Directed Individual Study
Supervised work for a qualifying paper, examination, or project with an individual faculty member.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ANTHRO 452. Graduate Internship
Provides graduate students with the opportunity to pursue their area of specialization in an institutional setting such as a laboratory, clinic, research institute, or government agency.
3-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ANTHRO 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ANTHRO 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

APPLIED PHYSICS (APPPHYS) COURSES

UNDERGRADUATE COURSES IN APPLIED PHYSICS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

APPPHYS 78Q. Tools of Nanotechnology
(Stanford Introductory Seminar) Preference to sophomores. Topics include: current and future applications of nanotechnology, nanofabrication tools, nanoscale characterization and manipulation tools, scanning probe microscopy (SPM), Stanford nanotechnology research examples, hands-on activities, research lab tours. Prerequisite: high school physics. GER:DB-EngrAppSci
3 units, Aut (Beetz, T)

APPPHYS 79N. Energy Options for the 21st Century
(Stanford Introductory Seminar) Preference to freshmen. Choices for meeting the future energy needs of the U.S. and the world. Basic physics of energy sources, technologies that might be employed, and related public policy issues. Trade-offs and societal impacts of different energy sources. Policy options for making rational choices for a sustainable world energy economy. GER:DB-EngrAppSci
3 units, Aut (Fox, J; Geballe, T)

APPPHYS 136. Biology by the Numbers
(Same as BIOC 236) Skillbuilding in biological quantitative reasoning. Topics include: biological size scales from proteins to ecosystems; biological time scales from enzymatic catalysis and DNA replication to evolution; biological energy, motion, and force from molecular to organismic scales; mechanisms of environmental sensing from bacterial chemotaxis to vision. Prerequisite: Physics 21, 41, or consent of instructor.
3 units, not given this year

APPPHYS 192. Introductory Biophysics
(Same as APPPHYS 292) For advanced undergraduates or beginning graduate students. Quantitative models used in molecular biophysics. The relation of structure to function. Chemical equilibria, cooperativity, and control: elementary statistical mechanics, affinity plots, allostery, models of hemoglobin-oxygen binding, bacterial chemotaxis. Macromolecular conformations: polymer chain models, protein folding, taxonomy of globular proteins, general principles of sequence selection. Chemical kinetics. Multiple barriers: CO-myoglobin kinetics, ion diffusion through channels and ion selectivity, spectroscopy of ion channels-acetylcholine receptor. Supramolecular kinetics: conversion of chemical energy to mechanical force, myosin and kinesin, actin polymers. Nerve impulse propagation: membrane potentials, voltage sensitive ion gates, Hodgkin-Huxley equations, propagation of the nerve impulse.
3 units, alternate years, not given this year

GRADUATE COURSES IN APPLIED PHYSICS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

APPPHYS 207. Laboratory Electronics
Lecture/lab emphasizing analog and digital electronics for lab research. RC and diode circuits. Transistors. Feedback and operational amplifiers. Active filters and circuits. Pulsed circuits, voltage regulators, and power circuits. Precision circuits, low-noise measurement, and noise reduction techniques. Circuit simulation tools. Analog signal processing techniques and modulation/demodulation. Principles of synchronous detection and applications of lock-in amplifiers. Common laboratory measurements and techniques illustrated via topical applications. Limited enrollment. Prerequisites: undergraduate device and circuit exposure.
3 units, Win (Fox, J)

APPPHYS 208. Laboratory Electronics
Lecture/lab emphasizing analog and digital electronics for lab research. Continuation of APPPHYS 207 with emphasis on appli-

cations of digital techniques. Combinatorial and synchronous digital circuits. Design using programmable logic. Analog/digital conversion. Microprocessors and real time programming, concepts and methods of digital signal processing techniques. Current lab interface protocols. Techniques commonly used for lab measurements. Development of student lab projects during the last three weeks. Limited enrollment. Prerequisites: undergraduate device and circuit exposure. Recommended: previous enrollment in APPPHYS 207.

3 units, alternate years, not given this year

APPPHYS 215. Numerical Methods for Physicists and Engineers

Review of basic numerical techniques with additional advanced material: derivatives and integrals; linear algebra; linear least squares fitting, FFT and wavelets, singular value decomposition, linear prediction; optimization, nonlinear least squares, maximum entropy methods; deterministic and stochastic differential equations, Monte Carlo methods.

3 units, not given this year

APPPHYS 216. X-Ray and VUV Physics

Research and classical concepts in photon science. Photon-electron interactions; x-ray absorption and Compton scattering. X-ray spectroscopy; EXAFS, SEXAFS, edge structure, magnetic circular dichroism, and linear dichroism. Photoemission spectroscopy and many-electron effects: angle-resolved and integrated photoemission, resonance photoemission, spin-polarized photoemission. Photoelectron diffraction and holography. X-ray interactions with condensed matter: diffraction and scattering. Photon sources: synchrotron, wigglers, and undulators. Photon and electron detectors and analyzers. Prerequisite: familiarity with quantum mechanics.

3 units, alternate years, not given this year

APPPHYS 217. Estimation and Control Methods for Applied Physics

Recursive filtering, parameter estimation, and feedback control methods based on linear and nonlinear state-space modeling. Topics in: dynamical systems theory; practical overview of stochastic differential equations; model reduction; and tradeoffs among performance, complexity, and robustness. Numerical implementations in MATLAB. Contemporary applications in systems biology and quantum precision measurement. Prerequisites: linear algebra and ordinary differential equations.

3 units, alternate years, not given this year

APPPHYS 219. Solid State Physics and the Energy Challenge

Technology issues for a secure energy future; role of solid state physics in energy technologies. Topics include the physics principles behind future technologies related to solar energy and solar cells, solid state lighting, superconductivity, solid state fuel cells and batteries, electrical energy storage, materials under extreme condition, nanomaterials.

3 units, Win (Shen, Z), alternate years, not given next year

APPPHYS 223. Stochastic and Nonlinear Dynamics

(Same as BIO 223) Theoretical analysis of dynamical processes: dynamical systems, stochastic processes, and spatiotemporal dynamics. Motivations and applications from biology and physics. Emphasis is on methods including qualitative approaches, asymptotics, and multiple scale analysis. Prerequisites: ordinary and partial differential equations, complex analysis, and probability or statistical physics.

3 units, alternate years, not given this year

APPPHYS 225. Probability and Quantum Mechanics

Structure of quantum theory emphasizing states, measurements, and probabilistic modeling. Generalized quantum measurement theory; parallels between classical and quantum probability; conditional expectation in the Schrödinger and Heisenberg pictures; covariance with respect to symmetry groups; reference frames and super-selection rules. Classical versus quantum correlations; nonlocal aspects of quantum probability; axiomatic approaches to interpretation. Prerequisites: undergraduate quantum mechanics, linear algebra, and basic probability and statistics.

3 units, alternate years, not given this year

APPPHYS 226. Physics of Quantum Information

Laws and concepts of quantum information science. Postulates of quantum mechanics: symmetrization postulate, quantum indistinguishability and multi-particle interference, commutation relation and quantum measurement, reduction postulate and impossibility of measuring, cloning and deleting a single wavefunction. Quantum information theory: von Neumann entropy, Holevo information and Schumacher data compression. Decoherence: Linbladian, quantum error correction, and purification of entanglement.

3 units, alternate years, not given this year

APPPHYS 227. Quantum Device Physics of Atomic and Semiconductor Systems

Concepts and constituent technologies of quantum information systems. Quantum cryptography: single photon and entangled photon-pair-based quantum key distributions, quantum teleportation, quantum repeater. Quantum computer: Deutsch-Josza algorithm, Grover algorithm, Shor algorithm, quantum simulation, quantum circuits. Quantum hardwares: atomic physics, nuclear magnetic resonance, spintronics and quantum optics.

3 units, Spr (Mabuchi, H; Yamamoto, Y), alternate years, not given next year

APPPHYS 232. Advanced Imaging Lab in Biophysics

(Same as BIO 132, BIO 232, BIOPHYS 232, MCP 232) Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor.

4 units, Spr (Block, S; Smith, S; Stearns, T)

APPPHYS 270. Magnetism and Long Range Order in Solids

Cooperative effects in solids. Topics include the origin of magnetism in solids, crystal electric field effects and anisotropy, exchange, phase transitions and long-range order, ferromagnetism, antiferromagnetism, metamagnetism, density waves and superconductivity. Emphasis is on archetypal materials. Prerequisite: PHYSICS 172 or MATSCI 209, or equivalent introductory condensed matter physics course.

3 units, Aut (Fisher, I), alternate years, not given next year

APPPHYS 272. Solid State Physics I

The properties of solids. Theory of free electrons, classical and quantum. Crystal structure and methods of determination. Electron energy levels in a crystal: weak potential and tight-binding limits. Classification of solids: metals, semiconductors, and insulators. Types of bonding and cohesion in crystals. Lattice dynamics, phonon spectra, and thermal properties of harmonic crystals. Pre- or corequisites: PHYSICS 120 and 121; and PHYSICS 130 and 131, or equivalents.

3 units, Win (Reis, D)

APPPHYS 273. Solid State Physics II

Electronic structure of solids. Electron dynamics and transport. Semiconductors and impurity states. Surfaces. Dielectric properties of insulators. Electron-electron, electron-phonon, and phonon-phonon interactions. Anharmonic effects in crystals. Electronic states in magnetic fields and the quantum Hall effect. Magnetism, superconductivity, and related many-particle phenomena. Prerequisite: 272.

3 units, Spr (Kivelson, S)

APPPHYS 275. Probing the Nanoscale

Theory, operation, and applications of nanoprobes of interest in physics and materials science. Lectures by experts. Topics include scanning tunneling microscopy, spectroscopy, and potentiometry; atomic manipulation; scanning magnetic sensors and magnetic resonance; scanning field-effect gates; scanning force probes; and ultra-near-field optical scanning.

3 units, alternate years, not given this year

APPPHYS 280. Phenomenology of Superconductors

Phenomenology of superconductivity viewed as a macroscopic quantum phenomenon. Topics include the superconducting pair wave function, London and Ginzburg-Landau theories, the Josephson effect, type I type II superconductivity, and the response of superconductors to currents, magnetic fields, and RF electromagnetic radiation. Introduction to thermal fluctuation effects in superconductors and quantum superconductivity.

3 units, alternate years, not given this year

APPPHYS 290. Directed Studies in Applied Physics
Special studies under the direction of a faculty member for which academic credit may properly be allowed. May include lab work or directed reading.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

APPPHYS 291. Practical Training
Opportunity for practical training in industrial labs. Arranged by student with research adviser's approval. Summary of activities required.

3 units, Sum (Staff)

APPPHYS 292. Introductory Biophysics
(Same as APPPHYS 192) For advanced undergraduates or beginning graduate students. Quantitative models used in molecular biophysics. The relation of structure to function. Chemical equilibria, cooperativity, and control: elementary statistical mechanics, affinity plots, allostery, models of hemoglobin-oxygen binding, bacterial chemotaxis. Macromolecular conformations: polymer chain models, protein folding, taxonomy of globular proteins, general principles of sequence selection. Chemical kinetics. Multiple barriers: CO-myoglobin kinetics, ion diffusion through channels and ion selectivity, spectroscopy of ion channels-acetylcholine receptor. Supramolecular kinetics: conversion of chemical energy to mechanical force, myosin and kinesin, actin polymers. Nerve impulse propagation: membrane potentials, voltage sensitive ion gates, Hodgkin-Huxley equations, propagation of the nerve impulse.

3 units, alternate years, not given this year

APPPHYS 294. Cellular Biophysics
(Same as BIO 294) Physical biology of dynamical and mechanical processes in cells. Emphasis is on qualitative understanding of biological functions through quantitative analysis and simple mathematical models. Sensory transduction, signaling, adaptation, switches, molecular motors, actin and microtubules, motility, and circadian clocks. Prerequisites: differential equations and introductory statistical mechanics.

3 units, Spr (Fisher, D), alternate years, not given next year

APPPHYS 302. Experimental Techniques in Condensed Matter Physics
Cryogenics; low signal measurements and noise analysis; data collection and analysis; examples of current experiments. Prerequisites: PHYSICS 170, 171, and 172, or equivalents.

3 units, alternate years, not given this year

APPPHYS 304. Lasers Laboratory
Theory and practice. Theoretical and descriptive background for lab experiments, detectors and noise, and lasers (helium neon, beams and resonators, argon ion, cw dye, titanium sapphire, semiconductor diode, and the Nd:YAG). Measurements of laser threshold, gain, saturation, and output power levels. Laser transverse and axial modes, linewidth and tuning, Q-switching and modelocking. Limited enrollment. Prerequisites: EE 231 and 232, or consent of instructor.

3 units, Win (Byer, R)

APPPHYS 305. Nonlinear Optics Laboratory
Laser interaction with matter. Laser devices provide radiation to explore the linear and nonlinear properties of matter. Experiments on modulation, harmonic generation, parametric oscillators, modelocking, stimulated Raman and Brillouin scattering, coherent anti-Stokes scattering, other four-wave mixing interactions such as wavefront conjugation and optical bistability. Optical pumping and spectroscopy of atomic and molecular species. Limited enrollment. Prerequisites: 304, EE 231 and 232, or consent of instructor.

3 units, Spr (Byer, R)

APPPHYS 315. Methods in Computational Biology
Methods of bioinformatics and biomolecular modeling from the standpoint of biophysical chemistry. Methods of genome analysis; cluster analysis, phylogenetic trees, microarrays; protein, RNA and DNA structure and dynamics, structural and functional homology; protein-protein interactions and cellular networks; molecular dynamics methods using massively parallel algorithms.

3 units, Spr (Doniach, S), alternate years, not given next year

APPPHYS 324. Introduction to Accelerator Physics
Physics of particle beams in linear and circular accelerators. Transverse beam dynamics, acceleration, longitudinal beam dynamics, synchrotron radiation, free electron lasers, collective instabilities and nonlinear effects. Topics of current research in accelerator physics. Selected laboratory measurements at SLAC to augment the lecture material.

3 units, Aut (Ruth, R), alternate years, not given next year

APPPHYS 376. Literature of Cavity Quantum Electrodynamics
Historical development and contemporary frontiers of cavity quantum electrodynamics in the optical and microwave domains. Topics include effects of boundary conditions on spontaneous emission, development of strong coupling in experimental systems, fundamental theoretical models, linear and nonlinear phenomenology in the strong coupling regime, optical bistability, input-output theory, photon statistics and single-photon sources, and modern developments in circuit QED. Journal club format; student presentations.

3 units, alternate years, not given this year

APPPHYS 383. Introduction to Atomic Processes
Atomic spectroscopy, matrix elements using the Coulomb approximation, summary of Racah algebra, oscillator and line strengths, Einstein A coefficients. Radiative processes, Hamiltonian for two- and three-state systems, single- and multi-photon processes, linear and nonlinear susceptibilities, density matrix, brightness, detailed balance, and electromagnetically induced transparency. Inelastic collisions in the impact approximation, interaction potentials, Landau-Zener formulation. Continuum processes, Saha equilibrium, autoionization, and recombination.

3 units, Aut (Bucksbaum, P)

APPPHYS 387. Quantum Optics and Measurements
Basic concerns and fundamental postulates in quantum theory of measurements. Quantum non-demolition measurements, nonlinear measurements and continuous measurements. Non-local quantum correlation and Bell's inequality. Generation, detection, and application of single photons and entangled photon-pairs. Reservoir theory of an open dissipative system. Laser phase transition versus BCS transition in microcavities.

3 units, Win (Yamamoto, Y), alternate years, not given next year

APPPHYS 389. Boise-Einstein Condensation and Lasers
Topics include comparison of physics of Bose-Einstein Condensation (BEC) to physics of lasers, system differences and similarities between the quantum statistical properties of BEC and of lasers, BEC of non-interacting particles, Bogoliubov theory of interacting BEC and Gross-Pitaevskii equation, superfluidity and quantized vortices, quantum theory of laser, quantum noise and coherence functions, quantum correlation and squeezing.

3 units, alternate years, not given this year

APPPHYS 390. Dissertation Research

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

APPPHYS 470. Condensed Matter Seminar
Current research and literature; offered by faculty, students, and outside specialists. May be repeated for credit.

1 unit, Aut (Moler, K), Win (Moler, K), Spr (Moler, K)

APPPHYS 483. Optics and Electronics Seminar
Current research topics in lasers, quantum electronics, optics, and photonics by faculty, students, and invited outside speakers. May be repeated for credit.

1 unit, Aut (Byer, R), Win (Staff), Spr (Staff)

APPPHYS 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ARCHAEOLOGY (ARCHLGY) COURSES

UNDERGRADUATE COURSES IN ARCHAEOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ARCHLGY 1. Introduction to Prehistoric Archeology
(Same as ANTHRO 3) Aims, methods, and data in the study of human society's development from early hunters through late prehistoric civilizations. Archaeological sites and remains characteristic of the stages of cultural development for selected geographic

areas, emphasizing methods of data collection and analysis appropriate to each. GER:DB-SocSci, EC-GlobalCom

3-5 units, Aut (Rick, J)

ARCHLGY 12. Peopling of the Globe: Changing Patterns of Land Use and Consumption Over the Last 50,000 Years

(Same as ANTHRO 18, EARTHSYS 21) Fossil, genetic and archaeological evidence suggest that modern humans began to disperse out of Africa about 50,000 years ago. Subsequently, humans have colonized every major landmass on earth. This class introduces students to the data and issues regarding human dispersal, migration and colonization of continents and islands around the world. We explore problems related to the timing and cause of colonizing events, and investigate questions about changing patterns of land use, demography and consumption. Students are introduced to critical relationships between prehistoric population changes and our contemporary environmental crisis. GER:DB-SocSci

3-5 units, Aut (Bird, D)

ARCHLGY 99A. Historical Archaeology in the Archive, Lab, and Underground: Methods

The practice of historical archaeology through methodologies including archival research, oral history, material culture analysis, and archaeological excavation. Students use these methods to analyze the history and archaeology of a local park, the Thornewood Open Space Preserve.

5 units, not given this year

ARCHLGY 102B. Incas and their Ancestors: Peruvian Archaeology

(Same as ANTHRO 106, ANTHRO 206A) The development of high civilizations in Andean S. America from hunter-gatherer origins to the powerful, expansive Inca empire. The contrasting ecologies of coast, sierra, and jungle areas of early Peruvian societies from 12,000 to 2,000 B.C.E. The domestication of indigenous plants which provided the economic foundation for monumental cities, ceramics, and textiles. Cultural evolution, and why and how major transformations occurred. (HEF II, III; DA-B) GER:DB-SocSci, EC-GlobalCom

3-5 units, Win (Rick, J)

ARCHLGY 103. History of Archaeological Thought

(Same as ANTHRO 90A) Introduction to the history of archaeology and the forms that the discipline takes today, emphasizing developments and debates over the past five decades. Historical overview of culture, historical, processual and post-processual archaeology, and topics that illustrate the differences and similarities in these theoretical approaches.

5 units, Spr (Meskell, L)

ARCHLGY 104C. The Archaeology of Ancient China

(Same as ARCHLGY 304C) Early China from the perspective of material remains unearthed from archaeological sites; the development of Chinese culture from early hominid occupation nearly 2 million years ago through the development of agriculture in the Neolithic period and complex society in the Bronze Age to the political unification of China under the Qin Dynasty. Continuity of Chinese culture from past to present, history of Chinese archaeology, relationships between archaeology and politics, and food in early China.

5 units, not given this year

ARCHLGY 106A. Museums and Collections

(Same as ARCHLGY 306A) Practical, theoretical, and ethical issues which face museums and collections. Practical collections-based work, museum visits, and display research. The roles of the museum in contemporary society. Students develop their own exhibition and engage with the issues surrounding the preservation of material culture.

5 units, Spr (Newble, L)

ARCHLGY 107A. Archaeology as a Profession

(Same as ANTHRO 101A) Academic, contract, government, field, laboratory, museum, and heritage aspects of the profession.

5 units, Aut (Williams, B)

ARCHLGY 111. Emergence of Chinese Civilization from Caves to Palaces

(Same as CHINGEN 141, CHINGEN 241) Introduces processes of cultural evolution from the Paleolithic to the Three Dynasties in China. By examining archaeological remains, ancient inscriptions, and traditional texts, four major topics will be discussed: origins of modern humans, beginnings of agriculture, development of social stratification, and emergence of states and urbanism.

3-4 units, Spr (Staff)

ARCHLGY 112. Roman Archaeolgy and Heritage: The Case of Tarragona (Spain) in The European Context

(Same as ARCHLGY 312) Tarragona (Tarraco) was one of the most important provincial capitals of the Roman Empire. Its well preserved monumental ruins served to build a mediaeval town. Today preserves an important archaeological set included in the list of the World Heritage by the UNESCO. Its archaeological research and the restoration of its monuments permit its use as a model to explain the modern tendencies in archaeological heritage management in Europe. Course objectives: to contextualize the archaeology of Tarragona in the European cultural historiography; to show its experience to build urban strategies and architectural projects to preserve and to give value to the archaeological heritage; and to explore how to make compatible the touristic use a monumental site, and the needs of modern development adapted to the lives of common people.

5 units, Spr (Staff)

ARCHLGY 115. Introduction to Archaeological Geophysical Prospection

(Same as ARCHLGY 315) The use of subsurface geophysical survey techniques is a fast-growing area in archaeological field work. Geophysical techniques commonly used which provide fast and non-invasive imaging of archaeological features. Focus is on a conceptual understanding of the geophysical processes behind these techniques. Techniques applied during hands-on, field-based acquisition with electrical resistivity, magnetic, electromagnetic induction, and ground penetrating radar instruments at local archaeological sites.

2-5 units, Aut (Crook, N)

ARCHLGY 117. Ceramics: Art and Science

(Same as CLASSART 114) From clay to culture. Design, technology, manufacture, and consumption of ceramics. Guest lecturers, site visits, and hands-on studio work.

3-5 units, Spr (Shanks, M)

ARCHLGY 119. Environmental Archaeology

Goals are to introduce undergraduates to methods of environmental archaeology, and to review key cases of past human actions affecting the environment and of human responses to environmental change. The main methods of paleoclimatic reconstruction, soil analysis and geomorphology, archaeobotany and zooarchaeology. Emphasis is on human actions affecting the environment and human responses to environmental change.

5 units, Win (Staff)

ARCHLGY 133. Landscape Archaeologies

(Same as ARCHLGY 333) People shape the world around them and are shaped by it. How is this essential interaction examined by archaeologists? And how can a meaningful engagement with space and place be discovered in the archaeological record? Landscape foundations, human ecology, typologies, perception and bodily experience, monuments, networks, settlement systems, political landscapes, frontiers, placelessness and mobility, place histories, and the effects of revolutionary advances in data collection and organization on how archaeologists and anthropologists approach spatial data and human interaction with space and landscape. Field exercises.

5 units, Spr (Staff)

ARCHLGY 137. Ethnographic Archaeologies

(Same as ANTHRO 140A, ANTHRO 240A) How have ethnographic and archaeological methods been combined in anthropological research? What methodological and theoretical implications do these kinds of projects generate? Seminar topics will include ethnoarchaeology, ethnographies of archaeological practice, public archaeology and heritage ethics. Lecture and discussion.

4-5 units, Spr (Staff)

ARCHLGY 190. Archaeology Directed Reading/Independent Study

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

ARCHLGY 199. Honors Independent Study

Independent study with honors faculty adviser.

5 units, Win (Staff), Spr (Staff)

ARCHLGY 201. Art and Archaeology of Korea
(Same as KORGEN 170, KORGEN 270) Introduction to art and archaeology of Korean peninsula and adjacent continental northeast Asia from Bronze Age to early twentieth century. Topics include archaeology of the proto-Three Kingdoms period, state formation and Sinicization, introduction of Buddhism and its development to the Unified Silla period, the sophisticated tastes of the Koryo aristocrats, and the literati culture of Choson.
3-5 units, Win (Staff)

GRADUATE COURSES IN ARCHAEOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

ARCHLGY 302. Constructing National History in East Asian Archaeology
(Same as CHINLIT 218) Archaeological studies in contemporary East Asia share a common concern, to contribute to building a national narrative and cultural identity. This course focuses on case studies from China, Korea, and Japan, examining the influence of particular social-political contexts, such as nationalism, on the practice of archaeology in modern times.
2-4 units, Spr (Staff)

ARCHLGY 304C. The Archaeology of Ancient China
(Same as ARCHLGY 104C) Early China from the perspective of material remains unearthed from archaeological sites; the development of Chinese culture from early hominid occupation nearly 2 million years ago through the development of agriculture in the Neolithic period and complex society in the Bronze Age to the political unification of China under the Qin Dynasty. Continuity of Chinese culture from past to present, history of Chinese archaeology, relationships between archaeology and politics, and food in early China.
5 units, not given this year

ARCHLGY 306A. Museums and Collections
(Same as ARCHLGY 106A) Practical, theoretical, and ethical issues which face museums and collections. Practical collections-based work, museum visits, and display research. The roles of the museum in contemporary society. Students develop their own exhibition and engage with the issues surrounding the preservation of material culture.
5 units, Spr (Newble, L)

ARCHLGY 312. Roman Archaeolgy and Heritage: The Case of Tarragona (Spain) in The European Context
(Same as ARCHLGY 112) Tarragona (Tarraco) was one of the most important provincial capitals of the Roman Empire. Its well preserved monumental ruins served to build a mediaeval town. Today preserves an important archaeological set included in the list of the World Heritage by the UNESCO. Its archaeological research and the restoration of its monuments permit its use as a model to explain the modern tendencies in archaeological heritage management in Europe. Course objectives: to contextualize the archaeology of Tarragona in the European cultural historiography; to show its experience to build urban strategies and architectural projects to preserve and to give value to the archaeological heritage; and to explore how to make compatible the touristic use a monumental site, and the needs of modern development adapted to the lives of common people.
5 units, Spr (Staff)

ARCHLGY 315. Introduction to Archaeological Geophysical Prospection
(Same as ARCHLGY 115) The use of subsurface geophysical survey techniques is a fast-growing area in archaeological field work. Geophysical techniques commonly used which provide fast and non-invasive imaging of archaeological features. Focus is on a conceptual understanding of the geophysical processes behind these techniques. Techniques applied during hands-on, field-based acquisition with electrical resistivity, magnetic, electromagnetic induction, and ground penetrating radar instruments at local archaeological sites.
2-5 units, Aut (Crook, N)

ARCHLGY 333. LANDSCAPE ARCHAEOLOGIES
(Same as ARCHLGY 133) People shape the world around them and are shaped by it. How is this essential interaction examined by archaeologists? And how can a meaningful engagement with space and place be discovered in the archaeological record? Landscape foundations, human ecology, typologies, perception and bodily experience, monuments, networks, settlement systems, political landscapes, frontiers, placelessness and mobility, place histories, and the effects of revolutionary advances in data collection and organization on how archaeologists and anthropologists approach spatial data and human interaction with space and landscape will be discussed in lecture and seminar format and studied through field exercises.
5 units, Spr (Staff)

ART HISTORY (ARTHIST) COURSES

UNDERGRADUATE COURSES IN ART HISTORY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ARTHIST 1. Introduction to the Visual Arts
Multicultural rather than historical approach. WIM GER:DB-Hum, WIM
5 units, Aut (Marrinan, M)

ARTHIST 2. Asian Art and Culture
(Same as JAPANGEN 60) The religious and philosophical ideas and social attitudes of India, China, and Japan and how they are expressed in architecture, painting, woodblock prints, sculpture, and in such forms as garden design and urban planning. GER:DB-Hum, EC-GlobalCom
5 units, alternate years, not given this year

ARTHIST 3. Introduction to the History of Architecture
From antiquity to the 20th century, mostly Western with some non-Western topics. Buildings and general principles relevant to the study of architecture. GER:DB-Hum
5 units, Win (Beischer, T)

ARTHIST 99A. Student Guides at the Cantor Center for the Visual Arts
Open to all Stanford students. Public speaking, inquiry methods, group dynamics, theme development, and art-related vocabulary. Introduction to museum administration; art registration, preparation and installation; rights and reproduction of images; exhibition planning; and art storage, conservation, and security. Students research, prepare, and present discussions on art works of their choice.
1 unit, Aut (Young, P)

ARTHIST 101. Archaic Greek Art
(Same as ARTHIST 301, CLASSART 101, CLASSART 201) The development of Greek art and culture from protogeometric beginnings to the Persian Wars, 1000-480 B.C.E. The genesis of a native Greek style; the orientalizing phase during which contact with the Near East and Egypt transformed Greek art; and the synthesis of East and West in the 6th century B.C.E. GER:DB-Hum
4 units, Aut (Maxmin, J)

ARTHIST 102. Empire and Aftermath: Greek Art from the Parthenon to Praxiteles
(Same as ARTHIST 302, CLASSART 102) The course explores the art and architecture of the Athenian Empire in the age of Pericles, and then considers the effects of civil war and plague on Greek art and society in the later 5th and early 4th centuries. GER:DB-Hum
4 units, Win (Maxmin, J)

ARTHIST 105. Introduction to Medieval Art
(Same as ARTHIST 305) Chronological survey of Byzantine, Islamic, and Western Medieval art and architecture from the early Christian period to the Gothic age. Broad art-historical developments and more detailed examinations of individual monuments and works of art. Topics include devotional art, court and monastic culture, relics and the cult of saints, pilgrimage and crusades, and the rise of cities and cathedrals. GER:DB-Hum
4 units, not given this year

ARTHIST 106. Byzantine Art and Architecture, 300-1453 C.E.
(Same as ARTHIST 306) Art-historical developments, and monuments and works of art. Topics include: the transition from naturalism to abstraction; imperial art and court culture; pilgrimage and cult of saints; and secular art and luxury objects. GER:DB-Hum

4 units, Aut (Pentcheva, B)

ARTHIST 106A. Art of Pilgrimage and Crusade
(Same as ARTHIST 306A) Focus is on the artistic production of Mediterranean 12th-13th centuries exploring the phenomena of pilgrimage and Crusade. The rise of the Normans; the establishment of the pilgrimage to Santiago de Compostella as part of the Reconquista of Spain; the Crusader capture of Jerusalem in 1099 and the subsequent formation of Crusader states in the eastern Mediterranean; the rise of the Ayyubids and the emergence of the Italian city-state trade. The interconnection between the rise of narrative and conquest; the emergence of monumental sculpture; and the clash between tactile and optical visuality.

4 units, not given this year

ARTHIST 108. Virginity and Power: Mary in the Middle Ages
(Same as ARTHIST 308) The most influential female figure in Christianity whose state cult was connected with the idea of empire. The production and control of images and relics of the Virgin and the development of urban processions and court ceremonies though which political power was legitimized in papal Rome, Byzantium, Carolingian and Ottonian Germany, Tuscany, Gothic France, and Russia. GER:DB-Hum

4 units, not given this year

ARTHIST 111. Introduction to Italian Renaissance, 1420-1580
(Same as ARTHIST 311) New techniques of pictorial illusionism and the influence of the humanist revival of antiquity in the reformulation of the pictorial arts in 15th-century Italy. How different Italian regions developed characteristic artistic cultures through mutual interaction and competition. GER:DB-Hum

4 units, not given this year

ARTHIST 114. Vision and Emblem: Netherlandish Painting from Van Eyck to Brueghel
(Same as ARTHIST 314) How 15th-century pictorial illusionism transformed the devotional image and portraiture, calling for a new kind of engagement with the image on the part of the beholder. How 16th-century humanist knowledge influenced the creation of new pictorial subjects and representational forms. The reflection of religious crises triggered by the Reformation in art. GER:DB-Hum GER:DB-Hum

4 units, Spr (Hansen, M)

ARTHIST 117. Picturing the Papacy: Renaissance to Neoclassicism
(Same as ARTHIST 317) Campaigns of renovations aimed at restoring Rome to its former legendary splendor. The use of art and architecture to glorify the papacy and negotiate attacks on the institution. Art and papal nepotism from the 15th to 18th century. GER:DB-Hum

4 units, Aut (Hansen, M)

ARTHIST 118. Titian, Veronese, Tintoretto
(Same as ARTHIST 318) The course addresses the ways in which Venetian painters of the sixteenth century redefined paradigms of color, disegno, and invention. Themes to be examined include civic piety, new kinds of mythological painting, the intersection between naturalism and eroticism, and the relationship between art and rituals of church and statecraft.

4 units, not given this year

ARTHIST 120. Art and Culture of Northern Europe in the 17th Century
(Same as ARTHIST 320) Painting and graphic arts by artists in Flanders and Holland from 1600 to 1680, a period of political and religious strife. Historical context; their relationship to developments in the rest of Europe and contributions to the problem of representation. Preferences for particular genres such as portraits, landscapes, and scenes of everyday life; the general problem of realism as manifested in the works studied. GER:DB-Hum

4 units, not given this year

ARTHIST 121. 18th-Century Art in Europe, ca 1660-1780
(Same as ARTHIST 321) Major developments in painting across Europe including the High Baroque illusionism of Bernini, the founding of the French Academy, and the revival of antiquity during the 1760s, with parallel developments in Venice, Naples, Madrid, Bavaria, and London. Shifts in themes and styles amidst the emergence of new viewing publics. Artists: the Tiepolos, Giordano, Batoni, and Mengs; Ricci, Pellegrini, and Thornhill; Watteau and Boucher; Chardin and Longhi; Reynolds and West; Hogarth and Greuze; Vien, Fragonard, and the first works by David. Additional discussion for graduate students. GER:DB-Hum

4 units, not given this year

ARTHIST 121S. 19TH CENTURY EUROPEAN PAINTING
Lecture and discussion of the major movements of 19th century Europe. Critical and theoretical readings, object analysis of Cantor Arts Center collections.

4 units, Sum (Salzman, M)

ARTHIST 122. The Age of Revolution
(Same as ARTHIST 322) Painting in Europe during the French Revolution and the Napoleonic conquest. As political events altered social formations, practices in the visual arts were similarly affected by shifts in patronage, public, and the social function of image making. An attempt to align ruptures in the tradition of representation with the unfolding historical situation. The first manifestations of a romantic alternative to the canons of classical beauty and stylistic restraint. GER:DB-Hum

4 units, not given this year

ARTHIST 124. The Age of Naturalism, ca 1830-1874
(Same as ARTHIST 324) The origins, development, and triumph of naturalist painting in Europe. The creative tensions that emerged between traditional forms of history painting and the challenge of modern subjects drawn from contemporary life. Emphasis is on the development of open-air painting as an alternative to traditional studio practice, and to the rise of new imaging technologies, such as lithography and photography, as popular alternatives to the hand-wrought character and elitist appeal of high art. GER:DB-Hum

4 units, not given this year

ARTHIST 126. Post-Naturalist Painting
(Same as ARTHIST 326) How conceptual models from language, literature, new technologies, and scientific theory affected picture making following the collapse of the radical naturalism of the 1860s and 1870s. Bracketed in France by the first Impressionist exhibition (1874) and the first public acclamation of major canvases by Matisse and Picasso (1905), the related developments in England, Germany, Belgium, and Austria. Recommended: some prior experience with 19th-century art. GER:DB-Hum

4 units, not given this year

ARTHIST 132. American Art and Culture, 1528-1860
(Same as ARTHIST 332) The visual arts and literature of the U.S. from the beginnings of European exploration to the Civil War. Focus is on questions of power and its relation to culture from early Spanish exploration to the rise of the middle classes. Cabeza de Vaca, Benjamin Franklin, John Singleton Copley, Phillis Wheatley, Charles Willson Peale, Emerson, Hudson River School, American Genre painters, Melville, Hawthorne and others. GER:DB-Hum

4 units, not given this year

ARTHIST 142. Architecture Since 1900
(Same as ARTHIST 342) The development of competing versions of modern and postmodern architecture and design in Europe and America, from the early 20th century to the present. Recommended: 141. GER:DB-Hum

4 units, not given this year

ARTHIST 143A. American Architecture
(Same as ARTHIST 343A) A historically based understanding of what defines American architecture. What makes American architecture American, beginning with indigenous structures of pre-Columbian America. Materials, structure, and form in the changing American context. How these ideas are being transformed in today's globalized world. GER:DB-Hum

4 units, not given this year

ARTHIST 147. The Visual Culture of Modernism and its Discontents, ca. 1850-1925
(Same as ARTHIST 347) Focus is on the visual arts and related fields in Europe (especially France but also Russia and Germany) during the late 19th and early 20th centuries. Beginning with Paris in the period of Haussmann, Baudelaire and Manet, modernism in art and visual culture presents a compelling dream of utopian possibilities that involved multifaceted and often contradictory ap-

proaches to the changes brought about by industrialization, urbanization, and the rise of mass culture.

4 units, Win (Staff)

ARTHIST 153A. American Art, 1900-1945

(Same as ARTHIST 353A) Painting, sculpture, photography, and design. Focus is on the emergence of diverse cultural forms in the search for a modern, American form of artistic expression. Topics include: Robert Henri and the Ash Can school; the Armory Show and the influence of European modernism; Marcel Duchamp and plumbing; futurism, cubism, and the machine aesthetic; Stuart Davis and jazz; Dorothea Lange and documentary photography; Alfred Stieglitz and his Seven Americans; Thomas Hart Benton and regionalism; the arts of the WPA; and the role of artists in wartime propaganda. GER:DB-Hum

4 units, not given this year

ARTHIST 155. American Art Since 1945

(Same as ARTHIST 355) Major figures, movements, and concepts of American art with examples from Europe from WW II to the present. Topics: the ideology and aesthetics of high modernism, the relationship between art and popular culture, the death of painting, the question of postmodernism. Artists: Pollock, Newman, Stella, Johns, Warhol, Andre, Rainer, Smithson, Hesse, Serra, Kruger, Sherman. GER:DB-Hum

4 units, not given this year

ARTHIST 158A. History of Photography

(Same as ARTHIST 358A) From its invention in 1839 to the present. Emphasis is on the evolution of photography as a fine art. Photographs as a universal democratic art form to record familial events and express personal creativity. Development of photography as it relates to other art forms, journalism, architecture, portraiture, landscape, documentation, time, and personal expression. The technology of photography; photographic techniques. GER:DB-Hum

4 units, Win (Dawson, R)

ARTHIST 159B. How Photography Exists

(Same as ARTHIST 359B) Photographs as things; the different physical forms gathered under the label photograph and the varying lives they lead: silver salts, halftone screens, wire transfers, color transparencies, one-hour processing, the anatomy of xerography, compression algorithms, the rebirth of instant films; school portraits, family slideshows, Viewmasters, flea markets, dental records, mugshots, news broadcasts, social media, server farms. Includes direct examination of materials in university repositories. Students to investigate and take positions on digital technologies and the present status of photographs.

4 units, Spr (Fay, B)

ARTHIST 160A. Twentieth-Century African American Art

(Same as ARTHIST 360A) Paintings, sculptures, photography, and mixed media works. Styles, cultural and social histories, patronage, and critical reception. The problems of studying the production of artists of color as a separate field; alternatives to the category of African American art; and the outlook for new critical methodologies. GER:DB-Hum

4 units, not given this year

ARTHIST 161. American Art 1900-1945

(Same as ARTHIST 361) U.S. artistic production and aesthetic developments from the turn of the century until the end of WW II. Roughly chronological in scope, the course eschews any single tendency or medium in order to elaborate the disjunctive formation of modernism in America. Painting and photography figure simultaneously; abstraction in its various guises, artists' films, the Armory Show, formations of race and gender, Black Mountain and MoMA all move through intransigent debates that pit social commitment against the pursuit of an ethos of autonomy.

4 units, not given this year

ARTHIST 162A. Spectacle & Revolution: European Art c.1968

(Same as ARTHIST 362A) Focus is on art and artists contemporary to the radical student movements of the 1960s, which exploded postwar tensions between traditional societies and new mass cultures. Topics include artists Joseph Beuys, VALIE EXPORT, and Gerhard Richter, and movements Fluxus, Situationism, Nouveau Realisme, and Arte povera. Course is reading intensive. Readings include Guy Debord, Umberto Eco, Pierre Restany, and many artists' writings. Prerequisites: AH1

4 units, Aut (Staff)

ARTHIST 173. Issues in Contemporary Art

(Same as ARTHIST 373) Major figures, themes, and movements of contemporary art from the 80s to the present. Readings on the neo-avant garde; postmodernism; art and identity politics; new media and technology; globalization and participatory aesthetics. Prerequisite: ARTHIST 155, or equivalent with consent of instructor. GER:DB-Hum

4 units, not given this year

ARTHIST 176. Feminism and Contemporary Art

(Same as ARTHIST 376) The impact of second wave feminism on art making and art historical practice in the 70s, and its reiteration and transformation in contemporary feminist work. Topics: sexism and art history, feminist studio programs in the 70s, essentialism and self-representation, themes of domesticity, the body in feminist art making, bad girls, the exclusion of women of color and lesbians from the art historical mainstream, notions of performativity. GER:DB-Hum

4 units, not given this year

ARTHIST 182. Arts of China, 900-1500: Cultures in Competition

(Same as ARTHIST 382) The era from the Five Dynasties and Song to the mid-Ming period was marked by competition in cultural arenas such as between Chinese and formerly nomadic regimes, or between official court art modes and scholar-official and literati groups. Topics include: innovations in architectural and ceramic technologies; developments in landscape painting and theory; the proliferation of art texts and discourses; the rise of educated artists; official arts and ideologies of the Song, Liao, Jin, Yuan, and Ming regimes; new roles for women as patrons and cultural participants; and Chan and popular Buddhist imagery. GER:DB-Hum, EC-GlobalCom

4 units, not given this year

ARTHIST 185. Art in China's Modern Era

(Same as ARTHIST 385) From the late Ming period (ca. 1600) to early 20th century Chinese arts. Topics include: urban arts and print culture; commodification of art; painting theories; self portrayals; art sponsorship, collecting, and ideological programs at the Qing imperial court; media and modernity in Shanghai; art and politics in early 20th century China. GER:DB-Hum

4 units, Win (Vinograd, R)

ARTHIST 185B. Contemporary Chinese Art: Sites and Strategies

(Same as ARTHIST 385B) Issues and developments in contemporary Chinese art over the past two decades. Questions of personal and national identity, politics and history, globalization and mass culture, consumerism and urban transformation, and the body, sexuality, and gender, as represented in formats including painting, photography, and installation and multimedia art. Museum visits. GER:DB-Hum, EC-GlobalCom

4 units, not given this year

ARTHIST 186. Theme and Style in Japanese Art

(Same as ARTHIST 386, JAPANGEN 186, JAPANGEN 286) Monuments in traditional Japanese architecture, sculpture, garden design, painting, prints, and pots, through the 19th century. Chronological framework emphasizes the role of these objects play in visualizing the ideals of the society they represent. GER:DB-Hum

4 units, not given this year

ARTHIST 187. Arts of War and Peace: Late Medieval and Early Modern Japan, 1500-1868

(Same as ARTHIST 387, JAPANGEN 185) Narratives of conflict, pacification, orthodoxy, nostalgia, and novelty through visual culture during the change of episteme from late medieval to early modern, 16th through early 19th centuries. The rhetorical messages of castles, teahouses, gardens, ceramics, paintings, and prints; the influence of Dutch and Chinese visuality; transformation in the roles of art and artist; tensions between the old and the new leading to the modernization of Japan. GER:DB-Hum, EC-GlobalCom

4 units, Aut (Takeuchi, M)

ARTHIST 188A. The History of Modern and Contemporary Japanese and Chinese Architecture and Urbanism

(Same as ARTHIST 388A) The recent rapid urbanization and architectural transformation of Asia; focus is on the architecture of Japan and China since the mid-19th century. History of forms,

theories, and styles that serve as the foundation for today's buildings and cityscapes. How Eastern and Western ideas of modernism have merged or diverged and how these forces continue to shape the future of Japanese and Chinese architecture and urban form. GER:DB-Hum

4 units, Spr (Beischer, T)

ARTHIST 190. African Art and Writing Traditions

(Same as ARTHIST 390) Classic African graphic writings south of the Sahara in historical and social context. What makes an African graphic writing system, and how they are used as visual art, and as markers of identity, religion, and moral philosophy. Civilizations include Mali, Asante, Yoruba, Ejagham, and Kongo.

4 units, not given this year

ARTHIST 191. Afro-Atlantic Religion, Art, and Philosophy

(Same as ARTHIST 391) Afro-American graphic writing and other forms of visual communication including ancient rupestrian art and rock painting in Africa, and present-day forms in the Americas. The diversity of daily life, religion, social organization, politics, and culture with African origin in the diaspora. Focus is on major contemporary Afro-Atlantic religions including: Palo Monte and Abakua in Cuba; Gaga in the Dominican Republic; Revival, Obeah, and Kumina in Jamaica; Vodun in Haiti; and Candomble and Macumba in Brazil.

4 units, not given this year

ARTHIST 192. Introduction to African Art

(Same as ARTHIST 392) Form, space, media, medium, and visual expression in African art. Rock art to contemporary art production. Majors works and art expression in terms of function and historical context. GER:DB-Hum

4 units, not given this year

ARTHIST 194. Iconography of African Art

(Same as ARTHIST 394) African art from 25,000 years ago to the present emphasizing social, historical, and ideological concerns in visual systems and traditions and aesthetic form. Critical grounding in anthropology and cultural studies. GER:DB-Hum

4 units, Aut (Martinez-Ruiz, B)

ARTHIST 195. Introduction to Black Atlantic Visual Traditions

(Same as ARTHIST 395) African cultural expression in the Americas. How politics, religion, and culture influence the art of the Black Atlantic. Focus is on the period when cultures were brought from Africa to the Americas through the slave trade and came into contact and conflict with western colonial powers. GER:DB-Hum

4 units, not given this year

ARTHIST 196. African Visual Art & Graphic Communication in the Americas

(Same as ARTHIST 396) The class addresses the modes of visual expression used among the Bakongo people in Central Africa and their descendents in Cuba, Haiti, and Brazil and argues that together these constitute identifiable graphic writing systems. After providing a brief overview of the forms of graphic expression in use within Kongo and Kongo Atlantic cultures, the class focuses on the most central of the traditional cosmograms, Dikenga. By mapping the meanings and forms of Dikenga, the essay attempts to demonstrate its continuity throughout the Kongo diaspora. Finally, the class highlights the rich cosmology, cosmogony, and moral philosophy that have consistently informed the use and meaning of Dikenga in its central role in religious narratives, moral philosophy and religious education among the Bakongo in Atlantic world.

4 units, Win (Martinez-Ruiz, B)

ARTHIST 203. Greek Art In and Out of Context

(Same as CLASSART 109) The cultural contexts in which art served religious, political, commercial, athletic, sympotic, and erotic needs of Greek life.

4-5 units, Aut (Maxmin, J)

ARTHIST 204A. Appropriations of Greek Art

(Same as CLASSART 110) Upper division seminar. The history of the appropriation of Greek art by Rome, the Renaissance, Lord Elgin, and Manet. Enrollment limited to 6. Prerequisite: ARTHIST 102 or consent of instructor.

4-5 units, Spr (Maxmin, J)

ARTHIST 206. Virginity and Power: Mary in the Middle Ages

The most influential female figure in Christianity whose state cult was connected with the idea of empire. The production and control of images and relics of the Virgin and the development of urban processions and court ceremonies though which political power was legitimized in papal Rome, Byzantium, Carolingian and Ottonian Germany, Tuscany, Gothic France, and Russia.

5 units, not given this year

ARTHIST 208. Hagia Sophia

By employing a methodology based in psychoacoustics, semiotics, and phenomenology, this course explores the relationship among sound, water, marble, meaning, and religious experience in the sixth-century church of Hagia Sophia built by emperor Justinian in Constantinople. Medieval sources describing the interior and ritual. Students make short movies exploring the shimmer of marble in buildings on campus and study the acoustics of domed buildings through computer auralization done at Stanford's CCRMA (Center for Computer Research in Music and Acoustics).

5 units, Win (Pentcheva, B)

ARTHIST 213. Renaissance Print Culture: From Durer to Goltzius

Prints became vehicles for the spreading of artistic inventions as well as political and religious propaganda during the societal upheavals of the 16th century. How the new medium of reproducible images changed attitudes towards visuality. Prints as self-reflective performances of virtuosity. Class taught at the Cantor Arts Center.

5 units, Win (Hansen, M)

ARTHIST 235A. Art and the Machine Age

Artistic and intellectual responses to modernization. Topics include: artistic uses of the machine as a metaphor for nature, the body, and sexuality; adaptation of mechanical technologies to art making; appreciation of machines as works of art; and how changing technologies in the industrial sphere impacted the artist's role in the cultural sphere. The place of the machine in architecture; historical role of industrial design; machine-themed museum exhibitions; and works by Fernand Léger, Le Corbusier, Rube Goldberg, Charles Sheeler, Charlie Chaplin, Raymond Loewy, and George Gershwin.

5 units, not given this year

ARTHIST 240. Sister Arts: Image and Text in America

(Same as AMSTUD 240) Seminar focuses equally on painting and literature in American history. Classes meet twice per week: one session devoted to a literary text, and the other to a visual artifact. The course is organized topically, placing text and images into dialogue with each other, asking for example, how Glen Ligon's contemporary reworking of nineteenth century runaway slave posters relates to Toni Morrison's Beloved, or how Melville's story of urban life, Bartleby the Scrivener, alludes to Hudson River School painting.

5 units, Win (Wolf, B)

ARTHIST 242. Henri Matisse

Themes, methods, and media in the production of Matisse, the familiar yet enigmatic 20th-century master. The phases of his career; critical responses to his work. Research project and presentation. Recommended: reading knowledge of French.

5 units, not given this year

ARTHIST 256A. Critical Race Art History

Primer for the comparative study of the representation of race in Western art. Whiteness, a construction that has been dependent upon blackness and alterity from its beginnings. Stereotyped ethnicities, nationalities, and territories, such as the Red Indian, the Jew, and Orientalism. Style as an image making strategy shaped by patronage and reception.

5 units, not given this year

ARTHIST 259. The Fifties: Abstract Expressionism to Beat Culture

Abstract expressionism and beat culture as the two dominant models of art making in the U.S. in the 50s, conventionally if not exclusively associated with cultural production in New York and San Francisco. Compares and contrasts existential, ideological, and formal valences relative to the backdrop of postwar American affluence, and the Cold War and its rhetorics of individual freedom and expression. The politics and criticism of abstract expressionism and its relation to the New York Intellectuals in the 30s versus beat culture and the emergence of the counterculture in the 60s.

5 units, not given this year

ARTHIST 260A. Photography and Performance
(Same as DRAMA 157H, DRAMA 257H) Intersections of performance and photography in theories, artistic practices, and daily lives: from photoconceptualism to surveillance and family portraits. How does performance remain differently through documentation? What does it mean to understand photographs as performances? Topics include stillness, traces, posing, and theatricality. Written and practical assignments. GER:DB-Hum
4 units, Win (Fay, B; Elswit, K)

ARTHIST 282A. Imagining the Imperial: Images of the Court in Late Ming Dynasty Public Culture
Themes of palace and court life popular in vernacular painting, print illustrated books, and fiction. Dimensions of the imperial palace and court in late Ming public imaginary, including strategies of historical displacement, disguised political critique, commerce in imperial objects, the taste for scandal, and mythologies of court life.
5 units, not given this year

ARTHIST 287. Pictures of the Floating World: Images from Japanese Popular Culture
(Same as JAPANLIT 287) Printed objects produced during the Edo period (1600-1868), including the Ukiyo-e (pictures of the floating world) and lesser-studied genres such as printed books (ehon) and popular broadsheets (kawaraban). How a society constructs itself through images. The borders of the acceptable and censorship; theatricality, spectacle, and slippage; the construction of play, set in conflict against the dominant neo-Confucian ideology of fixed social roles. Prerequisites: 2, 186, 187, 188. GER:DB-Hum
5 units, Spr (Takeuchi, M)

ARTHIST 287A. The Japanese Tea Ceremony: The History, Aesthetics, and Politics Behind a National Pastime
(Same as JAPANGEN 287A) The tea ceremony, a premodern multimedia phenomenon, integrates architecture, garden design, ceramics, painting, calligraphy, and treasured objects into a choreographed ritual wherein host, objects, and guests perform roles on a tiny stage. Aesthetic, philosophical, and political dimensions. The evolution of tea taste including its inception in Zen monasteries, use for social control during the 16th century, the development of a class of tea connoisseurs, and 20th-century manipulation by the emerging industrialist class.
5 units, not given this year

ARTHIST 290. Mapping Africa: Cartography and Architecture
Visual forms of spatial representation of Africa and implications for understanding the cultures they depict. Examples include early Renaissance cartography and written accounts by explorers, travelers, geographers, and missionaries. African concepts of design, meaning in architecture, and spatial solutions. Case studies of African models.
5 units, Aut (Martinez-Ruiz, B)

ARTHIST 292. African Art and Museum Display
African art and its intersection with art concepts, museum politics, art display, and colonialism. African art collections in major institutions around the world. Methodologies. Final class exhibition using art from the Cantor Arts Center collection.
5 units, not given this year

ARTHIST 292A. Researching Africa: Problem and Theory in African Art
5 units, not given this year

ARTHIST 293. Latino American Avant Garde
African contribution to modern art practices in Latino America. Mexico, Brazil, and Cuba as models. Cultural and historical context.
5 units, Win (Martinez-Ruiz, B)

ARTHIST 294. Caribbean and Latin American Art
Visual culture from 1505 to 1889 and its relation to current debates on cultural identity, hybridity, syncretism, and creolization. Examination of paintings, travel books and printmaking by artists including De Bry, Belisario, Rugendas, Debret, and Landaluce. Close visual analysis of works at the Cantor Arts Center and the Green Library at Stanford University.
5 units, not given this year

ARTHIST 296. Junior Seminar: Methods & Historiography of Art History
Historiography and methodology.
5 units, Aut (Pentcheva, B)

ARTHIST 297. Honors Thesis Writing
May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

ARTHIST 298. Individual Work: Art History
For approved independent research with individual faculty members. Letter grades only.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

ARTHIST 299. Research Project: Art History
1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

GRADUATE COURSES IN ART HISTORY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

ARTHIST 301. Archaic Greek Art
(Same as ARTHIST 101, CLASSART 101, CLASSART 201) The development of Greek art and culture from protogeometric beginnings to the Persian Wars, 1000-480 B.C.E. The genesis of a native Greek style; the orientalizing phase during which contact with the Near East and Egypt transformed Greek art; and the synthesis of East and West in the 6th century B.C.E.
4 units, Aut (Maxmin, J)

ARTHIST 302. Empire and Aftermath: Greek Art from the Parthenon to Praxiteles
(Same as ARTHIST 102, CLASSART 102) The course explores the art and architecture of the Athenian Empire in the age of Pericles, and then considers the effects of civil war and plague on Greek art and society in the later 5th and early 4th centuries.
4 units, Win (Maxmin, J)

ARTHIST 305. Introduction to Medieval Art
(Same as ARTHIST 105) Chronological survey of Byzantine, Islamic, and Western Medieval art and architecture from the early Christian period to the Gothic age. Broad art-historical developments and more detailed examinations of individual monuments and works of art. Topics include devotional art, court and monastic culture, relics and the cult of saints, pilgrimage and crusades, and the rise of cities and cathedrals.
4 units, not given this year

ARTHIST 306. Byzantine Art and Architecture, 300-1453 C.E.
(Same as ARTHIST 106) Art-historical developments, and monuments and works of art. Topics include: the transition from naturalism to abstraction; imperial art and court culture; pilgrimage and cult of saints; and secular art and luxury objects.
4 units, Aut (Pentcheva, B)

ARTHIST 306A. Art of Pilgrimage and Crusade
(Same as ARTHIST 106A) Focus is on the artistic production of Mediterranean 12th-13th centuries exploring the phenomena of pilgrimage and Crusade. The rise of the Normans; the establishment of the pilgrimage to Santiago de Compostella as part of the Reconquista of Spain; the Crusader capture of Jerusalem in 1099 and the subsequent formation of Crusader states in the eastern Mediterranean; the rise of the Ayyubids and the emergence of the Italian city-state trade. The interconnection between the rise of narrative and conquest; the emergence of monumental sculpture; and the clash between tactile and optical visuality.
4 units, not given this year

ARTHIST 308. Virginity and Power: Mary in the Middle Ages
(Same as ARTHIST 108) The most influential female figure in Christianity whose state cult was connected with the idea of empire. The production and control of images and relics of the Virgin and the development of urban processions and court ceremonies though which political power was legitimized in papal Rome, Byzantium, Carolingian and Ottonian Germany, Tuscany, Gothic France, and Russia.
4 units, not given this year

ARTHIST 311. Introduction to Italian Renaissance, 1420-1580
(Same as ARTHIST 111) New techniques of pictorial illusionism and the influence of the humanist revival of antiquity in the reformulation of the pictorial arts in 15th-century Italy. How different Italian regions developed characteristic artistic cultures through mutual interaction and competition.

4 units, not given this year

ARTHIST 314. Vision and Emblem: Netherlandish Painting from Van Eyck to Brueghel
(Same as ARTHIST 114) How 15th-century pictorial illusionism transformed the devotional image and portraiture, calling for a new kind of engagement with the image on the part of the beholder. How 16th-century humanist knowledge influenced the creation of new pictorial subjects and representational forms. The reflection of religious crises triggered by the Reformation in art. GER:DB-Hum

4 units, Spr (Hansen, M)

ARTHIST 317. Picturing the Papacy: Renaissance to Neoclassicism
(Same as ARTHIST 117) Campaigns of renovations aimed at restoring Rome to its former legendary splendor. The use of art and architecture to glorify the papacy and negotiate attacks on the institution. Art and papal nepotism from the 15th to 18th century.

4 units, Aut (Hansen, M)

ARTHIST 318. Titian, Veronese, Tintoretto
(Same as ARTHIST 118) The course addresses the ways in which Venetian painters of the sixteenth century redefined paradigms of color, disegno, and invention. Themes to be examined include civic piety, new kinds of mythological painting, the intersection between naturalism and eroticism, and the relationship between art and rituals of church and statecraft.

4 units, not given this year

ARTHIST 320. Art and Culture of Northern Europe in the 17th Century
(Same as ARTHIST 120) Painting and graphic arts by artists in Flanders and Holland from 1600 to 1680, a period of political and religious strife. Historical context; their relationship to developments in the rest of Europe and contributions to the problem of representation. Preferences for particular genres such as portraits, landscapes, and scenes of everyday life; the general problem of realism as manifested in the works studied.

4 units, not given this year

ARTHIST 321. 18th-Century Art in Europe, ca 1660-1780
(Same as ARTHIST 121) Major developments in painting across Europe including the High Baroque illusionism of Bernini, the founding of the French Academy, and the revival of antiquity during the 1760s, with parallel developments in Venice, Naples, Madrid, Bavaria, and London. Shifts in themes and styles amidst the emergence of new viewing publics. Artists: the Tiepolos, Giordano, Batoni, and Mengs; Ricci, Pellegrini, and Thornhill; Watteau and Boucher; Chardin and Longhi; Reynolds and West; Hogarth and Greuze; Vien, Fragonard, and the first works by David. Additional discussion for graduate students.

4 units, not given this year

ARTHIST 322. The Age of Revolution
(Same as ARTHIST 122) Painting in Europe during the French Revolution and the Napoleonic conquest. As political events altered social formations, practices in the visual arts were similarly affected by shifts in patronage, public, and the social function of image making. An attempt to align ruptures in the tradition of representation with the unfolding historical situation. The first manifestations of a romantic alternative to the canons of classical beauty and stylistic restraint.

4 units, not given this year

ARTHIST 324. The Age of Naturalism, ca 1830-1874
(Same as ARTHIST 124) The origins, development, and triumph of naturalist painting in Europe. The creative tensions that emerged between traditional forms of history painting and the challenge of modern subjects drawn from contemporary life. Emphasis is on the development of open-air painting as an alternative to traditional studio practice, and to the rise of new imaging technologies, such as lithography and photography, as popular alternatives to the hand-wrought character and elitist appeal of high art.

4 units, not given this year

ARTHIST 326. Post-Naturalist Painting
(Same as ARTHIST 126) How conceptual models from language, literature, new technologies, and scientific theory affected picture making following the collapse of the radical naturalism of the 1860s and 1870s. Bracketed in France by the first Impressionist exhibition (1874) and the first public acclamation of major canvases by Matisse and Picasso (1905), the related developments in England, Germany, Belgium, and Austria. Additional weekly discussion for graduate students. Recommended: some prior experience with 19th-century art.

4 units, not given this year

ARTHIST 332. American Art and Culture, 1528-1860
(Same as ARTHIST 132) The visual arts and literature of the U.S. from the beginnings of European exploration to the Civil War. Focus is on questions of power and its relation to culture from early Spanish exploration to the rise of the middle classes. Cabeza de Vaca, Benjamin Franklin, John Singleton Copley, Phillis Wheatley, Charles Willson Peale, Emerson, Hudson River School, American Genre painters, Melville, Hawthorne and others.

4 units, not given this year

ARTHIST 342. Architecture Since 1900
(Same as ARTHIST 142) The development of competing versions of modern and postmodern architecture and design in Europe and America, from the early 20th century to the present. Recommended: 141.

4 units, not given this year

ARTHIST 343A. American Architecture
(Same as ARTHIST 143A) A historically based understanding of what defines American architecture. What makes American architecture American, beginning with indigenous structures of pre-Columbian America. Materials, structure, and form in the changing American context. How these ideas are being transformed in today's globalized world.

4 units, not given this year

ARTHIST 347. The Visual Culture of Modernism and its Discontents, ca. 1850-1925
(Same as ARTHIST 147) Focus is on the visual arts and related fields in Europe (especially France but also Russia and Germany) during the late 19th and early 20th centuries. Beginning with Paris in the period of Haussmann, Baudelaire and Manet, modernism in art and visual culture presents a compelling dream of utopian possibilities that involved multifaceted and often contradictory approaches to the changes brought about by industrialization, urbanization, and the rise of mass culture.

4 units, Win (Staff)

ARTHIST 353A. American Art, 1900-1945
(Same as ARTHIST 153A) Painting, sculpture, photography, and design. Focus is on the emergence of diverse cultural forms in the search for a modern, American form of artistic expression. Topics include: Robert Henri and the Ash Can school; the Armory Show and the influence of European modernism; Marcel Duchamp and plumbing; futurism, cubism, and the machine aesthetic; Stuart Davis and jazz; Dorothea Lange and documentary photography; Alfred Stieglitz and his Seven Americans; Thomas Hart Benton and regionalism; the arts of the WPA; and the role of artists in wartime propaganda.

4 units, not given this year

ARTHIST 355. American Art Since 1945
(Same as ARTHIST 155) Major figures, movements, and concepts of American art with examples from Europe from WW II to the present. Topics: the ideology and aesthetics of high modernism, the relationship between art and popular culture, the death of painting, the question of postmodernism. Artists: Pollock, Newman, Stella, Johns, Warhol, Andre, Rainer, Smithson, Hesse, Serra, Kruger, Sherman.

4 units, not given this year

ARTHIST 358A. History of Photography
(Same as ARTHIST 158A) From its invention in 1839 to the present. Emphasis is on the evolution of photography as a fine art. Photographs as a universal democratic art form to record familial events and express personal creativity. Development of photography as it relates to other art forms, journalism, architecture, portraiture, landscape, documentation, time, and personal expression. The technology of photography; photographic techniques.

4 units, Win (Dawson, R)

ARTHIST 359B. How Photography Exists
(Same as ARTHIST 159B) Photographs as things; the different physical forms gathered under the label photograph and the varying lives they lead: silver salts, halftone screens, wire transfers, color transparencies, one-hour processing, the anatomy of xerography, compression algorithms, the rebirth of instant films; school portraits, family slideshows, Viewmasters, flea markets, dental records, mugshots, news broadcasts, social media, server farms. Includes direct examination of materials in university repositories. Students to investigate and take positions on digital technologies and the present status of photographs.
4 units, Spr (Fay, B)

ARTHIST 360A. Twentieth-Century African American Art
(Same as ARTHIST 160A) Paintings, sculptures, photography, and mixed media works. Styles, cultural and social histories, patronage, and critical reception. The problems of studying the production of artists of color as a separate field; alternatives to the category of African American art; and the outlook for new critical methodologies.
4 units, not given this year

ARTHIST 361. American Art 1900-1945
(Same as ARTHIST 161) Course surveys US artistic production and aesthetic developments from the turn of the century until the end of World War II. Roughly chronological in scope, it eschews any single tendency or medium in order to elaborate the disjunctive formation of modernism in America. Painting and photography figure simultaneously; abstraction in its various guises, artists' films, the Armory Show, formations of race and gender, Black Mountain and MoMA all move through intransigent debates that pit social commitment against the pursuit of an ethos of autonomy.
4 units, not given this year

ARTHIST 362A. Spectacle & Revolution: European Art c.1968
(Same as ARTHIST 162A) Focus is on art and artists contemporary to the radical student movements of the 1960s, which exploded postwar tensions between traditional societies and new mass cultures. Topics include artists Joseph Beuys, VALIE EXPORT, and Gerhard Richter, and movements Fluxus, Situationism, Nouveau Realisme, and Arte povera. Course is reading intensive. Readings include Guy Debord, Umberto Eco, Pierre Restany, and many artists¿ writings. Prerequisites: AH1
4 units, Aut (Staff)

ARTHIST 373. Issues in Contemporary Art
(Same as ARTHIST 173) Major figures, themes, and movements of contemporary art from the 80s to the present. Readings on the neo-avant garde; postmodernism; art and identity politics; new media and technology; globalization and participatory aesthetics. Prerequisite: ARTHIST 155, or equivalent with consent of instructor.
4 units, not given this year

ARTHIST 376. Feminism and Contemporary Art
(Same as ARTHIST 176) (Same as ARTHIST 176) The impact of second wave feminism on art making and art historical practice in the 70s, and its reiteration and transformation in contemporary feminist work. Topics: sexism and art history, feminist studio programs in the 70s, essentialism and self-representation, themes of domesticity, the body in feminist art making, bad girls, the exclusion of women of color and lesbians from the art historical mainstream, notions of performativity.
4 units, not given this year

ARTHIST 382. Arts of China, 900-1500: Cultures in Competition
(Same as ARTHIST 182) The era from the Five Dynasties and Song to the mid-Ming period was marked by competition in cultural arenas such as between Chinese and formerly nomadic regimes, or between official court art modes and scholar-official and literati groups. Topics include: innovations in architectural and ceramic technologies; developments in landscape painting and theory; the proliferation of art texts and discourses; the rise of educated artists; official arts and ideologies of the Song, Liao, Jin, Yuan, and Ming regimes; new roles for women as patrons and cultural participants; and Chan and popular Buddhist imagery.
4 units, not given this year

ARTHIST 385. Art in China's Modern Era
(Same as ARTHIST 185) From the late Ming period (ca. 1600) to early 20th century Chinese arts. Topics include: urban arts and print culture; commodification of art; painting theories; self portrayals; art sponsorship, collecting, and ideological programs at the Qing imperial court; media and modernity in Shanghai; art and politics in early 20th century China.
4 units, Win (Vinograd, R)

ARTHIST 385B. Contemporary Chinese Art: Sites and Strategies
(Same as ARTHIST 185B) Issues and developments in contemporary Chinese art over the past two decades. Questions of personal and national identity, politics and history, globalization and mass culture, consumerism and urban transformation, and the body, sexuality, and gender, as represented in formats including painting, photography, and installation and multimedia art. Museum visits.
4 units, not given this year

ARTHIST 386. Theme and Style in Japanese Art
(Same as ARTHIST 186, JAPANGEN 186, JAPANGEN 286) Monuments in traditional Japanese architecture, sculpture, garden design, painting, prints, and pots, through the 19th century. Chronological framework emphasizes the role of these objects play in visualizing the ideals of the society they represent.
4 units, not given this year

ARTHIST 387. Arts of War and Peace: Late Medieval and Early Modern Japan, 1500-1868
(Same as ARTHIST 187, JAPANGEN 185) Narratives of conflict, pacification, orthodoxy, nostalgia, and novelty through visual culture during the change of episteme from late medieval to early modern, 16th through early 19th centuries. The rhetorical messages of castles, teahouses, gardens, ceramics, paintings, and prints; the influence of Dutch and Chinese visuality; transformation in the roles of art and artist; tensions between the old and the new leading to the modernization of Japan.
4 units, Aut (Takeuchi, M)

ARTHIST 388A. The History of Modern and Contemporary Japanese and Chinese Architecture and Urbanism
(Same as ARTHIST 188A) The recent rapid urbanization and architectural transformation of Asia; focus is on the architecture of Japan and China since the mid-19th century. History of forms, theories, and styles that serve as the foundation for today's buildings and cityscapes. How Eastern and Western ideas of modernism have merged or diverged and how these forces continue to shape the future of Japanese and Chinese architecture and urban form.
4 units, Spr (Beischer, T)

ARTHIST 390. African Art and Writing Traditions
(Same as ARTHIST 190) Classic African graphic writings south of the Sahara in historical and social context. What makes an African graphic writing system, and how they are used as visual art, and as markers of identity, religion, and moral philosophy. Civilizations include Mali, Asante, Yoruba, Ejagham, and Kongo.
4 units, not given this year

ARTHIST 391. Afro-Atlantic Religion, Art, and Philosophy
(Same as ARTHIST 191) Afro-American graphic writing and other forms of visual communication including ancient rupestrian art and rock painting in Africa, and present-day forms in the Americas. The diversity of daily life, religion, social organization, politics, and culture with African origin in the diaspora. Focus is on major contemporary Afro-Atlantic religions including: Palo Monte and Abakua in Cuba; Gaga in the Dominican Republic; Revival, Obeah, and Kumina in Jamaica; Vodun in Haiti; and Candomble and Macumba in Brazil.
4 units, not given this year

ARTHIST 392. Introduction to African Art
(Same as ARTHIST 192) Form, space, media, medium, and visual expression in African art. Rock art to contemporary art production. Majors works and art expression in terms of function and historical context.
4 units, not given this year

ARTHIST 394. Iconography of African Art
(Same as ARTHIST 194) African art from 25,000 years ago to the present emphasizing social, historical, and ideological concerns in visual systems and traditions and aesthetic form. Critical grounding in anthropology and cultural studies.
4 units, Aut (Martinez-Ruiz, B)

ARTHIST 395. Introduction to Black Atlantic Visual Traditions
(Same as ARTHIST 195) African cultural expression in the Americas. How politics, religion, and culture influence the art of the Black Atlantic. Focus is on the period when cultures were brought from Africa to the Americas through the slave trade and came into contact and conflict with western colonial powers.

4 units, not given this year

ARTHIST 396. African Visual Art & Graphic Communication in the Americas
(Same as ARTHIST 196) The class addresses the modes of visual expression used among the Bakongo people in Central Africa and their descendents in Cuba, Haiti, and Brazil and argues that together these constitute identifiable graphic writing systems. After providing a brief overview of the forms of graphic expression in use within Kongo and Kongo Atlantic cultures, the class focuses on the most central of the traditional cosmograms, Dikenga. By mapping the meanings and forms of Dikenga, the essay attempts to demonstrate its continuity throughout the Kongo diaspora. Finally, the class highlights the rich cosmology, cosmogony, and moral philosophy that have consistently informed the use and meaning of Dikenga in its central role in religious narratives, moral philosophy and religious education among the Bakongo in Atlantic world.

4 units, Win (Martinez-Ruiz, B)

ARTHIST 409. Iconoclasm
Iconoclasm, iconophobia, and aniconism as markers of cultural transformation of the Mediterranean in the 7th-9th centuries. The identity crisis in the region as the Arabs established the Umayyad caliphate, conquering the Holy Land, Egypt, and Spain. The West consolidated around the Carolingians versus the East split between the Byzantines and the Arabs. How each of these three empires emerged from the ashes of late antique culture and carved an identity out of a common cultural foundation.

5 units, not given this year

ARTHIST 410. Aesthetics of the Icon
How medieval objects were experienced through sight, touch, sound, smell, and taste; how this multisensory richness has been reduced to visual studies of medieval art. Focus is on the Byzantine icon to restore its synaesthetic power; how its performance is tied to culturally-specific modes of seeing. Byzantine liturgy, prayer, epigrams, and literary genres of description such as ekphrasis.

5 units, not given this year

ARTHIST 411. Animation, Performance, Presence in Medieval Art
Focus is on phenomenology and aesthetics. Rather than a mimesis understood as pictorial naturalism, Medieval art promoted mimesis as simulation of divine presence expressed through phenomenal changes. The shadow, sound, smell, taste, and touch moved the viewer/participant in ways richer than a reductive regime of the eye. Concepts of representation, lifelikeness, performance, and presence in the Byzantine East, Latin West, and Islam.

5 units, Win (Pentcheva, B)

ARTHIST 412. Problems in Italian Mannerism
Questions of the bella maniera, anti-classicism, and center and periphery in mannerist art in light of developments in scholarship from the 70s to the present. Authors include Arasse, Cropper, Cole, Nova, Summers, and Vickers.

5 units, not given this year

ARTHIST 413. Michelangelo
Michelangelo's long career in light of recent scholarship. Topics include the status of the cult image, the paragon between poetry and the pictorial arts, painting and questions of literary genre, and Counter Reformation reactions to his art.

5 units, not given this year

ARTHIST 414. Italian Mannerism
Questions of the bella maniera, anti-classicism, and center and periphery in mannerist art in light of developments in scholarship from the 70s to the present. Authors include Arasse, Cropper, Cole, Nova, Summers, and Vickers.

5 units, not given this year

ARTHIST 428. Eakins and Vermeer
Questions of gender, visuality, and power in two major realist painters of the 17th and 19th centuries. How Vermeer and Eakins confronted and sometimes evaded the central historical issues of their day: modernization, class, sexuality, nationality, and the status of the artist.

5 units, not given this year

ARTHIST 431. Landscape and Power
This seminar explores American landscape art from its origins in Hudson River School painting to the Land Art movement of the late 20th century. Images of nature are read as narratives of individual and national identity. Topics include gender and the landscape; nation building and the frontier; politics and parks; the landscape as anti-art; poetry and the environment. Students work with images from the collection of American landscape art at the de Young Museum in Golden Gate Park.

5 units, Aut (Wolf, B)

ARTHIST 444. Photograph, Document, Archive
Debates over the ontological status of the photograph as document from the 19th century to the present; archival conceptions of photographic meaning. Problems of realism, indexicality, positivism, tourism, social commentary, power, and subjectivity. Protagonists: Frith, Atget, Hine, Sander, Rodchenko, Siskind, Lange, Bernd and Hilla Becher, Richter, Rosler, Sekula. Readings: Warburg, Kracauer, Benjamin, Brik, Tret'iakov, Sontag, Barthes, Buchloh, Tagg, Nesbit, Armstrong, Stimson, Nickel, Kelsey.

5 units, not given this year

ARTHIST 447. The Historiography of Cubism
Students are introduced to historiography and method in the history of art through a consideration of the multiple constructions of French Cubism as a complex of styles, a set of theoretical problems, and a historical phenomenon. How important issues raised by the art of Picasso and Braque as well as Léger, Delaunay, Gleizes, Metzinger, Villon, and other figures of early 20th-century modernism have been debated by art historians over the past 75 years, since the publication of Alfred Barr's Cubism and Abstract Art in 1936. Undergraduates require consent of the instructor.

5 units, Spr (Staff)

ARTHIST 462A. Pictures and Politics: Art of the 1980s
The rise of postmodernism in art between 1977-1994. Artistic responses to the increased mediation of experience by images and products, including the rejection of the possibility of authentic identity as well as heavy investment in the politics of identities. Topics include pictures generation, neo-expressionism, graffiti art, AIDS crisis, identity politics, and relational aesthetics. Readings include authors: Barthes, Baudrillard, Bhaba, Bishop, Buchloh, Crimp, Foucault, Kwon, Linker, and Mulvey. Undergraduates require consent of instructor, and must have completed ARTHIST 1.

5 units, Win (Staff)

ARTHIST 470. Globalization and the Visual Arts
Enrollment restricted to graduate students. Globalization as the most important paradigm for the production, circulation, and reception of contemporary art since the 1990s. The expanding terrain of the art world; biennial culture; new economies of scale and the art market along with its critique in the discourses of empire and multitudes. Debates on the thematics of hybridity; post-Fordism; the flat world and capital flows; exteriority and site specificity; and new models of collectivism in recent art.

5 units, not given this year

ARTHIST 475. Media Cultures of the Cold War
(Same as COMM 386) The intersection of politics, aesthetics, and new media technologies in the U.S. between the end of WW II and the fall of the Berlin Wall. Topics include the aesthetics of thinking the unthinkable in the wake of the atom bomb; abstract expressionism and modern-man discourse; game theory, cybernetics, and new models of art making; the rise of television, intermedia, and the counterculture; and the continuing influence of the early cold war on contemporary media aesthetics. Readings from primary and secondary sources in art history, communication, and critical theory.

3-5 units, not given this year

ARTHIST 476. Postmodernism and the Visual Arts
Enrollment restricted to graduate students. The debates on postmodernism as a cultural dominant (Jameson) emerging in the criticism of the last half of the twentieth century. Theories of periodization and historicity; authorship, appropriation; allegory and narrative; simulation; difference; late capitalism and the postindustrial society; and cybercultures relative to the art of the 1970s-80s. Spe-

cial attention paid to the culture wars and the importance of postmodernism for contemporary discussions of neoliberalism. Authors include Barthes, Baudrillard, Crimp, Foster, Foucault, Jameson, Habermas, Harvey, Krauss, Lyotard, Owens.

5 units, not given this year

ARTHIST 481. Colloquium on Song and Yuan Dynasty Painting Studies

In-depth discussion and analysis of recent art historical studies, exhibitions, and conferences on Chinese painting and related arts of the Song and Yuan eras (10th-14th c.) . Topics will include: approaches to Five Dynasties painting; archaeological discoveries and Liao painting; political implications of painting in the late 11th century; recent studies of cultural patronage and production at the Huizong court; court women as art sponsors in the Song era; court painting and urban culture in Southern Song Lin'an (Hangzhou); Jin and late Song literati painting; Buddhist painting in the Ningbo region; Song-Yuan Daoist painting; art patronage and collecting at the Yuan court; historiographic, connoisseurial, and authenticity issues. Open to graduate students, and undergraduates with permission of the instructor.

5 units, Aut (Vinograd, R)

ARTHIST 482. Chinese Art of the 1970's and 1980's

Departing from the Maoist ideology of Cultural Revolution era art, Chinese art of the 1970's and '80's culminated in the '85 New Wave movement, and paved the way for the 1990s and beyond. Investigating art world events against the background of economic liberalization and emerging globalization. Topics include changing official art directives, agendas of art schools and institutions, the emergence of amateur and professional artists, the upsurge in art publications and the boom of artist groups and exhibitions, the definition of a new literati painting by ink painters, and transmedia experiments by avant-gardists. The post-socialist cultural fever in philosophy, literature, music, theater, and film after 1976 examined as the backdrop for artistic activities. Open to graduate students, and undergraduates with permission of the instructor.

5 units, Win (Vinograd, R)

ARTHIST 482B. Imagining the Imperial: Images of the Court in Late Ming Dynasty Public Culture Part II

Exploration in representations of palace and court life in Ming period vernacular painting, illustrated books, and fiction. Topics include the status of the court in the Ming public imaginary, strategies of historical displacement, disguised political critique, commerce in imperial objects, and scandals, rumors and myths surrounding court life

5 units, not given this year

ARTHIST 483. Shanghai Visual Culture: Contested Modernities

Held in conjunction with Modern Ink Painters exhibition at the Cantor Center and the Shanghai Visual Culture exhibition at the Asian Art Museum of San Francisco. Aspects of late 19th- and early 20th-century Shanghai visual culture and its historiography. Topics include the interplay and competition of ink painting with new media such as lithography, photography, illustrated periodicals, and film; images of gendered modernity, from courtesan to new woman; situating the national and the cosmopolitan; the cultural politics of painting; art institutions, education, and exhibitions. Museum visits; and individual or group research projects. Open to undergraduates with consent of instructor.

5 units, not given this year

ARTHIST 485. The Situation of the Artist in Traditional Japan

(Same as JAPANGEN 220) Topics may include: workshop production such as that of the Kano and Tosa families; the meaning of the signature on objects including ceramics and tea wares; the folk arts movement; craft guilds; ghost painters in China; individualism versus product standardization; and the role of lineage. How works of art were commissioned; institutions supporting artists; how makers purveyed their goods; how artists were recognized by society; the relationship between patrons' desires and artists' modes of production.

5 units, not given this year

ARTHIST 486. Connoisseurship & Research Methods in Chinese Painting

addresses problems of attribution, dating, and authenticity in Chinese painting and calligraphy studies. Related issues of style analysis, technical studies, documentation, catalogues and other art literature are considered within the larger context of collecting history.

5 units, Spr (Vinograd, R)

ARTHIST 502. Methods and Historiography of Art History

Restricted to graduate students. From the origins of the discipline in 19th-century Germany to recent debates on visual studies. Iconology, formalism, semiotics, psychonalysis, and Marxist and feminist approaches to the work of art. Limited enrollment.

5 units, Aut (Hansen, M)

ARTHIST 507. Medieval Image Theory

The Middle Ages saw the development of a theoretical framework on visual representation in response to charges of idolatry. The defenders of religious images drew on the dogma of Incarnation; as the Virgin gave human flesh to the Logos/Christ, the image offered a material manifestation of the divine. Focus is on the change in perception and staging of the image. Early in the period, the icon or relic expressed the presence of the sacred; later in the period, visual representation was designed to trigger an emotional response that led the viewer to a union with the divine.

5 units, not given this year

ARTHIST 600. Art History Bibliography and Library Methods

1 unit, Aut (Blank, P)

ARTHIST 610. Teaching Praxis

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

ARTHIST 620. Area Core Examination Preparation

For Art History Ph.D. candidates. Prerequisite: consent of instructor.

5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ARTHIST 640. Dissertation Proposal Preparation

(Staff)

5 units, Aut (Staff), Win (Staff), Spr (Staff, 1), Sum (Staff)

ARTHIST 650. Dissertation Research

(Staff)

5 units, Aut (Staff, 1), Win (Staff), Spr (Staff, 1), Sum (Staff)

ARTHIST 660. Independent Study

For graduate students only. Approved independent research projects with individual faculty members.

1-15 units, Aut (Staff, 1), Win (Staff), Spr (Staff, 1), Sum (Staff)

ARTHIST 660E. Extended Seminar

May be repeated for credit. (Staff)

4 units, Aut (Staff), Win (Staff), Spr (Staff)

ARTHIST 670. Dissertation Seminar

For graduate students writing and researching dissertations and dissertation proposals. How to define research projects, write grant proposals, and organize book-length projects.

3-5 units, not given this year

ARTHIST 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff, 1), Sum (Staff)

ART STUDIO (ARTSTUDI) COURSES

UNDERGRADUATE COURSES IN ART STUDIO

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ARTSTUDI 10. Contemporary Art Practices: Public Art, Territories, and the Politics of Food
A focus on contemporary art practices in public art, urban studies, and food-themed art projects. Students will survey artist's processes and topics such as urban locales, politicized territories, cultural identities and globalization of pivotal foods throughout history. Class will examine the artistic tactics of Suzanne Lacy, Daniel Martinez, Teddy Cruz, Rirkrit Tiravanija, among others. Students design proposal-based art, and (not required but encouraged) create food themed projects. Guests include curator Julio Morales, Torolab, historian Dawn Mabalon, other Stanford faculty. Field trips. Art majors and non-majors welcome.
2 units, Aut (Reyes, J)

ARTSTUDI 10AX. Filmmaking
Production skills and project development in documentary filmmaking. The fundamentals of filmmaking using digital video production techniques focused on documentary storytelling. Shooting in mini-DV format and editing with Final Cut Pro software, students actualize their ideas in an audiovisual medium from conceptualization through post-production and exhhibition.
2 units, not given this year

ARTSTUDI 12AX. Drawing Intensive: Revisiting Nature
As increasing technological advances can further separate us from direct impressions of nature, this class is designed to reconnect and enhance our relationship to the natural world and our surrounding environment. To do this we will develop visual skills and critical thinking through careful observation and classical drawing techniques. Inspired by Stanford's natural and manicured landscapes, students will enjoy the great outdoors while learning elements of perspective, composition, light, and form. Students will learn about master landscape artists, investigate the built and natural environment of the campus, and experiment with various drawing techniques, mediums, and styles.
2 units, Aut (Hewicker, S)

ARTSTUDI 14. Drawing the Imaginative Figure: Characters, Alter-Egos, Avatars and You
Drawing course where students create alter egos, fictional selves, and characters, utilize inspiration from fiction, true stories, and outrageous lies for stand-ins to express ideas and spawn imagery. An exploration of who one would rather be (and not be) and what one would rather say if only it were not so polite or it just did not sound peculiar in one's voice, but primarily to explore these things because it is fun to extend limits by playing pretend. Drawing from models costumed and posed in character from stories read aloud, fictionalized self-portrait assignments, assignments of animal or inanimate object that represents an aspect of us. Course incorporates found and self-written text, zines, and comics. Art majors and non-majors welcome. Recommended: drawing experience.
2 units, Aut (Katz, D)

ARTSTUDI 17. Fakes, Fictions, and Drama: The Constructed Image Staged and Imagined
Thematically focused photography course surveys ideas surrounding the staged photograph and its relationship to narrative and fiction. Workshop open studio format with slide lectures on historical and contemporary figures working within this genre of photography. Assignments include construction of scenes and collaborative photo shoots. Through discussions, demonstrations, and the creation of photographs, students explore the potential of the constructed image in their own work as well as its role in contemporary photo-based practices. Emphasis placed on conceptualizing ideas prior to making exposures. Art majors and non-majors welcome.
2 units, Win (Mazinani, S)

ARTSTUDI 18. Stories of Stuff: Art Making in the Global Economy
Focus is on the relationship of contemporary art to the material flows of the global economy. Seminar style discussion of art practices that deal with material politics and a studio based engagement with some specific materials in question. Students are required to conduct research on the material that they choose to work on, or with, in their final project. The form and media in which this project is realized is open and not limited to sculpture. Open to majors and non-majors.
2 units, Spr (Chapple, E)

ARTSTUDI 60. Design I : Fundamental Visual Language
Formal elements of visual expression (color, composition, space, and process) through hands-on projects. Two- and three-dimensional media. Emphasis is on originality and inventiveness. Content is realized abstractly. Centered in design; relevant to visual art study and any student seeking to develop visual perception. (lower level)
3-4 units, Aut (Edmark, J), Win (Edmark, J), Spr (Staff)

ARTSTUDI 70. Introduction to Photography
Critical, theoretical, and practical aspects of creative photography through camera and lab techniques. Field work. Cantor Art Center and Art Gallery exhibitions. 35mm camera required. (lower level)
4 units, Aut (Felzmann, L), Win (Felzmann, L), Spr (Felzmann, L), Sum (Staff)

ARTSTUDI 80. Color
Hands-on study of color to develop color sensitivity and the ability to manipulate color to exploit its expressive potential. Guided experimentation and observation. Topics include color relativity, color and light, color mixing, color harmony, and color and content. (lower level)
3-4 units, Aut (Edmark, J)

ARTSTUDI 130. Interactive Art I: Objects
The basics of sensors, processors, and actuators needed to create artworks that interact, record, and communicate. Emphasis is on the sculpture and interactive dimensions. (lower level)
4 units, Spr (DeMarinis, P)

ARTSTUDI 131. Sound Art I
Acoustic, digital and analog approaches to sound art. Familiarization with techniques of listening, recording, digital processing and production. Required listening and readings in the history and contemporary practice of sound art. (lower level)
4 units, Aut (DeMarinis, P)

ARTSTUDI 136. Future Media, Media Archaeologies
Hand-on. Media technologies from origins to the recent past. Students create artworks based on Victorian era discoveries and inventions, early developments in electronic media, and orphaned technologies. Research, rediscover, invent, and create devices of wonder and impossible objects. Readings in history and theory. How and what media technologies mediate. (lower level)
3-4 units, not given this year

ARTSTUDI 138. Sound and Image
Practices that combine audio and visual media. Topics include synesthesias, visual music, film soundtracks, and immersive multimedia practices that combine sound, music, still and moving images, projections, and performance. (lower level)
4 units, not given this year

ARTSTUDI 139. INTERMEDIA WORKSHOP
(Same as MUSIC 155) Students develop and produce intermedia works. Musical and visual approaches to the conceptualisation and shaping of time-based art. Exploration of sound and image relationship. Study of a wide spectrum of audiovisual practices including experimental animation, video art, dance, performance, non-narrative forms, interactive art and installation art. Focus on works that use music/sound and image as equal partners. Limited enrollment. Prerequisites: consent of instructors, and one of FILMPROD 114, ARTSTUDI 131, 138, 167, 177, 179, or MUSIC 123, or equivalent.
3-4 units, Spr (Kapuscinski, J; DeMarinis, P)

ARTSTUDI 140. Drawing I
Functional anatomy and perspective as they apply to problems of drawing the form in space. Individual and group instruction as students work from still life set-ups, nature, and the model. Emphasis is on the development of critical skills and perceptual drawing techniques for those with little or no previous experience with

pastels, inks, charcoal, conte, and pencil. Lectures alternate with studio work. (lower level)

4 units, Aut (Bean, K), Win (Chagoya, E), Spr (Xie, X)

ARTSTUDI 141. Drawing II

Intermediate/advanced. Observation, invention, and construction. Development of conceptual and material strategies, with attention to process and purpose. May be repeated for credit. Prerequisite: 140 or consent of instructor. (upper level)

4 units, Spr (Bean, K)

ARTSTUDI 145. Painting I

Introduction to techniques, materials, and vocabulary in oil painting. Still life, landscape, and figure used as subject matter. Emphasis is on painting and drawing from life. (lower level)

4 units, Aut (Xie, X), Win (Bean, K), Spr (Xie, X)

ARTSTUDI 146. Painting II

Symbolic, narrative, and representational self-portraits. Introduction to the pictorial strategies, painting methods, and psychological imperatives of Dürer, Rembrandt, Cézanne, Kahlo, Beckmann, Schiele, and Munch. Students paint from life, memory, reproductions, and objects of personal significance to create a world in which they describe themselves. May be repeated for credit. Prerequisites: 140, 145, or consent of instructor. (upper level)

4 units, Win (Bean, K), Spr (Chagoya, E)

ARTSTUDI 147S. Painting and Drawing

4 units, Sum (Bean, K)

ARTSTUDI 148. Monotype

Introduction to printmaking using monotype, a graphic art medium used by such artists as Blake, Degas, Gauguin, and Pendergast. May be repeated for credit. Prerequisite: 140. (lower level)

4 units, Spr (Chagoya, E)

ARTSTUDI 148A. Lithography

The classic technique of printing from limestones. Techniques to draw an image on the stone, etch and fix the image on the stone, and print it in numbered editions. Students work on a variety of stone sizes. Field trips to local publishers of lithography or lithography exhibitions. (lower level)

4 units, Win (Kain, K)

ARTSTUDI 148B. Introduction to Printmaking Techniques

Techniques such as monotype, monoprint, photocopy transfers, linocut and woodcut, intaglio etching. Demonstrations of these techniques. Field trips to local print collections or print exhibitions. (lower level)

4 units, Aut (Kain, K)

ARTSTUDI 149. Collage

The generative principles of this characteristic 20th-century art form. Along with assemblage (its three dimensional equivalent) and montage (its counterpart in photography, film, and video), collage introduced crucial aesthetic issues of the modern and postmodern eras. Typically, collage creates an expressive visual language through juxtaposition and displacement, and through materiality, difference, and event. Issues of location (where it happens), object (what it is), process (how it is realized), and purpose (why it is). Prerequisites: 140, 145, or consent of instructor. (upper level)

4 units, Win (Ebtekar, A)

ARTSTUDI 149A. Printmaking Relief

Various relief printmaking techniques explored with concentrated work in the processes of woodcut, linoleum cut and other related relief approaches. Students are exposed to contemporary practices in printmaking through visits to museums, print workshops, publishers, artists' studios, and other venues.

4 units, not given this year

ARTSTUDI 149B. Print Sliding Off the Page

An exploration of how printmaking has influenced visual and political culture in the 21st century. A seminar and workshop introducing mono print, photography and photo transfers. Artists (Angus Fairhurst, Helen Chadwick, Romare Beardon, Barbera Kruger) were advocates of self representation and exploring traditional techniques. Field trips to SF MOMA, Cantor Museum, and an artist studio. Guest lecture Stanford Art Gallery. Enrollment limited to 9.

4 units, Aut (Staff)

ARTSTUDI 151. Sculpture I

Traditional and non-traditional approaches to sculpture production through working with materials including wood, metal, and plaster. Conceptual and technical skills, and safe and appropriate use of tools and materials. Impact of material and technique upon form and content; the physical and expressive possibilities of diverse materials. Historical and contemporary forming methods provide a theoretical basis for studio work. Field trips; guest lecturers.

4 units, Win (Staff), Spr (Staff)

ARTSTUDI 152. Sculpture II

Builds upon 151. Installation and non-studio pieces. Impact of material and technique upon form and content; the physical and expressive possibilities of diverse materials. Historical and contemporary forming methods provide a theoretical basis for the studio work. Field trips; guest lecturers. (upper level)

4 units, Spr (Berlier, T)

ARTSTUDI 153. Ecology of Materials

Studio-based sculpture course. Materials used in sculpture and environmental concerns surrounding them. Artists concerned with environmental impact and the interconnection of art with other fields. The impact of material and technique upon form and content; understanding the physical and expressive possibilities of diverse materials. Conceptual and technical considerations. Group discussions, critiques, readings, video presentations, a field trip to a local artist-in-residence program, and visiting lecturers. (lower level)

4 units, Aut (Berlier, T)

ARTSTUDI 154. Kinetic Sculpture

Course developed in conjunction with Lively Arts and SICA to bring students in closer dialogue with artists working interdisciplinary on collaborative projects. Students work with visiting artist Trimpin, a MacArthur genius, in the design and construction of collaborative kinetic projects. The kinetic sculptures created in class are used for Trimpin's installation and performance work, The Gurs Zyklus (The Gurs Cycle), a world premiere at Memorial Auditorium in May. Students use both the Sculpture Lab facilities and the PRL. Engineers, sculptors, artists, majors and non-majors are welcome. (lower level)

4 units, Win (Berlier, T)

ARTSTUDI 155. Social Sculpture

Collect real time data via sensors to create artistic interventions. Focus is on art in the public sphere, in the landscape with references to cultural or social context. Articulation of artistic concepts is through site specific work and public interventions. Quick prototypes of sensors are created through Cycling74's (MAX/MSP/Jitter) visual programming environment.

4 units, Aut (Staff)

ARTSTUDI 160. Design II: The Bridge

The historical spectrum of design including practical and ritual. The values and conceptual orientation of visual fundamentals. Two- and three-dimensional projects sequentially grouped to relate design theory to application, balancing imaginative and responsible thinking. Prerequisite: ARTSTUDI 60. Corequisite: ME 203 (upper level)

3-4 units, Win (Kahn, M), Spr (Edmark, J)

ARTSTUDI 161. Catalysts for Design

Nature and science as sources of design inspiration. Projects in natural pattern formation, biological growth and form, Fibonacci numbers and the golden section, planar and spatial symmetry, mechanics, chaos, and fractals. Emphasis is on importance of creative synthesis to the design process. Projects take the form of physical constructions as opposed to renderings or computer models. Field trips. (lower level)

3-4 units, not given this year

ARTSTUDI 163. Paper

Beyond conventional use of paper as a foundation for mark making to its potential as a medium in its own right. Students experiment with papers to develop facility with techniques of folding, scoring, curling, cutting, tearing, piercing, embossing, layering, and binding to create three-dimensional forms, patterned/textured surfaces, reliefs, interactive dynamic structures such as pop-ups, containers, and book forms. (upper level)

3-4 units, not given this year

ARTSTUDI 166. Design in Motion
Design areas for which movement and transformation are essential. Experimentation with mechanical means such as linking, hinging, inflating, and rotating. Projects in lighting, automata, tools and utensils, chain reactions, toys and games, festival props, and quasi-architecture emphasize the creation of works in which motion is a significant agent for aesthetic gratification. No experience in mechanical engineering required. (lower level)
3-4 units, not given this year

ARTSTUDI 167. Introduction to Animation
Projects in animation techniques including flipbook, cut-out/collage, stop-motion such as claymation, pixilation, and puppet animation, rotoscoping, and time-lapse. Films. Computers used as post-production tools, but course does not cover computer-generated animation. (lower level)
3-4 units, Win (Edmark, J)

ARTSTUDI 169. Professional Design Exploration
Six to eight mature projects are stimulated by weekly field trips into significant areas of design activity or need. (upper level)
4 units, not given this year

ARTSTUDI 170. Projects in Photography
Students pursue a topic of their own definition. Further exploration of darkroom and other printing techniques; contemporary theory and criticism. (lower level)
4 units, Aut (Felzmann, L), Win (Felzmann, L)

ARTSTUDI 172. Alternative Processes
Priority to advanced students. Technical procedures and the uses of primitive and hand-made photographic emulsions. Enrollment limited to 10. Prerequisites: 70, 170, 270, or consent of instructor. (upper level)
4 units, Spr (Leivick, J)

ARTSTUDI 173. Introduction to Digital Photography and Visual Images
Students use Adobe Lightroom to organize and edit images, manipulate and correct digital files, print photographs, create slide shows, and post to the Internet. How to use digital technology to concentrate on visual thinking rather than darkroom techniques. (lower level)
4 units, Aut (Dawson, R), Spr (Dawson, R)

ARTSTUDI 175A. Light as a Sculptural Element
The application of light as a transformative medium in visual art practices. Artists such as Thomas Wilfred, Nam June-Paik, James Turrell, Ann Hamilton, Won Ju Lim, Diana Thater, Wolfgang Laib, Cai Guo-Qiang, Robert Irwin, Shirin Neshat, Bill Viola, and Olafur Eliasson. (upper level)
4 units, not given this year

ARTSTUDI 177. Video Art I
Students create experimental video works. Conceptual, formal, and performance-based approaches to the medium. The history of video art since the 70s and its influences including experimental film, television, minimalism, conceptual art, and performance and electronic art. Topics: camera technique, lighting, sound design, found footage, cinematic conventions, and nonlinear digital editing. (lower level)
4 units, Aut (Barber, J)

ARTSTUDI 177A. Video Art II
Advanced. Video, criticism, and contemporary media theory investigating the time image. Students create experimental video works, addressing the integration of video with traditional art media such as sculpture and painting. Nonlinearity made possible by Internet and DVD-based video. Prerequisite: 177 or consent of instructor. (upper level)
4 units, Spr (Staff)

ARTSTUDI 178. Art and Electronics
Analog electronics and their use in art. Basic circuits for creating mobile, illuminated, and responsive works of art. Topics: soldering; construction of basic circuits; elementary electronics theory; and contemporary electronic art. (lower level)
4 units, Win (Wight, G)

ARTSTUDI 179. Digital Art I
Contemporary electronic art focusing on digital media. Students create works exploring two- and three-dimensional, and time-based uses of the computer in fine art. History and theoretical underpinnings. Common discourse and informative resources for material and inspiration. Topics: imaging and sound software, web art, and rethinking the comptuer as interface and object. (lower level)
4 units, Aut (Wight, G)

ARTSTUDI 179A. Digital Art II
Advanced. Interactive art works using multimedia scripting software. Experimental interfaces, computer installation work, and mobile technologies. Contemporary media art theory and practice. (upper level)
4 units, Win (Staff)

ARTSTUDI 184. Art and Biology
The relationship between biology and art. Rather than how art has assisted the biological sciences as in medical illustration, focus is on how biology has influenced art making practice. New technologies and experimental directions, historical shifts in artists' relationship to the living world, the effects of research methods on the development of theory, and changing conceptions of biology and life. Projects address these themes and others that emerge from class discussions and presentations. (upper level)
4 units, Spr (Staff)

ARTSTUDI 184A. Along the Track of the Yellowstone Hotspot: Fusion of Art and Science
(Same as BIO 122) The 20-million-year-old track of the Yellowstone hotspot through western North America, using the field setting to investigate ecology, evolution, and geology through an aesthetic and documentary media lens. Students create: experiential ways to learn about the natural world; a scientific yet personal intimacy about how ecosystems work and how they change; and ways to convey their observations to the public. Required trip to Yellowstone National Park.
4 units, not given this year

ARTSTUDI 185. Topics in Media Studies: Street Media
Literal and figurative meanings of street and how they provide potential to media technologies and invite innovative forms of artistic practice. Contemporary art as the juncture where street movements and new media collide. Small projects. (upper level)
4 units, Spr (Wight, G)

ARTSTUDI 230. Interdisciplinary Art Survey
The diversity of artistic concepts and strategies; artists who use the different media taught in the department's studio program such as painting, drawing, video and digital art, printmaking, photography, and sculpture. Field trips to local museums and collections, artists studios, and libraries. Student research. Priority to Art Studio majors and minors. (upper level)
4 units, Win (Gordon, J)

ARTSTUDI 246. Individual Work: Drawing and Painting
Prerequisites: two quarters of painting or drawing and consent of instructor.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

ARTSTUDI 249. Advanced Undergraduate Seminar
Capstone experience for majors in Studio Art. Interdisciplinary. Methods of research, crossmedia critiques, and strategies for staging and presenting work. Guest artists from the Bay Area. (upper level)
3-4 units, Spr (Bell, C)

ARTSTUDI 250. Individual Work: Sculpture
May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

ARTSTUDI 260. Individual Work: Design
May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

ARTSTUDI 262. The Chair
Students design and fabricate a highly refined chair. The process is informed and supported by historical reference, anthropometrics, user testing, form studies, material investigations, and construction of scale models and full-size prototypes. Prerequisites: ARSTUDI 160 and ME 203, or consent of instructor. (upper level)
4 units, Spr (Edmark, J)

ARTSTUDI 265. Design for Exploration
A collaboration with the Exploratorium in San Francisco. Students investigate and experiment with all aspects of the creation of interactive museum exhibits. On-site exhibit floor sessions and prototyping workshops. Lectures from museum staff on exhibit design. Students design and construct exhibits for temporary placement on

the floor of the Exploratorium. Prerequisites: ME 203 or consent of instructor. (upper level)
3-4 units, not given this year

ARTSTUDI 268. Design Synthesis
Mature semi-elective problems in composite and multimedia design areas. May be repeaed for credit. Prerequisites: two design courses above 160. (upper level)
4-6 units, not given this year

ARTSTUDI 269. Advanced Creative Studies
Seminar based on elective design projects in areas of individual specialization. May be repeated for credit. Prerequisite: consent of instructor. (upper level)
1-15 units, Aut (Kahn, M)

ARTSTUDI 270. Advanced Photography Seminar
Student continues with own work, showing it in weekly seminar critiques. May be repeated for credit. (upper level)
1-5 units, Win (Leivick, J), Spr (Leivick, J)

ARTSTUDI 271. The View Camera: Its Uses and Techniques
For students of photography who wish to gain greater control and refine skills in image making. 4x5 view cameras provided. Enrollment limited to 8. (upper level)
4 units, Win (Leivick, J)

ARTSTUDI 272. Individual Work: Photography
Student continues with own work, showing it in weekly seminar critiques. May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

ARTSTUDI 273. Individual Work: Digital Media
May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

ARTSTUDI 274. Individual Work: Digital Art
May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

ARTSTUDI 276. The Photographic Book
Grouping and sequencing photographic images to produce a coherent body of work with a thematic structure. (lower level)
4 units, not given this year

GRADUATE COURSES IN ART STUDIO

Primarily for graduate students; undergraduates may enroll with consent of instructor.

ARTSTUDI 310A. Directed Reading: Studio
1-15 units, Aut (Staff)

ARTSTUDI 310B. Directed Reading: Studio
1-15 units, Win (Staff)

ARTSTUDI 310C. Directed Reading: Studio
1-15 units, Spr (Staff)

ARTSTUDI 342. MFA Project: Studio
Two weekly seminars, studio practice, and individual tutorials. Object seminar: student work is critiqued on issues of identity, presentation, and the development of coherent critical language. Concept seminar: modes of conceptualization to broaden the base of cognitive and generative processes. May be repeated for credit.
1-15 units, Aut (Xie, X), Win (Berlier, T), Spr (Wight, G)

ARTSTUDI 360A. Master's Project: Design
Students enroll concurrently in ME 316. Over the course of the year, students create and present two master's theses involving the synthesis of aesthetics and technological concerns in the service of human need and possibility.
3 units, Aut (Edmark, J; Franceschini, A)

ARTSTUDI 360B. Master's Project: Design
Students enroll concurrently in ME 316. Over the course of the year, students create and present two master's theses involving the synthesis of aesthetics and technological concerns in the service of human need and possibility.
3 units, Win (Franceschini, A)

ARTSTUDI 360C. Master's Project: Design
Students enroll concurrently in ME 316. Over the course of the year, students create and present two master's theses involving the synthesis of aesthetics and technological concerns in the service of human need and possibility.
3 units, Spr (Franceschini, A)

ARTSTUDI 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ASIAN AMERICAN STUDIES (ASNAMST) COURSES

UNDERGRADUATE COURSES IN ASIAN AMERICAN STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ASNAMST 74N. Race and Ethnicity in Contemporary American Fiction: Boundaries and Border Crossings
(Stanford Introductory Seminar) (Same as ENGLISH 74N) The question of place and locality in studies of identity and racial formation. Goal is to engage and examine texts with a critical eye both toward the social contexts represented and to the imaginative aesthetic techniques that American writers of color offer to bring their fictional worlds to life. Theme of border hopping and boundary crossing in works by authors including Charles Johnson, Toni Morrison, Alejandro Morales, Julie Otsuka, Stephen Graham Jones, and Lan Samantha Chang. GER:DB-Hum
3 units, Win (Sohn, S)

ASNAMST 100C. EAST House Seminar: Current Issues and Debates in Education
(Same as EDUC 100C) Education and Society Theme (EAST) House seminar. In Autumn Quarter, five current issues broadly related to education and society are discussed and debated among students and faculty. In Winter Quarter, topics pertaining to gender and education, particularly in developing countries, are explored. In the spring, the seminar revolves around race and ethnicity in higher education. Through an examination of these topics, students are able to share and develop their varied interests in educational research, policy, and practice.
1 unit, Spr (Wotipka, C)

ASNAMST 146S. Asian American Culture and Community
(Same as AMSTUD 146, COMPLIT 146, CSRE 146S) An examination of the history of Asians in America via one case history: the International Hotel in San Francisco. Background history of Asians in America, and the specifics of the I Hotel case as involving the convergence of global and local economies, urban redevelopment, and housing issues for minorities. Focus on the convergence of community and cultural production. Service learning component involving community work at the Manilatown Heritage Foundation in San Francisco. Service Learning Course (certified by Haas Center). GER:DB-Hum
5 units, Aut (Palumbo-Liu, D)

ASNAMST 173S. Transcultural and Multiethnic Lives: Contexts, Controversies, and Challenges
(Same as AFRICAAM 173S, CSRE 173S) Lived experience of people who dwell in the border world of race and nation where they negotiate transcultural and multiethnic identities and politics. Comparative, historical, and global contexts such as family and class. Controversies, such as representations of mixed race people in media and multicultural communities. What the lives of people like Tiger Woods and Barack Obama reveal about how the marginal is becoming mainstream.
5 units, Spr (Murphy-Shigematsu, S)

ASNAMST 179. Asian American Experiences and Documentary Practice
(Same as FILMSTUD 279, CSRE 179) Focus is on documentary cinema as a technology for understanding Asian Americans in the U.S. The social and historical context of the formation of the Asian American filmmaker, an authorial position that emerges in the 60s and 70s as part of the civil rights movement. Works include films by Loni Ding, Bob Nakamura and Curtis Choy; readings about the establishment of Asian American media industries and Asian American film criticism as a multi-genre. Social issue documentaries that represent new ethnographies of social experience including transnational adoption (Daughter From Danang), refugee experience (AKA Don Bonus), and sex tourism (The Women Outside). Readings include analyses of the implications of these works for cinema studies, ethnic studies, and the politics of film in everyday life. Experimental documentaries and their interrogation of the limits of the documentary form

in representing identities and social problems. How does representation matter within and for Asian America in framing the complexities of race and racial identity? Screenings include works by Marlon Fuentes, Rea Tajiri and Trinh T. Minh-ha.

5 units, Spr (Shimizu, C)

ASNAMST 185A. Race and Biomedicine

(Same as ANTHRO 185A) Race, identity, culture, biology, and political power in biomedicine. Biological theories of racial ordering, sexuality and the medicalization of group difference. Sources include ethnography, film, and biomedical literature. Topics include colonial history and medicine, the politics of racial categorization in biomedical research, the protection of human subjects and research ethics, immigration health and citizenship, race-based models in health disparities research and policy, and recent developments in human genetic variation research.

3-5 units, Aut (Lee, S)

ASNAMST 187. Geography, Time, and Trauma in Asian American Literature

(Same as AMSTUD 261A, ENGLISH 261A) The notion that homes can be stable locations for cultural, racial, ethnic, and similarly situated identity categories. Tthe possibility that there really is no place like home for Asian American subjects. How geography, landscape, and time situate traumas within fictional Asian American narratives.

5 units, Aut (Sohn, S)

ASNAMST 188. Gender and Sexuality in Asian American Literature

(Same as AMSTUD 261F, ENGLISH 261F) How writers and representations dialogue, challenge, resist, and complicate such formative constructions of gendered/sexual identities. How queer Asian Americans face multiple negations that include potential expulsion from their own families and from various communities. Authors include Bharati Mukherjee, Russell Leong, Suki Kim, Shawn Wong, Louis Chu, Lawrence Chua, Catherine Liu, Jessica Hagedorn, Timothy Liu, Shani Mootoo, David Mura, among others. Secondary readings include literary criticism, and feminist and queer theory.

5 units, Win (Sohn, S)

ASNAMST 200R. Directed Research

May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

ASNAMST 200W. Directed Reading

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

ATHLETICS, PHYSICAL EDUCATION, AND RECREATION (ATHLETIC) COURSES

UNDERGRADUATE COURSES IN ATHLETICS, PHYSICAL EDUCATION, AND RECREATION

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ATHLETIC 2. Abs and Glutes

Lower body workout to strengthen glutes and thighs, and abdominal training. Fee. (AU)

1 unit, Aut (McWherter, B), Win (McWherter, B), Spr (McWherter, B), Sum (Conniff, N)

ATHLETIC 3M. Aikido

1 unit, Aut (Ghormley, T), Win (Ghormley, T), Spr (Ghormley, T)

ATHLETIC 4C. Archery Club Team

(AU) (Staff)

1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ATHLETIC 7. Badminton, Beginning/Intermediate

Skills, knowledge, and etiquette including fundamentals such as serving, forehand and backhand shots, drops, and smashes. Score keeping. Strategies for play in singles and doubles. Fee. (AU)

1 unit, Aut (Staff)

ATHLETIC 8C. Badminton Club Team

(AU)

1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ATHLETIC 10. Band, Sports Activity

(AU)

1 unit, Aut (Aquilanti, G), Win (Aquilanti, G), Spr (Aquilanti, G)

ATHLETIC 12V. Baseball, Varsity Men

(AU)

1-2 units, Aut (Marquess, M; Stotz, D), Win (Marquess, M; Stotz, D), Spr (Marquess, M; Stotz, D)

ATHLETIC 14V. Basketball, Varsity Men

(AU)

1-2 units, Aut (Dawkins, J), Win (Dawkins, J)

ATHLETIC 15V. Basketball, Varsity Women

(AU)

1-2 units, Aut (VanDerveer, T), Win (VanDerveer, T)

ATHLETIC 20M. Capoeira Club

1 unit, Aut (Ghormley, T), Win (Ghormley, T), Spr (Ghormley, T)

ATHLETIC 22C. Competitive Cheer Club

1 unit, Aut (Mahlow, P), Win (Mahlow, P)

ATHLETIC 23. Core Training

Exercises to build muscular strength and body core endurance, focusing on balance and stability. Equipment includes stability and medicine balls. Fee. (AU)

1 unit, Aut (Conniff, N), Win (Conniff, N), Spr (Conniff, N), Sum (Conniff, N)

ATHLETIC 25V. Crew, Varsity Men

(AU)

1-2 units, Aut (Amerkhanian, C), Win (Amerkhanian, C), Spr (Amerkhanian, C)

ATHLETIC 26V. Crew, Varsity Women

(AU)

1-2 units, Aut (Farooq, Y), Win (Farooq, Y), Spr (Farooq, Y)

ATHLETIC 27. Cross Training Fitness

Cross training fitness class will focus on combining different types of exercises to work the body as a whole to develop cardiovascular fitness, strength and power. All fitness levels are welcome. Class sessions will include exercises such as: indoor cycling, plyometrics, rowing, jump rope, circuit training, and various other exercises.

1 unit, Aut (Ninow, A; Alexander, M)

ATHLETIC 28V. Cross Country, Varsity Men

(AU)

1-2 units, Aut (Dunn, J)

ATHLETIC 29V. Cross Country, Varsity Women

(AU)

1-2 units, Aut (Dunn, J)

ATHLETIC 31C. Cycling Club Team

(AU)

1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ATHLETIC 33. Diving, Springboard

Basic techniques and mechanics of springboard and platform diving. Five basic categories of dives will be introduced: front, back, inward, reverse and twist. Competitive aspects of diving. Fee.

