

# GEOPHYSICS

*Emeriti:* Antony Fraser-Smith,\*\* Robert Kovach, George A. Thompson

*Chair:* Rosemary J. Knight

*Associate Chair:* Greg Beroza

*Professors:* Greg Beroza, Jon F. Claerbout, Steven Gorelick, †† Jerry M. Harris, Simon Klemperer, Rosemary J. Knight, Marcia McNutt,\*\*  
Amos M. Nur, Joan Roughgarden, † Paul Segall, Norman H. Sleep,  
Howard Zebker,\*\* Mark D. Zoback

*Associate Professors:* Kevin Arrigo, Biondo Biondi, Azadeh Tabazadeh †††

*Assistant Professor:* Jesse Lawrence

*Professor (Research):* Gerald M. Mavko

*Courtesy Professors:* Stephan A. Graham, David D. Pollard

*Consulting Professors:* James Berryman, William Ellsworth, Antoine Guitton, Walter Mooney, Louise Pellerin, David Scholl

*Consulting Associate Professor:* Stewart Levin

*Visiting Professors:* Esben Auken, Sierd A.P.L. Cloetingh

*Senior Research Scientists:* Robert Clapp, Jack Dvorkin, Tapan Mukerji

*Research Associates:* Gry Mine Berg, Nigel Crook, Paul Hagin, Youli Quan, David Robinson, Tiziana Vanorio, Charley Weiland

\* Recalled to active duty

† Joint appointment with Biological Sciences

\*\* Joint appointment with Electrical Engineering

†† Joint appointment with Geological and Environmental Sciences

\*\*\* Joint appointment with Monterey Bay Aquarium Research Institute

††† Joint appointment with Civil and Environmental Engineering

*Department Offices:* Mitchell Building, Room 365

*Mail Code:* 94305-2215

*Phone:* (650) 724-3293

*Email:* tilich@pangea.stanford.edu

*Web Site:* <http://pangea.stanford.edu/GP/>

Courses given in Geophysics have the subject code GEOPHYS. For a complete list of subject codes, see Appendix.

Geophysics is the branch of Earth science concerned with exploring and analyzing active processes of Earth through physical measurement. The undergraduate and graduate programs are designed to provide a background of fundamentals in science, and courses to coordinate these fundamentals with the principles of geophysics. The program leading to the Bachelor of Science (B.S.) in Geophysics permits many electives and a high degree of flexibility for each student. Graduate programs provide specialized training for professional work in resource exploration, research, and education and lead to the degrees of Master of Science and Doctor of Philosophy.

The Department of Geophysics is housed in the Ruth Wattis Mitchell Earth Sciences Building. It has numerous research facilities, among which are a state-of-the-art broadband seismic recording station, high pressure and temperature rock properties and rock deformation laboratories, various instruments for field measurements including seismic recorders, nine dual frequency GPS receivers, and field equipment for measuring in-situ stress at great depth. Current research activities include biogeochemical cycling; crustal deformation; earthquake archaeology; earthquake seismology and earthquake mechanics; reflection, refraction, and tomographic seismology; rock mechanics, rock physics; seismic studies of the continental lithosphere; remote sensing; environmental geophysics; and synthetic aperture radar studies.

## UNDERGRADUATE PROGRAMS BACHELOR OF SCIENCE

*Objectives*—To provide knowledge about the entire spectrum of geophysics from resource exploration to environmental geophysics to earthquake seismology and plate tectonics, built upon a solid background in the essentials of math, physics, and geology. Students are prepared for either an immediate professional career in the resources and environmental sciences industries or future graduate study.

The following courses are required for the B.S. degree in Geophysics. A written report on original research or an honor's thesis is also required through participation in two or three quarters of GEOPHYS 185, Research Seminar Series, typically during the senior year. The departmental program proposal form can be downloaded at <http://geo.stanford.edu/GP/undergraduate/major.html>. Seniors in Geophysics who expect to do graduate work should take the Graduate Record Examination (GRE) early in their final undergraduate year.

