

Hello All,

This general description of our table project, it is not a comprehensive plan. Details will follow in class.

Rough means un-surfaced and **4/4** means a full 1" thick board, **8/4** means a full 2" thick board. This material should be of **FAS** (Firsts and Seconds, best quality) or **S&B** (select and better, lesser but adequate quality) grade. It should be **Kiln Dried**.

These are the general finish dimensions for the table. Remember when you choose your wood add 2-4" to the length, 1/2" to the width and 1/4" to the thickness.

Therefore should you decide on a table that is 24 inches square you will need to calculate how long your aprons should be. For example 24(top) minus 2 inches (2x overhang) minus 4 inches (2x leg thickness) = 18 inch long aprons.

Please feel free to contact me if you have any questions.