1 unit, Aut (Schavone, R)

ATHLETIC 34V. Diving, Varsity Men

(AU)

1-2 units, Aut (Schavone, R), Win (Schavone, R), Spr (Schavone, R)

ATHLETIC 35V. Diving, Varsity Women

(AU)

1-2 units, Aut (Schavone, R), Win (Schavone, R), Spr (Schavone, R)

ATHLETIC 37C. Equestrian Club Team

(AU)

1 unit, Aut (Bartsch, V), Win (Bartsch, V), Spr (Bartsch, V)

ATHLETIC 38M. Eskrima

1 unit, Aut (Ghormley, T), Win (Ghormley, T), Spr (Ghormley, T)

ATHLETIC 39. Fencing: Beginning
The sport of swordmanship develops quick hands, strong legs, and a strategic mind. Footwork, handwork, and bouting. Emphasis is on foil technique. All equipment provided. Fee. (AU)
1 unit, Aut (Milgram, L), Win (Posthumus, E)

ATHLETIC 40. Fencing, Intermediate
Continuation of 39; learn advanced footwork and handwork. Strategy and bouting. Introduction to epee and saber. All equipment provided. Prerequisite: 39. Fee. (AU)
1 unit, Win (Pogossov, G), Spr (Pogossov, G)

ATHLETIC 41V. Fencing, Varsity Men
(AU)
1-2 units, Aut (Posthumus, E), Win (Posthumus, E), Spr (Posthumus, E)

ATHLETIC 42V. Fencing, Varsity Women
(AU) (Milgram)
1-2 units, Aut (Posthumus, E), Win (Posthumus, E), Spr (Posthumus, E)

ATHLETIC 44. Fitness for Life
For improving overall fitness level. Workouts include brief periods of high intensity exercise interspersed with lower intensity exercise or rest. Short duration agility runs, weight lifting, and cardiovascular improvement. Proper stretching techniques, warm-ups, cool-downs, and monitoring heart rate. Fee. (AU)
1 unit, Win (Irvine, L)

ATHLETIC 46. Field Hockey, Intermediate
For those with prior experience. Techniques, skills, and strategy. Scrimmages and game-like scenarios. Fee. (AU)
1 unit, Win (Irvine, L)

ATHLETIC 47V. Field Hockey, Varsity Women
(AU)
1-2 units, Aut (Staff), Spr (Irvine, L)

ATHLETIC 48V. Football, Varsity
(AU)
1-2 units, Aut (Harbaugh, J), Spr (Harbaugh, J)

ATHLETIC 49. Golf for Women: Beginning
Fundamentals of the golf swing: putting, chipping and sand play. Golf etiquette and rules. Fee.
1 unit, Win (O'Connor, C; Mussani, S)

ATHLETIC 51. Golf: Beginning
Fundamentals of the golf swing; putting, chipping, and sand play. Golf etiquette and rules. Fee. (AU)
1 unit, Aut (Miller, J), Win (Miller, J), Spr (Marrone, P), Sum (Miller, J)

ATHLETIC 52. Golf: Advanced Beginning
Further development of the golf swing and short game. How to practice. Rules and etiquette. Prerequisite: 51 or golf experience. Fee. (AU)
1 unit, Aut (Flippo, K), Win (Miller, J), Spr (Miller, J), Sum (Miller, J)

ATHLETIC 53. Golf: Intermediate
Drills and practice on all facets of golf. How to lower scores and manage the game on the course. Prerequisite: 52 or equivalent. Fee. (AU)
1 unit, Aut (Flippo, K), Win (Acosta, E; Tight, M), Spr (Marrone, P), Sum (Miller, J)

ATHLETIC 54. Golf: Advanced
Goal is to refine the golf swing and increase power, distance, and accuracy. Course management, mental preparation, visualization techniques. Prerequisites: 53 or experience playing and practicing, and the ability to hit shots with relative accuracy and distance. Fee. (AU)
1 unit, Aut (Miller, J), Win (Ray, C; Tight, M), Spr (Miller, J)

ATHLETIC 55V. Golf, Varsity Men
(AU)
1-2 units, Aut (Ray, C), Win (Ray, C), Spr (Ray, C)

ATHLETIC 56V. Golf, Varsity Women
AU
1-2 units, Aut (O'Connor, C), Win (O'Connor, C), Spr (O'Connor, C)

ATHLETIC 58. Gymnastics: Beginning
Fundamental gymnastics movement for men and women, including flexibility and strength exercises taught on the Olympic apparatus including floor, balance beam, bars, and rings. Fee. (AU)
1 unit, Aut (Swircek, C), Win (Staff), Spr (Swircek, C)

ATHLETIC 60V. Gymnastics, Varsity Men
(AU)
1-2 units, Aut (Glielmi, T), Win (Glielmi, T), Spr (Glielmi, T)

ATHLETIC 61V. Gymnastics, Varsity Women
(AU)
1-2 units, Aut (Smyth, K), Win (Smyth, K), Spr (Smyth, K)

ATHLETIC 63. Hip Hop
Funky, jazzy, hip hop dance for fun and cardiovascular fitness. Fee. (AU)
1 unit, Aut (Miller Bell, A; Navarro, L), Win (Miller Bell, A; Navarro, L), Spr (Miller Bell, A; Navarro, L), Sum (Miller Bell, A)

ATHLETIC 64. Hockey, Floor
Fast-paced game adapted from ice hockey. Basic passing and shooting, offensive and defensive play, game strategy, team play. All equipment provided, eye guards required. Fee.
1 unit, Aut (Kacir, V), Win (Kacir, V)

ATHLETIC 65. Horsemanship: Beginning Riding
No experience needed. Basic horsemanship and riding at the walk, trot and canter. Fee. (AU)
1 unit, Aut (Bartsch, V), Win (Bartsch, V), Spr (Bartsch, V)

ATHLETIC 66. Horsemanship: Advanced Beginning Riding
Horsemanship and horse care; the canter and basic jumping. Prerequisite: 65 or equivalent. Fee. (AU)
1 unit, Aut (Bartsch, V), Win (Bartsch, V), Spr (Bartsch, V)

ATHLETIC 67. Horsemanship: Intermediate Riding
Basic veterinary skills and barn management. Riding at all gaits and completing horsemanship patterns (Western) or jumping basic courses (English). Fee. Prerequisite: 66 or equivalent. (AU)
1 unit, Aut (Bartsch, V), Win (Bartsch, V), Spr (Bartsch, V)

ATHLETIC 68. Horsemanship: Student Assistant
(Bartsch)
1 unit, Aut (Bartsch, V), Win (Bartsch, V), Spr (Bartsch, V)

ATHLETIC 70C. Horse Polo Club Team
(AU)
1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ATHLETIC 72C. Ice Hockey Club Team
Men (AU)
1 unit, Aut (Mahlow, P), Win (Mahlow, P)

ATHLETIC 73M. JKA Shotokan Karate
1 unit, Aut (Ghormley, T), Win (Ghormley, T), Spr (Ghormley, T)

ATHLETIC 74C. Judo Club Team
(AU)
1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ATHLETIC 75M. Jujitsu Self Defense
1 unit, Aut (Ghormley, T), Win (Ghormley, T), Spr (Ghormley, T)

ATHLETIC 76. Kickboxing
High intensity cardio workout incorporating kicks, punches, and elbow/knee and other combinations inspired by martial arts and boxing. Fee. (AU)
1 unit, Aut (Mandell, M), Win (Mandell, M), Spr (Mandell, M)

ATHLETIC 77C. Lacrosse Club Team (Men)
(AU)
1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ATHLETIC 78M. Kenpo Karate
1 unit, Aut (Ghormley, T), Win (Ghormley, T), Spr (Ghormley, T)

ATHLETIC 78V. Lacrosse, Varsity Women
(AU)
1-2 units, Aut (Bokker, A), Win (Bokker, A), Spr (Bokker, A)

ATHLETIC 80. Lifeguard Training
Priority to those wanting to guard at Stanford during the year. Lifeguard characteristics and responsibilities, recognition of hazards and emergencies, patron and facility surveillance, interaction with the public, rescue skills. Community first aid and CPR for the

professional rescuer. Fee. Prerequisite: pass swim test (swimmer/advanced swimmer level).
2 units, Spr (Erdrich, M; Carpenter, R)

ATHLETIC 81M. Muay Thai
1 unit, Aut (Ghormley, T), Win (Ghormley, T), Spr (Ghormley, T)

ATHLETIC 82. Manager: Athletic Team
For student managers of intercollegiate teams. Prerequisite: consent of respective varsity team head coach. (AU)
1 unit, Aut (Staff), Win (Dawkins, J), Spr (Staff)

ATHLETIC 86. Racquetball Fundamentals
An introduction to the fundamentals of racquetball.
1 unit, Spr (Stein, E)

ATHLETIC 88. Beginning Rowing for Women
This class is an introduction to the sport of rowing using ergometer machines. The fundamentals of proper form, technique and workouts to develop cardiovascular fitness will be taught. If you are interested in trying out for the Women's Rowing team this is an excellent class to give you the basics.
1 unit, Aut (Farooq, Y), Win (Staff)

ATHLETIC 89. Rowing Ergometer
Introduction to aerobic based training utilizing rowing machines. Rowing, core, flexibility and VO2 expansion. Fee.
1 unit, not given this year

ATHLETIC 90. Pilates Mat
Balanced sequence of exercises emphasizing grace and balance. Breath work and precision separate Pilates from traditional conditioning methods. Fee. (AU)
1 unit, Aut (Conniff, N), Win (Conniff, N), Spr (Conniff, N)

ATHLETIC 91C. Rugby Club Team (Men)
(AU)
1 unit, Aut (Griffin, P), Win (Griffin, P), Spr (Griffin, P)

ATHLETIC 92C. Rugby Club Team (Women)
(AU)
1 unit, Aut (Griffin, P), Win (Griffin, P), Spr (Griffin, P)

ATHLETIC 94C. Running Club
(AU)
1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ATHLETIC 95. Running at Stanford
Develop a training plan to meet your running goals. Proper form, warm ups, cool downs. Middle distance and distance workouts to meet your running goals.
1 unit, Aut (Vidal, D)

ATHLETIC 98. Sailing, Beginning
Skills, theory, and techniques to enable beginners to sail with confidence in small centerboard boats. Fee. (AU)
1 unit, Aut (Ustach, F), Spr (Ustach, F)

ATHLETIC 99. Sailing, Advanced Beginning
Continuation of ATHLETIC 98. For those with some sailing experience but not yet ready for intermediate sailing. Fee. May be repeated for credit. Prerequisites: ATHLETIC 98 or consent of instructor.
1 unit, Aut (Ustach, F), Spr (O'Bryan, M)

ATHLETIC 100. Sailing, Intermediate
Refine skills. Introduction to racing. Prerequisite: ATHLETIC 99 or consent of instructor. Fee. (AU)
1 unit, Aut (O'Bryan, M), Spr (O'Bryan, M)

ATHLETIC 104V. Sailing, Varsity Men
(AU)
1-2 units, Aut (Vandemoer, J), Win (Vandemoer, J), Spr (Vandemoer, J)

ATHLETIC 105V. Sailing, Varsity Women
(AU)
1-2 units, Aut (Vandemoer, J), Win (Vandemoer, J), Spr (Vandemoer, J)

ATHLETIC 107C. Ski Club Team
(AU)
1 unit, Win (Mahlow, P)

ATHLETIC 109. Social Dance, Beginning
Introduction to partner dancing. Steps, styling, and rhythms in popular social dances. No experience or partner necessary. Fee. (AU) Fall quarter: Foxtrot, Tango, Cha-Cha, and Salsa will be covered. Winter quarter: Waltz, Viennese Waltz, Rumba, and Hustle will be covered. Spring quarter: Foxtrot, Tango, Samba, and Night Club 2-Step will be covered.
1 unit, Aut (Greer, K), Win (Greer, K), Spr (Greer, K)

ATHLETIC 112. Soccer: Intermediate/Advanced
For the player with club or high school experience. Small group offensive and defensive tactics. Drills and small-sided games. Fee.
1 unit, Spr (Becerra, R; Cooney, J)

ATHLETIC 113. Soccer: Indoor, Beginning/Intermediate
For those with little or no playing experience. Skills, rules, small sided games. Fee. (AU)
1 unit, Win (Cooney, J; Becerra, R)

ATHLETIC 114. Soccer, Indoor: Intermediate/Advanced
Smaller ball and playing area. Emphasis is on individual ball skills through small sided games. Fee. (AU)
1 unit, Win (Cooney, J)

ATHLETIC 115. Soccer: Advanced for Men
Techniques under pressure; small group and team tactics. Fitness for the soccer player. Prerequisites: consent of instructor, tryouts. Fee. (AU)
1 unit, Win (Simon, B)

ATHLETIC 116. Soccer: Advanced for Women
Techniques under pressure; small group and team tactics. Fitness for the soccer player. Prerequisites: consent of instructor, tryouts. Fee. (AU)
1 unit, Win (Ratcliffe, P)

ATHLETIC 118V. Soccer, Varsity Men
(AU)
1-2 units, Aut (Simon, B), Spr (Simon, B)

ATHLETIC 119V. Soccer, Varsity Women
(AU)
1-2 units, Aut (Ratcliffe, P), Spr (Ratcliffe, P)

ATHLETIC 121V. Softball, Varsity Women
(AU)
1-2 units, Aut (Rittman, J), Win (Rittman, J), Spr (Rittman, J)

ATHLETIC 122. Spin Bike Cross Training
Aerobic based expansion utilizing spin bikes. Emphasis on volume work rather than anaerobic training. Heart rate monitoring, core, flexibility and nutrition information for more efficient fueling. Fee.
1 unit, Win (Amerkhanian, C)

ATHLETIC 123. Squash, Beginning/Intermediate
Techniques, rules and practice matches. Racquets, balls, and eye guards provided. Limited enrollment. Fee.
1 unit, Aut (Talbott, M), Win (Talbott, M), Spr (Talbott, M)

ATHLETIC 125C. Squash Club Team (Men)
(AU)
1 unit, Aut (Talbott, M), Win (Talbott, M), Spr (Talbott, M)

ATHLETIC 126V. Squash, Varsity Women
(AU)
1-2 units, Aut (Talbott, M), Win (Talbott, M), Spr (Talbott, M)

ATHLETIC 128. Swimming: Overcome Fear of Water
Overcome fear and discomfort in water. Learn to be comfortable and in control in both shallow and deep water. Feel balanced in water. Learn how water works and how your body works in water. If time permits, introduction to front crawl.
1 unit, Spr (Lonaker, S)

ATHLETIC 129. Swimming: Beginning
For non-swimmers or those who can swim about 10 yards but are not comfortable in deep water. Safety skills, front crawl, and back stroke. Additional strokes introduced as ability warrants. Fee. (AU)
1 unit, Aut (Neuhold-Huber, Z), Spr (Vargas, J), Sum (Neuhold-Huber, Z)

ATHLETIC 130. Swimming: Advanced Beginning
For those with limited swimming and safety skills. Safety skills, crawl, and elementary backstroke or back crawl. Introduction to sidestroke and breaststroke. Increase time and distance of swim. Prerequisite: ability to swim 25-50 yards on front and back. Fee. (AU)
1 unit, Aut (Neuhold-Huber, Z), Win (Neuhold-Huber, Z), Spr (Neuhold-Huber, Z), Sum (Neuhold-Huber, Z)

ATHLETIC 131. Swimming: Intermediate
Crawl, elementary backstroke, backstroke, and sidestroke. Safety skill work as needed. Introduction to or review of breaststroke. Open turns. Introduction to butterfly, flip turn, and conditioning.

Prerequisites: crawl, elementary backstroke, backstroke; some sidestroke and breaststroke; ability to swim approximately 100-200 yards continuously by mixing strokes. Fee. (AU)

1 unit, Aut (Neuhold-Huber, Z), Win (Neuhold-Huber, Z), Spr (Whildin, S), Sum (Neuhold-Huber, Z)

ATHLETIC 132. Swimming: Advanced

Review and refine all basic strokes and safety skills. Introduction to or review of butterfly and flip turn. Stroke drills and information on conditioning and designing individual workouts. Prerequisite: average to good strokes; ability to swim approximately 400-500 yards continuously. Fee. (AU)

1 unit, Aut (Tanner, J), Spr (Maurer, L)

ATHLETIC 133. Swim Conditioning

Improve cardio-respiratory endurance through directed swimming workouts. Technique corrections as needed. Prerequisite: advanced swimmer. Fee. (AU)

1 unit, Aut (Kenney, A), Win (Bokker, A), Spr (Knapp, T)

ATHLETIC 135V. Swimming, Synchronized: Varsity

(AU)

1-2 units, Aut (Olson, H), Win (Olson, H), Spr (Olson, H; Lowe, S)

ATHLETIC 136V. Swimming, Varsity Men

(AU)

1-2 units, Aut (Kenney, A), Win (Kenney, A), Spr (Kenney, A)

ATHLETIC 137V. Swimming, Varsity Women

(AU)

1-2 units, Aut (Maurer, L), Win (Maurer, L), Spr (Maurer, L)

ATHLETIC 139. Table Tennis

Basic counters, topspins, and chops with both the forehand and backhand. Serve and return, emphasizing game situations and match play. All equipment provided. Fee.

1 unit, Aut (Shodhan, S), Win (Shodhan, S), Spr (Shodhan, S)

ATHLETIC 140. Taiji Quan (Tai Chi)

(Same as ATHLETIC 44444) Taiji Quan (Tai Chi) is a Chinese martial arts system of slow meditative physical exercise designed for relaxation, balance and health. All levels are welcome.

1 unit, Aut (Ghormley, T)

ATHLETIC 141C. Tae Kwon Do Club

(AU)

1 unit, Aut (Ghormley, T), Win (Ghormley, T), Spr (Ghormley, T)

ATHLETIC 144. Tennis: Beginning

Forehand, backhand, serve, and net play; rules and scoring. (AU)

1 unit, Aut (Coupe, B), Win (Gould, A), Spr (Fenton, M), Sum (Gould, A)

ATHLETIC 145. Tennis: Low Intermediate

Fundamental strokes and their use in a game situation. Prerequisites: 144, or knowledge of rules and scoring and average ability in fundamental strokes but limited playing experience. Fee. (AU)

1 unit, Aut (Gould, A), Win (Gould, A), Spr (Sarsfield, T), Sum (Gould, A)

ATHLETIC 146. Tennis: Intermediate

Fundamental stroke review. Singles and doubles tactics. Prerequisites:145 or average ability in fundamental strokes, and regular playing experience; NTRP rating of 3.0 or equivalent. (AU)

1 unit, Aut (Glielmi, T), Win (Gould, A), Spr (Sarsfield, T), Sum (Gould, A)

ATHLETIC 147. Tennis: Advanced

Drills emphasize footwork, serve and return, approach shots, volleys, lobs, and overheads. Strategy for competition in singles and doubles. Prerequisites: above average stroking and game playing ability; NTRP rating above 4.0 or equivalent. (AU)

1 unit, Aut (Brennan, F), Win (Gould, A), Spr (Sarsfield, T), Sum (Gould, A)

ATHLETIC 148V. Tennis, Varsity Men

(AU)

1-2 units, Aut (Whitlinger, J), Win (Whitlinger, J), Spr (Whitlinger, J)

ATHLETIC 149V. Tennis, Varsity Women

(AU)

1-2 units, Aut (Forood, L), Win (Forood, L), Spr (Forood, L)

ATHLETIC 151. Total Body Workout

For all fitness levels; tone and strengthen the entire body. Different equipment used to target all major muscle groups. (AU)

1 unit, Aut (McWherter, B), Win (McWherter, B), Spr (McWherter, B), Sum (McWherter, B)

ATHLETIC 153V. Track and Field, Varsity Men

(AU)

1-2 units, Aut (Floreal, E), Win (Floreal, E), Spr (Floreal, E)

ATHLETIC 154V. Track and Field, Varsity Women

(AU)

1-2 units, Aut (Floreal, E), Win (Floreal, E), Spr (Floreal, E)

ATHLETIC 156C. Triathlon Club Team

(AU)

1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ATHLETIC 158C. Ultimate Frisbee Club Team (Men)

(AU)

1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ATHLETIC 159C. Ultimate Frisbee Club Team (Women)

(AU) (Staff)

1 unit, Aut (Mahlow, P), Win (Mahlow, P), Spr (Mahlow, P)

ATHLETIC 162. Volleyball

Drills to improve skills and game playing strategy. As ability indicates, more emphasis on team play and strategy. Fee. (AU)

1 unit, Aut (Price, A)

ATHLETIC 164. Volleyball: Intermediate Sand

Further development of skills and rules. Strategy in two- and four-person sand volleyball. Fee. (AU)

1 unit, Aut (Shibuya, K), Spr (Shaw, D)

ATHLETIC 165. Volleyball: Advanced Sand

Refine and improve skills and game playing strategy in two- and four-person sand volleyball. Must have strong skills and general knowledge of team concepts. Prerequisiste: 164 or consent of the instructor. Fee. (AU)

1 unit, Aut (Shibuya, K), Spr (Shaw, D)

ATHLETIC 166V. Volleyball, Varsity Men

(AU)

1-2 units, Aut (Kosty, J), Win (Kosty, J), Spr (Kosty, J)

ATHLETIC 167V. Volleyball, Varsity Women

(AU)

1-2 units, Aut (Dunning, J), Win (Dunning, J), Spr (Dunning, J)

ATHLETIC 169. Water Polo: Beginning

Introduction to basic skills and game play. For those who have never played or have had limited experience. Fee. (AU)

1 unit, Spr (Barnea, J)

ATHLETIC 170. Water Polo: Intermediate/Advanced

Further work on skills. Game strategies. Fee. (AU)

1 unit, Aut (Ortwein, S), Spr (Barnea, J)

ATHLETIC 171V. Water Polo, Varsity Men

(AU)

1-2 units, Aut (Vargas, J), Win (Vargas, J), Spr (Vargas, J)

ATHLETIC 172V. Water Polo, Varsity Women

(AU)

1-2 units, Aut (Tanner, J), Win (Tanner, J; Ortwein, S), Spr (Tanner, J; Ortwein, S)

ATHLETIC 174. Weight Training: Beginning

Improve fitness level through progressive resistance exercises using machines and free weights. Individualized weight training programs once basic exercises are learned. Stretching program. Basics of exercise physiology. Fee. (AU)

1 unit, Aut (Severson, L), Spr (Blake, R)

ATHLETIC 176. Weight Training for Women

All levels welcome, but designed for the beginner. Techniques and equipment for weight training. Emphasis is on stretching, proper form and progressions, and injury prevention. The basics of the physiology of strength training and planning individual programs. Fee. (AU)

1 unit, Aut (Severson, L)

ATHLETIC 177. Circuit Aerobic Weight Training

A full-body conditioning workout with weight lifting and aerobic components. Weight training equipment organized into a circuit to maximize workout intensity in a short amount of time. Fee. (AU)

1 unit, Aut (Nelson, D), Win (Nelson, D), Spr (Nelson, D)

ATHLETIC 178M. Wing Chun Kung Fu
1 unit, Aut (Ghormley, T), Win (Ghormley, T), Spr (Ghormley, T)

ATHLETIC 179. Wrestling and Introduction to Mixed Martial Arts (MMA)
While primarily focusing on the basic techniques of collegiate wrestling, some non-striking forms of MMA, such as Brazilian jiu-jitsu and submission grappling, will be covered throughout the quarter.
1 unit, Spr (Gentry, M)

ATHLETIC 180V. Wrestling, Varsity
(AU)
1-2 units, Aut (Borrelli, J), Win (Borrelli, J), Spr (Borrelli, J)

ATHLETIC 181M. Wushu
1 unit, Aut (Ghormley, T), Win (Ghormley, T), Spr (Ghormley, T)

ATHLETIC 182. Yoga
Mind, body, and spirit meet in yoga. Increase flexibility and restore health to the body. Fee. (AU)
1 unit, Aut (Carlow, A), Win (Carlow, A), Spr (Carlow, A), Sum (Conniff, N)

ATHLETIC 184. Yoga/Pilates Fusion
Combination of power and restorative yoga with strength building Pilates exercises. Fee.
1 unit, Aut (Conniff, N), Win (Conniff, N), Spr (Conniff, N), Sum (Conniff, N)

ATHLETIC 186. Zumba
Zumba combines Latin rhythms with cardiovascular exercise to create an aerobic routine. Interval and resistance training to maximize caloric output, fat burning, and total body toning. (AU)
1 unit, Aut (Picollo, A), Win (Picollo, A), Spr (Picollo, A)

ATHLETIC 187. Analysis of Human Movement
Overview of skeletal and muscular anatomy. The mechanical principles of movement as related to efficient performance in aquatics, dance, and sports.
2-4 units, Win (Wilson, C)

ATHLETIC 189. Business Practices in Sport
Planning and management of intercollegiate sports and recreation. Elements of business contracts, finance, facility development, legal issues, risk management, human resources, security, and operations and event management. How an athletic and recreation department is organized. Career opportunities in sports and recreation administration.
2 units, Spr (Purpur, R)

ATHLETIC 190. Introduction to Nutrition
How to optimize nutrition for health and performance. Topics include macronutrients, fad diets, sugar addiction, low-calorie sweeteners, caloric restriction, disease prevention, and nutrition.
1-2 units, Aut (Wilson, C), Spr (Wilson, C), Sum (Wilson, C)

ATHLETIC 193. Lifestyle Fitness Challenge
Exploration and improvement of overall health. Wellness, physical fitness, nutrition, cardio endurance, muscular strength and endurance, flexibility, and stress management. Introductions to weight and cardio equipment, outdoor workouts, spinning, strength and tone workouts, and yoga.
2 units, Aut (Spanier, J), Win (Spanier, J), Spr (Spanier, J)

ATHLETIC 195. Mind, Body, Spirit
Spiritual features of everyday life primarily from a psychological perspective with a focus on health. Topics include cultivating gratitude, forgiveness, life purpose, and kindness; mind/body/spirit solutions to everday problems. Meditation and other stress management practices.
2 units, Spr (Luskin, F)

ATHLETIC 196. HAPPINESS
Guided practice in research proven methods of creating more happiness in your life. Simple strategies for finding the good, becoming more peaceful, improving relationships and appreciating yourself.
1 unit, Aut (Luskin, F; Pertofsky, C), Spr (Luskin, F; Pertofsky, C)

ATHLETIC 197. Sport Psychology
Basic theories in psychology which have the greatest influence on sport performance. Motivation, anxiety reduction, personality and self esteem, motor learning theories and sociological aspects and their influence on performance and learning.
2 units, Spr (Schavone, R)

ATHLETIC 199. Sports Nutrition with Clinical Applications
Nutrition topics. Mechanisms by which nutrition positively impacts sports performance and relates to the mechanisms of health and disease. Student presentations. Prerequisites: ATHLETIC 190 and HUMBIO 130 or 135, or consent of instructor.
1-2 units, Spr (Wilson, C)

ATHLETIC 340. Rock Climbing: Strength and Conditioning
For experienced climbers to improve climbing skills and overall fitness through rock climbing exercises that center on focus, endurance, power-endurance, and power. Prerequisite: intermediate climbing class or equivalent or consent of instructor. Fee. (AU)
1 unit, Aut (Sandlin, P), Win (Sandlin, P), Spr (Sandlin, P)

ATHLETIC 342. Rock Climbing Route Setting
This class will introduce the route setting for rock climbing
1-11 units, Aut (Sandlin, P), Win (Staff), Spr (Staff)

ATHLETIC 405. Outdoor Leadership
Skills needed to lead basic multi-day backpacking trips. Classroom sessions and wilderness trips. Topics include group dynamics and leadership, technical skills, and wilderness first aid. Class may require work over several quarters. See http://www.stanford.edu/group/spot/training/. (FORMERLY ATH 84)
1 unit, Aut (Wright, P), Win (Nash-Webber, C), Spr (Nash-Webber, C)

ATHLETIC 406. Outdoor Leadership Practicum
Wilderness field portion of ATH 405 Outdoor Leadership. Skills needed to lead basic multi-day backpacking trips. See http://www.stanford.edu/group/spot/training/. You may contact SPOT with specific questions. PREREQ ATH 405 (Formerly ATH 84)
1 unit, Aut (Wright, P), Win (Staff), Spr (Staff)

ATHLETIC 495. Outdoor Education: Assistant Instructor
Formerly ATH 83
1-2 units, Aut (Fields, A), Win (Staff), Spr (Fields, A)

ATHLETIC 530. Climbing Wall Instructor
The Professional Climbing Instructor's Association (PCIA) Climbing Wall Instructor (CWI) Course provides instructors with an in depth and standardized understanding of the skills essential to teaching climbing in an indoor setting. Emphasis on the importance of teaching technically accurate information & sound fundamental skills. (Formerly ATH 21)
1 unit, Aut (Fields, A), Win (Fields, A), Spr (Fields, A)

ATHLETIC 535. PCIA Base-site Manager Instructor Course
This course will cover an understanding of the needed skills for teaching climbing in an outdoor setting. It will address fundamental climbing skills and an approach of how to teach this to others. Upon successful completion of all course components participants are considered PCIA Assistant Instructors.
1 unit, Aut (Fields, A), Win (Staff), Spr (Staff)

BIOCHEMISTRY (BIOC) COURSES

UNDERGRADUATE COURSES IN BIOCHEMISTRY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

BIOC 118Q. Genomics and Medicine
(Stanford Introductory Seminar) Preference to sophomores. Knowledge gained from sequencing human, bacterial, and viral genomes and implications for medicine and biomedical research. Novel diagnoses (chips, SNPs and gene expression) and treatment of diseases including gene therapy, stem cell therapy, and rational drug design. Ethical implications of stem cell therapy and uses of genetic information. Use of genome and disease databases to determine gene function in disease, diagnosis, and potential treatments. See http://biochem118.stanford.edu/. GER:DB-EngrAppSci
3 units, Aut (Brutlag, D)

BIOC 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN BIOCHEMISTRY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

BIOC 200. Applied Biochemistry
Enrollment limited to MD candidates. Fundamental concepts of biochemistry as applied to clinical medicine. Topics include thermodynamics, enzyme kinetics, vitamins and cofactors, metabolism of carbohydrates, lipids, amino acids and nucleotides, and the integration of metabolic pathways. Clinical case studies discussed in small-group, problem-based learning sessions.
1 unit, Aut (Harbury, P; Theriot, J; Cowan, T)

BIOC 201. Advanced Molecular Biology
Literature-based lectures and discussion on rapidly developing frontiers in chromosome structure and function and modern insights into the control of gene expression. Emphasis is on experimental approaches and insights. Topics include chromosome organization, novel modes of transcriptional control, RNA-based mechanisms for controlling gene expression and emerging translational regulatory mechanisms. Prerequisite: undergraduate molecular biology.
5 units, Spr (Krasnow, M; Straight, A)

BIOC 205. Molecular Foundations of Medicine
For medical students. Topics include DNA structure, replication, repair, and recombination; gene expression, including mechanisms for regulating transcription and translation; chromosome structure and function; and methods for manipulating DNA, RNA, and proteins. Patient presentations and journal clubs illustrate how molecular biology affects the practice of medicine.
3 units, Aut (Chu, G; Krasnow, M)

BIOC 210. Advanced Topics in Membrane Trafficking
The structure, function, and biosynthesis of cellular membranes and organelles. Current literature. Prerequisite: consent of instructor.
3 units, not given this year

BIOC 215. Frontiers in Biological Research
(Same as DBIO 215, GENE 215) Literature discussion in conjunction with the Frontiers in Biological Research seminar series in which investigators present current work. Students and faculty meet beforehand to discuss papers from the speaker¿s primary research literature. Students meet with the speaker after the seminar to discuss their research and future direction, commonly used techniques to study problems in biology, and comparison between the genetic and biochemical approaches in biological research.
1 unit, Aut (Harbury, P; Calos, M; Villeneuve, A), Win (Harbury, P; Villeneuve, A; Calos, M)

BIOC 218. Computational Molecular Biology
(Same as BIOMEDIN 231) For molecular biologists and computer scientists. Representation and analysis of genomes, sequences, and proteins. Strengths and limitations of existing methods. Course work performed on web or using downloadable applications. See http://biochem218.stanford.edu/. Prerequisites: introductory molecular biology course at level of BIOSCI 41 or consent of instructor. All offerings are via internet only.
3 units, Aut (Brutlag, D), Win (Brutlag, D), Spr (Brutlag, D)

BIOC 220. Chemistry of Biological Processes
(Same as CSB 220) The principles of organic and physical chemistry as applied to biomolecules. Goal is a working knowledge of chemical principles that underlie biological processes, and chemical tools used to study and manipulate biological systems. Prerequisites: organic chemistry and biochemistry, or consent of instructor.
4 units, Spr (Wandless, T), alternate years, not given next year

BIOC 221. The Teaching of Biochemistry
Required for teaching assistants in Biochemistry. Practical experience in teaching on a one-to-one basis, and problem set design and analysis. Familiarization with current lecture and text materials; evaluations of class papers and examinations. Prerequisite: enrollment in the Biochemistry Ph.D. program or consent of instructor.
3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOC 224. Advanced Cell Biology
(Same as BIO 214, MCP 221) For Ph.D. students. Current research on cell structure, function, and dynamics. Topics include complex cell phenomena such as cell division, apoptosis, compartmentalization, transport and trafficking, motility and adhesion, differentiation, and multicellularity. Current papers from the primary literature. Prerequisite for advanced undergraduates: BIO 129A,B, and consent of instructor.
2-5 units, Win (Kopito, R; Theriot, J; Pfeffer, S; Straight, A; Nachury, M)

BIOC 226. Interdisciplinary Approaches to Biochemistry: Single Molecule Biophysics to Clinical Outcomes
Interdisciplinary analyses from basic biochemistry and biophysics to clinical outcomes of disease states and potential therapeutic interventions (translational research). Focus on cardiac system. Cardiomyopathies arise from missense mutations in cardiac muscle proteins, including the cardiac myosin motor. Single molecule biophysics and classical enzyme kinetics and use of induced pluripotent stem cells (iPS cells) and single cell studies lay foundation for discussions of effects of cardiomyopathy mutations on heart function. Potential therapeutic approaches discussed, including genetic analysis, DNA cloning, reconstitution of functional assemblies, x-ray diffraction and 3D reconstruction of electron microscope images, spectroscopic methods, computational approaches, single molecule biophysics, use of induced pluripotent stem cells in research, and other interdisciplinary approaches. Current papers examined. Prerequisites: basic biochemistry.
3 units, Spr (Spudich, J)

BIOC 230. Molecular Interventions in Human Disease
For M.D. students who intend to declare a concentration in molecular basis of medicine, MSTP students, and Ph.D. students. Advanced medical biochemistry focusing on cases where molecular-level research has led to new medical treatments or changes in the understanding of important diseases. Different topics each week explore the underlying molecular basis of a variety of diseases and the reasons for success and failure in molecular approaches to treatment. Student-led discussions dissect papers from the primary medical and scientific research literature.
2-3 units, not given this year

BIOC 236. Biology by the Numbers
(Same as APPPHYS 136) Skillbuilding in biological quantitative reasoning. Topics include: biological size scales from proteins to ecosystems; biological time scales from enzymatic catalysis and DNA replication to evolution; biological energy, motion, and force from molecular to organismic scales; mechanisms of environmental sensing from bacterial chemotaxis to vision. Prerequisite: Physics 21, 41, or consent of instructor.
3 units, not given this year

BIOC 241. Biological Macromolecules
(Same as BIOPHYS 241, SBIO 241) The physical and chemical basis of macromolecular function. Forces that stabilize biopolymers with three-dimensional structures and their functional implications. Thermodynamics, molecular forces, structure and kinetics of enzymatic and diffusional processes, and relationship to their practical application in experimental design and interpretation. Biological function and the level of individual molecular interactions and at the level of complex processes. Case studies in lecture and discussion of classic and current literature. Enrollment limited to 40. Prerequisites: None; background in biochemistry and physical chemistry preferred but material available for those with deficiency; undergraduates with consent of instructor only.
3-5 units, Aut (Herschlag, D; Ferrell, J; Block, S; Weis, W; Garcia, K; Puglisi, J)

BIOC 257. Currents in Biochemistry
Seminars by Biochemistry faculty on their ongoing research. Background, current advances and retreats, general significance, and tactical and strategic research directions.
1 unit, Aut (Spudich, J)

BIOC 298. Biochemistry Consulting Service
Students are presented with requests for advice from faculty and students in the biological sciences and Medical School encountering experimental and analytical problems in their research. Students work with the instructor and other biochemistry faculty to propose solutions. May be repeated for credit.
3 units, not given this year

BIOC 299. Directed Reading in Biochemistry
Prerequisite: consent of instructor. (Staff)
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOC 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOC 399. Graduate Research and Special Advanced Work
Allows for qualified students to undertake investigations sponsored by individual faculty members.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOC 459. Frontiers in Interdisciplinary Biosciences
(Same as BIO 459, BIOE 459, CHEMENG 459, CHEM 459, PSYCH 459) Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See http://biox.stanford.edu/courses/459.html. Recommended: basic mathematics, biology, chemistry, and physics.
1 unit, Aut (Robertson, C), Win (Robertson, C), Spr (Robertson)

BIOC 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOC 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOENGINEERING (BIOE) COURSES

UNDERGRADUATE COURSES IN BIOENGINEERING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

BIOE 41. Physical Biology of Macromolecules
Principles of statistical physics and thermodynamics, with applications to molecular biology. Topics include entropy, temperature, free energy, chemical forces, self assembly, cooperative transitions in macromolecules, enzyme kinetics, molecular machines, and an introduction to genomic and proteomic technologies. Corequisite: BIO 41.
4 units, Aut (Fisher, D)

BIOE 42. Physical Biology of Cells
Principles of transport, continuum mechanics, and fluids, with applications to cell biology. Topics include random walks, diffusion, Langevin dynamics, transport theory, low Reynolds number flow, and beam theory, with applications including quantitative models of protein trafficking in the cell, mechanics of the cell cytoskeleton, the effects of molecular noise in development, the electromagnetics of nerve impulses, and an introduction to cardiovascular fluid flow. Concurrent enrollment in BIO 42 is required.
4 units, Win (Huang, K)

BIOE 44. Fundamentals for Engineering Biology Lab
Introduction to next-generation techniques in genetic, molecular, biochemical, and cellular engineering. Lab modules build upon current research including: gene and genome engineering via decoupled design and construction of genetic material; component engineering focusing on molecular design and quantitative analysis of experiments; device and system engineering using abstracted genetically encoded objects; and product development based on useful applications of biological technologies. Limited enrollment. Priority given to majors.
4 units, Spr (Endy, A)

BIOE 51. Anatomy for Bioengineers
Design principles of human anatomy, spanning major systems and tissues including nerve, muscle, bone, cardiovascular, respiratory, endocrine, and sensory systems. Explore feedback, homeostasis, information handling, and mass transfer across systems. Major disorders of anatomically-defined systems, defining challenges and opportunities for bioengineers. Evolving clinical interventions ranging from devices to tissue modeling and tissue engineering. Participate in medical school dissection procedures to gain understanding of the bioengineering human application domain.
4 units, Spr (Srivastava, S)

BIOE 70Q. Medical Device Innovation
(Stanford Introductory Seminar) Preference to sophomores. Survey of innovative technologies and medical devices used in multiple medical specialties. Guest lecturers include Stanford Medical School physicians, entrepreneurs, and venture capitalists. Focus on how to identify clinical needs and design device solutions to address those needs. Fundamentals of starting a company. Field trips to local medical device companies and design house. No previous engineering training required.
3 units, Spr (Mandato, J)

BIOE 80. Introduction to Bioengineering
(Same as ENGR 80) Overview of biological engineering focused on engineering analysis and design of biological processes. Topics include overall material and energy balances, rates of biochemical reactions and processes, genetic programming of biological systems, links between information and function, and technologies to probe and manipulate biological systems. Applications of these concepts to areas of current technological importance, including biotechnology, biosynthesis, molecular/cellular therapeutics, and personalized medicine and gene therapy. GER:DB-EngrAppSci
4 units, Spr (Smolke, C)

BIOE 101. SYSTEMS BIOLOGY
(Same as BIOE 210) Complex biological behaviors through the integration of computational modeling and molecular biology. Topics: reconstructing biological networks from high-throughput data and knowledge bases. Network properties. Computational modeling of network behaviors at the small and large scale. Using model predictions to guide an experimental program. Robustness, noise, and cellular variation. Prerequisites: background in biology and mathematical analysis.
4 units, Aut (Covert, M)

BIOE 102. Systems Physiology and Design I
Structure-function relationships of transport processes and systems. Conservation equations and momentum balance equations developed and applied to fluid and mass transport from cellular to organism scales. Topics: equations of mass conservation and momentum balance, fluid flow in the circulation and tissues, mass transport in biological systems, fluid and solute transport in porous media, transvascular transport, gas exchange in the cardiopulmonary systems, transport in the kidneys, applications to drug transport, circulatory devices, and mechanical and tissue-engineered artificial organs.
4 units, Win (Taylor, C)

BIOE 103. Systems Physiology and Design II
Biological and electrical design principles. Engineering tools used to electrically probe and model physiological systems. Basic and clinical excitable cell physiology. Topics: single-cell physiology (treatment of cells as bioelectrical devices, cable properties, ion channels and gradients, nonlinear dynamics of action potentials), network physiology and system design (neural networks, orderly recruitment of axons, Hebbian and spike timing-dependent plasticity), and excitable cell disease and interventions (major neurological and neuromuscular disease syndromes, neuromuscular simulation and surgical planning, electromagnetic stimulation instrumentation, optogenetics, tissue engineering).
4 units, Spr (Delp, S; Deisseroth, K)

BIOE 121. Bioinstrumentation and Imaging Lab
Introduction to bioinstrumentation and imaging through the use of ultrasound imaging. Basic ultrasound physics, pulser/receiver instrumentation, signal processing, and image reconstruction. Projects include building a 2D ultrasound system in a water tank and testing imaging performance.
4 units, Spr (Pelc, N)

BIOE 122. Tissue Engineering Lab
Introduction to the suite of cell culture tools needed to create tissue-mimetic, in vitro mammalian cellular communities, both on and within biocompatible and bioinspired materials known to direct cellular fate. Observation of the impacts of substrate properties on cell fate; mechanisms of cell-biomaterial interactions. Chemical/biochemical formulation and physical, rheological characterization of cell culture biomaterial substrates, from simple/conventional to experimental and biomimetic. Experience culturing epithelial, connective, muscle and neural cell lines. Tissue regeneration and engineering.
4 units, Win (Barron, A)

BIOE 123. Optics Lab
Introduction to optical microscopy, lasers, and optical forces. Lens theory, diffraction, compound optics, aberration, gaussian optics, fluorescence spectroscopy, and optical trapping. Projects include building and testing optical microscope and optical tweezers.
4 units, Win (Quake, S)

BIOE 161. Vertebrate Biology
(Same as HUMBIO 185) Study of structure, function, evolution and behavior of vertebrate animals. Consideration of vertebrate origins and examination of classes of vertebrates. Physiology, morphology, behaviors and evolutionary relationships are treated in each vertebrate group, as these relate to overall evolutionary trends within vertebrates. Topics: swimming behaviors in sharks and bony fishes, olfaction and vision in fishes, sex determination in amphibians, reptiles, birds and mammals, navigation in sea turtles and birds, evolution and biomechanics of flight in pterosaurs birds and bats, vocalization in whales and birds, temperature adaptation in reptiles, birds and mammals.
3 units, Win (Porzig, E)

BIOE 191. Bioengineering Problems and Experimental Investigation
Directed study and research for undergraduates on a subject of mutual interest to student and instructor. Prerequisites: consent of instructor and adviser. (Staff)
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOE 260. Tissue Engineering
Principles of tissue engineering and design strategies for practical applications for tissue repair. Topics include tissue components and dynamics, morphogenesis, stem cells, cellular fate processes, cell and tissue characterization, controlled drug and gene delivery, bioreactors, cell-materials interactions, and host integration. Present research proposal to solve a real life tissue engineering problem.
3 units, Aut (Yang, F)

GRADUATE COURSES IN BIOENGINEERING

Primarily for graduate students; undergraduates may enroll with consent of instructor.

BIOE 210. SYSTEMS BIOLOGY
(Same as BIOE 101) Complex biological behaviors through the integration of computational modeling and molecular biology. Topics: reconstructing biological networks from high-throughput data and knowledge bases. Network properties. Computational modeling of network behaviors at the small and large scale. Using model predictions to guide an experimental program. Robustness, noise, and cellular variation. Prerequisites: background in biology and mathematical analysis.
4 units, Aut (Covert, M)

BIOE 212. Introduction to Biomedical Informatics Research Methodology
(Same as BIOMEDIN 212, CS 272, GENE 212) Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Prerequisites: BIOMEDIN 210, 211, 214, 217 or consent of instructor.
3 units, Spr (Altman, R)

BIOE 214. Representations and Algorithms for Computational Molecular Biology
(Same as BIOMEDIN 214, CS 274, GENE 214) Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, Gibbs Sampling, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisites: programming skills; consent of instructor for 3 units.
3-4 units, Aut (Altman, R)

BIOE 220. Introduction to Imaging and Image-based Human Anatomy
(Same as RAD 220) The physics of medical imaging and human anatomy through medical images. Emphasis is on normal anatomy, contrast mechanisms, and the relative strengths of each imaging modality. Labs reinforce imaging techniques and anatomy. Prerequisites: basic biology, physics.
3 units, Win (Gold, G; Pauly, K)

BIOE 222A. Multimodality Molecular Imaging in Living Subjects I
(Same as RAD 222A) Provides an overview of the biology, instruments and chemistries for imaging of cellular and molecular processes in living animals and humans. Covers molecular biology, instrumentation physics, and chemistry of molecular imaging probes as an introduction to preclinical and clinical molecular imaging.
4 units, Aut (Contag, C; Xing, L; Rao, J)

BIOE 222B. Multimodality Molecular Imaging in Living Subjects II
(Same as RAD 222B) Focuses on molecular probes that target specific disease mechanisms. Covers molecular probe design for dynamic measures of biological function and how to deliver these to the target tissues for informative assays that reveal cellular and molecular changes.
4 units, Win (Contag, C; Xing, L; Rao, J)

BIOE 222C. Multimodality Molecular Imaging in Living Subjects III
(Same as RAD 222C) Topics course comprised of discussion and review of primary literature. Focuses on emerging chemistries and instruments that address unmet needs for improved diagnosis and disease management in cancer, neurological disease, cardiovascular medicine and musculoskeletal disorders. Identifies problems or controversies in the field, and resolves them through understanding the relevant primary literature.
4 units, Spr (Contag, C; Xing, L; Rao, J)

BIOE 232. Statistics Concepts in Bioengineering
Key statistics concepts for bioengineering research. Topics include how to select appropriate statistical tests, how to design efficient experiments to minimize sample size and maximize power, statistical design of experiments (DOE), principles of hypothesis testing, and reading and reporting statistical results in journal articles. Prerequisite: Knowledge of descriptive statistics, t-tests, analysis of variance, and linear regression.
1 unit, Win (Walker, M)

BIOE 261. Principles and Practice of Stem Cell Engineering
(Same as NSUR 261) Quantitative models used to characterize incorporation of new cells into existing tissues emphasizing pluripotent cells such as embryonic and neural stem cells. Molecular methods to control stem cell decisions to self-renew, differentiate, die, or become quiescent. Practical, industrial, and ethical aspects of stem cell technology application. Final projects: team-reviewed grants and business proposals.
3 units, not given this year

BIOE 280. Skeletal Development and Evolution
(Same as ME 280) The mechanobiology of skeletal growth, adaptation, regeneration, and aging is considered from developmental and evolutionary perspectives. Emphasis is on the interactions between mechanical and chemical factors in the regulation of connective tissue biology. Prerequisites: BIO 42, and ME 80 or BIOE 42.

3 units, not given this year

BIOE 280. Skeletal Development and Evolution
(Same as ME 280) The mechanobiology of skeletal growth, adaptation, regeneration, and aging is considered from developmental and evolutionary perspectives. Emphasis is on the interactions between mechanical and chemical factors in the regulation of connective tissue biology. Prerequisites: BIO 42, and ME 80 or BIOE 42.

3 units, not given this year

BIOE 281. Biomechanics of Movement
(Same as ME 281) Experimental techniques to study human and animal movement including motion capture systems, EMG, force plates, medical imaging, and animation. The mechanical properties of muscle and tendon, and quantitative analysis of musculoskeletal geometry. Projects and demonstrations emphasize applications of mechanics in sports, orthopedics, and rehabilitation.

3 units, not given this year

BIOE 282. Performance, Development, and Adaptation of Skeletal Muscle
Fundamentals of skeletal muscle by study of classical and recent research articles. Emphasis on the interactions between mechanics, biology, and electrophysiology in skeletal muscle performance, development, adaptation, control, and disease. Lab activities explore research methods discussed in class. Limited Enrollment. Prerequisites: engineering or biology core coursework.

3 units, Spr (Delp, S)

BIOE 284A. Cardiovascular Bioengineering
(Same as ME 284A) Bioengineering principles applied to the cardiovascular system. Anatomy of human cardiovascular system, comparative anatomy, and allometric scaling principles. Cardiovascular molecular and cell biology. Overview of continuum mechanics. Form and function of blood, blood vessels, and the heart from an engineering perspective. Normal, diseased, and engineered replacement tissues.

3 units, Aut (Taylor, C)

BIOE 284B. Cardiovascular Bioengineering
(Same as ME 284B) Continuation of ME/BIOE 284A. Integrative cardiovascular physiology, blood fluid mechanics, and transport in the microcirculation. Sensing, feedback, and control of the circulation. Overview of congenital and adult cardiovascular disease, diagnostic methods, and treatment strategies. Engineering principles to evaluate the performance of cardiovascular devices and the efficacy of treatment strategies.

3 units, Win (Taylor, C)

BIOE 291. Principles and Practice of Optogenetics for Optical Control of Biological Tissues
Principles and practice of optical control of biological processes (optogenetics), emphasizing bioengineering approaches. Theoretical, historical, and current practice of the field. Requisite molecular-genetic, optoelectronic, behavioral, clinical, and ethical concepts, and mentored analysis and presentation of relevant papers. Final projects of research proposals and a laboratory component in BioX to provide hands-on training. Contact instructor before registering.

3 units, Aut (Deisseroth, K)

BIOE 300A. Molecular and Cellular Bioengineering
The molecular and cellular bases of life from an engineering perspective. Analysis and engineering of biomolecular structure and dynamics, enzyme function, molecular interactions, metabolic pathways, signal transduction, and cellular mechanics. Quantitative primary literature. Prerequisites: CHEM 171 and BIO 41 or equivalents; MATLAB or an equivalent programming language.

3 units, Aut (Bryant, Z)

BIOE 300B. Physiology and Tissue Engineering
The interaction, communication, and disorders of major organ systems and relevant developmental biology and tissue engineering from cells to complex organs.

3 units, Win (Deisseroth, K; Covert, M)

BIOE 301A. Molecular and Cellular Engineering Lab
Preference to Bioengineering graduate students. Practical applications of biotechnology and molecular bioengineering including recombinant DNA techniques, molecular cloning, microbial cell growth and manipulation, library screening, and microarrays. Emphasis is on experimental design and data analysis. Limited enrollment. Corequisite: 300A.

2 units, Spr (Cochran, J)

BIOE 301B. Clinical Needs and Technology
Diagnostic and therapeutic methods in medicine. Labs include a pathology/histology session, pulmonary function testing, and the Goodman Simulation Center. Each student paired with a physician for observation of an operation or procedure. Final presentation. Limited enrollment. Corequisite: 300B.

1 unit, Spr (Feinstein, J)

BIOE 301C. Diagnostic Devices Lab
Biomedical instruments and diagnostic devices. Emphasis is on comparing measurements with theoretical predictions. Labs include ECG, MRI, microfluidics, CT, and EEG. Prerequisites: 300B and 301B.

3 units, Spr (Boahen, K)

BIOE 310. Systems Biology
(Same as CS 278, CSB 278) Experimental and computational approaches to the dissection of complex biologcal systems. Topics include network structure, non-linear dynamics, numerical modeling approaches, noise, and robustness. Topics are introduced in the context of recent papers from the primary literature.

4 units, Win (Ferrell, J)

BIOE 331. Protein Engineering
The design and engineering of biomolecules emphasizing proteins, antibodies, and enzymes. Combinatorial methodologies, rational design, protein structure and function, and biophysical analyses of modified biomolecules. Clinically relevant examples from the literature and biotech industry. Prerequisite: basic biochemistry.

3 units, Win (Cochran, J)

BIOE 332. Large-Scale Neural Modeling
Emphasis is on modeling neural systems at the circuit level, ranging from feature maps in neocortex to episodic memory in hippocampus. Simulation exercises to explore the roles of cellular properties, synaptic plasticity, spike synchrony, rhythmic activity, recurrent connectivity, and noise and heterogeneity. Theory of dynamical systems is introduced to analyze and predict network behavior. Work in teams of two; run simulations in real-time on neuromorphic hardware developed for this purpose.

3 units, Spr (Boahen, K)

BIOE 333. Interfacial Phenomena and Bionanotechnology
Fundamental and applied study of interfacial phenomena and effects of surface-active molecules on behavior of important biological, biochemical, environmental, and bioengineering systems. Discussion of central mathematical equations in surface science attributed to Laplace, Gibbs, Kelvin, and Young. Self-assembly of surfactants and biomolecules. Relevance of interfacial phenomena to protein folding/unfolding and microfluidics. Applications to recent research advances in bionano- and biomicrotechnology, using scientific literature.

3 units, Spr (Barron, A)

BIOE 334. Engineering Principles in Molecular Biology
The achievements and difficulties that exemplify the interface of theory and quantitative experiment. Topics include: bistability, cooperativity, robust adaptation, kinetic proofreading, analysis of fluctuations, sequence analysis, clustering, phylogenetics, maximum likelihood methods, and information theory. Sources include classic papers.

3 units, Win (Huang, K)

BIOE 335. Molecular Motors I
Physical mechanisms of mechanochemical coupling in biological molecular motors, using F1 ATPase as the major model system. Applications of biochemistry, structure determination, single molecule tracking and manipulation, protein engineering, and computational techniques to the study of molecular motors.

3 units, Spr (Bryant, Z)

BIOE 341. Computational Neural Networks
Distributed neural network implementations of algorithms for signal processing, function approximation, and control. Representation of information in networks of spiking neurons. Supervised and

unsupervised learning algorithms. Radial basis functions, principal and independent components analysis, reinforcement learning, support-vector machines, self-organizing maps, auto-associative learning, hidden Markov models. Related methods from information theory, signal processing, bayesian estimation, and stochastic systems. Final project in software or programmable hardware. Prerequisites: linear algebra, dynamic systems, and probability theory as in MATH 103, EE 102A, and EE 178 or equivalent, and programming experience in C++ or Matlab.

3 units, not given this year

BIOE 355. Advanced Biochemical Engineering

(Same as CHEMENG 355) Combines biological knowledge and methods with quantitative engineering principles. Quantitative review of biochemistry and metabolism; recombinant DNA technology and synthetic biology (metabolic engineering). The production of protein pharaceuticals as a paradigm for the application of chemical engineering principles to advanced process development within the framework of current business and regulatory requirements. Prerequisite: CHEMENG 181 (formerly 188) or BIOSCI 41, or equivalent.

3 units, Win (Swartz, J)

BIOE 361. Biomaterials in Regenerative Medicine

(Same as MATSCI 381) Materials design and engineering for regenerative medicine. How materials interact with cells through their micro- and nanostructure, mechanical properties, degradation characteristics, surface chemistry, and biochemistry. Examples include novel materials for drug and gene delivery, materials for stem cell proliferation and differentiation, and tissue engineering scaffolds. Prerequisites: undergraduate chemistry, and cell/molecular biology or biochemistry.

3 units, alternate years, not given this year

BIOE 370. Microfluidic Device Laboratory

Fabrication of microfluidic devices for biological applications. Photolithography, soft lithography, and micromechanical valves and pumps. Emphasis is on device design, fabrication, and testing.

2 units, Win (Quake, S; Melin, J)

BIOE 371. Global Biodesign: Medical Technology in an International Context

(Same as MED 271) Seminar examines the development and commercialization of medical technologies in the global setting focusing primarily on Europe, India and China. Faculty and guest speakers from industry and government discuss the status of the industry, as well as opportunities in and challenges to medical technology innovation unique to each geography. Topics related to development of technologies for bottom of the pyramid markets are also addressed. Students enrolling for 2 units are required to write/deliver a final paper.

1-2 units, Spr (Doshi, R; Yock, P; Shen, C)

BIOE 374A. Biodesign Innovation: Needs Finding and Concept Creation

(Same as ME 368A, MED 272A) (Same as OIT 384.) First of a two quarter series. How to develop comprehensive solutions (most commonly medical devices) to significant medical problems. Needs-finding methods, brainstorming, and concept creation. Strategies for understanding and interpreting clinical needs, researching literature, and searching patents. Clinical and scientific literature review, techniques of intellectual property analysis and feasibility, basic prototyping and market assessment. Students work in small entrepreneurial multidisciplinary teams to create, analyze, and screen medical technology ideas, and select projects for future development. Final presentations to a panel of prominent inventors and investors in medical Expert guest lecturers, faculty-led practical demonstrations and coaching sessions, and interactive team meetings under the mentorship of Biodesign. Projects from previous years include: prevention of hip fractures in the elderly; methods to accelerate healing after surgery; less invasive techniques for bariatric surgery; point of care diagnostics to improve emergency room efficiency; novel devices to bring specialty-type of care to primary care community doctors. More than 40,00 patients have been treated to date with technologies developed as part of this program and more than ten venture-backed companies were started by alums of the program. May be taken alone (2 units) or in combination with the project component (4 units). Prerequisite: application; see http://www.stanford.edu/group/biodesign/courseapplication.html; deadline is November 20, 2010.

2-4 units, Win (Yock, P; Zenios, S; Milroy, J; Brinton, T)

BIOE 374B. Biodesign Innovation: Concept Development and Implementation

(Same as ME 368B, MED 272B) Two quarter sequence. How to take a medical device invention forward from early concept to technology translation and development. Topics include prototyping; patent strategies; advanced planning for reimbursement and FDA approval; choosing translation route (licensing versus start-up); ethical issues including conflict of interest; fundraising approaches and cash requirements; essentials of writing a business or research plan; strategies for assembling a development team. May be taken alone (2 units) or in combination with the project component (4 units). Prerequisite: MED 272A, ME368A, or BIOE 374A.

2-4 units, Spr (Brinton, T; Milroy, J; Yock, P; Zenios, S)

BIOE 381. Orthopaedic Bioengineering

(Same as ME 381) Engineering approaches applied to the musculoskeletal system in the context of surgical and medical care. Fundamental anatomy and physiology. Material and structural characteristics of hard and soft connective tissues and organ systems, and the role of mechanics in normal development and pathogenesis. Engineering methods used in the evaluation and planning of orthopaedic procedures, surgery, and devices.

3 units, Spr (Levenston, M)

BIOE 386. Neuromuscular Biomechanics

(Same as ME 386) The interplay between mechanics and neural control of movement. State of the art assessment through a review of classic and recent journal articles. Emphasis is on the application of dynamics and control to the design of assistive technology for persons with movement disorders.

3 units, not given this year

BIOE 390. Introduction to Bioengineering Research

(Same as MED 289) Preference to medical and bioengineering graduate students. Bioengineering is an interdisciplinary field that leverages the disciplines of biology, medicine, and engineering to understand living systems, and engineer biological systems and improve engineering designs and human and environmental health. Topics include: imaging; molecular, cell, and tissue engineering; biomechanics; biomedical computation; biochemical engineering; biosensors; and medical devices. Limited enrollment.

1 unit, Aut (Wang, P; Gold, G)

BIOE 391. Directed Study

May be used to prepare for research during a later quarter in 392. Faculty sponsor required. May be repeated for credit.

1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOE 392. Directed Investigation
For Bioengineering graduate students. Previous work in 391 may be required for background; faculty sponsor required. May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOE 393. Bioengineering Departmental Research Colloquium
Bioengineering department labs at Stanford present recent research projects and results. Guest lecturers. Topics include applications of engineering to biology, medicine, biotechnology, and medical technology, including biodesign and devices, molecular and cellular engineering, regenerative medicine and tissue engineering, biomedical imaging, and biomedical computation.

1 unit, Aut (Lin, M; Yang, F), Win (Lin, M; Huang, K), Spr (Lin, M; Riedel-Kruse, H)

BIOE 454. Synthetic Biology and Metabolic Engineering
(Same as CHEMENG 454) Principles for the design and optimization of new biological systems. Development of new enzymes, metabolic pathways, other metabolic systems, and communication systems among organisms. Example applications include the production of central metabolites, amino acids, pharmaceutical proteins, and isoprenoids. Economic challenges and quantitative assessment of metabolic performance. Pre- or corequisite: CHEMENG 355 or equivalent.

3 units, alternate years, not given this year

BIOE 459. Frontiers in Interdisciplinary Biosciences
(Same as BIO 459, BIOC 459, CHEMENG 459, CHEM 459, PSYCH 459) Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See http://biox.stanford.edu/courses/459.html. Recommended: basic mathematics, biology, chemistry, and physics.

1 unit, Aut (Robertson, C), Win (Robertson, C), Spr (Robertson)

BIOE 484. Computational Methods in Cardiovascular Bioengineering
(Same as ME 484) Lumped parameter, one-dimensional nonlinear and linear wave propagation, and three-dimensional modeling techniques applied to simulate blood flow in the cardiovascular system and evaluate the performance of cardiovascular devices. Construction of anatomic models and extraction of physiologic quantities from medical imaging data. Problems in blood flow within the context of disease research, device design, and surgical planning.

3 units, not given this year

BIOE 485. Modeling and Simulation of Human Movement
(Same as ME 485) Direct experience with the computational tools used to create simulations of human movement. Lecture/labs on animation of movement; kinematic models of joints; forward dynamic simulation; computational models of muscles, tendons, and ligaments; creation of models from medical images; control of dynamic simulations; collision detection and contact models. Prerequisite: 281, 331A,B, or equivalent.

3 units, not given this year

BIOE 500. Thesis (Ph.D.)
(Staff)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOE 802. TGR Dissertation
(Staff)

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOLOGY (BIO) COURSES

UNDERGRADUATE COURSES IN BIOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

BIO 1. Human Evolution and Environment
Human genetic and cultural evolution and how people interact with their environments, from the ancestors of Australopithecus to current events. Issues include race, gender, and intelligence; pesticide and antibiotic resistance; abortion and contraception; ecosystem services; environmental economics and ethics; the evolution of religion; climate change; population growth and overconsumption; origins and spread of ideas and technologies; and the distribution of political and economic power. GER:DB-NatSci

3 units, not given this year

BIO 2N. Photons, Biological Photosynthesis, and Quantum Mechanics
(Stanford Introductory Seminar) Light driven reactions are fundamental to life on earth. Examination of basic properties of light, the role of light in photosynthesis, pertinent aspects of quantum mechanics, and the harnessing of light in bio- and nanotechnology. Discussion will emphasize intuitive understanding. High school biology and physics required. GER:DB-NatSci

3 units, Aut (Schnitzer, M)

BIO 3. Frontiers in Marine Biology
An introduction to contemporary research in marine biology, including ecology, conservation biology, environmental toxicology, behavior, biomechanics, evolution, neurobiology, and molecular biology. Emphasis is on new discoveries and the technologies used to make them. Weekly lectures by faculty from the Hopkins Marine Station.

1 unit, Aut (Somero, G)

BIO 3N. Views of a Changing Sea: Literature & Science
(Stanford Introductory Seminar) The state of a changing world ocean, particularly in the eastern Pacific, will be examined through historical and contemporary fiction, non-fiction and scientific publications. Issues will include harvest and mariculture fisheries, land-sea interactions and oceanic climate change in both surface and deep waters. GER:DB-NatSci

3 units, Spr (Gilly, W)

BIO 4N. Personalized Genomic Medicine
(Stanford Introductory Seminar) Exploration of the exciting new field of personalized genomic medicine. Personalized medicine is based on the idea that each person's unique genome sequence can be used to predict risk of acquiring specific diseases, and to make more informed medical choices. Learn about the fascinating science behind these approaches; where they are heading in the future; and the ethical implications such technology presents. Lectures will be augmented with hands-on experience in exploring and analyzing a real person's genome.

3 units, Aut (Fraser, H)

BIO 7S. Introduction to Biology
The major fields of biology: biochemistry, the cell, evolution, and diversity. Foundation for higher-level biology courses. GER:DB-NatSci

3 units, Sum (Khalfan, W)

BIO 7SL. Introduction to Biology Lab
Optional lab to be taken concurrently with BIO 7S.

2 units, Sum (Khalfan, W)

BIO 8N. Human Evolution
(Stanford Introductory Seminar) A survey of the anatomical and behavioral evidence for human evolution and of the increasingly important information from molecular genetics. Emphasis on the split between the human and chimpanzee lines 6-7 million years ago, the appearance of the australopiths by 4.1 million years ago, the emergence of the genus Homo about 2.5 million years ago, the spread of Homo from Africa 1.7-1.6 million years ago, the subsequent divergence of Homo into different species on different continents, and the expansion of fully modern humans (Homo sapiens) from Africa about 50,000 years ago to replace the Neanderthals and other non-modern Eurasians.
5 units, Win (Klein, R)

BIO 8S. Introduction to Human Physiology
The function and regulation of human organ systems. Various diseases are examined as failures of these regulatory processes. Systems include cardiovascular, respiratory, renal, endocrine, and gastrointestinal. GER:DB-NatSci
3 units, Sum (Garza, D)

BIO 9S. Introduction to Biological Research Methods
Theory and practice of experimental biology using representative fields in biology and model systems. How to plan an experiment and analyze data. Introduction to scientific writing and reading scientific journal articles. Prerequisite: high school biology. GER:DB-NatSci
3 units, Sum (Malladi, S)

BIO 14N. Plants and Civilization
(Stanford Introductory Seminar) Preference to freshmen. The role of plants in the development of civilization. Topics: the use of forests, woodlands, and grazing lands; centers of origins and spread of crops; viticulture, and wine and beer making; the spice route and the age of exploration; the use of plants as medicine; the global spread of weeds; engineering plants for the future; the importance of tea, coffee, chocolate, sugar, potatoes, natural dyes, and rubber in societal affairs and change. GER:DB-NatSci
3 units, Win (Mooney, H)

BIO 20. Introduction to Brain and Behavior
(Same as HUMBIO 21) Evolutionary principles to understand how the brain regulates behavior physiologically, and is also influenced by behavioral interactions. Topics include neuron structure and function, transmission of neural information, anatomy and physiology of sensory and motor systems, regulation of body states, the biological basis of learning and memory, and behavioral abnormalities. GER:DB-NatSci
3 units, Aut (Fernald, R), alternate years, not given next year

BIO 23N. FACEBUG: The Social Life of Microbes
(Stanford Introductory Seminar) Exploration of three crucial aspects of microbial life. First, examine how the unseen microbial majority is responsible for critical but under-appreciated aspects of the biology of the planet. Second, investigate the array of current genomic and imaging tools available to probe microscopic organisms in the environment. Last, we will research the importance of microbial communities and social dynamics in ecological and human health settings. GER:DB-NatSci
3 units, Aut (Bhaya, D)

BIO 26N. Maintenance of the Genome
(Stanford Introductory Seminar) Preference to freshmen. Focus is on DNA repair systems that monitor the genome to ensure genomic stability in the face of natural endogenous threats to DNA and those due to radiation and genotoxic environmental chemicals. Redundancy of the genetic message ensured by complementary DNA strands facilitates recovery of information by excision repair when one of the strands is damaged. Predisposition to cancer is often a consequence of defective DNA repair. Relevance for oncology, aging, developmental biology, environmental health, and neurobiology. GER:DB-NatSci
3 units, Spr (Hanawalt, P)

BIO 31Q. Ants: Behavior, Ecology, and Evolution
(Stanford Introductory Seminar) Preference to sophomores. Behavior: the organization of colonies, how they operate without central control, how they resemble other complex systems like brains. Ecology: how populations of colonies change, comparing the ecology of a species in SW American desert and invasive Argentine ants. Evolution: why are there so many species of ants; how are they alike, how do they differ, and why? Ants as the theme for exploring how to do research in animal behavior, ecology, and evolution. Research project will be on the invasive Argentine ant: its distribution on campus, foraging trails, and nest structure.
3 units, Spr (Gordon, D)

BIO 33N. Conservation Science and Practice
(Stanford Introductory Seminar) Preference to freshmen. Interdisciplinary. The science and art of conservation today. The forces that are driving change in Earth's atmosphere, lands, waters, and variety of life forms. Which broad dimensions of the biosphere, and which elements of ecosystems, most merit protection? The prospects for, and challenges in, making conservation economically attractive and commonplace. Field trip; project. GER:DB-NatSci
3 units, Spr (Daily, G)

BIO 41. Genetics, Biochemistry, and Molecular Biology
Emphasis is on macromolecules (proteins, lipids, carbohydrates, and nucleic acids) and how their structure relates to function and higher order assembly; molecular biology, genome structure and dynamics, gene expression from transcription to translation. Prerequisites: CHEM 31X (or 31A,B), 33; MATH 19, 20, 21 or 41, 42. Recommended: CHEM 35. GER:DB-NatSci
5 units, Aut (Bergmann, D; Simoni, R)

BIO 41S. Biochemistry, Genetics, and Molecular Biology
Emphasis is on macromolecules (proteins, lipids, carbohydrates, and nucleic acids) and how their structure relates to function and higher order assembly; molecular biology, genome structure and dynamics, gene expression from transcription to translation. Prerequisites: CHEM 31X (or 31A,B), 33; MATH 19, 20, 21 or 41, 42. Recommended: CHEM 35. GER:DB-NatSci
5 units, Sum (Staff)

BIO 42. Cell Biology and Animal Physiology
Cell structure and function; principles of animal physiology (immunology, renal, cardiovascular, sensory, motor physiology, and endocrinology); neurobiology from cellular basis to neural regulation of physiology. Prerequisites: CHEM 31X (or 31A,B), 33; MATH 19, 20, 21 or 41, 42. Recommended: CHEM 35. GER:DB-NatSci
5 units, Win (Cyert, M; Jones, P; Sapolsky, R)

BIO 43. Plant Biology, Evolution, and Ecology
Principles of evolution: macro- and microevolution and population genetics. Ecology: the principles underlying the exchanges of mass and energy between organisms and their environments; population, community, and ecosystem ecology; populations, evolution, and global change. Equivalent to BIOHOPK 43. Prerequisites: CHEM 31X (or 31A,B), 33; MATH 19, 20, 21 or 41, 42. Recommended: CHEM 35. GER:DB-NatSci
5 units, Spr (Petrov, D; Mudgett, M; Gordon, D)

BIO 44X. Core Experimental Laboratory
Concepts, organisms, and techniques of modern biological research. Four different labs cover various molecular biological procedures, purification and characterization of beta-galactosidase and its kinetics, fertilization and early development of the purple sea urchin and an introduction to the fundamental concepts of classical and molecular genetics. Emphasis on experimental design, analysis of data, written and oral presentation of the experiments. Lab fee. Prerequisites: CHEM 31X, or 31A,B, and 33. Recommended: statistics, and concurrent enrollment in Biology or Human Biology core; 44X,Y should be taken sequentially in same year.
5 units, Win (Malladi, S)

BIO 44Y. Core Experimental Laboratory
Concepts, organisms, and techniques of modern biological research. Four different labs cover immunological concepts, animal behavioral studies using ants and cichlid fish, vesicle transport studies in the Caenorhabditis elegans nervous system and field studies on woody encroachment of grasslands. Create, design, execute and report on individual experimental project. Emphasis on experimental design, analysis of data, written and oral presentation of the experiments. Lab fee. Prerequisites: CHEM 31X, or 31A,B, and 33. Recommended: statistics, and concurrent enrollment in Biology or Human Biology core; 44X,Y should be taken sequentially in same year. Equivalent to BIOHOPK 44Y.
5 units, Spr (Malladi, S; Fukami, T; Seawell, P)

BIO 101. Ecology
The principles of ecology. Topics: interactions of organisms with their environment, dynamics of populations, species interactions,

structure and dynamics of ecological communities, biodiversity. Satisfies Central Menu Area 4. Prerequisite: 43, or consent of instructor. Recommended: statistics. GER:DB-NatSci

3 units, Aut (Dirzo, R; Vitousek, P)

BIO 102. Demography: Health, Development, Environment

(Same as HUMBIO 119) Demographic methods and their application to understanding and projecting changes in human infant, child, and adult mortality and health, fertility, population, sex ratios, and demographic transitions. Progress in human development, capabilities, and freedoms. Relationships between population and environment. Prerequisites: numeracy and basic statistics; Biology or Human Biology core; or consent of instructor. GER:DB-SocSci

3 units, not given this year

BIO 104. Advanced Molecular Biology

(Same as BIO 200) Molecular mechanisms that govern the replication, recombination, and expression of eukaryotic genomes. Topics: DNA replication, DNA recombination, gene transcription, RNA splicing, regulation of gene expression, protein synthesis, and protein folding. Satisfies Central Menu Area 1. Prerequisite: Biology core. GER:DB-NatSci

5 units, Win (Frydman, J; Gozani, O)

BIO 105A. Jasper Ridge Docent Training

Formerly 96A. First of two-quarter sequence training program to join the Jasper Ridge education program. The scientific basis of ecological research in the context of a field station, hands-on field research, field ecology and the natural history of plants and animals, archaeology, geology, hydrology, land management, multidisciplinary environmental education; and research projects, as well as management challenges of the preserve presented by faculty, local experts, and staff. Participants lead research-focused educational tours, assist with classes, and attend continuing education classes available to members of the JRBP community after the course.

4 units, Win (Dirzo, R; Wilber, C)

BIO 105B. Jasper Ridge Docent Training

Formerly 96B. Second of two-quarter sequence training program to join the Jasper Ridge education program. Multidisciplinary environmental education; hands-on field research. Field ecology and the natural history of plants and animals, archaeology, geology, hydrology, land management, and research projects of the preserve presented by faculty, local experts, and staff. Participants lead research-focused educational tours, assist with classes, and attend continuing education classes available to members of the JRBP community after the course. Prerequisite: 96A.

4 units, Spr (Dirzo, R; Wilber, C)

BIO 109A. The Human Genome and Disease

(Same as BIO 209A, HUMBIO 158) The variability of the human genome and the role of genomic information in research, drug discovery, and human health. Concepts and interpretations of genomic markers in medical research and real life applications. Human genomes in diverse populations. Original contributions from thought leaders in academia and industry and interaction between students and guest lecturers. GER:DB-NatSci

3 units, Win (Heller, R)

BIO 109B. The Human Genome and Disease: Genetic Diversity and Personalized Medicine

(Same as BIO 209B) Continuation of 109A/209A. Genetic drift: the path of human predecessors out of Africa to Europe and then either through Asia to Australia or through northern Russia to Alaska down to the W. Coast of the Americas. Support for this idea through the histocompatibility genes and genetic sequences that predispose people to diseases. Guest lectures from academia and pharmaceutical companies. Prerequisite: Biology or Human Biology core. GER:DB-NatSci

3 units, Spr (Heller, R)

BIO 112. Human Physiology

(Same as BIO 212, HUMBIO 133) The functioning of organ systems emphasizing mechanisms of control and regulation. Topics: structure and function of endocrine and central nervous systems, cardiovascular physiology, respiration, salt and water balance, exercise, and gastrointestinal physiology. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology or Human Biology core. GER:DB-NatSci

4 units, Win (Garza, D)

BIO 113. Fundamentals of Molecular Evolution

(Same as BIO 244) The inference of key molecular evolutionary processes from DNA and protein sequences. Topics include random genetic drift, coalescent models, effects and tests of natural selection, combined effects of linkage and natural selection, codon bias and genome evolution. Satisfies Central Menu Areas 1 or 4. Prerequisites: Biology core or graduate standing in any department, and consent of instructor. GER:DB-NatSci

4 units, Spr (Petrov, D)

BIO 114. Field Course on Tropical Biogeochemistry: Amazon as Case Study

(Same as EARTHSYS 114) Post-field seminar for students who went on the two-week field trip to the Amazon in September with Brazilian students under Professor Martinelli of the University of São Paulo and Stanford Latin American Studies. Land use changes over the last 30 years including the conversion of natural forest for cattle ranching and soy beans in the Amazon, the largest continuous area of tropical forests on Earth with the greatest number of plant and animal species. In English.

3 units, not given this year

BIO 116. Ecology of the Hawaiian Islands

(Same as EARTHSYS 116) Terrestrial and marine ecology and conservation biology of the Hawaiian Archipelago. Taught in the field in Hawaii as part of quarter-long sequence of courses including Earth Sciences and Anthropology. Topics include ecological succession, plant-soil interactions, conservation biology, biological invasions and ecosystem consequences, and coral reef ecology. Restricted to students accepted into the Earth Systems of Hawaii Program. GER:DB-NatSci

4 units, Aut (Vitousek, P; Palumbi, S), alternate years, not given next year

BIO 117. Biology and Global Change

(Same as EARTHSYS 111, EESS 111) The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biology or Human Biology core or graduate standing. GER:DB-NatSci

4 units, Win (Vitousek, P; Arrigo, K)

BIO 118. Genetic Analysis of Biological Processes

(Same as BIO 218) Genetic principles and their experimental applications. Emphasis is on the identification and use of mutations to study cellular function. Satisfies Central Menu Areas 1 or 2. Prerequisite: Biology core. GER:DB-NatSci

5 units, Spr (Staff)

BIO 121. Biogeography

Global distributions of organisms through the Phanerozoic, with emphasis on historical causes. Topics: plate tectonics, island biogeography, climatic change, dispersal, vicariance, ecology of invasions, extinction, gradients, diversity. Satisfies Central Menu Area 4. GER:DB-NatSci

3 units, not given this year

BIO 122. Along the Track of the Yellowstone Hotspot: Fusion of Art and Science

(Same as ARTSTUDI 184A) The 20-million-year-old track of the Yellowstone hotspot through western North America, using the field setting to investigate ecology, evolution, and geology through an aesthetic and documentary media lens. Students create: experiential ways to learn about the natural world; a scientific yet personal intimacy about how ecosystems work and how they change; and ways to convey their observations to the public. Required trip to Yellowstone National Park.

4 units, not given this year

BIO 125. Ecosystems of California

The diversity and functioning of California ecosystems through time and how human beings have impacted and managed them. Prerequisite: 43, HUMBIO 2A, or EARTHSYS 10. GER:DB-NatSci

3 units, Spr (Mooney, H)

BIO 129A. Cellular Dynamics I: Cell Motility and Adhesion

Cell motility emphasizing role of actin assembly and dynamics coupling actin organization to cell movement. Interaction of cells with extracellular matrix, and remodelling of extracellular matrix in development and disease. Directed cell migration by chemotaxis

(neuronal path-finding, immune cells). Cell-cell adhesion, formation of intercellular junctions and mechanisms regulating cell-cell interactions in development and diseases. Emphasis is on experimental logic, methods, problem solving, and interpretation of results. Students present research papers. Satisfies Central Menu Area 2. Prerequisite: Biology core. GER:DB-NatSci

4 units, Win (Nelson, W)

BIO 129B. Cellular Dynamics II: Building a Cell

Principles of cell organization; how common biochemical pathways are modified to generate diversity in cell structure and function. Roles of actin and microtubule cytoskeletons in cellular architecture. Mechanisms of protein sorting and trafficking, and protein modules and switches in regulating cell polarity. Yeast to polarized epithelial cells and neurons. Emphasis is on experimental logic, methods, problem solving, and interpretation of results. Students present research papers. Satisfies Central Menu Area 2. Prerequisite: Biology core. Recommended: 129A. GER:DB-NatSci

4 units, Spr (Nelson, W)

BIO 132. Advanced Imaging Lab in Biophysics

(Same as APPPHYS 232, BIO 232, BIOPHYS 232, MCP 232) Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor. GER:DB-NatSci

4 units, Spr (Block, S; Smith, S; Stearns, T)

BIO 136. Evolutionary Paleobiology

A paleontological approach to evolutionary theory. Topics: history of life, speciation, heterochrony, evolutionary constraint, coevolution, macroevolution, the Cambrian Explosion, mass extinctions, taphonomy, life on land, life in the sea, life in the air. Satisfies Central Menu Area 4. GER:DB-NatSci

4 units, Win (Hadly, E)

BIO 137. Plant Genetics

(Same as BIO 237) Gene analysis, mutagenesis, transposable elements; developmental genetics of flowering and embryo development; biochemical genetics of plant metabolism; scientific and societal lessons from transgenic plants. Satisfies Central Menu Area 2. Prerequisite: Biology core or consent of instructor. GER:DB-NatSci

3-4 units, Spr (Walbot, V)

BIO 139. Biology of Birds

How birds interact with their environments and each other, emphasizing studies that had impact in the fields of population biology, community ecology, and evolution. Local bird communities. Emphasis is on field research. Enrollment limited to 20. Prerequisites: 43 or equivalent, and consent of instructor. Recommended: birding experience. GER:DB-NatSci

3 units, Spr (Root, T), alternate years, not given next year

BIO 140. Population Biology of Butterflies

Field work on Euphydryas populations under study on campus and elsewhere in California. Course offered as participation in research when conditions permit; decisions not made until Winter Quarter. Prerequisites: 43 and consent of instructor.

2-5 units, not given this year

BIO 141. Biostatistics

(Same as STATS 141) Introductory statistical methods for biological data: describing data (numerical and graphical summaries); introduction to probability; and statistical inference (hypothesis tests and confidence intervals). Intermediate statistical methods: comparing groups (analysis of variance); analyzing associations (linear and logistic regression); and methods for categorical data (contingency tables and odds ratio). Course content integrated with statistical computing in R. GER:DB-Math

4-5 units, Aut (De la Cruz Cabrera, O), Win (Feldman, M)

BIO 143. Evolution

(Same as BIO 243) The basic facts and principles of the evolution of all life. The logic of and evidence for the correctness of Darwin's argument for evolution by natural selection. How Mendelian genetics was integrated into evolutionary thinking. The integration of physiological and ecological perspectives into the study of evolutionary adaptation within species. Species formation and evolutionary divergence among species. Patterns of evolution over long time scales. Satisfies Central Menu Area 4. GER:DB-NatSci

3 units, Aut (Watt, W)

BIO 144. Conservation Biology

(Same as HUMBIO 112) Principles and application of the science of preserving biological diversity. Topics: sources of endangerment of diversity; the Endangered Species Act; conservation concepts and techniques at the population, community, and landscape levels; reserve design and management; conflict mediation. 4 units if taken with a service learning component. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: BIO 101, or BIO 43 or HUMBIO 2A with consent of instructor. GER:DB-NatSci

3-4 units, Win (Boggs, C; Launer, A)

BIO 145. Behavioral Ecology

(Same as BIO 245) Animal behavior from an evolutionary and ecological perspective. Topics: foraging, territoriality, reproductive behavior, social groups. Lecture/seminar format; seminars include discussion of journal articles. Independent research projects. Satisfies Central Menu Area 4. Prerequisites: Biology or Human Biology core, or consent of instructor. Recommended: statistics. GER:DB-NatSci, WIM

4 units, Spr (Gordon, D)

BIO 146. Population Studies

Series of talks by distinguished speakers introducing approaches to population and resource studies.

1 unit, Win (Feldman, M)

BIO 149. The Neurobiology of Sleep

(Same as BIO 249, HUMBIO 161) (Graduate students register for 249.) Preference to seniors and graduate students. The neurochemistry and neurophysiology of changes in brain activity and conscious awareness associated with changes in the sleep/wake state. Behavioral and neurobiological phenomena including sleep regulation, sleep homeostasis, circadian rhythms, sleep disorders, sleep function, and the molecular biology of sleep. Enrollment limited to 16. GER:DB-NatSci

4 units, not given this year

BIO 150. Human Behavioral Biology

(Same as BIO 250, HUMBIO 160) Multidisciplinary. How to approach complex normal and abnormal behaviors through biology. How to integrate disciplines including sociobiology, ethology, neuroscience, and endocrinology to examine behaviors such as aggression, sexual behavior, language use, and mental illness. GER:DB-NatSci

5 units, alternate years, not given this year

BIO 151. Mechanisms of Neuron Death

For Biology majors with background in neuroscience. Cell and molecular biology of neuron death during neurological disease. Topics: the amyloid diseases (Alzheimer's), prion diseases (kuru and Creutzfeldt-Jakob), oxygen radical diseases (Parkinson's and ALS), triplet repeat diseases (Huntington's), and AIDS-related dementia. Student presentations. Enrollment limited to 15; application required. GER:DB-NatSci

3 units, Aut (Sapolsky, R)

BIO 152. Imaging: Biological Light Microscopy

(Same as MCP 222) Survey of instruments which use light and other radiation for analysis of cells in biological and medical research. Topics: basic light microscopy through confocal fluorescence and video/digital image processing. Lectures on physical principles; involves partial assembly and extensive use of lab instruments. Lab. Prerequisites: some college physics, Biology core. GER:DB-NatSci

3 units, Spr (Staff)

BIO 153. Cellular Neuroscience: Cell Signaling and Behavior

(Same as PSYCH 120) Neural interactions underlying behavior. Prerequisites: PSYCH 1 or basic biology. GER:DB-NatSci

4 units, not given this year

BIO 154. Molecular and Cellular Neurobiology

(Same as BIO 254, NBIO 254) For advanced undergraduates and graduate students. Cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular

basis of behavior including learning and memory, molecular pathogenesis of neurological diseases. Satisfies Central Menu Areas 2 or 3. Prerequisite for undergraduates: Biology core or equivalent, or consent of instructors. GER:DB-NatSci

4-5 units, Aut (Clandinin, T; Luo, L; Shen, K), alternate years, not given next year

BIO 156. Epigenetics

(Same as BIO 256, GENE 206, PATH 206) For graduate students in the Biosciences and upper level Biology undergraduates. Mechanisms by which phenotypes not determined by the DNA sequence are stably inherited in successive cell divisions. From the discovery of position-effect variegation in Drosophila in the 1920s to present-day studies of covalent modifications of histones and DNA methylation. Topics include: position effect, gene silencing, heterochromatin, centromere identity, genomic imprinting, histone code, variant histones, and the role of epigenetics in cancer. Prerequisite: BIO41 and BIO42 , or GENE 203, or consent of instructor.

2 units, Spr (Lipsick, J; Gozani, O), alternate years, not given next year

BIO 157. Biochemistry and Molecular Biology of Plants

(Same as BIO 257) Biochemical and molecular basis of plant growth and adaptation. Topics include: hormone signal transduction; photoreceptor chemistry and signaling; metabolite sensing and transport; dynamics of photosynthesis; plant innate immunity and symbiosis. Lectures and readings will emphasize research methods. Prerequisite: Biology core or equivalent, or consent of instructor. GER:DB-NatSci

3-4 units, Spr (Mudgett, M)

BIO 158. Developmental Neurobiology

For advanced undergraduates and coterminal students. The principles of nervous system development from the molecular control of patterning, cell-cell interactions, and trophic factors to the level of neural systems and the role of experience in influencing brain structure and function. Topics: neural induction and patterning cell lineage, neurogenesis, neuronal migration, axonal pathfinding, synapse elimination, the role of activity, critical periods, and the development of behavior. Satisfies Central Menu Areas 2 or 3. Prerequisite: BIO 42 or equivalent. GER:DB-NatSci

4 units, Spr (McConnell, S; Shen, K; Garner, C; Shatz, C), alternate years, not given next year

BIO 160A. Developmental Biology I

Focus is on the molecular mechanisms underlying the generation of diverse cell types and tissues during embryonic and post-embryonic animal development. The role of cell-cell communication in controlling key developmental decisions. Topics covered in this quarter include embryonic axis formation, morphogen signaling, cell type specification and stem cells. Experimental logic and methods of research in developmental biology. Discussions of research papers. Satisfies Central Menu Areas 1 or 2. Prerequisite: Biology core or consent of instructor. GER:DB-NatSci

4 units, Aut (Simon, M)

BIO 160B. Developmental Biology II

Continuation of BIO 160A. Focus is on the molecular mechanisms underlying the generation of diverse cell types and tissues during embryonic and post-embryonic animal development. The role of cell-cell communication in controlling key developmental decisions. The topics include sexual control of development, tissue polarity and growth, cell migration, regeneration, and the evolution of developmental mechanisms. Experimental logic and methods of research in developmental biology. Discussions of research papers. Satisfies Central Menu Areas 1 or 2. Prerequisites: Biology Core and 160A, or consent of instructor. GER:DB-NatSci

4 units, Win (Simon, M)

BIO 161. Molecular Basis of Biological Communication

Across molecular, cellular, organismal and communal biological scales, communication among elements of a system is required for its function. The molecules and logic at the heart of communication at levels from the interactions between cells in a developing body to how organisms perceive and respond to their physical environment and the organisms around them; how these systems normally work and how failures in communication result in and from disease. Current research literature. Prerequisites: BIO 41, 42. Recommended: BIO 160A, 129A.

4 units, Spr (Bergmann, D), alternate years, not given next year

BIO 163. Neural Systems and Behavior

(Same as BIO 263, HUMBIO 163) The field of neuroethology and its vertebrate and invertebrate model systems. Research-oriented. Readings include reviews and original papers. How animal brains compare; how neural circuits are adapted to species-typical behavior; and how the sensory worlds of different species represent the world. Lectures and required discussions. Satisfies Central Menu Area 3 for Bio majors. Prerequisites: BIO 42, HUMBIO 4A. GER:DB-NatSci

4 units, alternate years, not given this year

BIO 164. Biosphere-Atmosphere Interactions

(Same as BIO 264) Physiological, ecological, and physical aspects of ecosystem function, emphasizing how ecosystems influence and are influenced by the atmosphere. Prerequisites: 42, 43; or consent of instructor. GER:DB-NatSci

4 units, Win (Field, C; Berry, J), alternate years, not given next year

BIO 165. When Neurons Misfire: The Molecular Basis of Neurological Disorders

Current topics in research and investigative therapies of neurological conditions including stroke, epilepsy,depression, personality disorders, schizophrenia, Parkinsons, and aging. Sources include primary literature and focus on molecular mechanisms and therapeutic strategies. Emphasis placed on what the study of dysfunction in the nervous system tells us about the delicacy of proper function. Guest lecturers.

1 unit, Win (House, P)

BIO 166. Faunal Analysis: Animal Remains for the Archaeologist

(Same as ANTHRO 113, ANTHRO 213, BIO 266) The analysis of fossil animal bones and shells to illuminate the behavior and ecology of prehistoric collectors, especially ancient humans. Theoretical and methodoloigcal issues. The identification, counting, and measuring of fossil bones and shells. Labs. Methods of numerical analysis.

5 units, Spr (Klein, R)

BIO 171. Principles of Cell Cycle Control

(Same as BIO 271, CSB 271) Genetic analysis of the key regulatory circuits governing the control of cell division. Illustration of key principles that can be generalized to other synthetic and natural biological circuits. Focus on tractable model organisms; growth control; irreversible biochemical switches; chromosome duplication; mitosis; DNA damage checkpoints; MAPK pathway-cell cycle interface; oncogenesis. Analysis of classic and current primary literature. Satisfies Central Menu Area 2.

3 units, Aut (Skotheim, J; Ferrell, J)

BIO 172. Molecular Basis of Body Plan Evolution

(Same as BIO 272) Developmental biology research, from arthropods and chordates, over the past 25 years has revealed astonishing levels of shared developmental similarities, despite large morphological differences between the two groups, and has led to speculation about the morphology of the earliest animals. This has led to a synthesis between developmental biology, zoology, and paleontology and sparked molecular developmental studies in diverse metazoan phyla. Focus is on the latest findings from comparative development and what they reveal about the early evolution of the animal phyla.

4 units, Spr (Lowe, C)

BIO 175. Tropical Ecology and Conservation

Field trip to a field station at Los Tuxtlas, Mexico; lectures at Stanford. How to address scientific questions concerning ecology and conservation. Field trip includes natural history observations and group research projects. Symposium based on project results. Recommended: 43, 101, and 141 or STATS 60. GER:DB-NatSci

5 units, Spr (Dirzo, R)

BIO 177. Plant Microbe Interaction
(Same as BIO 277) Molecular basis of plant symbiosis and pathogenesis. Topics include mechanisms of recognition and signaling between microbes and plant hosts, with examples such as the role of small molecules, secreted peptides, and signal transduction pathways in symbiotic or pathogenic interactions. Readings include landmark papers together with readings in the contemporary literature. Prerequisites: Biology core and two or more upper division courses in genetics, molecular biology, or biochemistry. Recommended: plant genetics or plant biochemistry.
3 units, alternate years, not given this year

BIO 178. Microbiology Literature
(Same as BIO 278) For advanced undergraduates and first-year graduate students. Critical reading of the research literature in prokaryotic genetics and molecular biology, with particular applications to the study of major human pathogens. Classic and foundational papers in pathogenesis, genetics, and molecular biology; recent literature on bacterial pathogens such as Salmonella, Vibrio, and/or Yersinia. Diverse experimental approaches: biochemistry, genomics, pathogenesis, and cell biology. Prerequisites: Biology Core and two upper-division courses in genetics, molecular biology, or biochemistry.
3 units, Win (Long, S)

BIO 183. Theoretical Population Genetics
(Same as BIO 283) Models in population genetics and evolution. Selection, random drift, gene linkage, migration, and inbreeding, and their influence on the evolution of gene frequencies and chromosome structure. Models are related to DNA sequence evolution. Prerequisites: calculus and linear algebra, or consent of instructor.
3 units, alternate years, not given this year

BIO 186. Natural History of the Vertebrates
(Same as BIO 286) Broad survey of the diversity of vertebrate life. Discussion of the major branches of the vertebrate evolutionary tree, with emphasis on evolutionary relationships and key adaptations as revealed by the fossil record and modern phylogenetics. Modern orders introduced through an emphasis on natural history, physiology, behavioral ecology, community ecology, and conservation. Lab sessions focused on comparative skeletal morphology through hands-on work with skeletal specimens. Discussion of field methods and experience with our local vertebrate communities through field trips to several of California¿s distinct biomes. Prerequisite: Biology core.
4 units, alternate years, not given this year

BIO 188. Biochemistry I
(Same as BIO 288, CHEMENG 181, CHEMENG 281, CHEM 181) (CHEMENG offerings formerly listed as 188/288.) Chemistry of major families of biomolecules including proteins, nucleic acids, carbohydrates, lipids, and cofactors. Structural and mechanistic analysis of properties of proteins including molecular recognition, catalysis, signal transduction, membrane transport, and harvesting of energy from light. Molecular evolution. Satisfies Central Menu Area 1 for Bio majors. Prerequisites: CHEM 135 or 171. GER:DB-NatSci
3 units, Win (Zare, R; Cegelski, L)

BIO 189. Biochemistry II
(Same as BIO 289, CHEMENG 183, CHEMENG 283, CHEM 183) Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Satisfies Central Menu Area 1 for Bio majors. Prerequisite: BIO 188/288 or CHEM 181 or CHEMENG 181/281 (formerly 188/288). GER:DB-NatSci
3 units, Spr (Dunn, A)

BIO 196A. Biology Senior Reflection
Capstone course series for seniors. Creative, self-reflective and scientifically relevant projects conceived, produced and exhibited over the course of three quarters. Explore scientific content of personal interest through creative forms including but not limited to writing, music, fine arts, performing arts, photography, film or new media. A written essay on the creative process and scientific significance of the selected topic will accompany the creative work. Completed projects may be included in a creative portfolio. Required enrollment in 196A,B,C.
3 units, Aut (McConnell, S)

BIO 196B. Biology Senior Reflection
Capstone course series for seniors. Creative, self-reflective and scientifically relevant projects conceived, produced and exhibited over the course of three quarters. Explore scientific content of personal interest through creative forms including but not limited to writing, music, fine arts, performing arts, photography, film or new media. A written essay on the creative process and scientific significance of the selected topic will accompany the creative work. Completed projects may be included in a creative portfolio. Required enrollment in 196A,B,C.
3 units, Win (McConnell, S)

BIO 196C. Biology Senior Reflection
Capstone course series for seniors. Creative, self-reflective and scientifically relevant projects conceived, produced and exhibited over the course of three quarters. Explore scientific content of personal interest through creative forms including but not limited to writing, music, fine arts, performing arts, photography, film or new media. A written essay on the creative process and scientific significance of the selected topic will accompany the creative work. Completed projects may be included in a creative portfolio. Required enrollment in 196A,B,C.
3 units, Spr (McConnell, S)

BIO 198. Directed Reading in Biology
Individually arranged under the supervision of members of the faculty.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIO 198X. Out-of-Department Directed Reading
Individually arranged under the supervision of members of the faculty. Credit for work arranged with out-of-department faculty is restricted to Biology majors and requires department approval. See http://biohonors.stanford.edu for information and petitions. May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIO 199. Advanced Research Laboratory in Experimental Biology
Individual research taken by arrangement with in-department instructors. See http://biohonors.stanford.edu for information on research sponsors, units, and credit for summer research. May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIO 199X. Out-of-Department Advanced Research Laboratory in Experimental Biology
Individual research by arrangement with out-of-department instructors. Credit for 199X is restricted to declared Biology majors and requires department approval. See http://biohonors.stanford.edu for information on research sponsors, units, petitions, deadlines, credit for summer research, and out-of-Stanford research. May be repeated for credit.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIO 271. Principles of Cell Cycle Control
(Same as BIO 171, CSB 271) Genetic analysis of the key regulatory circuits governing the control of cell division. Illustration of key principles that can be generalized to other synthetic and natural biological circuits. Focus on tractable model organisms; growth control; irreversible biochemical switches; chromosome duplication; mitosis; DNA damage checkpoints; MAPK pathway-cell cycle interface; oncogenesis. Analysis of classic and current primary literature. Satisfies Central Menu Area 2.
3 units, Aut (Skotheim, J; Ferrell, J)

GRADUATE COURSES IN BIOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

BIO 274S. Hopkins Microbiology Course
(Same as BIOHOPK 274, CEE 274S, EESS 253S) (Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and conse-

quences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A,B, or equivalents.

9-12 units, Sum (Spormann, A; Francis, C)

BIO 200. Advanced Molecular Biology

(Same as BIO 104) Molecular mechanisms that govern the replication, recombination, and expression of eukaryotic genomes. Topics: DNA replication, DNA recombination, gene transcription, RNA splicing, regulation of gene expression, protein synthesis, and protein folding. Satisfies Central Menu Area 1. Prerequisite: Biology core.

5 units, Win (Frydman, J; Gozani, O)

BIO 203. Advanced Genetics

(Same as DBIO 203, GENE 203) For graduate students in Bioscience programs; may be appropriate for graduate students in other programs. The genetic toolbox. Examples of analytic methods, genetic manipulation, genome analysis, and human genetics. Emphasis is on use of genetic tools in dissecting complex biological pathways, developmental processes, and regulatory systems. Faculty-led discussion sections with evaluation of papers. Students with minimal experience in genetics should prepare by working out problems in college level textbooks.

4 units, Aut (Stearns, T; Sidow, A; Kim, S)

BIO 206. Field Studies in Earth Systems

(Same as EARTHSYS 189, EESS 189) For advanced upper-division undergraduates and graduate students. Field-based, focusing on the components and processes by which terrestrial ecosystems function. Topics from biology, chemistry, ecology, geology, and soil science. Lecture, field, and lab studies emphasize standard field techniques, experimental design, analysis of data, and written and oral presentation. Small team projects test the original questions in the functioning of natural ecosystems. Admission by application; see Axess. Prerequisites: BIO 141 or EESS 160 (formerly GES 160), or equivalent.

5 units, not given this year

BIO 207. Life and Death of Proteins

How proteins are made and degraded in the cell. Discussion of primary literature. Case studies follow the evolution of scientific ideas, and evaluate how different experimental approaches contribute to our understanding of a biological problem. Emphasis on multidisciplinary approaches. Topics: protein folding and assembly, mechanisms of chaperone action, sorting into organelles, misfolding and disease, and the ubiquitin-proteasome pathway. Enrollment limited to 30.

3 units, Win (Frydman, J)

BIO 209A. The Human Genome and Disease

(Same as BIO 109A, HUMBIO 158) The variability of the human genome and the role of genomic information in research, drug discovery, and human health. Concepts and interpretations of genomic markers in medical research and real life applications. Human genomes in diverse populations. Original contributions from thought leaders in academia and industry and interaction between students and guest lecturers.

3 units, Win (Heller, R)

BIO 209B. The Human Genome and Disease: Genetic Diversity and Personalized Medicine

(Same as BIO 109B) Continuation of 109A/209A. Genetic drift: the path of human predecessors out of Africa to Europe and then either through Asia to Australia or through northern Russia to Alaska down to the W. Coast of the Americas. Support for this idea through the histocompatibility genes and genetic sequences that predispose people to diseases. Guest lectures from academia and pharmaceutical companies. Prerequisite: Biology or Human Biology core.

3 units, Spr (Heller, R)

BIO 210. DNA Replication and Genomic Maintenance

Maintenance of the genome and its accurate replication are prerequisites for life. Lecture topics include: Structural biology of DNA/RNA polymerases, DNA repair enzymes and accessory factors in functional complexes; Molecular mechanisms of replication and repair, mechanisms of chromatin remodeling and interfacing of repair pathways with other DNA transactions; Endogenous/environmental genotoxins, DNA structure alterations and inducible responses to genotoxic insult; Relationships of DNA damage processing to mutagenesis, carcinogenesis, aging and human genetic disease; Emphasis on fundamental principles and current research literature.

3 units, Win (Hanawalt, P; Morrison, A)

BIO 212. Human Physiology

(Same as BIO 112, HUMBIO 133) The functioning of organ systems emphasizing mechanisms of control and regulation. Topics: structure and function of endocrine and central nervous systems, cardiovascular physiology, respiration, salt and water balance, exercise, and gastrointestinal physiology. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology or Human Biology core.

4 units, Win (Garza, D)

BIO 214. Advanced Cell Biology

(Same as BIOC 224, MCP 221) For Ph.D. students. Current research on cell structure, function, and dynamics. Topics include complex cell phenomena such as cell division, apoptosis, compartmentalization, transport and trafficking, motility and adhesion, differentiation, and multicellularity. Current papers from the primary literature. Prerequisite for advanced undergraduates: BIO 129A,B, and consent of instructor.

2-5 units, Win (Kopito, R; Theriot, J; Pfeffer, S; Straight, A; Nachury, M)

BIO 215. Biochemical Evolution

Biochemical viewpoints on the evolutionary process. Topics: prebiotic biochemistry and the origins of life; adaptive organization of metabolism; enzyme polymorphisms and other biochemical aspects of population genetics; macromolecular phylogeny and protein clocks. Prerequisites: Biology core or substantial equivalent.

3 units, Win (Watt, W), alternate years, not given next year

BIO 216. Terrestrial Biogeochemistry

(Same as EESS 216) Nutrient cycling and the regulation of primary and secondary production in terrestrial, freshwater, and marine ecosystems; land-water and biosphere-atmosphere interactions; global element cycles and their regulation; human effects on biogeochemical cycles. Prerequisite: graduate standing in science or engineering; consent of instructor for undergraduates or coterminal students.

3 units, Spr (Vitousek, P), alternate years, not given next year

BIO 217. Neuronal Biophysics

Biophysical descriptions and mechanisms of passive and excitable membranes, ion channels and pumps, action potential propagation, and synaptic transmission. Introduction to dynamics of single neurons and neuronal networks. Emphasis is on the experimental basis for modern research applications. Interdisciplinary aspects of biology and physics. Literature, problem sets, and student presentations. Prerequisites: undergraduate physics, calculus, and biology.

4 units, not given this year

BIO 218. Genetic Analysis of Biological Processes

(Same as BIO 118) Genetic principles and their experimental applications. Emphasis is on the identification and use of mutations to study cellular function. Satisfies Central Menu Areas 1 or 2. Prerequisite: Biology core.

5 units, Spr (Staff)

BIO 222. Exploring Neural Circuits

Seminar. The logic of how neural circuits control behavior; how neural circuits are assembled during development and modified by experience. Emphasis is on primary literature. Topics include: neurons as information processing units; simple and complex circuits underlying sensory information processing and motor control; and development and plasticity of neural circuits. Advanced undergraduates with background in physical science, engineering, and biology may apply to enroll. Recommended: background in neuroscience.

3 units, Win (Luo, L)

BIO 223. Stochastic and Nonlinear Dynamics

(Same as APPPHYS 223) Theoretical analysis of dynamical processes: dynamical systems, stochastic processes, and spatiotemporal dynamics. Motivations and applications from biology and physics. Emphasis is on methods including qualitative approaches, asymptotics, and multiple scale analysis. Prerequisites: ordinary and par-

tial differential equations, complex analysis, and probability or statistical physics.

3 units, alternate years, not given this year

BIO 230. Molecular and Cellular Immunology

For advanced undergraduate and graduate students who have no previously taken an introductory immunology course. Components of the immune system and mechanisms of immune responses: structure, function, and genetics of antibody molecules; cellular basis of immunity and its regulation; molecular biology and biochemistry of antigen receptors and signaling pathways; genetic control of immunity and disease susceptibility. Emphasis is on key experimental approaches. Satisfies Central Menu Areas 1 or 2. Prerequisite for undergraduates: Biology or Human Biology core, or consent of instructor.

4 units, Aut (Jones, P)

BIO 230A. Molecular and Cellular Immunology Literature Review

Special discussion section for graduate students. Supplement to 230. Corequisite: 230.

1 unit, Aut (Jones, P)

BIO 231. Evolution of Life Histories

Life histories as descriptions of reproduction, survival, and growth over the lives of individuals. Theoretical approaches to the dynamics and evolution of life histories and of populations with different life histories. Experimental data on natural populations and methods for their analysis.

3 units, not given this year

BIO 232. Advanced Imaging Lab in Biophysics

(Same as APPPHYS 232, BIO 132, BIOPHYS 232, MCP 232) Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor.

4 units, Spr (Block, S; Smith, S; Stearns, T)

BIO 237. Plant Genetics

(Same as BIO 137) Gene analysis, mutagenesis, transposable elements; developmental genetics of flowering and embryo development; biochemical genetics of plant metabolism; scientific and societal lessons from transgenic plants. Satisfies Central Menu Area 2. Prerequisite: Biology core or consent of instructor.

3-4 units, Spr (Walbot, V)

BIO 243. Evolution

(Same as BIO 143) The basic facts and principles of the evolution of all life. The logic of and evidence for the correctness of Darwin's argument for evolution by natural selection. How Mendelian genetics was integrated into evolutionary thinking. The integration of physiological and ecological perspectives into the study of evolutionary adaptation within species. Species formation and evolutionary divergence among species. Patterns of evolution over long time scales. Satisfies Central Menu Area 4.

3 units, Aut (Watt, W)

BIO 244. Fundamentals of Molecular Evolution

(Same as BIO 113) The inference of key molecular evolutionary processes from DNA and protein sequences. Topics include random genetic drift, coalescent models, effects and tests of natural selection, combined effects of linkage and natural selection, codon bias and genome evolution. Satisfies Central Menu Areas 1 or 4. Prerequisites: Biology core or graduate standing in any department, and consent of instructor.

4 units, Spr (Petrov, D)

BIO 245. Behavioral Ecology

(Same as BIO 145) Animal behavior from an evolutionary and ecological perspective. Topics: foraging, territoriality, reproductive behavior, social groups. Lecture/seminar format; seminars include discussion of journal articles. Independent research projects. Satisfies Central Menu Area 4. Prerequisites: Biology or Human Biology core, or consent of instructor. Recommended: statistics.

4 units, Spr (Gordon, D)

BIO 249. The Neurobiology of Sleep

(Same as BIO 149, HUMBIO 161) (Graduate students register for 249.) Preference to seniors and graduate students. The neurochemistry and neurophysiology of changes in brain activity and conscious awareness associated with changes in the sleep/wake state. Behavioral and neurobiological phenomena including sleep regulation, sleep homeostasis, circadian rhythms, sleep disorders, sleep function, and the molecular biology of sleep. Enrollment limited to 16.

4 units, not given this year

BIO 250. Human Behavioral Biology

(Same as BIO 150, HUMBIO 160) Multidisciplinary. How to approach complex normal and abnormal behaviors through biology. How to integrate disciplines including sociobiology, ethology, neuroscience, and endocrinology to examine behaviors such as aggression, sexual behavior, language use, and mental illness.

5 units, alternate years, not given this year

BIO 254. Molecular and Cellular Neurobiology

(Same as BIO 154, NBIO 254) For advanced undergraduates and graduate students. Cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases. Satisfies Central Menu Areas 2 or 3. Prerequisite for undergraduates: Biology core or equivalent, or consent of instructors.

4-5 units, Aut (Clandinin, T; Luo, L; Shen, K), alternate years, not given next year

BIO 256. Epigenetics

(Same as BIO 156, GENE 206, PATH 206) For graduate students in the Biosciences and upper level Biology undergraduates. Mechanisms by which phenotypes not determined by the DNA sequence are stably inherited in successive cell divisions. From the discovery of position-effect variegation in Drosophila in the 1920s to present-day studies of covalent modifications of histones and DNA methylation. Topics include: position effect, gene silencing, heterochromatin, centromere identity, genomic imprinting, histone code, variant histones, and the role of epigenetics in cancer. Prerequisite: BIO41 and BIO42 , or GENE 203, or consent of instructor.

2 units, Spr (Lipsick, J; Gozani, O), alternate years, not given next year

BIO 257. Biochemistry and Molecular Biology of Plants

(Same as BIO 157) Biochemical and molecular basis of plant growth and adaptation. Topics include: hormone signal transduction; photoreceptor chemistry and signaling; metabolite sensing and transport; dynamics of photosynthesis; plant innate immunity and symbiosis. Lectures and readings will emphasize research methods. Prerequisite: Biology core or equivalent, or consent of instructor.

3-4 units, Spr (Mudgett, M)

BIO 258. Neural Development

For Ph.D. students. Seminar; students also attend BIO 158 lectures. Topics: neural induction and patterning, cell lineage, neurogenesis, neuronal migration, axonal pathfinding, synapse elimination, the role of activity, critical periods, and the development of behavior.

4 units, Spr (McConnell, S; Shen, K; Garner, C; Shatz, C), alternate years, not given next year

BIO 263. Neural Systems and Behavior

(Same as BIO 163, HUMBIO 163) The field of neuroethology and its vertebrate and invertebrate model systems. Research-oriented. Readings include reviews and original papers. How animal brains compare; how neural circuits are adapted to species-typical behavior; and how the sensory worlds of different species represent the world. Lectures and required discussions. Satisfies Central Menu Area 3 for Bio majors. Prerequisites: BIO 42, HUMBIO 4A.

4 units, alternate years, not given this year

BIO 264. Biosphere-Atmosphere Interactions

(Same as BIO 164) Physiological, ecological, and physical aspects of ecosystem function, emphasizing how ecosystems influence and are influenced by the atmosphere. Prerequisites: 42, 43; or consent of instructor.

4 units, Win (Field, C; Berry, J), alternate years, not given next year

BIO 266. Faunal Analysis: Animal Remains for the Archaeologist
(Same as ANTHRO 113, ANTHRO 213, BIO 166) The analysis of fossil animal bones and shells to illuminate the behavior and ecology of prehistoric collectors, especially ancient humans. Theoretical and methodoloigcal issues. The identification, counting, and measuring of fossil bones and shells. Labs. Methods of numerical analysis.

5 units, Spr (Klein, R)

BIO 267. Molecular Mechanisms of Neurodegenerative Disease
(Same as NENS 267) The epidemic of neurodegenerative disorders such as Alzheimer's and Parkinson's disease occasioned by an aging human population. Genetic, molecular, and cellular mechanisms. Clinical aspects through case presentations.

4 units, alternate years, not given this year

BIO 272. Molecular Basis of Body Plan Evolution
(Same as BIO 172) Developmental biology research, from arthropods and chordates, over the past 25 years has revealed astonishing levels of shared developmental similarities, despite large morphological differences between the two groups, and has led to speculation about the morphology of the earliest animals. This has led to a synthesis between developmental biology, zoology, and paleontology and sparked molecular developmental studies in diverse metazoan phyla. Focus is on the latest findings from comparative development and what they reveal about the early evolution of the animal phyla.

4 units, Spr (Lowe, C)

BIO 277. Plant Microbe Interaction
(Same as BIO 177) Molecular basis of plant symbiosis and pathogenesis. Topics include mechanisms of recognition and signaling between microbes and plant hosts, with examples such as the role of small molecules, secreted peptides, and signal transduction pathways in symbiotic or pathogenic interactions. Readings include landmark papers together with readings in the contemporary literature. Prerequisites: Biology core and two or more upper division courses in genetics, molecular biology, or biochemistry. Recommended: plant genetics or plant biochemistry.

3 units, alternate years, not given this year

BIO 278. Microbiology Literature
(Same as BIO 178) For advanced undergraduates and first-year graduate students. Critical reading of the research literature in prokaryotic genetics and molecular biology, with particular applications to the study of major human pathogens. Classic and foundational papers in pathogenesis, genetics, and molecular biology; recent literature on bacterial pathogens such as Salmonella, Vibrio, and/or Yersinia. Diverse experimental approaches: biochemistry, genomics, pathogenesis, and cell biology. Prerequisites: Biology Core and two upper-division courses in genetics, molecular biology, or biochemistry.

3 units, Win (Long, S)

BIO 283. Theoretical Population Genetics
(Same as BIO 183) Models in population genetics and evolution. Selection, random drift, gene linkage, migration, and inbreeding, and their influence on the evolution of gene frequencies and chromosome structure. Models are related to DNA sequence evolution. Prerequisites: calculus and linear algebra, or consent of instructor.

3 units, alternate years, not given this year

BIO 286. Natural History of the Vertebrates
(Same as BIO 186) Broad survey of the diversity of vertebrate life. Discussion of the major branches of the vertebrate evolutionary tree, with emphasis on evolutionary relationships and key adaptations as revealed by the fossil record and modern phylogenetics. Modern orders introduced through an emphasis on natural history, physiology, behavioral ecology, community ecology, and conservation. Lab sessions focused on comparative skeletal morphology through hands-on work with skeletal specimens. Discussion of field methods and experience with our local vertebrate communities through field trips to several of California¿s distinct biomes. Prerequisite: Biology core.

4 units, alternate years, not given this year

BIO 288. Biochemistry I
(Same as BIO 188, CHEMENG 181, CHEMENG 281, CHEM 181) (CHEMENG offerings formerly listed as 188/288.) Chemistry of major families of biomolecules including proteins, nucleic acids, carbohydrates, lipids, and cofactors. Structural and mechanistic analysis of properties of proteins including molecular recognition, catalysis, signal transduction, membrane transport, and harvesting of energy from light. Molecular evolution. Satisfies Central Menu Area 1 for Bio majors. Prerequisites: CHEM 135 or 171.

3 units, Win (Zare, R; Cegelski, L)

BIO 289. Biochemistry II
(Same as BIO 189, CHEMENG 183, CHEMENG 283, CHEM 183) Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Satisfies Central Menu Area 1 for Bio majors. Prerequisite: BIO 188/288 or CHEM 181 or CHEMENG 181/281 (formerly 188/288).

3 units, Spr (Dunn, A)

BIO 290. Teaching of Biology
Open to upper-division undergraduates and graduate students. Practical experience in teaching lab biology or serving as an assistant in a lecture course. May be repeated for credit. Prerequisite: consent of instructor.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

BIO 291. Development and Teaching of Core Experimental Laboratories
Preparation for teaching the core experimental courses (44X and 44Y). Emphasis is on lab, speaking, and writing skills. Focus is on updating the lab to meet the changing technical needs of the students. Taken prior to teaching either of the above courses. May be repeated for credit. Prerequisite: selection by instructor.

1-2 units, Aut (Malladi, S), Win (Malladi, S)

BIO 294. Cellular Biophysics
(Same as APPPHYS 294) Physical biology of dynamical and mechanical processes in cells. Emphasis is on qualitative understanding of biological functions through quantitative analysis and simple mathematical models. Sensory transduction, signaling, adaptation, switches, molecular motors, actin and microtubules, motility, and circadian clocks. Prerequisites: differential equations and introductory statistical mechanics.

3 units, Spr (Fisher, D), alternate years, not given next year

BIO 299. Biology PhD Lab Rotation
Limited to first year Biology PhD students. Lab rotations with Biosciences faculty.