### CURRICULUM

#### FUNDAMENTAL GEOPHYSICS

GEOPHYS 102/EARTHSYS 110. Geosphere  
or GES 1. Fundamentals of Geology  
GEOPHYS 150. General Geophysics  
or GEOPHYS 190. Near-Surface Geophysics  
GEOPHYS 201. Frontiers of Geophysical Research

#### ADDITIONAL ELECTIVES

1. Three approved upper-level (100 or higher) Geophysics lecture courses, typically chosen from the following:

GEOPHYS 104. The Water Course  
GEOPHYS 130. Biological Oceanography  
GEOPHYS 136. Aerosols, Clouds, and Climate Change  
GEOPHYS 140. Introduction to Remote Sensing  
GEOPHYS 141. Remote Sensing of the Oceans  
GEOPHYS 150. General Geophysics and Physics of the Earth  
GEOPHYS 160. Waves  
GEOPHYS 182. Reflection Seismology  
GEOPHYS 183. Reflection Seismology Interpretation  
GEOPHYS 190. Near-Surface Geophysics  
GEOPHYS 220. Tectonics  
GEOPHYS 262. Rock Physics

2. 6 units of GEOPHYS 185. Research Seminar Series (includes WIM requirement)

3. Three additional approved upper-level (100 or higher) Earth Sciences lecture courses, typically chosen from the above GEOPHYS electives or from the following:

GES 102. Earth Materials  
GES 110. Structural Geology and Tectonics  
GES 111A. Fundamentals of Structural Geology  
GES 160. Statistical Methods for Earth and Environmental Sciences  
ENERGY 120. Fundamentals of Petroleum Engineering

#### PREREQUISITE COURSES

MATH 19,20,21. Calculus, or equivalent,  
and MATH 53. Ordinary Differential Equations  
PHYSICS 41 and 110. Mechanics and Intermediate Mechanics  
EE 141. Engineering Electromagnetics  
or PHYSICS 120. Intermediate Electricity and Magnetism  
CHEM 31A. Chemical Principles

#### RECOMMENDED ELECTIVE

CS 106A. Programming Methodology

### MINOR

The Geophysics minor provides students with a general knowledge of geophysics in addition to a background in the related fields of physics, mathematics, and geology. The departmental program proposal form can be downloaded from <http://geo.stanford.edu/GP/undergraduate/major.html>.

### CURRICULUM

GEOPHYS 102. Geosphere or GES 1. Fundamentals of Geology  
GEOPHYS 201. Frontiers of Geophysical Research  
GEOPHYS 150. General Geophysics  
or GEOPHYS 190. Near-Surface Geophysics

Two additional approved upper-level (100 or higher) Geophysics lectures courses, typically chosen from GEOPHYS 104, 130, 136, 140, 141, 150, 160, 182, 183, 190, 220, 262.

MATH 19,20,21 or 41. Calculus  
PHYSICS 41. Mechanics

### HONORS PROGRAM

The department offers a program leading to the B.S. degree in Geophysics with honors. The guidelines are:

1. Select a research project, either theoretical, field, or experimental, that has the approval of an adviser.

2. Submit a proposal to the department, which decides on its suitability as an honors project. Necessary forms are in the department office.
3. Course credit for the project is assigned by the adviser within the framework of GEOPHYS 205.
4. The decision whether a given independent study project does or does not merit an award of honors shall be made jointly by the department and the student's adviser. This decision shall be based on the quality of both the honors work and the student's other work in earth sciences.
5. The work done on the honors program cannot be used as a substitute for regularly required courses.

## COTERMINAL B.S./M.S. PROGRAM

The department offers a coterminal program. Interested individuals should check with a member of the department faculty for details. For University coterminal degree program rules and University application forms, see <http://registrar.stanford.edu/shared/publications.htm#Coterm>.

## GRADUATE PROGRAMS

University requirements for the M.S. and Ph.D. are described in the "Graduate Degrees" section of this bulletin. Lecture course units applied to graduate degree program requirements must be taken for a letter grade if the course is offered for letter grade.

*Transfer credit*—An incoming student with a relevant Master of Science degree may apply for a departmental waiver of up to 18 units of the 45 units required for the Ph.D. degree (see "Doctor of Philosophy" section below). Students without an M.S. degree may apply for waivers for individual courses taken in post-baccalaureate study at other institutions. Credit for courses generally requires that students identify an equivalent Stanford course and obtain the signature of the Stanford faculty responsible for such a course stating its equivalence.

Waiving of any course requirements or substitution of electives other than those listed below requires the written consent of the student's faculty adviser and the Geophysics graduate coordinator.

## MASTER OF SCIENCE

*Objectives*—To enhance the student's training for professional work in geophysics through the completion of fundamental courses, both in the major fields and in related sciences, and to begin independent work and specialization.

