

FINANCIAL MATHEMATICS

Director: George Papanicolaou

Core Faculty:

Business: D. Duffie, J. M. Harrison, K. Singleton

Economics: T. Amemiya, F. Kubler, M. Kurz, F. Wolak

Electrical Engineering: T. Cover

Management, Science and Engineering: P. Glynn, D. Iglehart (emeritus), D. Luenberger

Mathematics: A. Dembo, P. Diaconis, G. Papanicolaou

Statistics: T. Cover, A. Dembo, P. Diaconis, T. Lai, A. Owen

Steering Committee:

A. Dembo, P. Glynn, F. Kubler, T. Lai, A. Owen, G. Papanicolaou, K. Singleton

This is an interdisciplinary program that aims to provide a master's level education in applied and computational mathematics, statistics, and financial applications to individuals with strong mathematical skills.

The departments of Mathematics and Statistics, in close cooperation with the departments of Economics, and Management Science and Engineering, as well as the Graduate School of Business, provide many of the basic courses.

GRADUATE PROGRAMS

MASTER OF SCIENCE

The program requires that the student take 45 units of work, or 15 courses of 3 units each. Of these 45 units of work, 36 units (12 courses of 3 units each) must be taken from the offerings provided on the lists of required and elective courses. Ordinarily, four or five quarters are needed to complete all requirements.

Admission—To be eligible for admission, students are expected to have taken the following courses or their equivalent:

1. Linear algebra at the level of MATH 103.
2. Advanced calculus (Real Analysis) at the level of MATH 115.
3. Basic ordinary and partial differential equations at the level of MATH 131 and 132 (Basic Partial Differential Equations).
4. Probability and statistics at the level of STATS 116, 200, and preferably 217 (Introduction to Stochastic Processes).
5. Computer programming at the level of CS 106A.

Some of these courses, for example, STATS 217-218, are offered as summer courses and can be taken by candidates lacking the required background. Additional information about summer courses is posted on the program web site at <http://cartan.stanford.edu/finmath>.

Candidates for admission must take the general Graduate Record Examination and preferably the subject test in Mathematics. Information about this exam can be found at <http://www.gre.org>.

Requirements—For the M.S. degree in Financial Mathematics, students must fulfill the following six required courses:

1. In stochastic processes and statistics:
 - a) MATH 236. Introduction to Stochastic Differential Equations
 - b) STATS 240. Statistical Methods in Finance *or* ECON 275. Time Series and Simultaneous Equation
2. In differential equations, simulation, and computing:
 - a) MATH 220B. Partial Differential Equations of Applied Mathematics
 - b) MATH 240. Computation and Simulation in Finance
3. In finance and economics:
 - a) MATH 180. Introduction to Financial Mathematics *or* MS&E 242. Investment Science *or* FINANCE 620. Introduction to Financial Economics
 - b) MATH 241. Mathematical Finance (Same as STATS 250.)

These courses must be taken for letter grades where available, and an overall 2.75 grade point average (GPA) is required. There is no thesis requirement.

Courses that are equivalent to the above and have been taken previously may be waived by the adviser, in which case they must be replaced by elective courses in the same subject area.

In addition, students must take at least six approved elective courses from a list that can be found on the web site at <http://cartan.stanford.edu/finmath>. With the approval of the instructor, credit can be obtained for practical training in industry. Students must sign up for MATH 201 and write a detailed report in order to receive credit.

The requirements must be met within three years of entering the program.

COURSES

The following are required core courses.

MATHEMATICS

MATH 180. Introduction to Financial Mathematics—Financial derivatives: contracts and options. Hedging and risk management. Arbitrage, interest rate, and discounted value. Geometric random walk and Brownian motion as models of risky assets. Initial boundary value problems for the heat and related partial differential equations. Self-financing replicating portfolio. Black-Scholes pricing of European options. Dividends. Implied volatility. Optimal stopping and American options. Prerequisite: 53. Corequisites: 131, 151 or STATS 116.

3 units, Aut (Diaconis)

MATH 220B. Partial Differential Equations of Applied Mathematics—Parabolic and elliptic partial differential equations. Eigenvalue problems, Green's functions, properties of harmonic functions, potential theory, Fourier series and Fourier transform. Prerequisite: 52 and 53 or equivalent.

3 units, Win (J. Levandosky)

MATH 236. Introduction to Stochastic Differential Equations—Brownian motion, stochastic integrals, and diffusions as solutions of stochastic differential equations. Functionals of diffusions and their connection with partial differential equations. Random walk approximation of diffusions. Prerequisite: basic probability and differential equations.

3 units, Win (Zerner)

MATH 240. Computation and Simulation in Finance—Monte Carlo, finite difference, tree, and transform methods for the numerical solution of partial differential equations in finance. Emphasis is on derivative security pricing.

3 units, Spr (Lee)

MATH 241. Mathematical Finance—(Same as STATS 250.) Stochastic models of financial markets. Forward and futures contracts. European options and equivalent martingale measures. Hedging strategies and management of risk. Term structure models and interest rate derivatives. Optimal stopping and American options.

3 units, Win (Papanicolaou)

STATISTICS

STATS 240. Statistical Methods in Finance—Regression analysis and applications to the Capital Asset Pricing Model and multifactor pricing models. Smoothing techniques and estimation of yield curves. Classification and credit risk. Statistical analysis and econometric modeling of financial time series. Forecasting. Problem sets, hands-on experience with financial data.

3-4 units, Spr (Lai)