1-10 units, Aut (Nelson, W), Win (Staff)

BIO 300. Graduate Research
For graduate students only. Individual research by arrangement with in-department instructors.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIO 300X. Out-of-Department Graduate Research
Individual research by arrangement with out-of-department instructors. Master's students: credit for work arranged with out-of-department instructors is restricted to Biology students and requires approved department petition. See http://biohonors.stanford.edu for more information. May be repeated for credit.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIO 301. Frontiers in Biology
Limited to and required of first-year Ph.D. students in molecular, cellular, and developmental biology. Current research in molecular, cellular, and developmental biology emphasizing primary research literature. Held in conjunction with the department's Monday seminar series. Students and faculty meet weekly before the seminar for a student presentation and discussion of upcoming papers.

1-3 units, Aut (Skotheim, J; Morrison, A), Win (Skotheim, J; Morrison, A)

BIO 302. Current Topics and Concepts in Population Biology, Ecology, and Evolution
Required of first-year PhD students in population biology, and ecology and evolution. Major conceptual issues and developing topics.

1 unit, Aut (Ehrlich, P)

BIO 303. Current Topics and Concepts in Population Biology, Ecology, and Evolution
Required of first-year PhD students in population biology, and ecology and evolution. Major conceptual issues and developing topics.
1 unit, Win (Ehrlich, P)

BIO 304. Current Topics and Concepts in Population Biology, Ecology, and Evolution
Required of first-year PhD students in population biology, and ecology and evolution. Major conceptual issues and developing topics.
1 unit, Spr (Ehrlich, P)

BIO 306. Current Topics in Integrative Organismal Biology
Limited to and required of graduate students doing research in this field. At Hopkins Marine Station.
1 unit, Aut (Heller, C; Sapolsky, R; Fernald, R; Somero, G)

BIO 312. Ethical Issues in Ecology and Evolutionary Biology
Focus is on ethical issues addressed in Donald Kennedy's Academic Duty and others of importance to academics and scientists in the fields of ecology, behavior, and evolutionary biology. Discussions led by faculty and outside guests. Satisfies ethics course requirement for ecology and evolutionary biology. Prerequisite: PhD student in the ecology and evolutionary biology or marine program, or consent of instructor.
1 unit, Aut (Ehrlich, P)

BIO 315. Seminar in Biochemical Evolution
Literature review and discussion of current topics in biochemical evolution and molecular evolutionary genetics. Prerequisite: consent of instructor.
1-3 units, Aut (Watt, W), Win (Watt, W)

BIO 323. Detecting Climate-Driven Changes in California Plant Ranges
Seminar. For advanced undergraduates and graduate students. Future anthropogenic climate change will continue to alter plant communities, plant ranges, and ecosystems. Studies have already documented plant and animal range shifts across the globe, yet many questions remain as to how plants will respond to climate change. Which taxa and functional groups will be most sensitive to changes in climate? What will happen to ecological communities with differential response of plant species to climate? Focus is on analyzing trends in climate change and long-term plant distribution data in California. May be repeated for credit. Prerequisite: familiarity with statistical, spatial, or modeling analyses.
1-2 units, not given this year

BIO 324. Interpreting Ecological Data
Experimental design and the theory behind and appropriate use of parametric statistics including: student t-test; analysis of variance; linear regression and some variations including logistic regression and multiple regression; analysis of covariance; chi-squared similarity test; testing the independence of multiple tests; Monte Carlo and bootstrapping methods. Students encouraged to use data from their own research. Course does not fulfill undergraduate statistics requirement. Prerequisite: consent of instructor.
4 units, not given this year

BIO 326. Foundations in Biogeography
Seminar. Focus on classic papers covering the global distribution and abundance of organisms through time. Topics include: phylogenetics, phylogeography, plate tectonics, island biogeography, climatic change, dispersal, vicariance, ecology of invasions, extinction, gradients, diversity, conservation and a history of the field.
2 units, Win (Hadly, E; Fukami, T), alternate years, not given next year

BIO 342. Plant Biology Seminar
Topics announced at the beginning of each quarter. Current literature. May be repeated for credit. See http://carnegiedpb.stanford.edu/seminars/seminars.php.
1-3 units, Aut (Walbot, V), Win (Walbot, V), Spr (Walbot, V)

BIO 344. Advanced Seminar in Cellular Biology
Enrollment limited to graduate students directly associated with departmental research groups working in cell biology.
1 unit, not given this year

BIO 383. Seminar in Population Genetics
Literature review, research, and current problems in the theory and practice of population genetics and molecular evolution. May be repeated for credit. Prerequisite: consent of instructor.
1-3 units, Aut (Feldman, M), Win (Feldman, M), Spr (Feldman, M)

BIO 384. Theoretical Ecology
Recent and classical research papers in ecology, and presentation of work in progress by participants. Prerequisite: consent of instructor.
1-3 units, not given this year

BIO 388. Communication and Leadership Skills
(Same as ENVRES 210) Focus is on delivering information to policy makers and the lay public. How to speak to the media, Congress, and the general public; how to write op-eds and articles; how to package ideas including titles, abstracts, and CVs; how to survive peer review, the promotion process, and give a job talk; and how to be a responsible science advocate.
2 units, not given this year

BIO 459. Frontiers in Interdisciplinary Biosciences
(Same as BIOC 459, BIOE 459, CHEMENG 459, CHEM 459, PSYCH 459) Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See http://biox.stanford.edu/courses/459.html. Recommended: basic mathematics, biology, chemistry, and physics.
1 unit, Aut (Robertson, C), Win (Robertson, C), Spr (Robertson)

BIO 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIO 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOLOGY, HOPKINS MARINE STATION (BIOHOPK) COURSES

UNDERGRADUATE COURSES IN BIOLOGY, HOPKINS MARINE STATION

Primarily for undergraduates; graduate students may enroll with consent of adviser.

BIOHOPK 43. Plant Biology, Evolution, and Ecology
Introduction to biology in a marine context. Principles of plant biology: physiology, structure, diversity. Principles of evolution: macro and microevolution, population genetics. Ecology: the principles governing the distribution and abundance of organisms; population, community, and ecosystem ecology. Equivalent to BIO 43. Corequisite: BIOHOPK 44Y. GER:DB-NatSci
5 units, Spr (Denny, M; Palumbi, S; Watanabe, J)

BIOHOPK 44Y. Core Experimental Laboratory
Laboratory and field projects provide working familiarity with the concepts, organisms, and techniques of plant and evolutionary biology, and ecology. Emphasis is on hands-on experimentation in the marine environment, analysis of data, and written and oral presentation of the experiments. Equivalent to BIO 44Y. Corequisite: BIOHOPK 43. GER:DB-NatSci, WIM
5 units, Spr (Denny, M; Palumbi, S; Watanabe, J)

BIOHOPK 161H. Invertebrate Zoology
(Same as BIOHOPK 261H) (Graduate students register for 261H.) Survey of invertebrate diversity emphasizing form and function in a phylogenetic framework. Morphological diversity, life histories, physiology, and ecology of the major invertebrate groups, concentrating on local marine forms as examples. Current views on the phylogenetic relationships and evolution of the invertebrates. Lectures, lab, plus field trips. Satisfies Central Menu Area 3 for Bio

majors. Prerequisite: Biology core or consent of instructor. GER:DB-NatSci

5 units, Win (Watanabe, J)

BIOHOPK 163H. Oceanic Biology

(Same as BIOHOPK 263H) (Graduate students register for 263H.) How the physics and chemistry of the oceanic environment affect marine plants and animals. Topics: seawater and ocean circulation, separation of light and nutrients in the two-layered ocean, oceanic food webs and trophic interactions, oceanic environments, biogeography, and global change. Lectures, discussion, and field trips. Satisfies Central Menu Area 4 for Bio majors. Recommended: PHYSICS 21 or 51, CHEM 31, Biology core, or consent of instructor. GER:DB-NatSci

4 units, Win (Denny, M; Somero, G)

BIOHOPK 164H. Marine Botany

(Same as BIOHOPK 264H) (Graduate students register for 264H.) Introduction to plants in the sea. Phytoplankton and oceanic productivity; macrophytes and nearshore ecology; marine angiosperms from taxonomical, physiological, and ecological perspectives. Lectures, lab. Prerequisite: Biology core or consent of instructor. GER:DB-NatSci

5 units, Win (Staff), alternate years, not given next year

BIOHOPK 166H. Molecular Ecology

(Same as BIOHOPK 266H) (Graduate students register for 266H.) How modern technologies in gene sequencing, detection of nuclear nucleotide polymorphisms, and other approaches are used to gather data on genetic variation that allow measurement of population structure, infer demographic histories, inform conservation efforts, and advance understanding of the ecology of diverse types of organisms. GER:DB-NatSci

5 units, Win (Palumbi, S)

BIOHOPK 167H. Nerve, Muscle, and Synapse

(Same as BIOHOPK 267H) (Graduate students register for 267H.) Fundamental aspects of membrane excitability, nerve conduction, synaptic transmission, and excitation-contraction coupling. Emphasis is on biophysical, molecular, and cellular level analyses of these processes in vertebrate and invertebrate systems. Labs on intra- and extracellular recording and patch clamp techniques. Lectures, discussions, and labs. Satisfies Central Menu Area 3 for Bio majors Prerequisites: PHYSICS 23, 28, 43, or equivalent; CHEM 31, 135; calculus; or consent of instructor. GER:DB-NatSci

5 units, Spr (Gilly, W), alternate years, not given next year

BIOHOPK 170H. Topics in Marine Biology

(Same as BIOHOPK 270H) (Graduate students register for 270H.) A topic of current interest to marine science explored through primary literature. Prerequisite: Biology core or consent of instructor. May be repeated for credit.

1 unit, Win (Lowe, C)

BIOHOPK 171H. Ecological and Evolutionary Physiology

(Same as BIOHOPK 271H) (Graduate students register for 271H.) The interplay between environmental factors, such as temperature, light, nutrient supply, salinity, and oxygen availability, and adaptive change at the physiological level. Emphasis is on marine species and the roles played by physiological adaptations in establishing their distribution and performance. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructor. GER:DB-NatSci

4 units, Spr (Somero, G)

BIOHOPK 172H. Marine Ecology

(Same as BIOHOPK 272H) (Graduate students register for 272H.) Focus is on quantitative approaches to questions in marine ecology and ecophysiology. Statistical methods, including multivariate statistical approaches and meta-analysis. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: Biology core or consent of instructor. GER:DB-NatSci

5 units, Win (Micheli, F)

BIOHOPK 173H. Marine Conservation Biology

(Same as BIOHOPK 273H) (Graduate students register for 273H.) The science of preserving marine diversity. Goal is to introduce students to major conservation issues associated with marine ecosystems. Topics include decline of open ocean fisheries, salmon conservation, bycatch issues in fisheries, use of marine reserves, marine invasions, marine pollution, and global warming. Includes five lecturers from other universities who specialize in marine conservation.

1-3 units, Spr (Block, B)

BIOHOPK 174H. Experimental Design and Probability

(Same as BIOHOPK 274H) (Graduate students register for 274H.) Variability is an integral part of biology. Introduction to probability and its use in designing experiments to address biological problems. Focus is on analysis of variance, when and how to use it, why it works, and how to interpret the results. Design of complex, but practical, asymmetrical experiments and environmental impact studies, and regression and analysis of covariance. Computer-based data analysis. Prerequisite: Biology core or consent of instructor. GER:DB-NatSci, WIM

3 units, Spr (Watanabe, J)

BIOHOPK 175H. Problems in Marine Ecology and Ecophysiology

Field-based, emphasizing individual and small group research for advanced undergraduates. Students learn field and laboratory techniques to address ecological, ecophysiological, and biomechanical problems faced by marine organisms. Original research projects may be integrated with ongoing research programs in the Hopkins Marine Life refuge. Prerequisites: Biology core, consent of instructor. GER:DB-NatSci, WIM

3-10 units, Spr (Palumbi, S)

BIOHOPK 182H. Stanford at Sea

(Same as BIOHOPK 323H, EESS 323, EARTHSYS 323) (Graduate students register for 323H.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major. GER:DB-NatSci

16 units, Spr (Block, B; Dunbar, R), alternate years, not given next year

BIOHOPK 185H. Ecology and Conservation of Kelp Forest Communities

(Same as BIOHOPK 285H) Eight week course. Daily lectures, labs, and scuba dives focused on kelp forest communities. Physical environment, identification, and natural history of resident organisms; ecological processes that maintain biodiversity and community organization; field methods, data analysis, and research diving techniques. Field research component contribut e to ongoing studies associated with Hopkins Marine Life Observatory. Training meets requirements for Stanford scientific diver certification. Satisfies Central Menu Area 4 for Bio majors. Prerequisites: BIO 42 and 43, or BIO 42 and BIOHOPK 43, or consent of instructor; and advanced scuba certification and scuba equipment.

12 units, Sum (Watanabe, J)

BIOHOPK 187H. Sensory Ecology

(Same as BIOHOPK 287H) (Graduate students register for 287H.) Topics: the ways animals receive, filter, and process information gleaned from the environment, sensory receptor mechanisms, neural processing, specialization to life underwater, communication within and between species, importance of behavior to ecosystem structure and dynamics, impact of acoustic and light pollution on marine animals. Emphasis is on the current scientific literature. The laboratory portion of the class explores sensory mechanisms using neurobiological methods and methods of experimental animal behavior.

4 units, Win (Thompson, S)

BIOHOPK 198H. Directed Instruction or Reading

May be taken as a prelude to research and may also involve participation in a lab or research group seminar and/or library research. Credit for work arranged with out-of-department instructors restricted to Biology majors and requires department approval. May be repeated for credit. (Staff)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOHOPK 199H. Undergraduate Research
Qualified undergraduates undertake individual work in the fields listed under 300H. Arrangements must be made by consultation or correspondence.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOHOPK 162H. Comparative Animal Physiology
(Same as BIOHOPK 262H) (Graduate students register for 262H.) How animals work. Topics: physiology of respiration, circulation, energy metabolism, thermal regulation, osmotic regulation, muscle physiology, and locomotion. Evolutionary and ecological physiology. Lectures, lab, and field research. An option to combine the course work with a more intensive research focus, with more units, is available. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructor. GER:DB-NatSci

5-8 units, Spr (Staff), alternate years, not given this year

BIOHOPK 184H. Holistic Biology: Monterey Bay and the Sea of Cortez
(Same as BIOHOPK 284H) (Graduate students register for 284H.) For majors and non-majors. Complexity in natural systems from complementary points of view, including scientific, historical, philosophical, and literary. The work and writings of Ed Ricketts and John Steinbeck and historical and contemporary works concerning marine ecology and fisheries. Field work, laboratory studies with living invertebrates, and an individual research project. Course includes a component in Baja California, Mexico. Only 6 units may count towards the Biology major. GER:DB-NatSci

16 units, alternate years, not given this year

GRADUATE COURSES IN BIOLOGY, HOPKINS MARINE STATION

Primarily for graduate students; undergraduates may enroll with consent of instructor.

BIOHOPK 261H. Invertebrate Zoology
(Same as BIOHOPK 161H) (Graduate students register for 261H.) Survey of invertebrate diversity emphasizing form and function in a phylogenetic framework. Morphological diversity, life histories, physiology, and ecology of the major invertebrate groups, concentrating on local marine forms as examples. Current views on the phylogenetic relationships and evolution of the invertebrates. Lectures, lab, plus field trips. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructor.

5 units, Win (Watanabe, J)

BIOHOPK 263H. Oceanic Biology
(Same as BIOHOPK 163H) (Graduate students register for 263H.) How the physics and chemistry of the oceanic environment affect marine plants and animals. Topics: seawater and ocean circulation, separation of light and nutrients in the two-layered ocean, oceanic food webs and trophic interactions, oceanic environments, biogeography, and global change. Lectures, discussion, and field trips. Satisfies Central Menu Area 4 for Bio majors. Recommended: PHYSICS 21 or 51, CHEM 31, Biology core, or consent of instructor.

4 units, Win (Denny, M; Somero, G)

BIOHOPK 264H. Marine Botany
(Same as BIOHOPK 164H) (Graduate students register for 264H.) Introduction to plants in the sea. Phytoplankton and oceanic productivity; macrophytes and nearshore ecology; marine angiosperms from taxonomical, physiological, and ecological perspectives. Lectures, lab. Prerequisite: Biology core or consent of instructor.

5 units, Win (Staff), alternate years, not given next year

BIOHOPK 266H. Molecular Ecology
(Same as BIOHOPK 166H) (Graduate students register for 266H.) How modern technologies in gene sequencing, detection of nuclear nucleotide polymorphisms, and other approaches are used to gather data on genetic variation that allow measurement of population structure, infer demographic histories, inform conservation efforts, and advance understanding of the ecology of diverse types of organisms.

5 units, Win (Palumbi, S)

BIOHOPK 267H. Nerve, Muscle, and Synapse
(Same as BIOHOPK 167H) (Graduate students register for 267H.) Fundamental aspects of membrane excitability, nerve conduction, synaptic transmission, and excitation-contraction coupling. Emphasis is on biophysical, molecular, and cellular level analyses of these processes in vertebrate and invertebrate systems. Labs on intra- and extracellular recording and patch clamp techniques. Lectures, discussions, and labs. Satisfies Central Menu Area 3 for Bio majors Prerequisites: PHYSICS 23, 28, 43, or equivalent; CHEM 31, 135; calculus; or consent of instructor.

5 units, Spr (Gilly, W), alternate years, not given next year

BIOHOPK 270H. Topics in Marine Biology
(Same as BIOHOPK 170H) (Graduate students register for 270H.) A topic of current interest to marine science explored through primary literature. Prerequisite: Biology core or consent of instructor. May be repeated for credit.

1 unit, Win (Lowe, C)

BIOHOPK 271H. Ecological and Evolutionary Physiology
(Same as BIOHOPK 171H) (Graduate students register for 271H.) The interplay between environmental factors, such as temperature, light, nutrient supply, salinity, and oxygen availability, and adaptive change at the physiological level. Emphasis is on marine species and the roles played by physiological adaptations in establishing their distribution and performance. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructor.

4 units, Spr (Somero, G)

BIOHOPK 272H. Marine Ecology
(Same as BIOHOPK 172H) (Graduate students register for 272H.) Focus is on quantitative approaches to questions in marine ecology and ecophysiology. Statistical methods, including multivariate statistical approaches and meta-analysis. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: Biology core or consent of instructor.

5 units, Win (Micheli, F)

BIOHOPK 273H. Marine Conservation Biology
(Same as BIOHOPK 173H) (Graduate students register for 273H.) The science of preserving marine diversity. Goal is to introduce students to major conservation issues associated with marine ecosystems. Topics include decline of open ocean fisheries, salmon conservation, bycatch issues in fisheries, use of marine reserves, marine invasions, marine pollution, and global warming. Includes five lecturers from other universities who specialize in marine conservation.

1-3 units, Spr (Block, B)

BIOHOPK 274. Hopkins Microbiology Course
(Same as BIO 274S, CEE 274S, EESS 253S) (Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A,B, or equivalents.

9-12 units, Sum (Spormann, A; Francis, C)

BIOHOPK 274H. Experimental Design and Probability
(Same as BIOHOPK 174H) (Graduate students register for 274H.) Variability is an integral part of biology. Introduction to probability and its use in designing experiments to address biological problems. Focus is on analysis of variance, when and how to use it, why it works, and how to interpret the results. Design of complex, but practical, asymmetrical experiments and environmental impact studies, and regression and analysis of covariance. Computer-based data analysis. Prerequisite: Biology core or consent of instructor.

3 units, Spr (Watanabe, J)

BIOHOPK 277H. Biomechanics, Ecological Physiology, and Genetics of Intertidal Communities
Four week course. Introduction to the mechanical and physiological design of wave-swept organisms. How different abiotic stresses (wave exposure, wind speed, temperature, light) influence marine animals and plants, and adaptive responses to these stresses. Lab introduces methods for measuring environmental stress and organ-

ismal responses. Recommended: background in algology, intertidal ecology, or invertebrate zoology; basic physics and calculus.

4 units, Sum (Denny, M; Palumbi, S; Somero, G)

BIOHOPK 285H. Ecology and Conservation of Kelp Forest Communities

(Same as BIOHOPK 185H) Eight week course. Daily lectures, labs, and scuba dives focused on kelp forest communities. Physical environment, identification, and natural history of resident organisms; ecological processes that maintain biodiversity and community organization; field methods, data analysis, and research diving techniques. Field research component contribut e to ongoing studies associated with Hopkins Marine Life Observatory. Training meets requirements for Stanford scientific diver certification. Satisfies Central Menu Area 4 for Bio majors. Prerequisites: BIO 42 and 43, or BIO 42 and BIOHOPK 43, or consent of instructor; and advanced scuba certification and scuba equipment.

12 units, Sum (Watanabe, J)

BIOHOPK 287H. Sensory Ecology

(Same as BIOHOPK 187H) (Graduate students register for 287H.) Topics: the ways animals receive, filter, and process information gleaned from the environment, sensory receptor mechanisms, neural processing, specialization to life underwater, communication within and between species, importance of behavior to ecosystem structure and dynamics, impact of acoustic and light pollution on marine animals. Emphasis is on the current scientific literature. The laboratory portion of the class explores sensory mechanisms using neurobiological methods and methods of experimental animal behavior.

4 units, Win (Thompson, S)

BIOHOPK 290H. Teaching of Biological Science

Open to upper-division undergraduates and graduate students. Practical experience in teaching lab biology or serving as an assistant in a lecture course. Prerequisite: consent of instructor. (Staff)

1-15 units, Win (Staff), Spr (Staff), Sum (Staff)

BIOHOPK 300H. Research

Graduate study involving original work undertaken with staff in the fields indicated. B. Block: Comparative Vertebrate Physiology (biomechanics, metabolic physiology and phylogeny of pelagic fishes, evolution of endothermy); M. Denny: Biomechanics (the mechanical properties of biological materials and their consequences for animal size, shape, and performance); W. Gilly: Neurobiology (analysis of giant axon systems in marine invertebrates from molecular to behavioral levels); C. Lowe: Evolution of Development (origin of chordates, early evolution of body plans); F. Micheli: Marine Ecology (species interactions and community ecology, scale-dependent aspects of community organization, marine conservation and design of multi-species marine protected areas, behavioral ecology); S. Palumbi: Molecular Evolution (mechanisms of speciation, genetic differentiations of populations, use of molecular tools in conservation biology, design of marine protected areas); G. Somero: Ecological and Evolutionary Physiology (adaptations of marine organisms to the environment: temperature, pressure, desiccation, and oxygen availability); S. Thompson: Neurobiology (neuronal control of behavior and mechanisms of ion permeation, signal transduction, calcium homeostasis, and neutrotransmission); J. Watanabe: Marine Ecology (kelp forest ecology and invertebrate zoology).

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOHOPK 323H. Stanford at Sea

(Same as BIOHOPK 182H, EESS 323, EARTHSYS 323) (Graduate students register for 323H.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major.

16 units, Spr (Block, B; Dunbar, R), alternate years, not given next year

BIOHOPK 262H. Comparative Animal Physiology

(Same as BIOHOPK 162H) (Graduate students register for 262H.) How animals work. Topics: physiology of respiration, circulation, energy metabolism, thermal regulation, osmotic regulation, muscle physiology, and locomotion. Evolutionary and ecological physiology. Lectures, lab, and field research. An option to combine the course work with a more intensive research focus, with more units, is available. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructor.

5-8 units, Spr (Staff), alternate years, not given this year

BIOHOPK 284H. Holistic Biology: Monterey Bay and the Sea of Cortez

(Same as BIOHOPK 184H) (Graduate students register for 284H.) For majors and non-majors. Complexity in natural systems from complementary points of view, including scientific, historical, philosophical, and literary. The work and writings of Ed Ricketts and John Steinbeck and historical and contemporary works concerning marine ecology and fisheries. Field work, laboratory studies with living invertebrates, and an individual research project. Course includes a component in Baja California, Mexico. Only 6 units may count towards the Biology major.

16 units, alternate years, not given this year

BIOMEDICAL INFORMATICS (BIOMEDIN) COURSES

UNDERGRADUATE COURSES IN BIOMEDICAL INFORMATICS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

BIOMEDIN 109Q. Genomics: A Technical and Cultural Revolution

(Stanford Introductory Seminar) (Same as GENE 109Q) Preference to sophomores. Concepts of genomics, high-throughput methods of data collection, and computational approaches to analysis of data. The social, ethical, and economic implications of genomic science. Students may focus on computational or social aspects of genomics.

3 units, Win (Altman, R)

BIOMEDIN 156. Economics of Health and Medical Care

(Same as BIOMEDIN 256, ECON 126, HRP 256) Graduate students with research interests should take ECON 248. Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: institutions in the health sector; measurement and valuation of health; nonmedical determinants of health; medical technology and technology assessment; demand for medical care and medical insurance; physicians, hospitals, and managed care; international comparisons. Prerequisites: ECON 50 and ECON 102A or equivalent statistics. Recommended: ECON 51.

5 units, Aut (Bhattacharya, J)

GRADUATE COURSES IN BIOMEDICAL INFORMATICS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

BIOMEDIN 200. Biomedical Informatics Colloquium

Series of colloquia offered by program faculty, students, and occasional guest lecturers. May be repeated three times for credit.

1 unit, Aut (Musen, M), Win (Musen, M), Spr (Musen, M)

BIOMEDIN 201. Biomedical Informatics Student Seminar

Participants report on recent articles from the Biomedical Informatics literature or their research projects. Goal is to teach presentation skills. May be repeated three times for credit.

1 unit, Aut (Musen, M), Win (Musen, M), Spr (Musen, M)

BIOMEDIN 204. Pharmacogenomics

Via Internet. Genetically determined responses to drugs; applications focusing on the PharmGKB database, a publicly available Internet tool to aid researchers in understanding how genetic variation among individuals contributes to differences in reactions to drugs. Topics include: introduction to pharmacogenomics and pharmacology; the genome and genetics; human polymorphisms, frequencies, significance, and populations; informatics in pharmacogenomics; genotype to phenotype and phenotype to genotype

approaches; drug discovery and validation; genomic variation discovery and genotyping; adverse drug reactions and interactions; pathways of drug metabolism; and cancer pharmacogenomics. Prerequisites: two of BIOSCI 41, 42, 43, and 44X,Y or consent of instructor.

1 unit, Aut (Cheng, B; Fagan, L), Win (Staff), Spr (Fagan, L; Cheng, B), Sum (Staff)

BIOMEDIN 205. Biomedical Informatics for Medicine

Primarily for M.D. students; open to other graduate students. Emphasis is on practical applications of bioinformatics and medical informatics for medicine, health care, clinicians, and biomedical research, focused on work at Stanford. Topics may include: methods to analyze genetic conditions, integrative methods for microarray, proteomic, and genomic data to understand the etiology of disease, clinical information systems in local healthcare facilities, cellular and radiology imaging, and pharmacogenomics. Enrollment for 2 units includes weekly assignments. Non-MD students may enroll for 1 unit. May be repeated for credit. Prerequisite: background in biomedicine. Recommended: background in programming.

1-2 units, Aut (Butte, A), Spr (Butte, A)

BIOMEDIN 206. Informatics in Industry

Effective management, modeling, acquisition, and mining of biomedical information in healthcare and biotechnology companies and approaches to information management adopted by companies in this ecosystem. Guest speakers from pharmaceutical/biotechnology companies, clinics/hospitals, health communities/portals, instrumentation/software vendors. May be repeated for credit.

1 unit, Spr (Kotecha, N; Shah, N; Altman, R)

BIOMEDIN 207. Digital Medicine: Promise and Peril in the Age of Electronic Health Records

Topical discussions of the use of electronic health records in clinical care and clinical research. Lectures by faculty, students and guest speakers are augmented by site visits to local clinical institutions that have implemented electronic health records systems. Goal is exposure to practical challenges of system implementation and to research opportunities in clinical informatics.

1 unit, Sum (Das, A)

BIOMEDIN 210. Modeling Biomedical Systems: Ontology, Terminology, Problem Solving

(Same as CS 270) Methods for modeling biomedical systems and for making those models explicit in the context of building software systems. Emphasis is on intelligent systems for decision support and Semantic Web applications. Topics: knowledge representation, controlled terminologies, ontologies, reusable problem solvers, and knowledge acquisition. Recommended: exposure to object-oriented systems, basic biology.

3 units, Win (Musen, M; Ghazvinian, A; Tirrell, R; Beck, A)

BIOMEDIN 211. Effective Design in Clinical Informatics

(Same as CS 271) Methods of designing and engineering software systems in complex clinical environments. Case studies illustrate factors leading to success or failure of systems. Project assignments involve focused team-based design work. Topics: user and organizational requirements, data and knowledge modeling, component-based system design, system prototyping, and human-systems interaction. Prerequisite: BIOMEDIN 210 recommended, or database or object-oriented programming course.

3 units, not given this year

BIOMEDIN 212. Introduction to Biomedical Informatics Research Methodology

(Same as BIOE 212, CS 272, GENE 212) Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Prerequisites: BIOMEDIN 210, 211, 214, 217 or consent of instructor.

3 units, Spr (Altman, R)

BIOMEDIN 214. Representations and Algorithms for Computational Molecular Biology

(Same as BIOE 214, CS 274, GENE 214) Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, Gibbs Sampling, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisites: programming skills; consent of instructor for 3 units.

3-4 units, Aut (Altman, R)

BIOMEDIN 216. Representations and Algorithms for Molecular Biology: Lectures

Lecture component of BIOMEDIN 214. One unit for medical and graduate students who attend lectures only; may be taken for 2 units with participation in limited assignments and final project. Lectures also available via internet. Prerequisite: familiarity with biology recommended.

1-2 units, Aut (Altman, R)

BIOMEDIN 217. Translational Bioinformatics

(Same as CS 275) Analytic, storage, and interpretive methods to optimize the transformation of genetic, genomic, and biological data into diagnostics and therapeutics for medicine. Topics: access and utility of publicly available data sources; types of genome-scale measurements in molecular biology and genomic medicine; analysis of microarray data; analysis of polymorphisms, proteomics, and protein interactions; linking genome-scale data to clinical data and phenotypes; and new questions in biomedicine using bioinformatics. Case studies. Prerequisites: programming ability at the level of CS 106A and familiarity with statistics and biology.

4 units, Spr (Butte, A)

BIOMEDIN 218. Translational Bioinformatics Lectures

Same content as BIOMEDIN 217; for medical and graduate students who attend lectures and participate in limited assignments and final project. Analytic, storage, and interpretive methods to optimize the transformation of genetic, genomic, and biological data into diagnostics and therapeutics for medicine. Topics: access and utility of publicly available data sources; types of genome-scale measurements in molecular biology and genomic medicine; analysis of microarray data; analysis of polymorphisms, proteomics, and protein interactions; linking genome-scale data to clinical data and phenotypes; and new questions in biomedicine using bioinformatics. Case studies. Prerequisites: programming at the level of CS 106A; familiarity with statistics and biology.

2 units, Spr (Butte, A)

BIOMEDIN 219. Mathematical Models and Medical Decisions

Analytic methods for determining the optimal diagnostic and therapeutic decisions for the care of individual patients and for the design of policies affecting the care of patient populations. Topics: utility theory and probability modeling, empirical methods for estimating disease prevalence, probability models for periodic processes, binary decision-making techniques, Markov models of dynamic disease state problems, utility assessment techniques, parametric utility models, utility models for multidimensional outcomes, analysis of time-varying clinical outcomes, and the design of cost-contstrained clinical policies. 2 units requires completion of a case study project. Prerequisites: introduction to calculus and basic statistics.

1-2 units, Win (Higgins, M; Musen, M)

BIOMEDIN 231. Computational Molecular Biology

(Same as BIOC 218) For molecular biologists and computer scientists. Representation and analysis of genomes, sequences, and proteins. Strengths and limitations of existing methods. Course work performed on web or using downloadable applications. See http://biochem218.stanford.edu/. Prerequisites: introductory molecular biology course at level of BIOSCI 41 or consent of instructor. All offerings are via internet only.

3 units, Aut (Brutlag, D), Win (Brutlag, D), Spr (Brutlag, D)

BIOMEDIN 233. Intermediate Biostatistics: Analysis of Discrete Data

(Same as HRP 261, STATS 261) Methods for analyzing data from case-control and cross-sectional studies: the 2x2 table, chi-square test, Fisher's exact test, odds ratios, Mantel-Haenzel methods, stratification, tests for matched data, logistic regression, condi-

tional logistic regression. Emphasis is on data analysis in SAS. Special topics: cross-fold validation and bootstrap inference.

3 units, Win (Sainani, K)

BIOMEDIN 251. Outcomes Analysis

(Same as HRP 252) Methods of conducting empirical studies which use large existing medical, survey, and other databases to ask both clinical and policy questions. Econometric and statistical models used to conduct medical outcomes research. How research is conducted on medical and health economics questions when a randomized trial is impossible. Problem sets emphasize hands-on data analysis and application of methods, including re-analyses of well-known studies. Prerequisites: one or more courses in probability, and statistics or biostatistics.

3 units, Spr (Bhattacharya, J)

BIOMEDIN 256. Economics of Health and Medical Care

(Same as BIOMEDIN 156, ECON 126, HRP 256) Graduate students with research interests should take ECON 248. Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: institutions in the health sector; measurement and valuation of health; nonmedical determinants of health; medical technology and technology assessment; demand for medical care and medical insurance; physicians, hospitals, and managed care; international comparisons. Prerequisites: ECON 50 and ECON 102A or equivalent statistics. Recommended: ECON 51.

5 units, Aut (Bhattacharya, J)

BIOMEDIN 262. Computational Genomics

(Same as CS 262) Applications of computer science to genomics, and concepts in genomics from a computer science point of view. Topics: dynamic programming, sequence alignments, hidden Markov models, Gibbs sampling, and probabilistic context-free grammars. Applications of these tools to sequence analysis: comparative genomics, DNA sequencing and assembly, genomic annotation of repeats, genes, and regulatory sequences, microarrays and gene expression, phylogeny and molecular evolution, and RNA structure. Prerequisites: 161 or familiarity with basic algorithmic concepts. Recommended: basic knowledge of genetics.

3 units, Win (Batzoglou, S)

BIOMEDIN 273A. A Computational Tour of the Human Genome

(Same as CS 273A, DBIO 273A) Introduction to computational biology through an informatic exploration of the human genome. Topics include: genome sequencing (technologies, assembly, personalized sequencing); functional landscape (genes, gene regulation, repeats, RNA genes, epigenetics); genome evolution (comparative genomics, ultraconservation, co-option). Additional topics may include population genetics, personalized genomics, and ancient DNA. Course includes primers on molecular biology, the UCSC Genome Browser, and text processing languages. Guest lectures from genomic researchers. No prerequisites. See http://cs273a.stanford.edu/.

3 units, Aut (Batzoglou, S; Bejerano, G)

BIOMEDIN 299. Directed Reading and Research

For students wishing to receive credit for directed reading or research time. Prerequisite: consent of instructor. (Staff)

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOMEDIN 366. Computational Biology

(Same as STATS 166, STATS 366) Course is designed to introduce students from the mathematical, physical and engineering sciences to selected current issues in computational biology and bioinformatics. Topics: principles of gene expression measurement by microarrays and sequencing, methods to measure locations of protein-DNA interaction, the application of these techniques in the study of gene regulation, approaches to the mapping of genes by association studies. Emphasis is on the statistical and computational issues in these studies. Assignments: weekly reading of papers and a final project.

2-3 units, Spr (Wong, W)

BIOMEDIN 370. Medical Scholars Research

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOMEDIN 374. Algorithms in Biology

(Same as CS 374) Algorithms and computational models applied to molecular biology and genetics. Topics vary annually. Possible topics include biological sequence comparison, annotation of genes and other functional elements, molecular evolution, genome rearrangements, microarrays and gene regulation, protein folding and classification, molecular docking, RNA secondary structure, DNA computing, and self-assembly. May be repeated for credit. Prerequisites: 161, 262 or 274, or BIOCHEM 218, or equivalents.

2-3 units, Aut (Batzoglou, S)

BIOMEDIN 390A. Curricular Practical Training

Provides educational opportunities in biomedical informatics research. Qualified biomedical informatics students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and must complete a research report outlining their work activity, problems investigated, key results, and any follow-up on projects they expect to perform. BIOMEDIN 390A, B, and C may each be taken only once.

1 unit, Aut (Musen, M), Win (Staff), Spr (Musen, M), Sum (Musen, M)

BIOMEDIN 390B. Curricular Practical Training

Provides educational opportunities in biomedical informatics research. Qualified biomedical informatics students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and must complete a research report outlining their work activity, problems investigated, key results, and any follow-up on projects they expect to perform. BIOMEDIN 390A, B, and C may each be taken only once.

1 unit, Aut (Musen, M), Win (Staff), Spr (Musen, M), Sum (Musen, M)

BIOMEDIN 390C. Curricular Practical Training

Provides educational opportunities in biomedical informatics research. Qualified biomedical informatics students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and must complete a research report outlining their work activity, problems investigated, key results, and any follow-up on projects they expect to perform. BIOMEDIN 390A, B, and C may each be taken only once.

1 unit, Aut (Musen, M), Win (Staff), Spr (Musen, M), Sum (Musen, M)

BIOMEDIN 432. Analysis of Costs, Risks, and Benefits of Health Care

(Same as HRP 392) (Same as MGTECON 332) For graduate students. How to do cost/benefit analysis when the output is difficult or impossible to measure. How do M.B.A. analytic tools apply in health services? Literature on the principles of cost/benefit analysis applied to health care. Critical review of actual studies. Emphasis is on the art of practical application.

4 units, Aut (Garber, A; Owens, D)

BIOMEDIN 801. TGR Master's Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOMEDIN 802. TGR PhD Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOPHYSICS (BIOPHYS) COURSES

GRADUATE COURSES IN BIOPHYSICS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

BIOPHYS 227. Functional MRI Methods

(Same as RAD 227) Basics of functional magnetic resonance neuroimaging, including data acquisition, analysis, and experimental design. Journal club sections. Cognitive neuroscience and clinical applications. Prerequisites: basic physics, mathematics; neuroscience recommended.

3 units, Win (Glover, G)

BIOPHYS 228. Computational Structural Biology
(Same as SBIO 228) Interatomic forces and interactions such as electrostatics and hydrophobicity, and protein structure in terms of amino acid properties, local chain conformation, secondary structure, domains, and families of folds. How protein motion can be simulated. Bioinformatics introduced in terms of methods that compare proteins via their amino acid sequences and their three-dimensional structures. Structure prediction via simple comparative modeling. How to detect and model remote homologues. Predicting the structure of a protein from knowledge of its amino acid sequence. Via Internet.

3 units, not given this year

BIOPHYS 232. Advanced Imaging Lab in Biophysics
(Same as APPPHYS 232, BIO 132, BIO 232, MCP 232) Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor.

4 units, Spr (Block, S; Smith, S; Stearns, T)

BIOPHYS 241. Biological Macromolecules
(Same as BIOC 241, SBIO 241) The physical and chemical basis of macromolecular function. Forces that stabilize biopolymers with three-dimensional structures and their functional implications. Thermodynamics, molecular forces, structure and kinetics of enzymatic and diffusional processes, and relationship to their practical application in experimental design and interpretation. Biological function and the level of individual molecular interactions and at the level of complex processes. Case studies in lecture and discussion of classic and current literature. Enrollment limited to 40. Prerequisites: None; background in biochemistry and physical chemistry preferred but material available for those with deficiency; undergraduates with consent of instructor only.

3-5 units, Aut (Herschlag, D; Ferrell, J; Block, S; Weis, W; Garcia, K; Puglisi, J)

BIOPHYS 242. Methods in Molecular Biophysics
(Same as SBIO 242) Experimental methods in molecular biophysics from theoretical and practical standpoints. Emphasis is on X-ray diffraction, nuclear magnetic resonance, and fluorescence spectcroscopy. Prerequisite: physical chemistry or consent of instructor.

3 units, Win (Staff)

BIOPHYS 250. Seminar in Biophysics
Required of Biophysics graduate students. Presentation of current research projects and results by faculty in the Biophysics program. May be repeated for credit.

1 unit, Aut (Weis, W), Win (Weis, W)

BIOPHYS 297. Bio-Inorganic Chemistry
(Same as CHEM 297) Overview of metal sites in biology. Metalloproteins as elaborated inorganic complexes, their basic coordination chemistry and bonding, unique features of the protein ligand, and the physical methods used to study active sites. Active site structures are correlated with function. Prerequisites: 153 and 173, or equivalents.

3 units, not given this year

BIOPHYS 300. Graduate Research
Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOPHYS 399. Directed Reading in Biophysics
Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOPHYS 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

BIOPHYS 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CANCER BIOLOGY (CBIO) COURSES

UNDERGRADUATE COURSES IN CANCER BIOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

CBIO 101. Cancer Biology
(Same as PATH 101) Experimental approaches to understanding the origins, diagnosis, and treatment of cancer. Focus on key experiments and discoveries with emphasis on genetics, molecular biology, and cell biology. Topics include carcinogens, tumor virology, oncogenes, tumor suppressor genes, cell cycle regulation, angiogenesis, invasion and metastasis, cancer genomics, cancer epidemiology, and cancer therapies. Discussion sections based on primary research articles that describe key experiments in the field. Satisfies Central Menu Areas 1 or 2 for Bio majors. Prerequisite: Biology or Human Biology core or equivalent, or consent of instructor.

4 units, Win (Lipsick, J)

GRADUATE COURSES IN CANCER BIOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

CBIO 241. Molecular, Cellular, and Genetic Basis of Cancer
Core course required for first-year Cancer Biology graduate students. Focus is on key experiments and classic primary research papers in cancer biology. Letter grade required. Undergraduates require consent of course director.

5 units, Aut (Giaccia, A; Graves, E)

CBIO 242. Scientific Basis of Clinical Cancer Therapy
Required for first- and second-year medical students who wish to join the Cancer Biology Scholarly Concentration Program. Also open to advanced undergraduates; limited enrollment. The curriculum includes a sampling of recent biomedical research discoveries that led to the current cancer diagnosis and therapeutic treatments.

3 units, Spr (Koong, A)

CBIO 260. Teaching in Cancer Biology
Practical experience in teaching by serving as a teaching assistant in a cancer biology course. Unit values are allotted individually to reflect the level of teaching responsibility assigned to the student.

1-10 units, Aut (Giaccia, A), Win (Lipsick, J), Spr (Giaccia, A)

CBIO 275. Tumor Immunology
(Same as IMMUNOL 275) Focuses on the ability of innate and adaptive immune responses to recognize and control tumor growth. Topics include: tumor antigens, tumor immunosurveillance and immunoediting, tumor immunotherapy, cancer vaccines and dendritic cell therapy. Tracks the historical developments of our understanding of modulating tumor immune response and discusses their relative significance in the light of current research findings. Prerequisite: for undergraduates, human biology or biology core.

3 units, not given this year

CBIO 280. Cancer Biology Journal Club
Required of and limited to first- and second-year graduate students in Cancer Biology. Recent papers in the literature presented by graduate students. When possible, discussion relates to and precedes cancer-related seminars at Stanford. Attendance at the relevant seminar required.

1 unit, Aut (Giaccia, A), Win (Giaccia, A), Spr (Giaccia, A)

CBIO 299. Directed Reading in Cancer Biology
Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CBIO 399. Graduate Research
Students undertake investigations sponsored by individual faculty members. Cancer Biology Ph.D. students must register as soon as they begin dissertation-related research work.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CBIO 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CBIO 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CATALAN LANGUAGE (CATLANG) COURSES

UNDERGRADUATE COURSES IN CATALAN LANGUAGE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

CATLANG 1A. Accelerated First-Year Catalan, Part A
For students with knowledge of another Romance language, preferably Spanish. Emphasis is on developing socially and culturally appropriate proficiency in interpersonal, interpretive, and presentational spheres. Completion of 2A fulfills the University language requirement. Prerequisite: consent of instructor.
5 units, Aut (Casas Roige, R)

CATLANG 2A. Accelerated First-Year Catalan, Part B
For students with knowledge of another Romance language, preferably Spanish. Emphasis is on developing socially and culturally appropriate proficiency in interpersonal, interpretive, and presentational spheres. Completion of 2A fulfills the University language requirement. Prerequisite: consent of instructor.
5 units, Win (Mack, T)

CATLANG 11A. Accelerated Second-Year Catalan, Part A
Sequence integrating culture and language of the Catalan-speaking world. Socially and culturally appropriate forms in narrations, descriptions, and expression of ideas and opinions. Emphasis is on oral and written proficiency in formal, informal, academic, and professional contexts. Prerequisite: consent of instructor.
3-5 units, Spr (Mack, T)

CATLANG 12A. Accelerated Second-Year Catalan, Part B
Sequence integrating culture and language of the Catalan-speaking world. Socially and culturally appropriate forms in narrations, descriptions, and expression of ideas and opinions. Emphasis is on oral and written proficiency in formal, informal, academic, and professional contexts. Prerequisite: consent of instructor.
3-5 units, not given this year

CATLANG 199. Individual Work
May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

GRADUATE COURSES IN CATALAN LANGUAGE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

CATLANG 395. Graduate Studies in Catalan
May be repeated for credit. Prerequisite consent of instructor.
2-5 units, Aut (Staff), Win (Staff), Spr (Staff)

CENTER FOR TEACHING AND LEARNING (CTL) COURSES

UNDERGRADUATE COURSES IN CENTER FOR TEACHING AND LEARNING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

CTL 53. Working Smarter
College-level strategies and skills in time management, reading, speaking, writing, and test preparation. Students explore learning preferences to develop strategies in different academic settings.
2 units, Sum (Townsend, L)

CTL 105. Voice and Articulation Intensive for Non-Native English Speakers
Workshop focusing on exercises designed to help foreign students improve their articulation and delivery in English. Work includes breath, sound, enunciation, melody, and colloquialism.
1-2 units, Win (Freeland, T)

CTL 115. Voice Workshop
(Same as CTL 215) Focus is on breath, voice production, expansion of vocal range and stamina, and clarity of articulation. Geared toward public speaking including presentations, lectures, and job talks. May be taken in conjunction with CTL 117.
1-2 units, Aut (Freeland, T), Spr (Freeland, T)

CTL 117. The Art of Effective Speaking
(Same as CTL 217) The principles and practice of effective oral communication. Through formal and informal speaking activities, students develop skills framing and articulating ideas through speech. Strategies for speaking extemporaneously, preparing and delivering multimedia presentations, formulating persuasive arguments, refining critical clarity of thought, and enhancing general facility and confidence in oral self-expression.
3 units, Aut (Neuwirth, M), Win (Allen, D)

CTL 118. Public Speaking: Romancing the Room
A practical approach to the art of public speaking. Emphasis is on developing skills in speech types including impromptu, personal experience, interviewing, demonstration, persuasive, and special occasion. Materials include videotape, texts of famous speeches, and a final dinner program of speeches. Students evaluate presentations by others. $55 materials fee.
3 units, Sum (Wagstaffe, J)

CTL 119. Oral Communication Tutor Teaching Practicum
Seminar. For students with a strong background in public speaking who wish to train as public speaking tutors for CTL's Oral Communication Program. Readings, exercises, and supervised teaching refine speaking skills. Preparation to serve as a peer tutor in a variety of academic disciplines. Prerequisite: application and consent of instructor.
1-3 units, Spr (Allen, D; Paul, L)

CTL 120. Peer Tutor Training
Goal is to help students become effective peer tutors for course material already mastered by articulating aims; developing practical tutoring skills including strategies for drop-in sessions; observing experienced tutors; discussing reading assignments; role playing; and reflecting on experiences as a peer tutor intern. Prerequisite: consent of instructor.
1 unit, Aut (Glickman, A; Chambers, A), Win (Glickman, A; Chambers, A)

CTL 125. From the Page to the Stage: The Performance of Literature
The oral interpretation of literature as performance art and mode of literary analysis. Focus is on contemporary and local expression including topics such as the Spoken Word Collective at Stanford, the ensemble performance of short works of fiction by San Francisco's Word for Word Performing Arts Company, and the storytelling art of Awele Makeba which combines theater, oral history, and music. No performance experience necessary.
3 units, not given this year

CTL 130. Beyond Stereotype Threat: Claiming a Rightful Place in an Academic Community
(Same as PSYCH 125) Stereotype threat as mitigating the quality of a student's test performance; its impact on academic success at Stanford. How to reduce the impact of stereotype threat on Stanford students.
3 units, Win (Glickman, A)

CTL 175. Intertextuality, Interpretation, and Performance
Literary and performance theories from the late 20th century to the present. The performative link between writing and speech. Students apply theories in critical writings, performances, and intertextual assemblages. How to find and refine one's own voices in writing and vocality.
4 units, not given this year

CTL 177. Performance of Power: Oratory and Authority from the Ancient World to the Postmodern
Speech as action has long been seen as essential to leadership. Theories and examples of oratory, from Aristotle to George W.

Bush, assessing each as model of voice-activated authority. The impact of mass media technologies as they transform the public space of oratory.

4 units, Aut (Freeland, T)

CTL 180. Interpersonal and Small Group Communication
(Same as CTL 280) Communication effectiveness in the contexts of dyads, the workplace, family, and society. Listening, conflict resolution, leadership, power and its implementation, group dynamics, emotions, and cultural influences on interactions. Sources include readings videos/DVDs, role playing, interviews, individual and group presentations, and group exercises.

3 units, Spr (Neuwirth, M)

CTL 190. Persuasive Speaking
(Same as CTL 290) Persuasion is the act of influencing others to see, feel, think, believe, and/or act in a way that is consistent with what the speaker or sender advocates. Persuasion seeks to engender power, and how that power is used can vary widely. How to effectively persuade others in interpersonal, family, workplace, and public spheres. How to be astute consumers of persuasive messages, including those from other individuals and from public sources such as media, advertising, and politics. In-class exercises and speeches to assist participants in developing and executing persuasive skills.

3 units, Win (Neuwirth, M)

CTL 199. Independent Study
Special study under lecturer direction, usually leading to a written report or an oral presentation. Prerequisite: consent of instructor.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN CENTER FOR TEACHING AND LEARNING

Primarily for graduate students; undergraduates may enroll with consent of instructor.

CTL 215. Voice Workshop
(Same as CTL 115) Focus is on breath, voice production, expansion of vocal range and stamina, and clarity of articulation. Geared toward public speaking including presentations, lectures, and job talks. May be taken in conjunction with CTL 117.

1-2 units, Aut (Freeland, T), Spr (Freeland, T)

CTL 217. The Art of Effective Speaking
(Same as CTL 117) The principles and practice of effective oral communication. Through formal and informal speaking activities, students develop skills framing and articulating ideas through speech. Strategies for speaking extemporaneously, preparing and delivering multimedia presentations, formulating persuasive arguments, refining critical clarity of thought, and enhancing general facility and confidence in oral self-expression.

3 units, Aut (Neuwirth, M), Win (Allen, D)

CTL 219. Oral Communication for Graduate Students
Graduate student speaking activities such as teaching (delivering lectures, guiding discussion, and facilitating small groups), professional presentations and conference papers, and preparing for oral exams and defenses. In-class projects, discussion, and individual evaluation assist students in developing effective techniques for improving oral communication skills.

1-3 units, Spr (Freeland, T), Sum (Staff)

CTL 224. Fundamentals of College Teaching in the Humanities and Humanistic Social Sciences
For teaching assistants in the humanities and humanistic social sciences. Topics include current research on learning and teaching, practice teaching sessions, leading discussions, designing assignments and group activities, grading and feedback practices, and teaching with technology.

1-3 units, Win (Denman, M)

CTL 225. Teaching Development Series
Teaching and academic career topics from CTL's workshops series. Documented participation in a minimum of 10 hours required for credit. Offerings vary quarterly. See http://ctl.stanford.edu for current information. May be repeated for credit. Prerequisite: consent of instructor.

1 unit, Aut (Clerici-Arias, M), Win (Clerici-Arias, M), Spr (Clerici-Arias, M)

CTL 226. Advanced College Teaching and Professional Development in Humanities and Humanistic Social Sciences
For advanced graduate students in the humanities and humanistic social sciences interested in an academic career. Topics include current research on teaching and learning, effective lecturing, designing courses and assignments, writing a persuasive teaching statement, disciplinary and interdisciplinary teaching, and research on early career faculty.

1-3 units, Spr (Denman, M)

CTL 230. Mentoring in Research
Knowledge, skills, and hands-on training to mentor undergraduate research assistants and to impact relationships with your own mentors and advisers. Topics include communication and project management skills, different learning styles, and cultural, ethnic and socioeconomic diversity. Case studies, scenarios, and small group activities. Five weeks.

1 unit, not given this year

CTL 231. Future Faculty Seminar
(Same as INDE 231) For graduate students from all disciplines who are considering faculty careers. Postdoctoral fellows, TGR students, and research/clinical trainees may audit by consent of instructor. Explores the broad spectrum of duties and opportunities presented through faculty positions beyond the research-related aspects. Develops awareness of resources and skills that lead to faculty success; answers field-specific and related faculty job questions through discussions with representatives of a variety of academic institutions and fellow course participants. Topics include: finding and obtaining faculty positions, negotiating and navigating the first year, and working toward tenure. May be repeated for credit.

1 unit, Aut (Eberle, S; Puglisi, J; Wright-Dunbar, R)

CTL 280. Interpersonal and Small Group Communication
(Same as CTL 180) Communication effectiveness in the contexts of dyads, the workplace, family, and society. Listening, conflict resolution, leadership, power and its implementation, group dynamics, emotions, and cultural influences on interactions. Sources include readings videos/DVDs, role playing, interviews, individual and group presentations, and group exercises.

3 units, Spr (Neuwirth, M)

CTL 290. Persuasive Speaking
(Same as CTL 190) Persuasion is the act of influencing others to see, feel, think, believe, and/or act in a way that is consistent with what the speaker or sender advocates. Persuasion seeks to engender power, and how that power is used can vary widely. How to effectively persuade others in interpersonal, family, workplace, and public spheres. How to be astute consumers of persuasive messages, including those from other individuals and from public sources such as media, advertising, and politics. In-class exercises and speeches to assist participants in developing and executing persuasive skills.

3 units, Win (Neuwirth, M)

CTL 297X. Teaching and Learning in Higher Education
(Same as EDUC 297X) Open to master's and doctoral students in all disciplines. How teachers can promote lasting learning and ask which pedagogies are most effective in today's college classrooms. Readings analyze teaching and learning in diverse disciplines and institutional types. Students observe the instruction of a Stanford master teacher. Students write a paper about the instruction of the teacher they observe or prepare a syllabus and commentary for a course of their design.

3-4 units, Win (Ehrlich, T)

CTL 299. Independent Study
Special study under lecturer direction, usually leading to a written report or an oral presentation. Prerequisite: consent of instructor.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CTL 312. Science and Engineering Course Design
(Same as ENGR 312) For students interested in an academic career and who anticipate designing science courses at the undergraduate or graduate level. Goal is to apply research on science learning to the design of effective course materials. Topics include syllabus design, course content and format decisions, assessment planning and grading, and strategies for teaching improvement.

2-3 units, Win (Wright-Dunbar, R; Sheppard, S)

CHEMICAL ENGINEERING (CHEMENG) COURSES

UNDERGRADUATE COURSES IN CHEMICAL ENGINEERING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

CHEMENG 10. The Chemical Engineering Profession
Open to all undergraduates. Overview of and careers in chemical engineering; opportunities to develop networks with working professionals. Panel discussions on career paths and post-graduation opportunities available. Areas include biotechnology, electronics, energy, environment, management consulting, nanotechnology, and graduate school in business, law, medicine, and engineering.
1 unit, Aut (Jaramillo, T)

CHEMENG 20. Introduction to Chemical Engineering
(Same as ENGR 20) Overview of chemical engineering through discussion and engineering analysis of physical and chemical processes. Topics: overall staged separations, material and energy balances, concepts of rate processes, energy and mass transport, and kinetics of chemical reactions. Applications of these concepts to areas of current technological importance: biotechnology, energy, production of chemicals, materials processing, and purification. Prerequisite: CHEM 31. GER:DB-EngrAppSci
3 units, Spr (Hwang, L; Khosla, C)

CHEMENG 25B. Biotechnology
(Same as ENGR 25B) Biology and chemistry fundamentals, genetic engineering, cell culture, protein production, pharmaceuticals, genomics, viruses, gene therapy, evolution, immunology, antibodies, vaccines, transgenic animals, cloning, stem cells, intellectual property, governmental regulations, and ethics. Prerequisites: CHEM 31 and MATH 41 or equivalent courage. GER:DB-EngrAppSci
3 units, Spr (Wang, C)

CHEMENG 25E. Energy: Chemical Transformations for Production, Storage, and Use
(Same as ENGR 25E) An introduction and overview to the challenges and opportunities of energy supply and consumption. Emphasis on energy technologies where chemistry and engineering play key roles. Review of energy fundamentals along with historical energy perspectives and current energy production technologies. In depth analysises of solar thermal systems, biofuels, photovoltaics and electrochemical devices (batteries and fuel cells). Prerequisites: high school chemistry or equivalent. GER:DB-EngrAppSci
3 units, Win (Robertson, C; Bent, S)

CHEMENG 35N. Renewable Energy for a Sustainable World
(Stanford Introductory Seminar) Preference to freshmen. An overall world energy assessment, projections, and technologies. How to assess good and bad potential impacts of leading renewable energy candidates: benefit versus impact ratio using quantitative cradle-to-grave approach. Technologies suitable for near-term application in developing economic systems. Governmental policies, governmental versus private sector investments, raw materials supply issues, and impact of cultural influences on technology choices and speed of implementation. GER:DB-EngrAppSci
3 units, Aut (Swartz, J)

CHEMENG 60Q. Environmental Regulation and Policy
(Stanford Introductory Seminar) Preference to sophomores. How environmental policy is formulated in the U.S. How and what type of scientific research is incorporated into decisions. How to determine acceptable risk, the public's right to know of chemical hazards, waste disposal and clean manufacturing, brownfield redevelopment, and new source review regulations. The proper use of science and engineering including media presentation and misrepresentation, public scientific and technical literacy, and emotional reactions. Alternative models to formulation of environmental policy. Political and economic forces, and stakeholder discussions. GER:DB-EngrAppSci
3 units, Aut (Robertson, C; Libicki, S)

CHEMENG 70Q. Masters of Disaster
(Stanford Introductory Seminar) Preference to sophomores. For students interested in science, engineering, politics, and the law. Learn from past disasters to avoid future ones. How disasters can be tracked to failures in the design process. The roles of engineers, artisans, politicians, lawyers, and scientists in the design of products. Failure as rooted in oversight in adhering to the design process. Student teams analyze real disasters and design new products presumably free from the potential for disastrous outcomes. GER:DB-EngrAppSci
3 units, Aut (Robertson, C; Moalli, J)

CHEMENG 80Q. Art, Chemistry, and Madness: The Science of Art Materials
(Stanford Introductory Seminar) Preference to sophomores. Chemistry of natural and synthetic pigments in five historical palettes: earth (paleolithic), classical (Egyptian, Greco-Roman), medieval European (Middle Ages), Renaissance (old masters), and synthetic (contemporary). Composite nature of paints using scanning electron microscopy images; analytical techniques used in art conservation, restoration, and determination of provenance; and inherent health hazards. Paintings as mechanical structures. Hands-on laboratory includes stretching canvas, applying gesso grounds, grinding pigments, preparing egg tempera paint, bamboo and quill pens, gilding and illumination, and papermaking. GER:DB-EngrAppSci
3 units, Spr (Frank, C; Loesch-Frank, S)

CHEMENG 100. Chemical Process Modeling, Dynamics, and Control
Mathematical methods applied to engineering problems using chemical engineering examples. The development of mathematical models to describe chemical process dynamic behavior. Analytical and computer simulation techniques for the solution of ordinary differential equations. Dynamic behavior of linear first- and second-order systems. Introduction to process control. Dynamics and stability of controlled systems. Prerequisites: CHEMENG 20 or ENGR 20; CME 102 or MATH 53.
3 units, Aut (Hwang, L)

CHEMENG 110. Equilibrium Thermodynamics
Thermodynamic properties, equations of state, properties of non-ideal systems including mixtures, and phase and chemical equilibria. Prerequisite: CHEM 171 or equivalent.
3 units, Win (Bao, Z)

CHEMENG 120A. Fluid Mechanics
The flow of isothermal fluids from a momentum transport viewpoint. Continuum hypothesis, scalar and vector fields, fluid statics, non-Newtonian fluids, shell momentum balances, equations of motion and the Navier-Stokes equations, creeping and potential flow, parallel and nearly parallel flows, time-dependent parallel flows, boundary layer theory and separation, introduction to drag correlations. Prerequisites: junior in Chemical Engineering or consent of instructor; 100 and CME 102 or equivalent.
4 units, Win (Staff)

CHEMENG 120B. Energy and Mass Transport
General diffusive transport, heat transport by conduction, Fourier's law, conduction in composites with analogies to electrical circuits, advection-diffusion equations, forced convection, boundary layer heat transport via forced convection in laminar flow, forced convection correlations, free convection, free convection boundary layers, free convection correlations and application to geophysical flows, melting and heat transfer at interfaces, radiation, diffusive transport of mass for dilute and non-dilute transfer, mass and heat transport analogies, mass transport with bulk chemical reaction, mass transport with interfacial chemical reaction, evaporation. Prerequisite 120A or consent of instructor.
4 units, Spr (Spakowitz, A)

CHEMENG 130. Separation Processes
Analysis and design of equilibrium and non-equilibrium separation processes. Possible examples: distillation, liquid-liquid extraction, flash distillation, electrophoresis, centrifugation, membrane separations, chromatography, and reaction-assisted separation processes.
3 units, Spr (Jaramillo, T)

CHEMENG 140. Micro and Nanoscale Fabrication Engineering
(Same as CHEMENG 240) (Same as CHEMENG 140) Survey of fabrication and processing technologies in industrial sectors, such

as semiconductor, biotechnology, and energy. Chemistry and transport of electronic and energy device fabrication. Solid state materials, electronic devices and chemical processes including crystal growth, chemical vapor deposition, etching, oxidation, doping, diffusion, thin film deposition, plasma processing. Micro and nanopatterning involving photolithography, unconventional soft lithography and self assembly. Recommended: CHEM 33, 171, and PHYSICS 55

3 units, Win (Bao, Z)

CHEMENG 150. Biochemical Engineering

Systems-level combination of chemical engineering concepts with biological principles. The production of protein pharmaceuticals as a paradigm to explore quantitative biochemistry and cellular physiology, the elemental stoichiometry of metabolism, recombinant DNA technology, synthetic biology and metabolic engineering, fermentation development and control, product isolation and purification, protein folding and formulation, and biobusiness and regulatory issues. Prerequisite: CHEMENG 181 (formerly 188) or BIOSCI 41 or equivalent.

3 units, Win (Staff)

CHEMENG 160. Polymer Science and Engineering

(Same as CHEMENG 260) Interrelationships among molecular structure, morphology, and mechanical behavior of polymers. Topics include amorphous and semicrystalline polymers, glass transitions, rubber elasticity, linear viscoelasticity, and rheology. Applications of polymers in biomedical devices and microelectronics. Recommended: CHEM 33 and 171, or equivalent.

3 units, Spr (Hwang, L)

CHEMENG 170. Kinetics and Reactor Design

Chemical kinetics, elementary reactions, mechanisms, rate-limiting steps, and quasi-steady state approximations. Ideal isothermal and non-isothermal reactors; design principles. Steady state and unsteady state operation of reactors; conversion and limitations of thermodynamic equilibrium. Enzymes and heterogeneous catalysis and catalytic reaction mechanisms. Prerequisites: 110, 120A, 120B.

3 units, Aut (Bent, S)

CHEMENG 174. Environmental Microbiology I

(Same as CHEMENG 274, CEE 274A) Basics of microbiology and biochemistry. The biochemical and biophysical principles of biochemical reactions, energetics, and mechanisms of energy conservation. Diversity of microbial catabolism, flow of organic matter in nature: the carbon cycle, and biogeochemical cycles. Bacterial physiology, phylogeny, and the ecology of microbes in soil and marine sediments, bacterial adhesion, and biofilm formation. Microbes in the degradation of pollutants. Prerequisites: CHEM 33, 35, and BIOSCI 41, CHEMENG 181 (formerly 188), or equivalents.

3 units, Aut (Spormann, A), Sum (Krieger, C)

CHEMENG 180. Chemical Engineering Plant Design

Open to seniors in chemical engineering or by consent of instructor. Application of chemical engineering principles to the design of practical plants for the manufacture of chemicals and related materials. Topics: flow-sheet development from a conceptual design, equipment design for distillation, chemical reactions, heat transfer, pumping, and compression; estimation of capital expenditures and production costs; plant construction.

3 units, Spr (Pavone, A)

CHEMENG 181. Biochemistry I

(Same as BIO 188, BIO 288, CHEMENG 281, CHEM 181) (CHEMENG offerings formerly listed as 188/288.) Chemistry of major families of biomolecules including proteins, nucleic acids, carbohydrates, lipids, and cofactors. Structural and mechanistic analysis of properties of proteins including molecular recognition, catalysis, signal transduction, membrane transport, and harvesting of energy from light. Molecular evolution. Satisfies Central Menu Area 1 for Bio majors. Prerequisites: CHEM 135 or 171. GER:DB-NatSci

3 units, Win (Zare, R; Cegelski, L)

CHEMENG 183. Biochemistry II

(Same as BIO 189, BIO 289, CHEMENG 283, CHEM 183) Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Satisfies Central Menu Area 1 for Bio majors. Prerequisite: BIO 188/288 or CHEM 181 or CHEMENG 181/281 (formerly 188/288). GER:DB-NatSci

3 units, Spr (Dunn, A)

CHEMENG 185A. Chemical Engineering Laboratory A

Experimental aspects of chemical engineering science. Emphasizes laboratory work and development of communication skills. Lab work in student groups. Student presentations. Prerequisites: 120A,B. Corequisite: 170.

4 units, Aut (Dunn, A; Hwang, L)

CHEMENG 185B. Chemical Engineering Laboratory B

Methods and techniques in molecular biology and biochemical engineering. Emphasis is on team organization, communiction skills, experimental design, and project execution. Creation of presentations, experiments, and demonstrations for high school students. Additional laboratory times to be arranged. Prerequisite: BIO 41, CHEMENG 181, or equivalent.

4 units, Win (Wang, C)

CHEMENG 190. Undergraduate Research in Chemical Engineering

Laboratory or theoretical work for undergraduates under the supervision of a faculty member. Research in one of the graduate research groups or other special projects in the undergraduate chemical engineering lab. Students should consult advisers for information on available projects.

1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHEMENG 190H. Undergraduate Honors Research in Chemical Engineering

For Chemical Engineering majors pursuing a B.S. with Honors degree who have submitted an approved research proposal to the department. Unofficial transcript must document BSH status and at least 9 units of 190H research for a minimum of 3 quarters May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHEMENG 191H. Undergraduate Honors Seminar

For Chemical Engineering majors approved for B.S. with Honors research program. Honors research proposal must be submitted and unofficial transcript document BSH status prior to required concurrent registration in 190H and 191H. May be repeated for credit. Corequisite: 190H

1 unit, Aut (Hwang, L), Win (Hwang, L), Spr (Hwang, L), Sum (Hwang, L)

GRADUATE COURSES IN CHEMICAL ENGINEERING

Primarily for graduate students; undergraduates may enroll with consent of instructor.

CHEMENG 240. Micro and Nanoscale Fabrication Engineering

(Same as CHEMENG 140) (Same as CHEMENG 140) Survey of fabrication and processing technologies in industrial sectors, such as semiconductor, biotechnology, and energy. Chemistry and transport of electronic and energy device fabrication. Solid state materials, electronic devices and chemical processes including crystal growth, chemical vapor deposition, etching, oxidation, doping, diffusion, thin film deposition, plasma processing. Micro and nanopatterning involving photolithography, unconventional soft lithography and self assembly. Recommended: CHEM 33, 171, and PHYSICS 55

3 units, Win (Bao, Z)

CHEMENG 260. Polymer Science and Engineering

(Same as CHEMENG 160) Interrelationships among molecular structure, morphology, and mechanical behavior of polymers. Topics include amorphous and semicrystalline polymers, glass transitions, rubber elasticity, linear viscoelasticity, and rheology. Applications of polymers in biomedical devices and microelectronics. Recommended: CHEM 33 and 171, or equivalent.

3 units, Spr (Hwang, L)

CHEMENG 274. Environmental Microbiology I

(Same as CHEMENG 174, CEE 274A) Basics of microbiology and biochemistry. The biochemical and biophysical principles of

biochemical reactions, energetics, and mechanisms of energy conservation. Diversity of microbial catabolism, flow of organic matter in nature: the carbon cycle, and biogeochemical cycles. Bacterial physiology, phylogeny, and the ecology of microbes in soil and marine sediments, bacterial adhesion, and biofilm formation. Microbes in the degradation of pollutants. Prerequisites: CHEM 33, 35, and BIOSCI 41, CHEMENG 181 (formerly 188), or equivalents.

3 units, Aut (Spormann, A), Sum (Krieger, C)

CHEMENG 281. Biochemistry I

(Same as BIO 188, BIO 288, CHEMENG 181, CHEM 181) (CHEMENG offerings formerly listed as 188/288.) Chemistry of major families of biomolecules including proteins, nucleic acids, carbohydrates, lipids, and cofactors. Structural and mechanistic analysis of properties of proteins including molecular recognition, catalysis, signal transduction, membrane transport, and harvesting of energy from light. Molecular evolution. Satisfies Central Menu Area 1 for Bio majors. Prerequisites: CHEM 135 or 171.

3 units, Win (Zare, R; Cegelski, L)

CHEMENG 283. Biochemistry II

(Same as BIO 189, BIO 289, CHEMENG 183, CHEM 183) Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Satisfies Central Menu Area 1 for Bio majors. Prerequisite: BIO 188/288 or CHEM 181 or CHEMENG 181/281 (formerly 188/288).

3 units, Spr (Dunn, A)

CHEMENG 310. Microhydrodynamics

(Same as ME 451D) Transport phenomena on small-length scales appropriate to applications in microfluidics, complex fluids, and biology. The basic equations of mass, momentum, and energy, derived for incompressible fluids and simplified to the slow-flow limit. Topics: solution techniques utilizing expansions of harmonic and Green's functions; singularity solutions; flows involving rigid particles and fluid droplets; applications to suspensions; lubrication theory for flows in confined geometries; slender body theory; and capillarity and wetting. Prerequisites: 120A,B, 300, or equivalents.

3 units, Aut (Shaqfeh, E)

CHEMENG 320. Chemical Kinetics and Reaction Engineering

Theoretical and experimental tools useful in understanding and manipulating reactions mediated by small-molecules and biological catalysts. Theoretical: first classical chemical kinetics and transition state theory; then RRKM theory and Monte Carlo simulations. Experimental approaches include practical application of modern spectroscopic techniques, stopped-flow measurements, temperature-jump experiments, and single-molecule approaches to chemical and biological systems. Both theory and application are framed with regard to systems of particular interest, including industrially relevant enzymes, organometallic catalysts, heterogeneous catalysis, electron transfer reactions, and chemical kinetics within living cells.

3 units, Win (Staff)

CHEMENG 340. Molecular Thermodynamics

Classical thermodynamics and quantum mechanics. Development of statistical thermodynamics to address the collective behavior of molecules. Establishment of theories for gas, liquid, and solid phases, including phase transitions and critical behavior. Applications include electrolytes, ion channels, surface adsorption, ligand binding to proteins, hydrogen bonding in water, hydrophobicity, polymers, and proteins.

3 units, Aut (Spakowitz, A)

CHEMENG 345. Fundamentals and Applications of Spectroscopy

Development of theoretical approaches to spectroscopy, including spectroscopic transitions, transition probabilities, and selection rules. Application to photon and electron spectroscopies of the gas and solid phases. Topics: rotational spectroscopy; infrared and Raman vibrational spectroscopies; fluorescence spectroscopy; Auger, x-ray and ultraviolet photoelectron spectroscopies. Prerequisite: CHEM 271 or course in quantum mechanics.

3 units, Win (Jaramillo, T)

CHEMENG 355. Advanced Biochemical Engineering

(Same as BIOE 355) Combines biological knowledge and methods with quantitative engineering principles. Quantitative review of biochemistry and metabolism; recombinant DNA technology and synthetic biology (metabolic engineering). The production of protein pharaceuticals as a paradigm for the application of chemical engineering principles to advanced process development within the framework of current business and regulatory requirements. Prerequisite: CHEMENG 181 (formerly 188) or BIOSCI 41, or equivalent.

3 units, Win (Swartz, J)

CHEMENG 442. Structure and Reactivity of Solid Surfaces

The structure of solid surfaces including experimental methods for determining the structure of single crystal surfaces. The adsorption of molecules on these surfaces including the thermodynamics of adsorption processes, surface diffusion, and surface reactions. Molecular structure of adsorbates. Current topics in surface structure and reactivity, including systems for heterogeneous catalysis and electronic materials.

3 units, not given this year

CHEMENG 448. Molecular Catalysis

Chemical transformation of organic molecules in the energy and chemical industries. The focus on molecular metal catalysis in various environments including homogeneous, multi-phase, and on solid supports. Possible examples: isomerization, hydrogenation, oligo-polymerization, oxidation, methathesis, hydroformylation, and carbonylation of olefins.

3 units, Win (Staff), given occasionally

CHEMENG 450. Advances in Biotechnology

Guest academic and industrial speakers. Latest developments in fields such as bioenergy, green process technology, production of industrial chemicals from renewable resources, protein pharmaceutical production, industrial enzyme production, stem cell applications, medical diagnostics, and medical imaging. Biotechnology ethics, business and patenting issues, and entrepreneurship in biotechnology.

3 units, Spr (Swartz, J; Hwang, L)

CHEMENG 451. Chemical Principles in Drug Discovery and Development

Application of physical and organic chemistry to the discovery and subsequent product development of small molecule and macromolecular drugs. Course discusses key physical, chemical, and biological properties of drug candidates and how to measure them, how to engineer them. Discussion of principles of drug formulation and delivery. Graduate-level background in physical and organic chemistry recommended.

3 units, Aut (Khosla, C)

CHEMENG 454. Synthetic Biology and Metabolic Engineering

(Same as BIOE 454) Principles for the design and optimization of new biological systems. Development of new enzymes, metabolic pathways, other metabolic systems, and communication systems among organisms. Example applications include the production of central metabolites, amino acids, pharmaceutical proteins, and isoprenoids. Economic challenges and quantitative assessment of metabolic performance. Pre- or corequisite: CHEMENG 355 or equivalent.

3 units, alternate years, not given this year

CHEMENG 456. Metabolic Biochemistry of Microorganisms

(Same as CEE 274B) Microbial metabolism, biochemical and metabolic principles, unity and diversity of metabolic pathways, evolution of enzymes and metabolic pathways, microbial degradation of natural and anthropogenic organic compounds, predicting biodegradation, and metabolic origin of life.

3 units, Win (Spormann, A)

CHEMENG 457. Microbial Ecology and Evolution
(Same as CEE 274C) Structure/function relationship of microbial communities; metabolic and ecological basis of interactions in microbial communities; microbial ecology and population biology in natural and human host systems; and evolution of microbial life. Prerequisite: CEE 274A, CHEMENG 281 (formerly 288), or equivalent.

3 units, not given this year

CHEMENG 458. Recent Advances in Genetic, Cellular, and Biomolecular Systems
Current topics, experimental methods, technologies, quantitative analysis, and mathematical models.

3 units, not given this year

CHEMENG 459. Frontiers in Interdisciplinary Biosciences
(Same as BIO 459, BIOC 459, BIOE 459, CHEM 459, PSYCH 459) Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See http://biox.stanford.edu/courses/459.html. Recommended: basic mathematics, biology, chemistry, and physics.

1 unit, Aut (Robertson, C), Win (Robertson, C), Spr (Robertson)

CHEMENG 460. Polymer Surfaces and Interfaces
Principles of interfacial thermodynamics and polymer physics applied to polymer surfaces and interfaces, particularly in relation to biomedical devices. Treatments of intermolecular forces; conformational statistics of macromolecular structure; tethering of polymers at different interfaces; techniques for chemical modification of surfaces; methods for physical characterization of polymer surfaces and interfaces. Applications in adhesion, biocompatibility, prosthetic orthopedic devices, and ophthalmic devices. Prerequisite: exposure to principles of polymer science or consent of instructor.

3 units, Win (Frank, C), alternate years, not given next year

CHEMENG 461. Polymeric Materials in Medical Devices
Integrated approach to polymer synthesis, characterization, and processing for polymer properties of technological benefit in biomedical devices. Classes of materials include ultra high molecular weight polyethylene, silicone elastomers, block copolymer segmented polyurethanes, highly orientated nylon fibers, hydrogels, and biodegradable polymers. Applications include prosthetic orthopedic devices, ophthalmic devices, sutures, and drug delivery systems.

3 units, not given this year

CHEMENG 462. Complex Fluids and Non-Newtonian Flows
Division of complex fluids into suspensions, solutions, and melts. Suspensions as colloidal and non-colloidal. Extra stress and relation to the stresslet. Suspension rheology including Brownian and non-Brownian fibers. Microhydrodynamics and the Fokker-Planck equation. Linear viscoelasticity and the weak flow limit. Polymer solutions including single mode (dumbbell) and multimode models. Nonlinear viscoelasticity. Intermolecular effects in nondilute solutions and melts and the concept of reptation. Prerequisites: low Reynolds number hydrodynamics or consent of instructor.

3 units, Spr (Shaqfeh, E)

CHEMENG 464. Polymer Chemistry
Polymer material design, synthesis, characterization, and application. Topics include organic and kinetic aspects of polymerization, polymer characterization techniques, and structure and properties of bulk polymers for commercial applications and emerging technologies.

3 units, alternate years, not given this year

CHEMENG 466. Polymer Physics
Concepts and applications in the equilibrium and dynamic behavior of complex fluids. Topics include solution thermodynamics, scaling concepts, semiflexibility, characterization of polymer size (light scattering, osmotic pressure, size-exclusion chromatography, intrinsic viscosity), viscoelasticity, rheological measurements, polyelectrolytes, liquid crystals, biopolymers, and gels.

3 units, Win (Spakowitz, A)

CHEMENG 467. Physics of Biomacromolecules
Advanced topics in the equilibrium and dynamic behavior of biomacromolecules. Theoretical approaches addressed include path integral approaches to polymer Green function theory, polymer field theory, application of Smoluchowski and fractional Fokker Planck equations to biopolymer transport, and Brownian dynamics and Monte Carlo simulations. These methods will be applied to topics such as DNA/protein semiflexibility, DNA supercoiling, lyotropic polymer ordering, anomalous diffusion in crowded environments, motor-protein transport, and protein dynamics. Prerequisites: CHEMENG 340 and 466 or consent of the instructor.

3 units, not given this year

CHEMENG 500. Special Topics in Protein Biotechnology
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

1 unit, Aut (Swartz, J), Win (Swartz, J), Spr (Swartz, J), Sum (Swartz, J)

CHEMENG 501. Special Topics in Semiconductor Processing
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

1 unit, Aut (Bent, S), Win (Bent, S), Spr (Bent, S), Sum (Bent, S)

CHEMENG 503. Special Topics in Biocatalysis
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

1 unit, Aut (Khosla, C), Win (Khosla, C), Spr (Khosla, C), Sum (Khosla, C)

CHEMENG 504. Special Topics in Bioengineering
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

1 unit, Aut (Robertson, C), Win (Robertson, C), Spr (Robertson, C), Sum (Robertson, C)

CHEMENG 505. Special Topics in Microrheology
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

1 unit, Aut (Fuller, G), Win (Fuller, G), Spr (Fuller, G), Sum (Fuller, G)

CHEMENG 507. Special Topics in Polymer Physics and Molecular Assemblies
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

1 unit, Aut (Frank, C), Win (Frank, C), Spr (Frank, C), Sum (Frank, C)

CHEMENG 510. Special Topics in Transport Mechanics
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

1 unit, Aut (Shaqfeh, E), Win (Shaqfeh, E), Spr (Shaqfeh, E), Sum (Shaqfeh, E)

CHEMENG 513. Special Topics in Functional Organic Materials for Electronic and Optical Devices
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

1 unit, Aut (Bao, Z), Win (Bao, Z), Spr (Bao, Z), Sum (Bao, Z)

CHEMENG 514. Special Topics in Biopolymer Physics
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

1 unit, Aut (Spakowitz, A), Win (Spakowitz, A), Spr (Spakowitz, A), Sum (Spakowitz, A)

CHEMENG 515. Special Topics in Molecular and Systems Biology
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

1 unit, Aut (Wang, C), Win (Wang, C), Spr (Wang, C), Sum (Wang, C)

CHEMENG 516. Special Topics in Energy and Catalysis
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.
1 unit, Aut (Jaramillo, T), Win (Jaramillo, T), Spr (Jaramillo, T), Sum (Jaramillo, T)

CHEMENG 517. Special Topics in Microbial Physiology and Metabolism
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.
1 unit, Aut (Spormann, A), Win (Spormann, A), Spr (Spormann, A), Sum (Spormann, A)

CHEMENG 518. Special Topics in Advanced Biophysics and Protein Design
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.
1 unit, Aut (Dunn, A), Win (Dunn, A), Spr (Dunn, A), Sum (Dunn, A)

CHEMENG 519. Special Topics in Interface Science and Catalysis
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.
1 unit, Aut (Noerskov, J), Win (Noerskov, J), Spr (Noerskov, J), Sum (Staff)

CHEMENG 520. Special Topics in Biological Chemistry
Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.
1 unit, Win (Staff), Spr (Staff), Sum (Staff)

CHEMENG 600. Graduate Research in Chemical Engineering
Laboratory and theoretical work leading to partial fulfillment of requirements for an advanced degree.
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHEMENG 699. Colloquium
Weekly lectures by experts from academia and industry in the field of chemical engineering.
1 unit, Aut (Wang, C), Win (Wang, C), Spr (Wang, C)

CHEMICAL SYSTEMS BIOLOGY (CSB) COURSES

UNDERGRADUATE COURSES IN CHEMICAL SYSTEMS BIOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

CSB 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN CHEMICAL SYSTEMS BIOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

CSB 210. Signal Transduction Pathways and Networks
The molecular mechanisms through which cells receive and respond to external signals. Emphasis is on principles of cell signaling, the systems-level properties of signal transduction modules, and experimental strategies through which cell signaling pathways are being studied. Prerequisite: working knowledge of biochemistry and genetics.
4 units, not given this year

CSB 220. Chemistry of Biological Processes
(Same as BIOC 220) The principles of organic and physical chemistry as applied to biomolecules. Goal is a working knowledge of chemical principles that underlie biological processes, and chemical tools used to study and manipulate biological systems. Prerequisites: organic chemistry and biochemistry, or consent of instructor.
4 units, Spr (Wandless, T), alternate years, not given next year

CSB 240A. A Practical Approach to Drug Discovery and Development
Advancing a drug from discovery of a therapeutic target to human trials and commercialization. Topics include: high throughput assay development, compound screening, lead optimization, protecting intellectual property, toxicology testing, regulatory issues, assessment of clinical need, defining the market, conducting clinical trials, project management, and commercialization issues, including approach to licensing and raising capital.
3 units, Win (Mochly-Rosen, D; Grimes, K)

CSB 240B. A Practical Approach to Drug Discover and Development
(Continuation of 240A) Advancing a drug from discovery of a therapeutic target to human trials and commercialization. Topics include: high throughput assay development, compound screening, lead optimization, protecting intellectual property, toxicology testing, regulatory issues, assessment of clinical need, defining the market, conducting clinical trials, project management, and commercialization issues, including approach to licensing and raising capital. Prerequisite: 240A.
3 units, Spr (Mochly-Rosen, D; Grimes, K)

CSB 242. A seminar series on Drug Discovery and Development.
The scientific principles and technologies involved in making the transition from a basic biological observation to the creation of a new drug emphasizing molecular and genetic issues. Prerequisite: biochemistry, chemistry, or bioengineering.
1 unit, Win (Mochly-Rosen, D; Grimes, K), Spr (Mochly-Rosen, D; Grimes, K)

CSB 250. The Biology of Chromatin Templated Processes
Topics include mechanisms of DNA replication; gene expressions regulation; DNA damage sensing and DNA repair; chromatin structure and function; and epigenetics and nuclear reprogramming. Prerequisite: working knowledge of molecular biology, biochemistry and genetics, or instructor consent.
4 units, Win (Staff), alternate years, not given next year

CSB 260. Quantitative Chemical Biology
Current topics including protein and small molecule engineering, cell signaling sensors and modulators, molecular imaging, chemical genetics, combinatorial chemistry, in vitro evolution, and signaling network modeling. Prerequisites: undergraduate organic chemistry, and biochemistry or cell biology.
4 units, alternate years, not given this year

CSB 270. Research Seminar
Guest speakers and discussion on current research in pharmacology.
1-2 units, not given this year

CSB 271. Principles of Cell Cycle Control
(Same as BIO 171, BIO 271) Genetic analysis of the key regulatory circuits governing the control of cell division. Illustration of key principles that can be generalized to other synthetic and natural biological circuits. Focus on tractable model organisms; growth control; irreversible biochemical switches; chromosome duplication; mitosis; DNA damage checkpoints; MAPK pathway-cell cycle interface; oncogenesis. Analysis of classic and current primary literature. Satisfies Central Menu Area 2.
3 units, Aut (Skotheim, J; Ferrell, J)

CSB 278. Systems Biology
(Same as BIOE 310, CS 278) Experimental and computational approaches to the dissection of complex biologcal systems. Topics include network structure, non-linear dynamics, numerical modeling approaches, noise, and robustness. Topics are introduced in the context of recent papers from the primary literature.
4 units, Win (Ferrell, J)

CSB 299. Directed Reading in Chemical and Systems Biology
Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CSB 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.
4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CSB 399. Graduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CSB 801. TGR Project
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CSB 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHEMISTRY (CHEM) COURSES

UNDERGRADUATE COURSES IN CHEMISTRY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

CHEM 24N. Nutrition and History
(Stanford Introductory Seminar) Preference to freshmen. Intended to broaden the introductory chemistry experience. The biochemical basis of historically important nutritional deficiencies (vitamins, minerals, starvation, metabolic variants that predispose to disease) and environmental toxins is related to physiological action and the sociological, political, and economic consequences of its effect on human populations. Prerequisite: high school chemistry. Recommended: 31A,B, or 31X, or 33.
3 units, Spr (Huestis, W)

CHEM 25N. Science in the News
(Stanford Introductory Seminar) Preference to freshmen. Possible topics include: diseases such as avian flu, HIV, and malaria; environmental issues such as climate change, atmospheric pollution, and human population; energy sources in the future; evolution; stem cell research; nanotechnology; and drug development. Focus is on the scientific basis for these topics as a basis for intelligent discussion of societal and political implications. Sources include the popular media and scientific media for the nonspecialist, especially those available on the web.
3 units, Aut (Andersen, H)

CHEM 25Q. Science-in-Theatre: A New Genre?
(Stanford Introductory Seminar) (Same as DRAMA 25N) Preference to sophomores. How scientists acquire their rules, mores, and idiosyncrasies through a form of intellectual osmosis in a mentor-disciple relationship. Scientists represented as Frankensteins or nerds, rather than normal. Why more intellectually challenging plays have appeared on the Anglo-American theatre scene where scientific behavior and even science are presented accurately. Students engage in a playwriting experiment.
3 units, Win (Djerassi, C)

CHEM 26N. The What, Why, How and wow's of Nanotechnology
(Stanford Introductory Seminar) Preference to freshmen. Introduction to nanotechnology with discussion of basic science at the nanoscale, its difference from molecular and macroscopic scales, and implications and applications. Developments in nanotechnology in the past two decades, from imaging and moving single atoms on surfaces to killing cancer cells with nanoscale tools and gadgets. GER:DB-NatSci
3 units, Spr (Dai, H)

CHEM 31A. Chemical Principles I
For students with moderate or no background in chemistry. Stoichiometry; periodicity; electronic structure and bonding; gases; enthalpy; phase behavior. Emphasis is on skills to address structural and quantitative chemical questions; lab provides practice. Recitation. GER:DB-NatSci
4 units, Aut (Dai, H; Schwartz, J), Sum (Schwartz, J)

CHEM 31AC. Problem Solving in Science
Development and practice of critical problem solving skills using chemical examples. Limited enrollment. Prerequisite: consent of instructor. Corequisite: CHEM 31A.
1 unit, Aut (Schwartz, J)

CHEM 31B. Chemical Principles II
Chemical equilibrium; acids and bases; oxidation and reduction reactions; chemical thermodynamics; kinetics. Lab. Prerequisite: 31A. GER:DB-NatSci
4 units, Win (Fayer, M; Schwartz, J), Sum (Schwartz, J)

CHEM 31BC. Problem Solving in Science
Development and practice of critical problem solving skills using chemical examples. Students should also be concurrently enrolled in the parent course 31B. Limited enrollment and with permission of the instructor.
1 unit, Win (Schwartz, J)

CHEM 31X. Chemical Principles
Accelerated; for students with substantial chemistry background. Chemical equilibria concepts, equilibrium constants, acids and bases, chemical thermodynamics, quantum concepts, models of ionic and covalent bonding, atomic and molecular orbital theory, periodicity, and bonding properties of matter. Recitation. Prerequisites: AP chemistry score of 5 or passing score on chemistry placement test. Recommended: high school physics. GER:DB-NatSci
4 units, Aut (Moerner, W; Waymouth, R)

CHEM 33. Structure and Reactivity
Organic chemistry, functional groups, hydrocarbons, stereochemistry, thermochemistry, kinetics, chemical equilibria. Recitation. Prerequisite: 31A,B, or 31X, or an AP Chemistry score of 5. GER:DB-NatSci
4 units, Win (Stack, T; Kanan, M), Spr (Schwartz, J; Wender, P), Sum (Kahl, S)

CHEM 33C. Problem Solving in Science
Development and practice of critical problem solving skills using chemical examples. Limited enrollment. Prerequisite: consent of instructor. Corequisite: CHEM 33.
1 unit, Spr (Schwartz, J)

CHEM 34X. General Chemistry Laboratory
Introduction to chemical laboratory practice. Topics include preparation of compounds and characterization of their properties by modern spectroscopic techniques. Corequisite: Chemistry 31X or the equivalent. Limited to 12 students; enrollment by consent of the instructor.
1 unit, Aut (Zare, R)

CHEM 35. Organic Monofunctional Compounds
Organic chemistry of oxygen and nitrogen aliphatic compounds. Recitation. Prerequisite: 33. GER:DB-NatSci
4 units, Aut (Du Bois, J), Spr (Du Bois, J), Sum (Hua, Y)

CHEM 36. Organic Chemistry Laboratory I
Techniques for separations of compounds: distillation, crystallization, extraction, and chromatographic procedures. Lecture treats theory; lab provides practice. Prerequisite: 33. GER:DB-NatSci
3 units, Aut (Cox, C), Spr (Hua, Y), Sum (Safi, S)

CHEM 110. Directed Instruction/Reading
Undergraduates pursue a reading program under supervision of a faculty member in Chemistry; may also involve participation in lab. Prerequisites: superior work in 31A,B, 31X, or 33; and consent of instructor and the Chemistry undergraduate study committee.
1-2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHEM 111. Exploring Chemical Research at Stanford
Preference to freshmen and sophomores. Department faculty describe their cutting-edge research and its applications.
1 unit, Win (Cegelski, L)

CHEM 130. Organic Chemistry Laboratory II
Diels-Alder, reduction, and Wittig reactions; qualitative analysis. Lab. Limited enrollment Autumn Quarter. Prerequisite: 36. Corequisite: 35. GER:DB-NatSci
4 units, Aut (Hua, Y), Win (Hua, Y)

CHEM 131. Organic Polyfunctional Compounds
Aromatic compounds, polysaccharides, amino acids, proteins, natural products, dyes, purines, pyrimidines, nucleic acids, and polymers. Prerequisite: 35. GER:DB-NatSci
3 units, Aut (Huestis, W), Win (Trost, B)

CHEM 132. Synthesis Laboratory
Advanced synthetic methods in organic and inorganic laboratory chemistry. Prerequisites: 35, 130. GER:DB-NatSci
3 units, Win (Cox, C)

CHEM 134. Analytical Chemistry Laboratory
Methods include gravimetric, volumetric, spectrophotometric, and chromatographic. Writing instruction includes communications, full papers, research proposals, and referee papers. Lab. Prerequisite: 130. GER:DB-NatSci
5 units, Spr (Cox, C)

CHEM 135. Physical Chemical Principles
Introductory physical chemistry intended for students of the life sciences, geology and environmental engineering. Chemical kinetics: rate laws, integration of rate laws, reaction mechanisms, enzyme kinetics. Chemical thermodynamics: first, second and third laws, thermochemistry, entropy, free energy, chemical equilibrium, physical equilibrium, osmotic pressure, other colligative properties. Prerequisites: 31A,B, or 31X, calculus. GER:DB-NatSci
3 units, Aut (Pande, V)

CHEM 137. Special Topics in Organic Chemistry
(Formerly 181.) Chemical view of the biological processes of life. Topics include: structure and function of proteins, peptides, and nucleic acids; and how to use chemistry to mediate biological processes. GER:DB-NatSci
3 units, Win (Flygare, J)

CHEM 151. Inorganic Chemistry I
Theories of electronic structure, stereochemistry, and symmetry properties of inorganic molecules. Topics: ionic and covalent interactions, electron-deficient bonding, and molecular orbital theories. Emphasis is on the chemistry of the metallic elements. Prerequisites: 35. Recommended: 171. GER:DB-NatSci
3 units, Win (Stack, T)

CHEM 153. Inorganic Chemistry II
The theoretical aspects of inorganic chemistry. Group theory; many-electron atomic theory; molecular orbital theory emphasizing general concepts and group theory; ligand field theory; application of physical methods to predict the geometry, magnetism, and electronic spectra of transition metal complexes. Prerequisites: 151, 173. GER:DB-NatSci
3 units, Spr (Solomon, E)

CHEM 155. Advanced Inorganic Chemistry
(Same as CHEM 255) Chemical reactions of organotransition metal complexes and their role in homogeneous catalysis. Analogous patterns among reactions of transition metal complexes in lower oxidation states. Physical methods of structure determination. Prerequisite: one year of physical chemistry.
3 units, Spr (Waymouth, R)

CHEM 171. Physical Chemistry
Chemical thermodynamics; fundamental principles, Gibbsian equations, systematic deduction of equations, equilibrium conditions, phase rule, gases, solutions. Prerequisites: 31A,B, or 31X, 35; MATH 51. GER:DB-NatSci
3 units, Aut (Pecora, R)

CHEM 173. Physical Chemistry
Introduction to quantum chemistry: the basic principles of wave mechanics, the harmonic oscillator, the rigid rotator, infrared and microwave spectroscopy, the hydrogen atom, atomic structure, molecular structure, valence theory. Prerequisites: MATH 51, 53; PHYSICS 41, 43. Recommended: PHYSICS 45. GER:DB-NatSci
3 units, Win (Boxer, S)

CHEM 174. Physical Chemistry Laboratory I
Experimental investigations in spectroscopy, thermodynamics, and electronics. Students take measurements on molecular systems, design and build scientific instruments, and computer-automate them with software that they write themselves. Prerequisites: 134, MATH 51, PHYSICS 44. Corequisite 173. GER:DB-NatSci
4 units, Win (Chidsey, C)

CHEM 175. Physical Chemistry
Introduction to kinetic theory and statistical mechanics: molecular theory of matter and heat, transport phenomena in gases, Boltzmann distribution law, partition functions for ideal gases. Introduction to chemical kinetics: measurement of rates of reactions, relationship between rate and reaction mechanism, consideration of specific reactions, transition-state theory of reaction rates. Prerequisites: 171, 173. GER:DB-NatSci
3 units, Spr (Moerner, W)

CHEM 176. Physical Chemistry Laboratory II
Use of chemical instrumentation to study physical chemical time-dependent processes. Experiments include reaction kinetics, fluorimetry, and nuclear magnetic and electron spin resonance spectroscopy. Lab. Prerequisite: 173. GER:DB-NatSci
3 units, Spr (Cui, B)

CHEM 181. Biochemistry I
(Same as BIO 188, BIO 288, CHEMENG 181, CHEMENG 281) (CHEMENG offerings formerly listed as 188/288.) Chemistry of major families of biomolecules including proteins, nucleic acids, carbohydrates, lipids, and cofactors. Structural and mechanistic analysis of properties of proteins including molecular recognition, catalysis, signal transduction, membrane transport, and harvesting of energy from light. Molecular evolution. Satisfies Central Menu Area 1 for Bio majors. Prerequisites: CHEM 135 or 171. GER:DB-NatSci
3 units, Win (Zare, R; Cegelski, L)

CHEM 183. Biochemistry II
(Same as BIO 189, BIO 289, CHEMENG 183, CHEMENG 283) Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Satisfies Central Menu Area 1 for Bio majors. Prerequisite: BIO 188/288 or CHEM 181 or CHEMENG 181/281 (formerly 188/288). GER:DB-NatSci
3 units, Spr (Dunn, A)

CHEM 184. Biological Chemistry Laboratory
Modern techniques in biological chemistry including protein purification, characterization of enzyme kinetics, heterologous expression of His-tagged fluorescent proteins, site-directed mutagenesis, and single-molecule fluorescence microscopy. Prerequisite: 181. GER:DB-NatSci
4 units, Spr (Cegelski, L)

CHEM 185. Biochemistry III
Advanced biophysical chemistry. Topics include: protein and DNA structure, stability, and folding, membrane lateral organization and dynamics, and transmembrane transport. Prerequisites: 171, 173, 183. GER:DB-NatSci
3 units, Spr (Boxer, S)

CHEM 190. Introduction to Methods of Investigation
Limited to undergraduates admitted under the honors program or by special arrangement with a member of the teaching staff. For general character and scope, see 200. Prerequisite:130. Corequisite: 300.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN CHEMISTRY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

CHEM 200. Research and Special Advanced Work
Qualified graduate students undertake research or advanced lab work not covered by listed courses under the direction of a member of the teaching staff. For research and special work, students register for 200.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHEM 221. Advanced Organic Chemistry
Molecular orbital theory and orbital symmetry. Thermochemistry and thermochemical kinetics. Unimolecular reaction rate theory. Methods of determining organic reaction mechanisms from a theoretical and experimental point of view. Prerequisites: 137, 175.
3 units, Aut (Kanan, M)

CHEM 223. Advanced Organic Chemistry
Continuation of 221 with emphasis on physical methods. Prerequisite: 221 or consent of instructor.
3 units, Win (Trost, B)

CHEM 225. Advanced Organic Chemistry
Continuation of 223. Organic reactions, new synthetic methods, conformational analysis, and exercises in the syntheses of complex molecules. Prerequisite: 223 or consent of instructor.
3 units, Spr (Wender, P)

CHEM 227. Synthesis and Analysis at the Chemistry-Biology Interface
Focus on organic chemistry of biomacromolecules. Synthetic methods and conjugation chemistry; labeling and chemical modification of nucleic acids and peptides; combinatorial library construction and selection methods. Prerequisite: One year of undergraduate organic chemistry.
3 units, Spr (Kool, E)

CHEM 229. Organic Chemistry Seminar
Required of graduate students majoring in organic chemistry. Students giving seminars register for 231.
1 unit, Aut (Trost, B), Win (Trost, B), Spr (Trost, B)

CHEM 231. Organic Chemistry Seminar Presentation
Required of graduate students majoring in organic chemistry for the year in which they present their organic seminar. Second-year students must enroll all quarters.
1 unit, Aut (Waymouth, R), Win (Waymouth, R), Spr (Waymouth, R)

CHEM 233A. Creativity in Organic Chemistry
Required of second- and third-year Ph.D. candidates in organic chemistry. The art of formulating, writing, and orally defending a research progress report (A) and two research proposals (B, C). Second-year students register for A and B; third-year students register for C. A: Aut, B: Spr, C: Spr
1 unit, Aut (Waymouth, R)

CHEM 233B. Creativity in Organic Chemistry
Required of second- and third-year Ph.D. candidates in organic chemistry. The art of formulating, writing, and orally defending a research progress report (A) and two research proposals (B, C). Second-year students register for A and B; third-year students register for C. A: Aut, B: Spr, C: Spr
1 unit, Spr (Waymouth, R)

CHEM 233C. Creativity in Organic Chemistry
Required of second- and third-year Ph.D. candidates in organic chemistry. The art of formulating, writing, and orally defending a research progress report (A) and two research proposals (B, C). Second-year students register for A and B; third-year students register for C. A: Aut, B: Spr, C: Spr
1 unit, Spr (Staff)

CHEM 235. Applications of NMR Spectroscopy
The uses of NMR spectroscopy in chemical and biochemical sciences, emphasizing data acquisition for liquid samples and including selection, setup, and processing of standard and advanced experiments.
3 units, Win (Lynch, S)

CHEM 237. Electrochemistry
Principles of electrochemistry and their application to redox systems, electron transfer, electroanalysis, electrodeposition, electrocatalysis, batteries, and fuel cells. Prerequisite: 171 or equivalent.
3 units, not given this year

CHEM 251. Advanced Inorganic Chemistry
Chemical reactions of inorganic compounds with focus on mechanisms of reactions mediated by inorganic and organometallic complexes. The structural and electronic basis of reactivity including oxidation and reduction; kinetics and thermodynamics of inorganic reactions. Prerequisite: one year of physical chemistry.
3 units, not given this year

CHEM 253. Advanced Inorganic Chemistry
Electronic structure and physical properties of transition metal complexes. Ligand field and molecular orbital theories, magnetism and magnetic susceptibility, electron paramagnetic resonance including hyperfine interactions and zero field splitting and electronic absorption spectroscopy including vibrational interactions. Prerequisite: 153 or the equivalent.
3 units, not given this year

CHEM 255. Advanced Inorganic Chemistry
(Same as CHEM 155) Chemical reactions of organotransition metal complexes and their role in homogeneous catalysis. Analogous patterns among reactions of transition metal complexes in lower oxidation states. Physical methods of structure determination. Prerequisite: one year of physical chemistry.
3 units, Spr (Waymouth, R)

CHEM 258A. Research Progress in Inorganic Chemistry
Required of all second-, third-, and fourth-year Ph.D. candidates in inorganic chemistry. Students present their research progress in written and oral forms (A); present a seminar in the literature of the field of research (B); and formulate, write, and orally defend a research proposal (C). Second-year students register for A; third-year students register for B; fourth-year students register for C.
1 unit, Win (Solomon, E)

CHEM 258B. Research Progress in Inorganic Chemistry
Required of all second-, third-, and fourth-year Ph.D. candidates in inorganic chemistry. Students present their research progress in written and oral forms (A); present a seminar in the literature of the field of research (B); and formulate, write, and orally defend a research proposal (C). Second-year students register for A; third-year students register for B; fourth-year students register for C.
1 unit, Spr (Solomon, E)

CHEM 258C. Research Progress in Inorganic Chemistry
Required of all second-, third-, and fourth-year Ph.D. candidates in inorganic chemistry. Students present their research progress in written and oral forms (A); present a seminar in the literature of the field of research (B); and formulate, write, and orally defend a research proposal (C). Second-year students register for A; third-year students register for B; fourth-year students register for C.
1 unit, Win (Solomon, E)

CHEM 259. Inorganic Chemistry Seminar
Required of graduate students majoring in inorganic chemistry.
1 unit, Aut (Solomon, E), Win (Solomon, E), Spr (Solomon, E)

CHEM 271. Advanced Physical Chemistry
The principles of quantum mechanics. General formulation, mathematical methods, and applications of quantum theory. Exactly solvable problems and approximate methods including time independent perturbation theory and the variational method. Time dependent methods including exactly solvable problems, time dependent perturbation theory, and density matrix formalism. Different representations of quantum theory including the Schrödinger, matrix, and density matrix methods. Absorption and emission of radiation Angular momentum. Atomic structure calculations and simple molecular structure methods. Prerequisite: 175.
3 units, Aut (Fayer, M)

CHEM 273. Advanced Physical Chemistry
Topics in advanced quantum mechanics: ab initio electronic structure theory (Hartree-Fock, configuration interaction, multiconfiguration self-consistent-field, and many-body perturbation theory techniques) and density functional theory, time-dependent quantum mechanics (time evolution operator, Feynman path integrals, correlation functions), interaction of radiation and matter (semiclassical and quantum theories of radiation, transition probabilities, selection rules), and vibrations and rotations of polyatomic molecules (normal modes, anharmonicity, wave functions and energy levels of rigid rotations, vibration-rotation interaction). Prerequisite: Chem 271 or Physics 230.
3 units, Win (Martinez, T)

CHEM 275. Advanced Physical Chemistry
The principles and methods of statistical mechanics from the ensemble point of view, statistical thermodynamics, heat capacities of solids and polyatomic gases, chemical equilibria, equations of state of fluids, and phase transitions. Prerequisite: 271.
3 units, Spr (Pecora, R)

CHEM 276. Advanced Physical Chemistry
The statistical mechanical basis for computer simulations of atomic and molecular liquids. Principles of the Monte Carlo method, Metropolis algorithm, and application to lattice models and continuum fluids. Principles of molecular dynamics calculations, methods for sampling equilibrium ensembles, algorithms for dynamics. Periodic boundary conditions, methods for dealing with long-ranged forces, construction of potential energy functions, estimation of statistical error in results of simulations. Prerequisite: 275. it might be repeatable for credit.
3 units, not given this year

CHEM 277. Topics in Physical Chemistry
Possible topics: structure elucidation using diffraction techniques, advanced statistical mechanics, crystal field theory, advanced quantum mechanics, magnetic relaxation, advanced thermodynamics, chemical applications of group theory. May be repeated for credit. Prerequisite: 275 or consent of instructor.
3 units, Spr (Pecora, R)

CHEM 278A. Research Progress in Physical Chemistry
Required of all second- and third-year Ph.D. candidates in physical and biophysical chemistry and chemical physics. Second-year students present their research progress and plans in brief written and oral summaries (A); third-year students prepare a written progress report (B). A: Win, B: Win
1 unit, Win (Pecora, R)

CHEM 278B. Research Progress in Physical Chemistry
Required of all second- and third-year Ph.D. candidates in physical and biophysical chemistry and chemical physics. Second-year students present their research progress and plans in brief written and oral summaries (A); third-year students prepare a written progress report (B). A: Win, B: Win
1 unit, Win (Pecora, R)

CHEM 279. Physical Chemistry Seminar
Required of graduate students majoring in physical chemistry. May be repeated for credit.
1 unit, Aut (Chidsey, C), Win (Chidsey, C), Spr (Chidsey, C)

CHEM 280. Single-Molecule Spectroscopy and Imaging
Theoretical and experimental techniques necessary to achieve single-molecule sensitivity in laser spectroscopy: interaction of radiation with spectroscopic transitions; systematics of signals, noise, and signal-to-noise; modulation and imaging methods; and analysis of fluctuations; applications to modern problems in biophysics, cellular imaging, physical chemistry, single-photon sources, and materials science. Prerequisites: 271, previous or concurrent enrollment in 273.
3 units, not given this year

CHEM 285. Chemical Principles in Drug Discovery and Development
Application of physical organic chemistry to the discovery and subsequent product development of small molecule and macromolecular drugs. Key physical, chemical, and biological properties of drug candidates, how to measure them, and how to engineer them. Principles of drug formulation and delivery. Recommended: graduate-level background in physical and organic chemistry.
3 units, Aut (Khosla, C)

CHEM 297. Bio-Inorganic Chemistry
(Same as BIOPHYS 297) Overview of metal sites in biology. Metalloproteins as elaborated inorganic complexes, their basic coordination chemistry and bonding, unique features of the protein ligand, and the physical methods used to study active sites. Active site structures are correlated with function. Prerequisites: 153 and 173, or equivalents.
3 units, not given this year

CHEM 299. Teaching of Chemistry
Required of all teaching assistants in Chemistry. Techniques of teaching chemistry by means of lectures and labs.
1-3 units, Aut (Hua, Y), Win (Hua, Y), Spr (Hua, Y)

CHEM 300. Department Colloquium
Required of graduate students. May be repeated for credit.
1 unit, Aut (Trost, B), Win (Trost, B), Spr (Trost, B)

CHEM 301. Research in Chemistry
Required of graduate students who have passed the qualifying examination. Open to qualified graduate students with the consent of the major professor. Research seminars and directed reading deal with newly developing areas in chemistry and experimental techniques. May be repeated for credit. Search for adviser name on Axess.
2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHEM 309. Navigating Career Options for Ph.D. Chemists
Planning a post-graduate career. Topics include career options, job search strategies, job application process, long-term career planning, and minority issues in science careers. Workshops focused on developing professional skills working with CDC and CTL, and panel discussions with chemistry Ph.D.s working in a range of fields. (Zare)
1 unit, not given this year

CHEM 390. Curricular Practical Training for Chemists
For Chemistry majors who need work experience as part of their program of study.
1 unit, Aut (Staff)

CHEM 459. Frontiers in Interdisciplinary Biosciences
(Same as BIO 459, BIOC 459, BIOE 459, CHEMENG 459, PSYCH 459) Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See http://biox.stanford.edu/courses/459.html. Recommended: basic mathematics, biology, chemistry, and physics.
1 unit, Aut (Robertson, C), Win (Robertson, C), Spr (Robertson)

CHEM 802. TGR Dissertation
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHICANA/O STUDIES (CHICANST) COURSES

UNDERGRADUATE COURSES IN CHICANA/O STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

CHICANST 117N. Film, Nation, Latinidad
(Stanford Introductory Seminar) (Same as CSRE 117N, ILAC 117N) Examination of films from Spain, Mexico, and Latina/o USA that expand, trouble, contest, parody, or otherwise interrogate notions of national identity. Filmmakers may include Lourdes Portillo, Alejandro González Iñárritu, John Sayles, Maria Novaro, Pedro Almodóvar, and Gregory Nava.
3-4 units, Spr (Yarbro-Bejarano, Y)

CHICANST 125S. Chicano/Latino Politics
(Same as POLISCI 125S) The political position of Latinos and Latinas in the U.S.. Focus is on Mexican Americans, with attention to Cuban Americans, Puerto Ricans, and other groups. The history of each group in the American polity; their political circumstances with respect to the electoral process, the policy process, and government; the extent to which the demographic category Latino is meaningful; and group identity and solidarity among Americans of Latin American ancestry. Topics include immigration, education, affirmative action, language policy, and environmental justice.
5 units, Aut (Michelson, M)

CHICANST 167. Chicana and Chicano Representation in Cinema
(Same as CSRE 167) Representations of Chicana/os and Latinas/os in independent and Hollywood film and video across genres such as narrative, documentary, and experimental. How film and video are social and artistic phenomenon where cultural and political debates about cultural identity and community are narrated and imagined. Screened works historically situated in relation to the Chicano civil rights movement, the emergence of Chicano film and television, international film movements, the struggle for access to the means for self-representation, and challenges in distribution, exhibition, and reception. The role of visual media in struggles for social change and political enfranchisement. How visual media are a vehicle for creative and personal expression.
5 units, Spr (Staff)

CHICANST 168. New Citizenship: Grassroots Movements for Social Justice in the U.S.
(Same as CSRE 168) This class focuses on the contributions of immigrants and communities of color to the meaning of citizenship in the U.S. Citizenship, more than only a legal status, is a dynamic cultural field in which people claim equal rights while demanding respect for differences. Academic studies of citizenship will be examined in dialogue with the theory and practice of activists and movements. Engagement with immigrant organizing and community-based research will be a central feature of this course.
5 units, Win (Staff)

CHICANST 180E. Introduction to Chicana/o Studies
(Same as CSRE 180E) Historical and contemporary experiences that have defined the status of Mexican-origin people living in the U.S. Topics include the U.S./Mexico border and the borderlands; immigration and anti-immigration sentiment; literary and cultural traditions; music; labor; historical perspectives on Mexicans in the U.S. and the Chicano movement; urban realities; gender relations; political and economic changes; and inter- and intra-group interactions. Sources include social science and humanities scholarship. GER:DB-Hum, EC-AmerCul
5 units, Spr (Gallardo, S)

CHICANST 189W. Language and Minority Rights
(Same as CSRE 189W, EDUC 189X) Language as it is implicated in migration and globalization. The effects of globalization processes on languages, the complexity of language use in migrant and indigenous minority contexts, the connectedness of today's societies brought about by the development of communication technologies. Individual and societal multilingualism; preservation and revival of endangered languages. GER:EC-GlobalCom
3 units, not given this year

CHICANST 199A. Race, Sex, Gender in Cultural Representations
(Same as CSRE 199A, ILAC 389E) Critical theory and cultural representations in media that address issues surrounding the representation of race, gender, sexuality, and politics. How is desire racialized? How is racial difference produced through sex as a material practice and what is the function of sex in racial self formation ? How are questions of pleasure, desire, and the structures of power reconciled? How do these texts reinforce or contest stereotypes and the ideal bodies of national identity? Is it desirable to envision a bridging of queer communities of color, or a transnational or global network?
3-5 units, Spr (Yarbro-Bejarano, Y)

CHICANST 200. Latina/o Literature
(Same as CSRE 200, ILAC 280) Examination of a diverse set of literary texts by Latinas/os, bringing history, politics, and cultural theory to bear in order to apprehend the significant intracultural differences amongst Latinas/os (most notably concerning im/migration). Gender and sexuality as critical lenses that reflect and refract themes such as identity, language politics, transnationalism, political turmoil, socioeconomic status, and the notion of home/land and its loss, reinvention, and/or reclamation
3-5 units, Aut (Yarbro-Bejarano, Y)

CHICANST 200R. Directed Research
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

CHICANST 200W. Directed Reading
(Staff)
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

CHICANST 201B. From Racial Justice to Multiculturalism: Movement-based Arts Organizing in the Post Civil Rights Era
(Same as CSRE 201B) How creative projects build and strengthen communities of common concern. Projects focus on cultural reclamation, multiculturalism, cultural equity and contemporary cultural wars, media literacy, independent film, and community-based art. Guest artists and organizers, films, and case studies.
5 units, Aut (Hernandez, G)

GRADUATE COURSES IN CHICANA/O STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

CHICANST 201C. Critical Concepts in Chicana/o Literature
(Same as CSRE 201C, ILAC 380E) Interrogation of the critical discourses that have configured and reconfigured the canon of Chicana/o literature over the last thirty years. Close textual readings of primary texts, mainly narrative, within the development of Chicana/o literary and cultural criticism. Construction of narrative genealogies and foundational texts. Impact of the publication of late-nineteenth or pre-movement novels and Chicana feminist/lesbian/queer critiques. Consideration of alternative paradigms such as positioning Chicana/o literature within a U.S. Latina/o literary imaginary, and the shift of critical discourse in the field of visual art from a paradigm of resistance and affirmation to one of post-Chicano.
3-5 units, Aut (Yarbro-Bejarano, Y)

CHINESE GENERAL (CHINGEN) COURSES

UNDERGRADUATE COURSES IN CHINESE GENERAL

Primarily for undergraduates; graduate students may enroll with consent of adviser.