*Requirements for the Degree*—The candidate must complete 45 units from the following groups of courses:

1. Complete 15 units of Geophysics lecture courses with at least 9 units numbered 200 or higher.
2. Complete six units numbered 100 or higher and three units of 200-level, non-Geophysics lecture courses in earth sciences.
3. Complete one to four electives selected from courses numbered 100 or higher from mathematics, chemistry, engineering, physics, relevant biology, computer science, ecology, hydrology, or earth science. At least one course must be numbered 200 or higher.
4. At least 9, but not more than 18, of the 45 units must be independent work on a research problem resulting in a written report accepted and archived by the candidate's faculty adviser. Normally, this research is undertaken as part of the candidate's participation in multiple quarters of research seminar (GEOPHYS 385 series). A summer internship is encouraged as a venue for research, but no academic credit is given.
5. Submit a program proposal for approval by a faculty adviser in the first quarter of enrollment.
6. Each candidate must present and defend the results of his or her research at a public oral presentation attended by at least two faculty members.
7. Students are required to attend department seminars.

## DOCTOR OF PHILOSOPHY

*Objectives*—The Ph.D. degree is conferred upon evidence of high attainment in Geophysics, and ability to conduct an independent investigation and present the results of such research.

*Requirements for the Degree*—A minimum of 135 units of graduate study at Stanford must be satisfactorily completed. An acceptable program normally consists of at least 45 lecture units in the areas listed following. Up to 18 lecture units in categories 2, 4, and 6 may be satisfied by courses taken elsewhere if the previous course duplicates an existing Stanford course and the Stanford faculty member responsible for the course concurs. Required courses must be taken for a letter grade, if offered. Students are required to attend the department seminars.

1. ENGR 202W.
2. GEOPHYS 201.
3. 12 units of Geophysics lecture courses numbered 100 or higher.
4. 12 units of Geophysics lecture courses numbered 200 or higher, taken from at least four faculty members with different research specializations.
5. One 3-unit lecture course numbered 100 or higher in mathematics, science, or engineering covering mathematical methods, continuum or fluid mechanics, or Fourier/spectral analysis.
6. 9 units of 200-level or higher courses in math, science, engineering, or other quantitative science.
7. 6 units of non-Geophysics lecture courses numbered 100 or higher in Earth or planetary sciences, ecology, hydrology, chemistry, or relevant biology.
8. One 3-unit non-Geophysics lecture course numbered 200 or higher in Earth or planetary science, ecology, hydrology, chemistry, or relevant biology.
9. Sufficient units of independent work on a research problem to meet the 135-unit University requirement. 12 units must be met by participation in the GEOPHYS 385 series, or equivalent series in other departments with approval of the adviser and graduate coordinator. Students are encouraged to participate in the GEOPHYS 385 series from more than one faculty member or group and relevant equivalent series in other departments.
10. Two quarters of quarter-time teaching assistant experience. For more information, see the *Geophysics Administrative Guide*, section 1.4.1.

The student's record must indicate outstanding scholarship, and deficiencies in previous training must be removed. Experience as a teaching assistant (quarter-time for at least two academic quarters) is required for the Ph.D. degree. The student must pass the departmental oral examination by presenting and defending a written research paper or proposal by the end of the sixth academic quarter (third academic quarter for students with an M.S. degree); prepare under faculty supervision a dissertation that is a contribution to knowledge and the result of independent work expressed in satisfactory form; and pass the University oral examination. The Ph.D. dissertation must be submitted in its final form within five calendar years from the date of admission to candidacy.

Upon formal acceptance into a research group, the student and faculty adviser form a supervising committee consisting of at least three members who are responsible for overseeing satisfactory progress toward the Ph.D. degree. At least two committee members must be Geophysics faculty members. The committee conducts the department oral examination, and meets thereafter annually with the student to review degree progress. The Geophysics faculty monitors progress of all students who have not yet passed their department oral examination by carrying out an annual performance appraisal at a closed faculty meeting.

## COURSES

**GEOPHYS 25. Hands-on Introduction to Astrobiology**—Are human beings alone; are microbes common in the universe? Historical development and modern status of topics such as: the vastness of space and time; star evolution; planetary climate; effects of geological processes and asteroid impacts on life; other habitable places in the solar system with updates on Mars; the Earth as a biological organism; maintenance of society for a geologically long time; and the search for intelligent extraterrestrials. Outdoor lab exercises designed to work in K-12 science classes. Non-science majors welcome. GER:DB-NatSci  
3 units, Aut (Sleep, N)

**GEOPHYS 100. Directed Reading**  
1-2 units, Aut, Win, Spr, Sum (Staff)

**GEOPHYS 101A. Research Preparation**—Structured mentoring of students enrolled in Geophysics Summer Research Program. Development of research proposals and preliminary readings.

*1 unit, Spr (Klemperer, S; Egger, A)*

**GEOPHYS 101B. Research Presentation**—Student participants from the Geophysics Summer Research Program prepare oral and poster presentations; formal presentations to the department and community.

