

PC Electronic Vaulting

Iron Mountain's PC Electronic Vaulting delivers managed enterprise class PC data protection via the Internet for businesses of any size. Businesses can now ensure that critical business data on PCs and laptops is protected and secure at an Iron Mountain vault—without all of the management burdens and associated costs. Once your users are set up, regular backups are performed automatically and take just a few minutes a day.

EASY TO DEPLOY

Adding PC Electronic Vaulting to your organization is simple, quick and hands-free. Once PC Electronic Vaulting is installed on the user's PC, backups begin automatically and securely via TCP/IP sessions over virtually any Internet connection. The deployment and rollout are limited solely by the rate at which you desire to protect the data on your organization's PCs.

LOWER YOUR COSTS

By deploying PC Electronic Vaulting, your organization can leverage the expertise and resources of the industry leader in data protection. You no longer need to estimate and maintain the amount of backup space each user will require. There is no need to invest in purchasing storage equipment such as servers or near line systems.

NO STAFFING BURDEN

Adding a new application to your enterprise usually means new overhead and some hidden costs. These costs can include staff training, monitoring the new system, inspection of log files, scheduled maintenance and server or client upgrades. With Iron Mountain's PC Electronic Vaulting, all of these issues are the responsibility of Iron Mountain 24 hours a day.

EASILY RESTORE OR RECOVER YOUR DATA ONLINE

Having access to your PC backup data whenever and where ever you need it is critical. PC Electronic Vaulting ensures high availability to your PC backup data with best practices in networking and best of breed routers, switches, firewalls, servers, facilities infrastructure, power

grids and telecommunications circuits—all of which are deployed with backup components for fail over and redundancy. Your data is mirrored to assure 99.95% availability for whenever you need it.

MANAGE USER ACCOUNTS ONLINE

Once your solution is deployed, a web-based enterprise management system puts you in control of your off-site PC backup data. PC Electronic Vaulting gives you 100% access to manage users, set and change policies, and run reports, 24 hours a day.

COMPLETE SECURITY FOR YOUR DATA

Iron Mountain knows that protecting intellectual property is critical. Data is encrypted at the client PC prior to transmission, and stored encrypted at the data center. Data is unencrypted only after data restoration is completed to the client PC. The purpose of encryption is to protect your data from intrusion or interception via the Internet. PC Electronic Vaulting uses 112 bit Triple DES encryption, the same level of encryption used by the nation's financial institutions, military organizations and research laboratories.

Iron Mountain's PC Electronic Vaulting Benefits

- ▶ Easy to Deploy
- ▶ Lower Your Costs
- ▶ No Staffing Burden
- ▶ Easily Restore or Recover Your Data Online
- ▶ Manage Your Account Online
- ▶ Complete Security for Your Data

With PC Electronic Vaulting you are finally able to provide complete PC backup data protection for user throughout your organization without the associated management time and costs.