CHINGEN 51. Chinese Calligraphy
Practice in writing Chinese characters with a brush, emphasizing standardized script and the composition of the characters and improving handwriting. Limited enrollment. May be repeated for credit. Prerequisite: CHINLANG 3 or equivalent.
1-2 units, Spr (Chuang, Y)

CHINGEN 70N. Marvelous Creatures: Animals and Humans in Chinese Literature
(Stanford Introductory Seminar) Preference to freshmen. Read novels and short stories as well as view films that feature an array of marvelous creatures from late imperial times to the contemporary era. What animal imageries and metaphors can reveal about the Chinese and how they relate to the natural, supernatural, and human worlds across the centuries. GER:DB-Hum, EC-GlobalCom
3-4 units, Spr (Lee, H)

CHINGEN 73. Chinese Language, Culture, and Society
(Same as CHINGEN 173) Topics include the origin of Chinese, development of dialects, emergence of the standard, preferred formulaic expressions, the evolution of writing, and language policies in greater China. Prerequisite: CHINLANG 1 or 1B, or equivalent. GER:DB-SocSci, EC-GlobalCom
4 units, not given this year

CHINGEN 91. Traditional East Asian Culture: China
Required for Chinese and Japanese majors. Introduction to Chinese culture in a historical context. Topics include political and socioeconomic institutions, religion, ethics, education, and art and literature. GER:DB-Hum, EC-GlobalCom
5 units, Aut (Lee, H)

CHINGEN 114. Chinese Imagination of Death
(Same as EASTASN 114, EASTASN 214) Examines the popular representations and imaginations of death and the afterlife in the Chinese tradition. Sources include philosophical discourses, literary and visual representations, religious and popular practices, and modern imaginations. All readings in English.
3-4 units, Win (Son, S), given once only

CHINGEN 117. Worship of Buddhist Images in Medieval China
(Same as CHINGEN 217) Explores Buddhist image-making practices from Han to Tang China from a trans-Asian perspective. Topics include characteristics of earliest Chinese images (vis-a-vis those of Indian subcontinent), their growth as a dominant artistic genre, inroads of foreign images and Chinese interactions, con-

structions of Buddhist ritual spaces such as monumental pagodas and cave temples, crosscultural contexts of image worship.

3-5 units, Spr (Staff)

CHINGEN 119. Popular Culture and Casino Capitalism in China

(Same as CHINGEN 219) Examination of different forms of Chinese popular culture used to gauge or control fate and uncertainty, from geomancy and qigong to ghost culture and mahjong. Ways in which Chinese are incorporating these cultural forms into the informal economy to get rich quick: rotating credit associations, stock market speculation, pyramid schemes, underground lotteries, counterfeiting. Impact of casino capitalism on Chinese culture and social life today.

3-4 units, not given this year

CHINGEN 120. Soldiers and Bandits in Chinese Culture

(Same as CHINGEN 220) Social roles and literary images of two groups on the margins of traditional Chinese society; historical and comparative perspectives.

3-5 units, not given this year

CHINGEN 121. Classical Chinese Rituals

(Same as CHINGEN 221) Meanings of rituals regarding death, wedding, war, and other activities; historical transformations of classical rituals throughout the premodern period; legacy of the Chinese ritual tradition. Sources include canonical texts.

3-5 units, not given this year

CHINGEN 131. Chinese Poetry in Translation

(Same as CHINGEN 231) From the first millennium B.C. through the 12th century. Traditional verse forms representative of the classical tradition; highlights of the most distinguished poets. History, language, and culture. Chinese language not required. GER:DB-Hum, EC-GlobalCom

4 units, Win (Sargent, S)

CHINGEN 132. Chinese Fiction and Drama in Translation

(Same as CHINGEN 232) From early times to the 18th century, emphasizing literary and thematic discussions of major works in English translation. GER:DB-Hum, EC-GlobalCom

4 units, not given this year

CHINGEN 133. Literature in 20th-Century China

(Same as CHINGEN 233) (Graduate students register for 233.) How modern Chinese culture evolved from tradition to modernity; the century-long drive to build a modern nation state and to carry out social movements and political reforms. How the individual developed modern notions of love, affection, beauty, and moral relations with community and family. Sources include fiction and film clips. GER:DB-Hum, EC-GlobalCom

4-5 units, Aut (Wang, B)

CHINGEN 134. Early Chinese Mythology

(Same as CHINGEN 234) The definition of a myth. Major myths of China prior to the rise of Buddhism and Daoism including: tales of the early sage kings such as Yu and the flood; depictions of deities in the underworld; historical myths; tales of immortals in relation to local cults; and tales of the patron deities of crafts. GER:DB-Hum

3-5 units, not given this year

CHINGEN 136. The Chinese Family

(Same as CHINGEN 236) History and literature. Institutional, ritual, affective, and symbolic aspects. Perspectives of gender, class, and social change. GER:EC-GlobalCom

3-5 units, Spr (Zhou, Y)

CHINGEN 137. Tiananmen Square: History, Literature, Iconography

(Same as CHINGEN 237) Multidisciplinary. Literary and artistic representations of this site of political and ideological struggles throughout the 20th century. Tiananmen-themed creative, documentary, and scholarly works that shed light on the dynamics and processes of modern Chinese culture and politics. No knowledge of Chinese required. GER:DB-Hum, EC-GlobalCom

3-5 units, not given this year

CHINGEN 138. Love and Politics in Chinese Cinema

(Same as CHINGEN 238) How films work as expressions of desire, impulse, emotional connection, and communal attachment during times of social upheaval and reconstruction. Film theory and aesthetics, and alternative paradigms about world and social relations. Chinese language not required. GER:DB-Hum

4-5 units, not given this year

CHINGEN 139. Cultural Revolution as Literature

(Same as CHINGEN 239) Literary form, aesthetic sensibility, and themes of trauma, identity, and the limits of representation in major literary works concerning the Cultural Revolution in China. Recommended: background in Chinese history or literature.

4 units, not given this year

CHINGEN 140. Chinese Justice: Law, Morality, and Literature

(Same as CHINGEN 240) Explores the relationship between law and morality in Chinese literature, culture, and society. Readings include court case romances, crime plays, detective novels, and legal dramas from traditional era and modern and contemporary periods. Prior coursework in Chinese history, civilization, or literature is recommended. All readings are in English. GER:EC-GlobalCom

3-5 units, Spr (Lee, H)

CHINGEN 141. Emergence of Chinese Civilization from Caves to Palaces

(Same as ARCHLGY 111, CHINGEN 241) Introduces processes of cultural evolution from the Paleolithic to the Three Dynasties in China. By examining archaeological remains, ancient inscriptions, and traditional texts, four major topics will be discussed: origins of modern humans, beginnings of agriculture, development of social stratification, and emergence of states and urbanism.

3-4 units, Spr (Staff)

CHINGEN 142. Early Chinese Thought

(Same as CHINGEN 342) The classical age of Chinese philosophy, when the major intellectual traditions that defined Chinese thought were first formulated and elaborated. How each of the traditions developed in response to problems presented by the social background and by other traditions. Texts attributed to Confucius, Mozi, Sunzi, Yangists, Mencius, early histories, Zhuangzi, Laozi, Xunzi, Shang Yang, Han Fei, the Guodian texts, early encyclopedic works.

3-5 units, Win (Lewis, M)

CHINGEN 193E. Female Divinities in China

(Same as CHINGEN 393E) The role of powerful goddesses, such as the Queen Mother of the West, Guanyin, and Chen Jinggu, in Chinese religion. Imperial history to the present day. What roles goddesses played in the spirit world, how this related to the roles of human women, and why a civilization that excluded women from the public sphere granted them such a major, even dominant place, in the religious sphere. Readings in English-language secondary literature. GER:DB-Hum, EC-Gender

3-5 units, not given this year

CHINGEN 198. Senior Colloquium in Chinese Studies

Students research, write, and present a capstone essay or honors thesis.

1 unit, Win (Zhou, Y)

GRADUATE COURSES IN CHINESE GENERAL

Primarily for graduate students; undergraduates may enroll with consent of instructor.

CHINGEN 173. Chinese Language, Culture, and Society

(Same as CHINGEN 73) Topics include the origin of Chinese, development of dialects, emergence of the standard, preferred formulaic expressions, the evolution of writing, and language policies in greater China. Prerequisite: CHINLANG 1 or 1B, or equivalent.

4 units, not given this year

CHINGEN 200. Directed Readings in Asian Languages

For Chinese literature. Prerequisite: consent of instructor. (Staff)

1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHINGEN 201. Teaching Chinese Humanities

Prepares graduate students to teach humanities at the undergraduate level. Topics include syllabus development and course design,

techniques for generating discussion, effective grading practices, and issues particular to the subject matter.

1 unit, Win (Staff)

CHINGEN 217. Worship of Buddhist Images in Medieval China

(Same as CHINGEN 117) Explores Buddhist image-making practices from Han to Tang China from a trans-Asian perspective. Topics include characteristics of earliest Chinese images (vis-a-vis those of Indian subcontinent), their growth as a dominant artistic genre, inroads of foreign images and Chinese interactions, constructions of Buddhist ritual spaces such as monumental pagodas and cave temples, cross-cultural contexts of image worship.

3-5 units, Spr (Staff)

CHINESE LANGUAGE (CHINLANG) COURSES

UNDERGRADUATE COURSES IN CHINESE LANGUAGE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

CHINLANG 1. First-Year Modern Chinese, First Quarter

Conversation, grammar, reading, elementary composition. Daily sections may be set at the beginning of the quarter to suit schedule requirements.

5 units, Aut (Zeng, H)

CHINLANG 1B. First-Year Modern Chinese for Bilingual Students, First Quarter
For students with elementary comprehension and speaking skills who need work on conversation, grammar, reading, and composition.
3 units, Aut (Rozelle, Y)

CHINLANG 2. First-Year Modern Chinese, Second Quarter
Continuation of 1. Daily sections may be set at the beginning of the quarter to suit schedule requirements.
5 units, Win (Zeng, H)

CHINLANG 2B. First-Year Modern Chinese for Bilingual Students, Second Quarter
Continuation of 1B.
3 units, Win (Rozelle, Y)

CHINLANG 3. First-Year Modern Chinese, Third Quarter
Continuation of 2. Daily sections may be set at the beginning of the quarter to suit schedule requirements. Fulfills the University language requirement.
5 units, Spr (Zeng, H)

CHINLANG 3B. First-Year Modern Chinese for Bilingual Students, Third Quarter
Continuation of 2B.
3 units, Spr (Rozelle, Y)

CHINLANG 5. Intensive First-Year Modern Chinese
Equivalent to 1,2,3 combined if taken together with the Beijing portion of the Summer Program. Five weeks at Stanford and four weeks at Peking University.
8 units, Sum (Staff)

CHINLANG 6. Beginning Conversational Chinese, First Quarter
Three quarter sequence. Basic language skills in Mandarin to function abroad.
2 units, Aut (Rozelle, Y)

CHINLANG 7. Beginning Conversational Chinese, Second Quarter
Continuation of 6.
2 units, Win (Rozelle, Y)

CHINLANG 8. Beginning Conversational Chinese, Third Quarter
Continuation of 7.
2 units, Spr (Rozelle, Y)

CHINLANG 15. Beginning Conversational Cantonese, First Quarter
Three quarter sequence. Basic language skills for everyday life situations and for functioning abroad. 15: Aut, 16: Win, 17: Spr. Internet tools will be incorporated in this course.
2 units, Aut (Dennig, S)

CHINLANG 15M. Beginning Conversational Cantonese for Mandarin Speakers, First Quarter
Conversational skills and special written characters in Cantonese. Internet tools will be incorporated in this course.
2 units, Aut (Dennig, S)

CHINLANG 16. Beginning Cantonese Conversation, Second Quarter
Continuation of 15.
2 units, Win (Dennig, S)

CHINLANG 16M. Beginning Conversational Cantonese for Mandarin Speakers, Second Quarter
Continuation of 15M.
2 units, Win (Dennig, S)

CHINLANG 17. Beginning Conversational Cantonese, Third Quarter
Continuation of 16.
2 units, Spr (Dennig, S)

CHINLANG 17M. Beginning Conversational Cantonese for Mandarin Speakers, Third Quarter
Continuation of 16M.
2 units, Spr (Dennig, S)

CHINLANG 18. Intermediate Cantonese Conversation, First Quarter
Continuation of CHINLANG 17. Further develop students' conversational skills and expand their vocabulary and grammar for talking about a wide range of topics relevant to college students. Internet tools will be incorporated in this course.
2 units, Aut (Dennig, S)

CHINLANG 19. Intermediate Conversational Cantonese, Second Quarter
Continuation of 18 or 18M.
2 units, Win (Dennig, S)

CHINLANG 20. Intermediate Conversational Cantonese, Third Quarter
Continuation of 19 or 19M.
2 units, Spr (Dennig, S)

CHINLANG 20A. Advanced Conversational Cantonese, First Quarter
Viewing and discussion of authentic multimedia materials on cultural topics and current events: movies, video clips, radio, TV broadcasts, and Internet tools. Prerequisite 20 or consent of instructor.
2 units, Aut (Dennig, S)

CHINLANG 20B. Advanced Conversational Cantonese, Second Quartet
Prerequisite 20A or consent of instructor.
2 units, Win (Dennig, S)

CHINLANG 20C. Advanced Cantonese Conversation - Third Quarter
Continuation of 20B. Improving Cantonese through Hong Kong movies. Prerequisite 20B or consent of instructor.
2 units, Spr (Dennig, S)

CHINLANG 21. Second-Year Modern Chinese, First Quarter
Grammar, reading, conversation, composition. Daily sections may be set at the beginning of the quarter to suit schedule requirements. Prerequisite: 3 or equivalent. 21: Aut, 22: Win, 23: Spr
5 units, Aut (Chung, M)

CHINLANG 21B. Second-Year Modern Chinese for Bilingual Students, First Quarter
For students with advanced comprehension and speaking skills, but lacking equivalent knowledge of grammar, reading, and writing Chinese characters. Equivalent to 21,22,23. 21B: Aut, 22B: Win, 23B: Spr
3 units, Aut (Zhu, Q)

CHINLANG 22. Second-Year Modern Chinese, Second Quarter
Prerequisite: 21 or equivalent.
5 units, Win (Chung, M)

CHINLANG 22B. Second-Year Chinese for Bilingual Students, Second Quarter
Continuation of 21B. Prerequisite 21B.
3 units, Win (Zhu, Q)

CHINLANG 23. Second-Year Modern Chinese, Third Quarter
Prerequisite: 22 or equivalent.
5 units, Spr (Chung, M)

CHINLANG 23B. Second-Year Chinese for Bilingual Students, Third Quarter
Continuation of 22B. Prerequisite 22B.
3 units, Spr (Zhu, Q)

CHINLANG 24A. Second-Year Comprehensive Cantonese, First Quarter
5 units, not given this year

CHINLANG 24B. Second-Year Comprehensive Cantonese, Second Quarter
Continuation of 24A.
5 units, not given this year

CHINLANG 24C. Second-Year Comprehensive Cantonese, Third Quarter
Continuation of 24B.
5 units, not given this year

CHINLANG 25. Intensive Second-Year Modern Chinese
Equivalent to 21,22,23 combined if taken together with the Beijing portion of the Summer Program. Five weeks at Stanford and four weeks at Peking University. Prerequisite: 3 or equivalent.
8 units, Sum (Chung, M)

CHINLANG 27. Intermediate Chinese Conversation, First Quarter
Prerequisite: 3 or consent of instructor.
2 units, Aut (Zhang, Y)

CHINLANG 28. Intermediate Chinese Conversation, Second Quarter
Continuation of 27. Prerequisite: 27 or consent of instructor.
2 units, Win (Zhang, Y)

CHINLANG 29. Intermediate Chinese Conversation, Third Quarter
Continuation of 28. Prerequisite: 28 or consent of instructor.
2 units, Spr (Zhang, Y)

CHINLANG 31E. Accelerated Beginning Mandarin for Engineering Students, First Quarter
Restricted to engineering students participating in the China Internship Program. Commercial, economic, and business-related vocabulary. Materials include formal business conversations, newspaper and journal articles, and TV news on trade and economic. Technical language and business etiquette. Student oral and written reports on their own research regarding recent economic developments, using sources in China. Prerequisite: 23 or equivalent. Grad students enroll in 331E.
2-5 units, Spr (Staff)

CHINLANG 99. Language Specials
Prerequisite: consent of instructor. (Staff)
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

CHINLANG 101. Third-Year Modern Chinese, First Quarter
Written and spoken styles of modern Chinese. Reading and discussion of authentic writings on cultural topics; newspaper reports, radio, and TV broadcasts and films; online Chinese software and email network to facilitate study. Prerequisite: 23 or equivalent. 101: Aut, 102: Win, 103: Spr
5 units, Aut (Wang, H)

CHINLANG 101B. Third-Year Modern Chinese for Bilingual Students, First Quarter
For students with advanced listening and speaking abilities, but lacking equivalent knowledge in reading and writing. Equivalent to 101.
3 units, Aut (Wang, H)

CHINLANG 102. Third-Year Modern Chinese, Second Quarter
Continuation of 101. Prerequisite: 101 or equivalent.
5 units, Win (Wang, H)

CHINLANG 102B. Third-Year Modern Chinese for Bilingual Students, Second Quarter
Continuation of 101B. Equivalent of 102.
3 units, Win (Wang, H)

CHINLANG 103. Third-Year Modern Chinese, Third Quarter
Continuation of 102. Prerequisite: 102.
5 units, Spr (Wang, H)

CHINLANG 103B. Third-Year Modern Chinese for Bilingual Students, Third Quarter
Continuation of 102B. Equivalent of 103.
3 units, Spr (Wang, H)

CHINLANG 105. Intensive Third-Year Modern Chinese
Equivalent to 101,102,103 combined if taken together with the Beijing portion of the Summer Program. Five weeks at Stanford and four weeks at Peking University. Prerequisite: 23 or equivalent.
8 units, Sum (Wang, H)

CHINLANG 121. Advanced Chinese Conversation, First Quarter
Prerequisite: 23 or equivalent.
2 units, Aut (Chung, M)

CHINLANG 122. Advanced Chinese Conversation, Second Quarter
Prerequisite: 122 or equivalent.
2 units, Win (Chung, M)

CHINLANG 123. Advanced Chinese Conversation, Third Quarter
Continuation of 122. Prerequisite: 122 or equivalent.
2 units, Spr (Chung, M)

CHINLANG 131. Business Chinese, First Quarter
Commercial, economic, and business-related vocabulary. Materials include formal business conversations, newspaper and journal articles, and TV news on trade and economic. Technical language and business etiquette. Student oral and written reports on their own research regarding recent economic developments, using sources in China. Prerequisite: 23 or equivalent.
3-4 units, Aut (Wang, H)

CHINLANG 132. Business Chinese, Second Quarter
Continuation of 131. Prerequisite: 131 or equivalent.
3-4 units, Win (Wang, H)

CHINLANG 133. Business Chinese, Third Quarter
Continuation of 132. Prerequisite: 132 or equivalent.
3-4 units, Spr (Wang, H)

CHINLANG 200. Directed Reading
May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

CHINLANG 211. Fourth-Year Modern Chinese, First Quarter
Year-long sequence. Goal is to become functional speakers, readers, and writers of modern Chinese through articles and essays from newspapers, magazines, scholarly journals, and the Internet. Cultural and social science themes: students may take both themes for 5 units or one theme for reduced units. Prerequisite211: Aut, 212: Win, 213: Spr
2-5 units, Aut (Zhu, Q)

CHINLANG 211B. Fourth year Modern Chinese for Bilingual Students, First Quarter
Emphasis is on listening, speaking, reading, and writing. The main textbook for the class is Boya Hanyu: Feixiang pian, comprised of well-crafted essays rich in vocabulary. In-depth discussions; goal is to help students develop a natural feel for word choice, sentence structure, and paragraph organization.
3 units, Aut (Zhu, Q)

CHINLANG 212. Fourth-Year Modern Chinese, Second Quarter
Continuation of 211. Prerequisite: 211.
2-5 units, Win (Zhu, Q)

CHINLANG 212B. Fourth-Year Modern Chinese for Bilingual Students, Second Quarter
Emphasis is on listening, speaking, reading, and writing. The main textbook for the class is Boya Hanyu: Feixiang pian, comprised of well-crafted essays rich in vocabulary. In-depth discussions; goal is to help students develop a natural feel for word choice, sentence structure, and paragraph organization.
3 units, Win (Staff)

CHINLANG 213. Fourth-Year Modern Chinese, Third Quarter
Continuation of 212. Prerequisite: 212.
2-5 units, Spr (Zhu, Q)

CHINLANG 213B. Fourth-Year Modern Chinese for Bilingual Students. Third Quarter
Emphasis is on listening, speaking, reading, and writing. The main textbook for the class is Boya Hanyu: Feixiang pian, comprised of well-crafted essays rich in vocabulary. In-depth discussions; goal is to help students develop a natural feel for word choice, sentence structure, and paragraph organization.
3 units, Spr (Staff)

CHINLANG 221. Fourth-Year Modern Chinese for Social Science Students, First Quarter
Goal is to become functional speakers, readers, and writers of modern Chinese through articles, essays, newspapers, magazines, and scholarly journals in social sciences. Prerequisite: three years of Chinese. 221.
3 units, not given this year

CHINLANG 222. Fourth-Year Modern Chinese for Social Science Students, Second Quarter
Continuation of 221. Prerequisite: 221.
3 units, not given this year

CHINLANG 223. Fourth-Year Modern Chinese for Social Science Students, Third Quarter
Continuation of 222. Prerequisite: 222.
3 units, not given this year

CHINLANG 231. Fifth-Year Modern Chinese: Cultural China, First Quarter
Year-long sequence. Rhetorical devices through essays about China's cultural journey in relationship to geographical regions.
2-5 units, Aut (Staff)

CHINLANG 232. Fifth-Year Modern Chinese: Cultural China, Second Quarter
Continuation of 231.
2-5 units, Win (Staff)

CHINLANG 233. Fifth-Year Modern Chinese: Cultural China, Third Quarter
Continuation of 232.
2-5 units, Spr (Zhu, Q)

GRADUATE COURSES IN CHINESE LANGUAGE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

CHINLANG 31G. Accelerated Beginning Mandarin I
For GSB students only.
4 units, Win (DiBello, M)

CHINLANG 32G. Accelerated Beginning Mandarin II
For GSB students only.
4 units, Spr (DiBello, M)

CHINLANG 33G. Accelerated Beginning Mandarin III
For GSB students only.
4 units, Aut (DiBello, M)

CHINLANG 199. individual Reading
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

CHINLANG 205S. Intensive Third-Year Modern Chinese
Equivalent to 101, 102, 103 if taken together with the Beijing portion of the Summer Program. Five weeks at Stanford and four weeks at Peking University. Prerequisite: 23 or equivalent. Grads only.
8 units, Sum (Staff)

CHINLANG 331E. Beginning Madarin for Engineering Students, First Quarter
Restricted to graduate engineering students participating in the China Internship Program. Commercial, economic, and business-related vocabulary. Materials include formal business conversations, newspaper and journal articles, and TV news on trade and economic. Technical language and business etiquette. Student oral and written reports on their own research regarding recent economic developments, using sources in China. Prerequisite: 23 or equivalent.Prerequisite: consent of instructor.
2-5 units, Spr (Staff)

CHINLANG 394. Graduate Studies in Chinese Conversation
Prerequisite: consent of instructor.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

CHINLANG 395. Graduate Studies in Chinese
Prerequisite: consent of instructor.
2-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHINESE LITERATURE (CHINLIT) COURSES

UNDERGRADUATE COURSES IN CHINESE LITERATURE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

CHINLIT 125. Beginning Classical Chinese, First Quarter
(Same as CHINLIT 205) Goal is reading knowledge of classical Chinese. Basic grammar and commonly used vocabulary. Students with no background in classical Chinese who are taking 127 to satisfy Chinese major requirements must begin with 125. Prerequisite: CHINLANG 23 or equivalent.
2-5 units, Aut (Sun, C)

CHINLIT 126. Beginning Classical Chinese, Second Quarter
(Same as CHINLIT 206) Goal is reading knowledge of classical Chinese. Basic grammar and commonly used vocabulary. Students with no background in classical Chinese who are taking 127/207 to satisfy Chinese major requirements must begin with 125/205. Prerequisite: CHINLANG 125/205 or equivalent.
2-5 units, Win (Sun, C)

CHINLIT 127. Beginning Classical Chinese, Third Quarter
(Same as CHINLIT 207) Goal is reading knowledge of classical Chinese. Basic grammar and commonly used vocabulary. Students with no background in classical Chinese who are taking 127/207 to satisfy Chinese major requirements must begin with 125/205. Prerequisite: CHINLANG 126/206 or equivalent.
2-5 units, Spr (Zhou, Y)

CHINLIT 161. Passion in Late Imperial Literature
(Same as CHINLIT 261A) The treatment of romantic passion and related emotions in late imperial fiction and theater. Focus is on secondary literature. GER:DB-Hum
4 units, Win (Lewis, M)

CHINLIT 174. Modern Chinese Novel: Theory, Aesthetics, History
(Same as CHINLIT 274, COMPLIT 254) From the May Fourth movement to the 40s. Themes include enlightenment, democracy, women's liberation, revolution, war, urban culture, and love. Prerequisite: advanced Chinese.
4 units, Aut (Wang, B)

CHINLIT 189A. Honors Research
2-5 units, Aut (Staff), Spr (Staff)

CHINLIT 189B. Honors Research
Open to senior honors students to write thesis.
5 units, Win (Staff)

CHINLIT 190. Chinese Cultural Revolution: Performance, Politics, and Aesthetics
(Same as CHINLIT 290, COMPLIT 135) Events, arts, films, and operas of the Chinese Cultural Revolution. Analysis of political passion, aesthetics, and psychology of mass movements. Places the Cultural Revolution in the long-range context of art, social movements, and politics. Chinese language is not required.
4 units, Win (Wang, B)

CHINLIT 191. The Structure of Modern Chinese
(Same as CHINLIT 291) Focus is on on syntax and semantics. Prerequisite: CHINLANG 3 or equivalent, or consent of instructor. GER:DB-SocSci
2-4 units, Aut (Sun, C)

CHINLIT 199. Individual Reading in Chinese
Asian Language majors only. Prerequisite: CHINLANG 103 or consent of instructor. Units by arrangement.
1-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN CHINESE LITERATURE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

CHINLIT 200. Directed Reading in Chinese
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHINLIT 201. Proseminar: Bibliographic and Research Methods in Chinese Studies
Bibliographic and research methods in Chinese studies. Prerequisite: 127/207 or equivalent.
3-5 units, not given this year

CHINLIT 205. Beginning Classical Chinese, First Quarter
(Same as CHINLIT 125) Goal is reading knowledge of classical Chinese. Basic grammar and commonly used vocabulary. Students with no background in classical Chinese who are taking 127 to satisfy Chinese major requirements must begin with 125. Prerequisite: CHINLANG 23 or equivalent.
2-5 units, Aut (Sun, C)

CHINLIT 206. Beginning Classical Chinese, Second Quarter
(Same as CHINLIT 126) Goal is reading knowledge of classical Chinese. Basic grammar and commonly used vocabulary. Students with no background in classical Chinese who are taking 127/207 to satisfy Chinese major requirements must begin with 125/205. Prerequisite: CHINLANG 125/205 or equivalent.
2-5 units, Win (Sun, C)

CHINLIT 207. Beginning Classical Chinese, Third Quarter
(Same as CHINLIT 127) Goal is reading knowledge of classical Chinese. Basic grammar and commonly used vocabulary. Students with no background in classical Chinese who are taking 127/207 to satisfy Chinese major requirements must begin with 125/205. Prerequisite: CHINLANG 126/206 or equivalent.
2-5 units, Spr (Zhou, Y)

CHINLIT 218. Constructing National History in East Asian Archaeology
(Same as ARCHLGY 302) Archaeological studies in contemporary East Asia share a common concern, to contribute to building a national narrative and cultural identity. This course focuses on case studies from China, Korea, and Japan, examining the influence of particular social-political contexts, such as nationalism, on the practice of archaeology in modern times.
2-4 units, Spr (Staff)

CHINLIT 221. Advanced Classical Chinese: Philosophical Texts
Prerequisite: 207 or equivalent.
3-5 units, not given this year

CHINLIT 222. Advanced Classical Chinese: Historical Narration
Prerequisite: 127/207 or equivalent.
2-5 units, not given this year

CHINLIT 223. Advanced Classical Chinese: Literary Essays
Readings and grammatical analyses of literary essays thoughout imperial China. Prerequisite: CHINLIT 127/207 or equivalent.
2-5 units, Win (Wang, J)

CHINLIT 232. Chinese Biographies of Women
Generic and historical analysis of the two-millennia long biographical tradition inaugurated by Liu Xiang, ca. 79-8 B.C.E. Chinese women's history, intellectual history, historiography, and literary studies. Prerequisite: 127/207 or consent of instructor.
4 units, not given this year

CHINLIT 261. Sources of Chinese Poetry
The Book of Songs(ca. 1000-500 B.C.E.) and Songs of Chu (ca. 400 B.C.E.), the earliest anthologies of Chinese poetry.
4 units, not given this year

CHINLIT 261A. Passion in Late Imperial Literature
(Same as CHINLIT 161) The treatment of romantic passion and related emotions in late imperial fiction and theater. Focus is on secondary literature.
4 units, Win (Lewis, M)

CHINLIT 263. Lyric (Shih) I
Han through Sui dynasties.
2-4 units, not given this year

CHINLIT 265. Major Figures in Classical Chinese Shi Poetry
Focus is on a major poet and relationships to previous and later poetry. Poetic form, including meter and rhyme schemes. Historical context. This year's poet is Tao Yuanming. May be repeated for credit. Prerequisites: 201, 207.
2-4 units, Spr (Sargent, S)

CHINLIT 266. Chinese Tz'u Poetry (Song Lyrics)
Highlights from the Northern and Southern Sung periods. Patterns of generic development correlated to social changes in historical context. Prerequisite: classical Chinese.
4 units, not given this year

CHINLIT 271. Traditional Chinese Fiction: Short Stories
Early times to Qing. Prerequisite: 127/207 or consent of instructor.
2-4 units, not given this year

CHINLIT 272. Traditional Chinese Fiction: Novels
Major novels of late imperial China. Prerequisite: 127/207 or consent of instructor.
2-4 units, not given this year

CHINLIT 273. Chinese Drama
Yuan, Ming, and Qing periods emphasizing literary not theatrical qualities. Prerequisite: 127/207 or consent of instructor.
2-4 units, Aut (Wang, J)

CHINLIT 274. Modern Chinese Novel: Theory, Aesthetics, History
(Same as CHINLIT 174, COMPLIT 254) From the May Fourth movement to the 40s. Themes include enlightenment, democracy, women's liberation, revolution, war, urban culture, and love. Prerequisite: advanced Chinese.
4 units, Aut (Wang, B)

CHINLIT 279. For Love of Country: National Narratives in Chinese Literature and Film
Explores the nation as it is constructed, deconstructed, and continuously contested in novels, short stories, films, and other media from the second half of the 20th century in mainland China and Taiwan. Asks how the trope of the nation and the ideology of nationalism mediate the relationships between politics and aesthetics. Explores the nation's internal fault lines of gender, ethnicity, geography, language, and citizenship.
3-5 units, Aut (Lee, H)

CHINLIT 289. The Poetics and Politics of Affect in Modern China
The role of affect in modern Chinese aesthetics and politics. Cultural and social theories of affect (love, hate, fear, grief, ressentiment, rage, sympathy, sincerity, shame, and nostalgia); affective discourses across agenres and media including fiction, poetry, film, journalism, and television; and mass social movements such as protest, uprising, and revolution. Advanced undergraduates requires consent of instructor. Recommended: reading knowledge of Chinese.
3-5 units, not given this year

CHINLIT 290. Chinese Cultural Revolution: Performance, Politics, and Aesthetics
(Same as CHINLIT 190, COMPLIT 135) Events, arts, films, and operas of the Chinese Cultural Revolution. Analysis of political passion, aesthetics, and psychology of mass movements. Places the Cultural Revolution in the long-range context of art, social movements, and politics. Chinese language is not required.
4 units, Win (Wang, B)

CHINLIT 291. The Structure of Modern Chinese
(Same as CHINLIT 191) Focus is on on syntax and semantics. Prerequisite: CHINLANG 3 or equivalent, or consent of instructor.
2-4 units, Aut (Sun, C)

CHINLIT 299. Master's Thesis or Translation
A total of 5 units taken in one or more quarters.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHINLIT 369. Late Imperial Chinese Fiction
Primary works examined include Jin Ping Mei, Xingshi yinyuan zhuan, Hongloumeng, Qilu deng, Rulin waishi, and Ernu yingxiong zhuan. Secondary readings focus on social dimensions of the Chinese novel (ca. 1600-1850), but students may explore other aspects of the texts in their presentations and research papers. Comparisons with the English novel, particularly on the rise of the novel and the advent of modernity.
2-5 units, Win (Zhou, Y)

CHINLIT 371. Seminar in Chinese Literary Criticism
(Same as COMPLIT 371) How aesthetics and politics intertwine and break apart in Western and Eastern traditions. Aesthetics for understanding culture, morality, and power in crosscultural contexts. Readings include Hegel, Kant, Marcuse, Lukacs, and Adorno; and Chinese thinkers Wang Guowei, Lu Xun, Li Zehou, and Mao. Prerequisite: CHINLIT 127/207 or consent of instructor.
2-5 units, not given this year

CHINLIT 399. Dissertation Research
1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CHINLIT 400. Advanced Language Training
For students in the Inter-University Program for Chinese Language Studies in Beijing or Taipei. For more information, contact the consortium office at UC Berkeley: (510) 642-3873, or see http://ieas.berkeley.edu/iup/contact_iup.html.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

CIVIL AND ENVIRONMENTAL ENGINEERING (CEE) COURSES

UNDERGRADUATE COURSES IN CIVIL AND ENVIRONMENTAL ENGINEERING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

CEE 31Q. Accessing Architecture Through Drawing
(Stanford Introductory Seminar) Preference to sophomores. Drawing architecture provides a deeper understanding of the intricacies and subtleties that characterize contemporary buildings. How to dissect buildings and appreciate the formal elements of a building, including scale, shape, proportion, colors and materials, and the problem solving reflected in the design. Students construct conventional architectural drawings, such as plans, elevations, and perspectives. Limited enrollment. GER:DB-EngrAppSci
4 units, Aut (Barton, J), Win (Barton, J)

CEE 32Q. Place: Making Space Now
(Stanford Introductory Seminar) This seminar argues that architects are ultimately place-makers and questions what that means in the contemporary world. The idea of contemporary place-making includes a critique of the history of modern place-making through an examination of modern form, a discussion of non-places and the role of cyber technologies in making space and place, as well as the nature of in-between spaces.
3 units, Spr (Barton, J; Beischer, T)

CEE 63. Weather and Storms
(Same as CEE 263C) Daily and severe weather and global climate. Topics: structure and composition of the atmosphere, fog and cloud formation, rainfall, local winds, wind energy, global circulation, jet streams, high and low pressure systems, inversions, el Niño, la Niña, atmosphere/ocean interactions, fronts, cyclones, thunderstorms, lightning, tornadoes, hurricanes, pollutant transport, global climate and atmospheric optics. GER:DB-NatSci
3 units, Aut (Jacobson, M)

CEE 64. Air Pollution: From Urban Smog to Global Change
(Same as CEE 263D) Survey of urban- through global-scale air pollution. Topics: the evolution of the Earth's atmosphere, indoor air pollution, urban smog formation, history of discovery of atmosphere chemicals, visibility, acid rain, the greenhouse effect, historical climate, global warming, stratospheric ozone reduction, Antarctic ozone destruction, air pollution transport across political boundaries, the effects of air pollution on ultraviolet radiation, and impacts of energy systems on the atmosphere. GER:DB-NatSci
3 units, Win (Jacobson, M)

CEE 70. Environmental Science and Technology
Introduction to environmental quality and the technical background necessary for understanding environmental issues, controlling environmental degradation, and preserving air and water quality. Material balance concepts for tracking substances in the environmental and engineering systems. GER:DB-EngrAppSci
3 units, Aut (Kopperud, R)

CEE 70N. Water, Public Health, and Engineering
(Stanford Introductory Seminar) Preference to sophomores. Linkages between water, wastewater and public health, with an emphasis on engineering interventions. Topics include the history of water and wastewater infrastructure development in the U.S. and Europe; evolution of epidemiological approaches for water-related health challenges; biological and chemical contaminants in water and wastewater and their management; and current trends and challenges in access to water and sanitation around the world. How to identify ways in which freshwater contributes to human health; exposure routes for water- and sanitation-illness; how to classify these illnesses by pathogen type and their geographic distribution; how to identify the health and economic consequences of water- and sanitation-related illnesses; costs and benefits of curative and preventative interventions; and how to interpret data related to epidemiological concepts. No previous experience in engineering is required. GER:DB-EngrAppSci
3 units, Spr (Davis, J)

CEE 80N. The Art of Structural Engineering
(Stanford Introductory Seminar) Preference to freshmen. The history of modern bridges, buildings, and other large-scale structures. Students learn about modern structures, the social context in which they are built and their symbolic value. Principles of structural engineering and calculating efficiency and safety taught through case studies. Field trip to Bay Area landmark and hands-on exercises including building and testing a model bridge. Students from all backgrounds welcome. GER:DB-EngrAppSci
4 units, Aut (Billington, S)

CEE 100. Managing Sustainable Building Projects
Managing the life cycle of buildings from the owner, designer, and contractor perspectives emphasizing sustainability goals; methods to define, communicate, coordinate, and manage multidisciplinary project objectives including scope, quality, life cycle cost and value, schedule, safety, energy, and social concerns; roles, responsibilities, and risks for project participants; virtual design and construction methods for product, organization, and process modeling; lifecycle assessment methods; individual writing assignment related to a real world project. GER:DB-EngrAppSci
4 units, Spr (Fischer, M)

CEE 101A. Mechanics of Materials
Introduction to beam and column theory. Normal stress and strain in beams under various loading conditions; shear stress and shear flow; deflections of determinate and indeterminate beams; analysis of column buckling; structural loads in design; strength and serviceability criteria. Lab experiments. Prerequisites: ENGR 14. GER:DB-EngrAppSci
4 units, Win (Baker, J)

CEE 101B. Mechanics of Fluids
Physical properties of fluids and their effect on flow behavior; equations of motion for incompressible ideal flow, including the special case of hydrostatics; continuity, energy, and momentum principles; control volume analysis; laminar and turbulent flows; internal and external flows in specific engineering applications including pipes, open channels, estuaries, and wind turbines. Prerequisites: PHYSICS 41 (formerly 53), MATH 51. GER:DB-EngrAppSci
4 units, Spr (Koseff, J)

CEE 101C. Geotechnical Engineering
Introduction to the principles of soil mechanics. Soil classification, shear strength and stress-strain behavior of soils, consolidation theory, analysis and design of earth retaining structures, introduction to shallow and deep foundation design, slope stability. Lab projects. Prerequisite: ENGR 14. Recommended: 101A. GER:DB-EngrAppSci
3-4 units, Aut (Borja, R)

CEE 101D. Computations in Civil and Environmental Engineering
(Same as CEE 201D) Computational and visualization methods in the design and analysis of civil and environmental engineering systems. Focus is on applications of MATLAB. How to develop a more lucid and better organized programming style.
3 units, Aut (Kitanidis, P)

CEE 102. Legal Aspects of Engineering and Construction
Introduction to the U.S. legal system as it applies to civil engineering and construction. Fundamental concepts of contract and tort law, claims, risk management, business formation and licensing, agency, insurance and bonding, and real property. (London)
3 units, Win (London, M)

CEE 109. Creating a Green Student Workforce to Help Implement Stanford's Sustainability Vision
(Same as EARTHSYS 109) Examination of program-based local actions that promote resource resource conservation and an educational environment for sustainability. Examination of building-level actions that contribute to conservation, lower utility costs, and generate understanding of sustainability consistent with Stanford's commitment to sustainability as a core value. Overview of operational sustainability including energy, water, buildings, waste, and food systems. Practical training to enable students to become sustainability coordinators for their dorms or academic units.
2 units, Win (Koseff, J; Ahmed, F)

CEE 110. Building Information Modeling
(Same as CEE 210) (Graduate students register for 210.) Creation, management, and application of building information models. Process and tools available for creating 2D and 3D computer representations of building components and geometries. Organizing and operating on models to produce architectural views and construction documents, renderings and animations, and interface with analysis tools. Lab exercises, class projects. Limited enrollment.
4 units, Aut (Katz, G)

CEE 111. Multidisciplinary Modeling and Analysis
(Same as CEE 211) (Graduate students register for 211.) Computer modeling, visualization, analysis, and graphical communication of building projects. Use of 3D models in laser scanning, rendering, animation, daylight, energy, cost, structural, lighting analysis, and computer controlled fabrication. Underlying 3D computer representations, and analysis tools and their applications. Guest lectures, lab exercises, class project. Prerequisite: 110 or CAD experience. GER:DB-EngrAppSci
4 units, Win (Kunz, J)

CEE 115. Goals and Methods of Sustainable Building Projects
(Same as CEE 215) (Graduate students register for 215.) Goals related to sustainable sites, water efficiency, energy and atmosphere, materials and resources, indoor environmental quality, and economic and social sustainability. Methods to integrate these goals and enhance the economic, ecological, and equitable value of building projects. Industry and academic rating systems, project case studies, guest lecturers, and group project.
3 units, Spr (Staff)

CEE 122A. Computer Integrated Architecture/Engineering/Construction (A/E/C)
Undergraduates serve as apprentices to graduate students in the AEC global project teams in CEE 222A. Apprentices participate in all activities of the AEC team, including the goals, objectives, constraints, tasks, and process of a crossdisciplinary global AEC teamwork in the concept development phase of a comprehensive building project. Prerequisite: consent of instructor.
2 units, Win (Fruchter, R)

CEE 122B. Computer Integrated A/E/C
Undergraduates serve as apprentices to graduate students in the AEC global project teams in CEE 222B. Project activity focuses on modeling, simulation, life-cycle cost, and cost benefit analysis in the project development phase. Prerequisite: CEE 122A.
2 units, Spr (Fruchter, R)

CEE 124. Sustainable Development Studio
(Graduate students register for 224A.) Project-based. Sustainable design, development, use and evolution of buildings; connections of building systems to broader resource systems. Areas include architecture, structure, materials, energy, water, air, landscape, and food. Projects use a cradle-to-cradle approach focusing on technical and biological nutrient cycles and information and knowledge generation and organization. May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

CEE 129. Engineering and Policy responses to Climate Change Impacts on Seaports
(Same as CEE 229) Interdisciplinary. Exploration of impacts of climate change on major coastal seaports around the world. Assessment of the minimum necessary response to protect ports from a significant sea-levels rise in terms of costs, material, labor, and time. Consideration of economic and policy implications. Class projects, case studies, guest speakers. May be credited for credit.
2-4 units, Aut (Fischer, M; Becker, A; Schwegler, B), Win (Fischer, M; Schwegler, B; Becker, A), Spr (Fischer, M; Becker, A; Schwegler, B), Sum (Staff)

CEE 130. Architectural Design: 3-D Modeling, Methodology, and Process
Preference to Architectural Design majors; others by consent of instructor. Projects investigate conceptual approaches to the design of key architectural elements, such as wall and roof. Functional and structural considerations. Focus is on constructing 3-D models in a range of materials; 3-D computer modeling. Students keep a graphic account of the evolution of their design process. Final project entails design of a simple structure. Limited enrollment. Pre- or corequisite: CEE 31 or 31Q.
4 units, Win (Walters, P)

CEE 131. Architectural Design Process
Preference to Architectural Design and CEE majors; others by consent of instructor. Issues in the architectural profession including programming, site analysis, design process, and professional practice concerns. Building/landscape design case study project using architectural graphics and models. Limited enrollment.
4 units, not given this year

CEE 131A. Introduction to the Design Professions
Seminar. Paths to careers that contribute to the design and construction of the built environment, including architecture, landscape architrecture, project management, construction management, civil engineering, urban planning, and sustainability coordination. Guest lecturers present their work, background, roles and relationships to the other disciplines. Field trips, written and oral presentations, and four Wednesday evening lectures of the Spring Architecture and Landscape Architecture series.
2 units, Spr (Blake, C)

CEE 132. Interplay of Architecture and Engineering
(Same as CEE 232) The range of requirements that drive a building's design including architecture, engineering, constructability, building codes, and budget. Case studies illustrate how structural and mechanical systems are integrated into building types including residential, office, commercial, and retail. In-class studio work.
4 units, not given this year

CEE 133F. Principles of Freehand Drawing
By studying traditional drawing techniques, students learn the principles of academic drawing using charcoal as the primary medium. Value, proportion, modeling, edge, and composition introduced in lectures, demonstrations, and drawing assignments. Emphasis is on still life and photographic references, allowing students to refine their rendering skills and develop their freehand drawing portfolio.
1 unit, not given next year

CEE 134A. Site and Space
Preference to Architectural Design and CEE majors; others by consent of instructor. An architectural design studio exploring the Stanford Green Dorm project. Initial sessions develop a working definition of sustainable design and strategies for greening the built environment in preparation for design studio work. Enrollment limited to 14. Prerequisites: 31 or 31Q, and 110 and 130.
4 units, not given this year

CEE 134B. Architectural Studio: Special Topic
Preference to Architectural Design majors; others by consent of Instructor. Multi-view drawing and quick sketching. Drawings such as section cuts to enable development of designs. Functional, structural, site, and sustainable considerations. Final project entails design of a simple structure. Limited enrollment.
4 units, Spr (Barton, J)

CEE 135A. Parametrics: Applications in Architecture and Product Design
(Same as CEE 235A) Precedents in architecture and product design; methods for modeling, prototyping, and fabrication. How to combine design intentions and digital logics with physical and material constraints. Students develop a case study and small design projects using a parametric approach at the scales of architecture and product.
4 units, not given this year

CEE 136. Green Architecture
(Same as CEE 236) Preference to Architectural Design and CEE majors; others by consent of instructor. An architectural design studio exploring green design and green design processes. Initial sessions develop a working definition of sustainable design and strategies for greening the built environment in preparation for design studio work. Enrollment limited to 14. Prerequisites: 31 or 31Q, and 110 and 130. GER:DB-EngrAppSci
4 units, Aut (Sperry, R)

CEE 137A. Form and Structure
Preference to Architectural Design and CEE majors; others by consent of instructor. Intermediate architectural studio. The integration of structure, form, site, and program. Emphasis is on developing a schematic design in the context of site topography and structural systems. Limited enrollment. Prerequisites: 31 or 31Q, and 130.
4 units, not given this year

CEE 137B. Intermediate Architecture Studio
Explore the relationship of site and building in the context of a rural Woodside landscape above the Stanford Campus. Issues of topography, microclimate and sustainable building strategies are key spring points of the studio. The class will start with a series of brief architectural case studies and then focus on one main design problem for the Djerassi Art Foundation. Some site visits. Prerequisites: CEE 31 (or 31Q), CEE 110, and CEE 130. Preference to architectural design majors.

5 units, Win (Haesloop, E)

CEE 138A. Contemporary Architecture: Materials, Structures, and Innovations
Structural and material bases for contemporary architecture; its roots in modern innovations. Recent technological developments; new materials and structural expressions. Sources include specific buildings and construction techniques. How to think critically about design strategies, material properties, and structural techniques.

3 units, not given this year

CEE 139. Design Portfolio Methods
Students present designs completed in other studio courses to communicate design intentions and other aspects of their work. Instruction in photography; preparation of a design portfolio; and short essays that characterize portfolio contents. Oral presentation workshops offered through the Center for Teaching and Learning. Limited enrollment. Prerequisites: two Art or Architecture studio courses, or consent of instructor.

2 units, Spr (Larimer, A)

CEE 140. Field Surveying Laboratory
(Same as CEE 225) Graduate students register for 225. Friday afternoon laboratory provides practical surveying experience. Additional morning classes to prepare for the afternoon sessions. Hands-on operation of common traditional field survey tools ; introduction to the newest generation of digital measuring, positioning, and mapping tools. Emphasis is on the concept of using the data collected in the field as the basis for subsequent engineering and economic decisions.

3 units, not given this year

CEE 141A. Infrastructure Project Development
(Same as CEE 241A) Infrastructure is critical to the economy, global competitiveness and quality of life. Topics include energy, transportation, water, public facilities, and communications sectors. Analysis of the condition of the nation's infrastructure and how projects are planned and financed. Focus is on public works projects in the U.S.. The role of public and private sectors through a step-by-step study of the project development process. Case studies of real infrastructure projects. Industry guest speakers. Field trips to real world of project development.

3 units, Aut (Griggs, G)

CEE 141B. Infrastructure Project Delivery
(Same as CEE 241B) Infrastructure is critical to the economy, global competitiveness and quality of life. Topics include energy, transportation, water, public facilities ,and communications sectors. Analysis of how projects are designed, constructed, operated, and maintained. Focus is on public works projects in the U.S. Alternative project delivery approaches and organizational strategies. Case studies of real infrastructure projects. Industry guest speakers. Field trips to real world of project delivery.

3 units, Win (Griggs, G)

CEE 141C. Global Infrastructure Projects Seminar
(Same as CEE 241C) Infrastructure is critical to the economy, global competitiveness, and quality of life. Course analyzes and compares the development and delivery of mega-projects around the world. Alternative project delivery methods, the role of public and private sector, different project management strategies, and lessons learned. Case studies of real infrastructure projects. Industry guest speakers. Field trips to local projects.

1-2 units, Spr (Griggs, G)

CEE 142A. Negotiating Sustainable Development
(Same as CEE 242A, ENVRES 242) How to be effective at achieving sustainability by learning the skills required to negotiate differences between stakeholders who advocate for their own interests. How ecological, social, and economic interests can be effectively balanced and managed. How to be effective actors in the sustainability movement, and use frameworks to solve complex, multiparty processes. Case study analysis of domestic and international issues. Students negotiate on behalf of different interest groups in a variety of arenas including energy, climate, land use, and the built environment. One Saturday all day field trip. No prerequisites.

3 units, Win (Christensen, S)

CEE 147. Cases in Personality, Leadership, and Negotiation
(Same as CEE 247) Case studies target personality issues, risk willingness, and life skills essential for real world success. Failures, successes, and risk willingness in individual and group tasks based on the professor's experience as small business owner and construction engineer. Required full afternoon field trips to local sites. Application downloaded from coursework must be submitted before first class; mandatory first class attendance. No auditors.

3 units, Spr (Griggs, G)

CEE 151. Negotiation
(Same as CEE 251) Students learn to prepare for and conduct negotiations in a variety of arenas including getting a job, managing workplace conflict, negotiating transactions, and managing personal relationships. Interactive class. The internationally travelled instructor who has mediated cases in over 75 countries will require students to negotiate real life case studies and discuss their results in class. Application required before first day of class; see Coursework.

3 units, Aut (Christensen, S), Spr (Christensen, S)

CEE 154. Cases in Estimating Costs
(Same as CEE 254) Students participate in bidding contests requiring cost determination in competitive markets. Monetary forces driving the construction industry as general principles applicable to any competitive business. Cases based on field trips and professor's experience as small business owner and construction engineer. Required full afternoon field trips to local sites. Limited enrollment; no auditors. Prerequisites: consent or intructor and application downloaded from CourseWork prior to start of class. GER:DB-EngrAppSci

3 units, not given this year

CEE 155. Introduction to Sensing Technologies

4 units, Win (Staff)

CEE 156. Building Systems
(Same as CEE 256) HVAC, lighting, and envelope systems for commercial and institutional buildings, with a focus on energy efficient design. Knowledge and skills required in the development of low-energy buildings that provide high quality environment for occupants. GER:DB-EngrAppSci

4 units, Spr (Kolderup, E)

CEE 159. Career Skills Seminar
(Same as CEE 259) (Graduate students register for 259.) Factors required for successful careers. Guest speakers. Case studies. Participation in real world corporate interviews, testing, and reviews conducted by industry trainers. Limited enrollment; no auditors. Prerequisite: application downloaded from CourseWork prior to start of class.

2 units, not given this year

CEE 159C. Industry Applications of VDC
(Same as CEE 259C) In the context of design and construction projects in industry, students will develop VDC/BIM models using off-the-shelf authoring tools for project analysis, collaboration, and communication. Students will develop essential skills for industry practice and/or academic research in VDC. Remote web-participation is possible. Class content changes every quarter.

2-4 units, Win (Kam, C; Fischer, M)

CEE 159D. Advanced Industry Applications of VDC
(Same as CEE 259D) In the context of design and construction projects in industry, students will develop advanced VDC/BIM models using off-the-shelf and newly created tools for project analysis, collaboration, and communication. Students will develop advanced skills for industry practice and/or cutting edge academic research in VDC. Remote web-participation is possible. Class content changes every quarter. Pre-requisites: CEE 159C/259C

2-4 units, Spr (Kam, C; Fischer, M)

CEE 160. Mechanics of Fluids Laboratory
Lab experiments/demonstrations illustrate conservation principles and flows of real fluids. Corequisite: 101B.

2 units, Spr (Monismith, S)

CEE 161A. Rivers, Streams, and Canals
(Same as CEE 264A) The movement of water through natural and engineered channels, streams, and rivers. Equations and theory (mass, momentum, and energy equations) for steady and unsteady descriptions of the flow. Design of flood-control and canal systems. Flow controls such as weirs and sluice gates; gradually varied flow; Saint-Venant equations and flood waves; and method of characteristics. Open channel flow laboratory experiments: controls such as weirs and gates, gradually varied flow, and waves. Students taking lab section register for 4 units. Prerequisites: 101B, 160. (Fong) GER:DB-EngrAppSci
3-4 units, Aut (Fong, D), Sum (Fong, D)

CEE 164. Introduction to Physical Oceanography
(Same as CEE 262D, EARTHSYS 164) The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53). GER:DB-NatSci
4 units, Win (Fong, D)

CEE 166A. Watersheds and Wetlands
(Same as CEE 266A) Introduction to the occurrence and movement of water in the natural environment and its role in creating and maintaining terrestrial, wetland, and aquatic habitat. Hydrologic processes, including precipitation, evaporation, transpiration, snowmelt, infiltration, subsurface flow, runoff, and streamflow. Rivers and lakes, springs and swamps. Emphasis is on observation and measurement, data analysis, modeling, and prediction. Prerequisite: 101B or equivalent. (Freyberg) GER:DB-EngrAppSci
3 units, Aut (Freyberg, D)

CEE 166B. Floods and Droughts, Dams and Aqueducts
(Same as CEE 266B) Sociotechnical systems associated with human use of water as a resource and the hazards posed by too much or too little water. Potable and non-potable water use and conservation. Irrigation, hydroelectric power generation, rural and urban water supply systems, storm water management, flood damage mitigation, and water law and institutions. Emphasis is on engineering design. Prerequisite: 166A or equivalent. GER:DB-EngrAppSci
3 units, Win (Freyberg, D)

CEE 166D. Water Resources and Water Hazards Field Trips
(Same as CEE 266D) Introduction to water use and water hazards via weekly field trips to local and regional water resources facilities (dams, reservoirs, fish ladders and hatcheries, pumping plants, aqueducts, hydropower plants, and irrigation systems) and flood damage mitigation facilities (storm water detention ponds, channel modifications, flood control dams, and reservoirs). Each trip preceded by an orientation lecture.
2 units, Win (Freyberg, D)

CEE 169. Environmental and Water Resources Engineering Design
Application of fluid mechanics, hydrology, water resources, environmental sciences, and engineering economy fundamentals to the design of a system addressing a complex problem of water in the natural and constructed environment. Problem changes each year, generally drawn from a challenge confronting the University or a local community. Student teams prepare proposals, progress reports, oral presentations, and a final design report. Prerequisite: senior in Civil Engineering or Environmental Engineering; 166B.
5 units, alternate years, not given this year

CEE 171. Environmental Planning Methods
For juniors and seniors. Use of microeconomics and mathematical optimization theory in the design of environmental regulatory programs; tradeoffs between equity and efficiency in designing regulations; techniques for predicting adverse effects in environmental impact assessments; information disclosure requirements; and voluntary compliance of firms with international regulating norms. Prerequisites: MATH 51. Recommended: 70. GER:DB-EngrAppSci
3 units, Win (Ortolano, L)

CEE 172. Air Quality Management
Quantitative introduction to the engineering methods used to study and seek solutions to current air quality problems. Topics: global atmospheric changes, urban sources of air pollution, indoor air quality problems, design and efficiencies of pollution control devices, and engineering strategies for managing air quality. Prerequisites: 70, MATH 51. GER:DB-EngrAppSci
3 units, Win (Hildemann, L)

CEE 172A. Indoor Air Quality
(Same as CEE 278C) Factors affecting the levels of air pollutants in the built indoor environment. The influence of ventilation, office equipment, floor coverings, furnishings, cleaning practices, and human activities on air quality including carbon dioxide, VOCs, resuspended dust, and airborne molds and fungi. Recommended: 172 or 278A.
2-3 units, Spr (Hildemann, L)

CEE 172P. Distributed Generation and Grid Integration of Renewables
(Same as CEE 272P) Renewable generation technologies and their use in the electric power system. Conventional electricity generation systems and the historical development of renewables. Development and operation of the electric power system for high penetrations of renewables and demand side participation. Wind energy and wind farms. Design of wind turbines. Photovoltaic systems (grid connected), micro-hydro and marine renewables (wave and tidal stream devices). Analysis of the electric power system and the integration of renewable energy generators.
3-4 units, Win (Jenkins, N)

CEE 172S. Technology and business strategies to reduce greenhouse gas emissions
(Same as CEE 272S) Concepts of greenhouse gas (GHG) emissions measurement and management, and mitigation options for reducing emissions or sequestering carbon dioxide. Technical aspects of GHG mitigation via energy efficiency and demand-side management, energy in high-technology industry, distributed power and co-generation, the role of renewable energy in GHG management, carbon sequestration in forestry, agriculture, and geological formations. Policy options, carbon trading, and business strategies for GHG mitigation.
3 units, Spr (Swisher, J)

CEE 173A. Energy Resources
(Same as CEE 207A, EARTHSYS 103) Comprehensive overview of fossil and renewable energy resources and energy efficiency. Topics covered for each resource: resource abundance, location, recovery, conversion, consumption, end-uses, environmental impacts, economics, policy, and technology. Applied lectures in specific energy sectors: buildings, transportation, the electricity industry, and energy in the developing world. Required field trips to local energy facilities. Optional discussion section for extra unit. GER:DB-EngrAppSci
4-5 units, Aut (Woodward, J; Knapp, K)

CEE 175A. California Coast: Science, Policy, and Law
(Same as CEE 275A, EARTHSYS 175, EARTHSYS 275) Interdisciplinary. The legal, science, and policy dimensions of managing California's coastal resources. Coastal land use and marine resource decision making. The physics, chemistry, and biology of the coastal zone, tools for exploring data from the coastal ocean, and the institutional framework that shapes public and private decision making. Field work: how experts from different disciplines work to resolve coastal policy questions. Primarily for graduate students; upper-level undergraduates require consent of instructor. Students must participate in at least three mandatory field trips.
3-4 units, Spr (Caldwell, M; Boehm, A; Sivas, D)

CEE 176A. Energy Efficient Buildings
Analysis and design. Thermal analysis of building envelope, heating and cooling requirements, HVAC, and building integrated PV systems. Emphasis is on residential passive solar design and solar water heating. Lab. GER:DB-EngrAppSci
3-4 units, Win (Masters, G)

CEE 176B. Electric Power: Renewables and Efficiency
Renewable and efficient electric power systems emphasizing analysis and sizing of photovoltaic arrays and wind turbines. Basic electric power generation, transmission and distribution, distributed generation, combined heat and power, fuel cells. End use demand, including lighting and motors. Lab. GER:DB-EngrAppSci
3-4 units, Spr (Masters, G)

CEE 176F. Energy Systems Field Trips: China Energy Systems
(Same as CEE 276F) Energy resources and policies in use and under development in China. 12-day field trip to China during

Spring Break 2012. One unit for seminar and readings; one unit for field trip. Prerequisite: consent of instructor for field trip.

1-2 units, alternate years, not given this year

CEE 177. Aquatic Chemistry and Biology
(Same as CEE 277) Introduction to chemical and biological processes in the aqueous environment. Basic aqueous equilibria; the structure, behavior, and fate of major classes of chemicals that dissolve in water; redox reactions; the biochemistry of aquatic microbial life; and biogeochemical processes that govern the fate of nutrients and metals in the environment and in engineered systems. Prerequisite: CHEM 31. GER:DB-EngrAppSci

4 units, Aut (Criddle, C), Sum (Criddle, C)

CEE 177P. Sustainability in Theory and Practice
The multidimensional concept of sustainable development. Students evaluate engineered systems using tools such as cost-benefit analysis, trade-off analysis, and lifecycle analysis. How to make judgments about sustainable and unsustainable courses of action. Case studies dealing with contemporary environmental and economic challenges.

3 units, not given this year

CEE 177S. Design for a Sustainable World
(Same as CEE 277S) Technology-based problems faced by developing communities worldwide. Student groups partner with organizations abroad to work on concept, feasibility, design, implementation, and evaluation phases of various projects. Past projects include a water and health initiative, a green school design, seismic safety, and medical device. Admission based on written application and interview. See http://esw.stanford.edu for application. (Staff)

1-5 units, Win (Staff), Spr (Staff)

CEE 178. Introduction to Human Exposure Analysis
(Same as CEE 276) (Graduate students register for 276.) Scientific and engineering issues involved in quantifying human exposure to toxic chemicals in the environment. Pollutant behavior, inhalation exposure, dermal exposure, and assessment tools. Overview of the complexities, uncertainties, and physical, chemical, and biological issues relevant to risk assessment. Lab projects. Recommended: MATH 51. GER:DB-EngrAppSci

3 units, Spr (Kopperud, R), Sum (Kopperud, R)

CEE 179A. Water Chemistry Laboratory
(Same as CEE 273A) (Graduate students register for 273A.) Laboratory application of techniques for the analysis of natural and contaminated waters, emphasizing instrumental techniques.

3 units, Win (Robertson, A)

CEE 179C. Environmental Engineering Design
Application of engineering fundamentals including environmental engineering, hydrology, and engineering economy to a design problem. Enrollment limited; preference to seniors in Civil and Environmental Engineering.

5 units, Spr (Robertson, A; Leckie, J)

CEE 180. Structural Analysis
Analysis of beams, trusses, frames; method of indeterminate analysis by consistent displacement, least work, superposition equations, moment distribution. Introduction to matrix methods and computer methods of structural analysis. Prerequisite: 101A and ENGR 14. GER:DB-EngrAppSci

4 units, Aut (Kiremidjian, A)

CEE 181. Design of Steel Structures
Concepts of the design of steel structures with a load and resistance factor design (LRFD) approach; types of loading; structural systems; design of tension members, compression members, beams, beam-columns, and connections; and design of trusses and frames. Prerequisite: 180. GER:DB-EngrAppSci

4 units, Aut (Law, K)

CEE 182. Design of Reinforced Concrete Structures
Properties of concrete and reinforcing steel; behavior of structural elements subject to bending moments, shear forces, torsion, axial loads, and combined actions; design of beams, slabs, columns and footings; strength design and serviceability requirements; design of simple structural systems for buildings. Prerequisite: 180. GER:DB-EngrAppSci

4 units, Win (Lepech, M)

CEE 183. Integrated Civil Engineering Design Project
Studio format. Design concepts for civil engineering facilities from schematic design through construction, taking into account sustainable engineering issues. Design exercises culminating in the design of a civil engineering facility, emphasizing structural systems and materials and integration with construction and other project requirements. Prerequisites: CEE 180, 181, 182; civil engineering major; architectural design major with instructor consent.

4 units, Spr (Deierlein, G)

CEE 195A. Fundamentals of Structural Geology
(Same as GES 111A) Techniques for structural mapping; using differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; measurement and analysis of stress. Sources include field and laboratory data integrated with conceptual and mechanical models. Models of tectonic processes are constructed and solutions visualized using MATLAB. Prerequisites: GES 1, MATH 51, 52. GER:DB-NatSci

3 units, Aut (Pollard, D)

CEE 195B. Fundamentals of Structural Geology
(Same as GES 111B) Continuation of GES 111A/CEE 195A. Conservation of mass and momentum in a deformable continuum; linear elastic deformation and elastic properties of rock; brittle deformation including fracture and faulting; linear viscous flow including folding and magma dynamics; model development and methodology. Sources include field and laboratory data integrated with conceptual and mechanical models. Models of tectonic processes are constructed and solutions visualized using MATLAB. Prerequisite: GES 111A/CEE 195B.

3 units, Win (Pollard, D)

CEE 196. Engineering Geology Practice
(Same as GES 115) The application of geology and global change to the planning, design, and operation of engineering projects. Case histories taught in a seminar setting and field trips emphasize the impact of geology and global change on both individual engineering works and the built environment by considering Quaternary history and tectonics, anthropogenic sea level rise, active geologic processes, engineering properties of geologic deposits, site exploration, and professional ethics. Prerequisite: GES 1 or consent of instructor. GER:DB-NatSci

3 units, alternate years, not given this year

CEE 198. Directed Reading or Special Studies in Civil Engineering
Written report or oral presentation required. Students must obtain a faculty sponsor.

1-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CEE 199. Undergraduate Research in Civil and Environmental Engineering
Written report or oral presentation required. Students must obtain a faculty sponsor.

1-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CEE 199A. Special Projects in Architecture
Faculty-directed study or internship. May be repeated for credit. Prerequisite: consent of instructor.

1-4 units, Aut (Staff), Win (Staff), Spr (Staff)

CEE 199B. Directed Studies in Architecture
Projects may include studio-mentoring activities, directed reading and writing on topics in the history and theory of architectural design, or investigations into design methodologies.

1-4 units, Aut (Staff), Win (Staff), Spr (Staff)

CEE 199H. Undergraduate Honors Thesis
For students who have declared the Civil Engineering B.S. honors major and have obtained approval of a topic for research under the guidance of a CEE faculty adviser. Letter grade only. Written thesis or oral presentation required. (Staff)

2-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN CIVIL AND ENVIRONMENTAL ENGINEERING

Primarily for graduate students; undergraduates may enroll with consent of instructor.

CEE 274S. Hopkins Microbiology Course
(Same as BIO 274S, BIOHOPK 274, EESS 253S) (Formerly GES 274S.) Four-week, intensive. The interplay between molecular,

physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A,B, or equivalents.

9-12 units, Sum (Spormann, A; Francis, C)

CEE 200A. Teaching of Civil and Environmental Engineering
Required of CEE Ph.D. students. Strategies for effective teaching and introduction to engineering pedagogy. Topics: problem solving techniques and learning styles, individual and group instruction, the role of TAs, balancing other demands, grading. Teaching exercises. Register for quarter of teaching assistantship. 200A. Aut, 200B. Win, 200C. Spr

1 unit, Aut (Staff)

CEE 200B. Teaching of Civil and Environmental Engineering
Required of CEE Ph.D. students. Strategies for effective teaching and introduction to engineering pedagogy. Topics: problem solving techniques and learning styles, individual and group instruction, the role of TAs, balancing other demands, grading. Teaching exercises. Register for quarter of teaching assistantship. May be repeated for credit. 200A. Aut, 200B. Win, 200C. Spr

1 unit, Win (Chui, T)

CEE 200C. Teaching of Civil and Environmental Engineering
Required of CEE Ph.D. students. Strategies for effective teaching and introduction to engineering pedagogy. Topics: problem solving techniques and learning styles, individual and group instruction, the role of TAs, balancing other demands, grading. Teaching exercises. Register for quarter of teaching assistantship. May be repeated for credit. 200A. Aut, 200B. Win, 200C. Spr

1 unit, Spr (Chui, T)

CEE 201D. Computations in Civil and Environmental Engineering
(Same as CEE 101D) Computational and visualization methods in the design and analysis of civil and environmental engineering systems. Focus is on applications of MATLAB. How to develop a more lucid and better organized programming style.

3 units, Aut (Kitanidis, P)

CEE 202. Construction Claims Analysis and Resolution
Concepts include cost overrun and schedule delay analysis, contracts and other legal topics, and resolution of construction disputes. Introduction to construction law. Requires attendance of the first five weeks of CEE 102 for basic legal background.

3-4 units, Win (Groves, R; Tucker, A; London, M)

CEE 203. Probabilistic Models in Civil Engineering
Introduction to probability modeling and statistical analysis in civil engineering. Emphasis is on the practical issues of model selection, interpretation, and calibration. Application of common probability models used in civil engineering including Poisson processes and extreme value distributions. Parameter estimation. Linear regression.

3-4 units, Aut (Baker, J)

CEE 204. Structural Reliability
Procedures for evaluating the safety of structural components and systems. First-and second-order estimates of failure probabilities of engineered systems. Sensitivity of failure probabilities to assumed parameter values. Measures of the relative importance of random variables. Reliability of systems with multiple failure modes. Reliability updating. Simulation methods and variance reduction techniques. Prerequisite: 203 or equivalent.

3-4 units, alternate years, not given this year

CEE 205A. Structural Materials Testing and Simulation
Hands-on laboratory experience with fabrication, computer simulation, and experimental testing of material and small-scale structural components. Comparison of innovative and traditional structural materials. Behavior and application of high-performance fiber reinforced concrete materials for new design, fiber-reinforced polymeric materials for structural retrofits and introduction to sustainable, bio-based composites. Prerequisites: basic course in reinforced concrete design CEE 182 or equivalent.

3-4 units, alternate years, not given this year

CEE 205B. Advanced Topics in Structural Concrete
Concepts and application of strut and tie modeling including deep beams, design for torsion resistance, beam-column joints, bridge components, and post-tensioned anchor zones. Course project integrating computer simulation and physical experimentation of a structural concrete component. Prerequisites: CEE 285A or equivalent.

3 units, Spr (Billington, S)

CEE 206. Decision Analysis for Civil and Environmental Engineers
Current challenges in selecting an appropriate site, alternate design, or retrofit strategy based on environmental, economic, and social factors can be best addressed through applications of decision science. Basics of decision theory, including development of decision trees with discrete and continuous random variables, expected value decision making, utility theory value of information, and elementary multi-attribute decision making will be covered in the class. Examples will cover many areas of civil and environmental engineering problems. Prerequisite: CEE 203 or equivalent.

3 units, Spr (Kiremidjian, A)

CEE 206A. Decision Models in Civil Engineering
For advanced graduate students in CEE. Applications of decision science to address current challenges in selecting an appropriate site and appropriate design or retrofit strategy based on environmental, economic, and social factors. Examples from everyday civil and environmental engineering problems. Prerequisite: CEE 203 or equivalent.

2 units, not given this year

CEE 207A. Energy Resources
(Same as CEE 173A, EARTHSYS 103) Comprehensive overview of fossil and renewable energy resources and energy efficiency. Topics covered for each resource: resource abundance, location, recovery, conversion, consumption, end-uses, environmental impacts, economics, policy, and technology. Applied lectures in specific energy sectors: buildings, transportation, the electricity industry, and energy in the developing world. Required field trips to local energy facilities. Optional discussion section for extra unit.

4-5 units, Aut (Woodward, J; Knapp, K)

CEE 210. Building Information Modeling
(Same as CEE 110) (Graduate students register for 210.) Creation, management, and application of building information models. Process and tools available for creating 2D and 3D computer representations of building components and geometries. Organizing and operating on models to produce architectural views and construction documents, renderings and animations, and interface with analysis tools. Lab exercises, class projects. Limited enrollment.

4 units, Aut (Katz, G)

CEE 211. Multidisciplinary Modeling and Analysis
(Same as CEE 111) (Graduate students register for 211.) Computer modeling, visualization, analysis, and graphical communication of building projects. Use of 3D models in laser scanning, rendering, animation, daylight, energy, cost, structural, lighting analysis, and computer controlled fabrication. Underlying 3D computer representations, and analysis tools and their applications. Guest lectures, lab exercises, class project. Prerequisite: 110 or CAD experience.

4 units, Win (Kunz, J)

CEE 214. Introduction to Modeling and Analysis in CEE
Introduces students to modeling of products, processes and organizations in the AEC industry. Modeling and analysis purposes include support of technical, social, psychological and ethical decision making for different stakeholders. Different purposes and levels of detail for different models. CEM/DCI integrated approach to building using physical, mathematical, graphical and computer models of products, organizations and processes.

3 units, not given this year

CEE 215. Goals and Methods of Sustainable Building Projects
(Same as CEE 115) (Graduate students register for 215.) Goals related to sustainable sites, water efficiency, energy and atmosphere, materials and resources, indoor environmental quality, and economic and social sustainability. Methods to integrate these goals and enhance the economic, ecological, and equitable value of

building projects. Industry and academic rating systems, project case studies, guest lecturers, and group project.

3 units, Spr (Staff)

CEE 217. Renewable Energy Infrastructure

coming later

3 units, Win (Fischer, M; Jacobson, M)

CEE 222A. Computer Integrated Architecture/Engineering/Construction (AEC) Global Teamwork

AEC students engage in a crossdisciplinary, collaborative, geographically distributed, and multicultural project-based teamwork. AEC teams exercise their domain knowledge and information technologies in a multidisciplinary context focusing on the design and construction concept development phase of a comprehensive building project. Prerequisite: interview with Instructor in Autumn Quarter.

3 units, Win (Fruchter, R)

CEE 222B. Computer Integrated Architecture/Engineering/Construction (AEC) Global Teamwork

Global AEC student teams continue their project activity focusing on the most challenging concept developed in 222A and chosen jointly with their client. Comprehensive team project focusing on design and construction, including: project development and documentation; detailing, 3D and 4D modeling, simulation, sustainable concepts, cost benefit analysis, and life-cycle cost analysis; and final project presentation of product and process. Prerequisite: CEE 222A.

2 units, Spr (Fruchter, R)

CEE 224A. Sustainable Development Studio

(Undergraduates, see 124.) Project-based. Sustainable design, development, use and evolution of buildings; connections of building systems to broader resource systems. Areas include architecture, structure, materials, energy, water, air, landscape, and food. Projects use a cradle-to-cradle approach focusing on technical and biological nutrient cycles and information and knowledge generation and organization. May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CEE 225. Field Surveying Laboratory

(Same as CEE 140) Graduate students register for 225. Friday afternoon laboratory provides practical surveying experience. Additional morning classes to prepare for the afternoon sessions. Hands-on operation of common traditional field survey tools ; introduction to the newest generation of digital measuring, positioning, and mapping tools. Emphasis is on the concept of using the data collected in the field as the basis for subsequent engineering and economic decisions.

3 units, not given this year

CEE 226. Life Cycle Assessment for Complex Systems

Life cycle modeling of products, industrial processes, and infrastructure/building systems; material and energy balances for large interdependent systems; environmental accounting; and life cycle costing. These methods, based on ISO 14000 standards, are used to examine emerging technologies, such as biobased products, building materials, building integrated photovoltaics, and alternative design strategies, such as remanufacturing, dematerialization, LEED, and Design for Environment: DfE. Student teams complete a life cycle assessment of a product or system chosen from industry.

3-4 units, Aut (Lepech, M)

CEE 226E. Advanced Topics in Integrated, Energy-Efficient Building Design

Innovative methods and systems for the integrated design and evaluation of energy efficient buildings. Guest practitioners and researchers in energy efficient buildings. Student initiated final project.

2 units, Spr (Rumsey, P)

CEE 227. Global Project Finance

Public and private sources of finance for large, complex, capital-intensive projects in developed and developing countries. Benefits and disadvantages, major participants, risk sharing, and challenges of project finance in emerging markets. Financial, economic, political, cultural, and technological elements that affect project structures, processes, and outcomes. Case studies. Limited enrollment.

3-5 units, Win (Orr, R)

CEE 228. Innovative Global Construction Technology

(Formerly 245T.) Five-week class. How innovative companies invent new construction processes based on relative local labor, and materials and equipment cost, availability, and capabilities, and developed from experience and knowledge of construction technology in bridge, tunnel, and high-rise building. The process of generating new ideas. Industry guest speakers address the link between product/process innovation and construction technology.

2 units, Win (Brockmann, C)

CEE 229. Engineering and Policy responses to Climate Change Impacts on Seaports

(Same as CEE 129) Interdisciplinary. Exploration of impacts of climate change on major coastal seaports around the world. Assessment of the minimum necessary response to protect ports from a significant sea-levels rise in terms of costs, material, labor, and time. Consideration of economic and policy implications. Class projects, case studies, guest speakers. May be credited for credit.

2-4 units, Aut (Fischer, M; Becker, A; Schwegler, B), Win (Fischer, M; Schwegler, B; Becker, A), Spr (Fischer, M; Becker, A; Schwegler, B), Sum (Staff)

CEE 232. Interplay of Architecture and Engineering

(Same as CEE 132) The range of requirements that drive a building's design including architecture, engineering, constructability, building codes, and budget. Case studies illustrate how structural and mechanical systems are integrated into building types including residential, office, commercial, and retail. In-class studio work.

4 units, not given this year

CEE 235A. Parametrics: Applications in Architecture and Product Design

(Same as CEE 135A) Precedents in architecture and product design; methods for modeling, prototyping, and fabrication. How to combine design intentions and digital logics with physical and material constraints. Students develop a case study and small design projects using a parametric approach at the scales of architecture and product.

4 units, not given this year

CEE 236. Green Architecture

(Same as CEE 136) Preference to Architectural Design and CEE majors; others by consent of instructor. An architectural design studio exploring green design and green design processes. Initial sessions develop a working definition of sustainable design and strategies for greening the built environment in preparation for design studio work. Enrollment limited to 14. Prerequisites: 31 or 31Q, and 110 and 130.

4 units, Aut (Sperry, R)

CEE 241. Managing Fabrication and Construction

Methods to manage the physical production of construction projects; design, analysis, and optimization of the fabricate-assemble process including performance metrics. Project management techniques and production system design including: push versus pull methods; master scheduling and look-ahead scheduling; scope, cost, and schedule control; earned value analysis; critical path method; location-based scheduling; 4D modeling; workflow; trade coordination; methods to understand uncertainty and reduce process variability; and supply chain systems including made-to-stock, engineered-to-order, and made-to-order. Prerequisite: 100 or consent of instructor. Recommended corequisite: 240.

4 units, Aut (Fischer, M)

CEE 241A. Infrastructure Project Development

(Same as CEE 141A) Infrastructure is critical to the economy, global competitiveness and quality of life. Topics include energy, transportation, water, public facilities, and communications sectors. Analysis of the condition of the nation's infrastructure and how projects are planned and financed. Focus is on public works projects in the U.S.. The role of public and private sectors through a step-by-step study of the project development process. Case studies of real infrastructure projects. Industry guest speakers. Field trips to real world of project development.

3 units, Aut (Griggs, G)

CEE 241B. Infrastructure Project Delivery

(Same as CEE 141B) Infrastructure is critical to the economy, global competitiveness and quality of life. Topics include energy, transportation, water, public facilities ,and communications sectors. Analysis of how projects are designed, constructed, operated, and maintained. Focus is on public works projects in the U.S. Al-

ternative project delivery approaches and organizational strategies. Case studies of real infrastructure projects. Industry guest speakers. Field trips to real world of project delivery.

3 units, Win (Griggs, G)

CEE 241C. Global Infrastructure Projects Seminar
(Same as CEE 141C) Infrastructure is critical to the economy, global competitiveness, and quality of life. Course analyzes and compares the development and delivery of mega-projects around the world. Alternative project delivery methods, the role of public and private sector, different project management strategies, and lessons learned. Case studies of real infrastructure projects. Industry guest speakers. Field trips to local projects.

1-2 units, Spr (Griggs, G)

CEE 242. Organization Design for Projects and Companies
Introduction to organizational behavior and organizational design for construction projects and companies. Class incorporates readings, individual, small group and large group case study assignments. Students use computer simulation to design real-world project organizations.

3-4 units, Aut (Levitt, R)

CEE 242A. Negotiating Sustainable Development
(Same as CEE 142A, ENVRES 242) How to be effective at achieving sustainability by learning the skills required to negotiate differences between stakeholders who advocate for their own interests. How ecological, social, and economic interests can be effectively balanced and managed. How to be effective actors in the sustainability movement, and use frameworks to solve complex, multiparty processes. Case study analysis of domestic and international issues. Students negotiate on behalf of different interest groups in a variety of arenas including energy, climate, land use, and the built environment. One Saturday all day field trip. No prerequisites.

3 units, Win (Christensen, S)

CEE 243. Predicting and Measuring Building Energy Use
Energy modeling has entered commercial use and can help evaluate the impact of potential energy-saving interventions in commercial building design. Methods to create building information models to enable energy analysis, use energy analysis tools and interpret their results for commercial buildings, analyze measured building performance and relate prediction to measurement, and develop guidance for owners on how to use these methods in practice. May be repeated for credit. Prerequisites: Revit or Digital Project competence or CEE 210, CEE 211, or CEE 135 with equivalent experience. Recommended: energy modeling experience, CEE 176A, CEE 226E, or CEE 256.

2-3 units, Spr (Kunz, J)

CEE 244. Fundamentals of Construction Accounting and Finance
Concepts of financial accounting and economics emphasizing the construction industry. Financial statements, accounting concepts, project accounting methods, and the nature of project costs. Case study of major construction contractor. Ownership structure, working capital, and the sources and uses of funds.

2 units, Aut (Tucker, A; Meyer, P)

CEE 245A. Global Project Seminar
Issues related to large, complex, global development projects including infrastructure development, urban and rural development, and the development of new cities. Guest presentations by industry practitioners and academics, including: Sabeer Bhatia, founder of Hotmail and architect of NanoCity; Ian Bremmer, CEO of the Eurasia Group, and Greg Huger, managing director of AirliePartners. May be repeated for credit.

3 units, not given this year

CEE 246. Managing Engineering and Construction Companies
Management of design and construction companies in the architecture-engineering-construction industry. Focus is on management of risks inherent in the A/E/C industry: developing business strategies and organizations to cope with cyclical demand, alternative contracting approaches, managing receivables and cash flow, administration of human resources, safety, quality, insurance, and bonding. Students play different management roles in a computer simulation of a construction company. Prerequisites: introductory accounting course such as ENGR 60, CEE 244A, or MS&E 140.

3 units, Spr (Levitt, R)

CEE 246A. Engineering Economy Primer
Satisfies the engineering economy prerequisite for 246 or 253. Application of engineering economy concepts and principles to the construction industry. Equivalence concept; interest formulas; value of money across time; present value, annual cash flow, internal rate of return and benefit-cost methods; retirement and replacement; depreciation; capital budgeting; and sensitivity and risk analysis. Construction finance concepts, loans, mortgages, and construction pro formas.

2 units, Aut (Koen Cohen, N)

CEE 246B. Real Estate Finance Seminar
Real estate principles and process. Financial modeling. Feasibility analysis. Sources and uses of funds. Cash flow projections. Profit and loss reports. Financing issues for different types of real estate projects. Redevelopment projects. Financing green projects and technologies. Current challenges in financial markets. Group project and presentation. Limited enrollment with priority to CEM, DCI, and SDC students not enrolled in CEE 248. Prerequisites: CEE 246A or equivalent, ENGR 60. Recommended: knowledge of spreadsheets.

1 unit, Spr (Koen Cohen, N)

CEE 247. Cases in Personality, Leadership, and Negotiation
(Same as CEE 147) Case studies target personality issues, risk willingness, and life skills essential for real world success. Failures, successes, and risk willingness in individual and group tasks based on the professor's experience as small business owner and construction engineer. Required full afternoon field trips to local sites. Application downloaded from coursework must be submitted before first class; mandatory first class attendance. No auditors.

3 units, Spr (Griggs, G)

CEE 248. Real Estate Development
Critical activities and key participants. Topics: conceptual and feasibility studies, market perspectives, the public roles, steps for project approval, project finance, contracting and construction, property management, and sales. Group projects focus on actual developments now in the planning stage. Enrollment limited to 24; priority to graduate majors in the department's CEM and GSB programs. Prerequisites: 241, 244A or equivalent, ENGR 60.

3 units, Spr (Kroll, M)

CEE 248G. Certifying Green Buildings
Open to all disciplines. Goal is prepare students for the United States Green Building Council's professional accreditation exam. Basic metrics for project certification via USGBC's LEED rating system. Recommended: familiarity with design and construction terminology .

1 unit, not given this year

CEE 249. Labor and Industrial Relations: Negotiations, Strikes, and Dispute Resolution
Labor/management negotiations, content of a labor agreement, strikes, dispute resolution, contemporary issues affecting labor and management, and union versus open shop competitiveness in the marketplace. Case studies; presentations by union leaders, legal experts, and contractor principals. Simulated negotiation session with union officials and role play in an arbitration hearing.

2 units, Win (Walton, M)

CEE 251. Negotiation
(Same as CEE 151) Students learn to prepare for and conduct negotiations in a variety of arenas including getting a job, managing workplace conflict, negotiating transactions, and managing personal relationships. Interactive class. The internationally travelled instructor who has mediated cases in over 75 countries will require students to negotiate real life case studies and discuss their results in class. Application required before first day of class; see Coursework.

3 units, Aut (Christensen, S), Spr (Christensen, S)

CEE 252. Construction Methods for Concrete and Steel Structures
Providing technical support for concrete and steel construction operations on buildings or infrastructure projects. Concrete materials, construction properties of fresh concrete. Resources and operations for batching, transporting, placing, finishing, and curing concrete. Design, fabrication, and use of formwork. Special operations and formwork systems. Detailing, fabricating, erecting, and connecting structural steel. Lifting equipment and lift planning. Weld-

ing processes, operations, and quality control. Readings, exercises and course projects.

3 units, not given this year

CEE 252P. Construction Engineering Practicum
Discussion and group exercises related to technical fundamentals, resources, and field construction operations for earthwork, concrete and steel construction. Introduces construction engineering and prepares students for courses related to CEM and SDC degrees. Required: advance queries related to reading, class sessions, group exercises, summary paper. Time: prior to start of Autumn quarter

1 unit, Aut (Tatum, C)

CEE 253A. Earthwork Construction

1 unit, not given this year

CEE 254. Cases in Estimating Costs
(Same as CEE 154) Students participate in bidding contests requiring cost determination in competitive markets. Monetary forces driving the construction industry as general principles applicable to any competitive business. Cases based on field trips and professor's experience as small business owner and construction engineer. Required full afternoon field trips to local sites. Limited enrollment; no auditors. Prerequisites: consent or intructor and application downloaded from CourseWork prior to start of class.

3 units, not given this year

CEE 256. Building Systems
(Same as CEE 156) HVAC, lighting, and envelope systems for commercial and institutional buildings, with a focus on energy efficient design. Knowledge and skills required in the development of low-energy buildings that provide high quality environment for occupants.

4 units, Spr (Kolderup, E)

CEE 257. Building Systems Practice
Technical fundamentals, major components, connecting elements, field operations for active building systems: HVAC, electric power, water and waste, fire protection, control and instrumentation and vertical transportation. Integration, coordination and commissioning of systems. Field trip to HVAC specialty contractor.

1 unit, Spr (Tatum, C)

CEE 258. Donald R. Watson Seminar in Construction Engineering and Management
Panel discussions with speakers from various segments of industry and government who clarify career options. Students interact with panelists in group discussions at dinner after class.

1 unit, Aut (Fischer, M)

CEE 258B. Donald R. Watson Seminar in Construction Engineering and Management
Weekly seminars and field trips focusing on technical aspects of concrete and steel construction. Submission of abstract and paper required.

1 unit, not given this year

CEE 259A. Construction Problems
Group-selected problems in construction techniques, equipment, or management; preparation of oral and written reports. Guest specialists from the construction industry. See 299 for individual studies. Prerequisites: graduate standing in CEM program and consent of instructor.

1-3 units, Aut (Staff)

CEE 259B. Construction Problems
Group-selected problems in construction techniques, equipment, or management; preparation of oral and written reports. Guest specialists from the construction industry. See 299 for individual studies. Prerequisites: graduate standing in CEM program and consent of instructor.

1-3 units, Win (Staff)

CEE 259C. Industry Applications of VDC
(Same as CEE 159C) In the context of design and construction projects in industry, students will develop VDC/BIM models using off-the-shelf authoring tools for project analysis, collaboration, and communication. Students will develop essential skills for industry practice and/or academic research in VDC. Remote web-participation is possible. Class content changes every quarter.

2-4 units, Win (Kam, C; Fischer, M)

CEE 259D. Advanced Industry Applications of VDC
(Same as CEE 159D) In the context of design and construction projects in industry, students will develop advanced VDC/BIM models using off-the-shelf and newly created tools for project analysis, collaboration, and communication. Students will develop advanced skills for industry practice and/or cutting edge academic research in VDC. Remote web-participation is possible. Class content changes every quarter. Pre-requisites: CEE 159C/259C

2-4 units, Spr (Kam, C; Fischer, M)

CEE 260A. Physical Hydrogeology
(Same as EESS 220) (Formerly GES 230.) Theory of underground water occurrence and flow, analysis of field data and aquifer tests, geologic groundwater environments, solution of field problems, and groundwater modeling. Introduction to groundwater contaminant transport and unsaturated flow. Lab. Prerequisite: elementary calculus.

4 units, Aut (Gorelick, S)

CEE 260B. Surface and Near-Surface Hydrologic Response
(Same as GES 237) Quantitative review of process-based hydrology and geomorphology. Introduction to finite-difference and finite-element methods of numerical analysis. Topics: biometeorology, unsaturated and saturated subsurface fluid flow, overland and open channel flow, and physically-based simulation of coupled surface and near-surface hydrologic response. Links hydrogeology, soil physics, and surface water hydrology.

3 units, alternate years, not given this year

CEE 260C. Contaminant Hydrogeology
(Same as EESS 221) (Formerly GES 231.) For earth scientists and engineers. Environmental and water resource problems involving contaminated groundwater. The processes affecting contaminant migration through porous media including interactions between dissolved substances and solid media. Conceptual and quantitative treatment of advective-dispersive transport with reacting solutes. Predictive models of contaminant behavior controlled by local equilibrium and kinetics. Modern methods of contaminant transport simulation and optimal aquifer remediation. Prerequisite: GES 230 or CEE 260A or equivalent.

4 units, Spr (Gorelick, S)

CEE 262A. Hydrodynamics
The flow of incompressible viscous fluid; emphasis is on developing an understanding of fluid dynamics that can be applied to environmental flows. Topics: kinematics of fluid flow; equations of mass and momentum conservation (including density variations); some exact solutions to the Navier-Stokes equations; appropriate analysis of fluid flows including Stokes flows, potential flows, and laminar boundary layers; and an introduction to the effects of rotation and stratification through scaling analysis of fluid flows. Prerequisites: 101B or consent of instructor; and some knowledge of vector calculus and differential equations.

3-4 units, Aut (Fringer, O)

CEE 262B. Transport and Mixing in Surface Water Flows
Application of fluid mechanics to problems of pollutant transport and mixing in the water environment. Mathematical models of advection, diffusion, and dispersion. Application of theory to problems of transport and mixing in rivers, estuaries, and lakes and reservoirs. Recommended: 262A and CME 102 (formerly ENGR 155A), or equivalents.

3-4 units, Win (Fong, D)

CEE 262C. Modeling and Simulation for Civil and Environmental Engineers
Mathematical and computational methods for modeling and simulation. The use of Matlab for topics including predator-prey problems, buckling, transport and mixing, wave modeling, and flow reactors. Prerequisites: CME 102 and 104, or equivalent.

3 units, Spr (Fringer, O)

CEE 262D. Introduction to Physical Oceanography
(Same as CEE 164, EARTHSYS 164) The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53).

4 units, Win (Fong, D)

CEE 262E. Lakes and Reservoirs
Physics and water quality dynamics in lakes and reservoirs. Implementation of physical and biogeochemical processes in 1-D models. Recommended: 262B.
2-3 units, not given this year

CEE 262F. Ocean Waves
The fluid mechanics of surface gravity waves in the ocean of relevance to engineers and oceanographers. Topics include irrotational waves, wave dispersion, wave spectra, effects of bathymetry (shoaling), mass transport, effects of viscosity, and mean currents driven by radiation stresses. Prerequisite: CEE 262A or a graduate class in fluid mechanics.
3 units, alternate years, not given this year

CEE 263A. Air Pollution Modeling
The numerical modeling of urban, regional, and global air pollution focusing on gas chemistry and radiative transfer. Stratospheric, free-tropospheric, and urban chemistry. Methods for solving stiff systems of chemical ordinary differential, including the multistep implicit-explicit method, Gear's method with sparse-matrix techniques, and the family method. Numerical methods of solving radiative transfer, coagulation, condensation, and chemical equilibrium problems. Project involves developing a basic chemical ordinary differential equation solver. Prerequisite: CS 106A or equivalent.
3-4 units, alternate years, not given this year

CEE 263B. Numerical Weather Prediction
Numerical weather prediction. Continuity equations for air and water vapor, the thermodynamic energy equation, and momentum equations derived for the atmosphere. Numerical methods of solving partial differential equations, including finite-difference, finite-element, semi-Lagrangian, and pseudospectral methods. Time-stepping schemes: the forward-Euler, backward-Euler, Crank-Nicolson, Heun, Matsuno, leapfrog, and Adams-Bashforth schemes. Boundary-layer turbulence parameterizations, soil moisture, and cloud modeling. Project developing a basic weather prediction model. Prerequisite: CS 106A or equivalent.
3-4 units, Spr (Jacobson, M)

CEE 263C. Weather and Storms
(Same as CEE 63) Daily and severe weather and global climate. Topics: structure and composition of the atmosphere, fog and cloud formation, rainfall, local winds, wind energy, global circulation, jet streams, high and low pressure systems, inversions, el Niño, la Niña, atmosphere/ocean interactions, fronts, cyclones, thunderstorms, lightning, tornadoes, hurricanes, pollutant transport, global climate and atmospheric optics.
3 units, Aut (Jacobson, M)

CEE 263D. Air Pollution: From Urban Smog to Global Change
(Same as CEE 64) Survey of urban- through global-scale air pollution. Topics: the evolution of the Earth's atmosphere, indoor air pollution, urban smog formation, history of discovery of atmosphere chemicals, visibility, acid rain, the greenhouse effect, historical climate, global warming, stratospheric ozone reduction, Antarctic ozone destruction, air pollution transport across political boundaries, the effects of air pollution on ultraviolet radiation, and impacts of energy systems on the atmosphere.
3 units, Win (Jacobson, M)

CEE 264A. Rivers, Streams, and Canals
(Same as CEE 161A) The movement of water through natural and engineered channels, streams, and rivers. Equations and theory (mass, momentum, and energy equations) for steady and unsteady descriptions of the flow. Design of flood-control and canal systems. Flow controls such as weirs and sluice gates; gradually varied flow; Saint-Venant equations and flood waves; and method of characteristics. Open channel flow laboratory experiments: controls such as weirs and gates, gradually varied flow, and waves. Students taking lab section register for 4 units. Prerequisites: 101B, 160. (Fong)
3-4 units, Aut (Fong, D), Sum (Fong, D)

CEE 265A. Sustainable Water Resources Development
Alternative criteria for judging the sustainability of projects. Application of criteria to evaluate sustainability of water resources projects in several countries. Case studies illustrate the role of political, social, economic, and environmental factors in decision making. Influence of international aid agencies and NGOs on water projects. Evaluation of benefit-cost analysis and environmental impact assessment as techniques for enhancing the sustainability of future projects. Limited enrollment. Prerequisite: graduate standing in Environmental and Water Studies, or consent of instructor.
3 units, Spr (Ortolano, L)

CEE 265C. Water Resources Management
Principles of surface and ground water resources management in the context of water scarcity and hydrologic uncertainty. Topics include reservoir, river basin, and aquifer management, conjunctive use of surface and ground water, wastewater reuse, and demand management. Technical, economic, social, and political elements of water management.
3 units, Sum (Findikakis, A)

CEE 265D. Water and Sanitation in Developing Countries
Economic, social, political, and technical aspects of sustainable water supply and sanitation service provision in developing countries. Case studies from Asia, Africa, and Latin America. Service pricing, alternative institutional structures including privatization, and the role of consumer demand and community participation in the planning process. Environmental and public health considerations, and strategies for serving low-income households. Limited enrollment. Prerequisite: consent of instructor.
1-3 units, Win (Davis, J)

CEE 266A. Watersheds and Wetlands
(Same as CEE 166A) Introduction to the occurrence and movement of water in the natural environment and its role in creating and maintaining terrestrial, wetland, and aquatic habitat. Hydrologic processes, including precipitation, evaporation, transpiration, snowmelt, infiltration, subsurface flow, runoff, and streamflow. Rivers and lakes, springs and swamps. Emphasis is on observation and measurement, data analysis, modeling, and prediction. Prerequisite: 101B or equivalent. (Freyberg)
3 units, Aut (Freyberg, D)

CEE 266B. Floods and Droughts, Dams and Aqueducts
(Same as CEE 166B) Sociotechnical systems associated with human use of water as a resource and the hazards posed by too much or too little water. Potable and non-potable water use and conservation. Irrigation, hydroelectric power generation, rural and urban water supply systems, storm water management, flood damage mitigation, and water law and institutions. Emphasis is on engineering design. Prerequisite: 166A or equivalent. (Freyberg)
3 units, Win (Freyberg, D)

CEE 266C. Advanced Topics in Hydrology and Water Resources
Graduate seminar. Focus is on one or more hydrologic processes or water resources systems. Topics vary based on student and instructor interest. Examples include freshwater wetland hydrology, watershed-scale hydrologic modeling, renaturalization of stream channels, reservoir sediment management, and dam removal. Enrollment limited. Prerequisites: 266A,B, or equivalents. Recommended: 260A or equivalent.
3 units, Spr (Freyberg, D)

CEE 266D. Water Resources and Water Hazards Field Trips
(Same as CEE 166D) Introduction to water use and water hazards via weekly field trips to local and regional water resources facilities (dams, reservoirs, fish ladders and hatcheries, pumping plants, aqueducts, hydropower plants, and irrigation systems) and flood damage mitigation facilities (storm water detention ponds, channel modifications, flood control dams, and reservoirs). Each trip preceded by an orientation lecture.
2 units, Win (Freyberg, D)

CEE 268. Groundwater Flow
Flow and mass transport in porous media. Applications of potential flow theory and numerical modeling methods to practical groundwater problems: flow to and from wells, rivers, lakes, drainage ditches; flow through and under dams; streamline tracing; capture zones of wells; and mixing schemes for in-situ remediation. Prerequisites: calculus and introductory fluid mechanics.
3-4 units, Win (Staff)

CEE 269. Environmental Fluid Mechanics and Hydrology Seminar
Problems in all branches of water resources. Talks by visitors, faculty, and students. May be repeated for credit.
1 unit, Spr (Kitanidis, P)

CEE 270. Movement and Fate of Organic Contaminants in Waters
Transport of chemical constituents in surface and groundwater including advection, dispersion, sorption, interphase mass transfer, and transformation; impacts on water quality. Emphasis is on physicochemical processes and the behavior of hazardous waste contaminants. Prerequisites: undergraduate chemistry and calculus. Recommended: 101B.
3 units, Aut (Luthy, R), Sum (Robertson, A)

CEE 271A. Physical and Chemical Treatment Processes
Physical and chemical unit operations for water treatment, emphasizing process combinations for drinking water supply. Application of the principles of chemistry, rate processes, fluid dynamics, and process engineering to define and solve water treatment problems by flocculation, sedimentation, filtration, disinfection, oxidation, aeration, and adsorption. Investigative paper on water supply and treatment. Prerequisites: 101B, 270. Recommended: 273.
3 units, Win (Luthy, R)

CEE 271B. Environmental Biotechnology
Stoichiometry, kinetics, and thermodynamics of microbial processes for the transformation of environmental contaminants. Design of dispersed growth and biofilm-based processes. Applications include treatment of municipal and industrial waste waters, detoxification of hazardous chemicals, and groundwater remediation. Prerequisites: 270; 177 or 274A or equivalents.
4 units, Win (Criddle, C)

CEE 271M. Transport Phenomena: Momentum, heat and mass transport
(Same as CEE 371M) Heat, mass and momentum transfer theory from the viewpoint of basic transport equations. Steady and unsteady state; laminar and turbulent flow; boundary layer theory. Prerequisites: fluid mechanics, ordinary differential equations.
3 units, not given this year

CEE 272. Coastal Contaminants
Coastal pollution and its effects on ecosystems and human health. The sources, fate, and transport of human pathogens and nutrients. Background on coastal ecosystems and coastal transport phenomena including tides, waves, and cross shelf transport. Introduction to time series analysis with MATLAB. Undergraduates require consent of instructor.
3-4 units, Aut (Boehm, A)

CEE 272P. Distributed Generation and Grid Integration of Renewables
(Same as CEE 172P) Renewable generation technologies and their use in the electric power system. Conventional electricity generation systems and the historical development of renewables. Development and operation of the electric power system for high penetrations of renewables and demand side participation. Wind energy and wind farms. Design of wind turbines. Photovoltaic systems (grid connected), micro-hydro and marine renewables (wave and tidal stream devices). Analysis of the electric power system and the integration of renewable energy generators.
3-4 units, Win (Jenkins, N)

CEE 272R. Power Systems
coming later
3 units, Spr (Staff)

CEE 272S. Technology and business strategies to reduce greenhouse gas emissions
(Same as CEE 172S) This course will introduce the main concepts of greenhouse gas (GHG) emissions measurement and management, and it will explore the main mitigation options for reducing emissions or sequestering carbon dioxide. It will address technical aspects of GHG mitigation via energy efficiency and demand-side management, energy in high-technology industry, distributed power and co-generation, the role of renewable energy in GHG management, carbon sequestration in forestry, agriculture, and geological formations. The course explores policy options, carbon trading and business strategies for GHG mitigation.
3 units, Spr (Swisher, J)

CEE 272W. Wind Power project Development
Introduction to wind power resource assessment and project development. Topics include the dynamics of large-scale and small-scale wind systems, vertical scaling of winds in the boundary layer, measurement instruments used for resource assessments, wind turbine technology, and wind farm siting, planning and economics. Analysis methods of wind data, use of industry-standard software for optimizing turbine siting and project feasibility studies. Project work using existing resource assessment from local areas. Prerequisite: Math41/42 or equivalent. Limited enrollment.
1 unit, Aut (Ten Hoeve, J)

CEE 273. Aquatic Chemistry
Chemical principles and their application to the analysis and solution of problems in aqueous geochemistry (temperatures near 25° C and atmospheric pressure). Emphasis is on natural water systems and the solution of specific chemical problems in water purification technology and water pollution control. Prerequisites: CHEM 31 and 33, or equivalents.
3 units, Aut (Leckie, J)

CEE 273A. Water Chemistry Laboratory
(Same as CEE 179A) (Graduate students register for 273A.) Laboratory application of techniques for the analysis of natural and contaminated waters, emphasizing instrumental techniques.
3 units, Win (Robertson, A)

CEE 273C. Introduction to Membrane Technology for Water/Wastewater Treatment
Membrane separation processes focusing on their use for water and wastewater purification. Topics will include membrane types and materials; transport across and rejection by membranes; membrane fouling, cleaning and degradation; and design and operation of membrane systems.
1 unit, not given this year

CEE 274A. Environmental Microbiology I
(Same as CHEMENG 174, CHEMENG 274) Basics of microbiology and biochemistry. The biochemical and biophysical principles of biochemical reactions, energetics, and mechanisms of energy conservation. Diversity of microbial catabolism, flow of organic matter in nature: the carbon cycle, and biogeochemical cycles. Bacterial physiology, phylogeny, and the ecology of microbes in soil and marine sediments, bacterial adhesion, and biofilm formation. Microbes in the degradation of pollutants. Prerequisites: CHEM 33, 35, and BIOSCI 41, CHEMENG 181 (formerly 188), or equivalents.
3 units, Aut (Spormann, A), Sum (Krieger, C)

CEE 274B. Metabolic Biochemistry of Microorganisms
(Same as CHEMENG 456) Microbial metabolism, biochemical and metabolic principles, unity and diversity of metabolic pathways, evolution of enzymes and metabolic pathways, microbial degradation of natural and anthropogenic organic compounds, predicting biodegradation, and metabolic origin of life.
3 units, Win (Spormann, A)

CEE 274C. Microbial Ecology and Evolution
(Same as CHEMENG 457) Structure/function relationship of microbial communities; metabolic and ecological basis of interactions in microbial communities; microbial ecology and population biology in natural and human host systems; and evolution of microbial life. Prerequisite: CEE 274A, CHEMENG 281 (formerly 288), or equivalent.
3 units, not given this year

CEE 274D. Pathogens and Disinfection
Introduction to epidemiology, major pathogens and infectious diseases, the immune system, movement and survival of pathogens in the environment, transfer of virulence and antibiotic resistance genes, and pathogen control, with an emphasis on public health engineering measures (disinfection). Prerequisite: 274A.
3 units, alternate years, not given this year

CEE 274E. Pathogens in the Environment
Sources, fates, movement, and ecology of waterborne pathogens in the natural environment and disinfection systems; epidemiology and microbial risk assessment. No microbiology background required; undergraduates may enroll with consent of instructor.
3 units, not given this year

CEE 274P. Environmental Health Microbiology Lab
3-4 units, not given this year

CEE 275A. California Coast: Science, Policy, and Law
(Same as CEE 175A, EARTHSYS 175, EARTHSYS 275) Interdisciplinary. The legal, science, and policy dimensions of managing California's coastal resources. Coastal land use and marine resource decision making. The physics, chemistry, and biology of the coastal zone, tools for exploring data from the coastal ocean,

and the institutional framework that shapes public and private decision making. Field work: how experts from different disciplines work to resolve coastal policy questions. Primarily for graduate students; upper-level undergraduates may enroll with permission of instructor. Students will be expected to participate in at least three mandatory field trips.

3-4 units, Spr (Caldwell, M; Boehm, A; Sivas, D)

CEE 275B. Process Design for Environmental Biotechnology
Use of microbial bioreactors for degradation of contaminants and recovery of clean water, clean energy and/or green materials. Student teams design, operate, and analyze bioreactors and learn to write consulting style reports. Limited enrollment. Prerequisites: 271B

3 units, Spr (Criddle, C)

CEE 276. Introduction to Human Exposure Analysis
(Same as CEE 178) (Graduate students register for 276.) Scientific and engineering issues involved in quantifying human exposure to toxic chemicals in the environment. Pollutant behavior, inhalation exposure, dermal exposure, and assessment tools. Overview of the complexities, uncertainties, and physical, chemical, and biological issues relevant to risk assessment. Lab projects. Recommended: MATH 51.

3 units, Spr (Kopperud, R), Sum (Kopperud, R)

CEE 276E. Environmental Toxicants
Chemicals in the environment that pose toxicity risk. Introduction to environmental toxicology principles for identifying and characterizing toxicants based on sources, properties, pathways, and toxic action. Past and present environmental toxicant issues.

2-3 units, Spr (Ong, C)

CEE 276F. Energy Systems Field Trips: China Energy Systems
(Same as CEE 176F) Energy resources and policies in use and under development in China. 12-day field trip to China during Spring Break 2012. One unit for seminar and readings; one unit for field trip. Prerequisite: consent of instructor for field trip.

1-2 units, alternate years, not given this year

CEE 277. Aquatic Chemistry and Biology
(Same as CEE 177) Introduction to chemical and biological processes in the aqueous environment. Basic aqueous equilibria; the structure, behavior, and fate of major classes of chemicals that dissolve in water; redox reactions; the biochemistry of aquatic microbial life; and biogeochemical processes that govern the fate of nutrients and metals in the environment and in engineered systems. Prerequisite: CHEM 31.

4 units, Aut (Criddle, C), Sum (Criddle, C)

CEE 277A. Teaching Science Literacy for a Sustainable Society
Teaching science to nontechnical audiences emphasizing technologies and science for the sustainable use of water. Guest lecturers. Learning styles, and the role of engineers and scientists in K-12 and media communication. Students develop teaching modules to be used in educational settings involving nontechnical audiences.

2-4 units, not given this year

CEE 277C. Environmental Governance
Interaction between private, public and civil sectors in decision making that effects environmental sustainability. Governance on global to local scales, US and international case studies. Theoretical concepts of environmental policy design and implementation: common property and collective action, social movements and locally unwanted land uses, sustainable cities, ecological modernization, shifts in corporate environmental norms, ISO 14001 and green supply chains, and global institutions for constraining carbon emissions. Limited enrollment.

3 units, alternate years, not given this year

CEE 277D. Water, Sanitation and Health in Developing Countries
Graduate seminar focused on emerging research in the areas of water supply, sanitation, hygiene and health in developing countries. Limited enrollment; instructor permission required.

1-3 units, not given this year

CEE 277E. Environmental Informatics
The storage, processing and flow of information collected from or modeled after environmental systems. Scope of environmental informatics, and survey of frameworks and emerging developments. Discussions on the form and function of environmental datasets, and related issues of compatibility, interoperability, interpretation and usability. Optional computational laboratory/individual project for extra unit.

2-3 units, Sum (Ong, C; Wang, J)

CEE 277F. Advanced Field Methods in Water, Health and Development
Field methods for assessing household stored water quality, hand contamination, behaviors, and knowledge related to water, sanitation and health. Limited enrollment. Instructor consent required.

10-15 units, not given this year

CEE 277S. Design for a Sustainable World
(Same as CEE 177S) Technology-based problems faced by developing communities worldwide. Student groups partner with organizations abroad to work on concept, feasibility, design, implementation, and evaluation phases of various projects. Past projects include a water and health initiative, a green school design, seismic safety, and medical device. Admission based on written application and interview. See http://esw.stanford.edu for application. (Staff)

1-5 units, Win (Staff), Spr (Staff)

CEE 278A. Air Pollution Physics and Chemistry
The sources and health effects of pollutants. The influence of meteorology on pollution: atmospheric energy balance, temperature profiles, stability classes, inversion layers, turbulence. Atmospheric diffusion equations, downwind dispersion of emissions from point and line sources. Tropospheric chemistry: mechanisms for ozone formation, photochemical reactions, radical chain mechanisms, heterogeneous chemical reactions. Prerequisites: MATH 51, CHEM 31, or equivalents. Recommended: 101B, 273 or CHEM 135, or equivalents.

3 units, Aut (Hildemann, L)

CEE 278B. Atmospheric Aerosols
The characterization of atmospheric particulate matter: size distributions, chemical composition, health effects. Atmospheric diffusion and transport of particles: removal by convection, impaction, gravitational settling. Effect of aerosols on visibility: light scattering and absorption, reduction of visual range. Mechanics influencing ambient size distributions: Brownian coagulation, laminar shear flow, homogeneous nucleation, heterogeneous condensation. Prerequisite: MATH 51, or equivalent. Recommended: 101B or equivalent.

3 units, alternate years, not given this year

CEE 278C. Indoor Air Quality
(Same as CEE 172A) Factors affecting the levels of air pollutants in the built indoor environment. The influence of ventilation, office equipment, floor coverings, furnishings, cleaning practices, and human activities on air quality including carbon dioxide, VOCs, resuspended dust, and airborne molds and fungi. Recommended: 172 or 278A.

2-3 units, Spr (Hildemann, L)

CEE 279. Environmental Engineering Seminar
Current research, practice, and thinking in environmental engineering and science. Attendance at seminars is self-directed, and may be accrued throughout the school year.

1 unit, Aut (Hildemann, L; Boehm, A), Win (Hildemann, L), Spr (Hildemann, L)

CEE 280. Advanced Structural Analysis
Theoretical development and computer implementation of direct stiffness method of structural analysis; virtual work principles; computation of element stiffness matrices and load vectors; direct assembly procedures; equation solution techniques. Analysis of two- and three-dimensional truss and frame structures, thermal loads, and substructuring and condensation techniques for large systems. Practical modeling techniques and programming assignments. Introduction to nonlinear analysis concepts. Prerequisites: elementary structural analysis and matrix algebra.

3-4 units, Aut (Deierlein, G)

CEE 281. Mechanics and Finite Elements
Fluid conduction and solid deformation; conservation laws: balance of mass and balance of momentum; generalized Darcy's law and Hooke's law in 3D; the use of tensors in mechanics; finite element formulation of boundary-value problems; variational equations and Galerkin approximations; basic shape functions, numerical integration, and assembly operations.

3 units, Win (Borja, R)

CEE 282. Nonlinear Structural Analysis
Introduction to methods of geometric and material nonlinear analysis, emphasizing modeling approaches for framed structures. Large-displacement analysis, concentrated and distributed plasticity models, and nonlinear solution methods. Applications to frame stability and performance-based seismic design. Assignments emphasize computer implementation and applications. Prerequisites: 280, 286 or equivalent.

3-4 units, Win (Deierlein, G)

CEE 283. Structural Dynamics
Vibrations and dynamic response of simple structures under time dependent loads; dynamic analysis of single and multiple degrees of freedom systems; support motion; response spectra.

3-4 units, Win (Law, K)

CEE 284. Finite Element and Computational Methods in Structural Dynamics
Computational methods for structural dynamics analysis of discrete and continuous systems in free and forced vibration; finite element formulation; modal analysis; numerical methods; introduction to nonlinear dynamics; advanced topics. Prerequisites: 280, 283.

3-4 units, Spr (Law, K)

CEE 285. Behavior of Structural Systems for Buildings
Basic design concepts, performance criteria, loading, methods of design, types of structural systems, behavior under gravity and lateral loads, approximate methods of analysis, preliminary conceptual design, performance assessment, behavior of structural elements. Prerequisites: basic courses in design of steel and reinforced concrete structures.

3-4 units, not given this year

CEE 285A. Advanced Structural Concrete Behavior and Design
Behavior and design of reinforced and prestressed concrete for building and bridge design. Emphasis on flexural behavior, prestressed concrete design, slender columns, and two-way slab design & analysis.

3-4 units, Aut (Billington, S; Michel, A)

CEE 285B. Advanced Structural Steel Behavior and Design
Advanced topics in structural steel design. Topics include composite floor systems; bolted and welded connections; beam-column connections; innovative lateral load resisting systems. As part of this course students design a 15-story steel building. Prerequisite: basic course in structural steel design CEE181 or equivalent.

3-4 units, Aut (Miranda, E)

CEE 286. Behavior and Design of Structural Systems
Basic design concepts, performance criteria, loading, methods of design, behavior of various types of structural systems under gravity and lateral loads, approximate methods of analysis, preliminary conceptual design of structural elements. Prerequisites: CEE 280. Recommended: CEE 285A and/or CEE 285B.

3-4 units, Win (Miranda, E)

CEE 287. Earthquake Resistant Design and Construction
Evaluation, design, and construction of structures in seismic regions. Factors influencing earthquake ground motions, design spectra, design of linear and nonlinear single- and multiple-degree-of-freedom-system structures, force-based and displacement-based design methods, capacity design, detailing and construction of steel and reinforced concrete structures, introduction to performance-based design, seismic isolation, and energy dissipation. Prerequisites: 283, 285. Recommended: 282, 288.