*1 unit, not given this year (Klemperer, S)*

**GEOPHYS 104. The Water Course**—(Same as EARTHSYS 104.) The pathway that water takes from rainfall to the tap using student home towns as an example. How the geological environment controls the quantity and quality of water; taste tests of water from around the world. Current U.S. and world water supply issues. GER:DB-NatSci

*3 units, Spr (Knight, R)*

**GEOPHYS 112. Exploring Geosciences with MATLAB**—How to use MATLAB as a tool for research and technical computing, including 2-D and 3-D visualization features, numerical capabilities, and toolboxes. Practical skills in areas such as data analysis, regressions, optimization, spectral analysis, differential equations, image analysis, computational statistics, and Monte Carlo simulations. Emphasis is on scientific and engineering applications.

*1-3 units, Aut (Mukerji, T)*

**GEOPHYS 113. Earthquakes and Volcanoes**—(Same as EARTHSYS 113.) Earthquake location, magnitude and intensity scales, seismic waves, styles of eruptions and volcanic hazards, tsunami waves, types and global distribution of volcanoes, volcano forecasting. Plate tectonics as a framework for understanding earthquake and volcanic processes. Forecasting; earthquake resistant design; building codes; and probabilistic hazard assessment. For non-majors and potential earth scientists. GER:DB-EngrAppSci

*3 units, not given this year (Beroza, G; Segall, P)*

**GEOPHYS 117. Biology and Global Change**—(Same as BIOSCI 117, EARTHSYS 111.) The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biological Sciences or Human Biology core or graduate standing. GER:DB-NatSci

*4 units, Win (Vitousek, P; Arrigo, K)*

**GEOPHYS 123. What Does the Universe Tell Me**—Interdisciplinary series. Topics include: oil and war; Yergin's *The Prize*; earthquakes and archaeology; petroleum and national security; global warming and Al Gore's *An Inconvenient Truth*; earth systems and music; Gustav Mahler's 3rd Symphony.

*1 unit, Aut (Nur, A) offered once only*

**GEOPHYS 131/231. Marine Biogeochemistry**—(Graduate students register for 231.) Processes that control the mean concentration and distribution of biologically utilized elements and compounds in the ocean. Processes at the air-sea interface, production of organic matter in the upper ocean, remineralization of organic matter in the water column, and processing of organic matter in the sediments. Cycles of carbon, oxygen, and nutrients; the role of the ocean carbon cycle in interannual to decadal variability, paleoclimatology, and the anthropogenic carbon budget.

*3-4 units, Spr (Arrigo, K)*

**GEOPHYS 136/236. Aerosols, Clouds, and Climate Change**—(Graduate students register for 236; same as CEE 161T/261T.) Natural and manmade aerosol particles in the Earth's atmosphere. Coupling interactions between aerosol and cloud particles and how such interactions influence the climate and atmospheric composition. Term project. Prerequisites: MATH 51 and CHEM 31, or equivalents.

*3 units, Win (Tabazadeh, A)*

**GEOPHYS 137/237. Fundamentals of Ecological Modeling**—(Graduate students register for 237.) The dynamics of complex systems through quantitative models that synthesize knowledge and forecast system behavior. Principles of ecological modeling including model conceptualization, construction, analysis, use, and abuse. Modeling exercises that culminate in the design, implementation, and evaluation of a process-based simulation model.

*3 units, not given this year (Arrigo, K)*

**GEOPHYS 141/241. Remote Sensing of the Oceans**—(Graduate students register for 241; same as EARTHSYS 141/241.) How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features. GER:DB-NatSci

*3 units, Win (Arrigo, K)*

**GEOPHYS 150. General Geophysics and Physics of the Earth**—Elementary study of gravitational, magnetic, seismic, and thermal properties of the Earth. Earth's crust, mantle, core. Plate tectonics and mantle convection. Probing Earth structure with seismic waves. Measurements, interpretation, and applications to Earth structure and exploration. Prerequisites: calculus, first-year college physics. GER:DB-NatSci

*3 units, Win (Klemperer, S; Sleep, N)*

**GEOPHYS 160. Waves**—Topics: derivations of wave equations and their solutions in 1-D, 2-D, and 3-D; amplitude, polarization, phase and group velocities, attenuation, and dispersion; reflection and transmission at single and multiple interfaces; ray theory. Applications from acoustics, elastodynamics, and electromagnetics. Prerequisites: differential/integral calculus and complex functions. GER:DB-NatSci

*3 units, not given this year (Beroza, G; Harris, J)*

**GEOPHYS 161/261. Atmosphere and Global Environmental Change**—(Graduate students register for 261; same as CEE 161S/261S.) Topics include atmospheric chemistry and physics, solar dimming, the greenhouse model, cooling and warming components of climate, and the recovery of stratospheric ozone in a changing atmosphere. Prerequisites: MATH 51 and CHEM 31, or equivalents.