3-4 units, Spr (Miranda, E)

CEE 288. Earthquake Hazard and Risk Analysis
Earthquake phenomena, faulting, ground motion, earthquake hazard formulation, effects of earthquakes on manmade structures, response spectra, Fourier spectra, soil effects on ground motion and structural damage, methods for structural damage evaluation, and formulation of the performance-based earthquake engineering problems. Prerequisites: 203, 283.

3-4 units, Win (Kiremidjian, A)

CEE 289. Random Vibrations
Introduction to random processes. Correlation and power spectral density functions. Stochastic dynamic analysis of multi-degree-of-freedom structures subjected to stationary and non-stationary random excitations. Crossing rates, first-excursion probability, and distributions of peaks and extremes. Applications in earthquake, wind, and ocean engineering. Prerequisite: 203 or equivalent.

3-4 units, Spr (Baker, J)

CEE 290. Structural Performance and Failures
Basic concepts in the definition of satisfactory structural performance; key elements in structural performance; types of failures, ranging from reduced serviceability to total collapse; failure sources and their root cause allocation, emphasizing design/construction process failures; failure prevention mechanisms; illustration with real life examples.

2 units, Spr (Moncarz, P)

CEE 293. Foundation Engineering
Types, characteristics, analysis, and design of shallow and deep foundations; rigid and flexible retaining walls; braced excavations; settlement of footings in sands and clays; slope stability analysis by method of slices including search algorithms for the critical slip surface. Special seminars by guest speakers; computing assignment. Prerequisite: 101C or equivalent.

3 units, Win (Staff)

CEE 294. Computational Poromechanics
Continuum and finite element formulations of steady-state and transient fluid conduction problems on geomechanics; elliptic, parabolic, and hyperbolic systems; variational inequality and free-boundary problems; three-dimensional consolidation theory; undrained condition, mesh locking, B-bar and strain projection methods; finite element formulations of multiphase dynamic problems. Computing assignments. Prerequisite: CEE 281 or equivalent.

3 units, alternate years, not given this year

CEE 295. Plasticity Modeling and Computation
Theory of plasticity; micromechanical basis; classical yield models; return-mapping algorithm; multi-surface and bounding surface models; material instabilities; localization and bifurcation. Prerequisite: CEE 281 or equivalent.

3 units, Spr (Borja, R)

CEE 296. Special Topics in Fluid-Solid Interactions
Civil, mechanical, and biomedical engineering. Topics include surge and wave impact on structures, tsunami induced sediment transport and scour, wave-soil interactions, dam-reservoir-foundation interactions, shock and blast loads on composite structures, hydroelastic tailoring of composite structures, and blood-vessel interactions. Term project.

2 units, not given this year

CEE 297. Issues in Geotechnical and Environmental Failures
Causes and consequences of the failure of buildings, earth structures, waste storage, and high hazard facilities in contact with the environment; technical, ethical, economic, legal, and business aspects; failure analysis and forensic problems; prevention, liability, and dispute management. Case histories including earthquake, flood, and hazardous waste facilities. Student observation, participation in active lawsuits where possible.

3 units, not given this year

CEE 297G. Structural Geology and Rock Mechanics
(Same as GES 215A, GEOPHYS 251A) Quantitative field and laboratory data integrated with solutions to initial and boundary-value problems of continuum mechanics introduce tectonic processes in Earth's crust that lead to the development of geological structures including folds, faults, fractures and fabrics. Topics include: techniques and tools for structural mapping; using differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; traction and stress analysis. Data sets analyzed using MATLAB. Prerequisites: GES 1, MATH 53, MATLAB or equivalent.

3-5 units, Aut (Pollard, D)

CEE 297H. Structural Geology and Rock Mechanics
(Same as GES 215B, GEOPHYS 251B) Field equations for elastic solids and viscous fluids derived from conservation laws to develop mechanical models for tectonic processes and their structural products. Topics include: conservation of mass and momentum in a deformable continuum; linear elastic deformation and elastic properties of rock; brittle deformation including fracture and faulting; linear viscous flow including folding, model development, and methodology. Models constructed and solutions visualized using MATLAB. Prerequisite: GES 215A.

3-5 units, Win (Staff)

CEE 297M. Managing Critical Infrastructure Seminar
Safe and effective performance of infrastructure systems is critical to our economy, quality of life and safety. The seminar will present and discuss topics associated with risk analysis and management of critical civil infrastructure systems, including notions of acceptable risk. Discuss lessons learned from Hurricane Katrina and elsewhere which dictate the need for changes to how infrastructure systems are analyzed, designed and operated. Guest speakers. Student presentations.
1 unit, Spr (McCann, M)

CEE 298. Structural Engineering and Geomechanics Seminar
Recommended for all graduate students. Lectures on topics of current interest in professional practice and research.
1 unit, Win (Miranda, E)

CEE 299. Independent Study in Civil Engineering
Directed study for graduate students on subjects of mutual interest to students and faculty. Student must obtain faculty sponsor.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CEE 299S. Independent Project in Civil and Environmental Engineering
Prerequisite: consent of instructor.
1-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CEE 300. Thesis (Engineer Degree)
Research by Engineer candidates.
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CEE 301. The Energy Seminar
(Same as ENERGY 301) Interdisciplinary exploration of current energy challenges and opportunities, with talks by faculty, visitors, and students. May be repeated for credit.
1 unit, Aut (Benson, S), Win (Benson, S), Spr (Benson, S)

CEE 305. Damage and Failure Mechanics of Structural Systems
Examine the mechanics and failure mechanisms of structural deterioration mechanisms and hazards. Overview of fracture mechanics concepts as a general basis for analyzing brittle failure modes in steel and concrete structures. Analysis and design theory for corrosion, fatigue, fire and other damage mechanisms in steel and concrete structures. New methods for mitigation of these failure modes and hazards will be introduced, including new construction materials, structural designs and protection methods.
3-4 units, Spr (Lepech, M)

CEE 316. Sustainable Built Environment Research
Covers Ph.D. candidacy requirements of industry problem analysis and critical literature review for post-MS students conducting research on sustainable planning, design, management, and operation of buildings and infrastructure. Identify industry problems and related research questions. Design experiments and research methods for: ethnographies, case studies, surveys, classical experiments mathematical and computational simulations. Overview of statistical methods for data analysis. Publication strategies.
3-4 units, not given this year

CEE 320. Integrated Facility Engineering
Individual and group presentations on goals, research, and state-of-practice of virtual design and construction in support of integrated facility engineering, including objectives for the application and further development of virtual design and construction technologies. May be repeated for credit.
1 unit, Aut (Kunz, J; Fischer, M), Win (Fischer, M), Spr (Kunz, J)

CEE 321. Formal Models for Design
Theories, methods, and formal systems to support the design of buildings. Academic and industrial frameworks to represent and manage the products, organizations, and processes of building projects. May be repeated for credit.
3 units, not given this year

CEE 342. Computational Modeling of Organizations
For post-M.S. students interested in formal techniques for organization design. Computer simulations of organizations are used to conduct virtual experiments for developing organization theory or to analyze the performance of virtual organizations with different structures and decision support and communication technologies. Research on computational modeling and design of real-world organizations. Paper serves as a research proposal. Prerequisite: 242 or equivalent introductory organization design class.
4 units, not given this year

CEE 345. Game Theory Modeling in Engineering
Game theory involves the analysis of conflict, cooperation and communication, and is a novel and powerful tool for analyzing important issues in engineering management and engineering policy. Class will develop students¿ game theory skills in an applied context. Learn how to set up and solve fundamental game models and apply these skills to building new theories in engineering management through game theory modeling. Class illustrates the arts of game modeling by applying game theory in: (1) contracting and opportunistic bidding; (2) renegotiation in public-private partnerships; (3) partner selection strategies in global projects; and (4) knowledge management and sharing. Students are encouraged to apply game theory to their own research issues or disciplines, and extend their term projects into research papers or theses. Limited class size. Priority for CEE, IPER and MS&E students.
2-3 units, Aut (Ho, S)

CEE 362. Numerical Modeling of Subsurface Processes
Numerical modeling including: problem formulation, PDEs and weak formulations, and choice of boundary conditions; solution using the finite-element code COMSOL Multiphysics with a variety of solvers and pre- and postprocessing of data; and interpretation of results. Problems include: flow in saturated porous media with complex boundaries and heterogeneities; solute transport with common reaction models; effects of heterogeneity on dispersion, dilution, and mixing of solutes; variable-density flow and seawater intrusion; upscaling or coarsening of scale; and biofilm modeling. Enrollment limited to 5.
3-4 units, alternate years, not given this year

CEE 362G. Stochastic Inverse Modeling and Data Assimilation Methods
Stochastic methods for the solution of inverse problems that are algebraically underdetermined or have solutions that are sensitive to data. Emphasis is on geostatistical methods that, in addition to using data, incorporate information about structure such as spatial continuity and smoothness. Methods for real-time processing of new data. Prerequisite: consent of instructor.
3-4 units, alternate years, not given this year

CEE 363A. Mechanics of Stratified Flows
The effects of density stratification on flows in the natural environment. Basic properties of linear internal waves in layered and continuous stratification. Flows established by internal waves. Internal hydraulics and gravity currents. Turbulence in stratified fluids. Prerequisites: 262A,B, CME 204.
3 units, alternate years, not given this year

CEE 363C. Ocean and Estuarine Modeling
Advanced topics in modeling for ocean and estuarine environments, including methods for shallow water, primitive, and nonhydrostatic equations on Cartesian, curvilinear, and unstructured finite-volume grid systems. Topics include free-surface methods, nonhydrostatic solvers, and advanced Eulerian and Lagrangian advection techniques. Focus is on existing techniques and code packages, and their methodologies, including POM, ROMS, TRIM, ELCOM, and SUNTANS. Prerequisites: CME 200, 206, or equivalents.
3 units, Win (Fringer, O)

CEE 363F. Oceanic Fluid Dynamics
(Same as EESS 363F) Dynamics of rotating stratified fluids with application to oceanic flows. Topics include: inertia-gravity waves; geostrophic and cyclogeostrophic balance; vorticity and potential vorticity dynamics; quasi-geostrophic motions; planetary and topographic Rossby waves; inertial, symmetric, barotropic and baroclinic instability; Ekman layers; and the frictional spin-down of geostrophic flows. Prerequisite: CEE 262A or a graduate class in fluid mechanics.
3 units, Spr (Thomas, L)

CEE 363G. Field Techniques in Coastal Oceanography
This course focuses on the design and implementation of coastal oceanographic field studies from implementation through analysis. A wide range of field instrumentation and techniques, including AUVs and scientific diving is covered. Field studies. Data collection and analysis under instructor guidance.
3 units, Spr (Woodson, C)

CEE 364Y. Advanced Topics in Coastal Oceanography
The dynamics and transport implications of features in estuaries and coastal oceans characterized by sharp gradients: fronts, interfaces, and layers. Analytic framework to describe the formation, maintenance, and dissipation of such features. Examples include tidal mixing fronts, buoyant plume fronts and tidal intrusions, biological thin layers, and axial convergent fronts. Second unit for students who give a presentation.
1-2 units, not given this year

CEE 365A. Advanced Topics in Environmental Fluid Mechanics and Hydrology
Students must obtain a faculty sponsor.
2-6 units, Aut (Staff)

CEE 365B. Advanced Topics in Environmental Fluid Mechanics and Hydrology
Students must obtain a faculty sponsor.
2-6 units, Win (Staff)

CEE 365C. Advanced Topics in Environmental Fluid Mechanics and Hydrology
Students must obtain a faculty sponsor.
2-6 units, Spr (Staff)

CEE 365D. Advanced Topics in Environmental Fluid Mechanics and Hydrology
Students must obtain a faculty sponsor.
2-6 units, Sum (Staff)

CEE 370A. Environmental Research
Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literature survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.
5-6 units, Aut (Staff)

CEE 370B. Environmental Research
Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literature survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.
5-6 units, Win (Staff)

CEE 370C. Environmental Research
Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literature survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.
5-6 units, Spr (Staff)

CEE 370D. Environmental Research
Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literature survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.
3-6 units, Sum (Staff)

CEE 371. Frontiers in Environmental Research
How to evaluate environmental research.
1-2 units, Aut (Staff), Win (Staff), Spr (Staff)

CEE 371M. Transport Phenomena: Momentum, heat and mass transport
(Same as CEE 271M) Heat, mass and momentum transfer theory from the viewpoint of basic transport equations. Steady and unsteady state; laminar and turbulent flow; boundary layer theory. Prerequisites: fluid mechanics, ordinary differential equations.
3 units, not given this year

CEE 374A. Introduction to Physiology of Microbes in Biofilms
Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.
1-6 units, Aut (Spormann, A)

CEE 374B. Introduction to Physiology of Microbes in Biofilms
Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.
1-6 units, Win (Staff)

CEE 374C. Introduction to Physiology of Microbes in Biofilms
Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.
1-6 units, Spr (Staff)

CEE 374D. Introduction to Physiology of Microbes in Biofilms
Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.
1-6 units, Sum (Staff)

CEE 374S. Advanced Topics in Microbial Pollution
May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Boehm, A), Win (Boehm, A), Spr (Boehm, A), Sum (Boehm, A)

CEE 374T. Advanced Topics in Coastal Pollution
May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Boehm, A), Win (Boehm, A), Spr (Boehm, A), Sum (Boehm, A)

CEE 374U. Advanced Topics in Submarine Groundwater Discharge
May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Boehm, A), Win (Boehm, A), Spr (Boehm, A), Sum (Boehm, A)

CEE 374V. Advanced Topics in Microbial Source Tracking
May be repeated for credit. Prerequisite: consent of instructor.
1-5 units, Aut (Boehm, A), Win (Boehm, A), Spr (Boehm, A), Sum (Boehm, A)

CEE 375. Advanced Methods in Pathogen Detection
Molecular and culture-based techniques for pathogen detection in water.
2 units, not given this year

CEE 376. Investigating the Fate of Organic Contaminants in the Environment
Theory and practice of instrumental methods used in environmental engineering and sciences, emphasizing chromatographic separation and mass spectrometric detection. Study of instrument performance, design an investigation, case studies and written proposal.
3 units, Sum (Reinhard, M)

CEE 377. Research Proposal Writing in Environmental Engineering and Science
For first- and second-year post-master's students preparing for thesis defense. Students develop progress reports and agency-style research proposals, and present a proposal in oral form. Prerequisite: consent of thesis adviser.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CEE 378. Statistical Analysis of Environmental Data: Tools and Applications
Preference to Environmental Engineering and Science Ph.D. students. Practical data analysis techniques applicable to environmental engineering. The role of statistics in data collection, experimental design, data exploration, and effective communication of results. Use of statistical packages such as Excel, Matlab, and R. Discussions partially based on student interest and available datasets. Topics may include summarizing data, hypothesis testing, nonparametric statistics, regression analysis, classification and

regression trees, cluster analysis, and computationally intensive methods. Limited enrollment.

2-3 units, not given this year

CEE 378D. Seminar of Statistical Analysis of Multidisciplinary Primary Data

Practical management and analysis techniques for primary data collected in multidisciplinary projects. Selection of appropriate statistical tests, interpretation of results, and effective communication of findings to lay audiences. Univariate, bivariate and multivariate techniques, including hypothesis testing, nonparametric statistics, regression analysis and matching. Use of SPSS statistical package. Limited enrollment. Prerequisite: consent of instructor.

1-3 units, not given this year

CEE 381. Advanced Engineering Informatics

1-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CEE 385. Performance-Based Earthquake Engineering

Synthesis and application of approaches to performance-based design and assessment that recently have been developed or are under development. Emphasis is on quantitative decision making based on life-cycle considerations that incorporate direct losses, downtime losses, and collapse, and the associated uncertainties. Hazard analysis, response simulation, damage and loss estimation, collapse prediction. Case studies. Prerequisites: 282, 287, and 288.

2-3 units, Aut (Krawinkler, H)

CEE 398. Report on Civil Engineering Training

On-the-job training under the guidance of experienced, on-site supervisors; meets the requirements for Curricular Practical Training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. Prerequisite: qualified offer of employment and consent of adviser as per I-Center procedures.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CEE 399. Advanced Engineering Problems

Individual graduate work under the direction of a faculty member on a subject of mutual interest. Student obtain faculty sponsor. May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CEE 400. Thesis (Ph.D. Degree)

For students who have successfully completed the department general qualifying examination. Research and dissertation for the Ph.D. degree.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CEE 801. TGR Project (Engineer Degree)

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CEE 802. TGR Dissertation (PhD degree)

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CLASSICS ART/ARCHAEOLOGY (CLASSART) COURSES

UNDERGRADUATE COURSES IN CLASSICS ART/ARCHAEOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

CLASSART 21Q. Eight Great Archaeological Sites in Europe

(Stanford Introductory Seminar) Preference to sophomores. Focus is on excavation, features and finds, arguments over interpretation, and the place of each site in understanding the archaeological history of Europe. Goal is to introduce the latest archaeological and anthropological thought, and raise key questions about ancient society. The archaeological perspective foregrounds interdisciplinary study: geophysics articulated with art history, source criticism with analytic modeling, statistics interpretation. A web site with resources about each site, including plans, photographs, video, and publications, is the basis for exploring. GER:DB-Hum

3-5 units, Aut (Shanks, M)

CLASSART 101. Archaic Greek Art

(Same as ARTHIST 101, ARTHIST 301, CLASSART 201) The development of Greek art and culture from protogeometric beginnings to the Persian Wars, 1000-480 B.C.E. The genesis of a native Greek style; the orientalizing phase during which contact with the Near East and Egypt transformed Greek art; and the synthesis of East and West in the 6th century B.C.E. GER:DB-Hum

4 units, Aut (Maxmin, J)

CLASSART 102. Empire and Aftermath: Greek Art from the Parthenon to Praxiteles

(Same as ARTHIST 102, ARTHIST 302) The course explores the art and architecture of the Athenian Empire in the age of Pericles, and then considers the effects of civil war and plague on Greek art and society in the later 5th and early 4th centuries. GER:DB-Hum

4 units, Win (Maxmin, J)

CLASSART 109. Greek Art In and Out of Context

(Same as ARTHIST 203) The cultural contexts in which art served religious, political, commercial, athletic, sympotic, and erotic needs of Greek life.

4-5 units, Aut (Maxmin, J)

CLASSART 110. Appropriations of Greek Art

(Same as ARTHIST 204A) Upper division seminar. The history of the appropriation of Greek art by Rome, the Renaissance, Lord Elgin, and Manet. Enrollment limited to 6. Prerequisite: ARTHIST 102 or consent of instructor.

4-5 units, Spr (Maxmin, J)

CLASSART 113. Ten Things: An Archaeology of Design

(Same as CLASSART 213, STS 112) Connections among science, technology, society and culture by examining the design of a prehistoric hand axe, Egyptian pyramid, ancient Greek perfume jar, medieval castle, Wedgewood teapot, Edison's electric light bulb, computer mouse, Sony Walkman, supersonic aircraft, and BMW Mini. Interdisciplinary perspectives include archaeology, cultural anthropology, science studies, history and sociology of technology, cognitive science, and evolutionary psychology. GER:DB-SocSci

3-5 units, Aut (Shanks, M)

CLASSART 114. Ceramics: Art and Science

(Same as ARCHLGY 117) From clay to culture. Design, technology, manufacture, and consumption of ceramics. Guest lecturers, site visits, and hands-on studio work.

3-5 units, Spr (Shanks, M)

CLASSART 142. Archaeology of Roman Slavery

(Same as CLASSART 242) The archaeology of Roman slavery embodies a paradox: slavery was ubiquitous in Roman society but did not leave distinct material traces that archaeologists can easily identify. Explore that paradox by examining ancient writings on Roman slavery in conjunction with built spaces, visual images, and artifacts. Discuss more recent slave societies for purposes of comparison and contrast. Learn to analyze different kinds of historical and archaeological evidence, how to reconstruct social and spatial dynamics, and how ancient Roman slavery and society worked.

4-5 units, Win (Trimble, J)

GRADUATE COURSES IN CLASSICS ART/ARCHAEOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

CLASSART 201. Archaic Greek Art

(Same as ARTHIST 101, ARTHIST 301, CLASSART 101) The development of Greek art and culture from protogeometric beginnings to the Persian Wars, 1000-480 B.C.E. The genesis of a native Greek style; the orientalizing phase during which contact with the Near East and Egypt transformed Greek art; and the synthesis of East and West in the 6th century B.C.E.

4 units, Aut (Maxmin, J)

CLASSART 213. Ten Things: An Archaeology of Design

(Same as CLASSART 113, STS 112) Connections among science, technology, society and culture by examining the design of a prehistoric hand axe, Egyptian pyramid, ancient Greek perfume jar, medieval castle, Wedgewood teapot, Edison's electric light bulb, computer mouse, Sony Walkman, supersonic aircraft, and BMW Mini. Interdisciplinary perspectives include archaeology, cultural anthropology, science studies, history and sociology of technology, cognitive science, and evolutionary psychology.

3-5 units, Aut (Shanks, M)

CLASSART 242. Archaeology of Roman Slavery

(Same as CLASSART 142) The archaeology of Roman slavery embodies a paradox: slavery was ubiquitous in Roman society but

did not leave distinct material traces that archaeologists can easily identify. Explore that paradox by examining ancient writings on Roman slavery in conjunction with built spaces, visual images, and artifacts. Discuss more recent slave societies for purposes of comparison and contrast. Learn to analyze different kinds of historical and archaeological evidence, how to reconstruct social and spatial dynamics, and how ancient Roman slavery and society worked.

4-5 units, Win (Trimble, J)

CLASSART 315. Mapping Rome

Spatial analysis of the city of Rome in the late republic and early empire, including work with the Severan marble plan. Themes include the nature and urban impact of religious, commercial and residential space; interactions of different kinds of space; movement through the city; organization of neighborhoods and their implications for social relations. May be repeated for credit.

5 units, Spr (Trimble, J)

CLASSICS GENERAL (CLASSGEN) COURSES

UNDERGRADUATE COURSES IN CLASSICS GENERAL

Primarily for undergraduates; graduate students may enroll with consent of adviser.

CLASSGEN 5N. The Nile and its Life-cycles

(Stanford Introductory Seminar) Studying the Nile River, in all its aspects involving antiquity. Particular focus on the period between 500 BC and AD 500, with limited materials before and after said period. Is it useful or misleading to think of the river itself as ancient? What happens when we consider the Nile spatially as a whole? Since only a part of the river flows through Egypt we will also focus on Ethiopia, the Sudan and equatorial Africa, which were also objects of ancient Greek and Roman fascination.

3-5 units, Aut (Parker, G)

CLASSGEN 6N. Antigone: From Ancient Democracy to Contemporary Dissent

(Stanford Introductory Seminar) (Same as DRAMA 12N) Preference to freshmen. Tensions inherent in the democracy of ancient Athens; how the character of Antigone emerges in later drama, film, and political thought as a figure of resistance against illegitimate authority; and her relevance to contemporary struggles for women's and workers' rights and national liberation. Readings and screenings include versions of Antigone by Sophocles, Anouilh, Brecht, Fugard/Kani/Ntshona, Paulin, Glowacki, Gurney, and von Trotta. GER:DB-Hum, EC-Gender

3-5 units, Aut (Rehm, R)

CLASSGEN 9. Greek and Latin Roots of English

Goal is to improve vocabulary, comprehension of written English, and standardized test scores through learning the Greek and Latin components of English. Focus is on patterns and processes in the formation of the lexicon. Terminology used in medicine, business, education, law, and humanities; introduction to principles of language history and etymology. Greek or Latin not required.

3 units, Sum (Porta, F)

CLASSGEN 16N. New Worlds from Homer to Columbus

(Stanford Introductory Seminar) Preference to sophomores. What did the ancient Greeks and Romans imagine far away places and peoples to be like? What did they think the world looked like? What was the modern afterlife of these ancient travel experiences? Focus on Greek and Roman travels and encounters with alien peoples and exotic places (from Homer's Odyssey to the Roman historian Tacitus' descriptions of Britain and German), accounts of the New World and its peoples by both explorers and missionaries (from Columbus to Las Casas) and visual representations.

3-5 units, Spr (Ceserani, G)

CLASSGEN 18. Greek Mythology

The heroic and divine in the literature, mythology, and culture of archaic Greece. Interdisciplinary approach to the study of individuals and society. Illustrated lectures. Readings in translation of Homer, Hesiod, Herodotus, and the poets of lyric and tragedy. GER:DB-Hum

3-5 units, Aut (Martin, R)

CLASSGEN 24N. Sappho: Erotic Poetess of Lesbos

(Stanford Introductory Seminar) Preference to freshmen. Sappho's surviving fragments in English; traditions referring to or fantasizing about her disputed life. How her poetry and legend inspired women authors and male poets such as Swinburne, Baudelaire, and Pound. Paintings inspired by Sappho in ancient and modern times, and composers who put her poetry to music. GER:DB-Hum, EC-Gender

4-5 units, Win (Peponi, A)

CLASSGEN 81. Philosophy and Literature

(Same as COMPLIT 181, ENGLISH 81, FRENGEN 181, ITALGEN 181, GERGEN 181) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum

4-5 units, Win (Anderson, L; Landy, J)

CLASSGEN 107. The Black Mediterranean: Greece, Rome and Antiquity

(Same as AFRICAAM 107C, CSRE 107) Explore problems of race and ethnicity as viable criteria in studying ancient societies and consider the question, What is the Mediterranean?, in relation to premodern evidence. Investigate the role of blackness as a marker of ethnicity; the demography of slavery and its roles in forming social identities; and environmental determinism as a factor in ethnic and racial thinking. Consider Greek and Roman perspectives and behavior, and their impact on later theories of race and ethnicity as well as the Mediterranean as a whole. GER:EC-GlobalCom

4-5 units, Aut (Parker, G)

CLASSGEN 119. Gender and Power in Ancient Rome

Ideals, norms, and transgressions of behavior. Masculinity and femininity in founding legends and public rituals; the ambiguous status of vestal virgins; the masculinity of the Roman Forum; the spatial logic of Roman prostitution; gendered accounts of good and bad emperors in ancient texts. Practices of gender and power in life and death, public and private space, religion, spectacles, and sex in the urban landscape of ancient Rome GER:DB-Hum, EC-Gender

3-5 units, Spr (Trimble, J)

CLASSGEN 123. Urban Sustainability: Long-Term Archaeological Perspectives

(Same as CLASSGEN 223, URBANST 115) Comparative and archaeological view of urban design and sustainability. How fast changing cities challenge human relationships with nature. Innovation and change, growth, industrial development, the consumption of goods and materials. Five millennia of city life including Near Eastern city states, Graeco-Roman antiquity, the Indus Valley, and the Americas.

3-5 units, Spr (Shanks, M)

CLASSGEN 125. Socrates: The Legend and the Man

Socrates has been one of the most enigmatic, controversial and influential figures in history. Explore the major ancient sources about his private and public life, his legendary death, his provocative views on ethics, politics and erotics, his distinctive self-presentation, and his various modes of communicating ideas. We will also discuss the way modern philosophers, such as Kierkegaard and Nietzsche, struggled over Socrates' heritage.

3-5 units, Win (Peponi, A)

CLASSGEN 126. Judaism and Christianity in the Mediterranean World: Contact, Comptetition, and Conflict
(Same as CLASSGEN 226, JEWISHST 226B, JEWISHST 326B, RELIGST 226B, RELIGST 326B) Jewish beginnings of Christianity in the first century C.E.; process of differentiation between various Jewish and Christian groups; effect of Roman-Jewish wars on Jewish and Christian identity formation; Jewish Christians, Christian Jews, and other heretics; rise of the discourse of orthodoxy and heresy; the emergence of the Adversus Judaeos tradition; theology as a realm of mutual attraction and conflict. Readings include Epistles of Paul in the New Testament, Christian authors from Justin through Augustine, excerpts from Rabbinic Texts (Mishnah, Midrash and Talmud), along with current literature on religion, ethnicity, and identity in the Roman world. GER:DB-Hum

5 units, Aut (Fonrobert, C)

CLASSGEN 132. Early Christian Gospels
(Same as RELIGST 132D) An exploration of Christian gospels of the first and second century. Emphasis on the variety of images and interpretations of Jesus and the good news, the broader Hellenistic and Jewish contexts of the gospels, the processes of developing and transmitting gospels, and the creation of the canon. Readings include the Gospel of John, the Gospel of Mark, the Gospel of Thomas, the Gospel of Mary and other canonical and non-canonical gospels. GER:DB-Hum

4 units, Spr (Copeland, K)

CLASSGEN 138. Modern Journeys in Ancient Lands: Building a Spatial History of the Grand Tour
Touring the ancient sites of Italy was an educational rite of passage for 18th-century British elites. Where did Grand Tourists travel? How did the places visited and people encountered affect them, and shape our own vision of the ancient world? Analysis of the literary, geographic, and ideological landscapes of the Grand Tour through focus on primary sources (archival and published) and modern geoanalytical tools (from Google Earth to GIS) to create dynamic visualizations reflecting current theoretical and historical approaches.

3-5 units, Win (Ceserani, G)

CLASSGEN 151. Greek Tragedy
(Same as DRAMA 151, DRAMA 251) Greek Tragedy explores the plays of Aeschylus, Sophocles, and Euripides and the theatrical genre that developed along with the radical democracy of ancient Athens. Plays include the Oresteia, Prometheus Bound, Persians, Antigone, Electra, Oedipus Tyrannus, Philoctetes, Medea, Heracles, Trojan Women, Helen, Ion, and the Bacchae. We will focus on the dramatic challenges posed by these plays, their political and historical context, and what they can teach us about today¿s theater.

3-5 units, Aut (Rehm, R)

CLASSGEN 160. Directed Readings (Undergraduate)
May be repeated for credit.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CLASSGEN 164. The Homeric Muse: Iliad, Odyssey, and Their Epic Influence
(Same as DRAMA 164R) The great Homeric epics, the Iliad and Odyssey, and Derek Walcott's re-working of Homer's poems, his Nobel-prize winning Omeros. Students attend the theatrical and cinematic adaptations that Stanford Summer Theater (SST) presents, featuring a production of The Wanderings of Odysseus, a staged reading of Walcott's Omeros, and films such as Oh Brother, Where Art Thou? Students attend the SST symposium, featuring scholars from Oxford University and Stanford, who discuss the Homeric epics and their influence.

3-5 units, Sum (Rehm, R)

CLASSGEN 174. Martyrdom in the Ancient World
(Same as RELIGST 174) Jewish, pagan and Christian groups under Roman rule all told tales of persecution and resistance. How did they use these stories, and the historical experiences behind them, to form group identity? Emphasis is on ancient documents in translation, and modern scholarly interpretations, to examine the competing agendas of parties involved, group dynamics, individual motivation, symbolic violence, and the body as a locus of power and control. GER:DB-Hum

4 units, not given this year

CLASSGEN 176. Majors Seminar: The Iliad, the Aeneid, and the Ancient Art of Persuasion
Required of Classics majors and minors in junior or senior year; students contemplating honors should take this course in junior year. Advanced skills course involving close reading, critical thinking, editing, and writing. Students read the Iliad and the Aeneid, along with a selection of articles reflecting various critical approaches. We also study the system of rhetorical training that was the cornerstone of ancient education. In-class and take-home writing and revising exercises. Final paper topic may be on any subject related to Classics. WIM

4-5 units, Win (Gleason, M)

CLASSGEN 199. Undergraduate Thesis: Senior Research

2-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN CLASSICS GENERAL

Primarily for graduate students; undergraduates may enroll with consent of instructor.

CLASSGEN 205A. The Semantics of Grammar
Supplements CLASSLAT/CLASSGRK 275. Introduction to the grammatical encoding of semantic and pragmatic meaning. 205A: morphology-semantics interface (gender, tense, aspect, case). 205B: syntax-pragmatics interface (Latin word order). Begins in Autumn Quarter and continues through 5th week of Winter Quarter.

2 units, Aut (Devine, A)

CLASSGEN 205B. The Semantics of Grammar
Supplements CLASSLAT/CLASSGRK 275. Introduction to the grammatical encoding of semantic and pragmatic meaning. 205A: morphology-semantics interface (gender, tense, aspect, case). 205B: syntax-pragmatics interface (Latin word order). Begins in Autumn Quarter and continues through 5th week of Winter Quarter.

2 units, Win (Devine, A)

CLASSGEN 207A. Survey of Greek and Latin Literature: Literature of the Roman Republic
First course in a required two-year sequence. Focus is on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years. Focus is on translation, textual criticism, genre, the role of Greece in shaping Roman literature, and oral versus written discourse.

3-5 units, Aut (Barchiesi, A)

CLASSGEN 207B. Survey of Greek and Latin Literature: Augustan Age Latin
Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Texts of Augustan literature required by the graduate syllabus, emphasizing poetry and major authors.

3-5 units, Win (Kaesser, C)

CLASSGEN 207C. Survey of Greek and Latin Literature: Imperial Latin
Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.

4-5 units, Spr (Parker, G)

CLASSGEN 223. Urban Sustainability: Long-Term Archaeological Perspectives
(Same as CLASSGEN 123, URBANST 115) Comparative and archaeological view of urban design and sustainability. How fast changing cities challenge human relationships with nature. Innovation and change, growth, industrial development, the consumption of goods and materials. Five millennia of city life including Near Eastern city states, Graeco-Roman antiquity, the Indus Valley, and the Americas.

3-5 units, Spr (Shanks, M)

CLASSGEN 226. Judaism and Christianity in the Mediterranean World: Contact, Comptetition, and Conflict
(Same as CLASSGEN 126, JEWISHST 226B, JEWISHST 326B, RELIGST 226B, RELIGST 326B) Jewish beginnings of Christianity in the first century C.E.; process of differentiation between various Jewish and Christian groups; effect of Roman-Jewish wars on Jewish and Christian identity formation; Jewish Christians,

Christian Jews, and other heretics; rise of the discourse of orthodoxy and heresy; the emergence of the Adversus Judaeos tradition; theology as a realm of mutual attraction and conflict. Readings include Epistles of Paul in the New Testament, Christian authors from Justin through Augustine, excerpts from Rabbinic Texts (Mishnah, Midrash and Talmud), along with current literature on religion, ethnicity, and identity in the Roman world.

5 units, Aut (Fonrobert, C)

CLASSGEN 241. Words and Things in the History of Classical Scholarship

How have scholars used ancient texts and objects since the revival of the classical tradition? How did antiquarians study and depict objects and relate them to texts and reconstructions of the past? What changed and what stayed the same as humanist scholarship gave way to professional archaeologists, historians, and philologists? Focus is on key works in the history of classics, such as Erasmus and Winckelmann, in their scholarly, cultural, and political contexts, and recent critical trends in intellectual history and the history of disciplines.

4-5 units, Spr (Ceserani, G)

CLASSGEN 260. Directed Reading in Classics (Graduate Students)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CLASSGEN 304. Aristophanes and Athens

Poet, zany sage, satirist, surrealist, Aristophanes seems to anticipate every mode of comic writing and performances found later in Western literary traditions. His blend of social and political comedy, farces, and fantasy saw the end of its own genre in late 5th-century Athens. Lysistrata and other plays in Greek. Topics: the ancient theory of comedy, obscenity, theater and politics as complementary performance modes, genre-crossing and intersexuality within old comedy, and the representation of gender.

4-5 units, Win (Martin, R)

CLASSGEN 308. Lawcourt, Gymnasia, Symposium, Agora: Philosophic Discourse and Exchanging Places in Athens

In democratic Athens, the lawcourts, gymnasium, symposia, and agora were social spaces featuring different modes of exchange: political, pedagogical, erotic, mercantile. The discourses and practices in theseexchanging places reflect the ongoing negotiation and interrogation of democratic ideology. Topics include: Socrates' philosophic performances in these exchanging places in Plato and Xenophon; Plato, Isocrates, and Aristotle's critiques of the anti-philosophical modes of exchange in these places; and their efforts to make a place for philosophic exchange in the city.

4-5 units, Spr (Nightingale, A)

CLASSGEN 325. Mousike: Ancient Music in Theory and Performance

The starting point for this seminar is the difficulty of its definition. Ancient Mousike covered a range from technical mathematical treatises to a culture of public performance. Goal is to bring in as much of the evidence as possible for ancient music, and to understand it as a cultural whole, thereby shedding light on both science and culture.

3-5 units, Aut (Peponi, A; Netz, R)

CLASSGEN 360. Dissertation Research in Classics

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CLASSGEN 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CLASSGEN 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CLASSICS GREEK (CLASSGRK) COURSES

UNDERGRADUATE COURSES IN CLASSICS GREEK

Primarily for undergraduates; graduate students may enroll with consent of adviser.

CLASSGRK 1. Beginning Greek

No knowledge of Greek is assumed. Classics majors and minors must take course for letter grade. Vocabulary and syntax of the classical language.

5 units, Aut (Martin, R)

CLASSGRK 2. Beginning Greek

Continuation of CLASSGRK 1. Classics majors and minors must take course for letter grade.

3-5 units, Win (McCall, M)

CLASSGRK 3. Beginning Greek

Continuation of CLASSGRK 2. Classics majors and minors must take course for letter grade. Vocabulary and syntax of the classical language. Separate section for Biblical Greek. CLASSGRK 3 fulfills University language requirement.

3-5 units, Spr (Stephens, S)

CLASSGRK 101. Intermediate Greek: New Testament and Lysias

Greek Prose: readings from New Testament (Book of Acts) and Lysias. Vocabulary building, ongoing review of forms and constructions. Classics majors and minors must take course for letter grade. May be repeated for credit.

4-5 units, Aut (Gleason, M)

CLASSGRK 102. Intermediate Greek: Aeschylus

A close reading of Aeschylus' Prometheus Bound; the ongoing interpretive and staging problems in the play; and setting the play in the larger context of Aeschylean tragedy. Classics majors and minors must take course for letter grade. May be repeated for credit.

4-5 units, Win (McCall, M)

CLASSGRK 103. Intermediate Greek: Homer

The language and poetry of Homer. Readings in Greek and English. Classics majors and minors must take course for letter grade. May be repeated for credit.

3-5 units, Spr (MacDonald, C)

CLASSGRK 111. Advanced Greek: Poetry and the Senses

(Same as CLASSGRK 211) Invectives, love songs, drinking songs, elegies, and choral odes from 700-500 B.C.E. Readings include Sappho, Alcaeus, Archilochus, Mimnermus, Alcman, Solon, and Pindar. Classics majors and minors must take course for letter grade. May be repeated for credit.

3-5 units, Aut (Peponi, A)

CLASSGRK 113. Advanced Greek: Scientific Writing

Euclid and Archimedes. Reading texts from Greek science. The relationship between form and meaning in the presentation of scientific information, introduction to Greek Paleography. Classics majors and minors must take course for letter grade. May be repeated for credit.

4 units, Spr (Netz, R)

CLASSGRK 175A. Greek Syntax: Prose Composition

(Same as CLASSGRK 275A) (First-year graduate students register for 275A,B.) Review of Greek grammar and instruction in Greek prose composition skills. Begins sixth week of Winter Quarter and continues through Spring Quarter. Classics majors and minors must take course for letter grade. Prerequisite for undergraduates: three years of Greek.

3-5 units, Win (Stephens, S)

CLASSGRK 175B. Greek Syntax: Prose Composition
(Same as CLASSGRK 275B) (First-year graduate students register for 275A,B.) Review of Greek grammar and instruction in Greek prose composition skills. Begins sixth week of Winter Quarter and continues through Spring Quarter. Classics majors and minors must take course for letter grade. Prerequisite for undergraduates: three years of Greek.
3-5 units, Spr (Stephens, S)

CLASSGRK 211. Advanced Greek: Poetry and the Senses
(Same as CLASSGRK 111) Invectives, love songs, drinking songs, elegies, and choral odes from 700-500 B.C.E. Readings include Sappho, Alcaeus, Archilochus, Mimnermus, Alcman, Solon, and Pindar. Classics majors and minors must take course for letter grade. May be repeated for credit.
3-5 units, Aut (Peponi, A)

GRADUATE COURSES IN CLASSICS GREEK

Primarily for graduate students; undergraduates may enroll with consent of instructor.

CLASSGRK 275A. Greek Syntax: Prose Composition
(Same as CLASSGRK 175A) (First-year graduate students register for 275A,B.) Review of Greek grammar and instruction in Greek prose composition skills. Begins sixth week of Winter Quarter and continues through Spring Quarter. Classics majors and minors must take course for letter grade. Prerequisite for undergraduates: three years of Greek.
3-5 units, Win (Stephens, S)

CLASSGRK 275B. Greek Syntax: Prose Composition
(Same as CLASSGRK 175B) (First-year graduate students register for 275A,B.) Review of Greek grammar and instruction in Greek prose composition skills. Begins sixth week of Winter Quarter and continues through Spring Quarter. Classics majors and minors must take course for letter grade. Prerequisite for undergraduates: three years of Greek.
3-5 units, Spr (Stephens, S)

CLASSICS HISTORY (CLASSHIS) COURSES

UNDERGRADUATE COURSES IN CLASSICS HISTORY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

CLASSHIS 24N. The Roman Empire: Its Grandeur and Fall
(Stanford Introductory Seminar) (Same as HISTORY 11N) Preference to Freshmen. Prerequisite: IHUM 69A. Explore themes on the Roman Empire and its decline from the 1st through the 5th centuries C.E.. What was the political and military glue that held this diverse, multi-ethnic empire together? What were the bases of wealth and how was it distributed? What were the possibilities and limits of economic growth? How integrated was it in culture and religion? What were the causes and consequences of the conversion to Christianity? Why did the Empire fall in the West? How suitable is the analogy of the U.S. in the 21st century?
3 units, Spr (Saller, R)

CLASSHIS 60. The Romans
How did Rome grow from a loose gang of shepherds, exiles, and criminals to an empire of 65 million people stretching from Britain to Egypt? How and why did it then fall into ruins? Topics include Roman history, society, culture, economics, religions, and impact on Western civilization. We also discuss the origins of the republican form of government, explorations of military strategy, imperialism, slavery, and public entertainment. Focus is on original primary sources, including visual and archaeological evidence. This course also teaches general historical methodologies and techniques. GER:DB-Hum
3-5 units, Spr (Strong, A)

CLASSHIS 101. The Greeks
Greek history from the rise of the city state through Alexander the Great's conquest of Persia. Economics, society, culture, and technology. Competition and cooperation within and between states; the emergence of strong forms of citizenship along with chattel slavery and gender inequality; the origins and practices of democracy; and relations with non-Greek peoples. Focus is on ancient sources and archaeological remains. GER:DB-Hum
4-5 units, Win (Morris, I)

CLASSHIS 133. Classical Seminar: Origins of Political Thought
(Same as CLASSHIS 333, PHIL 176A, PHIL 276A, POLISCI 230A, POLISCI 330A) Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change. GER:DB-Hum
4-5 units, Win (Ober, J)

GRADUATE COURSES IN CLASSICS HISTORY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

CLASSHIS 330A. Wealthy Hellas
(Same as POLISCI 430A) Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, however (much of it conducted here at Stanford), suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. We will develop and test hypotheses to explain the rate and pace of economic change in the Greek world.
4-5 units, Win (Ober, J; Morris, I)

CLASSHIS 330B. Wealthy Hellas
(Same as POLISCI 430B) Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, much of it conducted at Stanford, suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. Students develop and test hypotheses to explain the rate and pace of economic change in the Greek world.
1-5 units, Spr (Ober, J; Morris, I)

CLASSHIS 333. Classical Seminar: Origins of Political Thought
(Same as CLASSHIS 133, PHIL 176A, PHIL 276A, POLISCI 230A, POLISCI 330A) Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change.
4-5 units, Win (Ober, J)

CLASSICS LATIN (CLASSLAT) COURSES

UNDERGRADUATE COURSES IN CLASSICS LATIN

Primarily for undergraduates; graduate students may enroll with consent of adviser.

CLASSLAT 1. Beginning Latin: Vocabulary and Syntax
Vocabulary and syntax of the classical language. No previous knowledge of Latin is assumed. Classics majors and minors must take course for letter grade.
3-5 units, Aut (Staff)

CLASSLAT 2. Beginning Latin
Continuation of CLASSLAT 1. Classics majors and minors must take course for letter grade.
3-5 units, Win (Staff)

CLASSLAT 3. Beginning Latin
Continuation of CLASSLAT 2. Classics majors and minors must take course for letter grade. CLASSLAT 3 fulfills the University language requirement.
3-5 units, Spr (Staff)

CLASSLAT 10. Intensive Beginning Latin
Equivalent to CLASSLAT 1, 2, 3; or 51 and 52. Goal is to read easy Latin prose and poetry by the end of the quarter. Classics majors and minors must take course for letter grade. CLASSLAT 10 fulfills the University language requirement.
9-15 units, Sum (Duncan, A)

CLASSLAT 101. Intermediate Latin: Introduction to Literature
Phonology, morphology, semantics, and syntax. Readings in prose and poetry. Analysis of literary language, including rhythm, meter, word order, narrative, and figures of speech.
3-5 units, Aut (Staff)

CLASSLAT 102. Intermediate Latin: Nepos and Catullus
Classics majors and minors must take this course for a letter grade. Translation of selections from Nepos' Life of Atticus and poems of Catullus. Emphasis is on syntax and grammar; questions concerning place and function of Catullus' erotic poetry and Nepos' biography in the late Roman Republic.
3-5 units, Win (Kaesser, C)

CLASSLAT 103. Intermediate Latin
Classics majors and minors must take course for a letter grade. May be repeated for credit.
3-5 units, Spr (Staff)

CLASSLAT 111. Advanced Latin: Mental Health in Roman Philosophy
In the ancient world, philosophers sought to improve the happiness of their students and satisfaction with their lives by addressing emotional upheaval. Study will include the writings of Cicero, Seneca, and St. Augustine. Classic majors and minors must take course for a letter grade. May be repeated for credit.
3-5 units, Aut (Kaesser, C)

CLASSLAT 112. Advanced Latin: Tacitus
Classics majors and minors must take course for letter grade. May be repeated for credit. Close readings of selections from Tacitus' Germania and Agricola. Attention to style and vocabulary. How does Tacitus describe previously unknown places and peoples? What do his descriptions in turn tell us about Rome in his own time and place?
3-5 units, Win (Ceserani, G)

CLASSLAT 113. Advanced Latin: Writing Rome
With its distinctive combination grandeur and filth, of elegance and congestion, the City of Rome has inspired a wide range of responses since antiquity. We will sample those responses with special attention to Latin verse (Virgil, Propertius, Ovid, Juvenal); prose texts (Livy and Ammianus); and inscriptions - many anthologized in P.J. Aicher's Rome Alive. This course will complement `Mapping Rome' (J. Trimble), but can be taken separately. Readings in Latin. May be repeated for credit.
3-5 units, Spr (Parker, G)

CLASSLAT 175A. Latin Syntax
(Same as CLASSLAT 275A) (First-year graduate students register for 275A,B.) Intensive review of Latin syntax. Begins Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSGEN 205A,B for supplemental courses. Classics majors and minors must take course for letter grade. Prerequisite for undergraduates: three years of Latin.
3-5 units, Aut (Devine, A)

CLASSLAT 175B. Latin Syntax
(Same as CLASSLAT 275B) (First-year graduate students register for 275A,B.) Intensive review of Latin syntax. Begins Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSGEN 205A,B for supplemental courses. Classics majors and minors must take course for letter grade. Prerequisite for undergraduates: three years of Latin.
2 units, Win (Devine, A)

GRADUATE COURSES IN CLASSICS LATIN

Primarily for graduate students; undergraduates may enroll with consent of instructor.

CLASSLAT 275A. Latin Syntax
(Same as CLASSLAT 175A) (First-year graduate students register for 275A,B.) Intensive review of Latin syntax. Begins Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSGEN 205A,B for supplemental courses. Classics majors and minors must take course for letter grade. Prerequisite for undergraduates: three years of Latin.
3-5 units, Aut (Devine, A)

CLASSLAT 275B. Latin Syntax
(Same as CLASSLAT 175B) (First-year graduate students register for 275A,B.) Intensive review of Latin syntax. Begins Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSGEN 205A,B for supplemental courses. Classics majors and minors must take course for letter grade. Prerequisite for undergraduates: three years of Latin.
2 units, Win (Devine, A)

CLASSLAT 401. Virgil's Aeneid
Research seminar on the text of the Aeneid in Latin: requires advanced knowledge of Classical Latin. This poem is central both in the classical tradition and in professional Classics. A combination of close reading of selected passages and exploration of critical issues (space; time; ethnicity; political ideology; art, knowledge, empire) with research papers.
3-5 units, Aut (Barchiesi, A)

COMMUNICATION (COMM) COURSES

UNDERGRADUATE COURSES IN COMMUNICATION

Primarily for undergraduates; graduate students may enroll with consent of adviser.

COMM 1A. Media Technologies, People, and Society
(Same as COMM 211) (Graduate students register for COMM 211.) Open to non-majors. Introduction to the concepts and contexts of communication. A topics-structured orientation emphasizing the field and the scholarly endeavors represented in the department. GER:DB-SocSci
4-5 units, not given this year

COMM 1B. Media, Culture, and Society
(Same as AMSTUD 1B) The institutions and practices of mass media, including television, film, radio, and digital media, and their role in shaping culture and social life. The media's shifting relationships to politics, commerce, and identity. GER:DB-SocSci
5 units, Win (Turner, F)

COMM 104. Reporting, Writing, and Understanding the News
Techniques of news reporting and writing. The value and role of news in democratic societies. Gateway class to journalism. Prerequisite for all COMM 177/277 classes. Limited enrollment. Preference to sophomores and juniors. GER:DB-SocSci
5 units, Aut (Staff), Win (Staff), Spr (Staff)

COMM 106. Communication Research Methods
(Same as COMM 206) (Graduate students register for COMM 206.) Conceptual and practical concerns underlying commonly used quantitative approaches, including experimental, survey, content analysis, and field research in communication. Pre- or corequisite: STATS 60 or consent of instructor. GER:DB-SocSci
4-5 units, Win (Voelker, D)

COMM 108. Media Processes and Effects
(Same as COMM 208) (Graduate students register for COMM 208.) The process of communication theory construction including a survey of social science paradigms and major theories of communication. Recommended: 1 or PSYCH 1. GER:DB-SocSci
4-5 units, Aut (Bailenson, J)

COMM 116. Journalism Law
(Same as COMM 216) (Graduate students register for 216.) Laws and regulation impacting journalists. Topics include libel, privacy, news gathering, protection sources, fair trial and free press, theories of the First Amendment, and broadcast regulation. Prerequisite: Journalism M.A. student or advanced Communication major.
4-5 units, Win (Wheaton, J)

COMM 117. Digital Journalism
(Same as COMM 217) (Graduate students register for COMM 217.) Seminar and practicum. The implications of new media for journalists. Professional and social issues related to the web as a case of new media deployment, as a story, as a research and reporting tool, and as a publishing channel. Prerequisite: Journalism M.A. student or consent of instructor.
4-5 units, Win (Staff)

COMM 118Q. Theories of Film Practice
(Stanford Introductory Seminar) Preference to sophomores. How theory connects with practice in the production of film and television. Film and television from the perspectives of practitioners who have theorized about their work in directing, editing, screenwriting, cinematography, and sound, and social scientists whose research has explored similar issues empirically.
4 units, Win (Breitrose, H)

COMM 120. Digital Media in Society
(Same as AMSTUD 120, COMM 220) (Graduate students register for 220.) Contemporary debates concerning the social and cultural impact of digital media. Topics include the historical origins of digital media, cultural contexts of their development and use, and influence of digital media on conceptions of self, community, and state. Priority to Juniors and Seniors. GER:DB-SocSci, WIM
4-5 units, Spr (Turner, F)

COMM 125. Perspectives on American Journalism
(Same as COMM 225) (Graduate students register for COMM 225.) An interrogation of the practice of American journalism, focusing on the political, social, cultural, and economic forces that have shaped the U. S. press since the early 1800s. Aimed at producers as well as consumers of news, the objective of this course is to provide a vocabulary and framework for judging the quality of everyday journalism. Prerequisite: 1 or junior standing. GER:DB-SocSci
4-5 units, Aut (Glasser, T)

COMM 131. Media Ethics and Responsibility
(Same as COMM 231) (Graduate students register for COMM 231.) The development of professionalism among American journalists, emphasizing the emergence of objectivity as a professional and the epistemological norm. An applied ethics course where questions of power, freedom, and truth autonomy are treated normatively so as to foster critical thinking about the origins and implications of commonly accepted standards of responsible journalism. GER:DB-SocSci
4-5 units, Win (Glasser, T)

COMM 134. Public Participation and Public Policy
(Same as COMM 234) Examines the role of public participation in public policy making. Around the world, policymakers seek to engage their publics. But, even though public participation is important, it is also problematic. Public meetings can become dysfunctional and turn into media spectacles instead of actually gathering the opinions of the public. The question becomes, when and how should the public be consulted in order to effectively impact public policies? There are consequences of engaging the public, and this seminar explores the methods used to engage publics around the world.
4-5 units, Spr (Siu, A)

COMM 136. Democracy and the Communication of Consent
(Same as COMM 236, POLISCI 134) (Graduate students register for COMM 236.) Focus is on competing theories of democracy and the forms of communication they presuppose, combining normative and empirical issues, and historical and contemporary sources. Topics include representation, public opinion, mass media, small group processes, direct democracy, the role of information, and the prospects for deliberative democracy. GER:DB-SocSci
4-5 units, not given this year

COMM 137. The Dialogue of Democracy
(Same as AMSTUD 137, COMM 237, POLISCI 232T, POLISCI 332T) All forms of democracy require some kind of communication so people are aware of issues and make decisions. Competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small-scale discussions or sound bites on television? Or social media? What is the role of technology in changing democratic practices, to mobilize, to persuade, to solve public problems? Readings from political theory about democratic ideals from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. Contemporary examinations of the media and the Internet to see how those practices are changing and how the ideals can or cannot be realized. GER:EC-EthicReas
4-5 units, Win (Fishkin, J)

COMM 140. Digital Media Entrepreneurship
(Same as COMM 240) (Graduate students register for COMM 240.) Primarily for graduate journalism and computer science students. Silicon Valley's new media culture, digital storytelling skills and techniques, web-based skills, and entrepreneurial ventures. Guest speakers.
3-5 units, Spr (Grimes, A)

COMM 147. Modern History and Future of Journalism
(Same as COMM 247) (Graduate students register for COMM 247.) The birth and evolution of local and national television news. The modern history of newspapers. Can they survive in the era of online journalism?
4-5 units, Spr (Brinkley, J)

COMM 160. The Press and the Political Process
(Same as COMM 260, POLISCI 323R) (Graduate students register for COMM 260.) The role of mass media and other channels of communication in political and electoral processes. GER:DB-SocSci
4-5 units, alternate years, not given next year

COMM 162. Campaigns, Voting, Media, and Elections
(Same as COMM 262, POLISCI 120B) The theory and practice of American campaigns and elections. The behavior of the key players, candidates, parties, journalists, and voters, in terms of the institutional arrangements and political incentives that confront them. Current and recent election campaigns used as laboratories for testing generalizations about campaign strategy and voter behavior. Readings from the academic literature dealing with the origins of partisan identity, electoral design, and the immediate effects of campaigns on public opinion, voter turnout, and voter choice. Issues of electoral reform and their more long-term consequences for governance and the political process. GER:DB-SocSci
4-5 units, Aut (Iyengar, S)

COMM 166. Virtual People
(Same as COMM 266) (Graduate students register for COMM 266.) The concept of virtual people or digital human representations; methods of constructing and using virtual people; methodological approaches to interactions with and among virtual people; and current applications. Viewpoints including popular culture, literature, film, engineering, behavioral science, computer science, and communication.
4-5 units, Spr (Bailenson, J)

COMM 167. Advanced Seminar in Virtual Reality Research
Restricted to students with previous research experience in virtual reality. Experimental methods and other issues.
1-3 units, Win (Bailenson, J)

COMM 168. Experimental Research in Advanced User Interfaces
(Same as COMM 268, COMM 368, ME 468) Project-based course involves small (3-4) person teams going through all parts of the experimental process: question generation, experiment design, running, and data analysis. Each team creates an original, publishable project that represents a contribution to the research and practicum literatures. All experiments involve interaction between people and technology, including cars, mobile phones, websites, etc. Prerequisite: consent of instructor.
1-5 units, Aut (Nass, C), Win (Nass, C), Spr (Nass, C)

COMM 169. Computers and Interfaces
(Same as COMM 269) (Graduate students register for COMM 269.) Interdisciplinary. User responses to interfaces and design

implications of those responses. Theories from different disciplines illustrate responses to textual, voice-based, pictorial, metaphoric, conversational, adaptive, agent-based, intelligent, and anthropomorphic interfaces. Group design project applying theory to the design of products or services for developing countries. GER:DB-SocSci

4-5 units, Spr (Nass, C)

COMM 171. Multimedia Reporting and Production for Public Issues

(Same as COMM 271) (Graduate students register for 271.) Production of multimedia assignments for traditional news beats using audio, still photography, graphics and video. 2-hour lab class for creative, conceptual and technical skills for production of multimedia stories. Prerequesite: Journalism MA student or instructor's consent.

3-5 units, Win (Staff)

COMM 172. Media Psychology

(Same as COMM 272) (Graduate students register for COMM 272.) The literature related to psychological processing and the effects of media. Topics: unconscious processing; picture perception; attention and memory; emotion; the physiology of processing media; person perception; pornography; consumer behavior; advanced film and television systems; and differences among reading, watching, and listening. GER:DB-SocSci

4-5 units, Spr (Reeves, B)

COMM 176. Advanced Digital Media Production

(Same as COMM 276) In-depth reporting and production using audio, images and video. Focus on an in-depth journalism project with appropriate uses of digital media: audio, photography, graphics, and video. Topics include advanced field techniques and approaches (audio, video, still) and emphasis on creating a nonfiction narrative arc in a multimedia piece of 10-12 minutes. Prerequisite: COMM 275 or consent of instructor

4-5 units, Spr (Staff)

COMM 177C. Specialized Writing and Reporting: Environmental Journalism

(Same as COMM 277C, ENVRES 277C) (Graduate students register for COMM / ENVRES 277C.) Practical, collaborative, writing-intensive course in environmental journalism. Science and journalism students learn how to identify and write engaging stories about environmental issues and science, how to assess the quality and relevance of environmental news, how to cover the environment and science beats effectively, and how to build bridges between the worlds of journalism and science. Limited enrollment: preference to journalism students and students in the natural and environmental sciences. Prerequisite: 104 or consent of instructor.

4-5 units, Spr (Hayden, T)

COMM 177D. Specialized Writing and Reporting: Magazine Journalism

(Same as COMM 277D) (Graduate students register for COMM 277D.) How to report, write, edit, and read magazine articles, emphasizing long-form narrative. Tools and templates of story telling such as scenes, characters, dialogue, and narrative arc. How the best magazine stories defy or subvert conventional wisdom and bring fresh light to the human experience through reporting, writing, and moral passion. Prerequisite: 104 or consent of instructor.

4-5 units, Aut (Staff)

COMM 177G. Specialized Writing and Reporting: Covering Silicon Valley

(Same as COMM 277G) (Graduate students register for COMM 277G.) Business reporting basics in the context of Silicon Valley's technology scene. Prerequisite: 104 or consent of instructor.

4-5 units, Win (Grimes, A)

COMM 177I. Specialized Writing and Reporting: Investigative Reporting

(Same as COMM 277I) Graduate students register for COMM 277I.) Under the supervision of editors from the Center for Investigative Reporting, students will work on a group investigative project with the end-goal of publication and distribution through CIR's California Watch project. The class will emphasize the history and role of investigative reporting as well as skills and techniques needed to do it.

4-5 units, Win (Staff)

COMM 177K. Specialized Writing and Reporting: Human Rights Journalism

(Same as COMM 277K) (Graduate students register for COMM 277K.) The evolution of human rights law and enforcement, and the role of journalists in uncovering, pursuing, and publicizing political violence, detention, and torture. Case studies from S. Africa, Latin America, Israel and Palestine, N. Ireland, Bosnia, Rwanda, and Sudan and Darfur. Human rights issues in the U.S. in the aftermath of 9/11. Students conduct research and write journalistic reports on foreign and domestic issues. Prerequisite: 104 or consent of instructor.

4-5 units, not given this year

COMM 177S. Specialized Writing and Reporting: Sports Journalism

(Same as COMM 277S) (Graduate students register for COMM 277S.) Workshop. The history of sports writing from the 20s to present. Reporting, interviewing, deadline writing, and how to conceptualize and develop stories. Students write features and news stories for publication in a new sports section in 'The Cardinal Inquirer', an online publication of the graduate program in journalism. Prerequisite: 104 or consent of instructor.

4-5 units, not given this year

COMM 177Y. Specialized Writing and Reporting: Foreign Correspondence in the Middle East

(Same as COMM 277Y) (Graduate students register for COMM 277Y.) What's involved in working as a journalist in one of the most important and dangerous parts of the world.

4-5 units, Aut (Brinkley, J)

COMM 182. Virtual Communities and Social Media

(Same as COMM 282) (Graduate students register for CMM 282.) Taught by the originator of the terms virtual community and smart mobs. How the concept of community has changed from agricultural to industrial to networked societies. Much class discussion takes place in social cyberspaces.

4-5 units, Aut (Rheingold, H)

COMM 190. Senior Project

Research project. Prerequisite: senior standing.

5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMM 195. Honors Thesis

Qualifies students to conduct communication research. Student must apply for department honors thesis program during Spring Quarter of junior year.

5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMM 199. Individual Work

For students with high academic standing. May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMM 212. Models of Democracy

(Same as COMM 312, POLISCI 237, POLISCI 337) Ancient and modern varieties of democracy; debates about their normative and practical strengths and the pathologies to which each is subject. Focus is on participation, deliberation, representation, and elite competition, as values and political processes. Formal institutions, political rhetoric, technological change, and philosophical critique. Models tested by reference to long-term historical natural experiments such as Athens and Rome, recent large-scale political experiments such as the British Columbia Citizens' Assembly, and controlled experiments.

3-5 units, not given this year

COMM 236G. Democracy, Justice, and Deliberation

(Same as COMM 336G) Decision processes that make a normative claim to resolve questions of public choice, at any of these levels of choice: first principles, constitutions, public policies, or particular outcomes. Topics include democratic theory, the theory of justice and issues of deliberation in small groups, public consultations, conventions, juries, and thought experiments popular in contemporary political theory. Readings include Madison, de Tocqueville, Mill, Marx, Rawls, Nozick, Ackerman, and Schudson. Preference to graduate students. Prerequisite: consent of instructor.

1-5 units, not given this year

COMM 244. Democracy, Press, and Public Opinion

(Same as COMM 344) The democratic tradition provides conflicting visions of what a democracy is or might be, offering different views of the role of the press and citizens in engaging public is-

sues. Focus is on democratic theory with empirical work on public opinion and the role of the media. Topics include campaigns, the effects of new technology, competing strategies of public consultation, public journalism, and possibilities for citizen deliberation. Prerequisite: consent of instructor.

1-4 units, not given this year

GRADUATE COURSES IN COMMUNICATION

Primarily for graduate students; undergraduates may enroll with consent of instructor.

COMM 206. Communication Research Methods
(Same as COMM 106) (Graduate students register for COMM 206.) Conceptual and practical concerns underlying commonly used quantitative approaches, including experimental, survey, content analysis, and field research in communication. Pre- or corequisite: STATS 60 or consent of instructor.

4-5 units, Win (Voelker, D)

COMM 208. Media Processes and Effects
(Same as COMM 108) (Graduate students register for COMM 208.) The process of communication theory construction including a survey of social science paradigms and major theories of communication. Recommended: 1 or PSYCH 1.

4-5 units, Aut (Bailenson, J)

COMM 211. Media Technologies, People, and Society
(Same as COMM 1A) (Graduate students register for COMM 211.) Open to non-majors. Introduction to the concepts and contexts of communication. A topics-structured orientation emphasizing the field and the scholarly endeavors represented in the department.

4-5 units, not given this year

COMM 216. Journalism Law
(Same as COMM 116) (Graduate students register for 216.) Laws and regulation impacting journalists. Topics include libel, privacy, news gathering, protection sources, fair trial and free press, theories of the First Amendment, and broadcast regulation. Prerequisite: Journalism M.A. student or advanced Communication major.

4-5 units, Win (Wheaton, J)

COMM 217. Digital Journalism
(Same as COMM 117) (Graduate students register for COMM 217.) Seminar and practicum. The implications of new media for journalists. Professional and social issues related to the web as a case of new media deployment, as a story, as a research and reporting tool, and as a publishing channel. Prerequisite: Journalism M.A. student or consent of instructor.

4-5 units, Win (Staff)

COMM 220. Digital Media in Society
(Same as AMSTUD 120, COMM 120) (Graduate students register for 220.) Contemporary debates concerning the social and cultural impact of digital media. Topics include the historical origins of digital media, cultural contexts of their development and use, and influence of digital media on conceptions of self, community, and state. Priority to Juniors and Seniors.

4-5 units, Spr (Turner, F)

COMM 225. Perspectives on American Journalism
(Same as COMM 125) (Graduate students register for COMM 225.) An interrogation of the practice of American journalism, focusing on the political, social, cultural, and economic forces that have shaped the U. S. press since the early 1800s. Aimed at producers as well as consumers of news, the objective of this course is to provide a vocabulary and framework for judging the quality of everyday journalism. Prerequisite: 1 or junior standing.

4-5 units, Aut (Glasser, T)

COMM 231. Media Ethics and Responsibility
(Same as COMM 131) (Graduate students register for COMM 231.) The development of professionalism among American journalists, emphasizing the emergence of objectivity as a professional and the epistemological norm. An applied ethics course where questions of power, freedom, and truth autonomy are treated normatively so as to foster critical thinking about the origins and implications of commonly accepted standards of responsible journalism.

4-5 units, Win (Glasser, T)

COMM 234. Public Participation and Public Policy
(Same as COMM 134) Examines the role of public participation in public policy making. Around the world, policymakers seek to engage their publics. But, even though public participation is important, it is also problematic. Public meetings can become dysfunctional and turn into media spectacles instead of actually gathering the opinions of the public. The question becomes, when and how should the public be consulted in order to effectively impact public policies? There are consequences of engaging the public, and this seminar explores the methods used to engage publics around the world.

4-5 units, Spr (Siu, A)

COMM 236. Democracy and the Communication of Consent
(Same as COMM 136, POLISCI 134) (Graduate students register for COMM 236.) Focus is on competing theories of democracy and the forms of communication they presuppose, combining normative and empirical issues, and historical and contemporary sources. Topics include representation, public opinion, mass media, small group processes, direct democracy, the role of information, and the prospects for deliberative democracy.

4-5 units, not given this year

COMM 237. The Dialogue of Democracy
(Same as AMSTUD 137, COMM 137, POLISCI 232T, POLISCI 332T) All forms of democracy require some kind of communication so people are aware of issues and make decisions. Competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small-scale discussions or sound bites on television? Or social media? What is the role of technology in changing democratic practices, to mobilize, to persuade, to solve public problems? Readings from political theory about democratic ideals from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. Contemporary examinations of the media and the Internet to see how those practices are changing and how the ideals can or cannot be realized.

4-5 units, Win (Fishkin, J)

COMM 238. Democratic Theory: Normative and Empirical Issues
(Same as COMM 338) Conflicting visions in terms of normative conflicts and empirical evidence. How citizens communicate with each other and their representatives, and how their representatives deliberate. Topics include theories of deliberation, how democracy is transformed when brought to the mass public, how informed a public is needed, and potential pathologies of small group communication in settings including juries, town meetings, and contemporary public consultations. Readings include Madison, Burke, Mill, Lippmann, Dewey, Schumpeter, Dahl, Sunstein, and Mansbridge.

1-5 units, not given this year

COMM 239. Questionnaire Design for Surveys and Laboratory Experiments: Social and Cognitive Perspectives
The social and psychological processes involved in asking and answering questions via questionnaires for the social sciences; optimizing questionnaire design; open versus closed questions; rating versus ranking; rating scale length and point labeling; acquiescence response bias; don't-know response options; response choice order effects; question order effects; social desirability response bias; attitude and behavior recall; and introspective accounts of the causes of thoughts and actions.

4 units, not given this year

COMM 240. Digital Media Entrepreneurship
(Same as COMM 140) (Graduate students register for COMM 240.) Primarily for graduate journalism and computer science students. Silicon Valley's new media culture, digital storytelling skills and techniques, web-based skills, and entrepreneurial ventures. Guest speakers.

3-5 units, Spr (Grimes, A)

COMM 247. Modern History and Future of Journalism
(Same as COMM 147) (Graduate students register for COMM 247.) The birth and evolution of local and national television news. The modern history of newspapers. Can they survive in the era of online journalism?

4-5 units, Spr (Brinkley, J)

COMM 260. The Press and the Political Process
(Same as COMM 160, POLISCI 323R) (Graduate students register for COMM 260.) The role of mass media and other channels of communication in political and electoral processes.

4-5 units, alternate years, not given next year

COMM 262. Campaigns, Voting, Media, and Elections
(Same as COMM 162, POLISCI 120B) The theory and practice of American campaigns and elections. The behavior of the key players (candidates, parties, journalists, and voters) in terms of the institutional arrangements and political incentives that confront them. Current and recent election campaigns as laboratories for testing generalizations about campaign strategy and voter behavior. The academic literature dealing with the origins of partisan identity, electoral design, and the immediate effects of campaigns on public opinion, voter turnout, and voter choice. Issues of electoral reform and their more long-term consequences for governance and the political process.

4-5 units, Aut (Iyengar, S)

COMM 266. Virtual People
(Same as COMM 166) (Graduate students register for COMM 266.) The concept of virtual people or digital human representations; methods of constructing and using virtual people; methodological approaches to interactions with and among virtual people; and current applications. Viewpoints including popular culture, literature, film, engineering, behavioral science, computer science, and communication.

4-5 units, Spr (Bailenson, J)

COMM 268. Experimental Research in Advanced User Interfaces
(Same as COMM 168, COMM 368, ME 468) Project-based course involves small (3-4) person teams going through all parts of the experimental process: question generation, experiment design, running, and data analysis. Each team creates an original, publishable project that represents a contribution to the research and practicum literatures. All experiments involve interaction between people and technology, including cars, mobile phones, websites, etc. Prerequisite: consent of instructor.

1-5 units, Aut (Nass, C), Win (Nass, C), Spr (Nass, C)

COMM 269. Computers and Interfaces
(Same as COMM 169) (Graduate students register for COMM 269.) Interdisciplinary. User responses to interfaces and design implications of those responses. Theories from different disciplines illustrate responses to textual, voice-based, pictorial, metaphoric, conversational, adaptive, agent-based, intelligent, and anthropomorphic interfaces. Group design project applying theory to the design of products or services for developing countries.

4-5 units, Spr (Nass, C)

COMM 271. Multimedia Reporting and Production for Public Issues
(Same as COMM 171) (Graduate students register for 271.) Production of multimedia assignments for traditional news beats using audio, still photography, graphics and video. 2-hour lab class for creative, conceptual and technical skills for production of multimedia stories. Prerequesite: Journalism MA student or instructor's consent.

3-5 units, Win (Staff)

COMM 272. Media Psychology
(Same as COMM 172) (Graduate students register for COMM 272.) The literature related to psychological processing and the effects of media. Topics: unconscious processing; picture perception; attention and memory; emotion; the physiology of processing media; person perception; pornography; consumer behavior; advanced film and television systems; and differences among reading, watching, and listening.

4-5 units, Spr (Reeves, B)

COMM 273. Public Issues Reporting I
Reporting and writing on government and public policies and issues; their implications for the people and the press. Required for journalism M.A. students.

3-4 units, Aut (Staff)

COMM 274. Public Issues Reporting II
Student teams study one major public policy issue that has broad societal impact. Students report and write individually, and as a team produce a body of journalism that advances the understanding of a new issue each year, published on a web site and offered for publication to newspapers and other media outlets. Prerequisites: 273, Journalism M.A. student.

3-4 units, Win (Brinkley, J)

COMM 275. Multimedia Storytelling: Reporting and Production Using Audio, Still Images, and Video
Multimedia assignments coordinated with deadline reporting efforts in COMM 273 from traditional news beats using audio, still photography, and video. Use of digital audio recorders and audio production to leverage voice-over narration, interviews, and natural sound; use of digital still cameras and audio to produce audio slideshows; and the combination of these media with video in post-production with Final Cut Pro. Prerequisite: Journalism M.A. student. Corequisite: COMM 273.

4 units, Aut (Migielicz, G)

COMM 276. Advanced Digital Media Production
(Same as COMM 176) In-depth reporting and production using audio, images and video. Focus on an in-depth journalism project with appropriate uses of digital media: audio, photography, graphics, and video. Topics include advanced field techniques and approaches (audio, video, still) and emphasis on creating a non-fiction narrative arc in a multimedia piece of 10-12 minutes. Prerequisite: COMM 275 or consent of instructor

4-5 units, Spr (Staff)

COMM 277C. Specialized Writing and Reporting: Environmental Journalism
(Same as COMM 177C, ENVRES 277C) (Graduate students register for COMM / ENVRES 277C.) Practical, collaborative, writing-intensive course in environmental journalism. Science and journalism students learn how to identify and write engaging stories about environmental issues and science, how to assess the quality and relevance of environmental news, how to cover the environment and science beats effectively, and how to build bridges between the worlds of journalism and science. Limited enrollment: preference to journalism students and students in the natural and environmental sciences. Prerequisite: 104 or consent of instructor.

4-5 units, Spr (Hayden, T)

COMM 277D. Specialized Writing and Reporting: Magazine Journalism
(Same as COMM 177D) (Graduate students register for COMM 277D.) How to report, write, edit, and read magazine articles, emphasizing long-form narrative. Tools and templates of story telling such as scenes, characters, dialogue, and narrative arc. How the best magazine stories defy or subvert conventional wisdom and bring fresh light to the human experience through reporting, writing, and moral passion. Prerequisite: 104 or consent of instructor.

4-5 units, Aut (Staff)

COMM 277G. Specialized Writing and Reporting: Covering Silicon Valley
(Same as COMM 177G) (Graduate students register for COMM 277G.) Business reporting basics in the context of Silicon Valley's technology scene. Prerequisite: 104 or consent of instructor.

4-5 units, Win (Grimes, A)

COMM 277I. Specialized Writing and Reporting: Investigative Reporting
(Same as COMM 177I) Graduate students register for COMM 277I.) Under the supervision of editors from the Center for Investigative Reporting, students will work on a group investigative project with the end-goal of publication and distribution through CIR's California Watch project. The class will emphasize the history and role of investigative reporting as well as skills and techniques needed to do it.

4-5 units, Win (Staff)

COMM 277K. Specialized Writing and Reporting: Human Rights Journalism
(Same as COMM 177K) (Graduate students register for COMM 277K.) The evolution of human rights law and enforcement, and the role of journalists in uncovering, pursuing, and publicizing political violence, detention, and torture. Case studies from S. Africa, Latin America, Israel and Palestine, N. Ireland, Bosnia, Rwanda, and Sudan and Darfur. Human rights issues in the U.S. in the aftermath of 9/11. Students conduct research and write journalistic reports on foreign and domestic issues. Prerequisite: 104 or consent of instructor.

4-5 units, not given this year

COMM 277S. Specialized Writing and Reporting: Sports Journalism
(Same as COMM 177S) (Graduate students register for COMM 277S.) Workshop. The history of sports writing from the 20s to present. Reporting, interviewing, deadline writing, and how to conceptualize and develop stories. Students write features and news stories for publication in a new sports section in 'The Cardinal Inquirer', an online publication of the graduate program in journalism. Prerequisite: 104 or consent of instructor.
4-5 units, not given this year

COMM 277Y. Specialized Writing and Reporting: Foreign Correspondence in the Middle East
(Same as COMM 177Y) (Graduate students register for COMM 277Y.) What's involved in working as a journalist in one of the most important and dangerous parts of the world.
4-5 units, Aut (Brinkley, J)

COMM 278. Journalism and Imaginative Writing in America
(Same as AMSTUD 257, ENGLISH 257) Walt Whitman spent twenty-five years as a journalist before publishing his first book of poems. Mark Twain was a journalist for twenty years before publishing his first novel. Topics include examination of how writers¿ backgrounds in journalism shaped the poetry or fiction for which they are best known; study of recent controversies surrounding writers who blurred the line between journalism and fiction. Writers include Whitman, Fanny Fern, Twain, Pauline Hopkins, Theodore Dreiser, Charlotte Perkins Gilman, Ernest Hemingway, Meridel LeSueur.
5 units, Spr (Fishkin, S)

COMM 282. Virtual Communities and Social Media
(Same as COMM 182) (Graduate students register for CMM 282.) Taught by the originator of the terms virtual community and smart mobs. How the concept of community has changed from agricultural to industrial to networked societies. Much class discussion takes place in social cyberspaces.
4-5 units, Aut (Rheingold, H)

COMM 289. Journalism Master's Project
4 units, Spr (Staff)

COMM 290. Media Studies M.A. Project
Individual research for coterminal Media Studies students.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMM 291. Graduate Journalism Seminar
Required of students in the graduate program in Journalism. Forum for current issues in the practice and performance of the press. The seminar frequently features Bay Area Journalists as guest speakers. May be repeated for credit.
1 unit, Aut (Grimes, A), Win (Brinkley, J), Spr (Staff)

COMM 299. Individual Work
1-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMM 301. Communication Research, Curriculum Development and Pedagogy
Designed to prepare students for teaching and research in the Department of Communication. Students will be trained in developing curriculum and in pedagogical practices, and will also be exposed to the research programs of various faculty members in the department. Required of all Ph.D. students.
1 unit, Aut (Bailenson, J)

COMM 307. Summer Institute in Political Psychology
Lectures, discussion groups, and workshops addressing many applications of psychology to the analysis of political behavior. Public opinion, international relations, political decision-making, attitudes and beliefs, prejudice, social influence and persuasion, terrorism, news media influence, foreign policy, socialization, social justice.
1-6 units, Sum (Krosnick, J)

COMM 308. Graduate Seminar in Political Psychology
(Same as POLISCI 324) For students interested in research in political science, psychology, or communication. Methodological techniques for studying political attitudes and behaviors. May be repeated for credit.
1-3 units, Aut (Krosnick, J), Win (Krosnick, J), Spr (Krosnick, J)

COMM 310. Method of Analysis Program in the Social Sciences
(Same as ANTHRO 446A) Colloquium series. Creation and application of new methodological techniques for social science research. Presentations on methodologies of use for social scientists across departments at Stanford by guest speakers from Stanford and elsewhere. See http://mapss.stanford.edu.
1 unit, Aut (Jackman, S; Jones, J), Win (Jackman, S; Jones, J), Spr (Jackman, S; Jones, J)

COMM 311. Theory of Communication
Required of Communication doctoral students.
1-5 units, Aut (Reeves, B)

COMM 312. Models of Democracy
(Same as COMM 212, POLISCI 237, POLISCI 337) Ancient and modern varieties of democracy; debates about their normative and practical strengths and the pathologies to which each is subject. Focus is on participation, deliberation, representation, and elite competition, as values and political processes. Formal institutions, political rhetoric, technological change, and philosophical critique. Models tested by reference to long-term historical natural experiments such as Athens and Rome, recent large-scale political experiments such as the British Columbia Citizens' Assembly, and controlled experiments.
3-5 units, not given this year

COMM 314. Doctoral Research Methods II B
Part of the doctoral research methods sequence. Focus is on the logic of qualitative research methods and modes of inquiry relevant to the study of communication and meaning. Prerequisite: Communication Ph.D. student, or consent of instructor.
1-5 units, Win (Glasser, T)

COMM 317. Doctoral Research Methods I
Approaches to social science research and their theoretical presuppositions. Readings from the philosophy of the social sciences. Research design, the role of experiments, and quantitative and qualitative research. Cases from communication and related social sciences. Prerequisite: consent of instructor.
1-5 units, Spr (Fishkin, J)

COMM 318. Doctoral Research Methods II
Prerequisite: consent of instructor.
1-5 units, Win (Krosnick, J)

COMM 320G. Advanced Topics in New Media and American Culture
Primarily for Ph.D. students. Prerequisite: 220 or consent of instructor.
1-5 units, Spr (Turner, F)

COMM 325G. Comparative Studies of News and Journalism
Focus is on topics such as the roles and responsibilities of journalists, news as a genre of popular literature, the nexus between press and state, and journalism's commitment to political participation.
1-5 units, given occasionally

COMM 326. Advanced Topics in Human Virtual Representation
Topics include the theoretical construct of person identity, the evolution of that construct given the advent of virtual environments, and methodological approaches to understanding virtual human representation. Prerequisite: consent of instructor.
1-5 units, Spr (Bailenson, J)

COMM 331G. Communication and Media Ethics
Limited to Ph.D. students. Advanced topics in press ethics and responsibility. Prerequisite: 231 or consent of instructor.
1-3 units, Spr (Glasser, T)

COMM 336G. Democracy, Justice, and Deliberation
(Same as COMM 236G) Decision processes that make a normative claim to resolve questions of public choice, at any of these levels of choice: first principles, constitutions, public policies, or particular outcomes. Topics include democratic theory, the theory of justice and issues of deliberation in small groups, public consultations, conventions, juries, and thought experiments popular in contemporary political theory. Readings include Madison, de Tocqueville, Mill, Marx, Rawls, Nozick, Ackerman, and Schudson. Preference to graduate students. Prerequisite: consent of instructor.
1-5 units, not given this year

COMM 338. Democratic Theory: Normative and Empirical Issues
(Same as COMM 238) Conflicting visions in terms of normative conflicts and empirical evidence. How citizens communicate with each other and their representatives, and how their representatives deliberate. Topics include theories of deliberation, how democracy

is transformed when brought to the mass public, how informed a public is needed, and potential pathologies of small group communication in settings including juries, town meetings, and contemporary public consultations. Readings include Madison, Burke, Mill, Lippmann, Dewey, Schumpeter, Dahl, Sunstein, and Mansbridge.

1-5 units, not given this year

COMM 344. Democracy, Press, and Public Opinion
(Same as COMM 244) The democratic tradition provides conflicting visions of what a democracy is or might be, offering different views of the role of the press and citizens in engaging public issues. Focus is on democratic theory with empirical work on public opinion and the role of the media. Topics include campaigns, the effects of new technology, competing strategies of public consultation, public journalism, and possibilities for citizen deliberation. Prerequisite: consent of instructor.

1-4 units, not given this year

COMM 360G. Political Communication
Limited to Ph.D. students. Advanced topics. Prerequisite: 260 or consent of instructor.

1-5 units, not given this year

COMM 361. Field Experimentation in Political Communication Research
The design of large-scale field experiments. Recent developments in analysis of experimental data including matching, propensity scores, and other techniques that address the problem of selection bias. Prerequisite: consent of instructor.

4 units, not given this year

COMM 368. Experimental Research in Advanced User Interfaces
(Same as COMM 168, COMM 268, ME 468) Project-based course involves small (3-4) person teams going through all parts of the experimental process: question generation, experiment design, running, and data analysis. Each team creates an original, publishable project that represents a contribution to the research and practicum literatures. All experiments involve interaction between people and technology, including cars, mobile phones, websites, etc. Prerequisite: consent of instructor.

1-5 units, Aut (Nass, C), Win (Nass, C), Spr (Nass, C)

COMM 372G. Seminar in Psychological Processing
Limited to Ph.D. students. Advanced topics. Prerequisite: 272 or consent of instructor.

1-5 units, Win (Reeves, B)

COMM 374G. Freedom and Control of Communication
The meaning of freedom of public communication in democratic communities, focusing on the tensions between freedom and control, rights and opportunities, individual liberty and political equality.

1-5 units, not given this year

COMM 379. History of the Study of Communication
The origins of communication/media theory and research emphasizing the rise of communication as a separate field of study. The influence of schools of thought concerning the scope and purpose of the study of communication. Readings include foundational essays and studies. Prerequisite: Ph.D. student or consent of instructor.

1-5 units, not given this year

COMM 380. Curriculum Practical Training
Practical experience in the communication industries. Prerequisites: graduate standing in Communication, consent of instructor. Meets requirements for Curricular Practical Training for students on F-1 visas. 380 May be repeated four times for credit. (Staff)

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMM 386. Media Cultures of the Cold War
(Same as ARTHIST 475) The intersection of politics, aesthetics, and new media technologies in the U.S. between the end of WW II and the fall of the Berlin Wall. Topics include the aesthetics of thinking the unthinkable in the wake of the atom bomb; abstract expressionism and_modern man_ discourse; game theory, cybernetics, and new models of art making; the rise of television, intermedia, and the counterculture; and the continuing influence of the early cold war on contemporary media aesthetics. Readings from primary and secondary sources in art history, communication, and critical theory.

3-5 units, not given this year

COMM 397. Complementary Project
Individual research for Ph.D. candidates.

1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMM 398. Major Research Project
Individual research for Ph.D. candidates.

1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMM 399. Advanced Individual Work

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMM 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMM 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMPARATIVE LITERATURE (COMPLIT) COURSES

UNDERGRADUATE COURSES IN COMPARATIVE LITERATURE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

COMPLIT 10N. Shakespeare and Performance in a Global Context
(Stanford Introductory Seminar) Preference to freshmen. The problem of performance including the performance of gender through the plays of Shakespeare. In-class performances by students of scenes from plays. The history of theatrical performance. Sources include filmed versions of plays, and readings on the history of gender, gender performance, and transvestite theater. GER:DB-Hum, EC-Gender

3 units, Spr (Parker, P)

COMPLIT 11Q. Shakespeare, Playing, Gender
(Stanford Introductory Seminar) Preference to sophomores. Focus is on several of the best and lesser known plays of Shakespeare, on theatrical and other kinds of playing, and on ambiguities of both gender and playing gender. Topics: transvestism inside and outside the theater, medical and other discussions of sex changes from female to male, hermaphrodites, and fascination with the monstrous. GER:DB-Hum, EC-Gender

3 units, Win (Staff)

COMPLIT 40Q. Aesthetics of Dissent: the Case of Islamic Iran
(Stanford Introductory Seminar) Preference to sohpomores. Censorship, Borges states, is the mother of metaphors. The Islamic regime in Iran censors all aethetic production in the country. But Iranian dissident artists, from film makers and fiction writers to composers in a thriving underground musical scene, have found ways to fight these draconian measures. They have developed a body of work that is as sophisticated in style as it is rich in its discourse of democracy and dissent. The purpose of the seminar is to understand the aesthetic tropes of dissent in Iran, and the social and theological roots of rules of censorship. Masterpieces of post-revolutionary film, fiction, and music discussed in the context of tumultuous history of dissent in Islamic Iran.

3 units, Aut (Milani, A)

COMPLIT 41N. Borderlands of Literature and Culture
(Stanford Introductory Seminar) The transnational themes of memory, identity, and U.S.-Mexico border thinking and writing. Transnational poetry, autoethnographies, short stores, novels, and rock is Spanish music and videos by Americo Paredes, Gloria Anzaldua, Sandra Cisneros, Guillermo Gomez-Pena, Alicia Gaspar de Alba, Carlos Fuentes, Elly Guerra, and Cafe Tacuba.

3-4 units, Aut (Saldivar, J)

COMPLIT 41Q. Ethnicity and Literature
(Stanford Introductory Seminar) Preference to sophomores. What is meant by ethnic literature? How is ethnic writing different from non-ethnic writing, or is there such a thing as either? How does ethnicity as an analytic perspective affect the way literature is read by ethnic peoples? Articles and works of fiction; films on ethnic literature and cultural politics. How ethnic literature represents the nexus of social, historical, political, and personal issues. GER:DB-Hum, EC-AmerCul

5 units, Spr (Palumbo-Liu, D)

COMPLIT 49. What is Nobel Literature? Reading, Assessing, and Interpreting the Nobel Novels on the World Stage
Recent Nobel laureates in literature: Gabriel García Márquez, Nadine Gordimer, Toni Morrison, Kenzaburo Oe, and V.S. Naipaul. These writers come from different locations, yet each participates in a global conversation about the human condition. The impact of their identities upon their thought and writing. How the Nobel prize is awarded. The role of literature in the world, and analytical skills for reading literary texts. GER:DB-Hum, EC-GlobalCom
5 units, Sum (Palumbo-Liu, D)

COMPLIT 51N. Comparative Fictions of Ethnicity
(Stanford Introductory Seminar) How does the sense of self interact with those surrounding? How does literature provide a particular medium for not only self expression, but also for meditations on what goes into the construction of the self? After all, don't people tell stories in response to the question,who are you"? Besides a list of nouns and names and attributes, people give their lives flesh and blood in telling how they process the world. Focus is on the question: Does this universal issue (who am I) become skewed differently when a qualifier such as ethnic is added to it?
5 units, Win (Staff)

COMPLIT 101. What is Literature?
How critics and authors from different eras and different parts of the globe have considered how literature, as a traditional cultural form, can or cannot, help to sustain societies faced with concrete historical crises such as war, revolution, and colonization. How the aesthetic work of verbal art has been seen to offer the possibility of continuity in the face of change. What, if anything, can be continued? How does art perhaps aid in accommodating change? GER:DB-Hum
5 units, Win (Palumbo-Liu, D)

COMPLIT 119. Dostoevsky and His Times
(Same as COMPLIT 219, SLAVGEN 151, SLAVGEN 251) Open to juniors, seniors, and graduate students. Major works in English translation with reference to related developments in Russian and European culture, literary criticism, and intellectual history. GER:DB-Hum
4 units, not given this year

COMPLIT 120. Queer Modernisms
Queer modernist literature, dance, film, and visual art from the 1890's to the 1930's; comparative modernist studies, queer and feminist theory. Texts by Wilde, Woolf, Radclyffe Hall, Foster, Gide, Proust, Mann, Isherwood, Barnes, Ballets Russes, Weimar cabaret, Paris Left Bank culture, queer modernist landmark films Salome and Mädchen in Uniform.
3-5 units, Spr (Staff)

COMPLIT 121. Poems, Poetry, Worlds: An Introductory Course
What is poetry? How does it speak in many voices to questions of history, society, and personal experience? Why does it matter? The reading and interpretation of poetry in crosscultural comparison as experience, invention, form, sound, knowledge, and part of the world. Readings include: medieval to modern poetry of western Europe and the Americas; contemporary poetry of Europe, Latin America, Africa, and the U.S.; and present-day experimental digital, sound, and visual poetry. GER:DB-Hum
5 units, Aut (Gumbrecht, H)

COMPLIT 122. Literature as Performance
Theater as performance and as literature. The historical tension between performance and sexuality in the Western tradition since Greek antiquity. Non-European forms and conventions of performance and theatricality. The modern competition between theater and other forms of performance and media such as sports, film, and television. Sources include: classical Japanese theater; ancient Greek tragedy and comedy; medieval theater in interaction with Christian rituals and its countercultural horizons; the classical age of European theater including Shakespeare, Lope de Vega, and Molière. GER:DB-Hum
5 units, Win (Greenleaf, M)

COMPLIT 123. The Novel, The World
Combining perspectives of the novels of the world as anthropological force with the sense of reality, and as protean form that has reshaped the literary universe. Readings from: ancient Greece; medieval Japan and Britain; and early modern Spain, China, and Britain; romantic theories of the novel; 19th-century realism and popular fiction; modernist experiments; and postmodern pastiches. GER:DB-Hum
5 units, Spr (Cohen, M)

COMPLIT 125A. The Gothic Novel
(Same as ENGLISH 125A) The Gothic novel and its relatives from its invention by Walpole in The Castle of Otranto of 1764. Readings include: Northanger Abbey, The Italian, The Monk, Frankenstein, Jane Eyre, Great Expectations, and Dracula. What defines the Gothic as it evolves from one specific novel to a mode that makes its way into a range of fictional types? GER:DB-Hum
5 units, not given this year

COMPLIT 127. Film and Literature
Comparative analysis of film adaptations of major literary works to different cultural contexts, times, or geographies. Close reading of primary literary and filmic texts in cultural and historical context, introduction to basic film terminology and adaptation theory. No prior film studies knowledge needed; readings in English.
3-5 units, Win (Staff)

COMPLIT 129A. Contemporary Persian Poetry: Encounter of a Thousand-Year-Old Classical Tradition with Modernity
The primacy of poetic expression in Persian culture in the transition from tradition to modernity. Major 20th-century poets in relation to historical events and social change. Authors include: Nima Yushij, Ahmad Shamloo, Sohrab Sepehri, Mehdi Akhavan Sales, Forough Farrokhzad, Nader Naderpour, Fereydoun Moshiri, Esma'il Kho'i, and Afghan and Tajik poets.
5 units, not given this year

COMPLIT 130. Fin-de-siècle Literature and Culture
Literature and culture of the 1860's to 1900's in Paris, London, Berlin, and Vienna. Aestheticism, Symbolism, Decadence; the new social drama; art nouveau; the dandy and the New Woman; sexology; degeneration. Works by Mallarmé, Baudelaire, Wilde, Huysmans, Hofmannsthal, Ibsen, Shaw, and various New Woman writers; historical and social contexts.
3-5 units, Aut (Dierkes-Thrun, P)

COMPLIT 131. Renaissance Poetry: Pursuing the Beloved from the Mediterranean to England
The course begins with Italian lyric poetry, particularly the sonnet, tracing its various developments in Renaissance Italian, Spanish, and English poetry. The poems feature a wide spectrum of ""beloveds,"" representative of amorous love (both heterosexual and homosexual), family, religion, patronage, captivity, and empire.
4 units, Win (Staff)

COMPLIT 135. Chinese Cultural Revolution: Performance, Politics, and Aesthetics
(Same as CHINLIT 190, CHINLIT 290) Events, arts, films, and operas of the Chinese Cultural Revolution. Analysis of political passion, aesthetics, and psychology of mass movements. Places the Cultural Revolution in the long-range context of art, social movements, and politics. Chinese language is not required.
4 units, Win (Wang, B)

COMPLIT 136. Women and Protest Literature in Twentieth Century Germany and China
(Same as GERLIT 110) An examination of works of fiction by women writers in German and China, the authors' responses to similar conditions such as the rise of Communism, and their treatment of gender, modernity, tradition, identity, and individual vs. collective interests. Readings are in English translation. Film adaptations are viewed and discussed as well.
3-5 units, Win (Staff)

COMPLIT 138. Women of Modernism
An examination of women's writing 1905-1940, focusing on formal experimentation, literary and oral traditions, war experience, and shifts in women's rights. Discussion of Modernist movements such as the Bloomsbury Group, Imagism, and the Harlem Renaissance. Novels, poems, essays, and newspaper articles by Wharton, Stein, Woolf, H.D., Hurston, and others.
4-5 units, Aut (Tate, B)

COMPLIT 139. On the Road: 20th-Century Travel Literature
Combining readings of both novels and memoirs, such as Jack Kerouac's On the Road, Michel Houellebecq's Platforme, Vesna Maric's Blubirt, as well as Douglas Adams and Mark Carwardine's Last Chance to See, and others, we will examine the personal and political implications of travel narratives in the later 20th century.

Course meetings will be organized around the discussion of specific topics, including: pilgrimage and tourism, utopia and dystopia, as well as exile and homecoming.

3-5 units, Win (Staff)

COMPLIT 140. Introduction to Hebrew Literature

(Same as JEWISHST 140) The influence of biblical poetry, piyut, and medieval Hebrew poetry on the development of Modern Hebrew poetry. With focus on voice, space, lyrical Subjectivity, Intertextuality, and Poetic Forms. Guest Speakers include Tamar Zwei, Susan Einbinder, Berry Saharoff, and Raymond Scheindlin.

3-5 units, Win (Staff)

COMPLIT 141. Literature and Society in Africa and the Caribbean

(Same as FRENLIT 133) Major African and Caribbean writers. Issues raised in literary works which reflect changing aspects of the societies and cultures of Francophone Africa and the French Caribbean. Topics include colonization and change, quest for identity, tradition and modernity, and new roles and status for women. Readings in fiction and poetry. Authors include Laye Camara, Mariama Ba, and Joseph Zobel. In French. Prerequisite: FRENLANG 126 or consent of instructor. GER:DB-Hum, EC-GlobalCom

4 units, Win (Boyi, E)

COMPLIT 142. The Literature of the Americas

(Same as ENGLISH 172E) The intellectual and aesthetic problems of inter-American literature conceived as an entirety. Emphasis is on continuities and crises relevant to N., Central, and S. American literatures. Issues such as the encounters between world views, the emergence of creole and racially mixed populations, slavery, the New World voice, myths of America as paradise or utopia, the coming of modernism, 20th-century avant gardes, and distinctive modern episodes such as the Harlem Renaissance, the Beats, magical realism, and Noigandres in comparative perspective. GER:DB-Hum, EC-AmerCul

5 units, Spr (Greene, R; Saldivar, R)

COMPLIT 146. Asian American Culture and Community

(Same as AMSTUD 146, ASNAMST 146S, CSRE 146S) An examination of the history of Asians in America via one case history: the International Hotel in San Francisco. Background history of Asians in America, and the specifics of the I Hotel case as involving the convergence of global and local economies, urban redevelopment, and housing issues for minorities. Focus on the convergence of community and cultural production. Service learning component involving community work at the Manilatown Heritage Foundation in San Francisco. Service Learning Course (certified by Haas Center). GER:DB-Hum

5 units, Aut (Palumbo-Liu, D)

COMPLIT 148. A survey of Iranian Cinema: Past and Present, A film maker¿s perspective

While a historical survey will constitute part of our attention, strictly speaking the survey of Iranian cinema will reflect a personal view rather than a purely historical analysis. Special attention will be paid to the development of Iranian film art and industry in terms of origins, style, genres, and issues of indigenous and national identity; however, the substance of the lectures will not follow a comprehensive historical method but will be tailored to a reading closer to film practice rather than theory.

3-5 units, Aut (Staff)

COMPLIT 149. The Laboring of Diaspora & Border Literary Cultures

Focus is on emergent theories of culture and on comparative literary and cultural studies. How is culture treated as a social force? How does one read the presence of social contexts within cultural texts? How do ethno-racial writers re-imagine the nation as a site with many cognitive maps in which the nation state is not congruent with cultural identity? How do diaspora and border narratives and texts strive for comparative theoretical scope while remaining rooted in specific local histories.

3-5 units, not given this year

COMPLIT 150. Terror and Apocalypse: An Examination of Literature of Fear

An examination of literature of fear: encounters with the supernatural, the aesthetics of psychological terror, the distinction between terror and horror, ghost stories and other popular narrations of life after death. History, retribution and repression. Problems in popular culture between ideology and criticism. Aesthetics of apocalypse in narrations of major catastrophes and the destruction of worlds. Cinematic versions of literary tests and readings from authors such as Auster, Dick, King, McCarthy, Meyrink, and others.

4 units, Spr (Staff)

COMPLIT 153. Literature and Religion in Modernity

Literature that takes a skeptical view of religious belief while criticizing the cultural, social, and political conditions of the religious imagination in post-Enlightenment modernity. Readings from authors such as Blake, Goethe, Büchner, Baudelaire, Mallarmé, Flaubert, Nietzsche, Mew, Eliot, Brecht, Bataille, Sartre, Beckett, Ionesco, Celan, Winterson. Sources include visual artworks and philosophical and critical writings. Literary, ethical, and religious positions concerning central human questions: what is humanity; what is God; how does one avoid evil and adhere to good; how does one live after the death of God? Readings in English.

3-5 units, Spr (Staff)

COMPLIT 155. Literature and Myth

Myths and myth making are an essential part of lives and greatly contribute to everyday worldmaking as they provide timeless images and stories of human knowledge and experiences that have shaped human imagination for centuries. But what exactly is a myth and how does it interact with literature? In addition to discussing theories of myth, the course examines the traveling and transformation of myths and mythical figures across different eras and genres. Texts include Hesiod, Homer, and Seneca, to E.T.H. Hoffman, Keats, Heine, Kafka, Brenton, Camus, Plath, Beckett, Kane, and Calvino.

3-5 units, Win (Staff)

COMPLIT 156. Christianity and Poetry

(Same as RELIGST 132E) The relationship between poetry and Christianity from Dante to T.S. Eliot. Focus on how Christian devotional practices (prayer, meditation), and liturgical forms appear in poetry. Does poetic faith (Coleridge) differ from religious faith? How do poets address God? What poetic devices do they use to pray, repent, or give thanks? Authors include Dante, St. Teresa of Avila, John Donne, Emily Dickinson, and Eliot.

3-5 units, Spr (Staff)

COMPLIT 158. Ecology in Philosophy and Literature

How literary and philosophical writers examine and represent the natural world. Key questions: what is nature, and where do humans fit in the natural world? How do humans differ from other animals? Do these differences make us superior beings? What are human ethical responsibilities towards nonhuman beings? How has the technology of writing, television, and computers affected human relationship to nature? Readings include: deep ecologists, ecofeminists, Descartes, Thoreau, Darwin, Conrad, Heidegger, Edward, Abbey, and Bill McKibben.

3-5 units, Spr (Staff)

COMPLIT 181. Philosophy and Literature

(Same as CLASSGEN 81, ENGLISH 81, FRENGEN 181, ITALGEN 181, GERGEN 181) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum

4-5 units, Win (Anderson, L; Landy, J)

COMPLIT 189A. Honors Research

Senior honors students enroll for 5 units in Winter while writing the honors thesis, and may enroll in 189B for 2 units in Spring while revising the thesis. Prerequisite: DLCL 189.

5 units, Win (Staff)

COMPLIT 189B. Honors Research
Open to juniors with consent of adviser while drafting honors proposal. Open to senior honors students while revising honors thesis. Prerequisites for seniors: 189A, DLCL 189.
2 units, Spr (Staff)

COMPLIT 194. Independent Research
(Staff)
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMPLIT 199. Senior Seminar: Pleasures of Reading
Required of Comparative Literature seniors; others by consent of instructor. Different paradigms for the kind of enjoyment readers get from literature: entertainment, instruction; ideological comfort, critical distance; inspiration and incitation to their own creativity. Works read may include Aristotle, Hegel, and Brecht on tragedy; Longinus and Burke on the sublime; Roland Barthes S/Z; sonnets by Mallarmé and Eliot's Wasteland; Cixous on écriture féminine; Bakthin's book on Rabelais and carnival, and Rabelais and the French fabliaux; Adorno on kitsch and literature of entertainment; Benjamin's essay on The Storyteller; Janice Radway's Reading the Romance. GER:DB-Hum
5 units, Win (Cohen, M)

COMPLIT 217. Hölderlin's Poetry
(Same as GERLIT 217) A discussion of key poems by Friedrich Hölderlin with regard to themes including the utopian fatherland as mythological landscape; the idea of the Greek gods; the concept of poetry as event; and the emphatic now. The seminar also explores the relationship between the philosophy of history and poetic metaphor.
3-5 units, not given this year

COMPLIT 218. The work of Luis Martín Santos in Mid-Twentieth Century Spain
(Same as ILAC 229) First published in 1962, Tiempo de Silencio is the only book that the young psychiatrist Luis Martin Santos finished during his lifetime, and, although largely overlooked (even in Spain) until the present day, one of the great European novels of the 20th century. It brings to a complex convergence the evocation of Spain's decadent and run-down post-Civil War society with high-modernist literary procedures and (an implicit parody of) phenomenological analysis.
3-5 units, Win (Gumbrecht, H)

COMPLIT 223. Literary Diaries of Classic Modernity
(Same as GERLIT 223) Focus is on self-analysis in works of key modern writers. Since Montaigne's Essais and Rousseau's Confessions, analysis of the self has been a central topic for modern literature. Texts include Baudelaire's Intimate Journals, Kafka's Diaries, Gide's Journals, Woolf's Moments of Being, Benjamin's Berlin Childhood, and Pavese's Diaries. Analysis of the self as polarizing between the imagination of a utopian childhood and self-deprivation.
3-5 units, not given this year

COMPLIT 226. Narrative and Ethics
(Same as GERLIT 242) Major terms of narratology; how different literary, cinematic, and popular culture narratives raise ethical issues, stir public debates and contribute to understanding human values. Readings include Biblical texts, Antigone, Kleist, Kafka, Coetzee, V for Vendetta, South Park, Kant, Arendt, Nussbaum, Rorty, and Levinas. GER:EC-EthicReas
3-5 units, Win (Eshel, A)

COMPLIT 233. Baroque and Neobaroque
(Same as ENGLISH 233, SPANLIT 293E) The literary, cultural, and political implications of the 17th-century phenomenon formed in response to the conditions of the 16th century including humanism, absolutism, and early capitalism, and dispersed through Europe, the Americas, and Asia. If the Baroque is a universal code of this period, how do its vehicles, such as tragic drama, Ciceronian prose, and metaphysical poetry, converse with one another? The neobaroque as a complex reaction to the remains of the baroque in Latin American cultures, with attention to the mode in recent Brazilian literary theory and Mexican poetry.
5 units, not given this year

COMPLIT 234. Conservative Revolution
(Same as GERGEN 201) An examination of conservative critiques of modernity in the early 20th century, including topics such as German nationalism, the war experience, responses to democracy, anti-liberalism, cultural pessimism in the decline of the West, crises of authority, technology, geopolitics, existentialism, and tradition. Readings from authors such as Oswald Spengler, Thomas Mann, Carl Schmitt, Ernst Jünger, Hugo von Hofmannsthal, Rudolf Borchardt, Karl Haushofer, Konrad Weiss. Readings in either English or German. GER:DB-Hum
3-5 units, not given this year

COMPLIT 246A. Literature and Film of Modern Iran
Iran's social structures, political system, cultural tendencies, and modern artistic culture.
3-5 units, not given this year

COMPLIT 247. Modernism and the Jewish Voice in Europe
(Same as GERGEN 221A, SLAVGEN 221) Some of the most haunting literary voices of the 20th century emerged from the Jewish communities of Eastern and Central Europe. The Jewishness of the modernists is thematized, asking whether it contributed to shared attitudes toward text, history, or identity. Their works are situated in specific linguistic traditions: Yiddish, Hebrew, Russian, Polish, or German. Primary readings from Ansky, Bialik, Mandelstam, Babel, Schulz, Kafka, Celan; secondary readings in history, E. European literature, and theory, including Marx, Freud, Benjamin, and Arendt. GER:DB-Hum
3-4 units, not given this year

GRADUATE COURSES IN COMPARATIVE LITERATURE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

COMPLIT 216. Petrarch and Petrarchism
(Same as ITALGEN 264E) The works of Petrarch (1304-1374), acknowledged as the founder of Renaissance humanism, and a bibliophile, collector of manuscripts, and devotee of erudition. How he dedicated his life to harmonizing the Christian faith with classical learning. Sources include his Latin moral works, epistles, epics, and treatises on illustrious men, and the Triumphs and Canzoniere .
5 units, not given this year

COMPLIT 219. Dostoevsky and His Times
(Same as COMPLIT 119, SLAVGEN 151, SLAVGEN 251) Open to juniors, seniors, and graduate students. Major works in English translation with reference to related developments in Russian and European culture, literary criticism, and intellectual history.
4 units, not given this year

COMPLIT 221. Memory, History, and the Contemporary Novel
(Same as GERLIT 246) How the watershed events of the 20th century, the philosophic linguistic turn, and the debate regarding the end of history left their mark on the novel. How does the contemporary novel engage with the past? How does its interest in memory and history relate to late- or postmodern culture of time or to political and ethical concerns? Novels by Toni Morrison, W. G. Sebald, J. M. Coetzee, Kazuo Ishiguro, and A. B. Yehoshua; theoretical works by Nietzsche, Freud, Heidegger, Hannah Arendt, Walter Benjamin, Fredric Jameson, Paul Ricoeur Awishai Margalit, and Walter Benn Michaels.
3-5 units, Aut (Staff)

COMPLIT 230A. The Novel in Europe: The Age of Compromise, 1800-1848
(Same as ENGLISH 230A) The novel after the French revolution and the industrial take-off. Novelistic form and historical processes including nation building and the marriage market, political conservatism and the advent of fashion, aristocracy and bourgeoisie and proletariatFocus is on how stylistic choices and plot structures offer imaginary resolutions to social and ideological conflicts. Authors include Austen, Scott, Shelley, Stendhal, Puskin, Balzac, Bronte.
5 units, not given this year

COMPLIT 239. Realistic Fictions
(Same as GERLIT 232) Realistic narratives in nineteenth-century literature. Structures of representation, temporality, and closure. Realism, history and political economy. Realism, modernism, and twentieth-century revisions. Texts by authors such as Keller, Stifter, Fontane, Seghers, Lukacs, and Adorno.
3-5 units, Aut (Berman, R)

COMPLIT 242. The Global South - Faulkner, García Márquez, Morrison, and Cisneros
A detailed study of Faulkner, García Márquez, Morrison, and Cisneros¿s major imaginative writings in the aesthetic and geopolitical contexts of the South and the Global South. What does it mean to read South by South? South by North? We will be considering the idea of the South as a real and imaginary territory, a rich ideological geography, and a geo-culture, where regional mythology, ethnic and racial formations and divisions, national and transnational contestations, and the new imperialism together produce extraordinary narratives.
3-5 units, Spr (Saldivar, J)

COMPLIT 245D. Modern Hebrew Literature: Prose
(Same as COMPLIT 345) The class will discuss major works of Hebrew prose from the nineteenth through the twenty first century, introduce major trends in the study of Modern Hebrew prose and will ask what new paradigms may be developed for the study of Hebrew narrative prose in the future. Readings will include Avraham Mapu, Mendele Mokher Sfarim, Y.H.Brenner, S.J. Agnon, S. Yizhar, Amos Os, Aharon Appelfeld, Amilia Kahana Carmon, A.B. Yehoshua, Yehudit Katzir, and Zeruya Shalev amon others. Readings in Hebrew. Discussion in English.
3-5 units, Spr (Staff)

COMPLIT 250. Literature, History, and Representation
(Same as FRENLIT 248) Literary works as historical narratives; texts which envision ways of reconstructing or representing an ancient or immediate past through collective or individual narratives. Narration and narrator; relation between individual and collective history; historical events and how they have shaped the narratives; master narratives; and alternative histories. Reading include Glissant, Césaire, Dadié, Cixous, Pérec, Le Clézio, Mokkedem, Benjamin, de Certeau, and White.
3-5 units, not given this year

COMPLIT 252. Mood, Clima, Stimmung as an Aesthetic Dimension: About the Ontology of Literature Today
A perspective on the question of the ontology of literature, a perspective that abandons the paradigm of representation, that language can or cannot refer to, and thereby represent, the material world. How literary texts provide for their readers the impression that they are surrounded by and wrapped in a material world that touches them in the lightest possible ways. Like a voice (German, Stimme), literary texts can make people feel that they are part of the world, of its objects and of its bodies.
3-5 units, Aut (Gumbrecht, H)

COMPLIT 254. Modern Chinese Novel: Theory, Aesthetics, History
(Same as CHINLIT 174, CHINLIT 274) From the May Fourth movement to the 40s. Themes include enlightenment, democracy, women's liberation, revolution, war, urban culture, and love. Prerequisite: advanced Chinese.
4 units, Aut (Wang, B)

COMPLIT 267. National Literatures, Littérature-monde: A New Comparatism
(Same as FRENLIT 267) The implications of a global francophonie, through discussion of texts produced in different francophone times and spaces. Topics include: confrontation of inward/outward territories and the questions of otherness, identity, and minority status; the relation between history and literature; transnationality; métissage of languages and transnationality. Readings include Montaigne and Calvin, Tzetan Todorov, Lise Gauvin, Aimé Césaire, Bernard Dadié, Edouard Glissant, Leila Sebbar.
3-5 units, Win (Boyi, E)

COMPLIT 278. Special Topics (Francophone Literature): From Exoticism to a Discourse of Auto-Representation
(Same as AFRICAST 278, FRENLIT 278) Critical analysis of major issues relating to literatures in French language in and outside France. Focus is on exoticism and and self-representation, with an emphasis on the evolution of mentalities, new sensitivities and the role of literature in developing individual or collective identity. Readings include Le Clézio, Memmi, Malouf, Lopes, Schwarz-Bart, Delaygue, Glissant, Todorov, Kane and others. Primary sources, secondary sources and film. Taught in French.
3-5 units, not given this year

COMPLIT 303D. Thinking in Fiction
(Same as ENGLISH 303D) Narrative and cognition in 18th-century fictional, philosophical, scientific, and cultural texts. Probable readings: Hobbes, Locke, Newton, Swift, Defoe, Hume, Lennox, Sterne, Adam Smith, Wollstonecraft, and Bentham.
5 units, not given this year

COMPLIT 311. Shakespeare, Islam, and Others
(Same as ENGLISH 373D) Shakespeare and other early modern writers in relation to new work on Islam and the Ottoman Turk in early modern studies. Othello, Twelfth Night, Titus Andronicus, The Merchant of Venice, and other Shakespeare plays. Kyd's Solyman and Perseda, Daborne's A Christian Turned Turk, Massinger's The Renegado, Marlowe's The Jew of Malta, and literary and historical materials.
5 units, not given this year

COMPLIT 320A. Epic and Empire
(Same as ENGLISH 314) Focus is on Virgil's Aeneid and its influence, tracing the European epic tradition (Ariosto, Tasso, Camoes, Spenser, and Milton) to New World discovery and mercantile expansion in the early modern period.
5 units, Spr (Staff)

COMPLIT 322A. Theories of the Novel
(Same as FRENGEN 356) The novel as the literary genre most closely identified with the development of cultural modernity by literary historians and theorists. Critical models for defining the novel's poetics and cultural work. Critical readings such as texts by Lukacs, Bakhtin, Auerbach, Barthes, Armstrong, Gallagher, Bourdieu, Macherey, Jameson, Said and Spivak. Tutor texts such as Defoe's Robinson Crusoe,Flaubert's Madame Bovary, and Woolf's To the Lighthouse.
3-5 units, not given this year

COMPLIT 327. Genres of the Novel
This course introduces students to the poetics of formative literary genres in the history of the novel, studied through representative examples and theories of the respective genres. These genres include canonized genres and forgotten literature. Genres considered may include picaresque and adventure fiction, domestic fiction, realist fiction, historical fiction, Gothic fiction, sentimental fiction, city mysteries fiction, science fiction, and magical realism.
5 units, Spr (Staff)

COMPLIT 330. The Bourgeois
(Same as ENGLISH 363) Goal is to define the ruling class of modern times. Social history (Weber, Hirschmann, Marx); literary texts (Defoe, Goethe, Gaskell); and Henrik Ibsen who produced an intransigent criticism of the bourgeois ethos.
5 units, Spr (Moretti, F)

COMPLIT 332. The Transatlantic Renaissance
(Same as ENGLISH 310) The emergence of early modern transatlantic culture, emphasizing how canonical works of the Renaissance may be reimagined in a colonial context and how the productions of the colonial Americas make sense as Renaissance works. Topics: mestizaje and creole identity, gender and sexuality, law, religion and the church, mining, commerce, and government. European and American authors: Thomas More, Philip Sidney, Thomas Lodge, William Shakespeare, the Inca Garcilaso de la Vega, and lesser known figures.
5 units, not given this year

COMPLIT 345. Modern Hebrew Literature: Prose
(Same as COMPLIT 245D) Major works of Hebrew prose from the 19th through the 21st centuries, major trends in the study of modern Hebrew prose, and new paradigms that may be developed for the study of Hebrew narrative prose. Readings include Avraham Mapu, Mendele Mokher Sfarim, Y.H.Brenner, S.J. Agnon, S. Yizhar, Amos Os, Aharon Appelfeld, Amilia Kahana Carmon, A.B. Yehoshua, Yehudit Katzir, and Zeruya Shalev. Readings in Hebrew. Discussion in English.
3-5 units, Spr (Staff)

COMPLIT 358. Reading, Otherness, Language
Empathy is considered useful as a key element in fostering moral sentiment and social equilibrium. The opposite is true with regard to literature, when dissimilarity rather than similarity becomes privileged and established as a key way of regarding fiction and its social and ethical role. Texts include: Badiou, Ethics; Cavarero, Relating Narratives; Miller, Others; Barthes, The Pleasure of the Text; James, The Jolly Corner; Shammas, Arabesques; Coetzee,

Foe; Gordimer, My Son's Story; Calvino, If on a Winter's Night a Traveler.