*3 units, Aut (Tabazadeh, A)*

**GEOPHYS 162. Laboratory Methods in Geophysics**—Principles and measurements of geophysical properties such as velocity, attenuation, porosity, permeability, electrical resistivity, and magnetic susceptibility. Foundation for conducting experiments and assessing accuracy and variability in reported experimental data. Laboratory experiments and demonstrations. No previous laboratory experience required.

*2-3 units, Win (Vanorio, T)*

**GEOPHYS 180. Geophysical Inverse Problems**—Concepts of inverse theory, with application to geophysics. Inverses with discrete and continuous models, generalized matrix inverses, resolving kernels, regularization, use of prior information, singular value decomposition, nonlinear inverse problems, back-projection techniques, and linear programming. Application to seismic tomography, earthquake location, migration, and fault-slip estimation. Prerequisite: MATH 103. GER:DB-Math

*3 units, alternate years, not given this year (Beroza, G; Segall, P)*

**GEOPHYS 182. Reflection Seismology**—The principles of seismic reflection profiling, focusing on methods of seismic data acquisition and seismic data processing for hydrocarbon exploration. GER:DB-NatSci

*3 units, not given this year (Klemperer, S)*

**GEOPHYS 183. Reflection Seismology Interpretation**—The structural and stratigraphic interpretation of seismic reflection data, emphasizing hydrocarbon traps in two and three dimensions on industry data, including workstation-based interpretation. Lectures only, 1 unit. Prerequisite: 182, or consent of instructor.

*1-4 units, Spr (Klemperer, S; Graham, S)*

**GEOPHYS 184. Seismic Reflection Processing**—Workshop in computer processing of seismic reflection data. Students individually process a commercial seismic reflection profile from field tapes to migrated stack, using interactive software on a workstation. Prerequisite: consent of instructor.

*3 units, alternate years, not given this year*

**GEOPHYS 185. Research Seminar Series**—(Graduate students register for 385 series.) Limited to Geophysics undergraduates and coterminous master's candidates. Undergraduates participate directly in an ongoing research project: experimental and computational work, joining in reading and study groups, giving seminar papers, and doing original research for the undergraduate thesis. Prerequisite: consent of instructor.

**GEOPHYS 185A. Reflection Seismology**—(Graduate students register for 385A.) Research in reflection seismology and petroleum prospecting. May be repeated for credit. WIM at 3-unit level.

*1-3 units, Aut, Win, Spr, Sum (Biondi, B; Clapp, R)*

**GEOPHYS 185B. Environmental Geophysics**—(Graduate students register for 385B.) Research on the use of geophysical methods for near-surface environmental problems. May be repeated for credit. WIM at 3-unit level.

*1-3 units, Aut, Win, Spr, Sum (Knight, R)*

**GEOPHYS 185C. Topics in Biological Oceanography**—(Graduate students register for 385C.) Research on biological processes of the world's oceans. May be repeated for credit. WIM at 3-unit level.

*1-3 units, Aut, Win, Spr, Sum (Arrigo, K)*

**GEOPHYS 185E. Tectonics**—(Graduate students register for 385E.) Research on the origin, major structures, and tectonic processes of the Earth's crust. Emphasis is on use of deep seismic reflection and refraction data. May be repeated for credit. WIM at 3-unit level.

*1-3 units, Aut, Win, Spr, Sum (Klemperer, S; Sleep, N; Thompson, G)*

**GEOPHYS 185K. Crustal Mechanics**—(Graduate students register for 385K.) Research in areas of petrophysics, seismology, in situ stress, and subjects related to characterization of the physical properties of rock in situ. May be repeated for credit. WIM at 3-unit level.

*1-3 units, Aut, Win, Spr (Zoback, M)*

**GEOPHYS 185L. Earthquake Seismology, Deformation, and Stress**—(Graduate students register for 385L.) Research on seismic source processes, crustal stress, and deformation associated with faulting and volcanism. May be repeated for credit. WIM at 3-unit level.

*1-3 units, Aut, Win, Spr (Segall, P; Beroza, G; Zoback, M)*

**GEOPHYS 185S. Wave Physics**—(Graduate students register for 385S.) Theory, numerical simulation, and experiments on seismic and electromagnetic waves in complex porous media. Applications from Earth imaging and in situ characterization of Earth properties, including subsurface monitoring. Presentations by faculty, research staff, students, and visitors. May be repeated for credit. WIM at 3-unit level.