5 units, not given this year

COMPLIT 359A. Philosophical Reading Group
(Same as FRENGEN 395, ITALGEN 395) Discussion of one contemporary or historical text from the Western philosophical tradition per quarter in a group of faculty and graduate students. For admission of new participants, a conversation with H. U. Gumbrecht is required. May be repeated for credit.

1 unit, Aut (Gumbrecht, H), Win (Gumbrecht, H)

COMPLIT 364. Style
(Same as ENGLISH 364) The return of a term that was central in 20th-century criticism, and has all but disappeared in recent decades. Focus ison looking at concepts of style from various branches of linguistic and literary theory, and examination of some revealing examples in novels and films. Team taught with D.A. Miller from U.C. Berkeley.

5 units, not given this year

COMPLIT 369. Introduction to Graduate Studies: Criticism as Profession
(Same as FRENGEN 369, ITALGEN 369, GERLIT 369) Major texts of modern literary criticism in the context of professional scholarship today. Readings of critics such as Lukács, Auerbach, Frye, Ong, Benjamin, Adorno, Szondi, de Man, Abrams, Bourdieu, Vendler, and Said. Contemporary professional issues including scholarly associations, journals, national and comparative literatures, university structures, and career paths.

5 units, Aut (Berman, R)

COMPLIT 371. Seminar in Chinese Literary Criticism
(Same as CHINLIT 371) How aesthetics and politics intertwine and break apart in Western and Eastern traditions. Aesthetics for understanding culture, morality, and power in crosscultural contexts. Readings include Hegel, Kant, Marcuse, Lukacs, and Adorno; and Chinese thinkers Wang Guowei, Lu Xun, Li Zehou, and Mao. Prerequisite: CHINLIT 127/207 or consent of instructor.

2-5 units, not given this year

COMPLIT 395. Research
(Staff)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMPLIT 396L. Pedagogy Seminar I
(Same as ENGLISH 396L) Required for first-year Ph.D students in English, Modern Thought and Literature, and Comparative Literature. Preparation for surviving as teaching assistants in undergraduate literature courses. Focus is on leading discussions and grading papers.

2 units, Aut (Bender, J)

COMPLIT 399. Dissertation
(Staff)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMPLIT 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMPARATIVE MEDICINE (COMPMED) COURSES

UNDERGRADUATE COURSES IN COMPARATIVE MEDICINE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

COMPMED 81N. Comparative Anatomy and Physiology of Mammals
(Stanford Introductory Seminar) Preference to freshmen. Emphasis is on a comparative approach to anatomy and physiology of a wide range of mammals, the unique adaptations of each species in terms of its anatomical, and behavioral characteristics, and how these species interact with human beings and other animals. Dissection required. Class size is limited to 16. GER:DB-NatSci

3 units, Win (Bouley, D)

COMPMED 83N. Horse Medicine
(Stanford Introductory Seminar) Preference to freshmen. The most common equine diseases, ranging from colic to lameness are reviewed using problem-oriented approach. Topics include: equine infectious diseases, care of the newborn foal, medical emergencies, and neurological disorders. A lab on the physical and neurological examination of the horse at the Red Barn.

1-2 units, Spr (Staff)

COMPMED 84Q. Globally Emerging Zoonotic Diseases
(Stanford Introductory Seminar) Preference to sophomores. Infectious diseases impacting veterinary and human health around the world today. Mechanisms of disease, epidemiology, and underlying diagnostic, treatment and control principles associated with these pathogens.

3 units, Spr (Felt, S)

COMPMED 87Q. Introduction to the Mouse in Biomedical Research
(Stanford Introductory Seminar) Preference to sophomores. Focus is on the laboratory mouse, one of the most widely used models for biomedical research. Topics include the natural history and origin of the laboratory mouse; characteristics of commonly used strains; mouse anatomy, physiology, and husbandry; common mouse diseases and their effects on research; coat color genetics; and genetically engineered mouse technology. Demonstrations and hands-on experience with necropsy, mouse handling, and research techniques.

3 units, Aut (Nagamine, C)

COMPMED 103. Horse Medicine
The most common equine diseases, ranging from colic to lameness. Equine anatomy and physiology relevant to topics in equine medicine. Equine infectious diseases, care of the newborn foal, medical emergencies, and neurological disorders. Laboratory sessions involve physical examination of the horse and review the basics of the neurological and lameness exam.

2 units, not given this year

COMPMED 107. Comparative Neuroanatomy
(Same as COMPMED 207) Functional organization and evolution of the vertebrate nervous system. Topics include paleoneurology, cladistic analysis, allometry, mosaic versus concerted evolution, and evolution of brain region structure, connectivity, and neurons. Comparisons between structure and function of vertebrate forebrains including hippocampi. Evolution of the primate visual and sensorimotor central nervous system as related to vocalization, socialization, and intelligence.

4 units, Aut (Buckmaster, P; Darian-Smith, C)

COMPMED 110. Pre-Vet Advisory
For students interested in a career in veterinary medicine. Guest speakers present career options in veterinary medicine. Networking with other pre-vet students. How to meet the academic and practical experience prerequisites for admission to veterinary school. Prerequisite: consent of instructor.

1 unit, Aut (Albertelli, M), Win (Bouley, D), Spr (Bouley, D)

COMPMED 120. Rodent Biomethodology
Preference to bioengineering and other biological sciences undergraduates. Techniques and surgery using mice and rats in biomedical research.Laboratory sessions include handling, dosing, and samplinig techniques; basic understanding of anesthesia and analgesia; aseptic surgery techniques, suturing, and surgical approaches. Prequisite: instructor consent.

3 units, Aut (Heath, L; Pacharinsak, C; Green, S)

COMPMED 198. Undergraduate Directed Reading in Comparative Medicine
May be taken as a prelude to research and may also involve participation in a lab or research group seminar and/or library research.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMPMED 199. Undergraduate Research
Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN COMPARATIVE MEDICINE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

COMPMED 207. Comparative Neuroanatomy
(Same as COMPMED 107) Functional organization and evolution of the vertebrate nervous system. Topics include paleoneurology, cladistic analysis, allometry, mosaic versus concerted evolution, and evolution of brain region structure, connectivity, and neurons. Comparisons between structure and function of vertebrate forebrains including hippocampi. Evolution of the primate visual and sensorimotor central nervous system as related to vocalization, socialization, and intelligence.

4 units, Aut (Buckmaster, P; Darian-Smith, C)

COMPMED 299. Directed Reading in Comparative Medicine
Prerequisite: consent of instructor. (Staff)

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMPMED 370. Medical Scholars Research
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMPMED 399. Graduate Research
Investigations sponsored by individual faculty members.Opportunities are available in comparative medicine and pathology, immuno-histochemistry, electron microscopy, molecular genetics, quantitative morphometry, neuroanatomy and neurophysiology of the hippocampus, pathogenesis of intestinal infections, immunopathology, biology of laboratory rodents, anesthesiology of laboratory animals, gene therapy of animal models of neurodegenerative diseases, and development and characterization of transgenic animal models. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMPARATIVE STUDIES IN RACE AND ETHNICITY (CSRE) COURSES

UNDERGRADUATE COURSES IN COMPARATIVE STUDIES IN RACE AND ETHNICITY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

CSRE 28N. The Cultural Shaping of Mental Health and Illness
(Stanford Introductory Seminar) (Same as PSYCH 28N) This seminar examines how our cultural ideas and practices shape our conceptions, perceptions, experiences, and treatment of emotional wellness and distress. We will read and discuss empirical research and case studies from psychology, anthropology, sociology, and medicine. Course requirements include weekly reading and thought papers, weekly discussion, and a final research project and presentation.

3 units, Win (Tsai, J)

CSRE 107. The Black Mediterranean: Greece, Rome and Antiquity
(Same as AFRICAAM 107C, CLASSGEN 107) Explore problems of race and ethnicity as viable criteria in studying ancient societies and consider the question, What is the Mediterranean?, in relation to premodern evidence. Investigate the role of blackness as a marker of ethnicity; the demography of slavery and its roles in forming social identities; and environmental determinism as a factor in ethnic and racial thinking. Consider Greek and Roman perspectives and behavior, and their impact on later theories of race and ethnicity as well as the Mediterranean as a whole. GER:EC-GlobalCom

4-5 units, Aut (Parker, G)

CSRE 108. Introduction to Feminist Studies
(Same as FEMST 101, HISTORY 107) Introduction to interdisciplinary feminist scholarship, which seeks to understand the creation, perpetuation, and critiques of gender inequalities. Topics include the historical emergence of feminist politics and contemporary analysis of work and family, health and sexuality, creativity, and politics. Close attention to the intersections of race, gender, ethnicity, and sexuality and to international, as well as U.S., perspectives. Students learn to think critically about gender in the past, present, and future.

5 units, Aut (Freedman, E)

CSRE 109A. Federal Indian Law
(Same as NATIVEAM 109A) Cases, legislation, comparative justice models, and historical and cultural material. The interlocking relationships of tribal, federal, and state governments. Emphasis is on economic development, religious freedom, and environmental justice issues in Indian country.

5 units, Aut (Biestman, K)

CSRE 117N. Film, Nation, Latinidad
(Stanford Introductory Seminar) (Same as CHICANST 117N, ILAC 117N) Examination of films from Spain, Mexico, and Latina/o USA that expand, trouble, contest, parody, or otherwise interrogate notions of national identity. Filmmakers may include Lourdes Portillo, Alejandro González Iñárritu, John Sayles, Maria Novaro, Pedro Almodóvar, and Gregory Nava.

3-4 units, Spr (Yarbro-Bejarano, Y)

CSRE 117S. History of California Indians
(Same as NATIVEAM 117S, HISTORY 250A) Demographic, political, and economic history of California Indians, 1700s-1950s. Processes and events leading to the destruction of California tribes, and their effects on the groups who survived. Geographic and cultural diversity. Spanish, Mexican, and Anglo-American periods. The mission system. GER:EC-AmerCul

5 units, Win (Shively, J)

CSRE 120. Native American Writers, 1880-1920
(Same as NATIVEAM 120) Hoxie's historical work provides a framework for analyzing what effects policies had on American Indian people. His work does not provide an American Indian perspective; he stated at the onset, that this was not an objective in this study. His main objective was to present a study that shows Indians' relations with whites as a clash of two complex cultures from a white point of view. Three American Indians writing during this time period provide the needed Indian perspective lacking in Hoxie's work.

5 units, Aut (Shaw, D)

CSRE 121X. Hip Hop, Youth Identities, and the Politics of Language
(Same as AFRICAAM 121X, AMSTUD 121X, ANTHRO 121A, EDUC 121X, LINGUIST 155) Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture.

3-4 units, Spr (Alim, H)

CSRE 125. Race, Crowds, and Gender
On January 19, 2009, over one million people gathered in the Washington Mall to watch the inauguration of President Barack Obaama. The press called it this generation's Woodstock, but it was three times larger than the crowd at Woodstock: the largest crowd gathered on U.S. soil since the 1964 March on Washington. Using political movements including marches around immigration, rallies for and against Obama, and others, this course looks at crowds in America and the mobilization of race as a political tactic in order to question why the centrality of race is so often absent in crowds.

5 units, Spr (Arnold, R)

CSRE 126. The Psychology of Race and Gender in Popular Culture
Current American popular culture including movies, television shows, commercials, and music: to highlight representations that create and maintainnotions of race and gender. Course taught from the point of view of social psychology and focuses on empirical

research but material from other fields including sociology, anthropology, drama/performance and communications also included.

5 units, Spr (Marshall, S)

CSRE 132. Friends, Enemies, and Lovers: Interracial Encounters in American Cultures

Representations of interracial encounters in American novels, films, and plays. How these works reflect, question, and reimagine relationships not only amongst minorities, but also between race and nation, individual and community, and art and politics. Topics: cultural appropriations; alternative histories of contact; cross-racial performances and social conflicts. Texts by Sherman Alexie, Luis Valdez, Anna Deveare Smith and Karen Tei Yamashita, and the films Do the Right Thing and Crash.

5 units, Aut (Kim, J)

CSRE 135H. CSRE House Seminar: Race and Ethnicity at Stanford

(Same as ANTHRO 135H) Race, ethnicity, gender, and religion using the tools, analytical skills and concepts developed by anthropologists.

1-2 units, Aut (Wilcox, M)

CSRE 135I. CSRE House Seminar: Race and Ethnicity at Stanford

(Same as ANTHRO 135I) Race, ethnicity, gender, and religion using the tools, analytical skills and concepts developed by anthropologists.

1-2 units, Win (Wilcox, M)

CSRE 145A. Poetics and Politics of Caribbean Women's Literature

(Same as AFRICAAM 145A) Mid 20th-century to the present. How historical, economic, and political conditions in Haiti, Cuba, Jamaica, Antigua, and Guadeloupe affected women. How Francophone, Anglophone, and Hispanophone women novelists, poets, and short story writers respond to similar issues and pose related questions. Caribbean literary identity within a multicultural and diasporic context; the place of the oral in the written feminine text; family and sexuality; translation of European master texts; history, memory, and myth; and responses to slave history, colonialism, neocolonialism, and globalization. GER:DB-SocSci, DB-SocSci, EC-Gender

5 units, Win (Duffey, C)

CSRE 146. Community Matters: Research and Service with Community Organizations

Methods and principles for academic research in community settings for students preparing to enter summer experiences with community organizations. Case studies and tools to help students conceptualize a research strateg. Students develop a memorandum of understanding in collaboration with the community agency to define the work, relationship, and mutual benefit of the research partnership.

2 units, Spr (Mitchell, T)

CSRE 146S. Asian American Culture and Community

(Same as AMSTUD 146, COMPLIT 146, ASNAMST 146S) An examination of the history of Asians in America via one case history: the International Hotel in San Francisco. Background history of Asians in America, and the specifics of the I Hotel case as involving the convergence of global and local economies, urban redevelopment, and housing issues for minorities. Focus on the convergence of community and cultural production. Service learning component involving community work at the Manilatown Heritage Foundation in San Francisco. Service Learning Course (certified by Haas Center). GER:DB-Hum

5 units, Aut (Palumbo-Liu, D)

CSRE 160N. Latino/Latina Performance in the United States

(Stanford Introductory Seminar) (Same as DRAMA 17N) Preference to freshmen. Works by U.S. Latino and Latina performance artists producing from the margins of the mainstream Euro American theater world. How performance art serves as a kind of dramatized political forum for Latino/a artists, producing some of the most transgressive explorations of queer and national/ethnic identities in the U.S. today. Students create and perform in a staged reading of an original performance piece. GER:DB-Hum, EC-AmerCul

3 units, Win (Moraga, C)

CSRE 162. WOMEN IN MODERN AMERICA

(Same as AMSTUD 161, HISTORY 161) The transformation from the New Woman of the 1890s to the New Woman of the 1990s; attention to immigrant, black, and white women, both historical analyses and personal accounts. Topics include: workforce participation; family and reproductive labor; educational and professional opportunities; the impact of wars, economic depression, and popular culture; and recurrent feminist movements. GER:DB-SocSci, EC-Gender

4-5 units, Spr (Freedman, E)

CSRE 167. Chicana and Chicano Representation in Cinema

(Same as CHICANST 167) This introductory course surveys representations of Chicana/os, as well as Latinas/os, in independent and Hollywood film and video across a variety of genres (narrative, documentary, experimental). We will consider how film and video are social and artistic phenomenon where cultural and political debates about cultural identity and community are narrated and imag(in)ed. Work screened in class will be historically situated in relation to the Chicano civil rights movement, the emergence of Chicano film and television, international film movements, the struggle for access to the means for self-representation, as well as the challenges involved in the areas of distribution, exhibition and reception. Course content seeks to underscore the vital role of visual media in struggles for social change and political enfranchisement. We will consider how visual media are a vehicle for creative and personal expression. Throughout this course, we will explore issues of film/video and

5 units, Spr (Staff)

CSRE 168. New Citizenship: Grassroots Movements for Social Justice in the U.S.

(Same as CHICANST 168) The contributions of immigrants and communities of color to the meaning of citizenship in the U.S. Citizenship, more than only a legal status, is a dynamic cultural field in which people claim equal rights while demanding respect for differences. Academic studies of citizenship examined in dialogue with the theory and practice of activists and movements. Engagement with immigrant organizing and community-based research.

5 units, Win (Staff)

CSRE 169A. Cultural Traffic: Race, Performance, and Globalization

(Same as AFRICAAM 169A, AMSTUD 169, DRAMA 169A, DRAMA 303A) This course will examine the transnational intersections of race and performance. It will consider the question of s race understood internationally and how do such definitions travel. We examine critical race theory and study constructions of race through the lens of performance. The course will interrogate the transnational meanings of such performances. Students in this course will read, study, analyze and potentially even stage theoretical and performance texts from both inside and outside of the United States. Course also satisfies Drama 302/303 requirement.

3-5 units, Aut (George, N)

CSRE 173S. Transcultural and Multiethnic Lives: Contexts, Controversies, and Challenges

(Same as AFRICAAM 173S, ASNAMST 173S) Lived experience of people who dwell in the border world of race and nation where they negotiate transcultural and multiethnic identities and politics. Comparative, historical, and global contexts such as family and class. Controversies, such as representations of mixed race people in media and multicultural communities. What the lives of people like Tiger Woods and Barack Obama reveal about how the marginal is becoming mainstream.

5 units, Spr (Murphy-Shigematsu, S)

CSRE 177. Writing for Performance: The Fundamentals

(Same as DRAMA 177, DRAMA 277) The elements of playwriting and creative experimentation for the stage. Topics include: character development, conflict and plot construction, staging and setting, and play structure. Script analysis of works by contemporary playwrights may include: Marsha Norman, Patrick Shanley, August Wilson, Suzan-Lori Parks, Paula Vogel, Octavio Solis. Table readings of one-act length work. GER:DB-Hum

5 units, Win (Moraga, C)

CSRE 179. Asian American Experiences and Documentary Practice
(Same as FILMSTUD 279, ASNAMST 179) Focus is on documentary cinema as a technology for understanding Asian Americans in the U.S. The social and historical context of the formation of the Asian American filmmaker, an authorial position that emerges in the 60s and 70s as part of the civil rights movement. Works include films by Loni Ding, Bob Nakamura and Curtis Choy; readings about the establishment of Asian American media industries and Asian American film criticism as a multi-genre. Social issue documentaries that represent new ethnographies of social experience including transnational adoption (Daughter From Danang), refugee experience (AKA Don Bonus), and sex tourism (The Women Outside). Readings include analyses of the implications of these works for cinema studies, ethnic studies, and the politics of film in everyday life. Experimental documentaries and their interrogation of the limits of the documentary form in representing identities and social problems. How does representation matter within and for Asian America in framing the complexities of race and racial identity? Screenings include works by Marlon Fuentes, Rea Tajiri and Trinh T. Minh-ha.
5 units, Spr (Shimizu, C)

CSRE 179C. Chroniclers of Desire: Creative Non-Fiction Writing Workshop
(Same as DRAMA 179C, DRAMA 279C) This course emphasizes the study and practice of personal memoir writing and literary journalism. The class will explore those writings that contain a public and private story, navigating an intimate and institutional world. Student writers will serve as public chroniclers whose subjective point of view and experience attempt to provide a truth greater than what ¿the facts¿ can offer.
3-5 units, Spr (Moraga, C)

CSRE 179G. Indigenous Identity in Diaspora: People of Color Art Practice in North America
(Same as CSRE 279G, DRAMA 179G, DRAMA 279G) Gateway core course to the IDA emphasis in CSRE. A 21st-century examination of people of color aesthetics and related politics, drawing from contemporary works (literature, music, visual and performing arts) in conversation with their native (especially American Indigenous and African) origins. Issues of gender and sexuality in relation to cultural identity areintegral to this study. Students will produce a final work, integrating critical writing with a creative project.
3-5 units, Spr (Moraga, C)

CSRE 180E. Introduction to Chicana/o Studies
(Same as CHICANST 180E) Historical and contemporary experiences that have defined the status of Mexican-origin people living in the U.S. Topics include the U.S./Mexico border and the borderlands; immigration and anti-immigration sentiment; literary and cultural traditions; music; labor; historical perspectives on Mexicans in the U.S. and the Chicano movement; urban realities; gender relations; political and economic changes; and inter- and intragroup interactions. Sources include social science and humanities scholarship. GER:DB-Hum, EC-AmerCul
5 units, Spr (Gallardo, S)

CSRE 183. Border Crossings and American Identities
(Same as AMSTUD 183) How novelists, filmmakers, and poets perceive racial, ethnic, gender, sexual preference, and class borders in the context of a national discussion about the place of Americans in the world. How Anna Deavere Smith, Sherman Alexie, or Michael Moore consider redrawing such lines so that center and margin, or self and other, do not remain fixed and divided. How linguistic borderlines within multilingual literature by Caribbean, Arab, and Asian Americans function. Can Anzaldúa's conception of borderlands be constructed through the matrix of language, dreams, music, and cultural memories in these American narratives? Course includes examining one's own identity. GER:DB-Hum, EC-AmerCul
5 units, Aut (Duffey, C)

CSRE 189W. Language and Minority Rights
(Same as CHICANST 189W, EDUC 189X) Language as it is implicated in migration and globalization. The effects of globalization processes on languages, the complexity of language use in migrant and indigenous minority contexts, the connectedness of today's societies brought about by the development of communication technologies. Individual and societal multilingualism; preservation and revival of endangered languages. GER:EC-GlobalCom
3 units, not given this year

CSRE 192E. Topics in the History of Sexuality: Sexual Violence
(Same as AMSTUD 258, HISTORY 258, HISTORY 358) Recent historical interpretations of sexual violence, with particular attention to the intersections of gender and race in the construction of rape, from early settlement through the twentieth century. Topics include the legal prosecution of rape in Early America; the racialization of rape in the U.S.; lynching and anti-lynching in the U.S.; and feminist responses to sexual violence. GER:DB-SocSci, EC-Gender
4-5 units, Win (Freedman, E)

CSRE 196C. Introduction to Comparative Studies in Race and Ethnicity
(Same as ENGLISH 172D, PSYCH 155, SOC 146) How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. GER:DB-SocSci, EC-AmerCul
5 units, Win (Markus, H; Moya, P)

CSRE 198. Internship for Public Service
Restricted to CSRE comparative studies majors with a concentration in public service. Students consult with the CSRE undergraduate program director and CSRE affiliated faculty to develop an internship. Group meetings. May be repeated for credit. Service Learning Course (certified by Haas Center).
1-5 units, Aut (Mitchell, T), Win (Mitchell, T), Spr (Mitchell, T)

CSRE 199. Pre-Honors Seminar
For students interested in writing a senior honors thesis. Conceptualizing and defining a manageable honors project, conducting interdisciplinary research, the parameters of a literature review essay, and how to identify a faculty adviser.
1-2 units, Aut (Ku, M)

CSRE 199A. Race, Sex, Gender in Cultural Representations
(Same as CHICANST 199A, ILAC 389E) Critical theory and cultural representations in media that address issues surrounding the representation of race, gender, sexuality, and politics. How is desire racialized? How is racial difference produced through sex as a material practice and what is the function of sex in racial self formation ? How are questions of pleasure, desire, and the structures of power reconciled? How do these texts reinforce or contest stereotypes and the ideal bodies of national identity? Is it desirable to envision a bridging of queer communities of color, or a transnational or global network?
3-5 units, Spr (Yarbro-Bejarano, Y)

CSRE 200. Latina/o Literature
(Same as CHICANST 200, ILAC 280) Examination of a diverse set of literary texts by Latinas/os, bringing history, politics, and cultural theory to bear in order to apprehend the significant intracultural differences amongst Latinas/os (most notably concerning im/migration). Gender and sexuality as critical lenses that reflect and refract themes such as identity, language politics, transnationalism, political turmoil, socioeconomic status, and the notion of home/land and its loss, reinvention, and/or reclamation
3-5 units, Aut (Yarbro-Bejarano, Y)

CSRE 200R. Directed Research
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

CSRE 200W. Directed Reading
1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

CSRE 200X. CSRE Senior Seminar
Required for CSRE-related students, including those who opt to write honors theses in other departments and programs. Research and the writing of the senior honors thesis or senior paper under the supervision of a faculty project adviser. The process of research including conceptualization, development of prospectus, development of theses, research, analysis, and writing.
5 units, Aut (Ku, M)

CSRE 200Y. CSRE Senior Honors Research
1-10 units, Win (Staff)

CSRE 200Z. CSRE Senior Honors Research
(Thompson, Snipp)
1-10 units, Spr (Staff)

CSRE 201B. From Racial Justice to Multiculturalism: Movement-based Arts Organizing in the Post Civil Rights Era
(Same as CHICANST 201B) How creative projects build and strengthen communities of common concern. Projects focus on cultural reclamation, multiculturalism, cultural equity and contemporary cultural wars, media literacy, independent film, and community-based art. Guest artists and organizers, films, and case studies.
5 units, Aut (Hernandez, G)

CSRE 203A. The Changing Face of America: Civil Rights and Education Strategies for the 21st Century
For students with leadership potential who have studied these topics in lecture format. Race discrimination strategies, their relation to education reform initiatives, and the role of media in shaping racial attitudes in the U.S.
5 units, Spr (Steyer, J; Lythcott-Haims, J)

CSRE 226. Race and Racism in American Politics
(Same as POLISCI 226, POLISCI 326) Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.
5 units, Aut (Segura, G)

GRADUATE COURSES IN COMPARATIVE STUDIES IN RACE AND ETHNICITY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

CSRE 201C. Critical Concepts in Chicana/o Literature
(Same as CHICANST 201C, ILAC 380E) Interrogation of the critical discourses that have configured and reconfigured the canon of Chicana/o literature over the last thirty years. Close textual readings of primary texts, mainly narrative, within the development of Chicana/o literary and cultural criticism. Construction of narrative genealogies and foundational texts. Impact of the publication of late-nineteenth or pre-movement novels and Chicana feminist/lesbian/queer critiques. Consideration of alternative paradigms such as positioning Chicana/o literature within a U.S. Latina/o literary imaginary, and the shift of critical discourse in the field of visual art from a paradigm of resistance and affirmation to one of post-Chicano.
3-5 units, Aut (Yarbro-Bejarano, Y)

CSRE 216X. Education, Race, and Inequality in African American History, 1880-1990
(Same as EDUC 216X, HISTORY 255E) Seminar. The relationship among race, power, inequality, and education from the 1880s to the 1990s. How schools have constructed race, the politics of school desegregation, and ties between education and the late 20th-century urban crisis.
3-5 units, Aut (Gordon, L)

CSRE 279G. Indigenous Identity in Diaspora: People of Color Art Practice in North America
(Same as CSRE 179G, DRAMA 179G, DRAMA 279G) This ""gateway"" core course to the IDA emphasis in CSRE offers a 21st century examination of people of color aesthetics and related politics, drawing from contemporary works (literature, music, visual and performing arts) in conversation with their native (especially American Indigenous and African) origins. Issues of gender and sexuality in relation to cultural identity are also integral to this study. Students will be required to produce a final work, integrating critical writing with a creative project.
3-5 units, Spr (Moraga, C)

COMPUTATIONAL AND MATHEMATICAL ENGINEERING (CME) COURSES

UNDERGRADUATE COURSES IN COMPUTATIONAL AND MATHEMATICAL ENGINEERING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

CME 100. Vector Calculus for Engineers
(Same as ENGR 154) Computation and visualization using MATLAB. Differential vector calculus: analytic geometry in space, functions of several variables, partial derivatives, gradient, unconstrained maxima and minima, Lagrange multipliers. Integral vector calculus: multiple integrals in Cartesian, cylindrical, and spherical coordinates, line integrals, scalar potential, surface integrals, Green's, divergence, and Stokes' theorems. Examples and applications drawn from various engineering fields. Prerequisites: MATH 41 and 42, or 10 units AP credit. GER:DB-Math
5 units, Aut (Khayms, V)

CME 100A. Vector Calculus for Engineers, ACE
Students attend CME102/ENGR155A lectures with additional recitation sessions; two to four hours per week, emphasizing engineering mathematical applications and collaboration methods. Prerequisite: application at:http://soe.stanford.edu/current_students/edp/programs/ace.html
6 units, Aut (Khayms, V; Darve, E)

CME 102. Ordinary Differential Equations for Engineers
(Same as ENGR 155A) Analytical and numerical methods for solving ordinary differential equations arising in engineering applications: Solution of initial and boundary value problems, series solutions, Laplace transforms, and non-linear equations; numerical methods for solving ordinary differential equations, accuracy of numerical methods, linear stability theory, finite differences. Introduction to MATLAB programming as a basic tool kit for computations. Problems from various engineering fields. Prerequisite: CME 100/ENGR 154 or MATH 51. GER:DB-Math
5 units, Win (Darve, E)

CME 102A. Ordinary Dofferential Equations for Engineers, ACE
Students attend CME102/ENGR155A lectures with additional recitation sessions; two to four hours per week, emphasizing engineering mathematical applications and collaboration methods. Prerequisite: application at: http://soe.stanford.edu/current_students/edp/programs/ace.html
6 units, Win (Osgood, B; Darve, E)

CME 104. Linear Algebra and Partial Differential Equations for Engineers
(Same as ENGR 155B) Linear algebra: matrix operations, systems of algebraic equations, Gaussian elimination, undertermined and overdetermined systems, coupled systems of ordinary differential equations, eigensystem analysis, normal modes. Fourier series with applications, partial differential equations arising in science and engineering, analytical solutions of partial differential equations. Numerical methods for solution of partial differential equations: iterative techniques, stability and convergence, time advancement, implicit methods, von Neumann stability analysis. Examples and applications from various engineering fields. Prerequisite: CME 102/ENGR 155A. GER:DB-Math
5 units, Spr (Khayms, V)

CME 104A. Linear Algebra and Partial Differential Equations for Engineers, ACE
Students attend CME104/ENGR15nB lectures with additional recitation sessions; two to four hours per week, emphasizing engineering mathematical applications and collaboration methods. Prerequisite: application at:http://soe.stanford.edu/current_students/edp/programs/ace.html
6 units, Spr (Khayms, V)

CME 106. Introduction to Probability and Statistics for Engineers
(Same as ENGR 155C) Probability: random variables, independence, and conditional probability; discrete and continuous distributions, moments, distributions of several random variables. Topics in mathematical statistics: random sampling, point estimation, confidence intervals, hypothesis testing, non-parametric tests, regression and correlation analyses; applications in engineering, industrial manufacturing, medicine, biology, and other fields. Prerequisite: CME 100/ENGR154 or MATH 51. GER:DB-Math
3-4 units, Win (Khayms, V), Sum (Khayms, V)

CME 108. Introduction to Scientific Computing
Numerical computation for mathematical, computational, physical sciences and engineering: error analysis, floating-point arithmetic, nonlinear equations, numerical solution of systems of algebraic equations, banded matrices, least squares, polynomial interpolation, numerical differentiation and integration, numerical solution of ordinary differential equations, truncation error, numerical stability for time dependent problems and stiffness. Prerequisites: CS 106A or familiarity with MATLAB; MATH 51, 52, 53; inappropriate for students who have taken CME 102,104/ENGR 155A,B. GER:DB-EngrAppSci
3-4 units, Spr (Le, H), Sum (Staff)

GRADUATE COURSES IN COMPUTATIONAL AND MATHEMATICAL ENGINEERING

Primarily for graduate students; undergraduates may enroll with consent of instructor.

CME 200. Linear Algebra with Application to Enginering Computations
(Same as ME 300A) Computer based solution of systems of algebraic equations obtained from engineering problems and eigensystem analysis, Gaussian elimination, effect of round-off error, operation counts, banded matrices arising from discretization of differential equations, ill-conditioned matrices, matrix theory, least square solution of unsolvable systems, solution of non-linear algebraic equations, eigenvalues and eigenvectors, similar matrices, unitary and Hermitian matrices, positive definiteness, Cayley-Hamilton theory and function of a matrix and iterative methods. Prerequisite: familiarity with computer programming, and MATH103, 130, or equivalent.
3 units, Aut (Gerritsen, M)

CME 204. Partial Differential Equations in Engineering
(Same as ME 300B) Geometric interpretation of partial differential equation (PDE) characteristics; solution of first order PDEs and classification of second-order PDEs; self-similarity; separation of variables as applied to parabolic, hyperbolic, and elliptic PDEs; special functions; eigenfunction expansions; the method of characteristics. If time permits, Fourier integrals and transforms, Laplace transforms. Prerequisite: CME 200/ME 300A, equivalent, or consent of instructor.
3 units, Win (Shaqfeh, E)

CME 206. Introduction to Numerical Methods for Engineering
(Same as AA 214A, ME 300C) Numerical methods from a user's point of view. Lagrange interpolation, splines. Integration: trapezoid, Romberg, Gauss, adaptive quadrature; numerical solution of ordinary differential equations: explicit and implicit methods, multistep methods, Runge-Kutta and predictor-corrector methods, boundary value problems, eigenvalue problems; systems of differential equations, stiffness. Emphasis is on analysis of numerical methods for accuracy, stability, and convergence. Introduction to numerical solutions of partial differential equations; Von Neumann stability analysis; alternating direction implicit methods and nonlinear equations. Prerequisites: CME 200/ME 300A, CME 204/ME 300B.
3 units, Spr (Iaccarino, G)

CME 211. Computer Programming in C++ for Earth Scientists and Engineers
(Same as ENERGY 211) Computer programming methodology emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and modularity. Fundamental data structures. Time and space complexity analysis. The basic facilities of the programming language C++. Numerical problems from various science and engineering applications.
3 units, Win (Caulfield, E; Aboud, S)

CME 212. Introduction to Large-Scale Computing in Engineering
(Same as ENERGY 212) Advanced programming methodologies for solving fundamental engineering problems using algorithms with pervasive application across disciplines. Overview of computer systems from a programming perspective including processor architectures, memory hierarchies, machine arithmetic, performance tuning techniques. Algorithms include iterative, direct linear solvers, fft, and divide and conquer strategies for n-body problems. Software development; other practical UNIX tools including shell scripting, vi/emacs, gcc, make, gdb, gprof, version control systems and LaTeX. Prerequisites: CME 200/ME 300A, CME 211, and CS 106X or equivalent level of programming in C/C++.
3 units, Spr (Caulfield, E)

CME 215A. Advanced Computational Fluid Dynamics
(Same as AA 215A) High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.
3 units, Win (Jameson, A)

CME 215B. Advanced Computational Fluid Dynamics
(Same as AA 215B) High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.
3 units, Spr (Jameson, A)

CME 263. Introduction to Linear Dynamical Systems
(Same as EE 263) Applied linear algebra and linear dynamical systems with application to circuits, signal processing, communications, and control systems. Topics: least-squares approximations of over-determined equations and least-norm solutions of underdetermined equations. Symmetric matrices, matrix norm, and singular value decomposition. Eigenvalues, left and right eigenvectors, with dynamical interpretation. Matrix exponential, stability, and asymptotic behavior. Multi-input/multi-output systems, impulse and step matrices; convolution and transfer matrix descriptions. Control, reachability, and state transfer; observability and least-squares state estimation. Prerequisites: linear algebra and matrices as in MATH 103; differential equations and Laplace transforms as in EE 102A.
3 units, Aut (Boyd, S), Spr (Lall, S)

CME 291. Master's Research
Students require faculty sponsor. (Staff)
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CME 300. Departmental Seminar Series
Required for first-year ICME Ph.D. students; recommended for first-year ICME M.S. students. Presentations about research at Stanford by faculty and researchers from Engineering, H&S, and organizations external to Stanford. May be repeated for credit.
1 unit, Aut (Murray, W), Win (Murray, W)

CME 302. Numerical Linear Algebra
First in a three quarter graduate sequence. Solution of systems of linear equations: direct methods, error analysis, structured matrices; iterative methods and least squares. Parallel techniques. Prerequisites: CME 108, MATH 103 or 113.
3 units, Aut (Gerritsen, M)

CME 303. Partial Differential Equations of Applied Mathematics
(Same as MATH 220) First-order partial differential equations; method of characteristics; weak solutions; elliptic, parabolic, and

hyperbolic equations; Fourier transform; Fourier series; and eigenvalue problems. Prerequisite: foundation in multivariable calculus and ordinary differential equations.

3 units, Aut (Ryzhik, L)

CME 304. Numerical Optimization

(Same as MS&E 315) Solution of nonlinear equations; unconstrained optimization; linear programming; quadratic programming; global optimization; general linearly and nonlinearly constrained optimization. Theory and algorithms to solve these problems. Prerequisite: background in analysis and numerical linear algebra.

3 units, Win (Murray, W)

CME 305. Discrete Mathematics and Algorithms

(Same as MS&E 316) Topics: enumeration such as Cayley's theorem and Prufer codes, SDR, flows and cuts (deterministic and randomized algorithms), probabilistic methods and random graphs, asymptotics (NP-hardness and approximation algorithms). Topics illustrated with EE, CS, and bioinformatics applications. Prerequisites: MATH 51 or 103 or equivalents.

3 units, Win (Saberi, A)

CME 306. Numerical Solution of Partial Differential Equations

(Same as MATH 226) Hyperbolic partial differential equations: stability, convergence and qualitative properties; nonlinear hyperbolic equations and systems; combined solution methods from elliptic, parabolic, and hyperbolic problems. Examples include: Burger's equation, Euler equations for compressible flow, Navier-Stokes equations for incompressible flow. Prerequisites: MATH 220A or CME 302.

3 units, Spr (Garapon, P)

CME 308. Stochastic Methods in Engineering

(Same as MATH 228) Review of basic probability; Monte Carlo simulation; state space models and time series; parameter estimation, prediction, and filtering; Markov chains and processes; stochastic control; and stochastic differential equations. Examples from various engineering disciplines. Prerequisites: exposure to probability; background in real variables and analysis.

3 units, Spr (Papanicolaou, G)

CME 309. Randomized Algorithms

(Same as CS 365) Design and analysis of algorithms that use randomness to guide their computations. Basic tools, from probability theory and probabilistic analysis, that are recurrent in algorithmic applications. Randomized complexity theory and game-theoretic techniques. Algebraic techniques. Probability amplification and derandomization. Applications: sorting and searching, data structures, combinatorial optimization and graph algorithms, geometric algorithms and linear programming, approximation and counting problems, similarity search and metric embeddings, online algorithms. Prerequisites: CS 161 and STAT 116, or equivalents.

3 units, Win (Goel, A)

CME 325. Numerical Approximations of Partial Differential Equations in Theory and Practice

Finite volume and finite difference methods for initial boundary value problems in multiple space dimensions. Emphasis is on formulation of boundary conditions for the continuous and the discrete problems. Analysis of numerical methods with respect to stability, accuracy, and error behavior. Techniques of treating non-rectangular domains, and effects of non-regular grids.

1-2 units, not given this year

CME 334. Advanced Methods in Numerical Optimization

(Same as MS&E 312) Topics include interior-point methods, relaxation methods for nonlinear discrete optimization, sequential quadratic programming methods, optimal control and decomposition methods. Topic chosen in first class; different topics for individuals or groups possible. Individual or team projects. May be repeated for credit.

3 units, Aut (Murray, W)

CME 335. Advanced Topics in Numerical Linear Algebra

Possible topics: Eigenvalue problems, including perturbation theory, algorithms, and related problems such as the SVD or generalized eigenvalue problems; iterative methods, including stationary and non-stationary methods; matrix functions, including applications of moments and quadrature; polynomial equations and Parallel implementation of matrix computations. May be repeated for credit.

3 units, given occasionally

CME 336. Linear and Conic Optimization with Applications

(Same as MS&E 314) Linear, semidefinite, conic, and convex nonlinear optimization problems as generalizations of classical linear programming. Algorithms include the interior-point, barrier function, and cutting plane methods. Related convex analysis, including the separating hyperplane theorem, Farkas lemma, dual cones, optimality conditions, and conic inequalities. Complexity and/or computation efficiency analysis. Applications to combinatorial optimization, sensor network localization, support vector machine, and graph realization. Prerequisite: MS&E 211 or equivalent.

3 units, alternate years, not given this year

CME 337. Information Networks

(Same as MS&E 337) Network structure of the Internet and the web. Modeling, scale-free graphs, small-world phenomenon. Algorithmic implications in searching and inter-domain routing; the effect of structure on performance. Game theoretic issues, routing games, and network creation games. Security issues, vulnerability, and robustness. Prerequisite: basic probability and graph theory.

3 units, alternate years, not given this year

CME 338. Large-Scale Numerical Optimization

(Same as MS&E 318) The main algorithms and software for constrained optimization emphasizing the sparse-matrix methods needed for their implementation. Iterative methods for linear equations and least squares. The simplex method. Basic factorization and updates. Interior methods. The reduced-gradient method, augmented Lagrangian methods, and SQP methods. Prerequisites: Basic numerical linear algebra, including LU, QR, and SVD factorizations, and an interest in MATLAB, sparse-matrix methods, and gradient-based algorithms for constrained optimization. Recommended: MS&E 310, 311, 312, 314, or 315; CME 108, 200, 302, 304, 334, or 335.

3 units, Spr (Saunders, M)

CME 340. Large-Scale Data Mining

Focus is on very large scale data mining on the web and on social networks. Topics include network models, ranking algorithms, reputation and collaborative filtering, and supervised and unsupervised learning. Prerequisites: programming at the level of CS 108; statistics at the level of MATH 103 and STATS 116. Recommended: machine learning at the level of CS 229.

1 unit, Win (Kamvar, S)

CME 352. Molecular Algorithms

Recent research in DNA and RNA based nanotechnology, mathematical models of DNA self-assembly, algorithmic techniques and stochastic analyses for efficient and robust DNA self-assembly, experimental advances in molecular motors and machines which use DNA migration/enzymes, and algorithmic issues in the design of molecular motors and machines. Prerequisite: consent of instructor.

3 units, not given this year

CME 356. Engineering Functional Analysis and Finite Elements

(Same as ME 412) Concepts in functional analysis to understand models and methods used in simulation and design. Topology, measure, and integration theory to introduce Sobolev spaces. Convergence analysis of finite elements for the generalized Poisson problem. Extensions to convection-diffusion-reaction equations and elasticity. Upwinding. Mixed methods and LBB conditions. Analysis of nonlinear and evolution problems. Prerequisites: 335A,B, CME 200, CME 204, or consent of instructor. Recommended: 333, MATH 171.

3 units, not given this year

CME 358. Finite Element Method for Fluid Mechanics

Mathematical theory of the finite element method for incompressible flows; related computational algorithms and implementation details. Poisson equation; finite element method for simple elliptic problems; notions of mathematical analysis of non-coercive partial differential equations; the inf-sup or Babushka-Brezzi condition and its applications to the Stokes and Darcy problems; presentation of stable mixed finite element methods and corresponding algebraic solvers; stabilization approaches in the context of advection-diffusion equation; numerical solution of the incompressible Navier-Stokes equations by finite element method. Theoretical, computational, and MATLAB computer programming assignments.

Prerequisites: foundation in multivariate calculus and ME 335A or equivalent.

3 units, not given this year

CME 362. An Introduction to Compressed Sensing

(Same as STATS 330) Compressed sensing is a new data acquisition theory asserting that one can design nonadaptive sampling techniques that condense the information in a compressible signal into a small amount of data. This revelation may change the way engineers think about signal acquisition. Course covers fundamental theoretical ideas, numerical methods in large-scale convex optimization, hardware implementations, connections with statistical estimation in high dimensions, and extensions such as recovery of data matrices from few entries (famous Netflix Prize).

2-3 units, Spr (Staff)

CME 364A. Convex Optimization I

(Same as EE 364A) Convex sets, functions, and optimization problems. The basics of convex analysis and theory of convex programming: optimality conditions, duality theory, theorems of alternative, and applications. Least-squares, linear and quadratic programs, semidefinite programming, and geometric programming. Numerical algorithms for smooth and equality constrained problems; interior-point methods for inequality constrained problems. Applications to signal processing, communications, control, analog and digital circuit design, computational geometry, statistics, machine learning, and mechanical engineering. Prerequisite: linear algebra such as 263.

3 units, Win (Boyd, S)

CME 364B. Convex Optimization II

(Same as EE 364B) Continuation of 364. Subgradient, cutting-plane, and ellipsoid methods. Decentralized convex optimization via primal and dual decomposition. Exploiting problem structure in implementation. Convex relaxations of hard problems. Global optimization via branch and bound. Robust and stochastic optimization. Applications in areas such as control, circuit design, signal processing, and communications. Substantial project. Prerequisite: 364A.

3 units, Spr (Boyd, S)

CME 390. Curricular Practical Training

May be repeated three times for credit.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CME 400. Ph.D. Research

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CME 444. Computational Consulting

Advice by graduate students under supervision of ICME faculty. Weekly briefings with faculty adviser and associated faculty to discuss ongoing consultancy projects and evaluate solutions. May be repeated for credit.

1-3 units, Aut (Gerritsen, M), Win (Gerritsen, M), Spr (Gerritsen, M)

CME 500. Numerical Analysis and Computational and Mathematical Engineering Seminar

Weekly research lectures by experts from academia, national laboratories, industry, and doctoral students. May be repeated for credit.

1 unit, Aut (Staff), Win (Staff), Spr (Staff)

CME 510. Linear Algebra and Optimization Seminar

Recent developments in numerical linear algebra and numerical optimization. Guest speakers from other institutions and local industry. Goal is to bring together scientists from different theoretical and application fields to solve complex scientific computing problems. May be repeated for credit.

1 unit, Aut (Saunders, M), Win (Saunders, M), Spr (Saunders, M)

CME 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CME 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

COMPUTER SCIENCE (CS) COURSES

UNDERGRADUATE COURSES IN COMPUTER SCIENCE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

CS 1C. Introduction to Computing at Stanford

For those with limited experience with computers or who want to learn more about Stanford's computing environment. Topics include: computer maintenance and security, computing resources, Internet privacy, and copyright law. One-hour lecture/demonstration in dormitory clusters prepared and administered weekly by the Resident Computer Consultant (RCC). Final project. Not a programming course.

1 unit, Aut (Smith, S)

CS 2C. Multimedia Production

Sound, image and video editing techniques and applications, including understanding file formats and publishing multimedia online. Topics: GarageBand, Photoshop, iMovie, Final Cut Pro, and iDVD. Weekly lecture followed by lab section. Second unit for additional creative production assignments completed out of class time and extensive Final Project. Not a programming course, but will use computer multimedia applications heavily for editing.

1-2 units, Aut (Staff), Win (Staff)

CS 21N. Can Machines Know? Can Machines Feel?

(Stanford Introductory Seminar) Preference to freshmen. Can mental attitudes attributed to people and sometimes to animals, including knowledge, belief, desire, and intention, also be ascribed to machines? Can light sensors have a belief? Can a pool cleaning robot or tax-preparation software have an intention? If not, why not? If yes, what are the rules of such ascription, and do they vary between human beings and machines? Sources include philosophy, neuroscience, computer science, and artificial intelligence. Topics: logic, probability theory, and elements of computation. Students present a paper. GER:DB-EngrAppSci

3 units, Spr (Shoham, Y)

CS 45N. Computers and Photography: From Capture to Sharing

(Stanford Introductory Seminar) Preference to freshmen with exerience in photography and use of computers. How a photographer creates photos, makes them available for computer viewing, reliably stores them, organizes them, tags them, searches them, and distributes them online. Access to a digital SLR camera and to PhotoShop Elements or equivalent software is required; no programming experience required. Digital SLRs and editing software will be provided to those students who do not wish to use their own.

3-4 units, Aut (Garcia-Molina, H)

CS 73N. The Business of the Internet

(Stanford Introductory Seminar) Preference to freshmen. Issues in Internet history, technology, and public policy are discussed as well as the Internet's impact on commerce, education, government, and health care. Writing for the web. Participants develop a substantial website. GER:DB-EngrAppSci

3 units, Spr (Wiederhold, G; Barr, A; Tessler, S)

CS 74N. Digital Dilemmas

(Stanford Introductory Seminar) Preference to freshmen. Issues where policy decision making requires understanding computer and communications technology. Technology basics taught in non-technology terms. Topics include consumer privacy, government surveillance, file sharing and intellectual property, and electronic voting. GER:DB-EngrAppSci

3 units, Aut (Dill, D)

CS 103. Mathematical Foundations of Computing

Mathematical foundations required for computer science, including propositional predicate logic, induction, sets, functions, and relations. Formal language theory, including regular expressions, grammars, finite automata, Turing machines, and NP-completeness. Mathematical rigor, proof techniques, and applica-

tions. May not be taken by students who have completed 103A,B or 103X. Prerequisite: 106A or equivalent. GER:DB-Math

3-5 units, Aut (Plummer, R), Spr (Plummer, R)

CS 105. Introduction to Computers

For non-technical majors. What computers are and how they work. Practical experience in programming. Construction of computer programs and basic design techniques. A survey of Internet technology and the basics of computer hardware. Students in technical fields and students looking to acquire programming skills should take 106A or 106X. Students with prior computer science experience at the level of 106 or above require consent of instructor. Prerequisite: minimal math skills. GER:DB-EngrAppSci

3-5 units, Aut (Staff), Win (Young, P), Spr (Young, P)

CS 106A. Programming Methodology

(Same as ENGR 70A) Introduction to the engineering of computer applications emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and testing. Uses the Java programming language. Emphasis is on good programming style and the built-in facilities of the Java language. No prior programming experience required. GER:DB-EngrAppSci

3-5 units, Aut (Sahami, M), Win (Roberts, E), Spr (Cain, G), Sum (Staff)

CS 106B. Programming Abstractions

(Same as ENGR 70B) Abstraction and its relation to programming. Software engineering principles of data abstraction and modularity. Object-oriented programming, fundamental data structures (such as stacks, queues, sets) and data-directed design. Recursion and recursive data structures (linked lists, trees, graphs). Introduction to time and space complexity analysis. Uses the programming language C++ covering its basic facilities. Prerequisite: 106A or equivalent. GER:DB-EngrAppSci

3-5 units, Aut (Cain, G), Win (Roberts, E), Spr (Cain, G), Sum (Staff)

CS 106L. Standard C++ Programming Laboratory

Supplemental lab to 106B and 106X. Additional features of standard C++ programming practice. Possible topics include advanced C++ language features, standard libraries, STL containers and algorithms, object memory management, operator overloading, and inheritance. Prerequisite: consent of instructor. Corequisite: 106B or 106X.

1 unit, Aut (Cain, G), Win (Cain, G), Spr (Cain, G; Schwarz, K)

CS 106X. Programming Abstractions (Accelerated)

(Same as ENGR 70X) Intensive version of 106B for students with a strong programming background interested in a rigorous treatment of the topics at an accelerated pace. Additional advanced material and more challenging projects. Prerequisite: excellence in 106A or equivalent, or consent of instructor. GER:DB-EngrAppSci

3-5 units, Aut (Cain, G), Win (Cain, G)

CS 107. Computer Organization and Systems

Introduction to the fundamental concepts of computer systems. Explores how computer systems execute programs and manipulate data, working from the C programming language down to the microprocessor. Topics covered include: the C programming language, data representation, machine-level code, computer arithmetic, elements of code compilation, performance evaluation and optimization, memory organization and management, and concurrency and threading. Prerequisites: 106B or X, or consent of instructor. GER:DB-EngrAppSci

3-5 units, Aut (Zelenski, J), Spr (Zelenski, J)

CS 108. Object-Oriented Systems Design

Software design and construction in the context of large OOP libraries. Taught in Java. Topics: OOP design, design patterns, testing, graphical user interface (GUI) OOP libraries, software engineering strategies, approaches to programming in teams. Prerequisite: 107. GER:DB-EngrAppSci

3-4 units, Aut (Young, P), Win (Young, P)

CS 109. Introduction to Probability for Computer Scientists

Topics include: counting and combinatorics, random variables, conditional probability, independence, distributions, expectation, point estimation, and limit theorems. Applications of probability in computer science including machine learning and the use of probability in the analysis of algorithms. Prerequisites: 103, 106B or X, 109 and MATH 51 or equivalent. GER:DB-EngrAppSci

3-5 units, Win (Sahami, M), Spr (Sahami, M)

CS 109L. Statistical Computing with R Laboratory

Supplemental lab to CS109. Introduces the R programming language for statistical computing. Topics include basic facilities of R including mathematical, graphical, and probability functions, building simulations, introductory data fitting and machine learning. Provides exposure to the functional programming paradigm. Corequisite: CS109.

1 unit, Win (Sahami, M; Rothfels, J), Spr (Sahami, M; Rothfels, J)

CS 110. Principles of Computer Systems

Principles and practice of engineering of computer software and hardware systems. Topics include: techniques for controlling complexity; strong modularity using client-server design, virtual memory, and threads; networks; atomicity and coordination of parallel activities; security, and encryption; and performance optimizations. Prerequisite: 107. GER:DB-EngrAppSci

3-5 units, Aut (Rosenblum, M), Win (Rosenblum, M)

CS 121. Introduction to Artificial Intelligence

(Only one of 121 or 221 counts towards any CS degree program.) Concepts, representations, and techniques used in building practical computational systems (agents) that appear to display artificial intelligence (AI), through the use of adaptive information processing algorithms. Topics: history of AI, reactive systems, heuristic search, planning, constraint satisfaction, knowledge representation and uncertain reasoning, machine learning, classification, applications to language, and vision. Prerequisites: 103 or 103B, and facility with differential calculus, vector algebra, and probability theory. GER:DB-EngrAppSci

3 units, Win (Latombe, J), Sum (Staff)

CS 124. From Languages to Information

(Same as LINGUIST 180, LINGUIST 280) Automated processing of less structured information: human language text and speech, web pages, social networks, genome sequences, with goal of automatically extracting meaning and structure. Methods include: string algorithms, automata and transducers, hidden Markov models, graph algorithms, XML processing. Applications such as information retrieval, text classification, social network models, machine translation, genomic sequence alignment, word meaning extraction, and speech recognition. Prerequisite: CS103, CS107, CS109.

3-4 units, Win (Jurafsky, D)

CS 140. Operating Systems and Systems Programming

Operating systems design and implementation. Basic structure; synchronization and communication mechanisms; implementation of processes, process management, scheduling, and protection; memory organization and management, including virtual memory; I/O device management, secondary storage, and file systems. Prerequisite: CS 110. GER:DB-EngrAppSci

3-4 units, Win (Mazieres, D)

CS 142. Web Applications

Concepts and techniques used in constructing interactive web applications. Browser-side web facilities such as HTML, cascading stylesheets, javascript, and the document object model. Server-side technologies such as sessions, templates, relational databases, and object-relational mapping. Issues in web security and application scalability. New models of web application deployment. Prerequisites: CS 107 and CS 108.

3 units, Aut (Ousterhout, J)

CS 143. Compilers

Principles and practices for design and implementation of compilers and interpreters. Topics: lexical analysis; parsing theory; symbol tables; type systems; scope; semantic analysis; intermediate representations; runtime environments; code generation; and basic program analysis and optimization. Students construct a compiler for a simple object-oriented language during course programming projects. Prerequisites: 103 or 103B, and 107. GER:DB-EngrAppSci

3-4 units, Aut (Aiken, A), Sum (Staff)

CS 144. Introduction to Computer Networking

Principles and practice. Structure and components of computer networks, packet switching, layered architectures. Applications: web/http, voice-over-IP, p2p file sharing and socket programming. Reliable transport: TCP/IP, reliable transfer, flow control, and congestion control. The network layer: names and addresses, rout-

ing. Local area networks: ethernet and switches. Wireless networks and network security. Prerequisite: CS 110. GER:DB-EngrAppSci

3-4 units, Aut (Levis, P; Mazieres, D)

CS 145. Introduction to Databases

Database design and use of database management systems for applications. The relational model, relational algebra, and SQL, the standard language for creating, querying, and modifying relational databases. XML data including DTDs and XML Schema for validation, and the query and transformation languages XPath, XQuery and XSLT. UML database design, and relational design principles based on functional dependencies and normal forms. Indexes, views, transactions, authorization, integrity contraints, and triggers. Advanced topics may include data warehousing, data mining, web data management, and data integration. Prerequisites: 103 or 103B, and 107. GER:DB-EngrAppSci

3-4 units, Aut (Widom, J)

CS 147. Introduction to Human-Computer Interaction Design

Introduces fundamental methods and principles for designing, implementing, and evaluating user interfaces. Topics: user-centered design, rapid prototyping, experimentation, direct manipulation, cognitive principles, visual design, social software, software tools. Learn by doing: work with a team on a quarter-long design project, supported by lectures, readings, and studios. Prerequisite: 106B or X or equivalent programming experience.

3-4 units, Aut (Klemmer, S)

CS 147L. Human-Computer Interaction Technology Laboratory

Hands-on introduction to building mobile web applications with html, css, and php. Corequisite: 147. Concurrent enrollment in CS147 required.

1 unit, Aut (Brandt, J)

CS 148. Introduction to Computer Graphics and Imaging

Topics: Image input and output devices such as cameras and displays, graphics hardware and software, input technologies and interactive techniques, typography and page layout, light and color representations, exposure and tone reproduction, image composition and imaging models, digital signal processing, sampling, aliasing and antialiasing, compression, two- and three-dimensional geometry and formations, modeling techniques including curves and surfaces, reflection models and illumination algorithms, and basic methods of animation. Progamming asssignments using C++ and OpenGL. Prerequisites: CS 107, MATH 51. GER:DB-EngrAppSci

3-4 units, Aut (Hanrahan, P), Sum (Staff)

CS 149. Parallel Computing

Course is an introduction to parallelism and parallel programming. Most new computer architectures are parallel; programming these machines requires knowlege of the basic issues of and techniques for writing parallel software. Topics: varieties of parallelism in current hardware (e.g., fast networks, multicore, accelerators such as GPUs, vector instruction sets), importance of locality, implicit vs. explicit parallelism, shared vs. non-shared memory, synchronization mechanisms (locking, atomicity, transactions, barriers), and parallel programming models (threads, data parallel/streaming, futures, SPMD, message passing, SIMT, transactions, and nested parallelism). Significant parallel programming assignments will be given as homework. Course is open to students who have completed the introductory CS course sequence through 110 and have taken at least one of CS 140, 143, 144, or 145. GER:DB-EngrAppSci

3-4 units, Win (Aiken, A; Olukotun, O)

CS 154. Introduction to Automata and Complexity Theory

Regular sets: finite automata, regular expressions, equivalences among notations, methods of proving a language not to be regular. Context-free languages: grammars, pushdown automata, normal forms for grammars, proving languages non-context-free. Turing machines: equivalent forms, undecidability. Nondeterministic Turing machines: properties, the class NP, complete problems for NP, Cook's theorem, reducibilities among problems. Prerequisites: 103 or 103B. GER:DB-EngrAppSci

3-4 units, Win (Dill, D), Spr (Trevisan, L), Sum (Staff)

CS 154N. Introduction to NP Completeness

Turing machines: equivalent forms, undecidability. Nondeterministic Turing machines: properties, the class NP, complete problems for NP, Cook¿s theorem, reducibilities among problems. Students participate in approximately the last half of 154. Prerequisite: formal languages and automata as in first part of 154.

2 units, Win (Dill, D), Spr (Trevisan, L)

CS 155. Computer and Network Security

For seniors and first-year graduate students. Principles of computer systems security. Attack techniques and how to defend against them. Topics include: network attacks and defenses, operating system holes, application security (web, email, databases), viruses, social engineering attacks, privacy, and digital rights management. Course projects focus on building reliable code. Prerequisite: 140. Recommended: basic Unix. GER:DB-EngrAppSci

3 units, Spr (Boneh, D; Mitchell, J)

CS 156. Calculus of Computation

Decision procedures with applications to analyzing and developing robust software. Logic review. Propositional and first-order logic; induction. Verification: methods for proving correctness of sequential programs using first-order reasoning; need for decision procedures. Decision procedures: algorithms that decide the validity of logical formulas for common theories including SAT, equality, arithmetic, recursive data structures, and arrays. Combination theories and combination of decision procedures. Static analysis: algorithms for deducing program properties. Projects include writing verified programs. Prerequisites: 103, 106, or equivalents. GER:DB-EngrAppSci

3-4 units, not given this year

CS 157. Logic and Automated Reasoning

An elementary exposition from a computational point of view of propositional and predicate logic, axiomatic theories, and theories with equality and induction. Interpretations, models, validity, proof, strategies, and applications. Automated deduction: polarity, skolemization, unification, resolution, equality. Prerequisite: 103 or 103B. GER:DB-EngrAppSci

3 units, Aut (Genesereth, M)

CS 161. Design and Analysis of Algorithms

Worst and average case analysis. Recurrences and asymptotics. Efficient algorithms for sorting, searching, and selection. Data structures: binary search trees, heaps, hash tables. Algorithm design techniques: divide-and-conquer, dynamic programming, greedy algorithms, amortized analysis, randomization. Algorithms for fundamental graph problems: minimum-cost spanning tree, connected components, topological sort, and shortest paths. Possible additional topics: network flow, string searching. Prerequisite: 103 or 103B; 109 or STATS 116. GER:DB-EngrAppSci

3-5 units, Aut (Plotkin, S), Win (Roughgarden, T), Sum (Davydov, E)

CS 164. Computing with Physical Objects: Algorithms for Shape and Motion

Algorithms and data structures dealing with the representation and manipulation of physical objects and entities in the computer. Computational structures for shape and motion, shape fitting and matching, triangulations and other spatial subdivisions, and low-dimensional search and optimization. Examples relevant to computer graphics, computer vision, robotics and geometric computation emphasizing algorithmic paradigms applicable to multidimensional data. Prerequisites: CS 103 or 103B, and CS 109 or STATS 116, and CS 106B/X or consent of instructor. GER:DB-EngrAppSci

3 units, not given this year

CS 170. Stanford Laptop Orchestra: Composition, Coding, and Performance

(Same as MUSIC 128) Classroom instantiation of the Stanford Laptop Orchestra (SLOrk) which includes public performances. An ensemble of more than 20 humans, laptops, controllers, and special speaker arrays designed to provide each computer-mediated instrument with its sonic identity and presence. Topics and activities include issues of composing for laptop orchestras, instrument design, sound synthesis, programming, and live performance. May be repeated four times for credit.

1-5 units, Spr (Wang, G)

CS 178. Digital Photography

Scientific, artistic, and computing aspects of digital photography. Topics: lenses and optics, light and sensors, optical effects in nature, perspective and depth of field, sampling and noise, the camera as a computing platform, image processing and editing, history of photography, computational photography. Counts as a CS elec-

tive in the Graphics track. Prerequisites: introductory calculus; students must have a digital camera with manual control over shutter speed and aperture. Loaner cameras may be available. No programming experience required. GER:DB-EngrAppSci GER:DB-EngrAppSci

3-5 units, Spr (Levoy, M)

CS 181. Computers, Ethics, and Public Policy

(Formerly 201.) Primarily for majors entering computer-related fields. Ethical and social issues related to the development and use of computer technology. Ethical theory, and social, political, and legal considerations. Scenarios in problem areas: privacy, reliability and risks of complex systems, and responsibility of professionals for applications and consequences of their work. Prerequisite: 106B or X. GER:EC-EthicReas

4 units, Spr (Roberts, E)

CS 181W. Computers, Ethics and Public Policy (WIM)

Restricted to Computer Science and Computer Systems Engineering undergraduates. Writing-intensive version of CS181.

4 units, Spr (Roberts, E)

CS 191. Senior Project

Restricted to Computer Science and Computer Systems Engineering students. Group or individual projects under faculty direction. Register using instructor's section number. A project can be either a significant software application or publishable research. Software application projects include substantial programming and modern user-interface technologies and are comparable in scale to shareware programs or commercial applications. Research projects may result in a paper publishable in an academic journal or presentable at a conference. Required public presentation of final application or research results.

1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 191W. Writing Intensive Senior Project

Restricted to Computer Science and Computer Systems Engineering students. Writing-intensive version of CS191. Register using the section number of an Academic Council member.

3-6 units, Aut (Staff), Win (Staff), Spr (Staff)

CS 192. Programming Service Project

Restricted to Computer Science students. Appropriate academic credit (without financial support) is given for volunteer computer programming work of public benefit and educational value.

1-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 193C. Client-Side Internet Technologies

Client-side technologies used to create web sites such as sophisticated Web 2.0 interfaces similar to Google maps. XHTML, CSS, JavaScript, document object model (DOM), AJAX, and Flash. Prerequisite: programming experience at the level of 106A.

3 units, Sum (Staff)

CS 193D. Professional Software Development with C++

Programming techniques and methodologies. Language concepts including object-oriented design, memory management, and the standard library. Modern software development concepts such as design patterns, test-driven development, extreme programming, and XML. Prerequisites: basic C++ or significant experience in C or Java. GER:DB-EngrAppSci

3 units, not given this year

CS 193G. Programming Massively Parallel Processors

Students will be taught how to effectively program massively parallel processors using the CUDA C programming language. Students will develop familiarity with the language itself, be exposed to the architecture of modern GPUs, and understand how to apply basic parallel patterns to decompose programs for parallel execution. The course is targeted at graduate students and upper-division undergraduates who have a good working experience of programming in C. Prior experience in parallel programming is not required. Open to all majors and graduate disciplines.

3 units, not given this year

CS 193P. iPhone and iPad Application Programming

Tools and APIs required to build applications for the iPhone and iPad platform using the iPhone/iPad SDK. User interface designs for mobile devices and unique user interactions using multitouch technologies. Object-oriented design using model-view-controller pattern, memory management, Objective-C programming language. iPhone/iPad APIs and tools including Xcode, Interface Builder and Instruments on Mac OS X. Other topics include: core animation, mobile device power management and performance considerations. Prerequisites: C language and programming experience at the level of 106B or X. Recommended: UNIX, object-oriented programming, graphical toolkits, databases.

3 units, Aut (Hegarty, P)

CS 193S. Scalable Web 2.0 Programming

Course charts development path for a large scale modern web service. Resource efficiency demands a single developer should be able to build, test and deploy a single codebase using only open source tools and libraries. Difficult to accomplish in practice due to variety of skill sets needed for UI, client, server and database coding. Course framework presented offers solution that does not sacrifice long term scalability and maintenability for rapid development cycles and easy prototyping. Programming projects provide overview of technologies and critical contraints. Prerequisites: CS107, CS108.

3 units, not given this year

CS 194. Software Project

Design, specification, coding, and testing of a significant team programming project under faculty supervision. Documentation includes a detailed proposal. Public demonstration of the project at the end of the quarter. Prerequisites: CS 110 and CS 161.

3 units, Spr (Plummer, R)

CS 194W. Software Project (WIM)

Restricted to Computer Science and Computer Systems Engineering undergraduates. Writing-intensive version of CS194.

3 units, Spr (Plummer, R)

CS 196. Computer Consulting

Focus is on Macintosh and Windows operating system maintenance and troubleshooting through hardware and software foundation and concepts. Topics include operating systems, networking, security, troubleshooting methodology with emphasis on Stanford's computing environment. Not a programming course. Prerequisite: 1C or equivalent.

2 units, Win (Smith, S), Spr (Smith, S)

CS 198. Teaching Computer Science

Students lead a discussion section of 106A while learning how to teach a programming language at the introductory level. Focus is on teaching skills, techniques, and course specifics. Application and interview required; see http://cs198.stanford.edu.

3-4 units, Aut (Sahami, M; Ruth, E), Win (Sahami, M; Wang, L; Ruth, E), Spr (Sahami, M; Ruth, E)

CS 199. Independent Work

Special study under faculty direction, usually leading to a written report. Letter grade; if not appropriate, enroll in 199P.

1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 199P. Independent Work

(Staff)

1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 202. Law for Computer Science Professionals

Intellectual property law as it relates to computer science including copyright registration, patents, and trade secrets; contract issues such as non-disclosure/non-compete agreements, license agreements, and works-made-for-hire; dispute resolution; and principles of business formation and ownership. Emphasis is on topics of current interest such as open source and the free software movement, peer-to-peer sharing, encryption, data mining, and spam.

1 unit, Aut (Hansen, D)

CS 204. Computational Law

Legal informatics based on representation of regulations in computable form. Encoding regulations facilitate creation of legal information systems with significant practical value. Convergence of technological trends, growth of the Internet, advent of semantic web technology, and progress in computational logic make computational law prospects better. Topics: current state of computational law, prospects and problems, philosophical and legal implications. Prerequisite: basic concepts of programming.

3 units, not given this year

CS 210A. Software Project Experience with Corporate Partners

Two quarter project course. Focus is on real world software development. Corporate partners provide loosely defined challenges from their R&D labs for which they are seeking innovative solutions and ideas. Student teams function as small startup companies with a technical advisory board comprised of the instructional

staff. Exposure to: current practices in software engineering; exploration of the design space; significant development experience with creative freedoms; working in groups; real world software engineering challenges; public presentation of technical work; creating written descriptions of technical work. Prerequisite: CS 108 or CS110.

3-4 units, Win (Borenstein, J)

CS 210B. Software Project Experience with Corporate Partners

Continuation of CS210A. Focus is on real world software development. Corporate partners provide loosely defined challenges from their R&D labs for which they are seeking innovative solutions and ideas. Student teams function as a small startup companies with a technical advisory board comprised of the instructional staff. Exposure to: current practices in software engineering; exploration of the design space; significant development experience with creative freedoms; working in groups; real world software engineering challenges; public presentation of technical work; creating written descriptions of technical work. Prerequisite: CS 210A.

3-4 units, Spr (Borenstein, J)

CS 448X. Math and Computer Science behind Special Effects

Course will focus on a number of case studies of special effects work in feature films, with the aim of elucidating the underlying technical challenges from the standpoint of mathematics and computer science. As a project based class, individuals may more deeply focus on the individual aspects of most interest to them be it rendering, computational geometry, computer vision, physical simulation, or character animation. Guests from industry will speak about effects work they and their colleagues have been involved in as well as discuss some current challenges in the industry. Students will be asked to submit some current challenges either alone or in an appropriate group. Since course may be taken multiple times for credit, and will be open to both undergraduate and graduate students with varied backgrounds and interests, grading will be based on individual effort relative to preparation. As such currently there are no prerequisites enforced.

3 units, Spr (Fedkiw, R)

GRADUATE COURSES IN COMPUTER SCIENCE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

CS 205A. Mathematical Methods for Robotics, Vision, and Graphics

Continuous mathematics background necessary for research in robotics, vision, and graphics. Possible topics: linear algebra; the conjugate gradient method; ordinary and partial differential equations; vector and tensor calculus. Prerequisites: 106B or X; MATH 51 and 113; or equivalents.

3 units, Aut (Fedkiw, R)

CS 207. The Economics of Software

How software products are moved into the marketplace and how the resulting intellectual property is exploited. Concepts that are outside of the common knowledge of computer scientists such as business terms and spreadsheet computations to quantitatively compare alternatives. Goal is to contribute to informed decision making in high-tech product design, acquisition, production, marketing, selection of business structures, outsourcing, and impact of taxation policies. No specific background required.

1 unit, Aut (Wiederhold, G)

CS 208. Canon of Computer Science

Analysis and discussion of seminal works in computer science. Emphasis on works that changed the course of computing and continue to this day to provoke and stimulate. Course will study foundational ideas that are at the core of personal computing, artificial intelligence, computer systems, computer networks, and more. Through immersion in original literature, we can more deeply comprehend the present state of computing, its origins, its underlying assumptions, and its major open questions. In connecting students with the ideas that shaped computer science, course aims to instill lasting inspiration and a deep understanding of major trends in the field.

3-4 units, Spr (Koltun, V)

CS 209. Introduction to Functional Programming

Functional programming offers insights and advanced programming techniques not found in other programming languages. Topics: lambda calculus (an alternative to Turing machines), higher-order functions, lazy evaluation, type-oriented programming, syntactic extension, and advanced control abstractions known as monads and continuations. Functional programming languages to be studied include Scheme, an eagerly evaluated, dynamically typed language, and Haskell, a lazily evaluated, statically typed language with type inferencing. Prerequisites: CS 107 and CS 161.

3 units, not given this year

CS 221. Artificial Intelligence: Principles and Techniques

(Only one of 121 or 221 counts towards any CS degree program.) Topics: search, constraint satisfaction, knowledge representation, probabilistic models, Bayesian networks, machine learning, neural networks, vision, robotics, and natural language processing. Prerequisites: 103 or 103B/X; 106B or 106X; and exposure to probability. Recommended: 107 and facility with basic differential calculus.

3-4 units, Win (Thrun, S)

CS 222. Rational Agency and Intelligent Interaction

(Same as PHIL 358) For advanced undergraduates, and M.S. and beginning Ph.D. students. Logic-based methods for knowledge representation, information change, and games in artificial intelligence and philosophy. Topics: knowledge, certainty, and belief; time and action; belief dynamics; preference and social choice; games; and desire and intention. Prerequisite: propositional and first-order logic.

3 units, Spr (Shoham, Y)

CS 223A. Introduction to Robotics

Robotics foundations in modeling, design, planning, and control. Class covers relevant results from geometry, kinematics, statics, dynamics, motion planning, and control, providing the basic methodologies and tools in robotics research and applications. Concepts and models are illustrated through physical robot platforms, interactive robot simulations, and video segments relevant to historical research developments or to emerging application areas in the field. Recommended: matrix algebra.

3 units, Win (Khatib, O)

CS 223B. Introduction to Computer Vision

Fundamental issues and techniques of computer vision. Image formation, edge detection and image segmentation, stereo, motion, shape representation, recognition.

3 units, Win (Li, F)

CS 224M. Multi-Agent Systems

For advanced undergraduates, and M.S. and beginning Ph.D. students. Topics: logics of knowledge and belief, other logics of mental state, theories of belief change, multi-agent probabilities, essentials of game theory, social choice and mechanism design, multi-agent learning, communication. Applications discussed as appropriate; emphasis is on conceptual matters and theoretical foundations. Prerequisites: basic probability theory and first-order logic.

3 units, Win (Shoham, Y)

CS 224N. Natural Language Processing

(Same as LINGUIST 284) Methods for processing human language information and the underlying computational properties of natural languages. Syntactic and semantic processing from linguistic and algorithmic perspectives. Focus is on modern quantitative techniques in NLP: using large corpora, statistical models for acquisition, translation, and interpretation; and representative systems. Prerequisites: CS124 or CS121/221.

3-4 units, Win (MacCartney, W)

CS 224S. Speech Recognition and Synthesis

(Same as LINGUIST 285) Automatic speech recognition, speech synthesis, and dialogue systems. Focus is on key algorithms including noisy channel model, hidden Markov models (HMMs), Viterbi decoding, N-gram language modeling, unit selection synthesis, and roles of linguistic knowledge. Prerequisite: programming experience. Recommended: CS 221 or 229.

2-4 units, not given this year

CS 224U. Natural Language Understanding

(Same as LINGUIST 188, LINGUIST 288) Machine understanding of human language. Computational semantics (determination of word sense and synonymy, event structure and thematic roles, time, aspect, causation, compositional semantics, scopal opera-

tors), and computational pragmatics and discourse (coherence, coreference resolution, information packaging, dialogue structure). Theoretical issues, online resources, and relevance to applications including question answering and summarization. Prerequisites: one of LINGUIST 180 / CS 124 / CS 224N,S: and logic such as LINGUIST 130A or B, CS 157, or PHIL150).

3-4 units, not given this year

CS 224W. Social and Information Network Analylsis

Previously numbered CS322. How do rumors and information spread? Who are the influencers? Can one predict friendships on Facebook? Networks are the core of the web, blogs, Twitter, and Facebook. They can be characterized by the interplay between information content, individuals and organizations that create it, and the technology that supports it. Focus is on how to analyze the structure and dynamics of large networks, how to model links, and how to design algorithms that work with such large networks. Topics: statistical properties of large networks, models of social network structure and evolution, link prediction, network community detection, diffusion of innovation, information propagation, six-degrees of separation, finding influential nodes in networks, disease outbreak detection, networks with positive and negative ties, and connections with work in the social sciences and economics.

3 units, Aut (Leskovec, J)

CS 225A. Experimental Robotics

Hands-on laboratory course experience in robotic manipulation. Topics include robot kinematics, dynamics, control, compliance, sensor-based collision avoidance, and human-robot interfaces. Second half of class is devoted to final projects using various robotic platforms to build and demonstrate new robot task capabilities. Previous projects include the development of autonomous robot behaviors of drawing, painting, playing air hocket, yoyo, basketball, ping-pong or xylophone. Prerequisites: 223A or equivalent.

3 units, Spr (Khatib, O)

CS 225B. Robot Programming Laboratory

For robotics and non-robotics students. Students program mobile robots to exhibit increasingly complex behavior (simple dead reckoning and reactivity, goal-directed motion, localization, complex tasks). Topics: motor control and sensor characteristics; sensor fusion, model construction, and robust estimation; control regimes (subsumption, potential fields); probabalistic methods, including Markov localization and particle filters. Student programmed robot contest. Programming is in C++ on Unix machines, done in teams. Prerequisite: programming at the level of 106B, 106X, 205, or equivalent.

3-4 units, Aut (Konolige, K)

CS 227. Knowledge Representation and Reasoning

Representing knowledge symbolically in a form suitable for automated reasoning, and associated reasoning methods. Combines formal algorithmic analysis with a description of recent applications. Topics: object-oriented knowledge representation, description logics, inheritance networks, logic programming, propositional satisfiability, contraint satisfaction, planning and scheduling, abductive explanation, tractable reasoning. Prerequisites: familiarity with basic notions in data structures and with techniques in algorithm design and analysis. Computational logic (CS157 or equivalent). Recommended: previous or concurrent course in AI. Knowledge of Lisp or Prolog programming.

3 units, Spr (Staff)

CS 227B. General Game Playing

A general game playing system accepts a formal description of a game to play it without human intervention or algorithms designed for specific games. Hands-on introduction to these systems and artificial intelligence techniques such as knowledge representation, reasoning, learning, and rational behavior. Students create GGP systems to compete with each other and in external competitions. Prerequisite: programming experience. Recommended: 103 or equivalent.

3 units, Spr (Genesereth, M)

CS 228. Structured Probabilistic Models: Principles and Techniques

Probabilistic graphical modeling languages for representing complex domains, algorithms for reasoning using these representations, and learning these representations from data. Topics include: Bayesian and Markov networks, extensions to temporal modeling such as hidden Markov models and dynamic Bayesian networks, exact and approximate probabilistic inference algorithms, and methods for learning models from data. Also included are sample applications to various domains including speech recognition, biological modeling and discovery, medical diagnosis, message encoding, vision, and robot motion planning. Prerequisites: basic probability theory and algorithm design and analysis.

3-4 units, Win (Koller, D)

CS 228T. Structured Probabalistic Models: Theoretical Foundations

For students interested in advanced methods in machine learning and probabilistic AI. Describes the theoretical foundations for methods of inference and learning in probabilistic graphical models, allowing for the derivation of properties of these methods and for the development of more advanced methods. Sample topics include advanced methods in Markov chain Monte Carlo, approximate message-passing algorithms for inference derived from an optimization perspective, representation and inference in models involving continuous variables, learning undirected models, learning with hidden variables, and non-parametric Bayesian methods. Prerequisites: CS228; strong mathematical foundation.

3 units, Spr (Koller, D)

CS 229. Machine Learning

Topics: statistical pattern recognition, linear and non-linear regression, non-parametric methods, exponential family, GLMs, support vector machines, kernel methods, model/feature selection, learning theory, VC dimension, clustering, density estimation, EM, dimensionality reduction, ICA, PCA, reinforcement learning and adaptive control, Markov decision processes, approximate dynamic programming, and policy search. Prerequisites: linear algebra, and basic probability and statistics.

3-4 units, Aut (Ng, A)

CS 240. Advanced Topics in Operating Systems

Recent research. Classic and new papers. Topics: virtual memory management, synchronization and communication, file systems, protection and security, operating system extension techniques, fault tolerance, and the history and experience of systems programming. Prerequisite: 140 or equivalent.

3 units, Win (Engler, D), Spr (Mazieres, D)

CS 240X. Advanced Operating Systems II

Same content as 240, with expanded topics focusing on more difficult and specialized papers. Recent topics in systems research.

3 units, not given this year

CS 241. Secure Web Programming

Building secure Web applications is key to the continued success of the Web. Course will cover the key components and available tools for securing web applications. Discussions on browser security policy and how to properly use it, server-side abstractions for building secure applications, and commong errors found in existing applications. Course will include student presentations on course projects.

3 units, alternate years, not given this year

CS 242. Programming Languages

Central concepts in modern programming languages, impact on software development, language design trade-offs, and implementation considerations. Functional, imperative, and object-oriented paradigms. Formal semantic methods and program analysis. Modern type systems, higher order functions and closures, exceptions and continuations. Modularity, object-oriented languages, and concurrency. Runtime support for language features, interoperability, and security issues. Prerequisite: 107, or experience with Lisp, C, and an object-oriented language.

3 units, Aut (Mitchell, J; Fisher, K)

CS 243. Program Analysis and Optimizations

Program analysis techniques used in compilers and software development tools to improve productivity, reliability, and security. The methodology of applying mathematical abstractions such as graphs, fixpoint computations, binary decision diagrams in writing complex software, using compilers as an example. Topics include data flow analysis, instruction scheduling, register allocation, parallelism, data locality, interprocedural analysis, and garbage collection. Prerequisites: 103 or 103B, and 107.

3-4 units, Win (Lam, M)

CS 244. Advanced Topics in Networking
Classic papers, new ideas, and research papers in networking. Architectural principles: naming, addressing, routing; congestion control, traffic management, QoS; wireless and mobility; overlay networks and virtualization; network security; switching and routing; content distribution; and proposals for future Internet structures. Prerequisite: 144 or equivalent.
3-4 units, Win (McKeown, N)

CS 244B. Distributed Systems
Distributed operating systems and applications issues, emphasizing high-level protocols and distributed state sharing as the key technologies. Topics: distributed shared memory, object-oriented distributed system design, distributed directory services, atomic transactions and time synchronization, application-sufficient consistency, file access, process scheduling, process migration, and storage/communication abstractions on distribution, scale, robustness in the face of failure, and security. Prerequisites: CS 144 and CS 249A.
3 units, Spr (Cheriton, D)

CS 244C. Readings and Projects in Distributed Systems
Companion project option for 244B. Corequisite: 244B.
3-6 units, Spr (Cao, P)

CS 244E. Wireless Networking
(Same as EE 384E) Design and implementation of wireless networks and mobile systems. Retrospective of wireless communication and fundamental physical layer properties of various wireless communication technologies. Design of media access control and routing layers for various wireless systems. Adaptations necessary at transport and higher layers to cope with node mobility and error-prone nature of the wireless medium. Overview of other related issues including emerging wireless/mobile applications. Prerequisites: EE 284
3 units, Win (Katti, S; Levis, P)

CS 245. Database Systems Principles
File organization and access, buffer management, performance analysis, and storage management. Database system architecture, query optimization, transaction management, recovery, concurrency control. Reliability, protection, and integrity. Design and management issues. Prerequisites: 145, 161.
3 units, Win (Garcia-Molina, H)

CS 246. Mining Massive Data Sets
Distributed file systems: Hadoop, map-reduce; PageRank, topic-sensitive PageRank, spam detection, hubs-and-authorities; similarity search; shingling, minhashing, random hyperplanes, locality-sensitive hashing; analysis of social-network graphs; association rules; dimensionality reduction: UV, SVD, and CUR decompositions; algorithms for very-large-scale mining: clustering, nearest-neighbor search, gradient descent, support-vector machines, classification, and regression; submodular function optimization. Prerequisites: At lease one of CS107 or CS145; at least one of CS109 or STAT116, or equivalent.
3 units, Win (Leskovec, J)

CS 247. Human-Computer Interaction Design Studio
Project-based. Methods used in interaction design including needs analysis, user observation, idea sketching, concept generation, scenario building, storyboards, user character stereotypes, usability analysis, and market strategies. Prerequisites: 147 and 106A or equivalent background in programming.
3-4 units, Win (Heer, J)

CS 247L. Human Computer Interaction Technology Laboratory
Hands-on introduction to contemporary HCI technologies. Interaction design with Adobe Flash, mobile development, physical computing, and web applications. Corequisite: 247.
1 unit, Win (Heer, J)

CS 248. Interactive Computer Graphics
Rendering and animation for interactive computer graphics. Topics in rendering include: the graphics pipeline, rasterization, lighting and surface shading, texture mapping and its applications, graphics hardware, and rendering optimization. Topics in animation include: keyframing and interpolation, physics-based simulation, and character animation. Prerequisite: CS148.
3-4 units, Win (Koltun, V)

CS 249A. Object-Oriented Programming from a Modeling and Simulation Perspective
Topics: large-scale software development approaches for complex applications, class libraries and frameworks; encapsulation, use of inheritance and dynamic dispatch, design of interfaces and interface/implementation separation, exception handling, smart pointers and reference management, minimalizing dependencies and value-oriented programming. Inheritance: when and why multiple inheritance naming, directories, manager, and disciplined use of design patterns including functors, event notification and iterators. Prerequisites: C, C++, and programming methodology as developed in 106B or X, and 107 (107 may be taken concurrently). Recommended: 193D.
3 units, Aut (Cheriton, D)

CS 249B. Advanced Object-Oriented Programming
Software engineering of high quality large-scale complex software with a focus on evolvability, performance and cost. Software development processes, people and practice; audit: integrating invariant checks with production software; concurrency with modular object-oriented programming; collection implementation; generic programming and templates; design of value types; named descriptions for large value types; memory management; controlling placement, locality and consumption; run-time vs. static type checking and identification.
3 units, Win (Cheriton, D)

CS 254. Computational Complexity
An introduction to computational complexity theory. The P versus NP problem; diagonalization and relativization; space complexity, Savitch's algorithm, NL=coNL, Reingold's algorithm; counting problem and #P-completeness; circuit complexity; pseudorandomness, derandomixation, and the Natural Proofs barrier; complexity of approximation; quantum computing. Prerequisites: 154 or equivalent; mathematical maturity.
3 units, Spr (Trevisan, L)

CS 255. Introduction to Cryptography
For advanced undergraduates and graduate students. Theory and practice of cryptographic techniques used in computer security. Topics: encryption (single and double key), digital signatures, pseudo-random bit generation, authentication, electronic commerce (anonymous cash, micropayments), key management, PKI, zero-knowledge protocols. Prerequisite: basic probability theory.
3 units, Win (Boneh, D)

CS 256. Formal Methods for Reactive Systems
Formal methods for specification, verification, and development of concurrent and reactive programs. Reactive systems: syntax and semantics, fairness requirements. Specification language: temporal formulas (state, future, and past) and omega-automata. Hierarchy of program properties: safety, guarantee, obligation, response, persistence, and reactivity. Invariant generation. Deductive verification of programs: verification diagrams and rules, completeness. Modularity. Parameterized programs. Algorithmic verification of finite-state programs (model checking). Prerequisite: 154, 156, 157, or equivalent.
3 units, not given this year

CS 256L. Formal Methods for Reactive Systems Laboratory
Practical application of the specification and verification methods in 256. Individual projects include implementation of verification methods, verification case studies, or tool evaluation, depending on student preference.
2 units, not given this year

CS 258. Introduction to Programming Language Theory
Syntactic, operational, and semantic issues in the mathematical analysis of programming languages. Type systems and non-context-free syntax. Universal algebra and algebraic data types. Operational semantics given by rewrite rules; confluence and termination. Denotational semantics and elementary domain theory for languages with higher-type functions and recursion. Treatment of side effects. Prerequisites: 154, 157 or PHIL 160A.
3 units, not given this year

CS 259. Security Analysis of Network Protocols
General methods for security modeling and analysis, illustrated using network protocol security. Common security protocols and their properties including secrecy, authentication, key establishment, and fairness. Fully automated, finite-state, model-checking techniques. Constraint solving, process algebras, protocol logics,

probabilistic model checking, and game theory. Students select a protocol, web component, hardware architecture, or other system to analyze, specify it in a chosen model, use an analysis tool or method to find vulnerabilities and verify properties, and present findings.

3 units, Win (Mitchell, J)

CS 261. Optimization and Algorithmic Paradigms

Algorithms for network optimization: max-flow, min-cost flow, matching, assignment, and min-cut problems. Introduction to linear programming. Use of LP duality for design and analysis of algorithms. Approximation algorithms for NP-complete problems such as Steiner Trees, Traveling Salesman, and scheduling problems. Randomized algorithms. Introduction to online algorithms. Prerequisite: 161 or equivalent.

3 units, Win (Plotkin, S)

CS 262. Computational Genomics

(Same as BIOMEDIN 262) Applications of computer science to genomics, and concepts in genomics from a computer science point of view. Topics: dynamic programming, sequence alignments, hidden Markov models, Gibbs sampling, and probabilistic context-free grammars. Applications of these tools to sequence analysis: comparative genomics, DNA sequencing and assembly, genomic annotation of repeats, genes, and regulatory sequences, microarrays and gene expression, phylogeny and molecular evolution, and RNA structure. Prerequisites: 161 or familiarity with basic algorithmic concepts. Recommended: basic knowledge of genetics.

3 units, Win (Batzoglou, S)

CS 268. Geometric Algorithms

Techniques for design and analysis of efficient geometric algorithms for objects in 2-, 3-, and higher dimensions. Topics: convexity, triangulations and simplicial complexes, sweeping, partitioning, and point location. Voronoi/Delaunay diagrams and their properties. Arrangements of curves and surfaces. Intersection and visibility problems. Geometric searching and optimization. Random sampling methods. Impact of numerical issues in geometric computation. Example applications to robotic motion planning, visibility preprocessing and rendering in graphics, model-based recognition in computer vision, and structural molecular biology. Prerequisite: discrete algorithms at the level of 161. Recommended: 164.

3 units, Spr (Guibas, L)

CS 270. Modeling Biomedical Systems: Ontology, Terminology, Problem Solving

(Same as BIOMEDIN 210) Methods for modeling biomedical systems and for making those models explicit in the context of building software systems. Emphasis is on intelligent systems for decision support and Semantic Web applications. Topics: knowledge representation, controlled terminologies, ontologies, reusable problem solvers, and knowledge acquisition. Recommended: exposure to object-oriented systems, basic biology.

3 units, Win (Musen, M; Ghazvinian, A; Tirrell, R; Beck, A)

CS 271. Effective Design in Clinical Informatics

(Same as BIOMEDIN 211) Methods of designing and engineering software systems in complex clinical environments. Case studies illustrate factors leading to success or failure of systems. Project assignments involve focused team-based design work. Topics: user and organizational requirements, data and knowledge modeling, component-based system design, system prototyping, and human-systems interaction. Prerequisite: BIOMEDIN 210 recommended, or database or object-oriented programming course.

3 units, not given this year

CS 272. Introduction to Biomedical Informatics Research Methodology

(Same as BIOE 212, BIOMEDIN 212, GENE 212) Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Prerequisites: BIOMEDIN 210, 211, 214, 217 or consent of instructor.

3 units, Spr (Altman, R)

CS 273A. A Computational Tour of the Human Genome

(Same as BIOMEDIN 273A, DBIO 273A) Introduction to computational biology through an informatic exploration of the human genome. Topics include: genome sequencing (technologies, assembly, personalized sequencing); functional landscape (genes, gene regulation, repeats, RNA genes, epigenetics); genome evolution (comparative genomics, ultraconservation, co-option). Additional topics may include population genetics, personalized genomics, and ancient DNA. Course includes primers on molecular biology, the UCSC Genome Browser, and text processing languages. Guest lectures from genomic researchers. No prerequisites. See http://cs273a.stanford.edu/.

3 units, Aut (Batzoglou, S; Bejerano, G)

CS 274. Representations and Algorithms for Computational Molecular Biology

(Same as BIOE 214, BIOMEDIN 214, GENE 214) Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, Gibbs Sampling, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisites: programming skills; consent of instructor for 3 units.

3-4 units, Aut (Altman, R)

CS 275. Translational Bioinformatics

(Same as BIOMEDIN 217) Analytic, storage, and interpretive methods to optimize the transformation of genetic, genomic, and biological data into diagnostics and therapeutics for medicine. Topics: access and utility of publicly available data sources; types of genome-scale measurements in molecular biology and genomic medicine; analysis of microarray data; analysis of polymorphisms, proteomics, and protein interactions; linking genome-scale data to clinical data and phenotypes; and new questions in biomedicine using bioinformatics. Case studies. Prerequisites: programming ability at the level of CS 106A and familiarity with statistics and biology.

4 units, Spr (Butte, A)

CS 276. Information Retrieval and Web Search

(Same as LINGUIST 286) Text information retrieval systems; efficient text indexing; Boolean, vector space, and probabilistic retrieval models; ranking and rank aggregation; evaluating IR systems. Text clustering and classification: classification algorithms, latent semantic indexing, taxonomy induction; Web search engines including crawling and indexing, link-based algorithms, and web metadata. Prerequisites: CS 107, CS 109, CS 161.

3 units, Spr (Nayak, P; Raghavan, P)

CS 277. Experimental Haptics

Haptics as it relates to creating touch feedback in simulated or virtualized environments. Goal is to develop virtual reality haptic simulators and applications. Theoretical topics: psychophysical issues, performance and design of haptic interfaces, haptic rendering methods for 3-D virtual environments, and haptic simulation and rendering of rigid and deformable solids. Applied topics: the CHAI haptic library; implementation of haptic rendering algorithms; collision detection in 3-D environments; design of real-time models for deformable objects. Guest speakers. Lab/programming exercises; a more open-ended final project. Enrollment limited to 20. Prerequisite: experience with C++. Recommended: 148 or 248, 223A.

3 units, Win (Barbagli, F; Salisbury, K)

CS 278. Systems Biology

(Same as BIOE 310, CSB 278) Experimental and computational approaches to the dissection of complex biologcal systems. Topics include network structure, non-linear dynamics, numerical modeling approaches, noise, and robustness. Topics are introduced in the context of recent papers from the primary literature.

4 units, Win (Ferrell, J)

CS 279. Computational Methods for Analysis and Reconstruction of Biological Networks

Types of interactions, including: regulatory such as transcriptional, signaling, and chromatin modification; protein-protein interac-

tions; and genetic. Biological network structure at scales such as single interaction, small subgraphs, and global organization. Methods for analyzing properties of biological networks. Techniques for reconstructing networks from biological data, including: DNA/protein sequence motifs and sequence conservation; gene expression data; and physical binding data such as protein-DNA, protein-RNA, and protein-protein. Network dynamics and evolution. Prerequisites: biology at the level of BIOSCI 41; computer science and data structures at the level of CS 103 and 106; and probability and statistics at the level of STATS 116 or CS 109.

3 units, not given this year

CS 294. Research Project in Computer Science
Student teams work under faculty supervision on research and implementation of a large project in some major sub-discipline in computer science. Lectures on state-of-the-art methods related to the particular problem domain. Prerequisites: consent of instructor.

3 units, not given this year

CS 294A. Research Project in Artificial Intelligence
Student teams under faculty supervision work on research and implementation of a large project in AI. State-of-the-art methods related to the problem domain. Prerequisites: AI course from 220 series, and consent of instructor.

3 units, Aut (Koller, D), Win (Ng, A)

CS 294H. Research Project in Human-Computer Interaction
Many of the most successful web applications are social, from personalized homepages to social networks. Focus is on fundamental interface design, systems, and algorithms concepts in designing social software. Case-based syllabus covers insights from research and industry. Students contribute to this growing field through a quarter-long, team-based project. Students are required to enter the class with an initial project idea.

3 units, not given this year

CS 294S. Research Project in Software Systems and Security
Topics vary. Focus is on emerging research themes such as programmable open mobile Internet that spans multiple system topics such as human-computer interaction, programming systems, operating systems, networking, and security. May be repeated for credit. Prerequisites: CS 103 and 107.

3 units, Spr (Lam, M)

CS 294W. Writing Intensive Research Project in Computer Science
Restricted to Computer Science and Computer Systems Engineering undergraduates. Students enroll in the CS 294W section attached to the CS 294 project they have chosen.

3 units, Aut (Koller, D), Win (Ng, A), Spr (Lam, M)

CS 295. Software Engineering
Software specification, testing, and verification. Emphasis is on current best practices and technology for developing reliable software at reasonable cost. Assignments focus on applying these techniques to realistic software systems. Prerequisites: 108. Recommended a project course such as 140, 143, or 145.

2-3 units, Spr (Aiken, A; Dill, D)

CS 298. Seminar on Teaching Introductory Computer Science
Faculty, undergraduates, and graduate students interested in teaching discuss topics raised by teaching computer science at the introductory level. Prerequisite: consent of instructor.

1-3 units, not given this year

CS 300. Departmental Lecture Series
Priority given to first-year Computer Science Ph.D. students. CS Masters students admitted if space is available. Presentations by members of the department faculty, each describing informally his or her current research interests and views of computer science as a whole.

1 unit, Aut (Mitchell, J)

CS 302. Tech Law with Progressive Minds
How the advent of computing technologies is reflected in the confluence of law, public policy, and technology. Issues relating to civil liberties, consumer protection, e-voting, copyright law, patent law, international patent law, trade secrets, political processes, and litigation.

1 unit, not given this year

CS 303. Designing Computer Science Experiments
Introduction to empirical research in computer science. Learn how to design, execute, interpret, and report on computer science experiments. Conducting empirical work and using experiments to build theory is one of the major ways to move computer science forward, but these issues are often omitted from computer science curricula. Course features case studies drawn from artificial intelligence, systems, and human-computer interaction. Emphasizes the decision-making aspects of research and the logic behind research procedures.

3 units, Spr (Klemmer, S; Levis, P)

CS 309. Industrial Lectureships in Computer Science
Guest computer scientist. By arrangement. May be repeated for credit. (Staff)

1 unit, not given this year

CS 309A. Cloud Computing
For technology and business students. The shift from traditional software model of disconnected development and CD-ROM deployment to engineering and delivery on the Internet as a service. Guest industry experts are typically CEOs of public companies who are delivering applications, platform or compute and storage cloud based services.

1 unit, Aut (Chou, T)

CS 315A. Parallel Computer Architecture and Programming
The principles and tradeoffs in the design of parallel architectures. Emphasis is on naming, latency, bandwidth, and synchronization in parallel machines. Case studies on shared memory, message passing, data flow, and data parallel machines illustrate techniques. Architectural studies and lectures on techniques for programming parallel computers. Programming assignments on one or more commercial multiprocessors. Prerequisites: EE 282, and reasonable programming experience.

3 units, Spr (Olukotun, O)

CS 315B. Parallel Computing Research Project
Advanced topics and new paradigms in parallel computing including parallel algorithms, programming languages, runtime environments, library debugging/tuning tools, and scalable architectures. Research project. Prerequisite: consent of instructor.

3 units, not given this year

CS 319. Topics in Digital Systems
Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

3 units, given occasionally

CS 321. Information Processing for Sensor Networks
Design and implementation of algorithms and protocols for performing information processing tasks in sensor networks, including routing, data dissemination and aggregation, information discovery and brokerage, service establishment (localization, time synchronization), sensor tasking and control, and distributed data storage. Techniques from signal processing, networking, energyware computing, distributed databases and algorithms, and embedded systems and platforms. Physical, networking, and application layers and design trade-offs across the layers. Prerequisites: linear algebra and elementary probability, networking background at the level of 144A or EE 284.

3-4 units, not given this year

CS 323. Understanding Images and Videos
Field of computer vision has seen an explosive growth in past decade. Much of recent effort in vision research is towards developing algorithms that can perform high-level visual recogniztion tasks on real-world images and videos. With development of Internet, this task becomes particularly challenging and interesting given the heterogeneous data on the web. Focus is on reading recent research papers that are focused on solving high-level visual recognition problems, such as object recognition and categorization, scene understanding, human motion understanding. Project required. Prerequisite: some experience in research with one of the following fields: computer vision, image processing, computer graphics, machine learning.

3 units, Spr (Li, F)

CS 326A. Motion Planning
Computing object motions in computer graphics, geometrical computing, robotics, or artificial intelligence for applications such as design, manufacturing, robotics, animated graphics, surgical planning, drug design, assembly planning, graphic animation of human figures, humanoid robots, inspection and surveillance, simulation of crowds, and biology. Path planning methods to gen-

erate collision-free paths among static obstacles. Extensions include uncertainty, mobile obstacles, manipulating moveable objects, maneuvering with kinematic constraints, and making and breaking contacts. Configuration space, geometric arrangements, and random sampling. Theoretical methods.

3 units, not given this year

CS 327A. Advanced Robotic Manipulation

Advanced control methodologies and novel design techniques for complex human-like robotic and bio mechanical systems. Class covers the fundamentals in operational space dynamics and control, elastic planning, human motion synthesis. Topics include redundancy, inertial properties, haptics, simulation, robot cooperation, mobile manipulation, human-friendly robot design, humanoids and whole-body control. Additional topcs in emerging areas are presented by groups of students at the end-of-quarter mini-symposium. Prerequisites: 223A or equivalent.

3 units, Spr (Khatib, O)

CS 329. Topics in Artificial Intelligence

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

3 units, given occasionally

CS 339. Topics in Numerical Analysis

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

3 units, given occasionally

CS 340. Topics in Computer Systems

Topics vary every quarter, and may include advanced material being taught for the first time. May be repeated for credit.

3-4 units, not given this year

CS 340V. Networked Systems for Virtual Worlds

Open to graduate students and advanced undergraduates. Systems and networking aspects of building large, distributed virtual 3D environments, with a focus on scalability, consistency, security, fairness, and federation. Topics include existing architectures, naming, routing, caching, migration, interoperability, and attribution. Open-ended research project. Prerequisite: some systems and networking background. May be repeated for credit.

3-4 units, not given this year

CS 341. Advanced Topics in Data Mining

Team project in data-mining of very large-scale data, including the problem statement and implementation and evaluation of a solution; some lectures on relevant materials will be given: Hadoop, Hive, Amazon EC2; other topics of possible relevance to some projects: computational advertising and the adwords problem; graph partitioning and community detection; extracting relations from the Web; stream data processing.

3-6 units, Spr (Rajaraman, A; Ullman, J)

CS 342. Programming Language Design

Tools for analysis and optimization of iterative coding systems. LDPC codes, Turbo codes, RA codes, optimized ensembles, message passing algorithms, density evolution, analytic techniques. Prerequisite: 376A.

3 units, not given this year

CS 343. Advanced Topics in Compilers

Topics change every year. May be repeated for credit. Prerequisite: 243.

3 units, Spr (Engler, D)

CS 344. Topics in Computer Networks

High-performance embedded system design. Student teams of two software engineers (C experience required) and one hardward engineer (Verilog experience required) build a fully functioning Internet router Work in teams of three. How router interoperates with others in class. Open-ended design challenge judged by panel of industry experts. Prerequisites: CS 144, 244, or network programming experience.

3 units, Spr (McKeown, N)

CS 344B. Advanced Topics in Distributed Systems

Continuation of 244B. The use of distributed systems research in practical systems. New applications due to the growth in high-bandwidth connections. Distributed systems knowledge and techniques from research and system implementations, and active research topics. Readings include research publications.

2 units, not given this year

CS 345. Advanced Topics in Database Systems

Content varies. May be repeated for credit with instructor consent. Prerequisite: 145. Recommended: 245.

3 units, given occasionally

CS 345C. Data Integration

Techniques for integrating data from multiple heterogeneous data sources. Topics: semantic heterogeneity; languages for mediating between disparate data sources; techniques for automatic schema reconciliation and reference reconciliation; adaptive query processing; basics of XML and its relevance to data integration; peer-to-peer data sharing data exchange; combining structured and unstructured data; and dataspaces. Recommended: 145.

3 units, not given this year

CS 345L. Large-Scale Data Mining

Topics include network models, ranking algorithms, reputation, collaborative filtering, and supervised and unsupervised learning. Individual or group applications-oriented programming project. 1 unit without project; 3 units with final project. Prerequisites: programming at the level of CS108; statistics at the level of MATH103 and STATS116. Recommended: machine learning at the level of CS229; knowledge of Java.

1-3 units, not given this year

CS 346. Database System Implementation

A major database system implementation project realizes the principles and techniques covered in earlier courses. Students independently build a complete database management system, from file structures through query processing, with a personally designed feature or extension. Lectures on project details and advanced techniques in database system implementation, focusing on query processing and optimization. Guest speakers from industry on commercial DBMS implementation techniques. Prerequisites: 145, 245, programming experience in C++.

3-5 units, Spr (Agrawal, P; Park, H)

CS 347. Transaction Processing and Distributed Databases

The principles and system organization of distributed databases. Data fragmentation and distribution, distributed database design, query processing and optimization, distributed concurrency control, reliability and commit protocols, and replicated data management. Distributed algorithms for data management: clocks, deadlock detection, and mutual exclusion. Heterogeneous and federated distributed database systems. Overview of commercial systems and research prototypes. Prerequisites: 145, 245.

3 units, Spr (Garcia-Molina, H)

CS 348A. Computer Graphics: Geometric Modeling

The mathematical tools needed for the geometrical aspects of computer graphics and especially for modeling smooth shapes. Fundamentals: homogeneous coordinates, transformations, and perspective. Theory of parametric and implicit curve and surface models: polar forms, Bezier arcs and de Casteljau subdivision, continuity constraints, B-splines, tensor product, and triangular patch surfaces. Subdivision surfaces and multiresolution representations of geometry. Representations of solids and conversions among them. Surface reconstruction from scattered data points. Geometry processing on meshes, including simplification. Prerequisite: linear algebra. Recommended: 164, 248.

3-4 units, not given this year

CS 348B. Computer Graphics: Image Synthesis Techniques

Intermediate level, emphasizing the sampling, shading, and display aspects of computer graphics. Topics: local and global illumination methods including radiosity and distributed ray tracing, texture generation and rendering, volume rendering, strategies for anti-aliasing and photo-realism, human vision and color science as they relate to computer displays, and high-performance architectures for graphics. Written assignments and programming projects. Prerequisite: 248 or equivalent. Recommended: Fourier analysis or digital signal processing.

3-4 units, Spr (Hanrahan, P)

CS 349. Topics in Programming Systems
Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.
3 units, given occasionally

CS 349C. Topics in Programming Systems: Readings in Distributed Systems
Discussion of research publications that are of current interest in distributed systems. Students are expected to read all papers, and sign up for presentation of one paper. The course itself is 1 unit. Those interested in working on a project along with the readings should enroll for 3 units.
1-3 units, Aut (Cao, P; Danzig, P)

CS 355. Advanced Topics in Cryptography
Topics: pseudo-random generation, zero knowledge protocols, elliptic curve systems, threshold cryptography, security analysis using random oracles, lower and upper bounds on factoring and discrete log. May be repeated for credit. Prerequisite: 255.
3 units, not given this year

CS 357. Advanced Topics in Formal Methods
Topics vary annually. Possible topics include automata on infinite words, static analysis methods, runtime analysis methods, verification of real-time and hybrid systems, and formalization of middleware services. May be repeated for credit. Prerequisite: 256.
3 units, given occasionally

CS 359. Topics in the Theory of Computation
Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.
3 units, given occasionally

CS 359D. Hardness of Approximation
Results on and proof techniques for ruling out good approximation algorithms for NP-hard optimization problems. Topics: the PCP theorem; parallel repetition theorem; the unique games conjecture; applications to set cover, clique, max cut, network design, and problems. Prerequisites: 154 and 261, or equivalents.
3 units, not given this year

CS 359G. Graph Partitioning and Expanders
Three topics related to the mathematics of expander graphs: (1) Approximation algorithms for finding a sparse balanced cut iin a graph (spectral partitioning, Leighton-Rao algorithm, and Arora-Rao-Vazirani algorithm; (2) Explicit construction of expander graphs (combinatorial and algebraic); and (3) Analysis of Markov-Chain Monte-Carlo algorithm via the estimation of the convergence of certain random walks. Recommended: a basic course in linear algebra and a course on algorithms.
3 units, Win (Trevisan, L)

CS 361A. Advanced Algorithms
Advanced data structures: union-find, self-adjusting data structures and amortized analysis, dynamic trees, Fibonacci heaps, universal hash function and sparse hash tables, persistent data structures. Advanced combinatorial algorithms: algebraic (matrix and polynomial) algorithms, number theoretic algorithms, group theoretic algorithms and graph isomorphism, online algorithms and competitive analysis, strings and pattern matching, heuristic and probabilistic analysis (TSP, satisfiability, cliques, colorings), local search algorithms. May be repeated for credit. Prerequisite: 161 or 261, or equivalent.
3 units, not given this year

CS 361B. Advanced Algorithms
Topics: fundamental techniques used in the development of exact and approximate algorithms for combinational optimization problems such as generalized flow, multicommodity flow, sparsest cuts, generalized Steiner trees, load balancing, and scheduling. Using linear programming, emphasis is on LP duality for design and analysis of approximation algorithms; interior point methods for LP. Techniques for development of strongly polynomial algorithms.
3 units, given next year

CS 364A. Algorithmic Game Theory
Topics at the interface of theoretical computer science and game theory such as: algorithmic mechanism design; combinatorial and competitive auctions; congestion and potential games; cost sharing; existence, computation, and learning of equilibria; game theory and the Internet; network games; price of anarchy; and selfish routing. Prerequisites: 154N and 161, or equivalents.
3 units, Win (Roughgarden, T)

CS 364B. Topics in Algorithmic Game Theory
Topics on the interface of theoretical computer science and game theory. May be taken prior to 364A; may be repeated for credit. Prerequisites: 154N and 161, or equivalents.
3 units, not given this year

CS 365. Randomized Algorithms
(Same as CME 309) Design and analysis of algorithms that use randomness to guide their computations. Basic tools, from probability theory and probabilistic analysis, that are recurrent in algorithmic applications. Randomized complexity theory and game-theoretic techniques. Algebraic techniques. Probability amplification and derandomization. Applications: sorting and searching, data structures, combinatorial optimization and graph algorithms, geometric algorithms and linear programming, approximation and counting problems, similarity search and metric embeddings, online algorithms. Prerequisites: CS 161 and STAT 116, or equivalents.
3 units, Win (Goel, A)

CS 369. Topics in Analysis of Algorithms
Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.
3 units, given occasionally

CS 369A. Advanced Geometric Algorithms
Approximate, randomized, and high-dimensional geometric algorithms. Topics of current interest: clustering; nearest-neighbor search; shortest paths; geometric random walks; shape fitting; geometric embeddings; coresets; geometric TSP; and linear programming. Prerequisites: 368 or equivalent.
3 units, not given this year

CS 369F. Topics in Analysis of Algorithms
Focus is on combinatorial optimization with emphasis on online algorithms.
3 units, Spr (Plotkin, S)

CS 369M. Algorithms for Modern Massive Data Set Analysis
Algorithmic and statistical methods for large-scale data analysis: matrix and graph algorithms; strengths and weaknesses of theoretical techniques for practical scientific and Internet data analysis; overlap with related problems in statistics, optimization, numerical analysis, and machine learning. Representative topics: matrix problems (numerical and statistical perpectives; algorithmic approaches, including Johnson-Lindenstrauss lemma and randomized projection and sampling algorithms; novel matrix factorizations); graph problems (graph partitioning algorithms, including spectral methods, flow-based methods, and recent geometric methods; local graph algorithms and approximate eigenvector computation); and applications to machine learning and statistical data analysis (motivating applications; algorithmic basis of the RKHS method; geometric data analysis, regularization, and statistical inference; boosting and its relationships to conjugate gradient methods, duality, convexity, online
3 units, not given this year

CS 369N. Novel Paradigms for Algorithmic Analysis
Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.
3 units, not given this year

CS 369P. Polyhedral Techyniques in Combinatorial Optimization
Graduate-level course in combinatorial optimization with a focus on polyhedral characterizations. First part of the course covers some classical results in combinatorial optimization: algorithms and polyhedral characterizations for matchings, spanning trees, matroids, and submodular functions. Second part covers some more recent work that builds upon these techniques-approximation algorithms using the primal-dual scheme, iterated rounding and dependent randomized rounding. Applications will include allocation in combinatorial auctions, network design, and variants of the traveling salesman problem. Prerequisites: Students should know basic computation theory and the material of CS261; in particular the fundamentals of linear programming, approximation algorithms and the notion of NP-completeness.
3 units, Aut (Staff)

CS 374. Algorithms in Biology
(Same as BIOMEDIN 374) Algorithms and computational models applied to molecular biology and genetics. Topics vary annually. Possible topics include biological sequence comparison, annotation of genes and other functional elements, molecular evolution, genome rearrangements, microarrays and gene regulation, protein folding and classification, molecular docking, RNA secondary structure, DNA computing, and self-assembly. May be repeated for credit. Prerequisites: 161, 262 or 274, or BIOCHEM 218, or equivalents.
2-3 units, Aut (Batzoglou, S)

CS 376. Research Topics in Human-Computer Interaction
Interactive systems, research areas in interaction techniques, and the design, prototyping, and evaluation of user interfaces. Topics: computer-supported cooperative work; audio, speech, and multimodal interfaces; user interface toolkits; design and evaluation methods; ubiquitous and context-aware computing; tangible interfaces, haptic interaction; and mobile interfaces.
3 units, Spr (Klemmer, S)

CS 377. Topics in Human-Computer Interaction
Contents change each quarter. May be repeated for credit. See http://hci.stanford.edu/academics for offerings.
2-3 units, given occasionally

CS 377L. Learning in a Networked World
(Same as EDUC 298) Foundations, theories and empirical studies for interdisciplinary advances in how we conceive of the potentials and challenges associated with lifelong, lifewide and life-deep learning in a networked world given the growth of always-on cyberinfrastructure for supporting information and social networks across space and time with personal computers, netbooks, and mobiles.
3 units, not given this year

CS 377V. Creating Health Habits with Social and Mobile Technologies
How to create habits in people via social and mobile tech. Design methods and psychological principles for long-term change. Focus on health behaviors. First, teams analyze best-in-class habit technologies. Next, teams create and test their own solutions for habit formation, leveraging Facebook, texting, and other platforms. No coding required.
3 units, not given this year

CS 377W. Create Engaging Web Applications Using Metrics and Learning on Facebook
Experimental course. Students work in small, interdisciplinary teams to create, launch, and optimize web-based applications for social networks such as Facebook. Tools include Google Analytics. Online experiments and user responses to learn how to iterate and improve applications. Guest experts.
3-4 units, not given this year

CS 378. Phenomenological Foundations of Cognition, Language, and Computation
Critical analysis of theoretical foundations of the cognitive approach to language, thought, and computation. Contrasts of the rationalistic assumptions of current linguistics and artificial intelligence with alternatives from phenomenology, theoretical biology, critical literary theory, and socially-oriented speech act theory. Emphasis is on the relevance of theoretical orientation to the design, implementation, and impact of computer systems as it affects human-computer interaction.
3-4 units, not given this year

CS 379D. Computer Vision and Image Analysis in the Study of Art
Application of algorithms to computer vision, image analysis, and two-dimensional Western art such as paintings, drawings, and etchings. Topics: multispectral image enhancement and color manipulation; geometric perspective and warped (anamorphic) perspective; visual metrology; view synthesis; statistical analysis of form; texture and brushstrokes; and shape-from-shading. These techniques, pattern classification, statistical estimation methods, and stylometry (quantification of artistic style) address art historical problems such as attribution, authentication, and dating to reveal artists¿ working methods.
3 units, not given this year

CS 390A. Curricular Practical Training
Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 390 A, B, and C may each be taken once.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 390B. Curricular Practical Training
Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 390A,B,C may each be taken once.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 390C. Curricular Practical Training
Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 390A,B,C may each be taken once.
1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 390D. Curricular Practical Training
Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. Students in F1 visas should be aware that completing 12 or more months of full-time CPT will make them ineligible for Optional Practical Training (OPT). 390A, B, C, D may each be taken once.
1 unit, not given this year

CS 393. Computer Laboratory
For CS graduate students. A substantial computer program is designed and implemented; written report required. Recommended as a preparation for dissertation research. Register using the section number associated with the instructor. Prerequisite: consent of instructor.
1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 395. Independent Database Project
For graduate students in Computer Science. Use of database management or file systems for a substantial application or implementation of components of database management system. Written analysis and evaluation required. Register using the section num-

ber associated with the instructor. Prerequisite: consent of instructor.