*1-3 units, Aut, Win, Spr (Harris, J)*

**GEOPHYS 185T. Atmospheric Chemistry**—(Graduate students register for 385T.) Research seminar. May be repeated for credit. WIM at 3-unit level.

*1-3 units, Aut, Win, Spr, Sum (Tabazadeh, A)*

**GEOPHYS 185V. Poroelasticity**—(Graduate students register for 385V.) Research on the mechanical properties of porous rocks: dynamic problems of seismic velocity, dispersion, and attenuation; and quasi-static problems of faulting, fluid transport, crustal deformation, and loss of porosity. Participants define, investigate, and present an original problem of their own. May be repeated for credit. WIM at 3-unit level.

*1-3 units, Aut, Win, Spr (Mavko, G)*

**GEOPHYS 185Z. Radio Remote Sensing**—(Graduate students register for 385Z.) Research applications, especially crustal deformation measurements. Recent instrumentation and system advancements. May be repeated for credit. WIM at 3-unit level.

*1-3 units, Aut, Win, Spr (Zebker, H)*

**GEOPHYS 190. Near-Surface Geophysics**—Applications of geophysical methods for imaging and characterizing the top 100 meters of the Earth. Focus is on the use of electrical and seismic methods for environmental and engineering applications. Introduction to the link between electrical and elastic properties of rocks, soils, and sediments, and their physical, chemical, and biological properties. Surface and borehole methods used for data acquisition. GER:DB-EngrAppSci

*3 units, not given this year (Knight, R)*

**GEOPHYS 200. Fluids and Flow in the Earth: Computational Methods**—Interdisciplinary problems involving the state and movement of fluids in crustal systems, and computational methods to model these processes. Examples of processes include: nonlinear, time-dependent flow in porous rocks; coupling in porous rocks between fluid flow, stress, deformation, and heat and chemical transport; percolation of partial melt; diagenetic processes; pressure solution and the formation of stylolites; and transient pore pressure in fault zones. MATLAB, Lattice-Boltzmann, and COMSOL Multiphysics. Term project. No experience with COMSOL Multiphysics required.

*3 units, Win (Mukerji, T)*

**GEOPHYS 201. Frontiers of Geophysical Research at Stanford: Faculty Lectures**—Required of new students entering the department; second-year and other graduate students may attend for credit or as auditors. Department faculty and senior research staff introduce the frontiers of research problems and methods being employed or developed in the department and unique to department faculty and students. Current research is, why it is important, methodologies and technologies, and potential impact of the results.

*1 unit, Aut (Knight, R)*

**GEOPHYS 202. Reservoir Geomechanics**—Basic principles of rock mechanics and the state of stress and pore pressure in sedimentary basins related to exploitation of hydrocarbon and geothermal reservoirs. Mechanisms of hydrocarbon migration, exploitation of fractured reservoirs, reservoir compaction and subsidence, hydraulic fracturing, utilization of directional and horizontal drilling to optimize well stability.

*3 units, Win (Zoback, M)*

**GEOPHYS 205. Honors Program**—Experimental, observational, or theoretical honors project and thesis in geophysics under supervision of a faculty member. Students who elect to do an honors thesis should begin planning it no later than Winter Quarter of the junior year. Prerequisites: department approval.

*1-3 units, Aut, Win, Spr, Sum (Staff)*

**GEOPHYS 210. Basic Earth Imaging**—Echo seismogram recording geometry, head waves, moveout, velocity estimation, making images of complex shaped reflectors, migration by Fourier and integral methods. Anti-aliasing. Dip moveout. Computer labs. See <http://sep.stanford.edu/sep/prof/>.

*3-4 units, Aut (Claerbout, J; Clapp, R)*

**GEOPHYS 211. Environmental Soundings Image Estimation**—Imaging principles exemplified by means of imaging geophysical data of various uncomplicated types (bathymetry, altimetry, velocity, reflectivity). Adjoints, back projection, conjugate-gradient inversion, preconditioning, multidimensional autoregression and spectral factorization, the helical coordinate, and object-based programming. Common recurring issues such as limited aperture, missing data, signal/noise segregation, and nonstationary spectra. See <http://sep.stanford.edu/sep/prof/>.

*3 units, Win (Claerbout, J)*

**GEOPHYS 220. Tectonics**—The architecture of the Earth's crust; regional assembling of structural or deformational features and their relationship, origin and evolution. The plate-tectonic cycle: rifting, passive margins, sea-floor spreading, subduction zones, and collisions. Case studies.

*3 units, Aut (Klemperer, S)*

**GEOPHYS 230. Advanced Topics in Well Logging**—(Same as ENERGY 230.) State of the art tools and analyses; the technology, rock physical basis, and applications of each measurement. Hands-on computer-based analyses illustrate instructional material. Guest speakers on formation evaluation topics. Prerequisites: 130 or equivalent; basic well logging; and standard practice and application of electric well logs.

3 units, Spr (Lindblom, R)

**GEOPHYS 241A. Practice of Geostatistics and Seismic Data Interpretation**—Students build a synthetic 3D fluvial channel reservoir model with layer depths, channel geometry, and facies-specific petrophysical and seismic properties, stressing the physical significance of geophysical data. Reference data set is sparsely sampled, providing the sample data typically available for an actual reservoir assessment. Geostatistical reservoir modeling uses well and seismic data, with results checked against the reference database. Software provided (GSLIB and SRB tools). Prerequisite: ENERGY 240. Recommended: experience with Unix, MATLAB/C++/Fortran programming.

3-4 units, Spr (Mukerji, T; Caers, J)

**GEOPHYS 245. Probability Theory**—(Same as ENERGY 245.) Probabilistic formulations and solutions to inverse problems. Monte Carlo methods for solving inverse problems. Metropolis algorithm. Deterministic solutions using maximum likelihood, gradient methods. Dealing with prior probability and data uncertainty. Gaussian and non-Gaussian model formulations. Application to Earth Science problems. Prerequisite: introduction to probability theory course.

3 units, Win (Tarantola, A)

**GEOPHYS 255. Report on Energy Industry Training**—On-the-job-training for master's and doctoral degree students under the guidance of on-site supervisors. Required report detailing work activities, problems, assignment, and key results. Prerequisite: written consent of adviser.

1-3 units, Aut, Win, Spr, Sum (Staff)

**GEOPHYS 260. Rock Physics for Reservoir Characterization**—How to integrate well log and laboratory data to determine and theoretically generalize rock physics transforms between sediment wave properties (acoustic and elastic impedance), bulk properties (porosity, lithology, texture, permeability), and pore fluid conditions (pore fluid and pore pressure). These transforms are used in seismic interpretation for reservoir properties, and seismic forward modeling in what-if scenarios.

3 units, Win (Dvorkin, J)

**GEOPHYS 262. Rock Physics**—Properties of and processes in rocks as related to geophysical exploration, crustal studies, and tectonic processes. Emphasis is on wave velocities and attenuation, hydraulic permeability, and electrical resistivity in rocks. Application to in situ problems, using lab data and theoretical results.

3 units, Aut (Mavko, G)

**GEOPHYS 263. Atmospheric Heterogeneous Processes**—(Same as CEE 261U.) Atmospheric physicochemical processes occurring in heterogeneous mediums. Topics include oxidation and catalytic chemistry in the aqueous phase, adsorption isotherms and chemistry on surfaces, and thermodynamics of colloid formation and precipitation processes in particles. Term project.

3 units, Spr (Tabazadeh, A)

**GEOPHYS 265. Imaging Radar and Applications**—(Same as EE 355.) Topics include radar system elements, the radar equation and signal to noise ratio, signal and image processing, range/Doppler algorithms, interferometric measurements. Applications to crustal deformation, topographic mapping, velocities of ice sheets and glaciers, polarimetry and terrain analysis. Computational labs give hands-on-experience with real data.

3 units, alternate years, not given this year (Zebker, H)

**GEOPHYS 270. Electromagnetic Properties of Geological Materials**—Laboratory observations and theoretical modeling of the electromagnetic properties and nuclear magnetic resonance response of geological material. Relationships between these properties and water-saturated

material properties such as composition, water content, surface area, and permeability.

2 units, Win (Knight, R)

**GEOPHYS 280. 3-D Seismic Imaging**—The principles of imaging complex structures in the Earth subsurface using 3-D reflection seismology. Emphasis is on processing methodologies and algorithms, with examples of applications to field data. Topics: acquisition geometries of land and marine 3-D seismic surveys, time vs. depth imaging, migration by Kirchhoff methods and by wave-equation methods, migration velocity analysis, velocity model building, imaging irregularly sampled and aliased data. Computational labs involve some programming. Lab for 3 units.

2-3 units, Spr (Biondi, B)

**GEOPHYS 287. Earthquake Seismology**—Theorems in elastodynamics, Green's functions, attenuation, wave propagation in layered media, ray theory, seismic moment tensors, finite-source effects, kinematics and dynamics of earthquakes, and engineering aspects of seismology.