1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 399. Independent Project

Letter grade only.

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 399P. Independent Project

Graded satisfactory/no credit.

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 402. Beyond Bits and Atoms: Designing Technological Tools

(Same as EDUC 236X) Practicum in designing and building technology-enabled curricula and learning environments. Students use software toolkits and state-of-the-art fabrication machines to design educational software, educational toolkits, and tangible user interfaces. How to design low-cost technologies, particularly for urban school in the US and abroad. The constructionist learning design perspective, critical pedagogy, and the application of complexity sciences in education.

3-5 units, Spr (Blikstein, P)

CS 402L. Beyond Bits and Atoms - Lab

(Same as EDUC 211X) This course is a hands-on lab in the prototyping and fabrication of tangible technologies, with a special focus in learning and education. We will learn how to use state-of-the-art fabrication machines (3D printers, 3D scanners, laser cutters, routers) to design educational toolkits, educational toys, science kits, and tangible user interfaces. A special focus of the course will be to design low-cost technologies, particularly for urban school in the US and abroad.

1-3 units, Win (Blikstein, P), Spr (Blikstein, P)

CS 422. Intelligent Avatar Laboratory

Lab course. Students, working either individually or in pairs, implement intelligent behaviors for autonomous avatars in virtual worlds. Brief tutorial on the software environment; students then design a behavior for the autonomous avatar(s), and once that is approved, implement the behavior. The programs can control a single avatars, or orchestrate a behavior of multiple avatars. Limited enrollment. Prerequisites: CS 106B or X, or equivalent. Recommended: experience with virtual worlds such as Second Life or World of Warcraft is a plus.

3 units, not given this year

CS 423. High-level Vision: Behaviors, Neurons and Computational Models

(Same as PSYCH 250) Interdisplinary approach aimed at understanding vision from several disciplines: neurophysiology, psychophysics, cognition, algorithms, and computational models. Focus is on the problem of scene understanding, covering topics from multiple perspectives drawing on recent research in psychology, neuroscience and computer science. Ongoing debates in the field, and discussion of recent empirical findings. Topics include theories of visual recognition for scene perception. What are the behavioral and cognitive characteristics of scene perception, and their connections to objection recognition. What are the neural computations that underlie scene perception? What are the roles of attention, expectation and experience in shaping scene recognition?

1-3 units, not given this year

CS 424P. Extracting Social Meaning and Sentiment

(Same as LINGUIST 287) Methods for extracting social meaning (speaker perspectives, emotions and attitudes) from text and speech. Topics include sentiment analysis and summarization, detection of deception, sarcasm, emotion, and personality. Analysis of meaning-bearing characteristics of the speaker and topic, including text, discourse, prosodic and other cues. Prerequisite: CS 124 or 221 or 229 or permission of instructors.

3 units, Aut (Jurafsky, D; Potts, C)

CS 447. Software Design Experiences

Small teams develop technology prototypes combining product and interaction design. Focus is on software and hardware interfaces, interaction, design aesthetics, and underpinnings of successful design including a reflective, interactive design process, group dynamics of interdisciplinary teamwork, and working with users. Prerequisite: CS 247A.

3-4 units, Win (Winograd, T)

CS 448. Topics in Computer Graphics

Topic changes each quarter. Recent topics: computational photography, data visualization, character animation, virtual worlds, graphics architectures, advanced rendering. See http://graphics.stanford.edu/courses for offererings and prerequisites. May be repeated for credit.

3-4 units, given occasionally

CS 448B. Data Visualization

Techniques and algorithms for creating effective visualizations based on principles from graphic design, visual art, perceptual psychology, and cognitive science. Topics: graphical perception, data and image models, visual encoding, graph and tree layout, color, animation, interaction techniques, automated design. Lectures, reading, and project. Prerequisite: one of 147, 148, or equivalent.

3 units, Aut (Heer, J)

CS 448E. Research Topics in Computer Graphics

Selected topics in current computer graphics research. Analysis of research publications, class discussions, quarter-long research project. Topics change each offering. Sample topics: procedural modeling, character animation, multimodal interfaces, perception and cognition. May be repeated for credit. Prerequisite: CS248.

1-4 units, not given this year

CS 448F. Image Processing for Photography and Vision

Image processing with a focus on implementation of new techniques from the literature. Topics: sampling and reconstruction, linear and non-linear filters, features and alignment, compositing, gradient-domain techniques, and recent techniques from conferences such as SIGGRAPH and Eurographics. Prerequisites: Students should be comfortable coding in C++. An introductory graphics course such as CS148 is helpful but not necessary.

3 units, not given this year

CS 448G. Advanced Topics in Visualization

Advanced topics in information visualization, research issues in the design and evaluation of visual data analysis tools. Topics: models of visual perception and cognition, layout algorithms, color perception and palette design, optimization-based approaches to automated design, interaction techniques, software architectures for visual analytics, evaluation methods. Lectures, reading, and final project. Prerequisite: CS448B or consent of instructor.

3 units, Spr (Staff)

CS 448M. Simulation of Human Movement

Foundations of human movement and motor control. Motion capture, motion graphs, and kinematic motion controllers. Physics-based optimization and dynamic controllers. Simulation of walking, running, jumping, balance, object manipulation, and airborne maneuvers. Prerequisites: CS248 and CS205A, or equivalent.

1-4 units, Spr (Koltun, V)

CS 448S. Topics in Computer Graphics: Beyond Programmable Shading

There are strong indications that the future of interactive graphics programming is a model more flexible than today's OpenGL/Direct3D pipelines. As such, graphics developers need to have a basic understanding of how to combine emerging parallel programming techniques and more flexible graphics processors with the traditional interactive rendering pipeline. This course presents the state-of-the-art in combing traditional redering API usage with advanced task- and data-parallel computation to increase the image quality of interactive graphics. Prerequisites: Students should be comfortable with OpenGL and/or Direct3D and have had an introductory computer architecture course such as CS248 or equivalent.

3 units, not given this year

CS 450. Introduction to Biotechnology

Academic and industrial experts discuss latest developments in fields such as bioenergy, green process technology, the production of industrial chemicals from renewable resources, protein pharmaceutical production, industrial enzyme production, stem cell applications, medical diagnostics, and medical imaging. Discussions of biotechnology ethics, business and patenting issues, and entrepreneurship in biotechnology.

3 units, not given this year

CS 468. Geometry Processing Algorithms

Contents of this course change with each offering. Past offerings have included geometric matching, surface reconstruction, colli-

sion detection, computational topology, etc. May be repeated for credit. Fall quarter 2010/11 topic will be Geometry Processing Algorithms. Techniques for modeling and efficient processing of polygonal geometric models. Topics: data structures for polygonal models, discrete differential geometry, mesh parameterization, mesh simplication and remeshing reconstruction from point clouds, mesh editing and deformation, geometric image editing. Recommended: 164.

3 units, Aut (Ben Chen Bolocan, M)

CS 476A. Music, Computing, and Design I: Software Paradigms for Computer Music

(Same as MUSIC 256A) Software design and implementation for computer audio. Strategies, best practices, and tradeoffs in building audio software systems of various sizes (S, M, L, XL), with a focus on interactive (real-time) systems. Lectures examine high-level designs as well as dissect code in a hands-on manner. Course work includes small programming assignments and a final software project. This course is the prerequisite for MUSIC 256B. Prerequisite: experience in C/C++ and/or Java.

1-4 units, Aut (Wang, G)

CS 476B. Mobile Music

(Same as MUSIC 256B) Aesthetic, design, and implementation of mobile music, centered around the modern super smartphones such as the iPhone). Similarities and intrinsic differences between mobile and traditional computing and design for music. Topics include mobile software design, social and cloud computing, mobile interface design, and programming phones, in the service of music. Prerequisite: MUSIC 256A.

1-4 units, Win (Wang, G)

CS 478. Computational Photography

Formerly numbered CS448A. Sensing strategies and algorithmic techniques that extend traditional digital photography. Topics: high dynamic range imaging, flash-noflash, coded aperture, coded exposure, multi-perspective, panoramic stitching, digital photomontage, all-focus, and light field imaging. Lectures, readings, and project. Prerequisite: 178 or equivalent.

3-4 units, not given this year

CS 499. Advanced Reading and Research

For CS graduate students. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 523. The Future of the Automobile

(Same as ME 302) Guest speakers from academia and industry present their research results, share their visions, explain challenges, and offer solutions regarding individual transportation. Students are requested to draft brief write-ups on selected topics that will be discussed in class to develop an understanding of the interactions of technology, business, and society with a specific automotive focus. No specific technical background is required as it is encouraged that everyone brings in specific expertise regarding the automobile as a student, researcher, and/or consumer.

1 unit, Aut (Beiker, S; Gerdes, C), Win (Beiker, S; Gerdes, C; Thrun, S), Spr (Beiker, S; Gerdes, C; Thrun, S)

CS 545. Database and Information Management Seminar

Current research and industrial innovation in database and information systems.

1 unit, Win (Widom, J)

CS 546. Seminar on Liberation Technologies

(Same as POLISCI 337S) This one-unit seminar will present speakers relevant in a variety of ways to how various forms of information technology are being used to defend human rights, improve governance, deepen democracy, empower the poor, promote economic development, protect the environment, enhance public health, and pursue a variety of other social goods.

1 unit, Aut (Cohen, J; Diamond, L), Win (Diamond, L; Winograd, T; Cohen, J), Spr (Winograd, T; Cohen, J)

CS 547. Human-Computer Interaction Seminar

Weekly speakers. May be repeated for credit.

1 unit, Aut (Dow, S), Win (Winograd, T), Spr (Winograd, T)

CS 548. Internet and Distributed Systems Seminar

Guest speakers from academia and industry. May be repeated for credit.

1 unit, not given this year

CS 549. Seminar on Computing and Design Thinking

Design shapes the world, both physical and digital. To produce better products, services and communities, we need a better understanding of how design practices lead to results. This seminar will examine cognitive, social, and organizational dimensions of creativity and problem solving. Each week, a prominent thought leader from academia or industry will offer their insights on ""design thinking"", as part of CS547, the Seminar on People, Computers and Design. Directly after the public talk, CS549 will meet in a smaller venue and a discussant will offer a short response to initiate a critical discourse. Corequisite: CS547.

2 units, not given this year

CS 571. Surgical Robotics Seminar

Surgical robots developed and implemented clinically on varying scales. Seminar goal is to expose students from engineering, medicine, and business to guest lecturers from academia and industry.engineering and clinical aspects connected to design and use of surgical robots, varying in degree of complexity and procedural role.

1 unit, Aut (Barbagli, F; Prisco, G)

CS 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

CS 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DANCE (DANCE) COURSES

UNDERGRADUATE COURSES IN DANCE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

DANCE 13AX. Ballet Intensive

Rigorous daily practice that challenges and expands understanding of and perspective on the art form. Students gain experience with the demands of an intense regimen of ballet training and with practice-based and discussion-based artistic inquiry through dance labs, forums, and field trips. Strengthening technique, exploring ballet as an expressive form and performing art, and developing an artistic voice.

2 units, Aut (Elliott, K; Maffre, M)

DANCE 27. Faculty Choreography

Rehearsal and performance of faculty choreography. Selection by audition. May be repeated for credit.

1 unit, Aut (Staff), Win (Staff), Spr (Frank, D; Moses, R)

DANCE 30. Chocolate Heads Dance and Performance Workshop

Students participate in the construction of a new dance driven performance work drawn from performance styles and various contemporary dances from around the world. Dancers and performers are drawn from diverse backgrounds including social dance, western classical, west African, musical theater, and other ethnic dance forms. Compositional and performance training. May be repeated for credit.

1 unit, Aut (Hayes, A), Win (Hayes, A)

DANCE 43. Liquid Flow: Introduction to Dance and Movement

Body expression, articulation, and anatomical basics through contemporary dance and other somatic practices. Emphasis is on development of awareness of the body in space and fluidity of motion. Exploration of improvisation and creativity. May be repeated for credit.

1 unit, Aut (Hayes, A)

DANCE 46. Social Dances of North America I

Introduction to the partner dances found in American popular culture: waltz, swing, tango, club two step, cha cha, merengue, and salsa. May be repeated for credit. (AU)

1 unit, Aut (Powers, R), Win (Powers, R), Spr (Powers, R)

DANCE 48. Beginning Ballet

Fundametals of ballet technique including posture, placement, the foundation steps, and ballet terms; emphasis on the development of coordination, balance, flexibility, sense of lines, and sensitivity to rhythm and music. May be repeated for credit.

1 unit, Aut (Maffre, M)

DANCE 51. Congolese Dance
Movements and choreography from Central Africa. Elements unique to all African dance movement: body isolation, polyrhythmic movement, and body posture. Live drumming. Open to all levels of dancers.
1 unit, Spr (Malonga, M)

DANCE 52. The Dance Jam: Process and Performance
Restaging of a number of seminal Bay Area modern dance works. Choreographers will work with students to recreate existing work from their repertory. The re-created work will be re- ordered into a completely new work.
1 unit, Aut (Moses, R)

DANCE 56. Ballet Repertory
Live collaboration with choreographer during bi-weekly rehearsals focusing on the creation of a new dance to be performed during the Spring Dance Division performance series and to be integrated in the Dance Division repertory. The course is designed to engage students in developing adaptability of technique, and artistic voice.
1 unit, Aut (Maffre, M)

DANCE 57. Dance Repertory
Current repertory of contemporary choreographers. Students perform the work of visiting artist with faculty supervision. Audition required. May be repeated for credit.
1 unit, Aut (Frank, D)

DANCE 58. Beginning Hip Hop
Steps and styling in one of America's 21st-century vernacular dance forms. May be repeated for credit.
1 unit, Aut (Reddick, R)

DANCE 59. Intermediate-Advanced Hip-Hop
Steps and styling in one of America's 21st-century vernacular dance forms. May be repeated for credit.
1 unit, Aut (Reddick, R)

DANCE 60. The Evolution of Hip Hop and the Dance Stage: From Broadway to Hollywood and MTV
The repertory of Hip Hop history through steps and choreography. May be repeated for credit.
1 unit, Spr (Reddick, R)

DANCE 100. Student Choreography: Studio to Stage
Student choreography developed under close faculty guidance, leading to performance. Requirement for students working towards performance on major Division concerts. May be repeated for credit.
1 unit, Win (Frank, D)

DANCE 102. Choreography and Composition
Fundamental techniques and approaches used in the creation of dance. Basic elements of composition including: style, form, theme and variation, and phrasing, development of movement vocabulary, symmetry and asymmetry, explicit versus abstract methods of expression, elements of time, quality and use of space, motif, and repetition. May be repeated for credit.
1 unit, Spr (Moses, R)

DANCE 104. Duets Project
Rehearsal experiences and techniques embedded in the reconstruction of repertory by three artists whose collective works represent differing approaches to the choreographic process. May be repeated for credit.
1 unit, Spr (Frank, D)

DANCE 105. Contemporary Afro Styles and Dancemaking: Aesthetic of the Cool
Studio class which studies traditional to current African diaspora dances. This course also looks at contemporary African American artistic expression and the aesthetic sensibility that is rendered through cultural activities such as: current dances, marching bands, street style and motion, step shows, vocal styles. May be repeated for credit
1 unit, Aut (Hayes, A)

DANCE 106. Essence of Contemporary Dance Performance: African Styles on Stage
Contemporary dance technique and repertory based on African diaspora movement styles. Focus is on articulation of expression, enhancement of stage presence, and awareness of individual movement strengths. May be repeated for credit.
1 unit, Win (Hayes, A)

DANCE 120. Hip Hop/Pop Fusion and Urban Dance: Choreography
Defining, developing, and exploring stylistic elements in the many variations of Hip Hop and Urban Dance Styles. Visiting Hip Hop professionals perform.
1 unit, Spr (Reddick, R)

DANCE 121. The Day Before Hip Hop: Lecture and Technique
Lecture and technique study of Hip Hop dance (street dance) technique and Hip Hop dance history prior to the existence of the umbrella term Hip Hop. History of street dance styles which may or may not fall under the umbrella term of Hip Hop; technical foundation rooted in an Afrocentric approach to movement that is dynamic, fluid, and rhythmically diverse in space.
1 unit, Win (Staff)

DANCE 138. Liquid Flow: Dance, Design, and Engineering
Dance technique and movement fundamentals drawn from Liquid Flow. Looking at the body as the source of design, students look at concepts and principles drawn from design and engineering through a tactile, kinetic, and kinesthetic lens. Improvisation and creative composition throughout the course.
1 unit, Win (Hayes, A)

DANCE 140. Intermediate Modern Dance
Contemporary dance technique, at the intermediate level. Focus on studio work to build dance skills, supplemented by movement exploration, professional concert attendance, readings, and participation in a culminating informal showing. Prerequisites: advanced beginner or intermediate skill level or consent of instructor. May be repeated for credit.
1 unit, Win (Frank, D)

DANCE 141. Advanced Modern Dance
Advanced dance technique. Complex movement combinations intended to build skills necessary to meet performance demands of contemporary concert dance. Studio work supplemented by professional concert attendance, readings, and participation in culminating informal showing. Intermediate/advanced skill level or permission of instructor required. May be repeated for credit.
2 units, Aut (Frank, D), Win (Moses, R), Spr (Frank, D)

DANCE 144. Intermediate Modern Jazz Dance
Practical skills of intermediate technique will focus on elements of contemporary jazz dance. Los Angeles, Broadway, and video dance styles will be covered. Studio work will focus on phrasing, endurance, technical proficiency, and musicality. Course includes viewing of a professional live performance. May be repeated for credit.
1 unit, Spr (Moses, R)

DANCE 145. ADVANCED JAZZ DANCE
Practical skills of intermediate technique will focus on elements of contemporary jazz dance. Los Angeles, Broadway, and video dance styles will be covered. Studio work focus is on phrasing, endurance, technical proficiency, and musicality. Course includes viewing of a professional live performance. May be repeated for credit.
2 units, Aut (Moses, R)

DANCE 146. Social Dances of North America II
Intermediate survey of dances in American popular culture: Lindy hop, Viennese waltz, cross-step waltz, foxtrot, and hustle. May be repeated for credit. Prerequisite: Dance 46 or equivalent.
1 unit, Aut (Powers, R), Spr (Powers, R)

DANCE 147. Living Traditions of Swing
Swing dancing: the early Lindy of the 1920s; 6- and 8-count Lindy hop, Shag, Big Apple, 1950s Rock 'n' Roll swing, disco Hustle and West Coast Swing. Partnering and improvisation. Swing's cross-cultural influences and personal creativity. May be repeated for credit.
1 unit, Win (Powers, R)

DANCE 148. Intermediate Ballet
Continuation of 48. Development of ballet technique with increased complexity of forms and combination of steps, and introducing pointe technique. Emphasis is on easing coordination and connectivity, and increasing strength. Open to men and women. Course designed to accommodate flat and pointe work. May be repeated for credit.
1 unit, Win (Elliott, K), Spr (Maffre, M)

DANCE 149. Advanced Ballet
Continuation of 148. Development of professional level ballet technique with increased complexity of forms and combination of steps. Emphasis is on classical and contemporary ballet technique. Open to men and women. Optional pointe work. May be repeated for credit.
2 units, Aut (Elliott, K), Win (Elliott, K), Spr (Elliott, K)

DANCE 156. Social Dances of North America III
Advanced survey of the partner dances found in American popular culture: waltz, redowa, Bohemian National Polka, tango, cha cha, salsa, samba. May be repeated for credit. Prerequisite: Dance 46 or equivalent experience.
1 unit, Win (Powers, R)

DANCE 156H. Dance and Theater: Twentieth-Century German Encounters
(Same as DRAMA 156H, DRAMA 256H) Twentieth-century German experiments at the intersections of dance and theater. From explorations with expressive bodies to propaganda spectacles and postdramatic performances: how do German artistic and cultural history combine with questions of medium and form? What do they look like in contemporary encounters? Written and performed assignments.
3-5 units, Aut (Elswit, K)

DANCE 160. Dance and History: From Postwar to Postmodernism
(Same as DRAMA 160, DRAMA 260) The cultural and historical unfolding of the genre of contemporary performance known as postmodern dance over the past six decades. Dance history used to trace the effects of visual art and movement experimentalists as they have teamed up since the first decades of the 20th century, redrawing the boundaries of live art and dance performance. GER:DB-Hum, EC-Gender
4 units, Win (Ross, J)

DANCE 166. History of Social Dance in Western Culture
Historic social dance from the past five centuries, including studio technique and history. Renaissance, Baroque, Regency Era, 19th Century, Ragtime Era, Swing Era and 1950s Rock'n'Roll social dances.
1 unit, Spr (Powers, R)

DANCE 190. Special Research
May be repeated for credit.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DANCE 191. Independent Research
Individual supervision of off-campus internship. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DANCE 197. Dance in Prisons: The Arts, Juvenile Justice, and Rehabilitation in America
Participatory seminar. The nexus of art, community, and social action, using dance to study how the performing arts affect self-construction, perception and experiences of embodiment, and social control for incarcerated teenagers in Santa Clara Juvenile Hall. Service Learning Course (certified by Haas Center). GER:DB-Hum, EC-AmerCul
4 units, Spr (Ross, J)

GRADUATE COURSES IN DANCE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

DANCE 290. Special Research
Individual project on the work of any choreographer, period, genre, or dance-related topic. May be repeated for credit.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DEVELOPMENTAL BIOLOGY (DBIO) COURSES

UNDERGRADUATE COURSES IN DEVELOPMENTAL BIOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

DBIO 156. Human Developmental Biology and Medicine
(Same as HUMBIO 156A) The biological, medical, and social aspects of normal and abnormal human development. Topics: in vitro fertilization and embryo transfer; gene and cell therapy; gametogenesis; pattern formation in the nervous system and limb development; gene and grand multiple pregnancies; prematurity, in utero effects of teratogens; sex determination and differentiation; growth control; gigantism and dwarfism; neural tube defects; cardiac morphogenesis; progress in the developmental biology of humans. Limited enrollment. Prerequisites: Human Biology or Biology core, or consent of instructor.
3-4 units, Spr (Porzig, E)

DBIO 199. Undergraduate Research
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.
1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN DEVELOPMENTAL BIOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

DBIO 201. Development and Disease Mechanisms
Mechanisms that direct human development from conception to birth. Conserved molecular and cellular pathways regulate tissue and organ development; errors in these pathways result in congenital anomalies and human diseases. Topics: molecules regulating development, cell induction, developmental gene regulation, cell migration, programmed cell death, pattern formation, stem cells, cell lineage, and development of major organ systems. Emphasis on links between development and clinically significant topics including infertility, assisted reproductive technologies, contraception, prenatal diagnosis, multiparity, teratogenesis, inherited birth defects, fetal therapy, adolescence, cancer, and aging.
4 units, Aut (Porzig, E; Kingsley, D; Kim, S)

DBIO 202. Assisted Reproductive Technologies
(Same as OBGYN 202, HUMBIO 150A) Primary and current literature in basic and clinical science aspects of assisted reproductive technologies (ART), and demonstrations of current ART techniques including in vitro fertilization and embryo culture, and micromanipulation procedures such as intracytoplasmic sperm injection and embryo biopsy and cryopreservation.Class only may be taken for 1 unit. 2 units includes papers and attendance at clinical demonstrations. 3 units includes a term paper. Recommended: DBIO 201, or consent of instructors.
1-3 units, Win (Porzig, E)

DBIO 203. Advanced Genetics
(Same as BIO 203, GENE 203) For graduate students in Bioscience programs; may be appropriate for graduate students in other programs. The genetic toolbox. Examples of analytic methods, genetic manipulation, genome analysis, and human genetics. Emphasis is on use of genetic tools in dissecting complex biological pathways, developmental processes, and regulatory systems. Faculty-led discussion sections with evaluation of papers. Students with minimal experience in genetics should prepare by working out problems in college level textbooks.
4 units, Aut (Stearns, T; Sidow, A; Kim, S)

DBIO 210. Developmental Biology
Current areas of research in developmental biology. How organismic complexity is generated during embryonic and post-embryonic development. The roles of genetic networks, induction events, cell lineage, maternal inheritance, cell-cell communication, and hormonal control in developmental processes in well-studied organisms such as vertebrates, insects, and nematodes. Team-taught.

Students meet with faculty to discuss current papers from the literature. Prerequisite: graduate standing, consent of instructor. Recommended: familiarity with basic techniques and experimental rationales of molecular biology, biochemistry, and genetics.

5 units, Spr (Villeneuve, A; Nusse, R)

DBIO 215. Frontiers in Biological Research

(Same as BIOC 215, GENE 215) Literature discussion in conjunction with the Frontiers in Biological Research seminar series in which investigators present current work. Students and faculty meet beforehand to discuss papers from the speaker¿s primary research literature. Students meet with the speaker after the seminar to discuss their research and future direction, commonly used techniques to study problems in biology, and comparison between the genetic and biochemical approaches in biological research.

1 unit, Aut (Harbury, P; Calos, M; Villeneuve, A), Win (Harbury, P; Villeneuve, A; Calos, M)

DBIO 221. Current Issues in Aging

(Same as GENE 221) Current research literature on genetic mechanisms of aging in animals and human beings. Topics include: mitochondria mutations, insulin-like signaling, sirtuins, aging in flies and worms, stem cells, human progeria, and centenarian studies. Prerequisite: GENE 203.

2 units, Spr (Kim, S; Brunet, A), alternate years, not given next year

DBIO 257. The Biology of Stem Cells

(Same as HUMBIO 157) The role of stem cells in human development and potential for treating disease. Guest lectures by biologists, ethicists, and legal scholars. Prerequisites: 2A,B, or consent of instructor.

3 units, Spr (Nusse, R; Fuller, M)

DBIO 273A. A Computational Tour of the Human Genome

(Same as BIOMEDIN 273A, CS 273A) Introduction to computational biology through an informatic exploration of the human genome. Topics include: genome sequencing (technologies, assembly, personalized sequencing); functional landscape (genes, gene regulation, repeats, RNA genes, epigenetics); genome evolution (comparative genomics, ultraconservation, co-option). Additional topics may include population genetics, personalized genomics, and ancient DNA. Course includes primers on molecular biology, the UCSC Genome Browser, and text processing languages. Guest lectures from genomic researchers. No prerequisites. See http://cs273a.stanford.edu/.

3 units, Aut (Batzoglou, S; Bejerano, G)

DBIO 296. Stem Cell Biology and Regenerative Medicine

(Same as PATH 296) For graduate and medical students. Embryonic and adult stem cells, including origin, regulation, self-renewal, differentiation, fate, and relationship to cancer; biological mechanisms and methods to translate findings to therapeutic applications. Medical students must enroll for 5 units; graduate students may choose to take only the basic science part for 3 units. Prerequisites: DBIO 201 and 210, or consent of instructor.

3-5 units, Win (Weissman, I; Nusse, R; Fuller, M)

DBIO 299. Directed Reading in Developmental Biology

Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DBIO 370. Medical Scholars Research

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DBIO 399. Graduate Research

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DBIO 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DIVISION OF LITERATURES, CULTURES, AND LANGUAGES (DLCL) COURSES

UNDERGRADUATE COURSES IN DIVISION OF LITERATURES, CULTURES, AND LANGUAGES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

DLCL 70N. From Vampires to Bathroom Walls: Folklore and Literature

(Stanford Introductory Seminar) Preference to freshmen. In the early 19th century, some Europeans started seeing the stories and songs of illiterate peasants as folklore to be collected, preserved, and perhaps transformed into new literature, art, and music. These folktales, such as legends of vampires, continue to inspire artists. The idea of folklore has expanded to include the shared practices or utterances of any group with at least one linking factor, including latrinalia (wall writings in a public bathroom). Sources include folklore from German, English, Russian, and Yiddish sources, and theoretical essays. Students collect living folklore, and analyze and present it.

4 units, Spr (Safran, G)

DLCL 99. Multimedia Course Lab

Designed to supplement the literature curriculum of existing undergraduate courses in DLCL departments in which a multimedia component may benefit collaborative or individual research projects. Taken for credit at the discretion of the instructor of the departmental literature course.

1 unit, Aut (Chandler, Z), Win (Chandler, Z), Spr (Chandler, Z)

DLCL 151. Monster Mothers and Critical Relations

(Same as DLCL 251) An inquiry into the principal modalities of the maternal figure as constructed in representative European, Asian, and American texts, including those of Euripedes, Balzac, Fontane, James, Tanizaki, Garcia Lorca, and Bazin. Such canonical literary works will be read with methodical attention to the relationship between primary texts and given analytical frameworks in Barthes, Benjamin, Freud, Kristeva, and Said, incorporating strategies of research.

3-5 units, Win (Staff)

DLCL 189. Honors Thesis Seminar

For undergraduate majors in DLCL departments; required for honors students. Planning, researching, and writing an honors thesis. Oral presentations and peer workshops. Research and writing methodologies, and larger critical issues in literary studies.

5 units, Aut (Barletta, V)

GRADUATE COURSES IN DIVISION OF LITERATURES, CULTURES, AND LANGUAGES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

DLCL 200. Teaching of Second Language Literatures

Focus is on literacy development in a second language, emphasizing literary texts, and assessing the learners' second-language linguistic level and requisite background knowledge with regard to particular literary texts. Instructional strategies and feedback techniques for written and oral work.

3 units, Aut (Bernhardt, E)

DLCL 201. The Learning and Teaching of Second Languages

Learning perspective rather than traditional teaching methods. Focus is on instructional decision making within the context of student intellectual and linguistic development in university settings to different populations. Readings in second-language acquisition. Might be repeatable for credit.

3 units, Spr (Bernhardt, E)

DLCL 251. Monster Mothers and Critical Relations
(Same as DLCL 151) An inquiry into the principal modalities of the maternal figure as constructed in representative European, Asian, and American texts, including those of Euripedes, Balzac, Fontane, James, Tanizaki, Garcia Lorca, and Bazin. Such canonical literary works will be read with methodical attention to the relationship between primary texts and given analytical frameworks in Barthes, Benjamin, Freud, Kristeva, and Said, incorporating strategies of research.
3-5 units, Win (Staff)

DLCL 308. Comparative Literature Colloquium
Participants discuss and critique work presented by graduate students and faculty in the DLCL. Work may include conference or seminar papers, thesis chapters, or works-in-progress. Feedback focuses on writing and argumentation, and more general responses to the subject matter. Meetings open to the public. May be repeated for credit.
1-2 units, Aut (Berman, R), Win (Berman, R), Spr (Berman, R)

DLCL 309. Teaching of Literature
Prepares graduate students in DLCL departments to teach literature at the undergraduate level. Topics include: the opportunities and problems of transposing a research project into a feasible course; the logic of syllabi and reading lists; the structuring of a course from week to week; and other matters relevant to first-time teachers of literature. Supervised by the graduate affairs committee of the DLCL. May be repeated for credit.
2 units, Aut (Staff), Spr (Staff)

DLCL 310. The Development of a Dissertation from Prospectus to Defense
Meets regularly throughout the year to advise and support dissertation-level students as they prepare a prospectus, begin writing, submit chapters, and complete their projects. Focus of the workshop shifts from term to term as appropriate to the participants. Supervised by the graduate affairs committee of the DLCL. May be repeated for credit.
2 units, Spr (Staff)

DLCL 311. Professional Workshop
Meets regularly throughout the year to discuss issues in the professional study of literature. Topics include the academic job market and the challenges of research and teaching at different types of institutions. Supervised by the graduate affairs committee of the DLCL. May be repeated for credit.
2 units, Win (Staff)

DRAMA (DRAMA) COURSES

UNDERGRADUATE COURSES IN DRAMA

Primarily for undergraduates; graduate students may enroll with consent of adviser.

DRAMA 10AX. Acting Intensive: American Realism of the Mid-20th Century
Introduction to the craft of acting and concepts for the experienced student. Focus is on process rather than result. Students build skills in acting, movement, voice, and speech, using material from the mid-20th-century plays of Tennessee Williams, Arthur Miller, Clifford Odets, William Inge, and others. These playwrights provided texts for the actors of the famous Group Theater (James Dean, Shelley Winters, Marlon Brando, Paul Newman). To this day, members of The Actors Studio (Al Pacino, Meryl Streep, Sean Penn, Sidney Poitier) continue the tradition of The Group Theatre. The Group Theatre originally developed this approach in the 30s, based on the innovations of the acting teacher Constantin Stanislavski. There has been a resurgence of American realism in contemporary productions that utilize actors of color who have transcended the casting barriers.
2 units, Aut (Kostopoulos, K)

DRAMA 10N. Arts and Ideas: 20th-Century Art in Conflict
(Stanford Introductory Seminar) Preference to freshmen. Focus is on drama and film that experiment with new possibilities of form, shaping the direction of later artistic practice. How the political and aesthetic concerns of the 20th century reflect and exploit new technologies, both in theater and film, altering the position and function of author, actor, director, and audience.
4 units, Spr (Rehm, R)

DRAMA 11N. Dramatic Tensions: Theater and the Marketplace
(Stanford Introductory Seminar) Preference to freshmen. Tension between artistic and commercial forces in modern theater; the conflicted state of the art form. Sources include major and emerging contemporary figures in commercial, fringe, and nonprofit theater in the U.S. and UK. Visits with writers, directors, and dramaturges. GER:DB-Hum
3-4 units, Aut (Freed, A)

DRAMA 12AX. Sketch Comedy and Improvisation
Explore improvisation and sketch comedy in an intensive ensemble and create an original show. Pure improvisational theater techniques. Concepts covered include spontaneity, shared control, creative collaboration, narrative, and status. Students apply those skills to writing and staging scripted monologues, two-handers, and ensemble sketches. Students create an original show with the entire class.
2 units, Aut (Klein, D)

DRAMA 12N. Antigone: From Ancient Democracy to Contemporary Dissent
(Stanford Introductory Seminar) (Same as CLASSGEN 6N) Preference to freshmen. Tensions inherent in the democracy of ancient Athens; how the character of Antigone emerges in later drama, film, and political thought as a figure of resistance against illegitimate authority; and her relevance to contemporary struggles for women's and workers' rights and national liberation. Readings and screenings include versions of Antigone by Sophocles, Anouilh, Brecht, Fugard/Kani/Ntshona, Paulin, Glowacki, Gurney, and von Trotta. GER:DB-Hum, EC-Gender
3-5 units, Aut (Rehm, R)

DRAMA 13N. Law and Drama
(Stanford Introductory Seminar) Preference to freshmen. Beyond the obvious traits that make a good courtroom drama, theater and jurisprudence have much more in common. Just as drama is engaged not only in entertainment but also in examination of social conventions and mechanisms, so law is not only concerned with dispensing justice but with shaping and maintaining a viable human community. Students read and discuss a series of plays in which court proceedings are at the center of dramatic action and concluding with an investigation of the new genre of documentary drama.
3-5 units, Aut (Jakovljevic, B)

DRAMA 17N. Latino/Latina Performance in the United States
(Stanford Introductory Seminar) (Same as CSRE 160N) Preference to freshmen. Introduction to works by U.S. Latino and Latina performance artists producing from the margins of the mainstream Euro-American theater world. We will examine how performance art serves as a kind of dramatized political forum for Latino/a artists, producing some of the most transgressive explorations of queer and national/ethnic identities in the U.S. today. By the course¿s conclusion, each student will create and perform in a staged reading of an original performance piece. GER:DB-Hum, EC-AmerCul
3 units, Win (Moraga, C)

DRAMA 20. Acting for Non-Majors
(Same as DRAMA 124D) A class designed for all interested students. Creative play, ensemble work in a supportive environment. Designed for the student to experience a range of new creative skills, from group improvisation to partner work. Introductory work on freeing the natural voice and physical relaxation. Emphasis on rediscovering imaginative and creative impulses. Movement improvisation, listening exercises, and theater games release the energy, playfulness and willingness to take risks that is the essence of free and powerful performance. Course culminates with work on dramatic text.
1-3 units, Aut (Kostopoulos, K), Win (Kostopoulos, K), Spr (Kostopoulos, K), Sum (Kostopoulos, K)

DRAMA 22. Scene Work
For actors who complete substantial scene work with graduate directors in the graduate workshop.
1-2 units, Aut (Staff), Win (Staff), Spr (Staff)

DRAMA 25N. Science-in-Theatre: A New Genre?
(Stanford Introductory Seminar) (Same as CHEM 25Q) Preference to sophomores. How scientists acquire their rules, mores, and idiosyncrasies through a form of intellectual osmosis in a mentor-disciple relationship. Scientists represented as Frankensteins or nerds, rather than normal. Why more intellectually challenging plays have appeared on the Anglo-American theatre scene where scientific behavior and even science are presented accurately. Students engage in a playwriting experiment.
3 units, Win (Djerassi, C)

DRAMA 28. Makeup for the Stage
Techniques of make-up application and design for the actor and artist including corrective, age, character, and fantasy. Emphasis placed on utilizing make-up for development of character by the actor. Limited enrollment.
2 units, Aut (Strayer, C)

DRAMA 29. Theater Performance: Acting
Students cast in department productions receive credit for their participation as actors; 1-2 units for graduate directing workshop projects and 1-3 units for major productions (units determined by instructor). May be repeated for credit. Prerequisite: consent of instructor.
1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

DRAMA 30. How Theater is Designed
Team-taught. An introduction to theatrical set, costume and lighting design. Emphasis on balancing practical skill with conceptual ideas for live stage performance. Hands-on projects.
4 units, Aut (Gambatese, E; Ramsaur, M; Strayer, C), Sum (Staff)

DRAMA 31. Introduction to Lighting and Production
How light contributes to the creation of mood and atmosphere and different kinds of visibility in theatrical storytelling. The use of controllable qualities of light including color, brightness, angle, and movemen in the theatrical process of creative scenography. Hands-on laboratory time.
4 units, Win (Ramsaur, M)

DRAMA 34. Stage Management Techniques
The production process, duties, and responsibilities of a stage manager. Skills needed to stage manage a production.
2-4 units, Aut (Apperson, L)

DRAMA 39. Theatre Crew
Under faculty guidance, working backstage on Drama Department productions. Open to any student interested in gaining back stage experience. Night and weekend time required.
1-3 units, Aut (Apperson, L; Ramsaur, M), Win (Apperson, L; Ramsaur, M), Spr (Apperson, L; Ramsaur, M), Sum (Staff)

DRAMA 39D. Theater Performance: Prosser Stage Management
For students stage mananging a Department of Drama Senior Project or Assistant Staage managing a Department Drama production
2-4 units, Aut (Staff), Win (Staff), Spr (Staff)

DRAMA 42. Costume Construction
Course will cover the basics of costume and garment construction. Includes hand and machine skills as well as basic patterning ideas that may be applied to more advanced projects. Lecture/Lab
2 units, Win (Strayer, C)

DRAMA 101H. How Theater Thinks: Introduction to Theater and Performance
Gateway course for majors and students considering the Drama major. Theater practices and techniques such as space, actor, language, props, and composition: what is unique about them and how they address the spectator. Sources include plays and theoretical texts.
3-5 units, Win (Menon, J), Spr (Jakovljevic, B)

DRAMA 101P. How Practice Practices
(Same as DRAMA 341) This course explores the practical tools of theatre making. From thinking, to sketching, to composing theatre and performance, this course will serve as a general introduction to the practice of theatre.
3-5 units, Win (Staff)

DRAMA 103. Beginning Improvising
The improvisational theater techniques that teach spontaneity, cooperation, team building, and rapid problem solving, emphasizing common sense, attention to reality, and helping your partner. Based on TheatreSports by Keith Johnstone. Readings, papers, and attendance at performances of improvisational theater. Limited enrollment.
3 units, Aut (Klein, D), Win (Klein, D)

DRAMA 104. Introduction to Sketch Comedy
Writing, directing, and performing original comic scenes, live and on video. Emphasis is on collaborative ensemble process and product. Topics include character, premise, satire, parody, joke writing, and comic timing. Prerequisite: 103 or 121C, or consent of instructor.
3 units, Spr (Klein, D)

DRAMA 110. IDA & Teatro Vision Collaboration: The Burciaga Play Project
Culture Clash veteran performer, Herbert Siguenza, will come to Stanford to lead a workshop with students on the signature research to performance method of Culture Clash while conducting interviews with faculty, staff and alumni to develop a new work on the life and art of Jose Antonio Burciaga. GER:DB-Hum
3-5 units, Aut (Hernandez, G)

DRAMA 120A. Fundamentals of Acting
A substantive introduction to the basics of the craft of acting, this course gives all incoming students the foundation of a common vocabulary. Students will learn fundamental elements of dramatic analysis, and how to apply it in action. Topics include scene analysis, environment work, psychological and physical scoring, and development of a sound and serviceable rehearsal technique. Scene work will be chosen from accessible, contemporary, and realistic plays. Outside rehearsal time required.
1-3 units, Aut (Freed, A), Win (Kostopoulos, K)

DRAMA 120B. Fundamentals of Acting
Learn how to expand character work, beyond what is immediately familiar. Continuing basic practices from the first part of the sequence, in this quarter they will look beyond the strictly contemporary, and may begin to approach roles drawn from more challenging dramatic texts. This might include plays chosen from mid-century American classics, World Theater, or other works with specific historic or cultural requirements. Actors begin to learn how a performing artist researches and how that research can be used to enrich and deepen performance. Prerequisite: 120A or consent of instructor.
1-3 units, Spr (Kostopoulos, K)

DRAMA 120D. Studio Performance
Rehearsal and development of a studio performance project for an end of quarter presentation. Emphasis is on development of acting skills with minimal technical support. Material chosen from classic plays, American realism, world theater, or created group ensemble pieces.
1-5 units, not given this year

DRAMA 120V. Vocal Production and Audition
(Same as DRAMA 210V) An introductory study of the vocal mechanism and the development of voice and articulation for the stage. The actor's tools of phonetics, verbal action, and text analysis. Vocal technique applied to the actor's process in preparation for audition. Actors participate in the audition process, from beginning to end. Emphasis is on relaxation, selection of appropriate material, and versatility to show contrast and range.
1-3 units, Aut (Kostopoulos, K), Spr (Staff)

DRAMA 121C. Physical Characterization
Workshop incorporating styles of movement and characterization for the stage. Tools to aid in theatrical transformation. Triggers include psychological gesture, shifting centers, full face photographs, collected live studies, vocal shifts, and rhythmic and metabolic changes.
3 units, Aut (Bihr, J)

DRAMA 121S. Acting Shakespeare Project
Work on a shortened Shakespeare play leading to a studio performance project. Skills in understanding and performing Shakespeare, conducted as series of rehearsals, and culminating in group performance. Development of voice, movement, and speaking skills necessary for classical theater work. Prerequisites: DRAMA120A,B, or consent of instructor.
3 units, Win (Bihr, J)

DRAMA 122P. Undergraduate Performance Project
By Audition: Studio Production of Timberlake Wertenbaker's 1988 play, ""Our Country's Good. A significant contemporary work about the ability of art to dignify human lives, the drama is set a penal colony in New South Wales in the late 18th century. This project also involves a concentrated study of relevant historical and cultural themes.
2-9 units, Spr (Freed, A; Murphy, C)

DRAMA 124D. Acting for Non-Majors
(Same as DRAMA 20) Creative play, ensemble work in a supportive environment. New creative skills, from group improvisation to partner work. Introductory work on freeing the natural voice and physical relaxation. Emphasis on rediscovering imaginative and creative impulses. Movement improvisation, listening exercises, and theater games release the energy, playfulness, and willingness to take risks that is the essence of free and powerful performance. Course culminates with work on dramatic text.
1-3 units, Aut (Kostopoulos, K), Win (Kostopoulos, K), Spr (Kostopoulos, K), Sum (Kostopoulos, K)

DRAMA 127AC. Actors for Directing Projects
This class provides students with an opportuinty to enhance their acting skills. Working with directing instructors, students will participate in a variety of actor/director projects; Directed by Joanna Settle in the Autumn and Professor Rush Rehm in the Winter.
1-2 units, Aut (Settle, J), Win (Rehm, R)

DRAMA 131. Lighting Design
Hands-on laboratory projects in lighting and designing stage productions and other live performances. The content and format of lighting plots. Prerequisite DRAMA 31.
4 units, Spr (Ramsaur, M)

DRAMA 132. Costume Design
Process of designing costumes for the stage, covering script analysis, rendering techniques, character development and conceptual ideas. Project related work with smaller, pertinent exercises.Prerequisite: 30 or consent of instructor.
4 units, Spr (Strayer, C)

DRAMA 133. Stage Scenery Design
Craft and Theory of stage scenery design including visual research, spatial organization, basic drafting, sketching and model-building. Prerequisite: 30, or consent of instructor.
3-4 units, Win (Gambatese, E)

DRAMA 134. Stage Management Project
For students stage managing a Department of Drama production.
2-5 units, Aut (Staff), Win (Apperson, L), Spr (Apperson, L)

DRAMA 137. Hand Drafting for Designers
Fundamentals of hand-drafting. Standard drawing conventions; the use of line weight, color, composition, and graphic style. Creation of construction documents for real-world applications.May be repeated for credit.
3 units, Spr (Gambatese, E)

DRAMA 140. Projects in Theatrical Production
(Same as DRAMA 240) Assistant directing; stage, costume, lighting, and sound design; technical production, stage managing, or other work in connection with Department of Drama productions. Prerequisite: consent of instructor.
1-4 units, Aut (Staff), Win (Staff), Spr (Staff)

DRAMA 151. Greek Tragedy
(Same as CLASSGEN 151, DRAMA 251) The plays of Aeschylus, Sophocles, and Euripides and the theatrical genre that developed along with the radical democracy of ancient Athens. Plays include the Oresteia, Prometheus Bound, Persians, Antigone, Electra, Oedipus Tyrannus, Philoctetes, Medea, Heracles, Trojan Women, Helen, Ion, and the Bacchae. Focus on the dramatic challenges posed by these plays, their political and historical context, and what they teach about today's theater.
3-5 units, Aut (Rehm, R)

DRAMA 151T. Great Books: Dramatic Traditions
(Same as DRAMA 351) The most influential and enduring texts in the dramatic canon from Sophocles to Shakepeare, Chekhov to Soyinka. Their historical and geopolitical contexts. Questions about the power dynamics involved in the formation of canons.
3-5 units, Win (Menon, J)

DRAMA 152. Beckett
(Same as DRAMA 358C, ENGLISH 389B) Beckett's plays and late writing, which have been described as proto-performance art. Recent Beckett scholarship, including new work about his analysis with Bion.
3-5 units, Spr (Phelan, M)

DRAMA 154RE. Residency:Think Like A Mountain
(Same as DRAMA 354RE) Practice and theory course that queries the validity of treating nature as a construct produced by language; this debate in the arts, sciences, and the humanities. From September 6-17, 2010 students partake in a field trip to the Rocky Mountains and participate in a seminar, attend the American Indian Artist Symposium, trek in Glacier National Park, visit the Helena National Forest, and produce and document two artworks that incorporate site. Permission Required.
2 units, Aut (Strom, M; Carlson, A; Preston, V), given once only

DRAMA 154SE. Seminar:Think Like A Mountain
(Same as DRAMA 354SE) Contemporary time-based art production in which the human is but one life form amount many. Currents in performance, participatory aesthetics, site-work, and social practices that challenge the humanist divisions of society and nature, human and animal, organic and technological. These debates in the arts, sciences, and the humanities through readings, discussions, field trips, visiting artist, and scholars.
3-5 units, Aut (Strom, M; Preston, V), given once only

DRAMA 156H. Dance and Theater: Twentieth-Century German Encounters
(Same as DANCE 156H, DRAMA 256H) 20th-century German experiments at the intersections of dance and theater. From explorations with expressive bodies to propaganda spectacles and post-dramatic performances: how do German artistic and cultural history combine with questions of medium and form? What do they look like in contemporary encounters? Written and performed assignments.
3-5 units, Aut (Elswit, K)

DRAMA 157H. Photography and Performance
(Same as ARTHIST 260A, DRAMA 257H) Intersections of performance and photography in theories, artistic practices, and daily lives: from photoconceptualism to surveillance and family portraits. How does performance remain differently through documentation? What does it mean to understand photographs as performances? Topics include stillness, traces, posing, and theatricality. Written and practical assignments. GER:DB-Hum
4 units, Win (Fay, B; Elswit, K)

DRAMA 158. Body and Camera
(Same as DRAMA 258S) Course explores interconnectedness between bodies, moving images and technologies. We will consider these shifting meanings through use of image capturing tools that extend or act as a prosthetic for the body. Students produce three projects using HD cameras, editing programs, real-time and computer control for video projectors. Against the histories of performance, media art and dance the course examines ways that digital moving images of the body produce meaning, circulate and expand on the project of live arts.
3-5 units, Aut (Staff)

DRAMA 160. Dance and History: From Postwar to Postmodernism
(Same as DANCE 160, DRAMA 260) The cultural and historical unfolding of the genre of contemporary performance known as postmodern dance over the past six decades. Dance history used to trace the effects of visual art and movement experimentalists as they have teamed up since the first decades of the 20th century, redrawing the boundaries of live art and dance performance. GER:DB-Hum, EC-Gender
4 units, Win (Ross, J)

DRAMA 162. Performance and the Text
(Same as DRAMA 262) Formal elements in Greek, Elizabethan, Noh, Restoration, romantic, realistic, and contemporary world drama; how they intersect with the history of performance styles,

character, and notions of action. Emphasis is on how performance and media intervene to reproduce, historicize, or criticize the history of drama. GER:DB-Hum

5 units, not given this year

DRAMA 164R. The Homeric Muse: Iliad, Odyssey, and Their Epic Influence

(Same as CLASSGEN 164) The course explores the great Homeric epics, the Iliad and Odyssey, and then turns to Derek Walcott's masterful re-working of Homer's poems, his Nobel-prize winning Omeros. Students also will attend the theatrical and cinematic adaptations that Stanford Summer Theater (SST) presents, featuring a production of The Wanderings of Odysseus, a staged reading of Walcott's Omeros, and films such as Oh Brother, Where Art Thou? Students also will also attend the SST symposium, featuring scholars from Oxford University and Stanford, who will discuss the Homeric epics and their influence.

3-5 units, Sum (Rehm, R)

DRAMA 166H. Historiography of Theater

(Same as DRAMA 304) Goal is to design an undergraduate theater history class. Standard theater history textbooks, alternative models of theater history scholarship, and critical literature engaging historiography in general.

3-5 units, Win (Rayner, A)

DRAMA 167. Avant Garde Theater

(Same as DRAMA 267) From its origins in the early 19th century to the present. GER:DB-Hum

5 units, Win (Jakovljevic, B)

DRAMA 168H. Art and Life: The Second Avant Garde

(Same as DRAMA 268H) Experiments in the second half of the 20th century that produced new genres such as happenings and performance art, and theoretical debates that attempted to reformulate relations between art forms and their changed role in society. How these fundamentals of performance were challenged and reshaped. GER:DB-Hum

5 units, not given this year

DRAMA 169A. Cultural Traffic: Race, Performance, and Globalization

(Same as AFRICAAM 169A, AMSTUD 169, CSRE 169A, DRAMA 303A) This course will examine the transnational intersections of race and performance. It will consider the question of s race understood internationally and how do such definitions travel. We examine critical race theory and study constructions of race through the lens of performance. The course will interrogate the transnational meanings of such performances. Students in this course will read, study, analyze and potentially even stage theoretical and performance texts from both inside and outside of the United States. Course also satisfies Drama 302/303 requirement.

3-5 units, Aut (George, N)

DRAMA 170A. Introduction to Directing

(Same as DRAMA 370) Practices of stage composition, work with the actor, approaches to character, and techniques of storytelling. Prerequisite: consent of instructor.

3-5 units, Aut (Settle, J)

DRAMA 170B. Directing Workshop: The Actor-Director Dialogue

(Same as DRAMA 372) This course focuses on the actor-director dialogue. We will work with actors and directors developing approaches to collaboration that make the actor-director dialogue in theater.

3-5 units, Win (Rehm, R)

DRAMA 177. Writing for Performance: The Fundamentals

(Same as CSRE 177, DRAMA 277) Course introduces students to the basic elements of playwriting and creative experimentation for the stage. Topics include: character development, conflict and plot construction, staging and setting, and play structure. Script analysis of works by contemporary playwrights may include: Marsha Norman, Patrick Shanley, August Wilson, Suzan-Lori Parks, Paula Vogel, Octavio Solis and others. Table readings of one-act length work required by quarter¿s end. GER:DB-Hum

5 units, Win (Moraga, C)

DRAMA 178. Page to Stage: Playwriting and Solo Performance

(Same as DRAMA 278) Dramatic writing: scripted and solo, and as performed by actors or by the playwright. Physical and psychological theatrical action. Development of skills in dialogue, story structure, style, and personal voice. Script readings and directed staging sessions.

3-5 units, Spr (Freed, A)

DRAMA 179C. Chroniclers of Desire: Creative Non-Fiction Writing Workshop

(Same as CSRE 179C, DRAMA 279C) The study and practice of personal memoir writing and literary journalism. Course explores those writings that contain a public and private story, navigating an intimate and institutional world. Student writers serve as public chroniclers whose subjective point of view and experience attempt to provide a truth greater than what the facts can offer.

3-5 units, Spr (Moraga, C)

DRAMA 179G. Indigenous Identity in Diaspora: People of Color Art Practice in North America

(Same as CSRE 179G, CSRE 279G, DRAMA 279G) This ""gateway"" core course to the IDA emphasis in CSRE offers a 21st century examination of people of color aesthetics and related politics, drawing from contemporary works (literature, music, visual and performing arts) in conversation with their native (especially American Indigenous and African) origins. Issues of gender and sexuality in relation to cultural identity are also integral to this study. Students will be required to produce a final work, integrating critical writing with a creative project.

3-5 units, Spr (Moraga, C)

DRAMA 180Q. Noam Chomsky: The Drama of Resistance

(Stanford Introductory Seminar) Preference to sophomores. Chomsky's ideas and work which challenge the political and economic paradigms governing the U.S. Topics include his model for linguistics; cold war U.S. involvements in S.E. Asia, the Middle East, Central and S. America, the Caribbean, and Indonesia and E. Timor; the media, terrorism, ideology, and culture; student and popular movements; and the role of resistance. GER:DB-Hum

3-5 units, Aut (Rehm, R)

DRAMA 190. Special Research

Individual project on the work of a playwright, period, or genre. Prerequisite: consent of instructor.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 191. Independent Study

Individual supervision of off-campus internship. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 200. Senior Project

See ""Undergraduate Programs"" for description. (Staff)

2-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 201A. Honors Colloquium

See ""Undergraduate Programs"" for description.

1 unit, Aut (Menon, J), Win (Menon, J), Spr (Menon, J), Sum (Staff)

DRAMA 201B. Honors Colloquium

See ""Undergraduate Programs"" for description.

1 unit, Aut (Menon, J), Win (Menon, J), Spr (Menon, J), Sum (Staff)

DRAMA 201C. Honors Colloquium

See ""Undergraduate Programs"" for description.

1 unit, Aut (Menon, J), Win (Menon, J), Spr (Menon, J), Sum (Staff)

DRAMA 201D. Honors Colloquium

See ""Undergraduate Programs"" for description.

1 unit, Aut (Menon, J), Win (Menon, J), Spr (Menon, J), Sum (Staff)

DRAMA 202. Honors Thesis

See ""Undergraduate Programs"" for description. May be repeated for credit. (Staff)

2-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 203. Advanced Improvisation

Further development of improvisational skills.

3 units, Aut (Klein, D)

DRAMA 210V. Vocal Production and Audition

(Same as DRAMA 120V) An introductory study of the vocal mechanism and the development of voice and articulation for the stage. Students will be introduced to the actor's tools of phonetics, verbal action and text analysis. Vocal technique will then be applied to the actor's process in preparation for audition. Actors will

fully participate in the audition process, from beginning to end. Emphasis will be on relaxation, selection of appropriate material, and versatility to show contrast and range.

1-3 units, Aut (Kostopoulos, K), Spr (Staff)

DRAMA 213. Stanford Improv Ensemble

By audition only, for members of the improvisation troupe. Special project work. Prerequisite: 103.

1-2 units, Aut (Klein, D), Win (Klein, D), Spr (Klein, D)

DRAMA 231. Advanced Stage Lighting Design

Individually structured class in lighting mechanics and design through experimentation, discussions, and written reports. Prerequisite: 131 or consent of instructor.

1-5 units, Aut (Staff), Win (Staff), Spr (Ramsaur, M), Sum (Staff)

DRAMA 232. Advanced Costume Design

Individually structured tutorial for costume designers. May be repeated for credit. Prerequisite: 132 or consent of instructor.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 233. Advanced Scene Design

Individually structured workshop. May be repeated for credit. Prerequisite: 133 or consent of instructor.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 234. Advanced Stage Management Project

For students stage managing a Department of Drama production. Prerequisite: 134.

2-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 235. Advanced Sound Design

Individually structured tutorial for sound designers. May be repeated for credit. Prerequisite: 135 or consent of instructor. (Staff)

1-5 units, Aut (Staff), Win (Staff), Sum (Staff)

GRADUATE COURSES IN DRAMA

Primarily for graduate students; undergraduates may enroll with consent of instructor.

DRAMA 240. Projects in Theatrical Production

(Same as DRAMA 140) Assistant directing; stage, costume, lighting, and sound design; technical production, stage managing, or other work in connection with Department of Drama productions. Prerequisite: consent of instructor.

1-4 units, Aut (Staff), Win (Staff), Spr (Staff)

DRAMA 251. Greek Tragedy

(Same as CLASSGEN 151, DRAMA 151) Greek Tragedy explores the plays of Aeschylus, Sophocles, and Euripides and the theatrical genre that developed along with the radical democracy of ancient Athens. Plays include the Oresteia, Prometheus Bound, Persians, Antigone, Electra, Oedipus Tyrannus, Philoctetes, Medea, Heracles, Trojan Women, Helen, Ion, and the Bacchae. We will focus on the dramatic challenges posed by these plays, their political and historical context, and what they can teach us about today¿s theater.

3-5 units, Aut (Rehm, R)

DRAMA 256H. Dance and Theater: Twentieth-Century German Encounters

(Same as DANCE 156H, DRAMA 156H) Twentieth-century German experiments at the intersections of dance and theater. From explorations with expressive bodies to propaganda spectacles and postdramatic performances: how do German artistic and cultural history combine with questions of medium and form? What do they look like in contemporary encounters? Written and performed assignments.

3-5 units, Aut (Elswit, K)

DRAMA 257H. Photography and Performance

(Same as ARTHIST 260A, DRAMA 157H) Intersections of performance and photography in theories, artistic practices, and daily lives: from photoconceptualism to surveillance and family portraits. How does performance remain differently through documentation? What does it mean to understand photographs as performances? Topics include stillness, traces, posing, and theatricality. Written and practical assignments.

4 units, Win (Fay, B; Elswit, K)

DRAMA 258S. Body and Camera

(Same as DRAMA 158) Course explores interconnectedness between bodies, moving images and technologies. We will consider these shifting meanings through use of image capturing tools that extend or act as a prosthetic for the body. Students produce three projects using HD cameras, editing programs, real-time and computer control for video projectors. Against the histories of performance, media art and dance the course examines ways that digital moving images of the body produce meaning, circulate and expand on the project of live arts.

3-5 units, Aut (Staff)

DRAMA 260. Dance and History: From Postwar to Postmodernism

(Same as DANCE 160, DRAMA 160) The cultural and historical unfolding of the genre of contemporary performance known as postmodern dance over the past six decades. Dance history used to trace the effects of visual art and movement experimentalists as they have teamed up since the first decades of the 20th century, redrawing the boundaries of live art and dance performance.

4 units, Win (Ross, J)

DRAMA 262. Performance and the Text

(Same as DRAMA 162) Formal elements in Greek, Elizabethan, Noh, Restoration, romantic, realistic, and contemporary world drama; how they intersect with the history of performance styles, character, and notions of action. Emphasis is on how performance and media intervene to reproduce, historicize, or criticize the history of drama.

5 units, not given this year

DRAMA 267. Avant Garde Theater

(Same as DRAMA 167) From its origins in the early 19th century to the present.

5 units, Win (Jakovljevic, B)

DRAMA 268H. Art and Life: The Second Avant Garde

(Same as DRAMA 168H) Experiments in the second half of the 20th century that produced new genres such as happenings and performance art, and theoretical debates that attempted to reformulate relations between art forms and their changed role in society. How these fundamentals of performance were challenged and reshaped.

5 units, not given this year

DRAMA 277. Writing for Performance: The Fundamentals

(Same as CSRE 177, DRAMA 177) Course introduces students to the basic elements of playwriting and creative experimentation for the stage. Topics include: character development, conflict and plot construction, staging and setting, and play structure. Script analysis of works by contemporary playwrights may include: Marsha Norman, Patrick Shanley, August Wilson, Suzan-Lori Parks, Paula Vogel, Octavio Solis and others. Table readings of one-act length work required by quarter¿s end.

5 units, Win (Moraga, C)

DRAMA 278. Page to Stage: Playwriting and Solo Performance

(Same as DRAMA 178) Dramatic writing: scripted and solo, and as performed by actors or by the playwright. Physical and psychological theatrical action. Development of skills in dialogue, story structure, style, and personal voice. Script readings and directed staging sessions.

3-5 units, Spr (Freed, A)

DRAMA 279C. Chroniclers of Desire: Creative Non-Fiction Writing Workshop

(Same as CSRE 179C, DRAMA 179C) This course emphasizes the study and practice of personal memoir writing and literary journalism. The class will explore those writings that contain a public and private story, navigating an intimate and institutional world. Student writers will serve as public chroniclers whose subjective point of view and experience attempt to provide a truth greater than what ¿the facts¿ can offer.

3-5 units, Spr (Moraga, C)

DRAMA 279G. Indigenous Identity in Diaspora: People of Color Art Practice in North America

(Same as CSRE 179G, CSRE 279G, DRAMA 179G) This ""gateway"" core course to the IDA emphasis in CSRE offers a 21st century examination of people of color aesthetics and related politics, drawing from contemporary works (literature, music, visual and performing arts) in conversation with their native (especially American Indigenous and African) origins. Issues of gender and sexuality in relation to cultural identity are also integral to this study. Students will be required to produce a final work, integrating critical writing with a creative project.

3-5 units, Spr (Moraga, C)

DRAMA 290. Special Research
Individual project on the work of a playwright, period, or genre.
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 300A. Critical Styles I
Literary criticism and theory, emphasizing style as evidence of historical, cultural, and ideological concerns. Assumptions about written texts by authors such as Coleridge, Bradley, and Burke. How style reveals context. Students write in the style of authors discussed.
3-5 units, Aut (Jakovljevic, B)

DRAMA 300B. Critical Styles II
Notions of performance as they relate to gender, race, and globalization in critics such as Derrida, Butler, and Phelan. How style reveals context. Students write in the style of authors discussed.
3-5 units, Win (Rayner, A)

DRAMA 301. Performance and Performativity
Performance theory through topics including: affect/trauma, embodiment, empathy, theatricality/performativity, specularity/visibility, liveness/disappearance, belonging/abjection, and utopias and dystopias. Readings from Schechner, Phelan, Austin, Butler, Conquergood, Roach, Schneider, Silverman, Caruth, Fanon, Moten, Anzaldúa, Agamben, Freud, and Lacan. May be repeated for credit.
5 units, Spr (Menon, J)

DRAMA 303A. Cultural Traffic: Race, Performance, and Globalization
(Same as AFRICAAM 169A, AMSTUD 169, CSRE 169A, DRAMA 169A) This course will examine the transnational intersections of race and performance. It will consider the question of s race understood internationally and how do such definitions travel. We examine critical race theory and study constructions of race through the lens of performance. The course will interrogate the transnational meanings of such performances. Students in this course will read, study, analyze and potentially even stage theoretical and performance texts from both inside and outside of the United States. Course also satisfies Drama 302/303 requirement.
3-5 units, Aut (George, N)

DRAMA 304. Historiography of Theater
(Same as DRAMA 166H) Goal is to design an undergraduate theater history class. Standard theater history textbooks, alternative models of theater history scholarship, and critical literature engaging historiography in general.
3-5 units, Win (Rayner, A)

DRAMA 321. Proseminar
Workshop. Skills needed to participate in the academic profession including abstract, conference presentation, and dissertation or book chapter.
3-5 units, Aut (Phelan, M)

DRAMA 341. How Practice Practices
(Same as DRAMA 101P) This course explores the practical tools of theatre making. From thinking, to sketching, to composing theatre and performance, this course will serve as a general introduction to the practice of theatre.
3-5 units, Win (Staff)

DRAMA 351. Great Books: Dramatic Traditions
(Same as DRAMA 151T) The most influential and enduring texts in the dramatic canon from Sophocles to Shakepeare, Chekhov to Soyinka. Their historical and geopolitical contexts. Questions about the power dynamics involved in the formation of canons.
3-5 units, Win (Menon, J)

DRAMA 354RE. Residency:Think Like A Mountain
(Same as DRAMA 154RE) Practice and theory course that queries the validity of treating nature as a construct produced by language. Course will examine this debate in the arts, sciences, and the humanities. From September 6-17, 2010 students will partake in a two-week field trip to the Rocky Mountains. During this time students will participate in a seminar, attend the American Indian Artist Symposium, trek in Glacier National Park visit the Helena National Forest and produce and document two artworks that incorporate site. Permission Required.
2 units, Aut (Strom, M; Carlson, A; Preston, V), given once only

DRAMA 354SE. Seminar:Think Like A Mountain
(Same as DRAMA 154SE) Seminar will examine contemporary time-based art production in which the ""human"" is but one life form amount many. We will survey currents in performance, participatory aesthetics, site-work and social practices that challenge the humanist divisions of society and nature, human and animal, organic and technological. Course will consider these debates in the arts, sciences and the humanities through readings, discussions, field trips, visiting artist and scholars.
3-5 units, Aut (Strom, M; Preston, V), given once only

DRAMA 358C. Beckett
(Same as DRAMA 152, ENGLISH 389B) Beckett's plays and late writing, which have been described as proto-performance art. Recent Beckett scholarship, including new work about his analysis with Bion.
3-5 units, Spr (Phelan, M)

DRAMA 370. Introduction to Directing
(Same as DRAMA 170A) Practices of stage composition, work with the actor, approaches to character, and techniques of storytelling. Prerequisite: consent of instructor.
3-5 units, Aut (Settle, J)

DRAMA 372. Directing Workshop: The Actor-Director Dialogue
(Same as DRAMA 170B) This course focuses on the actor-director dialogue. We will work with actors and directors developing approaches to collaboration that make the actor-director dialogue in theater.
3-5 units, Win (Rehm, R)

DRAMA 373. Directing and Dramaturgy
Dramaturgy, directorial methods, and visual concepts in the production of plays from the Elizabethan tradition to postmodernist texts. Work on the text is tested in the staging of scenes.
3-5 units, Win (Staff)

DRAMA 374. Projects in Directing
Creative projects to be determined in consultation with Drama graduate faculty and production advisor
3-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 375. Main Stage Production
Production of a full-length play as part of the Department of Drama season. Public performance.
3-5 units, Aut (Ramsaur, M), Win (Elam, H), Spr (Elam, H), Sum (Staff)

DRAMA 377. Graduate Directors' Staged Reading Project
Presentation of a new or newly adapted work for the stage, in a mode employed in professional theater for the development of new plays. Two to four rehearsals. Public performance.
2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 390. Directed Reading
(Staff) Students may take directing reading only with the permission of their dissertation advisor.
1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 398. Graduate Dissertation Workshop with Professor Jisha Menon
This course offers graduate students the opportunity to work intensively on their research projects by sharing drafts of their prospectus, dissertation outlines, chapters in order to obtain critical feedback. Course meets every other week over Fall and Winter quarters.
1-5 units, Aut (Menon, J), Win (Menon, J)

DRAMA 399. Dissertation Research
(Staff)
1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 801. TGR Project
(Staff)
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

DRAMA 802. TGR Dissertation
(Staff)
0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EARTH SYSTEMS (EARTHSYS) COURSES

UNDERGRADUATE COURSES IN EARTH SYSTEMS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

EARTHSYS 2. Earth System History
(Same as EESS 2) The evolution of Earth's systems from formation to the present. Couplings and relationships among biosphere, lithosphere, hydrosphere, and atmosphere. Topics include the evolution of life, origin of the oceans, atmosphere and continents, and changes in climate. Modern climate change and anthropogenic effects. GER:DB-NatSci
3 units, Win (Chamberlain, P)

EARTHSYS 4. Evolution and Extinction: Introduction to Historical Geology
(Same as GES 4) Focus is on the end-Cretaceous mass extinction. Principles of stratigraphy, correlation, the geological timescale, the history of biodiversity, and the interpretation of fossils. The use of data from sedimentary geology, geochemistry, and paleontology to test theories to explain the mass extinction event. Two half-day field trips. GER:DB-NatSci
4 units, alternate years, not given this year

EARTHSYS 8. The Oceans: An Introduction to the Marine Environment
(Same as EESS 8) For non-majors and majors in earth science or environmental science. The major ocean ecosystems and how they function both naturally and under the influence of human activities. Emphasis on the dominant organisms of each ecosystem and how they interact with each other and their physical and chemical environment. The types of ecosystems include coral reefs, deep-sea hydrothermal vents, coastal upwelling systems, blue-water oceans, estuaries, near-shore dead zones. Lectures, multimedia presentations, and group activities.
4 units, Spr (Arrigo, K)

EARTHSYS 10. Introduction to Earth Systems
For non-majors and prospective Earth Systems majors. Multidisciplinary approach using the principles of geology, biology, engineering, and economics to describe how the Earth operates as an interconnected, integrated system. Goal is to understand global change on all time scales. Focus is on sciences, technological principles, and sociopolitical approaches applied to solid earth, oceans, water, energy, and food and population. Case studies: environmental degradation, loss of biodiversity, and resource sustainability. GER:DB-NatSci
4 units, Aut (Ernst, G)

EARTHSYS 15SI. Reducing Stanford's Carbon Footprint
Sustainability issues within the areas of climate change policy, building energy consumption, the food system, behavior choices, technology, economics, and business solutions. Guest lectures and field trips to local buildings. Examination of Stanford's current carbon profile and energy consumption. Group project focused on reducing Stanford's carbon emissions.
2 units, Spr (Gonzalez Araiza, M)

EARTHSYS 18. Promoting Sustainability Behavior Change at Stanford
Stanford Green Living Council training course. Effective strategies for enacting sustainable behavior change on campus. Community-based social marketing, psychology, sociology, and design. Behavior change intervention project targeting a specific sustainable behavior. Lectures online.
2 units, Aut (Robinson, T)

EARTHSYS 21. Peopling of the Globe: Changing Patterns of Land Use and Consumption Over the Last 50,000 Years
(Same as ANTHRO 18, ARCHLGY 12) Fossil, genetic and archaeological evidence suggest that modern humans began to disperse out of Africa about 50,000 years ago. Subsequently, humans have colonized every major landmass on earth. This class introduces students to the data and issues regarding human dispersal, migration and colonization of continents and islands around the world. We explore problems related to the timing and cause of colonizing events, and investigate questions about changing patterns of land use, demography and consumption. Students are introduced to critical relationships between prehistoric population changes and our contemporary environmental crisis. GER:DB-SocSci
3-5 units, Aut (Bird, D)

EARTHSYS 37N. Energy and the Environment on the Back of an Envelope
(Same as EESS 37N) Preference to freshmen. How quantitative understanding of the Earth helps inform decisions about energy supply. How can enough energy be provided to support future growth and development throughout the world without damaging the natural environment? Focus is on simple quantitative observations and calculations that facilitate evaluation of potential solutions to this problem; algebra only, no calculus. GER:DB-NatSci
3 units, given next year

EARTHSYS 38N. The Worst Journey in the World: The Science, Literature, and History of Polar Exploration
(Stanford Introductory Seminar) (Same as EESS 38N, GES 38N) Preference to freshmen. The isolation of polar explorers under the harshest conditions on Earth, and the chronicles of their explorations and hardships dating to the 1500s for the Arctic and the 1700s for the Antarctic. Focus is on scientific and geographic achievements. Sources include The Worst Journey in the World by Apsley Cherry-Garrard who in 1911 participated in a midwinter Antarctic sledging trip to recover emperor penguin eggs. Class jointly authors essay on themes from such literature. Optional field trip into the high Sierra in December. (Dunbar) GER:DB-NatSci
3 units, Win (Dunbar, R)

EARTHSYS 43Q. Environmental Problems
(Stanford Introductory Seminar) (Same as GES 43Q) Preference to sophomores. Components of multidisciplinary environmental problems and ethical questions associated with decision making in the regulatory arena. Students lead discussions on environmental issues such as groundwater contamination from point and nonpoint sources, cumulative watershed effects related to timber and mining practices, acid rain, and subsurface disposal of nuclear waste. GER:DB-NatSci
3 units, Win (Loague, K)

EARTHSYS 46N. Exploring the Critical Interface between the Land and Monterey Bay: Elkhorn Slough
(Stanford Introductory Seminar) (Same as EESS 46N) Preference to freshmen. Field trips to sites in the Elkhorn Slough, a small agriculturally impacted estuary that opens into Monterey Bay, a model ecosystem for understanding the complexity of estuaries, and one of California's last remaining coastal wetlands. Readings include Jane Caffrey's Changes in a California Estuary: A Profile of Elkhorn Slough. Basics of biogeochemistry, microbiology, oceanography, ecology, pollution, and environmental management.
3 units, Spr (Francis, C)

EARTHSYS 57Q. Climate Change from the Past to the Future
(Stanford Introductory Seminar) (Same as EESS 57Q) Preference to sophomores. Numeric models to predict how climate responds to increase of greenhouse gases. Paleoclimate during times in Earth's history when greenhouse gas concentrations were elevated with respect to current concentrations. Predicted scenarios of climate models and how these models compare to known hyperthermal events in Earth history. Interactions and feedbacks among biosphere, hydrosphere, atmosphere, and lithosphere. Topics include long- and short-term carbon cycle, coupled biogeochemical cycles affected by and controlling climate change, and how the biosphere responds to climate change. Possible remediation strategies.
3 units, Aut (Chamberlain, P)

EARTHSYS 100. Environmental and Geological Field Studies in the Rocky Mountains
(Same as EESS 101, GES 101) Three-week, field-based program in the Greater Yellowstone/Teton and Wind River Mountains of Wyoming. Field-based exercises covering topics including: basics of structural geology and petrology; glacial geology; western cordillera geology; paleoclimatology; chemical weathering; aqueous geochemistry; and environmental issues such as acid mine drainage and changing land-use patterns.
3 units, Aut (Chamberlain, P)

EARTHSYS 101. Energy and the Environment
(Same as ENERGY 101) Energy use in modern society and the consequences of current and future energy use patterns. Case studies illustrate resource estimation, engineering analysis of energy systems, and options for managing carbon emissions. Focus is on energy definitions, use patterns, resource estimation, pollution. Recommended: MATH 21 or 42, ENGR 30. GER:DB-EngrAppSci

3 units, Win (Kovscek, A; Durlofsky, L)

EARTHSYS 102. Renewable Energy Sources and Greener Energy Processes
(Same as ENERGY 102) The energy sources that power society are rooted in fossil energy although energy from the core of the Earth and the sun is almost inexhaustible; but the rate at which energy can be drawn from them with today's technology is limited. The renewable energy resource base, its conversion to useful forms, and practical methods of energy storage. Geothermal, wind, solar, biomass, and tidal energies; resource extraction and its consequences. Recommended: 101, MATH 21 or 42. GER:DB-EngrAppSci

3 units, Spr (Kovscek, A; Gerritsen, M)

EARTHSYS 103. Energy Resources
(Same as CEE 173A, CEE 207A) Comprehensive overview of fossil and renewable energy resources and energy efficiency. Topics covered for each resource: resource abundance, location, recovery, conversion, consumption, end-uses, environmental impacts, economics, policy, and technology. Applied lectures in specific energy sectors: buildings, transportation, the electricity industry, and energy in the developing world. Required field trips to local energy facilities. Optional discussion section for extra unit. GER:DB-EngrAppSci

4-5 units, Aut (Woodward, J; Knapp, K)

EARTHSYS 104. The Water Course
(Same as GEOPHYS 104) The pathway that water takes from rainfall to the tap using student home towns as an example. How the geological environment controls the quantity and quality of water; taste tests of water from around the world. Current U.S. and world water supply issues. GER:DB-NatSci

3 units, not given this year

EARTHSYS 105. Food and Community: New Visions for a Sustainable Future
(Same as EESS 105) Service and research focused on providing healthy and environmentally friendly food for the under served in our community. Hands-on collaboration with the Stanford Glean student group, the Stanford Community Garden, and San Francisco nonprofits. Coverage of the broad spectrum from garden development to food dispersal to the needy. Design and implementation of projects that address an aspect of food and social justice, such as urban farming in low-income communities and sustainable food networks for the elderly. Service Learning Course (certified by Haas Center).

3-5 units, Aut (Chamberlain, P), Win (Chamberlain, P), Spr (Chamberlain, P), Sum (Staff)

EARTHSYS 108. Coastal Wetlands
(Same as EARTHSYS 208) Ecological structure and function of wetlands emphasizing local, coastal wetlands. Topics include: wetland distribution, classification, and history; and interactions between biotic and abiotic components of wetland ecosystems. Labs and local field trips for exposure to landscape patterns, and common sampling equipment and methods. Recommended: 104 or CEE 166A. GER:DB-NatSci

3 units, not given this year

EARTHSYS 109. Creating a Green Student Workforce to Help Implement Stanford's Sustainability Vision
(Same as CEE 109) Examination of program-based local actions that promote resource resource conservation and an educational environment for sustainability. Examination of building-level actions that contribute to conservation, lower utility costs, and generate understanding of sustainability consistent with Stanford's commitment to sustainability as a core value. Overview of operational sustainability including energy, water, buildings, waste, and food systems. Practical training to enable students to become sustainability coordinators for their dorms or academic units.

2 units, Win (Koseff, J; Ahmed, F)

EARTHSYS 111. Biology and Global Change
(Same as BIO 117, EESS 111) The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biology or Human Biology core or graduate standing. GER:DB-NatSci

4 units, Win (Vitousek, P; Arrigo, K)

EARTHSYS 112. Human Society and Environmental Change
(Same as EESS 112, HISTORY 103D) Interdisciplinary approaches to understanding human-environment interactions with a focus on economics, policy, culture, history, and the role of the state. Prerequisite: ECON 1A

4 units, Aut (Naylor, R; Frank, Z; Pizarro Gariazzo, R)

EARTHSYS 113. Earthquakes and Volcanoes
(Same as GEOPHYS 113) Earthquake location, magnitude and intensity scales, seismic waves, styles of eruptions and volcanic hazards, tsunami waves, types and global distribution of volcanoes, volcano forecasting. Plate tectonics as a framework for understanding earthquake and volcanic processes. Forecasting; earthquake resistant design; building codes; and probabilistic hazard assessment. For non-majors and potential earth scientists. GER:DB-EngrAppSci

3 units, Win (Segall, P)

EARTHSYS 114. Field Course on Tropical Biogeochemistry: Amazon as Case Study
(Same as BIO 114) Post-field seminar for students who went on the two-week field trip to the Amazon in September with Brazilian students under Professor Martinelli of the University of São Paulo and Stanford Latin American Studies. Land use changes over the last 30 years including the conversion of natural forest for cattle ranching and soy beans in the Amazon, the largest continuous area of tropical forests on Earth with the greatest number of plant and animal species. In English.

3 units, not given this year

EARTHSYS 116. Ecology of the Hawaiian Islands
(Same as BIO 116) Terrestrial and marine ecology and conservation biology of the Hawaiian Archipelago. Taught in the field in Hawaii as part of quarter-long sequence of courses including Earth Sciences and Anthropology. Topics include ecological succession, plant-soil interactions, conservation biology, biological invasions and ecosystem consequences, and coral reef ecology. Restricted to students accepted into the Earth Systems of Hawaii Program. GER:DB-NatSci

4 units, Aut (Vitousek, P; Palumbi, S), alternate years, not given next year

EARTHSYS 117. Earth Sciences of the Hawaiian Islands
(Same as EARTHSCI 117, EESS 117) Progression from volcanic processes through rock weathering and soil-ecosystem development to landscape evolution. The course starts with an investigation of volcanic processes, including the volcano structure, origin of magmas, physical-chemical factors of eruptions. Factors controlling rock weathering and soil development, including depth and nutrient levels impacting plant ecosystems, are explored next. Geomorphic processes of landscape evolution including erosion rates, tectonic/volcanic activity, and hillslope stability conclude the course. Methods for monitoring and predicting eruptions, defining spatial changes in landform, landform stability, soil production rates, and measuring biogeochemical processes are covered throughout the course. This course is restricted to students accepted into the Earth Systems of Hawaii Program.

4 units, Aut (Fendorf, S), alternate years, not given next year

EARTHSYS 118. Heritage, Environment, and Sovereignty in Hawaii
(Same as ANTHRO 118) The cultural, political economic, and environmental status of contemporary Hawaiians. What sorts of sustainable economic and environmental systems did Hawaiians use in prehistory? How was colonization of the Hawaiian Islands informed and shaped by American economic interests and the nascent imperialsm of the early 20th centrury? How was sovereignty and native Hawaiian identity been shaped by these forces? How has tourism and the leisure industry affected the natural environment? Course uses archaeological methods, ethnohistorical

sources, and historical analysis in an exploration of contemporary Hawaiian social economic and political life.

4 units, Aut (Wilcox, M)

EARTHSYS 122. Paleobiology

(Same as GES 123) Introduction to the fossil record with emphasis on marine invertebrates. Major debates in paleontological research. The history of animal life in the oceans. Topics include the nature of the fossil record, evolutionary radiations, mass extinctions, and the relationship between biological evolution and environmental change. Fossil taxa through time. Exercises in phylogenetics, paleoecology, biostratigraphy, and statistical methods. GER:DB-NatSci

4 units, Spr (Harnik, P)

EARTHSYS 123. From Local to Global: Collaborations for International Environmental Education

(Same as EDUC 122X) A collaboration with three universities in Africa. Discourse and debate using Internet and mobile technology interactions. Topics include the global environment, climate change, sustainable development, and food security.

2 units, not given this year

EARTHSYS 124. Environmental Justice: Local, National, and International Dimensions

(Same as EARTHSYS 224) Focus is on whether minorities and low income citizens suffer disproportionate environmental and health impacts resulting from government and corporate decision making in contexts such as the siting of industrial facilities and waste dumps, toxic chemical use and distribution, and the enforcement of environmental mandates and policies. Implications of environmental justice issues at the international level, emphasizing climate change.

4 units, not given this year

EARTHSYS 130. Soil Physics and Hydrology

(Same as GES 130) The occurrence, distribution, circulation, and reaction of water at the surface and within the near surface. Topics: precipitation, evapotranspiration, infiltration and vadose zone, groundwater, surface water and streamflow generation, and water balance estimates. Current and classic theory in soil physics and hydrology. Urban, rangeland, and forested environments. GER:DB-NatSci

3 units, Aut (Loague, K)

EARTHSYS 131. Communicating Environmental Research Using Narratives and Stories

(Same as EESS 131, EESS 231, EARTHSYS 231) Creative strategies by which earth scientists can overcome impediments to scientific literacy. Construction of stories and narratives out of research. The role of imagination and cognitive perception in environmental issues. Barriers and problems that arise in risk and science awareness. Connections between environmentalism and environmental science. Environmental issues in fictional narratives. The responsible function for earth scientists in public debates. Reflections on the role of science in current and future issues likely to involve members outside of science. Priority given to students seeking degrees in the School of Earth Sciences.

1 unit, not given this year

EARTHSYS 131H. Hydrologically-Driven Landscape Evolution

(Same as GES 131) Materials of the Earth and hydrologically driven landscape processes. Topics: hillslope hydrology, weathering of rocks and soils, erosion, flow failures, mass wasting, and conceptual models of landscape evolution. Current and classic theory in geomorphology. GER:DB-NatSci

3 units, Win (Loague, K)

EARTHSYS 132. Energy and Climate Cooperation in the Western Hemisphere

(Same as EARTHSYS 232, IPS 263, INTNLREL 146A) Current political dynamics in major western hemisphere fossil fuel producers in N. America, the Andean region, the Southern Cone of S. America, and Trinidad and Tobago. The potential for developing sustainable alternative energy resources in the western hemisphere for export particularly biofuels, and its impact on agricultural policy, environmental protection, and food prices. The feasibility of creating regional energy security rings such as the proposed N. American Energy Security and Prosperity Partnership.

4 units, not given this year

EARTHSYS 133. Climate Change Law and Policy: From California to the Federal Government

(Same as EARTHSYS 233) California climate laws, including the California Global Warming Solutions Act of 2006 (AB32), the Clean Cars and Trucks Bill (SB 1493), and the Greenhouse Gas Emissions Performance Standard (SB 1368), and complementary and subsidiary regulations such as the Renewable Portfolio Standard, the Low Carbon Fuel Standard, land use law, and energy efficiency and decoupling. The draft scoping plan to outline California's policies for achieving its ambitious economy-wide reductions in greenhouse gas emissions. The Western Climate Initiative. The history, details, and current status of California's efforts as platforms to delve into larger legal issues.

3 units, Spr (Grenfell, K)

EARTHSYS 134. Stable Isotopes in Biogeochemistry

(Same as EESS 134, EESS 234, EARTHSYS 234) Light stable isotopes and their application to geological, ecological, and environmental problems. Isotopic systematics of hydrogen, carbon, nitrogen, oxygen, and sulfur; chemical and biogenic fractionation of light isotopes in the atmosphere, hydrosphere, and rocks and minerals. GER:DB-NatSci

3 units, Spr (Chamberlain, P)

EARTHSYS 141. Remote Sensing of the Oceans

(Same as EESS 141, EESS 241, EARTHSYS 241) How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features. GER:DB-NatSci

3-4 units, Win (Arrigo, K)

EARTHSYS 142. Remote Sensing of Land

(Same as EESS 162, EARTHSYS 242) The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.

4 units, Win (Lambin, E)

EARTHSYS 143. Marine Biogeochemistry

(Same as EESS 143, EESS 243, EARTHSYS 243) (Graduate students register for 243.) Processes that control the mean concentration and distribution of biologically utilized elements and compounds in the ocean. Processes at the air-sea interface, production of organic matter in the upper ocean, remineralization of organic matter in the water column, and processing of organic matter in the sediments. Cycles of carbon, oxygen, and nutrients; the role of the ocean carbon cycle in interannual to decadal variability, paleoclimatology, and the anthropogenic carbon budget. GER:DB-NatSci

3-4 units, alternate years, not given this year

EARTHSYS 143J. Climate Change in the West: A History of the Future

(Same as HISTORY 243J) Global warming is changing the American West. But this region is no stranger to environmental change and human adaption to harsh environments. How can history create more clear thinking about the current crisis and choices for the future? The long history of climate change in the West, as well as current warming, through scientific research, historical sources, environmental histories, and visions for the future, including plans for mitigation and adaption, scientific predictions, and science fiction.

5 units, Spr (Christensen, J)

EARTHSYS 144. Fundamentals of Geographic Information Science (GIS)

(Same as EESS 164) Survey of geographic information including maps, satellite imagery, and census data, approaches to spatial data, and tools for integrating and examining spatially-explicit data. Emphasis is on fundamental concepts of geographic information science and associated technologies. Topics include geographic data structure, cartography, remotely sensed data, statistical analysis of geographic data, spatial analysis, map design, and geographic information system software. Computer lab assignments. GER:DB-NatSci

4 units, Aut (Nickel, B)

EARTHSYS 146A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation
(Same as EARTHSYS 246A, EESS 146A, EESS 246A, GEOPHYS 146A, GEOPHYS 246A) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

3 units, Win (Thomas, L; Diffenbaugh, N)

EARTHSYS 146B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation
(Same as EARTHSYS 246B, EESS 146B, EESS 246B, GEOPHYS 146B, GEOPHYS 246B) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. Structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic circumpolar current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A/246A or CEE 164/262D or consent of instructor.

3 units, Spr (Thomas, L; Diffenbaugh, N)

EARTHSYS 147. Controlling Climate Change in the 21st Century
(Same as EARTHSYS 247, HUMBIO 116) Global climate change science, impacts, and response strategies. Topics: scientific understanding of the climate system; modeling future climate change; global and regional climate impacts and vulnerability; mitigation and adaptation approaches; the international climate policy challenge; and decarbonization of energy and transportation systems. GER:DB-NatSci

3 units, not given this year

EARTHSYS 155. Science of Soils
(Same as EESS 155) Physical, chemical, and biological processes within soil systems. Emphasis is on factors governing nutrient availability, plant growth and production, land-resource management, and pollution within soils. How to classify soils and assess nutrient cycling and contaminant fate. Recommended: introductory chemistry and biology. GER:DB-NatSci

4 units, Spr (Fendorf, S)

EARTHSYS 156. Soil and Water Chemistry
(Same as EESS 156, EESS 256, EARTHSYS 256) (Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology. GER:DB-NatSci

1-4 units, alternate years, not given this year

EARTHSYS 158. Geomicrobiology
(Same as EESS 158, EESS 258, EARTHSYS 258) How microorganisms shape the geochemistry of the Earth's crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

3 units, given next year

EARTHSYS 160. Statistical Methods for Earth and Environmental Sciences: General Introduction
(Same as EESS 160) Extracting information from data using statistical summaries and graphical visualization, statistical measures of association and correlation, distribution models, sampling, error estimation and confidence intervals, linear models and regression analysis, introduction to time-series and spatial data with geostatistics, applications including environmental monitoring, natural hazards, and experimental design. GER:DB-Math

3 units, not given this year

EARTHSYS 161. Statistical Methods for the Earth and Environmental Sciences: Geostatistics
(Same as EESS 161, ENERGY 161) Statistical analysis and graphical display of data, common distribution models, sampling, and regression. The variogram as a tool for modeling spatial correlation; variogram estimation and modeling; introduction to spatial mapping and prediction with kriging; integration of remote sensing and other ancillary information using co-kriging models; spatial uncertainty; introduction to geostatistical software applied to large environmental, climatological, and reservoir engineering databases; emphasis is on practical use of geostatistical tools. GER:DB-NatSci

3-4 units, Win (Staff)

EARTHSYS 164. Introduction to Physical Oceanography
(Same as CEE 164, CEE 262D) The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53). GER:DB-NatSci

4 units, Win (Fong, D)

EARTHSYS 165. Promoting Behavior Change
(Same as HUMBIO 165) How to apply principles of behavioral change to a real world public health problem: climate change and environmental sustainability. Sources include theory, research, and practice from perspectives such as social and cognitive psychology, media and communication, education, behavioral medicine, social marketing, and consumer behavior. Student groups create an intervention to help elementary school students reduce their environmental footprint. Research performed in local high schools to develop optimally feasible, acceptable, and effective interventions. Prerequisite: Human Biology core or equivalent, or consent of instructor.

4 units, Spr (Robinson, T)

EARTHSYS 170. Environmental Geochemistry
(Same as GES 170) Solid, aqueous, and gaseous phases comprising the environment, their natural compositional variations, and chemical interactions. Contrast between natural sources of hazardous elements and compounds and types and sources of anthropogenic contaminants and pollutants. Chemical and physical processes of weathering and soil formation. Chemical factors that affect the stability of solids and aqueous species under earth surface conditions. The release, mobility, and fate of contaminants in natural waters and the roles that water and dissolved substances play in the physical behavior of rocks and soils. The impact of contaminants and design of remediation strategies. Case studies. Prerequisite: 90 or consent of instructor. GER:DB-NatSci

4 units, Win (Brown, G)

EARTHSYS 173. Aquaculture and the Environment: Science, History, and Policy
(Same as EARTHSYS 273, EESS 173, EESS 273) Can aquaculture feed billions of people without degrading aquatic ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical case studies (salmon farming in Chile, tuna ranching in the Mediterranean, shrimp farming in Vietnam), current federal/state legislation. Field trip to aquaculture farm and guest lectures.

3 units, alternate years, not given this year

EARTHSYS 175. California Coast: Science, Policy, and Law
(Same as CEE 175A, CEE 275A, EARTHSYS 275) Interdisciplinary. The legal, science, and policy dimensions of managing California's coastal resources. Coastal land use and marine resource decision making. The physics, chemistry, and biology of the coastal zone, tools for exploring data from the coastal ocean, and the institutional framework that shapes public and private decision making. Field work: how experts from different disciplines work to resolve coastal policy questions. Primarily for graduate students; upper-level undergraduates may enroll with permission of instructor. Students will be expected to participate in at least three mandatory field trips.

3-4 units, Spr (Caldwell, M; Boehm, A; Sivas, D)

EARTHSYS 177. Interdisciplinary Research Survival Skills
(Same as EARTHSYS 277) Learning in interdisciplinary situations. Framing research questions. Developing research methods that benefit from interdisciplinary understanding. Writing for multiple audiences and effectively making interdisciplinary presentations. Discussions with interdisciplinary experts from across campus regarding interdisciplinary research projects.

2 units, Spr (Root, T)

EARTHSYS 178. The Ethics of Environmental Choices
(Same as EARTHSYS 278, PHIL 178A, PHIL 278A) (Formerly PHIL 278/378.) The institutional and individual dimensions of environmental choices. On the institutional side, examine externalities, the tragedy of the commons, sustainable development and environmental policy. On the individual side, discuss individual responsibility, intrinsic value, and moral pluralism. Focus is on decision making including the role of risk analysis, the rate of discount for effects on future generations, cost-benefit analysis, and scientific epistemology. GER:DB-Hum

4 units, not given this year

EARTHSYS 180. Fundamentals of Sustainable Agriculture
(Same as EARTHSYS 280, EESS 180, EESS 280) Ecological, economic, and social dimensions of sustainable agriculture in the context of a growing world population. Focus is on management and technological approaches, and historical content of agricultural growth and change, organic agriculture, soil and water resource management, nutrient and pest management, biotechnology, ecosystem services, and climate change. GER:DB-NatSci

3 units, not given this year

EARTHSYS 180B. Principles and Practices of Sustainable Agriculture
(Same as EESS 180B) Field-based training in ecologically sound agricultural practices at the Stanford Community Farm. Weekly lessons, field work, and group projects. Field trips to educational farms in the area. Topics include: soils, composting, irrigation techniques, IPM, basic plant anatomy and physiology, weeds, greenhouse management, and marketing.

3-4 units, Aut (Wiederkehr, S), Spr (Wiederkehr, S)

EARTHSYS 181. Concepts of Urban Agriculture
(Same as EARTHSYS 281, EESS 181, EESS 281) For advanced undergraduates and graduate students from all fields. Seminar. Current status of and potential for global urban agriculture. Topics include: environmental and economic dimensions of urban food production and sourcing; city policy and land-use planning; and an ecosystem services approach to urban agriculture. Developed and developing world contexts. Two field trips to nearby cities; guest lectures; case studies; group projects. Attendance at first class is mandatory. Enrollment is limited. Enrollment permissions will be determined after first class meeting.

3 units, not given this year

EARTHSYS 182. Current Issues in Sustainable Agriculture
(Same as EARTHSYS 282, EESS 182, EESS 282) Sustainability and ethics of animal production in the U.S. Demystification of the marketing of agricultural products. The past, present, and future of small family farms. Farm labor issues. Students lead discussions and write response papers.

2 units, Win (Wiederkehr, S)

EARTHSYS 183. Food Matters: Agriculture in Film
(Same as EARTHSYS 283, EESS 183, EESS 283) Film series presenting historical and contemporary issues dealing with food and agriculture across the globe. Students discuss reactions and thoughts in a round table format. May be repeated for credit.

1 unit, Win (Wiederkehr, S)

EARTHSYS 184. Climate and Agriculture
(Same as EARTHSYS 284, EESS 184, EESS 284) The effects of climate change on global food and agricultural systems. Climate assessment and socioeconomic modeling approaches to quantify the impacts of climate on agro-ecosystems and society. Enrollment limited to 25; priority to graduate students, seniors, and juniors. Prerequisites: ECON 106/206.

3-4 units, alternate years, not given this year

EARTHSYS 189. Field Studies in Earth Systems
(Same as BIO 206, EESS 189) For advanced upper-division undergraduates and graduate students. Field-based, focusing on the components and processes by which terrestrial ecosystems function. Topics from biology, chemistry, ecology, geology, and soil science. Lecture, field, and lab studies emphasize standard field techniques, experimental design, analysis of data, and written and oral presentation. Small team projects test the original questions in the functioning of natural ecosystems. Admission by application; see Axess. Prerequisites: BIO 141 or EESS 160 (formerly GES 160), or equivalent. GER:DB-NatSci

5 units, not given this year

EARTHSYS 199. Honors Program in Earth Systems

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN EARTH SYSTEMS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

EARTHSYS 323. Stanford at Sea
(Same as BIOHOPK 182H, BIOHOPK 323H, EESS 323) (Graduate students register for 323H.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major.

16 units, Spr (Block, B; Dunbar, R), alternate years, not given next year

EARTHSYS 208. Coastal Wetlands
(Same as EARTHSYS 108) Ecological structure and function of wetlands emphasizing local, coastal wetlands. Topics include: wetland distribution, classification, and history; and interactions between biotic and abiotic components of wetland ecosystems. Labs and local field trips for exposure to landscape patterns, and common sampling equipment and methods. Recommended: 104 or CEE 166A.

3 units, not given this year

EARTHSYS 210. Senior Seminar
Interdisciplinary problem analysis and oral communication. Students present results of their Earth Systems internship or research project. Students participate in a research or service learning group project focused on a local environmental issue. Service Learning Course (certified by Haas Center). Prerequisite: EARTHSYS 260.

3 units, Win (Kennedy, J)

EARTHSYS 211. Fundamentals of Modeling
(Same as EESS 211) Simulation models are a powerful tool for environmental research, if used properly. The major concepts and techniques for building and evaluating models. Topics include model calibration, model selection, uncertainty and sensitivity analysis, and Monte Carlo and bootstrap methods. Emphasis is on gaining hands-on experience using the R programming language. Prerequisite: asic knowledge of statistics.

3 units, Aut (Lobell, D)

EARTHSYS 224. Environmental Justice: Local, National, and International Dimensions
(Same as EARTHSYS 124) Focus is on whether minorities and low income citizens suffer disproportionate environmental and health impacts resulting from government and corporate decision making in contexts such as the siting of industrial facilities and waste dumps, toxic chemical use and distribution, and the enforcement of environmental mandates and policies. Implications of

environmental justice issues at the international level, emphasizing climate change.

4 units, not given this year

EARTHSYS 231. Communicating Environmental Research Using Narratives and Stories

(Same as EESS 131, EESS 231, EARTHSYS 131) Creative strategies by which earth scientists can overcome impediments to scientific literacy. Construction of stories and narratives out of research. The role of imagination and cognitive perception in environmental issues. Barriers and problems that arise in risk and science awareness. Connections between environmentalism and environmental science. Environmental issues in fictional narratives. The responsible function for earth scientists in public debates. Reflections on the role of science in current and future issues likely to involve members outside of science. Priority given to students seeking degrees in the School of Earth Sciences.

1 unit, not given this year

EARTHSYS 232. Energy and Climate Cooperation in the Western Hemisphere

(Same as EARTHSYS 132, IPS 263, INTNLREL 146A) Current political dynamics in major western hemisphere fossil fuel producers in N. America, the Andean region, the Southern Cone of S. America, and Trinidad and Tobago. The potential for developing sustainable alternative energy resources in the western hemisphere for export particularly biofuels, and its impact on agricultural policy, environmental protection, and food prices. The feasibility of creating regional energy security rings such as the proposed N. American Energy Security and Prosperity Partnership.

4 units, not given this year

EARTHSYS 233. Climate Change Law and Policy: From California to the Federal Government

(Same as EARTHSYS 133) California climate laws, including the California Global Warming Solutions Act of 2006 (AB32), the Clean Cars and Trucks Bill (SB 1493), and the Greenhouse Gas Emissions Performance Standard (SB 1368), and complementary and subsidiary regulations such as the Renewable Portfolio Standard, the Low Carbon Fuel Standard, land use law, and energy efficiency and decoupling. The draft scoping plan to outline California's policies for achieving its ambitious economy-wide reductions in greenhouse gas emissions. The Western Climate Initiative. The history, details, and current status of California's efforts as platforms to delve into larger legal issues.

3 units, Spr (Grenfell, K)

EARTHSYS 234. Stable Isotopes in Biogeochemistry

(Same as EESS 134, EESS 234, EARTHSYS 134) Light stable isotopes and their application to geological, ecological, and environmental problems. Isotopic systematics of hydrogen, carbon, nitrogen, oxygen, and sulfur; chemical and biogenic fractionation of light isotopes in the atmosphere, hydrosphere, and rocks and minerals.

3 units, Spr (Chamberlain, P)

EARTHSYS 241. Remote Sensing of the Oceans

(Same as EESS 141, EESS 241, EARTHSYS 141) How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features.

3-4 units, Win (Arrigo, K)

EARTHSYS 242. Remote Sensing of Land

(Same as EESS 162, EARTHSYS 142) The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.

4 units, Win (Lambin, E)

EARTHSYS 243. Marine Biogeochemistry

(Same as EESS 143, EESS 243, EARTHSYS 143) (Graduate students register for 243.) Processes that control the mean concentration and distribution of biologically utilized elements and compounds in the ocean. Processes at the air-sea interface, production of organic matter in the upper ocean, remineralization of organic matter in the water column, and processing of organic matter in the sediments. Cycles of carbon, oxygen, and nutrients; the role of the ocean carbon cycle in interannual to decadal variability, paleoclimatology, and the anthropogenic carbon budget.

3-4 units, alternate years, not given this year

EARTHSYS 246A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation

(Same as EARTHSYS 146A, EESS 146A, EESS 246A, GEOPHYS 146A, GEOPHYS 246A) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

3 units, Win (Thomas, L; Diffenbaugh, N)

EARTHSYS 246B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation

(Same as EARTHSYS 146B, EESS 146B, EESS 246B, GEOPHYS 146B, GEOPHYS 246B) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. Structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic circumpolar current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A/246A or CEE 164/262D or consent of instructor.

3 units, Spr (Thomas, L; Diffenbaugh, N)

EARTHSYS 247. Controlling Climate Change in the 21st Century

(Same as EARTHSYS 147, HUMBIO 116) Global climate change science, impacts, and response strategies. Topics: scientific understanding of the climate system; modeling future climate change; global and regional climate impacts and vulnerability; mitigation and adaptation approaches; the international climate policy challenge; and decarbonization of energy and transportation systems.

3 units, not given this year

EARTHSYS 250. Directed Research

Independent research related to student's primary track, carried out after the junior year, during the summer, and/or during the senior year. Student develops own project with faculty supervision. 10-15 page thesis. May be repeated for credit.

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EARTHSYS 256. Soil and Water Chemistry

(Same as EESS 156, EESS 256, EARTHSYS 156) (Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology.

1-4 units, alternate years, not given this year

EARTHSYS 258. Geomicrobiology

(Same as EESS 158, EESS 258, EARTHSYS 158) How microorganisms shape the geochemistry of the Earth's crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

3 units, given next year

EARTHSYS 260. Internship

Supervised field, lab, or private sector project. May consist of directed research under the supervision of a Stanford faculty member, participation in one of several off campus Stanford programs, or an approved non-Stanford program relevant to the student's

Earth Systems studies. Required of and restricted to declared Earth Systems majors. Includes 15-page technical summary research paper that is subject to iterative revision. (WIM)

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EARTHSYS 272. Antarctic Marine Geology

(Same as EESS 242) For upper-division undergraduates and graduate students. Intermediate and advanced topics in marine geology and geophysics, focusing on examples from the Antarctic continental margin and adjacent Southern Ocean. Topics: glaciers, icebergs, and sea ice as geologic agents (glacial and glacial marine sedimentology, Southern Ocean current systems and deep ocean sedimentation), Antarctic biostratigraphy and chronostratigraphy (continental margin evolution). Students interpret seismic lines and sediment core/well log data. Examples from a recent scientific drilling expedition to Prydz Bay, Antarctica. Up to two students may have an opportunity to study at sea in Antarctica during Winter Quarter.

3 units, Aut (Staff), alternate years, not given this year

EARTHSYS 273. Aquaculture and the Environment: Science, History, and Policy

(Same as EARTHSYS 173, EESS 173, EESS 273) Can aquaculture feed billions of people without degrading aquatic ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical case studies (salmon farming in Chile, tuna ranching in the Mediterranean, shrimp farming in Vietnam), current federal/state legislation. Field trip to aquaculture farm and guest lectures.

3 units, alternate years, not given this year

EARTHSYS 275. California Coast: Science, Policy, and Law

(Same as CEE 175A, CEE 275A, EARTHSYS 175) Interdisciplinary. The legal, science, and policy dimensions of managing California's coastal resources. Coastal land use and marine resource decision making. The physics, chemistry, and biology of the coastal zone, tools for exploring data from the coastal ocean, and the institutional framework that shapes public and private decision making. Field work: how experts from different disciplines work to resolve coastal policy questions. Primarily for graduate students; upper-level undergraduates may enroll with permission of instructor. Students will be expected to participate in at least three mandatory field trips.

3-4 units, Spr (Caldwell, M; Boehm, A; Sivas, D)

EARTHSYS 277. Interdisciplinary Research Survival Skills

(Same as EARTHSYS 177) Learning in interdisciplinary situations. Framing research questions. Developing research methods that benefit from interdisciplinary understanding. Writing for multiple audiences and effectively making interdisciplinary presentations. Discussions with interdisciplinary experts from across campus regarding interdisciplinary research projects.

2 units, Spr (Root, T)

EARTHSYS 278. The Ethics of Environmental Choices

(Same as EARTHSYS 178, PHIL 178A, PHIL 278A) (Formerly PHIL 278/378.) The institutional and individual dimensions of environmental choices. On the institutional side, examine externalities, the tragedy of the commons, sustainable development and environmental policy. On the individual side, discuss individual responsibility, intrinsic value, and moral pluralism. Focus is on decision making including the role of risk analysis, the rate of discount for effects on future generations, cost-benefit analysis, and scientific epistemology.

4 units, not given this year

EARTHSYS 280. Fundamentals of Sustainable Agriculture

(Same as EARTHSYS 180, EESS 180, EESS 280) Ecological, economic, and social dimensions of sustainable agriculture in the context of a growing world population. Focus is on management and technological approaches, and historical content of agricultural growth and change, organic agriculture, soil and water resource management, nutrient and pest management, biotechnology, ecosystem services, and climate change.

3 units, not given this year

EARTHSYS 281. Concepts of Urban Agriculture

(Same as EARTHSYS 181, EESS 181, EESS 281) For advanced undergraduates and graduate students from all fields. Seminar. Current status of and potential for global urban agriculture. Topics include: environmental and economic dimensions of urban food production and sourcing; city policy and land-use planning; and an ecosystem services approach to urban agriculture. Developed and developing world contexts. Two field trips to nearby cities; guest lectures; case studies; group projects. Attendance at first class is mandatory. Enrollment is limited. Enrollment permissions will be determined after first class meeting.

3 units, not given this year

EARTHSYS 282. Current Issues in Sustainable Agriculture

(Same as EARTHSYS 182, EESS 182, EESS 282) Sustainability and ethics of animal production in the U.S. Demystification of the marketing of agricultural products. The past, present, and future of small family farms. Farm labor issues. Students lead discussions and write response papers.

2 units, Win (Wiederkehr, S)

EARTHSYS 283. Food Matters: Agriculture in Film

(Same as EARTHSYS 183, EESS 183, EESS 283) Film series presenting historical and contemporary issues dealing with food and agriculture across the globe. Students discuss reactions and thoughts in a round table format. May be repeated for credit.

1 unit, Win (Wiederkehr, S)

EARTHSYS 284. Climate and Agriculture

(Same as EARTHSYS 184, EESS 184, EESS 284) The effects of climate change on global food and agricultural systems. Climate assessment and socioeconomic modeling approaches to quantify the impacts of climate on agro-ecosystems and society. Enrollment limited to 25; priority to graduate students, seniors, and juniors. Prerequisites: ECON 106/206.

3-4 units, alternate years, not given this year

EARTHSYS 290. Master's Seminar

Required of and open to Earth Systems master's students only. Discussion of topical published literature relevant to Earth systems.

2 units, Spr (Staff)

EARTHSYS 297. Directed Individual Study in Earth Systems

Under supervision of an Earth Systems faculty member on a subject of mutual interest.

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EARTHSYS 298. Earth Systems Book Review

For Earth Systems master's students and advanced undergraduates only. Analysis and discussion of selected literary nonfiction books relevant to Earth systems topics. Examples of previous topics include political presentations of environmental change in the popular press, review of the collected works of Aldo Leopold, disaster literature, and global warming.

2 units, Spr (Kennedy, J)

EARTHSYS 299. M.S. Thesis

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EARTH, ENERGY, AND ENVIRONMENTAL SCIENCES (EEES) COURSES

GRADUATE COURSES IN EARTH, ENERGY, AND ENVIRONMENTAL SCIENCES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

EEES 302. Challenges and Practices in Crossdisciplinary Research and Teaching

Required EEES core course. Presentations by Earth Sciences faculty. Pedagogical tools to present interdisciplinary concepts to a non-specialist audience.

1 unit, not given this year

EEES 400. Research in Earth, Energy, and Environmental Sciences

May be repeated for credit.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EEES 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EAST ASIAN STUDIES (EASTASN) COURSES

UNDERGRADUATE COURSES IN EAST ASIAN STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

EASTASN 70SI. Critical Issues in U.S.-China Relations Today
Multidisciplinary approach to historical factors, current events, and key issues that drive relations between the United States and China today, including: economic reform and the current financial crisis; security concerns over Taiwan, North Korea and Tibet; energy and the environment; role of NGOs and media in society; and human rights and prospects for political liberalization. Guest lectures from faculty and personal experiences from individuals who have lived or worked in China.

2 units, Spr (Staff)

EASTASN 114. Chinese Imagination of Death
(Same as CHINGEN 114, EASTASN 214) Examines the popular representations and imaginations of death and the afterlife in the Chinese tradition. Sources include philosophical discourses, literary and visual representations, religious and popular practices, and modern imaginations. All readings in English.

3-4 units, Win (Son, S), given once only

EASTASN 117. Health and Healthcare Systems in East Asia
(Same as EASTASN 217) China, Japan, and both Koreas. Healthcare economics as applied to East Asian health policy, including economic development, population aging, infectious disease outbreaks (SARS, avian flu), social health insurance, health service delivery, payment incentives, competition, workforce policy, pharmaceutical industry, and regulation. No prior knowledge of economics or healthcare required.

3-5 units, Win (Eggleston, K)

EASTASN 191. Journal of East Asian Studies
(Staff)

1 unit, Aut (Wigen, K), Win (Wigen, K), Spr (Wigen, K)

EASTASN 199. Directed Reading
(Staff)

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN EAST ASIAN STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

EASTASN 214. Chinese Imagination of Death
(Same as CHINGEN 114, EASTASN 114) Examines the popular representations and imaginations of death and the afterlife in the Chinese tradition. Sources include philosophical discourses, literary and visual representations, religious and popular practices, and modern imaginations. All readings in English.

3-4 units, Win (Son, S), given once only

EASTASN 217. Health and Healthcare Systems in East Asia
(Same as EASTASN 117) China, Japan, and both Koreas. Healthcare economics as applied to East Asian health policy, including economic development, population aging, infectious disease outbreaks (SARS, avian flu), social health insurance, health service delivery, payment incentives, competition, workforce policy, pharmaceutical industry, and regulation. No prior knowledge of economics or healthcare required.

3-5 units, Win (Eggleston, K)

EASTASN 330. Core Seminar: Issues and Approaches in East Asian Studies
For East Asian Studies M.A. students only.

1 unit, Aut (Wigen, K)

EASTASN 390. Practicum Internship
On-the-job training under the guidance of experienced, on-site supervisors. Meets the requirements for curricular practical training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit. Prerequisite: qualified offer of employment and consent of adviser.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EASTASN 801. TGR Project

0 units, Aut (Wigen, K), Win (Wigen, K), Spr (Wigen, K), Sum (Wigen, K)

ECONOMICS (ECON) COURSES

UNDERGRADUATE COURSES IN ECONOMICS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

ECON 1A. Introductory Economics A
The economic way of thinking and the functioning of a market economy. The behavior of consumers and firms, markets for goods and inputs, and principles of international exchange. Applications and policy issues in economics. GER:DB-SocSci

5 units, Aut (Clerici-Arias, M), Win (Clerici-Arias, M), Sum (Wong, J)

ECON 1B. Introductory Economics B
Aggregate economic relationships, including output, employment, inflation, interest rates, and exchange rates. Short-run fluctuations and long-run growth. Issues in monetary and fiscal policy. Prerequisite: 1A. GER:DB-SocSci

5 units, Win (Tendall, M), Spr (Tendall, M), Sum (Leeson, R)

ECON 11N. Understanding the Welfare System
(Stanford Introductory Seminar) Preference to freshmen. Welfare reform legislation and the devolution revolution. The transfer of responsibility for antipoverty programs to the states. How recent reforms change the welfare system and who is likely to be affected. Food stamps, AFDC, TANF, SSI, and Medicaid. Income transfer programs such as earned income tax credit and income taxes, and labor market regulations such as minimum wages and overtime rules. Economic principles to understand the effectiveness of these programs and their consequences on the behavior of families. Pre- or corequisite: ECON 1. Recommended: basic understanding of labor markets, taxes, and transfers.