3 units, alternate years, not given this year

**GEOPHYS 288A. Crustal Deformation**—Earthquake and volcanic deformation, emphasizing analytical models that can be compared to data from GPS, InSAR, and strain meters. Deformation, stress, and conservation laws. Dislocation models of strike slip and dip slip faults, in 2 and 3 dimensions. Crack models, including boundary element methods. Dislocations in layered and elastically heterogeneous earth models. Models of volcano deformation, including sills, dikes, and magma chambers.

3-5 units, Win (Segall, P)

**GEOPHYS 288B. Crustal Deformation**—Earthquake and volcanic deformation, emphasizing analytical models that can be compared to data from GPS, InSAR, and strain meters. Viscoelasticity, post-seismic rebound, and viscoelastic magma chambers. Effects of surface topography and earth curvature on surface deformation. Gravity changes induced by deformation and elastogravitational coupling. Poro-elasticity, coupled fluid flow and deformation. Earthquake nucleation and rate-state friction. Models of earthquake cycle at plate boundaries.

3-5 units, Spr (Segall, P)

**GEOPHYS 289. Global Positioning System in Earth Sciences**—The basics of GPS, emphasizing monitoring crustal deformation with a precision of millimeters over baselines tens to thousands of kilometers long. Applications: mapping with GIS systems, airborne gravity and magnetic surveys, marine seismic and geophysical studies, mapping atmospheric temperature and water content, measuring contemporary plate motions, and deformation associated with active faulting and volcanism.

3-5 units, not given this year (Segall, P)

**GEOPHYS 290. Tectonophysics**—The physics of faulting and plate tectonics. Topics: plate driving forces, lithospheric rheology, crustal faulting, and the state of stress in the lithosphere. Exercises: lithospheric temperature and strength profiles, calculation of seismic strain from summation of earthquake moment tensors, slip on faults in 3D, and stress triggering and inversion of stress from earthquake focal mechanisms.

3 units, alternate years, not given this year (Zoback, M)

**GEOPHYS 300. Earth Sciences Seminar**—(Same as EARTHSYS 300, EEES 300, GES 300, IPER 300, ENERGY 300.) Required for incoming graduate students except cotermers. Research questions, tools, and approaches of faculty members from all departments in the School of Earth Sciences. Goals are: to inform new graduate students about the school's range of scientific interests and expertise; and introduce them to each other across departments and research groups. Two faculty members present work at each meeting. May be repeated for credit.

1 unit, Aut (Matson, P; Graham, S)

**GEOPHYS 385. Research Seminar Series**—See 185 series for offerings and descriptions. Opportunity for advanced graduate students to frame and pursue research or thesis research in the context of an ongoing research project in the department, and present thesis research progress reports before a critical audience. Prerequisite: consent of instructor.

**GEOPHYS 399. Teaching Experience in Geophysics**—On-the-job training in the teaching of geophysics. An opportunity to develop problem sets and lab exercises, grade papers, and give occasional lectures under the supervision of the regular instructor of a geophysics course. Regular conferences with instructor and with students in the class provide the student teacher with feedback about effectiveness in teaching.

*2-4 units, Aut, Win, Spr, Sum (Staff)*

**GEOPHYS 400. Research in Geophysics**

*1-15 units, Aut, Win, Spr, Sum (Staff)*

## COGNATE COURSES

See respective department listings for course descriptions and General Education Requirements (GER) information. See degree requirements above or the program's student services office for applicability of these courses to a major or minor program.

**AA 272C. Global Positioning Systems**

*3 units, Win (Enge, P)*

**CEE 297G. Structural Geology and Rock Mechanics**—(Same as GES 215A.)

*3-5 units, Aut (Pollard, D)*

**CEE 297H. Structural Geology and Rock Mechanics**—(Same as GES 215B.)

*3-5 units, Win (Pollard, D)*

**EE 106. Planetary Exploration**

*3 units, Spr (Fraser-Smith, A)*

**EE 140. The Earth From Space: Introduction to Remote Sensing**

*3 units, Win (Zebker, H)*

**EE 355. Imaging Radar and Applications**

*3 units, alternate years, not given this year (Zebker, H)*

**GES 3. Current Research Topics in Earth and Environmental Sciences**

*1 unit, Aut (Egger, A), Win (Egger, A)*

**GES 144. Fundamentals of Geographic Information Science (GIS)**—(Same as EARTHSYS 144.)

*4 units, Spr (Seto, K)*

**GES 222. Planetary Systems: Dynamics and Origins**

*3-4 units, Aut (Lissauer, J; Marley, M)*

**GES 223. Planetary Systems: Atmospheres, Surfaces, and Interiors**

*3 units, not given this year*