2 units, Aut (MaCurdy, T)

ECON 17N. Energy, the Environment, and the Economy
(Stanford Introductory Seminar) Preference to freshmen. The relationship between environmental quality and production and consumption of energy. Can environmentally-friendly energy production and consumption compete with conventional sources? How to estimate and compare environmental impact costs of nonrenewable sources such as fossil fuels and nuclear power versus renewable sources such as solar and wind power. Implicit subsidies in conventional energy sources and the environmental costs of these subsidies. Regulatory and legal barriers to more environmentally friendly energy sources.

2 units, Spr (Wolak, F)

ECON 50. Economic Analysis I
Individual consumer and firm behavior under perfect competition. The role of markets and prices in a decentralized economy. Monopoly in partial equilibrium. Economic tools developed from multivariable calculus using partial differentiation and techniques for constrained and unconstrained optimization. Prerequisites: 1A and MATH 51(must be taken for a letter grade). GER:DB-Math

5 units, Aut (Tendall, M), Spr (Cojoc, D), Sum (Bailey, M)

ECON 51. Economic Analysis II
Neoclassical analysis of general equilibrium, welfare economics, imperfect competition, externalities and public goods, intertemporal choice and asset markets, risk and uncertainty, game theory, adverse selection, and moral hazard. Multivariable calculus is used. Prerequisite: 50.

5 units, Aut (Einav, L), Win (Kojima, F), Sum (Santesteban, C)

ECON 52. Economic Analysis III
Long-run economic growth and short-run economic fluctuations. Focus on the macroeconomic tools of government: fiscal policy (spending and taxes) and monetary policy, and their effects on growth, employment, and inflation. Prerequisites: 1B, 50.

5 units, Win (Klenow, P), Spr (Piazzesi, M), Sum (Desmet, K)

ECON 90. Introduction to Financial Accounting
(Same as ECON 190) How to read, understand, and use corporate financial statements. Oriented towards the use of financial accounting information (rather than the preparer), and emphasizes the reconstruction of economic events from published accounting reports.
5 units, Aut (Stanton, F), Win (Ogneva, M)

ECON 91. Introduction to Cost Accounting
(Same as ECON 191) The use of internal financial data for managerial decision making.
5 units, Spr (Stanton, F)

ECON 101. Economic Policy Analysis
Economic policy analysis, writing, and oral presentation. Topics vary with instructor. Limited enrollment. Prerequisites: 51 and 52, 102B, and two field courses. Some sections require additional prerequisites. WIM
5 units, Aut (Steiner, F), Win (Steiner, F), Spr (Steiner, F)

ECON 102A. Introduction to Statistical Methods (Postcalculus) for Social Scientists
Description and examples of the use of statistical techniques relevant to economics. Basic rules of probability, conditional probability, discrete and continuous probability distributions. Point estimation, tests of hypotheses, confidence intervals, and linear regression model. Prerequisite: MATH 41 or equivalent. GER:DB-Math
5 units, Aut (Steiner, F), Win (Steiner, F)

ECON 102B. Introduction to Econometrics
Descriptive statistics. Regression analysis. Hypothesis testing. Confidence regions. Simultaneous equation models. Instrumental variables. Panel data. Limited dependent variables. Time series. Prerequisites: 50, 102A or equivalent. Recommended: computer experience.
5 units, Win (Harding, M), Spr (Mahajan, A)

ECON 102C. Advanced Topics in Econometrics
Identification and estimation of the effect of human capital variables on earnings (such as the return to education, tenure), and identification and estimation of labor supply models, focusing on microeconomic data. Topics: instrumental variable estimation, limited dependent variable models (probit, logit, and Tobit models), and panel data techniques (fixed effect and random effect models, dynamic panel data models).
5 units, Spr (Pistaferri, L)

ECON 103. Applied Econometrics
The construction and use of econometric models for analyzing economic phenomena. Students complete individual projects and core material. Topics vary with the instructor. Enrollment restricted to Juniors and Seniors. Limited enrollment. Prerequisites: 52, 102B.
5 units, not given this year

ECON 104. Econometrics Applied to Macroeconomics and Finance
Seminar in quantitative analysis of issues relating to the overall performance of the American and global economies. Emphasis on the recent economic crisis. Requires the execution and presentation of an original research paper using econometric techniques. Limited enrollment. Prerequisites: ECON 51, 52, 102B. Recommended: ECON 140.
5 units, not given this year

ECON 106. World Food Economy
The interrelationships among food, populations, resources, and economic development. The role of agricultural and rural development in achieving economic and social progress in low-income nations. Emphasis is on public sector decision making as it relates to food policy.
5 units, Win (Naylor, R; Falcon, W)

ECON 111. Money and Banking
Money, interest rates, banks and other financial institutions at both micro and macro levels. Micro: alternative financial instruments, the determination of interest rates, the yield curve, and the role of banks and other capital market institutions in the intermediation process. Supply of money, regulation, and supervision. Macro: the choice of monetary policy by the central bank, the impact of monetary policy making institutions on this choice and the various channels through which monetary policy affects inflation and real variables in the economy. Emphasis is on the institutional structure of Federal Reserve System and the conduct of monetary policy in the U.S. Prerequisites: 50, 52.
5 units, Win (Schneider, K), Sum (Leeson, R)

ECON 113. Economics of Innovation
The modern, knowledge-based economy characterized by: rapid innovation; a dramatic increase in the rate of production of information and decline in the cost of producing it; and pervasive network externalities or increasing returns to scale. Emphasis is on the role of patents and alternative mechanisms for creating incentives for firms to innovate. Topics include: why there may be too much innovative activity; how patent laws may slow rather than help innovation; and the interaction between public and private sector innovation. Prerequisite: 51. Recommended: 102B.
5 units, Spr (Moser, P)

ECON 115. European Economic History
Economic changes and growth in W. Europe from antiquity to the present. The transformation of Europe from an economically and culturally backward part of the world to the center of the pre-WW I world economy. Topics: the role of techniques and sciences, variations of the extent of market activities, institutional changes, international politics, demography. Prerequisites: 51, 52. GER:DB-SocSci
5 units, not given this year

ECON 116. American Economic History
The American economy from colonial times to the present. Application of economic analysis to historical issues; the role of history in economic life. Topics: U.S. economic development in global and comparative context; origins and consequences of the American system of technology and business organization; economics of the Great Depression and New Deal; recent U.S. economic performance in historical perspective. Prerequisite: 1A. GER:DB-SocSci, EC-AmerCul
5 units, not given this year

ECON 117. Economic History and Modernization of the Islamic Middle East
From the rise of Islam to the present. Transformation of region from economically advanced to underdeveloped. Role of religion in economic successes and failures. Current obstacles to development. Topics: Islamic economic institutions; innovation and change; political economy of modernization; interactions with other regions; and economic consequences of Islamism. Prerequisites: ECON 51, 52, 102B.
5 units, not given this year

ECON 118. Development Economics
The economic problems and policy concerns of developing countries. Theories of growth and development; inequality and poverty; credit and labor markets; health and education; politics and corruption. Emphasis is on economic models and econometric evidence rather than case studies. Prerequisites: 52, 102B. GER:EC-GlobalCom
5 units, Aut (Staff)

ECON 120. Socialist Economies in Transition
Privatization, restructuring, and institutional change in E. Europe and the former Soviet Union. Analysis of property rights, corporate governance, incentives, and resource allocation in socialist and transitional economies. Emphasis is on liberalization and privatization policies (including mass and voucher programs) as the primary instruments to induce changes in behavior. Prerequisite: 50. Recommended: 51.
5 units, not given this year

ECON 123. Regulation and Competition in Less Developed Countries
The economics and workings of public intervention, control and liberalization of markets in less developed countries. Topics: natural monopoly regulation; institutions and regulatory commitment; infrastructure concessions; regulation and competition in network industries such as telecoms and electricity; liberalization of markets and competition policy; competition and efficiency; antitrust with a weak judiciary. Prerequisite: 51.
5 units, given next year

ECON 124. Contemporary Japanese Economy
Comparative and historical perspective. Micro and institutional aspects, such as firms, the employment system, corporate governance and financial institutions, and the macro economy. Elemen-

tary applications of macro- and microeconomics. Prerequisite: 50. GER:EC-GlobalCom

5 units, not given this year

ECON 126. Economics of Health and Medical Care

(Same as BIOMEDIN 156, BIOMEDIN 256, HRP 256) Graduate students with research interests should take ECON 248. Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: institutions in the health sector; measurement and valuation of health; nonmedical determinants of health; medical technology and technology assessment; demand for medical care and medical insurance; physicians, hospitals, and managed care; international comparisons. Prerequisites: ECON 50 and ECON 102A or equivalent statistics. Recommended: ECON 51.

5 units, Aut (Bhattacharya, J)

ECON 127. Economics of Health Improvement in Developing Countries

(Same as MED 262) Application of economic paradigms and empirical methods to health improvement in developing countries. Emphasis is on unifying analytic frameworks and evaluation of empirical evidence. How economic views differ from public health, medicine, and epidemiology; analytic paradigms for health and population change; the demand for health; the role of health in international development. Prerequisites: ECON 50 and 102B, and consent of instructor.

5 units, Win (Miller, N)

ECON 135. Finance for Non-MBAs

(Same as MS&E 245G) For graduate students and advanced undergraduates. The foundations of finance; applications in corporate finance and investment management. Financial decisions made by corporate managers and investors with focus on process valuation. Topics include criteria for investment decisions, valuation of financial assets and liabilities, relationships between risk and return, market efficiency, and the valuation of derivative securities. Corporate financial instruments including debt, equity, and convertible securities. Equivalent to core MBA finance course, FINANCE 220. Prerequisites: ECON 51, or ENGR 60, or equivalent; ability to use spreadsheets, and basic probability and statistics concepts including random variables, expected value, variance, covariance, and simple estimation and regression.

3-5 units, Win (Admati, A)

ECON 136. Market Design

Use of economic theory, experiments, and empirical analysis to design market rules and institutions. Topics include: competitive bidding and auction design; matching algorithms to allocate resources in the absence of prices; organization of regulated exchanges; design of internet markets for advertising, retail commerce, and financial trading. Prerequisites: recommended: 51.

5 units, Spr (Levin, J)

ECON 137. Information and Incentives

Incentives in situations where one part has more information than another. A part may have better information about things that it controls (moral hazard), or about things that are outside of its control (adverse selection). The general structure of incentive problems and the design of contracts and institutions to deal with such problems. Applications: executive and employee compensation, sharecropping, financial contracts and credit rationing, insurance, markets with unobservable quality, monopolistic price discrimination, regulation of natural monopolies, income taxation and redistribution, the provision of public goods, and auctions. Prerequisite: 51

5 units, not given this year

ECON 138. Risk and Insurance

The nature of economic risk, its effect on allocation of resources and its public policy implications. Preferences among risky prospects: expected utility theory and the theory of risk aversion. Allocation of risk using markets for contingent claims vs. insurance pools in economies with complete information. The functioning of insurance markets when information is asymmetric, under moral hazard and adverse selection. Can insurance markets function well in a competitive equilibrium? Role of asset markets in allocating risk. How some risks corporations face are associated with price fluctuations and can be hedged in financial markets. Hedging strategies using futures markets, and options and other derivative assets. Associated with the study of insruance markets, the role of risk taking in financial crises and how do insurance markets perform in such conditions. Prerequisite: 50.

5 units, Win (Kurz, M)

ECON 139D. Directed Reading

May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ECON 140. Introduction to Financial Economics

Modern portfolio theory and corporate finance. Topics: present value and discounting, interest rates and yield to maturity, various financial instruments including financial futures, mutual funds, the efficient market theory, basic asset pricing theory, the capital asset pricing model, and models for pricing options and other contingent claims. Use of derivatives for hedging. Prerequisites: 51, 102A.

5 units, Spr (Shoven, J), Sum (Gould, A)

ECON 141. Public Finance and Fiscal Policy

(Same as PUBLPOL 107) What role should and does government play in the economy? What are the effects of government expenditure, borrowing, and taxation? Policy topics: budget surpluses/deficits; tax reform; social security, public goods, and externalities; fiscal federalism; public investment; and cost-benefit analysis. Prerequisites: 51, 52 (can be taken concurrently).

5 units, Spr (Boskin, M)

ECON 144. Family Economics

Topics at the intersection of economics and demography. Causes and consequences of historical trends such as the demographic transition, the increase in female labor force participation and its macroeconomic implications, the connection between economic development and family laws (child labor laws, women's rights), and policies affecting families and children (such as parental leave policies, social security policy, education subsidies). Economic models of household bargaining, fertility choice, and intergenerational transfers. Prerequisites: 51.

5 units, not given this year

ECON 145. Labor Economics

Analysis and description of labor markets. Determination of employment, unemployment, hours of work, wages. Welfare programs and work effort. Wage differentials by schooling, experience, gender, and race. Economics of discrimination. Earnings inequality and changes in inequality. Employment contracts, labor unions, and bargaining. International comparisons. Prerequisites: 51, 102B. GER:EC-Gender

5 units, Win (Pencavel, J)

ECON 146. Economics of Education

How a decision to invest in education is affected by factors including ability and family background. Markets for elementary and secondary schooling; topics such as vouchers and charter schools, accountability, expenditure equalization among schools, and the teacher labor market.The market for college education emphasizing how college tuition is determined, and whether students are matched efficiently with colleges. How education affects economic growth, focusing on developing countries. Theory and empirical results. Application of economics from fields such as public economics, labor economics, macroeconomics, and industrial organization. Prerequisites: 50, 102B.

5 units, Spr (Fitzpatrick, M)

ECON 147. Economics of Human Resources

Investments in human capital including education, on-the-job training, government training, and health. The effects of human capital accumulation on wages and wage growth and on wage differentials by gender and race. Sample selections and experimental data. Poverty and inequality. Optional research project for public policy organization on labor market/human resources issues. Prerequisite: 51.

5 units, Win (Bloom, N; Pistaferri, L)

ECON 150. Economic Policy Analysis
(Same as PUBLPOL 104, PUBLPOL 204) The relationship between microeconomic analysis and public policy making. How economic policy analysis is done and why political leaders regard it as useful but not definitive in making policy decisions. Economic rationales for policy interventions, methods of policy evaluation and the role of benefit-cost analysis, economic models of politics and their application to policy making, and the relationship of income distribution to policy choice. Theoretical foundations of policy making and analysis, and applications to program adoption and implementation. Prerequisite: ECON 50.
5 units, Win (Rosston, G; Landais, C)

ECON 153. Economics of the Internet
Economic models and tools used to understand online market phenomena, including standards, network and platform economics, online transactions, advertising, auctions, information, communications, and networking. The contemporary economics literature on internet markets and mobile communications markets. Public policy issues in competition policy, communication policy, and support for innovation. Prerequisites: 51 and 102B.
5 units, Aut (Bresnahan, T)

ECON 154. Economics of Legal Rules and Institutions
(Same as PUBLPOL 106, PUBLPOL 206) Design and consequences of laws, given alternative policy objectives. Welfarist approach to legal policy; deontological perspectives including Kant, Locke, Mill, and Rawls. Economic efficiency and agent rationality, law as mitigation of market and cognitive failures, effects of law on expectations and incentives, balancing costs of type I and type II legal errors. Empirical studies of law's effects. Applications: property, tort, contract, antitrust, discrimination, crime, legal procedure. Examples chiefly from U.S. law, but analytical tools of general applicability. Prerequisite: ECON 50.
5 units, Aut (Owen, B)

ECON 155. Environmental Economics and Policy
Economic sources of environmental problems and alternative policies for dealing with them (technology standards, emissions taxes, and marketable pollution permits). Evaluation of policies addressing regional air pollution, global climate change, water allocation in the western U.S., and the use of renewable resources. Connections between population growth, economic output, environmental quality, and human welfare. Prerequisite: ECON 50. GER:DB-NatSci
5 units, Win (Staff)

ECON 156. Marine Resource Economics and Policy
Economic, political, and institutional frameworks for understanding the causes and potential solutions to marine resource problems. Marine policy formation, implementation and evaluation. Applications include: offshore energy production, managing fisheries, marine spatial planning, protecting biodiversity, and ocean recreaction. Prerequisite: Econ 1A and 1B
5 units, Spr (Staff)

ECON 157. Imperfect Competition
The interaction between firms and consumers in markets that fall outside the benchmark competitive model. How firms acquire and exploit market power. Game theory and information economics to analyze how firms interact strategically. Topics include monopoly, price discrimination, oligopoly, collusion and cartel behavior, anti-competitive practices, the role of information in markets, anti-trust policy, and e-commerce. Sources include theoretical models, real-world examples, and empirical papers. Prerequisite: 51.
5 units, Aut (Kastl, J)

ECON 158. Regulatory Economics
The history, economics, and legal background of the institutions under which U.S. industry is subject to government control. Topics: economics and practice of public utility regulation in the communications, television, transportation, energy, and postal delivery sectors and health and safety regulation. Emphasis on the application of economic concepts in evaluating the performance and policies of government agencies. Antitrust law will be introduced and discussed where necessary. Prerequisite: 51or equivalent intermediate microeconomics course.
5 units, Win (Wolak, F)

ECON 160. Game Theory and Economic Applications
Introduction to game theory and its applications to economics. Topics: strategic and extensive form games,dominant strategies, Nash equilibrium, subgame-perfect equilibrium, Bayesian equilibrium, and behavioral game theory. The theory is applied to repeated games, voting, auctions, and bargaining with examples from economics and political science. Prerequisites: 51 and course in calculus.
5 units, Spr (Jackson, M; Fong, K)

ECON 162. Monetary Economics
Dynamic analysis of the role of money and monetary policy in the macro economy, using calculus. Topics: the exchange process and the role of money; inside and outside money; inflation and the inflation tax; international monetary systems; the indeterminacy of floating exchange rates; policies to fix the exchange rate and inflationary incentives; currency crises and speculative attacks; money and interest-bearing government debt; the government¿s budget constraint and the coordination of monetary and fiscal policies; hyperinflations and stabilizations; the effect of the national debt on consumption, savings, investment and output; time consistency of government policies. Prerequisite: 52.
5 units, not given this year

ECON 164. Law, Economics and Politics of International Trade
(Same as POLISCI 216) Taught by an economist and a lawyer. Examines aspects of the WTO system from legal and economic perspectives. Integrates a careful examination of topical legal issues with theoretical and empirical research in economics to develop both positive and normative themes regarding the WTO as an international institution. Overview of the economics of international cooperation on trade, and an introduction to the WTO as an institution and its core obligations. Topics may include: the dispute resolution system; the choice between multilateral and regional or bilateral trade agreements; the role of developing countries in the WTO; and the relationship between WTO law, domestic regulation and national sovereignty. Prerequisite: Econ 51 or equivalent undergraduate microeconomics.
2-5 units, Win (Bagwell, K; Sykes, A)

ECON 165. International Finance
Introduction to international macroeconomics. Topics: intertemporal approach to the current account, international investment patterns, sovereign debt, crises in international financial markets, real and nominal exchange rate determination and exchange rate policy. Prerequisite: ECON 52.
5 units, Sum (Desmet, K)

ECON 166. International Trade
Different sources of comparative advantage in production and trade among nations. Aggregate gains from trade, winners and losers from globalization. International migration, outsourcing and multinational companies. Trade policy and international trade agreements. Theory, empirical evidence, and real-life anecdotes.Llectures supplemented by in-class debates on current topics from the popular press. Prerequisite: 51.
5 units, Win (Staiger, R), Spr (Manova, K)

ECON 167. European Monetary and Economic Integration
The economics of the European Community and the internal market. Analysis of current competition, transportation, and factor market policies, including the problems of agriculture and unemployment. Fiscal harmonization and mercantilist rivalry. European Monetary Union (EMU): genesis, implementation, and consequences of a common currency and central bank. Foreign exchange and foreign trade. Prerequisites: 51, 52, or equivalents.
5 units, not given this year

ECON 168. International Finance and Exchange Rates
(Same as ECON 268) (Graduate students register for 268.) Monetary foundations of international exchange; the rules of the game since Bretton Woods. Foreign exchange risk under the world dollar standard. Hedging, forward covering, and interest parity relationships. International capital flows and the current account. Global trade imbalances; China and Japan versus the U.S. Inflation versus exchange rate targeting in developing countries. Prerequisite for undergraduates: 52; recommended: 165.
5 units, Win (McKinnon, R)

ECON 169. International Financial Markets and Monetary Institutions
(Same as ECON 269) (Graduate students register for 269.) How nations are linked financially through money, capital, and exchange markets, emphasizing policy issues including the role of

the International Monetary Fund, monetary and exchange rate policy, prevention and resolution of financial crises in emerging markets, current account imbalances, and capital mobility. Development and use of macroeconomic models of international financial linkages and microeconomic models of hedging, optimal selection of currencies for invoice and trade credit, and parity relationships in futures, swaps, and options markets. Prerequisite: 165.

5 units, not given this year

ECON 179. Experimental Economics
Methods and major subject areas that have been addressed by laboratory experiments. Focus is on a series of experiments that build on one another. Topics include decision making, two player games, auctions, and market institutions. How experiments are used to learn about preferences and behavior, trust, fairness, and learning. Final presentation of group projects. Prerequisites: 50, 51, 102A.

5 units, Win (Niederle, M)

ECON 190. Introduction to Financial Accounting
(Same as ECON 90) How to read, understand, and use corporate financial statements. Oriented towards the use of financial accounting information (rather than the preparer), and emphasizes the reconstruction of economic events from published accounting reports.

5 units, Aut (Stanton, F), Win (Ogneva, M)

ECON 191. Introduction to Cost Accounting
(Same as ECON 91) The use of internal financial data for managerial decision making.

5 units, Spr (Stanton, F)

ECON 198. Junior Honors Seminar
(Same as PUBLPOL 197) Primarily for students who expect to write an honors thesis. Weekly sessions discuss writing an honors thesis proposal (prospectus), submitting grant applications, and completing the honors thesis. Readings focus on writing skills and research design. Students select an adviser, outline a program of study for their senior year, and complete a prospectus by the end of the quarter. Enrollment limited to 25.

5 units, Win (Rothwell, G), Spr (Rothwell, G)

ECON 199D. Honors Thesis Research
In-depth study of an appropriate question and completion of a thesis of very high quality. Normally written under the direction of a member of the Department of Economics (or some closely related department). See description of honors program. Register for at least 1 unit for at least one quarter. Meets first week of Autumn Quarter (see Stanford Daily for details).

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

GRADUATE COURSES IN ECONOMICS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

ECON 202. Core Economics: Modules 1 and 2
(Non-Economics graduate students register for 202N.) Open to advanced undergraduates with consent of instructors. Theory of the consumer and the implications of constrained maximization; uses of indirect utility and expenditure functions; theory of the producer, profit maximization, and cost minimization; behavior under uncertainty; partial equilibrium analysis and introduction to models of general equilibrium. Limited enrollment. Prerequisite: thorough understanding of the elements of multivariate calculus and linear algebra.

2-5 units, Aut (Milgrom, P)

ECON 202N. 202 For Non-Economics Ph.D. Students
Core Economics modules 1 and 2 for non-Economics Ph.D. students.

2-5 units, Aut (Cojoc, D)

ECON 203. Core Economics: Modules 5 and 6
(Non-Economics graduate students register for 203N.) Non-cooperative game theory including normal and extensive forms, solution concepts, games with incomplete information, and repeated games. Externalities and public goods. The theory of imperfect competition: static Bertrand and Cournot competition, dynamic oligopoly, entry decisions, entry deterrence, strategic behavior to alter market conditions. Limited enrollment. Prerequisite: 202.

2-5 units, Win (Bernheim, D)

ECON 203N. 203 For Non-Economics Ph.D. Students
Non-cooperative game theory including normal and extensive forms, solution concepts, games with incomplete information, and repeated games. Externalities, public goods, and asymmetric information. The theory of imperfect competition and other applications. Limited enrollment. Prerequisite: 202N or consent of instructor.

2-5 units, Win (Cojoc, D)

ECON 204. Core Economics: Modules 9 and 10
The theory of contracts, emphasizing contractual incompleteness and the problem of moral hazard. Incentive regulation. Competition with imperfect information, including signaling and adverse selection. The theory of resource allocation over time, competitive equilibrium, and intertemporal efficiency. Limited enrollment. Prerequisite: 203.

2-5 units, Spr (Jackson, M)

ECON 210. Core Economics: Modules 3 and 7
Dynamic economics applied to aggregate economic fluctuations and economic growth. Solving dynamic, stochastic rational expectation models using discrete time dynamic programming. Growth theory (neoclassical models, growth accounting, technical change, endogenous growth) using optimal control theory. Limited enrollment.

2-5 units, Aut (Piazzesi, M; Klenow, P)

ECON 211. Core Economics: Modules 11 and 12
Investment theory and empirics, including adjustment costs and the q theory; consumption theory and empirics, focusing on the life-cycle model; and the labor market. Macro economics of financial markets. Limited enrollment. Prerequisite: 210.

2-5 units, Win (Hall, R; Schneider, K)

ECON 212. Core Economics: Modules 4 and 8
Monetary theory: economic fluctuations, the role of money (overlapping generations, cash in advance, money in the utility function), dynamic impact of changes in money on the economy, natural rate of unemployment and job creation/destruction, exchange rate determination, international transmission of money, dynamic stochastic general equilibrium models. Macroeconomic policy: rationale for central bank independence, time inconsistency, the impact of public debt, rules versus discretion, interest rate versus money rules, international monetary policy coordination, rational expectations, econometric policy evaluation. Limited enrollment. Prerequisites: 203, 211.

2-5 units, Spr (Taylor, J)

ECON 214. Development Economics I
Microeconomic analysis of markets and institutions in developing countries. Topics: the role of the household; health and nutrition; education; property rights; governance; and technology. Emphasis is on empirical tests of and evidence for theoretical models. Prerequisites: 202 or 202N, 270.

2-5 units, not given this year

ECON 215. Economic Development

2-5 units, Win (Mahajan, A)

ECON 216. Development Economics III
Use of quantitative theory to understand various aspects of the growth and development process. Emphasis on family and demographic issues and their importance for development. Theoretical models of fertility and marriage decisions, and their empirical relevance. Unified growth theories: demographic transition and industrial revolution. Family institutions such as marriage payments and polygamy. The political economy of family-related institutions, e.g. the evolution of women's and children's rights. Female labor supply and development. Theories of disease and development. Prerequisite: 202, 203, 204, 210, 211, 212, 270, 271, 272.

2-5 units, not given this year

ECON 220. Political Economy I
Positive and normative theories of political economy. Positive topics include direct democracy, electoral competition, legislative policy making, agenda setting, lobbying, comparative constitutions, and intergenerational politics, with applications to income taxation, redistribution, and the size of government. Normative topics include social choice theory with and without interpersonal comparisons, Pareto efficiency with public goods, potential Pareto improvements, welfare measurement, cost benefit analysis, and analysis of economic policy reform.
2-5 units, not given this year

ECON 221. Political Economy II
Continuation of 220. Preparation for advanced research in applied political economy. Focus is on econometric methods (panel data, IV, treatment estimation, nonlinear models, random coefficients, duration models, factor analysis) with applications to economic and political development, economic voting, war and economic interdependence, corruption, legislative behavior, and social networks.
2-5 units, not given this year

ECON 224. Science, Technology, and Economic Growth
Upper-division undergraduates may enroll with consent of instructor. The roles played by the growth of scientific knowledge and technical progress in the development of industrial societies. Emphasis is on the interactions between science and technology, and the organizational factors which have influenced their effectiveness in contributing to productivity growth.
2-5 units, not given this year

ECON 225. Economics of Technology and Innovation
Theoretical and empirical analysis of innovation. Topics include optimal design of patents laws and alternative mechanisms to create incentives for innovation, such as technology transfer to developing countries, (compulsory) licensing, and patent pools. Emphasis on empirical analyses of both historical and contemporary data.
2-5 units, Spr (Moser, P)

ECON 226. U.S. Economic History
The role of economic history as a distinctive approach to the study of economics, using illustrations from U.S. history. Topics: historical and institutional foundations of the U.S. rise to world economic preeminence; economic causes and consequences of slavery; the origins and character of national systems of technology; the Great Depression of the 30s.
2-5 units, not given this year

ECON 227. European Economic History
European economic history from middle ages to the twentieth century. Topics: competing hypotheses in explaining long term trends in economic growth and cross-country differences in long-term economic growth; formation, function, and persistence of institutions and organizations; the role of institutions and organizations (e.g. apprenticeship, servitude, partnerships, cooperatives, social networks, share cropping, and communes) as solutions to contractual problems; the economics of migration; the changing economic role of the family. Use of economic theory in guiding hypothesis testing, as well as construction of new datasets and the execution of empirical analysis.
2-5 units, Aut (Abramitzky, R)

ECON 228. Institutions and Organizations in Historical Perspective
Emphasis is on the formative period from the 11th to 18th centuries. Formation, function, and evolution of institutions; alternative conceptual frameworks such as neoclassical, transaction cost economics, institutionalism, and Marxism and neo-Marxism; game theory, mechanism design, and contract theory. Institutions related to trade organization, the organization of production, feudalism, mercantilism, and the state.
2-5 units, Win (Greif, A)

ECON 229. Topics in Economic History
Emphasis is on institutions and organizations, such as risk-sharing organizations, and property rights, such as patent laws and their effects on technological change and economic growth. Topics include: competing hypotheses for cross-country differences in long-term growth; the importance of institutions to economic growth; formation, function, and persistence of institutions and organizations; role of patent laws in creating incentives for innovation; informal networks as a mechanism to trade property rights; causes and effects of institutional change; tests of contract theory in history; and long-term migration and its effect on economic development.
2-5 units, not given this year

ECON 233. Advanced Macroeconomics I
Topics in the theory and empirics of economic growth.
2-5 units, Aut (Klenow, P)

ECON 234. Advanced Macroeconomics II
Current research in growth and development. Classic growth models (e.g. Romer, Lucas); recent models by Acemoglu, Aghion, and others. Covers diverse mix of evidence across industries and firms (not just countries) to test and quantify theoretical predictions. Topics: role of physical capital, human capital, technological change, allocative efficiency and openness in explaining long run growth and development facts.
2-5 units, Win (Hall, R)

ECON 235. Advanced Macroeconomics III
Current topics to prepare student for research in the field. Recent research in labor-market friction, reallocation, fluctuations, wage and price determination, innovation, and productivity growth. Research methods, presentations skills, and writing in advanced economics.
2-5 units, Spr (Staff)

ECON 236. Financial Economics I
Tools: solving choice problems and equilibrium models with multiple risky assets, many agents, and frictions. Applications: household finance (including housing and mortgage choice); risk sharing and financial innovation; economies; trading volume; international capital flows and financial market integration. Prerequisites: 210, 211, 212.
2-5 units, Win (Piazzesi, M)

ECON 237. Financial Economics II
Topics in financial Economics. Discussion of recent academic papers on asset pricing. Student presentations and course paper requirement. Designed for second year PhD students in economics or finance.
2-5 units, Spr (Schneider, K)

ECON 239D. Directed Reading
May be repeated for credit.
1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ECON 241. Public Finance and Taxation I
Optimal taxation and design of tax/income transfer systems, including incidence and efficiency. Social welfare. Externalities and public goods. Local public economics, fiscal federalism, and education finance. Prerequisites: 202-204, 210, 270, 271, or equivalent with consent of instructor.
2-5 units, Win (Hoxby, C)

ECON 242. Public Finance and Taxation II
Topics concerning capital income taxation, including taxation and saving, taxation and risk taking, and the effects of corporate income taxation. Public expenditures, including social insurance programs and education. Prerequisites: 202, 203, 204, 210, 270, 271, or equivalent with consent of instructor. Recommended: 241.
2-5 units, Spr (Staff)

ECON 246. Labor Economics I
The demand for workers and hours of work, substitution among different types of labor in production, technological change, adjustment costs, restrictions on layoffs. The supply of labor, hours of work, participation, life-cycle models of behavior, welfare programs. Wage differentials by schooling, age, cohort, gender, and race. Changes in these wage differentials and differences across countries. Economics of discrimination. Income inequality. Employment contracts and turnover. Models of labor union behavior. Bargaining. Worker-owned enterprises.
2-5 units, Aut (Pencavel, J)

ECON 247. Labor Economics II
Recent topics in applied micro, focusing on top papers from the last five years. Skill-biased technical change, discrimination, media bias, management, pollution, culture, development and peer effects. Combination of student and faculty presentations. Additional sessions on general presentations, paper writing and research skills, as well as practical Stata sessions on estimation procedures and tricks. Short presentation of research idea required.
2-5 units, Win (Bloom, N)

ECON 248. Labor Economics III
Topics in current applied microeconomic research including skill-biased technical change, income distribution, program evaluation, job search, migration, consumption behavior. Student and faculty presentations

2-5 units, Spr (Pistaferri, L)

ECON 250. Environmental Economics
Applications of modern applied methods to issues of environmental policy. Topics include: environmental policy under uncertainty, environmental quality and health, the economics of alternative fuels, valuationof environmental amenities, models of consumer choice and demand for green products, behavioral aspects of choice, the economics of energy efficiency, commodity markets and recent developments in financial markets and regulation.

2-5 units, Win (Harding, M)

ECON 251. Natural Resource and Energy Economics
Issues in provision and management of non-renewable and renewable natural resources, and energy products and services. Theory and empirical methods related to: market structure, pricing, and performance of important energy and resource industries; sources of market failure in these industries; and alternative regulatory approaches. Prerequisites: 202, 203, 204, 271, and 272, or equivalents with consent of instructor.

2-5 units, not given this year

ECON 257. Industrial Organization 1
Theoretical and empirical analyses of the determinants of market structure; firm behavior and market efficiency in oligopolies; price discrimination; price dispersion and consumer search; differentiated products; the role of information in markets, including insurance and adverse selection; auctions; collusion and cartel behavior; advertising; entry and market structure; market dynamics; strategic behavior.

2-5 units, Aut (Einav, L; Kastl, J)

ECON 258. Industrial Organization 2A
Theoretical and empirical analyses of the determinants of market structure; firm behavior and market efficiency in oligopolies; collusion and cartel behavior; advertising; signaling; auctions; financial markets.

2-5 units, Win (Kastl, J; Bagwell, K)

ECON 259. Industrial Organization II B
Theoretical and empirical analyses of the determinants of market structure; firm behavior and market efficiency in oligopolies; economics of antitrust and regulation, with focus on energy and environmental economics; the role of information asymmetries in markets: adverse selection and moral hazard, with focus on insurance and credit markets.

2-5 units, Win (Einav, L; Wolak, F)

ECON 260. Industrial Organization III
Current research and policy questions in industrial organization. Course combines lectures by the instructors with student presentations, with an emphasis on initiating dissertation research in industrial organization. Prerequisites: 257, 258.

2-5 units, Spr (Levin, J; Bresnahan, T)

ECON 265. International Economics I
International macroeconomics and finance, emphasizing current research. The course is organized around the role of different types of frictions (in asset and goods markets) in explaining features of the international macroeconomy. Prerequisites: 202, 203, 204, 210, 211, 212.

2-5 units, not given this year

ECON 266. International Economics II
Determinants of trade and comparative advantage. Trade with imperfectly competitive markets. Income distribution and gains from trade. Economic geography and trade. Commercial policies, political economy of trade policy and the economics of trade agreements.

2-5 units, Win (Staiger, R; Bagwell, K)

ECON 267. Topics in International Trade
Topics from the frontier of current international trade research, presented through recent theoretical and empirical papers. Firm heterogeneity in trade and firms' export decisions. Different types of foreign direct investment. Multinational firms and the interaction between international trade and the theory of the firm. Institutional frictions and their effects on trade and FDI activity. Course goal is to prepare students for doing research in international trade and related fields.

2-5 units, Spr (Manova, K)

ECON 268. International Finance and Exchange Rates
(Same as ECON 168) (Graduate students register for 268.) Monetary foundations of international exchange; the rules of the game since Bretton Woods. Foreign exchange risk under the world dollar standard. Hedging, forward covering, and interest parity relationships. International capital flows and the current account. Global trade imbalances; China and Japan versus the U.S. Inflation versus exchange rate targeting in developing countries. Prerequisite for undergraduates: 52; recommended: 165.

5 units, Win (McKinnon, R)

ECON 269. International Financial Markets and Monetary Institutions
(Same as ECON 169) (Graduate students register for 269.) How nations are linked financially through money, capital, and exchange markets, emphasizing policy issues including the role of the International Monetary Fund, monetary and exchange rate policy, prevention and resolution of financial crises in emerging markets, current account imbalances, and capital mobility. Development and use of macroeconomic models of international financial linkages and microeconomic models of hedging, optimal selection of currencies for invoice and trade credit, and parity relationships in futures, swaps, and options markets. Prerequisite: 165.

5 units, not given this year

ECON 270. Intermediate Econometrics I
Probability, random variables, and distributions; large sample theory; theory of estimation and hypothesis testing. Limited enrollment. Prerequisites: math and probability at the level of Chapter 2, Paul G. Hoel, Introduction to Mathematical Statistics, 5th ed.

2-5 units, Aut (Romano, J; Hong, H)

ECON 271. Intermediate Econometrics II
Linear regression model, relaxation of classical-regression assumptions, simultaneous equation models, linear time series analysis. Limited enrollment. Prerequisite: 270.

2-5 units, Win (Wolak, F)

ECON 272. Intermediate Econometrics III
Continuation of 271. Nonlinear estimation, qualitative response models, limited dependent variable (Tobit) models. Limited enrollment. Prerequisite: 271.

2-5 units, Spr (MaCurdy, T)

ECON 273. Advanced Econometrics I
Possible topics: parametric asymptotic theory. M and Z estimators. General large sample results for maximum likelihood; nonlinear least squares; and nonlinear instrumental variables estimators including the generalized method of moments estimator under general conditions. Model selection test. Consistent model selection criteria. Nonnested hypothesis testing. Markov chain Monte Carlo methods. Nonparametric and semiparametric methods. Quantile Regression methods.

2-5 units, Aut (Hong, H)

ECON 274. Advanced Econometrics II
(Formerly 273B); Possible topics: nonparametric density estimation and regression analysis; sieve approximation; local polynomial regression; spline regression; cross validation; indirect inference; resampling methods: bootstrap and subsampling; quantile regression; nonstandard asymptotic distribution theory; empirical processes; set identification and inference, large sample efficiency and optimality.

2-5 units, Win (Romano, J)

ECON 275. Time Series Econometrics
Stochastic processes and concepts such as stationarity, ergodicity, and mixing. Inference with heteroskedastic and autocorrelated time series; autoregressive and moving average models; unit root processes and asymptotic analysis of such; tests for structural change; vector autoregressive models; cointegration; impulse response analysis; forecasting; ARCH and GARCH volatility models. Prerequisites: 270, 271.

2-5 units, Spr (Staff)

ECON 276. Limited Dependent Variables
(Formerly 274.) Parametric and semi-parametric approaches to the estimation of econometric models with discrete or limited dependent variables. Maximum likelihood, nonlinear panel data, duration models, rank estimation and index models, Bayesian approaches

and MCMC. Estimation of discrete choice models with endogeneity, simulation methods and computationally intensive approaches. Estimation of social network models. Random matrix theory. Prerequisite: 273 or consent of instructor.

2-5 units, not given this year

ECON 278. Behavioral and Experimental Economics I

This is the first half of a two course sequence (along with Econ 279) on behavioral and experimental economics. The sequence has two main objectives: 1) examines theories and evidence related to the psychology of economic decision making, 2) Introduces methods of experimental economics, and explores major subject areas (including those not falling within behavioral economics) that have been addressed through laboratory experiments. Focuses on series of experiments that build on one another in an effort to test between competing theoretical frameworks, with the objects of improving the explanatory and predictive performance of standard models, and of providing a foundation for more reliable normative analyses of policy issues. Prerequisites: 204 and 271, or consent of instructor.

2-5 units, Aut (Bernheim, D)

ECON 279. Behavioral and Experimental Economics II

This is the first half of a two course sequence (along with Econ 278) on behavioral and experimental economics. The sequence has two main objectives: 1) examines theories and evidence related to the psychology of economic decision making, 2) Introduces methods of experimental economics, and explores major subject areas (including those not falling within behavioral economics) that have been addressed through laboratory experiments. Focuses on series of experiments that build on one another in an effort to test between competing theoretical frameworks, with the objects of improving the explanatory and predictive performance of standard models, and of providing a foundation for more reliable normative analyses of policy issues. Prerequisites: 204 and 271, or consent of instructor.

2-5 units, Win (Niederle, M)

ECON 281. Normative Decision Theory and Social Choice

Normative principles of behavior, especially in single-person decision trees. Objective and subjective expected utility. Savage, Anscombe-Aumann, and consequentialist axioms. State dependence. Multi-person extensions: social choice, ethics, opinion pooling, and rationalizability in non-cooperative games. Prerequisite: 202 or equivalent. (Hammond)

2-5 units, not given this year

ECON 282. Contracts, Information, and Incentives

Basic theories and recent developments in mechanism design and the theory of contracts. Topics include: hidden characteristics and hidden action models with one and many agents, design of mechanisms and markets with limited communication, long-term relationships under commitment and under renegotiation, property rights and theories of the firm.

2-5 units, Aut (Segal, I)

ECON 283. Advanced Topics in Contracts and Organization

Recent developments and promising research. Topics change from year to year, and may include: reputational concerns and implicit contracts in long-term relationships, property rights and the hold-up problem, multilateral contracting, communication requirements of allocation problems, communication without full commitment. Prerequisite: 282 or consent of instructors.

2-5 units, not given this year

ECON 285. Auctions, Bargaining, and Pricing

(Same as MGTECON 602.) Theory of auctions and related literature in bargaining and pricing. Key papers include Myerson and Satterthwaite on bargaining, Myerson on optimal auctions, and Milgrom and Weber's classic work. How markets with complicated preferences and constraints, limitations on the use of cash, or variations in contract details among bidders decisively impair the performance of simple market rules. Emphasis on matching markets such as the National Resident Matching Program, asset auctions such as the spectrum auctions. Literature on dynamic bargaining.

2-5 units, Win (Milgrom, P; Niederle, M)

ECON 286. Game Theory and Economic Application

Solution concepts for non-cooperative games, repeated games, games of incomplete information, reputation, and experiments. Standard results and current research topics. Prerequisite: 203 or consent of instructor.

2-5 units, not given this year

ECON 287. General Equilibrium Theory

Existence, efficiency, and Walrasian equilibrium in exchange economies. Production, financial markets, incomplete markets, sequence economies with infinitely-lived agents. Prerequisites: 204 or consent of instructor.

2-5 units, not given this year

ECON 289. Advanced Topics in Game Theory and Information Economics

Topics course covering a variety of game theory topics with emphasis on market design, such as matching theory and auction theory. Prerequisites: Econ 285 or equivalent.

2-5 units, Spr (Kojima, F)

ECON 290. Multiperson Decision Theory

dents and faculty review and present recent research papers on basic theories and economic applications of decision theory, game theory and mechanism design. Applications include market design and analyses of incentives and strategic behavior in markets, and selected topics such as auctions, bargaining, contracting, and computation.

4 units, not given this year

ECON 291. Social and Economic Networks

Synthesis of research on social and economic networks by sociologists, economists, computer scientists, physicists, and mathematicians, with an emphasis on modeling. Includes methods for describing and measuring networks, empirical observations about network structure, models of random and strategic network formation, as well as analyses of contagion, diffusion, learning, peer influence, games played on networks, and networked markets.

2-5 units, not given this year

ECON 299. Practical Training

Students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. At the start of the quarter, students must submit a one page statement showing the relevance of the employment to the degree program along with an offer letter. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ECON 300. Third-Year Seminar

Restricted to Economics Ph.D. students. Students present current research. May be repeated for credit.

1-10 units, Aut (Levin, J; Fong, K), Spr (Fong, K; Levin, J)

ECON 301. Microeconomic Workshop

1-10 units, not given this year

ECON 310. Macroeconomic Workshop

1-10 units, Aut (Hall, R; Klenow, P; Taylor, J; Amador, M; Tertilt, M; Piazzesi, M; Schneider, K; Bloom, N), Win (Hall, R; Klenow, P; Taylor, J; Tertilt, M; Amador, M; Piazzesi, M; Schneider, K; Bloom, N), Spr (Hall, R; Klenow, P; Taylor, J; Amador, M;

ECON 315. Development Workshop

1-10 units, Aut (DeGiorgi, G; Jayachandran, S; Mahajan, A), Win (Jayachandran, S; Mahajan, A; DeGiorgi, G), Spr (DeGiorgi, G; Mahajan, A; Jayachandran, S)

ECON 320. Political Economy Workshop

May be repeated for credit.

1-10 units, Aut (Bernheim, D; Harding, M; Jackson, M), Win (Bernheim, D; Harding, M; Jackson, M), Spr (Bernheim, D; Harding, M; Jackson, M)

ECON 325. Economic History Workshop

May be repeated for credit.

1-10 units, Aut (Greif, A; Wright, G; Abramitzky, R; Moser, P), Win (Greif, A; Wright, G; Moser, P; Abramitzky, R), Spr (Wright, G; Greif, A; Moser, P; Abramitzky, R)

ECON 341. Public Economics and Environmental Economics Seminar

Issues in measuring and evaluating the economic performance of government tax, expenditure, debt, and regulatory policies; their effects on levels and distribution of income, wealth, and environmental quality; alternative policies and methods of evaluation.

Workshop format combines student research, faculty presentations, and guest speakers. Prerequisite: 241 or consent of instructor.

1-10 units, Aut (Boskin, M; Shoven, J; Hoxby, C; Bloom, N), Win (Boskin, M; Shoven, J; Bloom, N; Hoxby, C), Spr (Boskin, M; Shoven, J; Bloom, N; Hoxby, C)

ECON 345. Applications Workshop

1-10 units, Aut (MaCurdy, T; Pencavel, J; Pistaferri, L; Wolak, F; Goulder, L; Hansen, P; Harding, M; Mahajan, A), Win (MaCurdy, T; Pencavel, J; Pistaferri, L; Wolak, F; Hansen, P; Goulder, L; Mahajan, A; Harding, M; Hong, H), Spr (MaCurdy, T; Pencavel

ECON 354. Workshop in Law and Economics

2-6 units, Aut (Staff), Win (Staff)

ECON 355. Industrial Organization Workshop

Current research in the field by visitors, presentations by students, and discussion of recent papers. Students write an original research paper, make a formal presentation, and lead a structured discussion.

1-10 units, Aut (Bresnahan, T; Einav, L; Kastl, J; Levin, J; Wolak, F), Win (Bresnahan, T; Einav, L; Kastl, J; Levin, J; Wolak, F), Spr (Bresnahan, T; Einav, L; Kastl, J; Levin, J; Wolak, F)

ECON 365. International Trade Workshop

1-10 units, Aut (Fitzgerald, D; Manova, K; Staiger, R; Bagwell, K), Win (Staiger, R; Fitzgerald, D; Manova, K; Bagwell, K), Spr (Fitzgerald, D; Staiger, R; Bagwell, K; Manova, K)

ECON 370. Econometrics Workshop

1-10 units, Aut (Hong, H; Hansen, P; Mahajan, A; Harding, M), Win (Hansen, P; Mahajan, A; Han, L; Harding, M), Spr (Hansen, P; Mahajan, A; Hong, H; Harding, M)

ECON 391. Microeconomic Theory Seminar

1-10 units, Aut (Segal, I; Milgrom, P; Niederle, M; Bernheim, D; Jackson, M; Kojima, F; Fong, K), Win (Bernheim, D; Milgrom, P; Niederle, M; Segal, I; Jackson, M; Kojima, F; Fong, K), Spr (Bernheim, D; Milgrom, P; Niederle, M; Segal, I; Jackson, M; Koj

ECON 400. Ph.D. Dissertation

(Staff)

1-15 units, Aut (Bresnahan, T), Win (Bresnahan, T), Spr (Bresnahan, T), Sum (Staff)

ECON 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

ECON 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUCATION (EDUC) COURSES

UNDERGRADUATE COURSES IN EDUCATION

Primarily for undergraduates; graduate students may enroll with consent of adviser.

EDUC 97X. Science Education through Community Service

This one-unit directed reading, service-learning course will focus on educational inequity in the sciences for k-8 children in the communities of the Ravenswood School District. It is intended for students who are participating in the Haas Center's Science in Service program. Students will attend a 2-hr/week seminar. Through the readings students will familiarize themselves with the communities, gain an understanding of the root causes of educational inequity in the sciences, and acquire skills in teaching science and mentoring children.

1 unit, Aut (Beck, K)

EDUC 98X. Service Learning Practicum

For Alternative Spring Break program leaders. The skills and philosophical framework to develop and lead an ASB experience.

1 unit, Aut (McConnell, J)

EDUC 100A. EAST House Seminar: Current Issues and Debates in Education

In Autumn Quarter, five current issues broadly related to education and society are discussed and debated among students and faculty. In Winter Quarter, topics pertaining to gender and education, particularly in developing countries, are explored. In Spring Quarter, the seminar revolves around race and ethnicity in higher education. Through an examination of these topics, students are able to share and develop their varied interests in educational research, policy, and practice.

1 unit, Aut (Wotipka, C)

EDUC 100B. EAST House Seminar: Current Issues and Debates in Education

In Autumn Quarter, five current issues broadly related to education and society are discussed and debated among students and faculty. In Winter Quarter, topics pertaining to gender and education, particularly in developing countries, are explored. In Spring Quarter, the seminar revolves around race and ethnicity in higher education. Through an examination of these topics, students are able to share and develop their varied interests in educational research, policy, and practice.

1 unit, Win (Wotipka, C)

EDUC 100C. EAST House Seminar: Current Issues and Debates in Education

(Same as ASNAMST 100C) In Autumn Quarter, five current issues broadly related to education and society are discussed and debated among students and faculty. In Winter Quarter, topics pertaining to gender and education, particularly in developing countries, are explored. In Spring Quarter, the seminar revolves around race and ethnicity in higher education. Through an examination of these topics, students are able to share and develop their varied interests in educational research, policy, and practice.

1 unit, Spr (Wotipka, C)

EDUC 101. Introduction to Teaching and Learning

This course is designed to help undergraduates explore career interests in education; it is the core course for the Undergraduate Minor in Education, and fulfills requirements for Honors in Education. The course considers the philosophy, history, politics, professional practice and social structures of teaching in the United States. Students read and discuss teaching theory and research, participate in learning activities and visit school teaching sites, as well as examine and analyze artifacts and models of teaching.

3-5 units, Aut (Wolf, J)

EDUC 102. Examining Social Structures, Power, and Educational Access

Goal is to prepare Education and Youth Development fellows for their work with adolescents in the Haas Center's pre-college summer programs and to define their role in addressing educational inequities in the summer programs and beyond.

2-3 units, Spr (Wilson, J)

EDUC 103A. Tutoring: Seeing a Child through Literacy

(Same as EDUC 203A) Experience tutoring grade school readers in a low income community near Stanford under supervision. Training in tutoring; the role of instruction in developing literacy; challenges facing low income students and those whose first language is not English. How to see school and print through the eyes of a child. Ravenswood Reads tutors encouraged to enroll. Service Learning Course (certified by Haas Center). GER:DB-SocSci

4 units, Aut (Juel, C)

EDUC 103B. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices

(Same as EDUC 337) Focus is on classrooms with students from diverse racial, ethnic and linguistic backgrounds. Studies, writing, and media representation of urban and diverse school settings; implications for transforming teaching and learning. Issues related to developing teachers with attitudes, dispositions, and skills necessary to teach diverse students.

3-5 units, Win (Ball, A)

EDUC 103C. Educational Policy, Diversity, and English Learners

Undergraduates engage in the real world of teaching. Historical and legal foundations, and materials, methods, and strategies for English and primary language development. Students tutor an English learner.

3-4 units, not given this year

EDUC 104X. Conduct of Research with and in Communities
For undergraduates interested in service learning and research in community settings. The historical and theoretical underpinnings of community-based participatory research (CBPR), action research, community-embedded research, participant observation, and qualitative research.
3-4 units, not given this year

EDUC 106. Interactive Media in Education
Workshop. (CTE)
3-5 units, not given this year

EDUC 107X. Social Psychology and Social Change
(Same as EDUC 371X, PSYCH 265) The major ideas, theories, and findings of social psychology and their applied status. Emphasis is on historical issues, classic experiments, and seminal theories, and their implications for topics relevant to education. Contemporary research also discussed. Advanced undergraduates and graduate students from other disciplines are welcome.
2-3 units, Spr (Cohen, G)

EDUC 109X. Educational Issues in Contemporary China
(Same as EDUC 309X) Reforms such as the decentralization of school finance, emergence of private schools, expansion of higher education, and reframing of educational policy to focus on issues of quality. Have these reforms exacerbated educational inequality.
3-4 units, Spr (Adams, J)

EDUC 110. Sociology of Education: The Social Organization of Schools
(Same as EDUC 310, SOC 132, SOC 332) Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy. GER:DB-SocSci
4 units, Win (Carter, P)

EDUC 111. The Young Adult Novel: A Literature For and About Adolescents
For undergraduates considering teaching or working with adolescents, and for those planning to apply to the coterminal program in the Stanford Teacher Education program (STEP). Students work together to define the genre of young adult novels. What they reveal about adolescence in America. How to read and teach young adult literature.
4 units, not given this year

EDUC 112X. Urban Education
(Same as EDUC 212X, SOC 129X, SOC 229X) (Graduate students register for EDUC 212X or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education. GER:DB-SocSci
3-4 units, Spr (Carter, P)

EDUC 113X. Gender and Sexuality in Schools
Issues at the intersection of queer theory and educational practice. Experiences, rights, and responsibilities of lesbian, gay, bisexual, transgender, intersex, queer, and questioning students and teachers as members of marginalized or majority cultures. GER:EC-Gender
1-3 units, Spr (Staff)

EDUC 115Q. Identities, Race, and Culture in Urban Schools
Preference to sophomores. How urban youth come to a sense of themselves as students, members of cultural and racial groups, and young people in urban America. The nature and interaction of racial and academic identities: how identity takes shape; how it has been conceptualized. The relation between identities and learning. Urban schools as contexts for identity development. Theoretical perspectives include psychology, sociolinguistics, sociology, anthropology, and education. Students shadow a high-school student in a public school and write a case study.
3 units, not given this year

EDUC 116X. Service Learning as an Approach to Teaching
History, theory, and practice. Topics include: responsive community partnerships, cultural awareness, the role of reflection, and best practices in service learning.
3 units, Spr (Mitchell, T)

EDUC 117. Research and Policy on Postsecondary Access
(Same as EDUC 417) The transition from high school to college. K-16 course focusing on high school preparation, college choice, remediation, pathways to college, and first-year adjustment. The role of educational policy in postsecondary access. Service Learning Course (certified by Haas Center).
3 units, Spr (Antonio, A)

EDUC 120C. Education and Society
(Same as EDUC 220C, SOC 130, SOC 230) The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling. GER:DB-SocSci
4-5 units, Aut (Ramirez, F)

EDUC 120X. Sociology of Knowledge Creation
(Same as EDUC 320X, SOC 330) The sociology of knowledge creation explores systematic relationships between thought and social structure in order to examine how human beings construct, interpret, and view reality. How knowledge is socially constructed, patterned, and used, and how everyday and tacit forms of knowledge are achieved. Emphasis is on the creation and patterning of scientific paradigms, social science disciplines, and the field of education.
3-4 units, Win (McFarland, D)

EDUC 121X. Hip Hop, Youth Identities, and the Politics of Language
(Same as AFRICAAM 121X, AMSTUD 121X, ANTHRO 121A, CSRE 121X, LINGUIST 155) Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture.
3-4 units, Spr (Alim, H)

EDUC 122X. From Local to Global: Collaborations for International Environmental Education
(Same as EARTHSYS 123) A collaboration with three universities in Africa. Discourse and debate using Internet and mobile technology interactions. Topics include the global environment, climate change, sustainable development, and food security.
2 units, not given this year

EDUC 123X. Contexts that Promote Youth Development: Understandings of Effective Interventions
How psychology, medicine, public health, sociology, education, and public policy define and promote youth development. How to build the resilience and competencies of youth through safe, supportive environments for building social, emotional, and intellectual skills. How to design settings that best promote youth development.
2-4 units, not given this year

EDUC 124. Collaborative Design and Research of Technology-integrated Curriculum
Design models for the development of educational materials through a studio-based, curriculum development project. Teams work with a teacher or non-school educator to design and test technology-integrated curricula. Focus is on the role that technologies can play in teaching and learning in school and out-of-school contexts. Open to all.
3-4 units, not given this year

EDUC 126X. Introduction to Public Service Learning
Offered through the Haas Center for Public Service. A foundation and vision for a future of public service leadership. Students identify personal values and assess strengths as leaders. The ethics of public service and leadership theory.
1-2 units, Win (Itliong, A)

EDUC 130. Introduction to Counseling
The goal of counseling is to help others to create more satisfying lives for themselves. Clients learn to create and capitalize on unexpected events to open up new opportunities. The success of counseling is judged, not by the words and actions of the counselor, but by the progress that the client makes in the real world after counseling itself is ended. Students are encouraged to exert their full

efforts within reasonable time limits to improve their competence. (PSE)

3 units, Win (Krumboltz, J)

EDUC 131. Mediation for Dispute Resolution

(Same as PSYCH 152) Mediation as more effective and less expensive than other forms of settling disputes such as violence, lawsuits, or arbitration. How mediation can be structured to maximize the chances for success. Simulated mediation sessions.

3 units, Aut (Krumboltz, J)

EDUC 134. Career and Personal Counseling

(Same as EDUC 234, PSYCH 192) Theories and methods for helping people create more satisfying lives for themselves. Simulated counseling experiences.

3 units, Spr (Krumboltz, J)

EDUC 136. World, Societal, and Educational Change: Comparative Perspectives

(Same as EDUC 306D, SOC 231) Theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation building; education, mobility, and equality; education, international organizations, and world culture. GER:DB-SocSci

4-5 units, Win (Martin, P)

EDUC 140. Honors Research

Provides opportunity for research in pursuit of senior honors theses.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 143. Boys' Psychosocial Development

(Same as HUMBIO 144) From early childhood through adolescence. Emphasis is on how boys' lives and experiences are embedded within their interpersonal relationships and social and cultural contexts. Interdisciplinary approach including perspectives from fields such as psychology, sociology, anthropology, family studies, and education. Prerequisite: Human Biology core, or Developmental Psychology , or consent of instructor. GER:EC-Gender

4 units, Spr (Chu, J)

EDUC 146X. Perspectives on the Education of Linguistic Minorities

Social, political, linguistic, and pedagogical issues associated with educating students who do not speak the language or language variety of the majority society. Focus is on the U.S.; attention to minorities elsewhere. American attitudes toward linguistic and racial minorities. Educational problems of linguistically different children and non-English- or limited-English-speaking children. Approaches to solving problems.

3-4 units, Spr (Staff)

EDUC 148X. Critical Perspectives on Teaching and Tutoring English Language Learners

Theoretical foundation for volunteer tutors of English language learners in urban environments working with children in school-based programs or adults in community-based settings.

3 units, not given this year

EDUC 149. Theory and Issues in the Study of Bilingualism

(Same as EDUC 249) Sociolinguistic perspective. Emphasis is on typologies of bilingualism, the acquisition of bilingual ability, description and measurement, and the nature of societal bilingualism. Prepares students to work with bilingual students and their families and to carry out research in bilingual settings. (SSPEP)

3-5 units, not given this year

EDUC 165. History of Higher Education in the U.S.

(Same as AMSTUD 165, EDUC 265, HISTORY 158C) Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities. (SSPEP-APA)

3-5 units, Aut (Gordon, L)

EDUC 166. The Centrality of Literacies in Teaching and Learning

Focus is on principles in understanding, assessing, and supporting the reading and writing processes, and the acquisition of content area literacies in secondary schools. Literacy demands within particular disciplines and how to use oral language, reading, and writing to teach content area materials more effectively to all students. (STEP)

3 units, Sum (Aukerman, M)

EDUC 170X. Preparation for Independent Public Service Projects

Open only to recipients of the Haas Summer Fellowship, which offers students the opportunity to initiate and carry out an innovative service project in collaboration with a community partner. Goal is to expand upon the work fellows did during the application process with respect to the feasibility and sustainability of their field projects.

2 units, Spr (Hawthorne, J)

EDUC 171. Early Childhood Education Practicum

Year-long seminar; restricted to students who participate in Jump-Start, a service learning program. Training for activities in preschool classrooms. Background on issues related to: young children's cognitive, language. and social development; classroom management; literacy; math; science teaching; cultural diversity; and early childhood education programs. May be repeataed for credit.

2-4 units, Aut (Stipek, D), Win (Stipek, D), Spr (Stipek, D)

EDUC 177. Education of Immigrant Students: Psychological Perspectives

(Same as EDUC 277) Historical and contemporary approaches to educating immigrant students. Case study approach focuses on urban centers to demonstrate how stressed urban educational agencies serve immigrants and native-born U.S. students when confronted with overcrowded classrooms, controversy over curriculum, current school reform movements, and government policies regarding equal educational opportunity. (SSPEP)

4 units, Win (Padilla, A)

EDUC 178X. Latino Families, Languages, and Schools

The challenges facing schools to establish school-family partnerships with newly arrived Latino immigrant parents. How language acts as a barrier to home-school communication and parent participation. Current models of parent-school collaboration and the ideology of parental involvement in schooling. (SSPEP) (Valdés)

3-5 units, not given this year

EDUC 179. Urban Youth and Their Institutions: Research and Practice

(Same as EDUC 279) The determinants and consequences of urban life for youth, emphasizing disciplinary and methodological approaches, and the gap between the perspectives of state and local organizations and those of youth and their communities. The diversity of urban youth experiences with respect to ethnicity, gender, and immigration histories. Case studies illustrate civic-level and grassroots institutions, their structures, networks, and philosophies; historical and contemporary realities of urban youth for policy makers, educators, and researchers. Limited enrollment. Prerequisite: consent of instructor. (SSPEP/APA)

4-5 units, not given this year

EDUC 179B. Youth Empowerment and Civic Engagement

(Same as EDUC 279B) Focus is on youth development policies and practices: what makes them effective, and how they operate in broader institutional contexts. Research-based information; conceptual underpinnings; best learning from experience; and the perspective of expert youth workers, policymakers, and youth about what works.

2-4 units, not given this year

EDUC 180. Directed Reading in Education

For undergraduates and master's degree students. (All Areas)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 181. Multicultural Issues in Higher Education

(Same as EDUC 381) The primary social, educational, and political issues that have surfaced in American higher education due to the rapid demographic changes occurring since the early 80s. Research efforts and the policy debates include multicultural communities, the campus racial climate, and student development; affirmative action in college admissions; multiculturalism and the curriculum; and multiculturalism and scholarship.

4 units, not given this year

EDUC 189X. Language and Minority Rights

(Same as CHICANST 189W, CSRE 189W) Language as it is implicated in migration and globalization. The effects of globaliza-

tion processes on languages, the complexity of language use in migrant and indigenous minority contexts, the connectedness of today's societies brought about by the development of communication technologies. Individual and societal multilingualism; preservation and revival of endangered languages. GER:EC-GlobalCom

3 units, not given this year

EDUC 190. Directed Research in Education

For undergraduates and master's students. May be repeated for credit. (all areas)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 191X. Introduction to Survey Research

(Same as EDUC 291X) Planning tasks, including problem formulation, study design, questionnaire and interview design, pretesting, sampling, interviewer training, and field management. Epistemological and ethical perspectives. Issues of design, refinement, and ethics in research that crosses boundaries of nationality, class, gender, language, and ethnicity.

3-4 units, Win (Adams, J)

EDUC 193A. Listen Up! Core Peer Counseling Skills

Topics: verbal and non-verbal skills, open and closed questions, paraphrasing, working with feelings, summarization, and integration. Individual training, group exercises, role play practice with optional video feedback. Sections on relevance to crisis counseling and student life. Guest speakers from University and community agencies. Students develop and apply skills in University settings.

2 units, Aut (Martinez, A), Win (Martinez, A), Spr (Martinez, A)

EDUC 193B. Peer Counseling in the Chicano/Latino Community

Topics: verbal and non-verbal attending and communication skills, open and closed questions, working with feelings, summarization, and integration. Salient counseling issues including Spanish-English code switching in communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, and Chicana/o student experience in University settings. Individual training, group exercises, role play, and videotape practice.

1 unit, Aut (Martinez, A)

EDUC 193C. Peer Counseling in the African American Community

Topics: the concept of culture, Black cultural attributes and their effect on reactions to counseling, verbal and non-verbal attending, open and closed questions, working with feelings, summarization, and integration. Reading assignments, guest speakers, role play, and videotaped practice. Students develop and apply skills in the Black community on campus or in other settings that the student chooses.

1 unit, Aut (Adams, C), Spr (Adams, C)

EDUC 193F. Psychological Well-Being on Campus: Asian American Perspectives

Topics: the Asian family structure, and concepts of identity, ethnicity, culture, and racism in terms of their impact on individual development and the counseling process. Emphasis is on empathic understanding of Asians in America. Group exercises.

1 unit, Spr (Lin, O)

EDUC 193N. Peer Counseling in the Native American Community

Verbal and non-verbal communication, strategic use of questions, methods of dealing with strong feelings, and conflict resolution. How elements of counseling apply to Native Americans including client, counselor, and situational variables in counseling, non-verbal communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, the impact of family on personal development, gender roles, and the experience of Native American students in university settings. Individual skill development, group exercises, and role practice.

1 unit, not given this year

EDUC 193P. Peer Counseling at the Bridge

Mental health issues such as relationships, substance abuse, sexual assault, depression, eating disorders, academic stressors, suicide, and grief and bereavement. Guest speakers.

1 unit, Aut (Martinez, A), Win (Martinez, A), Spr (Martinez, A)

EDUC 193S. Peer Counseling on Comprehensive Sexual Health

Information on sexually transmitted infections and diseases, and birth control methods. Topics related to sexual health such as communication, societal attitudes and pressures, pregnancy, abortion, and the range of sexual expression. Role-play and peer-education outreach projects. Required for those wishing to counsel at the Sexual Health Peer Resource Center (SHPRC).

1 unit, Aut (Yisrael, D), Win (Yisrael, D), Spr (Yisrael, D)

EDUC 196X. The Design of Technologies for Casual Learning

(Same as EDUC 396X) Studio-based, participatory, and user-centered development of casual learning technologies is explored, using the Apple iPhone as a prototype platform. The term casual is borrowed from casual gaming to denote that the learning technologies are meant for learners to use inextreme informal learning circumstances (whileon the go, any time and any place). Course builds on learning about and synthesizing knowledge, theory, and development activity in four areas including learning theories, mobile technologies, games and participatory design processes.

3 units, Win (Goldman, S)

EDUC 197. Education, Gender, and Development

(Same as SOC 134) Theories and perspectives from the social sciences relevant to the role of education in changing, modifying, or reproducing structures of gender differentiation and hierarchy. Cross-national research on the status of girls and women and the role of development organizations and processes. (SSPEP) GER:EC-Gender

4 units, Spr (Wotipka, C)

EDUC 199A. Undergraduate Honors Seminar

Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.

3 units, Aut (Stevens, M)

EDUC 199B. Undergraduate Honors Seminar

Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.

1 unit, Win (Stevens, M)

EDUC 199C. Undergraduate Honors Seminar

Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.

1 unit, Spr (Stevens, M)

EDUC 245. Understanding Racial and Ethnic Identity Development

(Same as AFRICAAM 245) African American, Native American, Mexican American, and Asian American racial and ethnic identity development; the influence of social, political and psychological forces in shaping the experience of people of color in the U.S. The importance of race in relationship to social identity variables including gender, class, and occupational, generational, and regional identifications. Bi- and multiracial identity status, and types of white racial consciousness.

3-5 units, Win (LaFromboise, T)

GRADUATE COURSES IN EDUCATION

Primarily for graduate students; undergraduates may enroll with consent of instructor.

EDUC 147X. Human-Computer Interaction in Education
Required for students in the Learning Design and Technology Master's Program. Concepts underlying the design of human-computer interaction including usability and affordances, direct manipulation, systematic design methods, user conceptual models and interface metaphors, design languages and genres, human cognitive and physical ergonomics, information and interactivity structures, design tools, and environments. Studio/discussion component applies these principles to the design of interactive technology for teaching and learning.
3 units, not given this year

EDUC 167. Educating for Equity and Democracy
Introduction to the theories and practices of equity and democracy in education. How to think about teaching and schooling in new ways; the individual moral and political reasons for becoming a teacher. (STEP)
2 units, Sum (Staff)

EDUC 176X. The Design of Technologies for Casual Learning: Lab
Lab. Studio-based, participatory, and user-centered development of casual learning technologies is explored, using the Apple iPhone as a prototype platform. The term casual is borrowed from casual gaming to denote that the learning technologies are meant for learners to use in extreme informal learning circumstances (while on the go, any time and any place). The class builds on learning about and synthesizing knowledge, theory and development activity in four areas including learning theories, mobile technologies, games and participatory design processes.
1 unit, Win (Marmon, S)

EDUC 185. Master's Thesis
(all areas)
1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

EDUC 200A. Introduction to Data Analysis and Interpretation
(Formerly EDUC 150.) Primarily for master's students in the School of Education. Focus is on reading literature and interpreting descriptive and inferential statistics, especially those commonly found in education. Topics: basic research design, instrument reliability and validity, description statistics, correlation, t-tests, one-way analysis of variance, and simple and multiple regression.
4 units, Aut (Porteus, A), Win (Porteus, A)

EDUC 200B. Introduction to Qualitative Research Methods
(Formerly EDUC 151.) Primarily for master's students: An introduction to the core concepts and methods of qualitative research. Through a variety of hands-on learning activities, readings, field experiences, class lectures, and discussions, students will explore the processes and products of qualitative inquiry.
4 units, Aut (Pope, D), Win (Wolf, J)

EDUC 200C. Introduction to Statistical Methods in Education
(Formerly EDUC 160.) Describing measured, count, and categorical data. Statistical inference procedures for comparisons of group outcomes and for associations among variables. Course content integrated with statistical computing in R. Students cannot also receive credit for PSYCH 60 or for STATS 60/160. (Master's students register for 200A.)
3-4 units, Aut (Hakuta, K)

EDUC 201. History of Education in the United States
(Same as AMSTUD 201, HISTORY 158B) How education came to its current forms and functions, from the colonial experience to the present. Focus is on the 19th-century invention of the common school system, 20th-century emergence of progressive education reform, and the developments since WW II. The role of gender and race, the development of the high school and university, and school organization, curriculum, and teaching. (SSPEP)
3-5 units, Win (Gordon, L)

EDUC 202. Introduction to Comparative and International Education
Contemporary theoretical debates about educational change and development, and the international dimension of issues in education. Emphasis is on the development of students' abilities to make cross-national and historical comparisons of educational phenomena. (SSPEP/ICE)
4-5 units, Aut (Adams, J)

EDUC 202I. Education Policy Workshop in International and Comparative Education
For students in International and Comparative Education. Practical introduction to issues in educational policy making, educational planning, implementation, and the role of foreign expertise/consultants in developing country contexts. (SSPEP/ICE)
3-4 units, not given this year

EDUC 203. The Anthropology of Education
Learning across situations, organizations, institutions, and cultures. How and when people learn and where, with whom and for what and how answers to these questions change across the lifespan. Schools in relation to other settings in which learning takes place for children, adolescents, and adults. Apprenticeship, mentorship, and learning through observation and imitation.
3-5 units, not given this year

EDUC 203A. Tutoring: Seeing a Child through Literacy
(Same as EDUC 103A) Experience tutoring grade school readers in a low income community near Stanford under supervision. Training in tutoring; the role of instruction in developing literacy; challenges facing low income students and those whose first language is not English. How to see school and print through the eyes of a child. Ravenswood Reads tutors encouraged to enroll. Service Learning Course (certified by Haas Center).
4 units, Aut (Juel, C)

EDUC 204. Introduction to Philosophy of Education
How to think philosophically about educational problems. Recent influential scholarship in philosophy of education. No previous study in philosophy required. (SSPEP)
3 units, Spr (Callan, E)

EDUC 205X. The Impact of Social and Behavioral Science Research on Educational Issues
Ways in which research intersects with educational policy and practice. Emphasis is on behavioral, social, and cognitive traditions. Topics include early childhood education, early reading, science education, bilingual education, school desegregation, class size reduction, classroom organization, violence and juvenile crime, and affirmative action in higher education. Policy debates and how research informs or fails to inform deliberations and decisions in these areas.
3 units, Spr (Hakuta, K)

EDUC 206A. Applied Research Methods in International and Comparative Education I: Introduction
Required for M.A. students in ICE and IEAPA. Orientation to the M.A. program and research project; exploration of resources for study and research. (SSPEP/ICE)
1 unit, Aut (Wotipka, C)

EDUC 206B. Applied Research Methods in International and Comparative Education II: Master's Monograph Proposal
Required for M.A. students in ICE and IEAPA. Development of research skills through theoretical and methodological issues in comparative and international education. Preparation of a research proposal for the M.A. monograph. (SSPEP/ICE)
1-3 units, Win (Wotipka, C)

EDUC 206C. Applied Research Methods in ICE III: Data Collection and Analysis
Required for M.A. students in ICE and IEAPA. Practice in data collection and analysis. Preparation of the first draft of the M.A. monograph. (SSPEP/ICE)
1 unit, Spr (Wotipka, C)

EDUC 206D. Applied Research Methods in International and Comparative Education IV: Master's Monograph Workshop
Conclusion of the M.A. program in ICE and IEAPA; required of M.A. students. Reviews of students' research in preparation for their master's monograph. (SSPEP/ICE)
3 units, Sum (Wotipka, C)

EDUC 207X. School: What Is It Good For?
(Same as HISTORY 258D) Focus is on authors who establish claims that the purposes, functions, impacts, and social roles of schooling promote human capital, citizenship, social reproduction, values transmission, social mobility, class equality, racial equality, social stratification, disciplinary power, and the pursuit of individual interests. Historical and sociological approaches.
3-4 units, Win (Labaree, D)

EDUC 208B. Curriculum Construction
The theories and methods of curriculum development and improvement. Topics: curriculum ideologies, perspectives on design, strategies for diverse learners, and the politics of curriculum construction and implementation. Students develop curriculum plans for use in real settings. Service Learning Course (certified by Haas Center). (CTE)
3-4 units, Win (Pope, D)

EDUC 208C. Curriculum: In Theory and Policy
Focus is on key works on the organization and structuring of learning in formal and informal educational settings in light of contemporary issues in curriculum theory, relation of theory and practice, and strategies of curriculum policy development and implementation.
4 units, not given this year

EDUC 209X. Policy, Organization, and Leadership Studies Seminar
Focus is on orienting students to a variety of educational topics pertaining to elementary, secondary, and higher education including program management, financial literacy, and effective communication.
1 unit, Spr (Salinas, N)

EDUC 210X. Policy, Organization, and Leadership Studies Internship Workshop
Forum for POLS students to link their academic learning to real world experience through in-class discussions, presentations, and reflective writing. Fall Quarter is focused on understanding the intern¿s role within the larger organization. Winter Quarter is outward looking with a focus on understanding the broader fields the students' organizations reside within. Spring Quarter focus is on students learning from and being prepared to teach others.
1-3 units, Aut (Salinas, N), Win (Salinas, N), Spr (Salinas, N)

EDUC 211X. Beyond Bits and Atoms - Lab
(Same as CS 402L) This course is a hands-on lab in the prototyping and fabrication of tangible technologies, with a special focus in learning and education. We will learn how to use state-of-the-art fabrication machines (3D printers, 3D scanners, laser cutters, routers) to design educational toolkits, educational toys, science kits, and tangible user interfaces. A special focus of the course will be to design low-cost technologies, particularly for urban school in the US and abroad.
1-3 units, Win (Blikstein, P), Spr (Blikstein, P)

EDUC 212X. Urban Education
(Same as EDUC 112X, SOC 129X, SOC 229X) (Graduate students register for EDUC 212X or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.
3-4 units, Spr (Carter, P)

EDUC 213X. Introduction to Teaching
Key concepts in teaching and learning. Student prior knowledge and preconceptions; facts, concepts, and the organization of knowledge; active learning; behavior and cognition; constructing knowledge; metacognition; motivation and affect; transfer; goals and objectives; zone of proximal development; input; organizing learning; modeling; feedback; practice; individual and group differences among students; and pedagogical content knowledge.
3-4 units, Aut (Goldenberg, C)

EDUC 214X. Social Entrepreneurship
(Same as STRAMGT 369.) The efforts of private citizens to create effective responses to social needs and innovative solutions to social problems. New opportunities for applying business skills in the social sector. Concepts, practices, and challenges of social entrepreneurship in the U.S. and around the world. Frameworks and tools to be more effective in socially entrepreneurial.
4 units, not given this year

EDUC 215X. International Human Rights and Education
Theory and practice. Focus is on how education may be seen as a human rights issue and a tool to educate citizens about their human rights. The history of human rights and the spread of the international human rights regime in terms of organizations and treaties. Issues include street and working children, language rights, and women¿s right to education.
4-5 units, not given this year

EDUC 216X. Education, Race, and Inequality in African American History, 1880-1990
(Same as CSRE 216X, HISTORY 255E) Seminar. The relationship among race, power, inequality, and education from the 1880s to the 1990s. How schools have constructed race, the politics of school desegregation, and ties between education and the late 20th-century urban crisis.
3-5 units, Aut (Gordon, L)

EDUC 217. Philosophical and Methodological Issues in Educational Research
The role causation in educational phenomena, and how to determine causal factors. Is educational research based on a positivistic paradigm? Randomized controlled experimental designs. Criteria for judging the rigor of qualitative modes of inquiry. Do Popperian or Deweyan approaches hold the key to resolving contentious issues? Does a postpositivist perspective hold promise?
3 units, not given this year

EDUC 218. Topics in Cognition and Learning: Educational Neuroscience
Topical seminar with changing topics on the psychological and social processes of learning. This year's course is on the applications of neuroscience to educational and behavioral topics. Applications to science, education, design, business, and philosophy. May be repeated for credit.
3 units, Aut (Schwartz, D)

EDUC 219E. The Creative Arts in Elementary Classrooms
For STEP Elementary only or for candidates in the Multiple Subjects program. Hands-on exploration of visual arts media and works of art.
1 unit, Aut (Malin, H)

EDUC 220A. Introduction to the Economics of Education
The relationship between education and economic analysis. Topics: labor markets for teachers, the economics of child care, the effects of education on earnings and employment, the effects of education on economic growth and distribution of income, and the financing of education. Students who lack training in microeconomics, register for 220Y for 1 additional unit of credit. (SSPEP/APA)
4 units, not given this year

EDUC 220B. Introduction to the Politics of Education
The relationships between political analysis and policy formulation in education; focus is on alternative models of the political process, the nature of interest groups, political strategies, community power, the external environment of organizations, and the implementations of policy. Applications to policy analysis, implementation, and politics of reform. (APA)
4 units, not given this year

EDUC 220C. Education and Society
(Same as EDUC 120C, SOC 130, SOC 230) The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling.
4-5 units, Aut (Ramirez, F)

EDUC 220D. History of School Reform: Origins, Policies, Outcomes, and Explanations
(Same as HISTORY 258E) Required for students in the POLS M.A. program; others welcome. Focus is on 20th-century U.S. Intended and unintended patterns in school change; the paradox of reform that schools are often reforming but never seem to change much; rhetorics of reform and factors that inhibit change. Case studies emphasize the American high school. (SSPEP/APA)
3-5 units, Aut (Labaree, D)

EDUC 220Y. Introduction to the Economics of Education: Economics Section
For those taking 220A who have not had microeconomics before or who need a refresher. Corequisite: 220A. (SSPEP/APA)
1-2 units, not given this year

EDUC 221A. Policy Analysis in Education
Major concepts associated with the development, enactment, and execution of educational policy. Issues of policy implementation, agenda setting and problem formulation, politics, and intergovernmental relations. Case studies. Goal is to identify factors that affect how analysts and policy makers learn about and influence education. Limited enrollment. Prerequisite: consent of instructor. (SSPEP/APA)
4-5 units, not given this year

EDUC 222. Resource Allocation in Education
Problems of optimization and design, and evaluation of decision experience. Marginal analysis, educational production functions, cost effectiveness and cost-benefit analysis, constrained maximization, program evaluation. Introduction to linear models for large-scale data analysis. Implications to model assumptions. (SSPEP)
4-5 units, Spr (Carnoy, M)

EDUC 223. Good Districts and Good Schools: Research, Policy, and Practice
Recent studies of districts and schools that exceed expectations in producing desired results for students. Research methodologies, findings of studies, theories of change in reforming schools and districts and efforts to implement results. Components of good schools and districts. Required project studies a school or district to determine goodness. (SSPEP/APA, CTE)
3-4 units, not given this year

EDUC 224. Social Entrepreneurship and Social Innovation
Individuals and organizations that use entrepreneurial skills and approaches to develop innovative responses to social problems. Entrepreneurship has traditionally been seen as a way of creating wealth for the entrepreneur and for those who back her/his work. Social entrepreneurs employ entrepreneurial skills, such as finding opportunities, inventing new approaches, securing and focusing resources and managing risk, in the service of creating a social value. As the intensity and complexity of social and environmental problems has grown in recent years social entrepreneurship, defined as innovative, social value creating activity that can occur within or across the nonprofit, government or business sectors, has become increasingly prominent. While virtually all enterprises, commercial and social, generate social value, fundamental to this definition is that the primary focus of social entrepreneurship is to achieve social impact above all else.
2-4 units, Spr (Staff)

EDUC 225X. Business Skills and Concepts for the Non-Business Student
For non-business students. Knowledge and tools for operating effectively in an organizational management capacity. Focus is on concepts developed for use in the business world in the areas of strategy, organizational behavior, financial accounting, and marketing. Case studies, podcasts, video, guest speakers, and team-based projects.
3-4 units, not given this year

EDUC 226X. Empirical Analysis of Education Governance
Emphasis is on strategies for empirical evaluation. Topics include: school board, superintendent, and principal decision making; the state role in education policy and budgeting; the impact of teacher unionization; and the growing influence of private foundations and parent associations. Students participate in an original data collection effort for an ongoing research project.
3 units, not given this year

EDUC 228E. Becoming Literate in School I
First in a three course sequence. Introduction to reading and language arts theory and methodology for candidates STEP Elementary Teacher program. Instructional methods, formats, and materials.
2 units, Sum (Juel, C)

EDUC 228F. Becoming Literate in School II
Second in a three-course required sequence of reading and language arts theory and methodology for candidates in the STEP Elementary program. Theories for guiding instruction and curricular choices.
2 units, Aut (Juel, C)

EDUC 228G. Becoming Literate in School III
Third in a three-course required sequence of reading and language arts theory and methodology for candidates in STEP Elementary Teacher program. Theories for guiding instruction and curricular choices.
2 units, Win (Juel, C)

EDUC 228H. Literacy, History, and Social Science
How elementary school teachers can teach history and social science within a literacy framework. Topics include: historical thinking, reading, and writing; current research; applying nonfiction reading and writing strategies to historical texts; using primary sources with elementary students; adapting instruction to meet student needs; state standards; evaluating curriculum; assessing student knowledge; developing history and social science units; and embedding history and social science into the general literacy curriculum.
1 unit, Spr (Martin, D)

EDUC 229A. Learning Design and Technology Seminar
Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology. Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT)
1 unit, Aut (Forssell, K)

EDUC 229B. Learning Design and Technology Seminar
Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology. Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT)
1 unit, Win (Forssell, K)

EDUC 229C. Learning Design and Technology Seminar
Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology. Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT)
1 unit, Spr (Forssell, K)

EDUC 229D. Learning Design and Technology Seminar
Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology. Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT)
2-5 units, Sum (Forssell, K)

EDUC 230X. Social Enterprise
(Same as STRAMGT 341.) Approaches for creating social value through a social enterprises including nonprofits, for-profits, and hybrid forms of organization. Perspectives include entrepreneur, CEO, funder, and board member. Topics include undertaking the social entrepreneurship process; mobilizing economic and human resources; achieving social objectives with commercial vehicles; crafting alliances; managing growth; measuring and managing performance; governing for excellence. Case studies. Student teams carry out field-based research in a significant strategic or operational issue of a social enterprise
4 units, not given this year

EDUC 231X. Education Schools: Historical and Sociological Perspectives
(Same as HISTORY 258F) The lowly status of the education school in the United States is the issue that defines the starting point of this course. Topics include an exploration the historical development of this institution, its major social function, and the interaction between the two. The course touches on a variety of scholarly domains, including the history of education, sociology of education, higher education, and educational policy.
3-4 units, alternate years, not given this year

EDUC 233A. Counseling Theories and Interventions from a Multicultural Perspective
(Same as AFRICAAM 233A) In an era of globalization characterized by widespread migration and cultural contacts, professionals face a unique challenge: How does one practice successfully when working with clients/students from so many different backgrounds? This course focuses upon the need to examine, conceptualize, and work with individuals according to the multiple ways in which they identify themselves. It will systematically examine multicultural counseling concepts, issues, and research. Literature on counselor and client characteristics such as social status or race/ethnicity and their effects on the counseling process and outcome will be reviewed. Issues in consultation with culturally and linguistically diverse parents and students and work with migrant children and their families are but a few of the topics covered in this course.
3-5 units, Spr (LaFromboise, T)

EDUC 233B. Adolescent Development and Mentoring in the Urban Context
Continution of 233A. Topics include: developmental psychology and service learning; collaborating with the community;psychological research on altruism and prosocial behavior; volunteers' motivations; attributions about poverty, and the problem of prejudice.
3 units, not given this year

EDUC 234. Career and Personal Counseling
(Same as EDUC 134, PSYCH 192) Theories and methods for helping people create more satisfying lives for themselves. Simulated counseling experiences.
3 units, Spr (Krumboltz, J)

EDUC 235X. The Creative Arts in Schools and Classrooms
Students work alongside teachers and performing artists to plan and implement classroom activities with elementary school children to prepare them for a Lively Arts performance. Background theory in education and arts education. Students develop a follow-up classroom activity for children in their own art form.
2 units, not given this year

EDUC 236X. Beyond Bits and Atoms: Designing Technological Tools
(Same as CS 402) Practicum in designing and building technology-enabled curricula and learning environments. Students use software toolkits and state-of-the-art fabrication machines to design educational software, educational toolkits, and tangible user interfaces. How to design low-cost technologies, particularly for urban school in the US and abroad. The constructionist learning design perspective, critical pedagogy, and the application of complexity sciences in education.
3-5 units, Spr (Blikstein, P)

EDUC 240. Adolescent Development and Learning
How do adolescents develop their identities, manage their inner and outer worlds, and learn? Presuppositions: that fruitful instruction takes into account the developmental characteristics of learners and the task demands of specific curricula; and that teachers can promote learning and motivation by mediating among the characteristics of students, the curriculum, and the wider social context of the classroom. Prerequisite: STEP student or consent of instructor. (STEP)
5 units, Aut (Padilla, A)

EDUC 241S. Organizational Learning
(Same as OB 586.) How firms learn from their experiences and the opportunities created by flawed learning. Common mistakes in learning and barriers to the adoption of effective practices. How to avoid common mistakes and build organizations that learn more effectively to identify possible opportunities in markets. Concepts and findings from organization theory, psychology, decision theory, and statistics.
2 units, not given this year

EDUC 241X. Organizational Learning
Why firms do not learn from their experiences and the opportunities created by flawed learning. Common mistakes in learning and barriers to the adoption of effective practices. How to avoid common mistakes and build organizations that learn more effectively to identify possible opportunities in markets. Concepts and findings from organization theory, psychology, decision theory, and statistics. Readings include teaching notes, papers in psychology and organization theory, HBR articles, and Moneyball by Michael Lewis who discusses market-level mistakes in professional baseball.
4 units, not given this year

EDUC 242. Language Use in the Chicano Community
(Same as SPANLIT 206) The significance and consequences of language diversity in the culture and society of the U.S. Experiences of non-English background individuals through focus on Spanish-English bilingual communities.
3-5 units, not given this year

EDUC 243. Writing Across Languages and Cultures: Research in Writing and Writing Instruction
Theoretical perspectives that have dominated the literature on writing research. Reports, articles, and chapters on writing research, theory, and instruction; current and historical perspectives in writing research and research findings relating to teaching and learning in this area.
3-5 units, not given this year

EDUC 244. Classroom Management
Student and teacher roles in developing a classroom community. Strategies for classroom management within a theoretical framework. STEP secondary only.
2 units, Aut (Haysman, C)

EDUC 244E. Elementary Classroom Culture and Management
How to best manage a classroom. Student and teacher roles in developing a classroom community. Strategies for classroom management within a theoretical framework. STEP elementary only.
1 unit, Sum (Staff)

EDUC 244F. Elementary Classroom Culture and Management
Skills for developing a positive classroom learning environment. Theoretical issues and opportunities to acquire strategies and make links with practice teaching class. STEP elementary only.
1 unit, Aut (Rose, D)

EDUC 246A. Secondary Teaching Seminar
Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.
3 units, Sum (Lotan, R)

EDUC 246B. Secondary Teaching Seminar
Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: guided observations, building classroom community, classroom interaction processes, topics in special education portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.
5 units, Aut (Lotan, R)

EDUC 246C. Secondary Teaching Seminar
Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student. (STEP)
5 units, Win (Lotan, R)

EDUC 246D. Secondary Teaching Seminar
Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.
2-7 units, Spr (Lotan, R)

EDUC 246E. Elementary Teaching Seminar
Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

3 units, Sum (Lit, I)

EDUC 246F. Elementary Teaching Seminar
Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

5-7 units, Aut (Lit, I)

EDUC 246G. Elementary Teaching Seminar
Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

3 units, Win (Lit, I)

EDUC 246H. Elementary Teaching Seminar
Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

5 units, Spr (Lit, I)

EDUC 247. Moral Education
Contemporary scholarship and educational practice related to the development of moral beliefs and conduct in young people. The psychology of moral development; major philosophical, sociological, and anthropological approaches. Topics include: natural capacities for moral awareness in the infant; peer and adult influences on moral growth during childhood and adolescence; extraordinary commitment during adulthood; cultural variation in moral judgment; feminist perspectives on morality; the education movement in today's schools; and contending theories concerning the goals of moral education. (PSE)

3 units, Spr (Damon, W)

EDUC 248X. Issues of Curriculum and Pedagogy in Multicultural Classrooms
Debates concerning race, class, gender and sexuality, and ethnicity as they impact curriculum and practice in heterogeneous classrooms. How teachers and students can become agents of educational change. Sources include videos, scholarship, popular press, and voices of practitioners, students, and families.

3-4 units, not given this year

EDUC 249. Theory and Issues in the Study of Bilingualism
(Same as EDUC 149) Sociolinguistic perspective. Emphasis is on typologies of bilingualism, the acquisition of bilingual ability, description and measurement, and the nature of societal bilingualism. Prepares students to work with bilingual students and their families and to carry out research in bilingual settings. (SSPEP)

3-5 units, not given this year

EDUC 250A. Inquiry and Measurement in Education
Part of doctoral research core. The logic of scientific inquiry in education, including identification of research questions, selection of qualitative or quantitative research methods, design of research studies, measurement, and collection, analysis and interpertation of evidence.

3 units, Aut (Stevens, M; Loeb, S)

EDUC 250B. Statistical Analysis in Education: Regression
Primarily for doctoral students; part of doctoral research core; prerequisite for advanced statistical methods courses in School of Education. Basic regression, a widely used data-analytic procedure, including multiple and curvilinear regression, regression diagnostics, analysis of residuals and model selection, logistic regression. Proficiency with statistical computer packages.

4 units, Win (Bettinger, E)

EDUC 250C. Qualitative Analysis in Education
Primarily for doctoral students; part of doctoral research core. Methods for collecting and interpreting qualitative data including case study, ethnograpy, discourse analysis, observation, and interview.

4 units, Spr (Goldman, S; Barron, B)

EDUC 251B. Statistical Analysis in Educational Research: Analysis of Variance
Primarily for doctoral students. ANOVA models as widely used data analytic procedures, especially in experimental, quasi-experimental, and criterion-group designs. Topics: single-factor ANOVA; factorial between and within subjects and mixed design ANOVA (fixed, random, and mixed models); analysis of covariance; and multiple comparison procedures. Prerequisite: 250A or equivalent. (all areas)

4 units, not given this year

EDUC 251C. Statistical Analysis in Educational Research: Applied Multivariate Analysis
Primarily for doctoral students in education, social, and behavioral sciences. Multivariate analysis of variance, discriminant analysis, factor analysis, correlation analysis. Advanced regression methods. Data compression: principal components analysis, clustering. Computer packages for data analysis. Prerequisite: 250B, 257, STATS 200, or equivalent. (all areas)

1-4 units, not given this year

EDUC 252. Introduction to Test Theory
Concepts of reliability and validity; derivation and use of test scales and norms; mathematical models and procedures for test validation, scoring, and interpretation. Prerequisite: STATS 190 or equivalent. (PSE)

3-4 units, not given this year

EDUC 253X. Teaching the Unteachable: Teaching and Representing the Holocaust
(Same as HISTORY 237B) Theodore Adorno asked whether it was possible to write poetry after Auschwitz; whatever the answer, each year witnesses exponential growth in state-sponsored mandates to teach the Holocaust. How and to what end does catastrophe become curriculum? How to assess what students learn from these efforts. The Nazis' efforts to teach for hate, and contemporary parallels. Historical and educational sources, especially films and memoirs.

3-5 units, not given this year

EDUC 254S. Leadership in Diverse Organizations
(Same as OB 593) This course is designed to help students improve their capacity to exercise leadership and work effectively with others within the context of culturally diverse groups and organizations. The course is based on the premise that diversity can present unique challenges and opportunities and thereby pushes students to develop crucial leadership skills, many of which are relevant across a variety of situations. What social and psychological obstacles limit people's ability to work effectively across identity-based differences? What can you do to build the relational and organizational capacity to enable these differences to be a resource for learning and effectiveness within teams and organizations? Students should be prepared to experiment with various conceptual and analytic skills inside and outside of the classroom.

2 units, Aut (Meyerson, D)

EDUC 254X. Leadership in Diverse Organizations
How improve capacity to exercise leadership and work effectively with others within the context of culturally diverse groups and organizations. Premise is that diversity presents challenges and opportunities that pushestudents to develop leadership skills relevant across a variety of situations. What social and psychological obstacles limit people's ability to work effectively across identity-based differences? What can people do to build the relational and organizational capacity to enable these differences to be a resource for learning and effectiveness within teams and organizations?

Focus is on dynamics of race and gender; attention to other dimensions of identity and difference in organizations, including sexual orientation, nationality, class, and religion.

4 units, not given this year

EDUC 255A. Experimental Research Designs in Educational Research

The course will cover the following topics: a) the logic of causal inference and the Fisher/Neyman/Rubin counterfactual causal model (Fisher, 1935; Heckman, 1979; Holland, 1986; Neyman, 1990; Rubin, 1978); b) randomized experiments; c) complex randomized experiments in education (cluster randomized trials, multi-site trials, staggered implementation via randomization, etc.); d) policy experiments with randomization; e) meta-analysis; and f) power in randomized experiments; g) the ethics and politics of randomized experiments.

5 units, Aut (Bettinger, E)

EDUC 255B. Causal Inference in Quantitative Educational and Social Science Research

(Same as SOC 257) Quantitative methods to make causal inferences in the absence of randomized experiment including the use of natural and quasi-experiments, instrumental variables, regression discontinuity, matching estimators, longitudinal methods, fixed effects estimators, and selection modeling. Assumptions implicit in these approaches, and appropriateness in research situations. Students develop research proposals relying on these methods. Prerequisites: exposure to quantitative research methods; multivariate regression.

3-5 units, Win (Reardon, S)

EDUC 255C. Applied Quasi-Experimental Research in Education

(Same as SOC 258) Hands-on practice in analysis of data from experimental and quasi-experimental research designs, including: instrumental variables estimators; regression discontinuity estimators; difference-in-difference estimators; matching estimators; fixed effects estimators; and panel data methods including individual fixed effects models, lagged covariate adjustment models, growth models. Prerequisite: EDUC 255B, EDUC 257C, or SOC 257.

3-5 units, Spr (Reardon, S)

EDUC 256. Psychological and Educational Resilience Among Children and Youth

(Same as HUMBIO 149) Theoretical, methodological, and empirical issues pertaining to the psychological and educational resilience of children and adolescents. Overview of the resilience framework, including current terminology and conceptual and measurement issues. Adaptive systems that enable some children to achieve successful adaptation despite high levels of adversity exposure. How resilience can be studied across multiple levels of analysis, ranging from cell to society. Individual, family, school, and community risk and protective factors that influence children's development and adaptation. Intervention programs designed to foster resilient adaptation in disadvantaged children's populations.

4 units, Spr (Padilla, A)

EDUC 257A. Statistical Methods for Behavioral and Social Sciences

For students with experience in empirical research. Analysis of data from experimental studies through factorial designs, randomized blocks, repeated measures; regression methods through multiple regression, model building, analysis of covariance; categorical data analysis through log-linear models, logistic regression. Integrated with the use of statistical computing packages. Prerequisite: analysis of variance and regression at the level of STATS 161.

3 units, not given this year

EDUC 257B. Statistical Methods for Behavioral and Social Sciences

For students with experience in empirical research. Analysis of data from experimental studies through factorial designs, randomized blocks, repeated measures; regression methods through multiple regression, model building, analysis of covariance; categorical data analysis through log-linear models, logistic regression. Integrated with the use of statistical computing packages. Prerequisite: analysis of variance and regression at the level of STATS 161.

3 units, not given this year

EDUC 258. Literacy Development and Instruction

Literacy acquisition as a developmental and educational process. Problems that may be encountered as children learn to read. How to disentangle home, community, and school instruction from development.

3 units, Spr (Juel, C)

EDUC 259X. Application of Hierarchical Linear Models in Behavioral and Social Research

The fundamental phenomenon of interest in educational research is the growth in knowledge and skills of individual students. Two facts, that children's growth is typically the object of inquiry and that such growth occurs in organizational settings, correspond to two of the most troublesome and persistent methodological problems in the social sciences: the measurement of change and the assessment of multi-level effects (also referred to as the unit of analysis problem). Although these two methodological problems have distinct, long-standing, and non-overlapping literatures, these problems, in fact, share a common cause: the inadequacy of traditional statistical techniques for the modeling of hierarchy.

4 units, not given this year

EDUC 260X. Understanding Statistical Models and their Social Science Applications

(Same as HRP 239, STATS 209) Critical examination of statistical methods in social science applications, especially for cause and effect determinations. Topics: path analysis, multilevel models, matching and propensity score methods, analysis of covariance, instrumental variables, compliance, longitudinal data, mediating and moderating variables. See http://www-stat.stanford.edu/~rag/stat209. Prerequisite: intermediate-level statistical methods

3 units, Win (Rogosa, D)

EDUC 261X. Justice at Home and Abroad: Civil Rights in the 21st Century

(Same as ETHICSOC 137R, POLISCI 137R, POLISCI 337R) Focus is on theories of justice. How the core ideals of freedom, equality, and security animate theories which John Rawls considers the first virtue of social institutions. Topics include the U.S. Constitution as a legal framework for the operation of these ideals, civil rights legislation and litigation as the arena of tensions between those ideals, and how ideas of justice function both at home and abroad to impact civil liberties in today's war on terror.

5 units, Win (Reich, R; Steyer, J; Karlan, P)

EDUC 262A. Curriculum and Instruction in English

Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. (STEP)

2 units, Sum (Staff)

EDUC 262B. Curriculum and Instruction in English

Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. STEP secondary only.

3 units, Aut (Willinsky, J)

EDUC 262C. Curriculum and Instruction in English

Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. (STEP)

3 units, Win (Grossman, P)

EDUC 263A. Curriculum and Instruction in Mathematics

The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP) 263A. Sum, 263B. Aut, 263C. Win

2 units, Sum (Staff)

EDUC 263B. Curriculum and Instruction in Mathematics

The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP) 263A. Sum, 263B. Aut, 263C. Win

3 units, Aut (Dieckmann, J; Dance, K)

EDUC 263C. Curriculum and Instruction in Mathematics
The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP) 263A. Sum, 263B. Aut, 263C. Win

3 units, Win (Boaler, J)

EDUC 263E. Quantitative Reasoning in Mathematics I
First of a three-course sequence in mathematics for STEP elementary teacher candidates. Content, pedagogy, and context. Mathematics subject matter; the orchestration of teaching and learning of elementary mathematics including curriculum, classroom and lesson design, and cases studies. Sociocultural and linguistic diversity, equity, differentiation of instruction, the impact of state and national standards, and home/community connections.

2 units, Sum (Murata, A)

EDUC 263F. Quantitative Reasoning in Mathematics II
Second of a three-course sequence in mathematics for STEP elementary teacher candidates. Content, pedagogy, and context. Mathematics subject matter; the orchestration of teaching and learning of elementary mathematics including curriculum, classroom and lesson design, and cases studies. Sociocultural and linguistic diversity, equity, differentiation of instruction, the impact of state and national standards, and home/community connections.

2-3 units, Aut (Bofferding, L)

EDUC 263G. Quantitative Reasoning in Mathematics III
Third of a three-course sequence in mathematics for STEP elementary teacher candidates. Content, pedagogy, and context. Mathematics subject matter; the orchestration of teaching and learning of elementary mathematics including curriculum, classroom and lesson design, and cases studies. Sociocultural and linguistic diversity, equity, differentiation of instruction, the impact of state and national standards, and home/community connections.

2 units, Win (Murata, A)

EDUC 264A. Curriculum and Instruction in World Languages
Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. Prerequisite: STEP student. (STEP)

2 units, Sum (Staff)

EDUC 264B. Curriculum and Instruction in World Languages
Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. STEP secondary only.

3 units, Aut (Silva, M; Xu, X)

EDUC 264C. Curriculum and Instruction in World Languages
Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. Prerequisite: STEP student. (STEP)

3 units, Win (Silva, M; Xu, X)

EDUC 264E. Methods and Materials in Bilingual Classrooms
Restricted to STEP elementary teacher candidates in the BCLAD program. Theories, research, and methods related to instruction of Spanish-English bilingual children, grades K-8. Approaches to dual language instruction, and pedagogical and curricular strategies for the instruction of reading, language arts, science, history, social science, and math in Spanish. Assessment issues and practices with bilingual students. In Spanish.

2 units, Aut (Poza, L)

EDUC 265. History of Higher Education in the U.S.
(Same as AMSTUD 165, EDUC 165, HISTORY 158C) Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities. (SSPEP-APA)

3-5 units, Aut (Gordon, L)

EDUC 266X. Workshop in Practical Quantitative Research on Educational Policy and Inequality
Conceptual and technical skills for analyzing data concerning educational policy and inequality. How to design analytic strategies using available data sources. Interpreting and presenting results. Prerequisite: 250A.

3 units, not given this year

EDUC 267A. Curriculum and Instruction in Science
Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP)

2 units, Sum (Brown, B)

EDUC 267B. Curriculum and Instruction in Science
Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP)

3 units, Aut (Brown, B)

EDUC 267C. Curriculum and Instruction in Science
Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP)

3 units, Win (Osborne, J)

EDUC 267E. Development of Scientific Reasoning and Knowledge
For STEP elementary teacher candidates. Theories and methods of teaching and learning science. How to develop curricula and criteria for critiquing curricula. Students design a science curriculum plan for a real setting. State and national science frameworks and content standards. Alternative teaching approaches; how to select approaches that are compatible with learner experience and lesson objectives. Focus is on the linguistic and cultural diversity of California public school students.

2 units, Aut (Lythcott, J)

EDUC 267F. Development of Scientific Reasoning and Knowledge II
Continuation of 267E. Scientific knowledge and pedagogical skills for supporting science instruction. Topics include: how children build scientific understandings and what that understanding might look and sound like in young children; what school science is and how concepts are connected to the doing of it; physical, life, and earth science constructs.

2 units, Spr (Osborne, J)

EDUC 268A. Curriculum and Instruction in History and Social Science
The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.

2 units, Sum (Wineburg, S)

EDUC 268B. Curriculum and Instruction in History and Social Science
The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.

3 units, Aut (Shed, E; Breakstone, J)

EDUC 268C. Curriculum and Instruction in History and Social Science
The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.

3 units, Win (Shed, E; Smith, M)

EDUC 268E. Elementary History and Social Science
Teaching and learning history and social science in the elementary grades. What is included in the discipline and why it is important to teach. The development of historical thinking among children. How students learn and understand content in these disciplines.

3-4 units, not given this year

EDUC 269. Analysis of Teaching
Student learning and the epistemology of school subjects as related to the planning and implementation of teaching, analysis of curriculum, and evaluation of performance and understanding. Readings and activities are coordinated with student teaching activities of participants. Prerequisite: STEP student or consent of instructor.
3 units, not given this year

EDUC 269X. The Ethics in Teaching
Goal is to prepare for the ethical problems teachers confront in their professional lives. Skills of ethical reasoning, familiarity with ethical concepts, and how to apply these skills and concepts in the analysis of case studies. Topics: ethical responsibility in teaching, freedom of speech and academic freedom, equality and difference, indoctrination, and the teaching of values.
1 unit, Win (Callan, E), Spr (Callan, E)

EDUC 270A. Learning to Lead in Public Service Organizations
For Haas Center student service organization leaders. (Davis)
3-5 units, not given this year

EDUC 271X. Education Policy in the United States
Topics include: school finance systems; an overview of policies defining and shaping the sectors and institutional forms of schooling; an overview of school governance; educational human-resource policy; school accountability policies at the federal and state levels; and school assignment policies and law, including intra- and inter-district choice policies, desegregation law and policy.
5 units, Aut (Loeb, S)

EDUC 272X. Understanding and Creating Value-Added Measures of Teacher Effectiveness
A variety of approaches to measuring teacher effectiveness using student performance on state standardized tests. Recent research literature on value-added estimation, addressing issues such as bias and measurement error. Course uses administrative data from two large districts to create and compare multiple value-added measures. Prerequisites: OLS regression and basic programming in Stata.
3 units, not given this year

EDUC 273. Gender and Higher Education: National and International Perspectives
(Same as SOC 273) The effects of interactions between gender and the structures of higher education; policies seeking changes in those structures. Topics: undergraduate and graduate education, faculty field of specialization, rewards and career patterns, sexual harassment, and the development of feminist scholarship and pedagogy.
4 units, not given this year

EDUC 274X. School Choice: The Role of Charter Schools
(Formerly EDUC 153X.) Is school choice, including vouchers, charter schools, contract schools, magnet schools, district options, and virtual schools, a threat or an opportunity for public education? Focus is on the charter school movement nationally and in California as reform strategy. Roles and responsibilities of charter schools emphasizing issues of governance, finance, curriculum, standards, and accountability.
3 units, Spr (Kushner, M)

EDUC 276. Educational Assessment
Reliability, validity, bias, fairness, and properties of test scores. Uses of tests to monitor, manage, and reform instruction. Testing and competition, meritocracy, achievement gaps, and explanations for group differences.
3 units, not given this year

EDUC 277. Education of Immigrant Students: Psychological Perspectives
(Same as EDUC 177) Historical and contemporary approaches to educating immigrant students. Case study approach focuses on urban centers to demonstrate how stressed urban educational agencies serve immigrants and native-born U.S. students when confronted with overcrowded classrooms, controversy over curriculum, current school reform movements, and government policies regarding equal educational opportunity. (SSPEP)
4 units, Win (Padilla, A)

EDUC 278. Introduction to Issues in Evaluation
Open to master's and doctoral students with priority to students from education. Focus is on the basic literature and major theoretical and practical issues in program evaluation. Introduction to basic concepts and intellectual debates in the field: knowledge construction, purpose of evaluation, values in evaluation, knowledge utilization, professional standards of evaluation practice. Enrollment limited to 15. (SSPEP)
3 units, Spr (Porteus, A)

EDUC 279. Urban Youth and Their Institutions: Research and Practice
(Same as EDUC 179) The determinants and consequences of urban life for youth, emphasizing disciplinary and methodological approaches, and the gap between the perspectives of state and local organizations and those of youth and their communities. The diversity of urban youth experiences with respect to ethnicity, gender, and immigration histories. Case studies illustrate civic-level and grassroots institutions, their structures, networks, and philosophies; historical and contemporary realities of urban youth for policy makers, educators, and researchers. Limited enrollment. Prerequisite: consent of instructor. (SSPEP/APA)
4-5 units, not given this year

EDUC 279B. Youth Empowerment and Civic Engagement
(Same as EDUC 179B) Focus is on youth development policies and practices: what makes them effective, and how they operate in broader institutional contexts. Research-based information; conceptual underpinnings; best learning from experience; and the perspective of expert youth workers, policymakers, and youth about what works.
2-4 units, not given this year

EDUC 281X. Technology for Learners
Does the use of technology improve learning? Many hope that technology will make learning easier, faster, or accessible to more learners. This course explores a variety of different approaches to designing tools for learning, the learning theories behind them, and the research that tests their effectiveness.
1-2 units, Aut (Forssell, K)

EDUC 283. Child Development In and Beyond Schools
(Formerly EDUC 144). How schools form a context for children's social and cognitive development. Focus is on early and middle childhood. Transactional processes between children and learning opportunities in classroom contexts. Topics include: alternative theoretical perspectives on the nature of child development; early experience and fit with traditional school contexts; assessment practices and implications for developing identities as learners; psychological conceptions of motivational processes and alternative perspectives; the role of peer relationships in schools; and new designs for learning environments. Readings address social science and methodological issues. STEP Elementary only.
2 units, Aut (Merino, N; Hill-Bonnet, L)

EDUC 284. Teaching and Learning in Heterogeneous Classrooms
Teaching in academically and linguistically heterogeneous classrooms requires a repertoire of pedagogical strategies. Focus is on how to provide access to intellectually challenging curriculum and equal-status interaction for students in diverse classrooms. Emphasis is on group work and its cognitive, social, and linguistic benefits for students. How to prepare for group work, equalize participation, and design learning tasks that support conceptual understanding, mastery of content and language growth. How to assess group products and individual contributions. (STEP)
3 units, Aut (Lotan, R)

EDUC 285. Supporting Students with Special Needs
For STEP teacher candidates. Needs of exceptional learners, identification of learning differences and disabilities, and adaptations in the regular inclusion classroom. Legal requirements of special education, testing procedures, development of individualized education plans, and support systems and services. Students follow a special needs learner to understand diagnosis, student needs, and types of services.
2-3 units, Spr (Fur, E)

EDUC 286B. Second Language Acquisition Research
Major research findings and theories in second language acquisition. Second language research and theories in formal and informal settings where a second language is learned. (SSPEP)
4 units, Win (Hakuta, K)

EDUC 287X. Graduate Research Workshop on Psychological Interventions
(Same as PSYCH 274) Psychological research has the potential to create novel interventions that promote the public good. Psychologically wise intervention research. Course supports student efforts to conduct such interventions, especially in the context of education, broadly conceived, as well as other areas. Classic interventions and important topics in intervention research, including effective delivery mechanisms, sensitive behavioral outcomes, the role of theory and psychological process, and considerations of the role of time and of mechanisms that can sustain treatment effects over time. Students present and receive feedback on their own ongoing and/or future intervention research. Prerequisite: graduate standing in Psychology or Education, or consent of instructor.
3 units, Win (Walton, G; Cohen, G)

EDUC 288. Organization Studies: Theories and Analyses
(Same as SOC 366) Principles of organizational behavior and analysis; theories of group and individual behavior; organizational culture; and applications to school organization and design. Case studies.
5 units, Aut (Meyerson, D)

EDUC 290. Leadership: Research, Policy, and Practice
Conceptions of leadership that include the classroom, school, district office, and state capitol. The role of complexity; organizational leaders outside of schools past and present, and how that complexity permitted leadership to arise. Case studies. (SSPEP/APA)
4 units, not given this year

EDUC 291. Learning Sciences and Technology Design Research Seminar and Colloquium
Students and faculty present and critique new and original research relevant to the Learning Sciences and Technology Design doctoral program. Goal is to develop a community of scholars who become familiar with each other's work. Practice of the arts of presentation and scholarly dialogue while introducing seminal issues and fundamental works in the field.
1-3 units, Aut (Schwartz, D), Win (Barron, B), Spr (Goldman, S)

EDUC 291X. Introduction to Survey Research
(Same as EDUC 191X) Planning tasks, including problem formulation, study design, questionnaire and interview design, pretesting, sampling, interviewer training, and field management. Epistemological and ethical perspectives. Issues of design, refinement, and ethics in research that crosses boundaries of nationality, class, gender, language, and ethnicity.
3-4 units, Win (Adams, J)

EDUC 293X. American Philosophy of Education
A century of classical writers in American philosophy, focusing on work on education, democracy, learning, and culture. Texts by Emerson, Peirce, James, Dewey, and Mead.
3-4 units, not given this year

EDUC 295. Learning and Cognition in Activity
(Same as PSYCH 261A) Methods and results of research on learning, understanding, reasoning, problem solving, and remembering, as aspects of participation in social organized activity. Principles of coordination that support cognitive achievements and learning in activity settings in work and school environments.
3 units, Spr (Pea, R)

EDUC 296X. School Leadership
Can one person really make a difference for all the students in a school? Accurate or not, that's the expectation faced by school principals. This course gives students practice in translating school improvement ideas into practice and also help them develop a personal vision for school improvement. For students in POLS or MA/MBA program in School of Education.
3 units, Aut (Staff)

EDUC 297X. Teaching and Learning in Higher Education
(Same as CTL 297X) Open to master's and doctoral students in all disciplines. How teachers can promote lasting learning and ask which pedagogies are most effective in today's college classrooms. Readings analyze teaching and learning in diverse disciplines and institutional types. Students observe the instruction of a Stanford master teacher. Students write a paper about the instruction of the teacher they observe or prepare a syllabus and commentary for a course of their design.
3-4 units, Win (Ehrlich, T)

EDUC 298. Learning in a Networked World
(Same as CS 377L) Foundations, theories and empirical studies for interdisciplinary advances in how we conceive of the potentials and challenges associated with lifelong, lifewide and life-deep learning in a networked world given the growth of always-on cyberinfrastructure for supporting information and social networks across space and time with personal computers, netbooks, and mobiles.
3 units, not given this year

EDUC 302X. Incentives In Education
Seminar. Theoretical and empirical literatures from psychology and economics that focus on group and individual incentives and their potential effects. Emphasis is on seminal experiments in psychology and the recent wave of economic field experiments that test the how individual incentives affect educational outcomes and intrinsic motivation.
1-4 units, not given this year

EDUC 303X. Designing Learning Spaces
Project-based. How space shapes personal interactions and affords learning opportunities In formal and informal settings. How to integrate learning principles into the design of spaces and develop a rubric to assess the impact on learning.
3-4 units, not given this year

EDUC 304. The Philosophical and Educational Thought of John Dewey
